Brown Quail	<i>Coturnix ypsilophora</i>	V	V	V	x	x		x							x	x		x														7
Blue-billed Duck	<i>Oxyura australis</i>	R	R	R	x	x										x																14
Musk Duck	<i>Biziura lobata</i>	R	R	R	x	x										x		x														15
Cape Barren Goose	<i>Cereopsis novaehollandiae</i>	R	R	R	x	x		x						x	x	x		x	x									x		x		20
Australasian Shoveler	<i>Anas rhynchotis</i>	R	R	R	x	x		x							x	x			x													29
Chestnut Teal	<i>Anas castanea</i>			U	x	x		x						x	x	x		x	x													32
Hardhead	<i>Aythya australasica</i>			U	x	x								x	x	x			x								x	x		x		36
Great Crested Grebe	<i>Podiceps cristatus</i>	R	R	R	x	x										x																39
Little Egret	<i>Egretta garzetta</i>	R		U	x	x								x		x																111
Eastern Reef Egret	<i>Egretta sacra</i>	R	R	V								x				x	x	x	x	x		x	x									112
White-necked Heron	<i>Ardea pacifica</i>			U	x	x									x	x																113
Intermediate Egret	<i>Ardea intermedia</i>	R	R	R	x	x																										117
Cattle Egret	<i>Ardea ibis</i>	R		U	x	x																										118
Nankeen Night Heron	<i>Nycticorax caledonicus</i>			U	x	x		x						x	x	x																120
Australasian Bittern	<i>Botaurus poiciloptilus</i>	V	V	V													x															123
Glossy Ibis	<i>Plegadis falcinellus</i>	R	R	R	x	x		x							x	x																124
Royal Spoonbill	<i>Platalea regia</i>			U	x	x		x						x	x	x				x										x		127
White-bellied Sea-eagle	<i>Haliaeetus leucogaster</i>	E	V	V	x	x												x	x													138
Peregrine Falcon	<i>Falco peregrinus</i>	R	R	R											x		x	x	x	x		x		x	x	x			x			151
Buff-banded Rail	<i>Rallus philippensis</i>			V	x	x		x							x	x		x	x											x		156
Lewin's Rail	<i>Rallus pectoralis</i>	V	V	V	x											x																158
Baillon's Crake	<i>Porzana pusilla</i>		R	R	x	x									x	x			x											x		160
Spotless Crake	<i>Porzana tabuensis</i>	R		U	x	x									x	x																162
Painted Button-quail	<i>Turnix varia</i>	R	V	V																			x									174
Latham's Snipe	<i>Gallinago hardwickii</i>	R	V	V	x	x		x							x	x																177
Black-tailed Godwit	<i>Limosa limosa</i>	R			x	x																										180
Bar-tailed Godwit	<i>Limosa lapponica</i>	R			x	x											x															182
Whimbrel	<i>Numenius phaeopus</i>	R			x	x										x																184
Eastern Curlew	<i>Numenius madagascariensis</i>	V	V	V	x	x																										185
Wood Sandpiper	<i>Tringa glareola</i>	R			x	x											x															191
Common Sandpiper	<i>Actitis hypoleucos</i>	R		R	x	x					x	x		x	x	x	x	x	x	x		x			x	x		x		x		193
Grey-tailed Tattler	<i>Heteroscelus brevipes</i>	R				x										x																194
Ruddy Turnstone	<i>Arenaria interpres</i>	R			x	x											x															196
Sanderling	<i>Calidris alba</i>	R				x																										200

Appendix 2 – Southern Fleurieu: Butterfly Species and Larval Foodplants

[FAMILY] Species	Common Name	Vulnerability	Larval Foodhost
[HESPERIIDAE] (Skippers)			[Skipper butterflies are entirely dependant on tussock grasses]
<i>Anisynta cynone cynone</i>	Cynone Skipper	Vulnerable	Native & introduced grasses, incl. <i>Brachypodium distachyon</i>
<i>Anisynta cynone gracilis</i>	Cynone Skipper	Rare	Native & introduced grasses, incl. <i>Brachypodium distachyon</i>
<i>Herimosa albovenata albovenata</i>	White-veined Skipper	Rare	<i>Stipa eremophila</i> ; <i>S. scabra falcata</i> ; <i>S. semibarbata</i>
<i>Hesperilla chrysotricha leucosia</i>	Chrysotricha Skipper	Vulnerable	<i>Gahnia duesta</i> ; <i>G. filum</i> ; <i>G. sieberiana</i> ; <i>G. trifida</i>
<i>Hesperilla donnyisa diluta</i>	Donnyisa Skipper	Rare	<i>Gahnia ancistrophylla</i> ; <i>G. duesta</i> ; <i>G. filum</i> ; <i>G. sieberiana</i> ; <i>G. trifida</i>
<i>Hesperilla idothea clara</i>	Flame Skipper	Rare	<i>Gahnia clarkei</i> ; <i>G. radula</i> ; <i>G. sieberiana</i> ; <i>G. trifida</i>
<i>Motasingha trimaculata trimaculata</i>	Trimaculata Skipper	Rare	<i>Lepidosperma carphoides</i> ; <i>L. viscidum</i>
<i>Antipodia atraiba</i>	Black and white Skipper	Local	<i>Gahnia ancistrophylla</i> ; <i>G. duesta</i> ; <i>G. lanigera</i>
Sub-family [SATYRINAE] (Browns)			
<i>Geitoneura acantha ocrea</i>	Southern Ringed Xenica	Rare	<i>Microlaena stipoides</i> ; <i>Poa tenera</i> ; <i>Themeda triandra</i>
[LYCAENIDAE] (Coppers & blues)			
<i>Ogyris amaryllis meridionalis</i>	Amaryllis Azure	Local	<i>Amyema melaleucaea</i> ; <i>A. miquelii</i> ; <i>A. pendulum pendulum</i> ; <i>A. presseii</i> . Larvae attended by small ants.
<i>Ogyris genoveva genua</i>	Genoveva Azure		<i>A. miquelii</i> ; <i>A. pendulum pendulum</i> . Larvae attended by sugar ants.
<i>Ogyris otanes</i>	Small Brown Azure	Vulnerable	Larval stage spent in sugar ant nests.
<i>Ogyris idmo halmaturia</i>	Large Brown Azure	Endangered	<i>Choretrum glomeratum glomeratum</i> . Larvae attended by sugar ants.
<i>Theclinesthes albocincta</i>	Grund's Blue	Local	<i>Adriana</i> spp. incl. <i>klotzshii</i>
<i>Jalmenus icilius</i>	Icilius Blue	Rare	<i>Acacia</i> spp. incl. <i>anceps</i> , <i>aneura aneura</i> , <i>pycnantha</i> , <i>retinodes</i> , <i>uncifolia</i> , <i>victoriae victoriae</i> . Larvae attended by small black ants.

Appendix 3 – Sites Identified by Grund (1997) (and updates, 2006) Within the Southern Fleurieu Coastal Boundary

LOCATION	CELL	FOODPLANTS FOR THR. SP.	OBSERVED BUTTERFLY SP.	LIKELY THR. SP.	LAND STATUS	VEG. CONDITION/ SIGNIFICANT BUTTERFLY SPECIES	REHABILITATION SUITABILITY	VALUE ON GIS MAPS
Newland Head	F15	✓	Thr. + C	✓	CP NPWS	Extensive varied habitat with valuable hostplant patches. Pressure of kangaroo grazing. Presence of <i>Hesperilla chrysotricha</i> <i>A. atralba</i> <i>Theclinesstes albocincta</i> .	Possible to rehabilitate fringe areas and reintroduce <i>Jalmenus icilius</i> , <i>Ogyris otanes</i> , <i>Ogyris idmo</i> , <i>O. amaryllis</i> , <i>M. trimaculata</i> , <i>A. cynone cynone</i> , <i>G. acantha</i> , <i>O. genoveva</i> .	9
Goolwa "CP"	F4	✓	Thr. + C	✓	NPWS (un dedic.)	Fair condition, but highly significant as major breeding habitat for <i>Anisynta cynone cynone</i> . Also present <i>Hesperilla donnyssa diluta</i> , <i>Theclinesstes albocincta</i> .	<i>H. chrysotricha</i> , <i>J. icilius</i> , <i>O. amaryllis</i> .	9
Deep Creek CP						Extensive varied habitat with valuable hostplant patches. Presence of <i>H. chrysotricha</i> , <i>H. idothea</i> , <i>G. acanthi</i> .	Possible to rehabilitate and reintroduce <i>Ogyris otanes</i> , <i>Ogyris idmo</i> , <i>O. amaryllis</i> , <i>M. trimaculata</i> , <i>O. genoveva</i> .	9
Sellicks Cliffs Coastal Reserve	F27	✓	C	✓	Coastal reserve	Degraded coastal heath	<i>A. cynone gracilis</i> .	7
Carrickalinga Beach	F25	✓	C	-	Coastal reserve	Dunes in poor condition	<i>J. icilius</i> , <i>T. albocincta</i> , <i>A. cynone gracilis</i> , <i>O. amaryllis</i>	7
Normanville Dunes	F24, F23	✓✓	Thr. + C	✓	Coastal reserve	Dunes in good condition but degraded by <i>Acacia sophorae</i> . Presence of <i>J. icilus</i>	<i>T. albocincta</i> , <i>A. cynone gracilis</i> , <i>O. amaryllis</i> , <i>O. otanes</i> .	9
Second Valley, sea cliffs	F22	✓	C	✓	Coastal reserve	Coastal cliff heath, degraded by grazing pressure.	<i>A. cynone gracilis</i> , <i>T. albocincta</i> .	7
Rapid Bay cliffs	F21	✓	C	✓	Coastal reserve	Cliffs provide habitat, cliff tops degraded by grazing pressure.	<i>A. cynone gracilis</i> , <i>T. albocincta</i> .	7
Newland Head cliffs to Kings Head and the Bluff	F14, F13	✓	-	-	Coastal reserve	Coastal heath, sparse food plants; but many records of butterfly species in adjacent conservation park.	<i>A. atralba</i> <i>M. trimaculata</i> .	7
Hindmarsh River Mouth, coastal reserve	F10	✓	C	(✓)	Coastal reserve	Significant site with rare foodplants.	<i>T. albocincta</i> , <i>H. donnyssa diluta</i> .	7
Dunes: Surfers to Goolwa	F5, F6	✓	C	✓	Coastal reserve	Coastal dunes in mixed condition and under great pressure.	<i>T. albocincta</i> , <i>A. cynone cynone</i> , <i>O. amaryllis</i> .	5
Sir Richard Peninsula	F2	✓	C		SA Water reserve	Extensive barrier dune mass and fringing swamp, extensive areas of exotics.	<i>T. albocincta</i> , <i>A. cynone cynone</i> <i>O amaryllis</i> .	7
Hindmarsh Island, Murray Mouth Lookout Reserve	F1	✓	C	✓	Coastal reserve	Sand dune, with potential for supporting introduced foodplants	<i>A. cynone cynone</i> .	5
Victor Harbor, Inman River Floodplain	F12	✓	C	✓	Council Reserve	Extensive well watered reserve, with considerable scope for introduced foodplants. Many old records of threatened species.	<i>H. chrysotricha</i> , <i>T. albocincta</i> , <i>G. acantha</i> , <i>A. cynone cynone</i> .	5
Goolwa Golf Course & Heritage Areas	F4	✓	Thr. + C	✓	Private, part Heritage listed	Significant woodland and heath site with <i>A. cynone cynone</i> , <i>T. albocincta</i> , <i>O. amaryllis</i> , <i>H. donnyssa diluta</i> .	<i>M. trimaculata</i> .	9
Myponga River Gorge and Estuary	F27	✓	Thr. + C	(✓)	Private, SA Water	Estuarine system is rare, but considerably degraded by sedimentation and altered flow regime. <i>O. genoveva</i> , <i>O. amaryllis</i> , <i>G. acantha</i> , <i>H. chrysotricha</i> .	<i>H. donnyssa diluta</i> , <i>A. cynone gracilis</i> , <i>J. icilius</i> .	9
Carrickalinga North, Whitelaw Road	F26	✓	Thr.	(✓)	Private & coastal reserve	<i>Gahnia lanigera</i> heath is one of two sites in region: presence of <i>Antipodia atralba</i> .		9
Carrickalinga North Canyon	F26	✓	C	-	Private & coastal reserve	<i>Gahnia lanigera</i> heath and <i>E. diversifolia</i> heath.	<i>T. albocincta</i> .	9
Yankalilla, Bungala R & Hay Flat Road Creek	F24	✓	C	(✓)	Private & council reserve	Degraded wetland.	<i>H. chrysotricha</i> , <i>G. acantha</i> .	1
Yankalilla, Little Gorge	F23	✓	-	-	Private	Degraded through grazing.		3
Yankalilla River (lower fraction)	F23	✓	Thr. + C	(✓)	Private	Degraded wetland and valley woodland, but with numerous	Has considerable potential.	8

only within boundary)						native vegetation remnants, not yet developed for housing. Presence of very large <i>O. olane</i> colony		
Lady Bay Sea Cliffs	F23	✓	-	✓	Private	Coastal heath on very steep cliff slopes; vegetation on grazed tops virtually destroyed.		3
Lady Bay					Private & coastal reserve	Coastal heath on degraded sand plain.	<i>A. cynone gracilis</i> , <i>T. albocincta</i> .	7
Wirrina Cove Resort & Anacotilla River	F22	✓	C	✓	Private & coastal reserve	Several and varied remnants; only cliff and coastal heath in good condition.	<i>A. cynone gracilis</i> , <i>T. albocincta</i> , <i>O. amaryllis</i> .	3
Cape Jervis, Lands End		✓	R		Private & coastal reserve	<i>Gahnia lanigera</i> heath, southernmost known in region; <i>A. atralba</i> present	<i>T. albocincta</i> , <i>M. trimaculata</i> .	9
Second Valley, Parananacooka River	F22	✓	C	✓	Private & Council reserve	Clearing and grazing have left the valley in poor condition.	<i>H. chrysotricha</i> .	1
Rapid Bay, Yattogalinga River	F21	✓	C	✓	Private & Council reserve	Clearing and grazing have left the valley in poor condition.	<i>H. chrysotricha</i> .	1
Victor Harbor, Lower Reaches of the Hindmarsh River	F11	✓	C	(✓)	Private	Degraded. Considerable revegetation needed to establish habitat.	<i>H. chrysotricha</i> , <i>H. idothea</i> , <i>G. acantha</i> .	1
Port Elliot, Watsons Gap swamp	F10	ü	Thr.	ü	Road reserve & private	A large remnant of <i>Gahnia filum</i> marshland on south side of road – a very significant feature.	<i>A. cynone cynone</i> , <i>H. donnysa diluta</i> .	8
Hindmarsh Island, Monument Road marshland	F1	✓	-	✓	Private	Saline chenopod grassland suitable for vulnerable skipper <i>Anisynta cynone cynone</i> .	<i>A. cynone cynone</i> , <i>H. donnysa diluta</i> .	8
Hindmarsh Island, Mundoo Channel & Boggy Creek	F1	✓	-	-	Private	Significant melaleuca stands and sedge swamp in good condition.	<i>H. donnysa diluta</i> .	5

Values on GIS maps

- 9 – Unique, extensive remnant butterfly habitat containing breeding colonies of threatened butterflies. Highly significant, extensive butterfly habitat (rare foodplants or breeding habitat); containing rare or locally significant butterfly species.
- 8 – Highly significant, extensive butterfly habitat, suitable for additional revegetation with foodplants for threatened butterfly species and / or reintroduction of threatened butterfly species
- 7 – Highly significant, extensive butterfly habitat, suffering degradation; suitable for additional revegetation with foodplants for rare or locally significant butterfly species and / or reintroduction of rare or locally significant butterfly species.
- 5 – Significant habitat in mixed to poor condition, but with considerable potential for threatened species
- 3 – Habitat, with significant patches, with possible potential for threatened species
- 1 – Habitat with potential for threatened species following considerable restoration.

Appendix 4B – Region Statistics

Project statistics for Southern Fleurieu Region

Length of coast = 156.5 km along the mainland

5.7 km of islands

Area (ha) of defined coastal zone = 8824 ha [6645 ha in Adelaide & Mt Lofty Ranges NRM (0.69% of Total NRM Region) & 2179 ha in SA Murray Darling Basin NRM(0.04% of Total NRM Region)]

Area (ha. + % of total) of remnant vegetation blocks = 2549 ha (29 % of total Coastal boundary area). 1654 ha in Adelaide & Mt Lofty Ranges NRM & 895 ha in SA Murray Darling Basin NRM

Area of NPWS reserves: Total area = 1943.5 ha approx

Which is approx 22 % of total coastal boundary area.

National Parks (ha. + % of total) = 682 ha (7.8 % of total area)

Conservation Parks (ha. + % of total) = 1236 ha (14.1 % of total area)

Recreational Reserves (ha. + % of total) = 26 ha (0.3 % of total area)

Areas of Crownland: Total Area =1400 ha approx

Which is approx 16 % of total coastal boundary area.

Area of Crown Land Act Reserves. (ha. + % of total) = 924 ha (10.8 % of total area)

Area of Crown Leasehold (ha. + % of total) = 21 ha (0.2 % of total area)

Area of Unallotted Crown Land (ha. + % of total) = 456 ha (5.2 % of total area)

Area subject to Heritage Agreements (ha. + % of total) = 10 ha (0.1 % of total area)

Appendix 5A – Reptile and Amphibian Species of the Southern Fleurieu Coastal Zone

COMMON NAME	SPECIES	CONSERVATION STATUS (SA)	LEVEL OF DEPENDENCY ON COAST	ABUNDANCE	REGIONAL COASTAL DISTRIBUTION
Adelaide Snake-lizard	<i>Delma malleri</i>		Not Dependent	Common	Restricted
Black Tiger Snake	<i>Notechis ater</i>				
Bougainville's Skink	<i>Lerista bougainvillii</i>		Not Dependent	Common	Widespread
Brown Toadlet	<i>Pseudophryne bibronii</i>		Not Dependent	Uncommon	Widespread
Brown Tree Frog	<i>Litoria ewingii</i>		Not Dependent	Common	Widespread
Bull Frog	<i>Limnodynastes dumerili</i>		Not Dependent	Common	Widespread
Common Froglet	<i>Crinia signifera</i>		Not Dependent	Common	Widespread
Common Long-necked Tortoise	<i>Chelodina longicollis</i>		Not Dependent		
Common Scaly-foot	<i>Pygopus lepidopus</i>		Not Dependent	Uncommon	Widespread
Cunningham's Skink	<i>Egernia cunninghami</i>	Vulnerable	Partially Dependent	Rare	Restricted
Dwarf Skink	<i>Menetia greyii</i>		Not Dependent	Common	Restricted
Eastern Bearded Dragon	<i>Pogona barbata</i>		Not Dependent	Common	Widespread
Eastern Blue-tounge	<i>Tiliqua scincoides</i>		Not Dependent	Common	Widespread
Eastern Brown Snake	<i>Pseudonaja textilis</i>		Not Dependent	Common	Widespread
Eastern Three-lined Skink	<i>Bassiana duperreyi</i>		Not Dependent	Common	Widespread
Eastern Tiger Snake	<i>Notechis scutatus</i>		Not Dependent	Uncommon	Restricted
Four-toed Earless Skink	<i>Hemiergis peronii</i>		Partially Dependent	Uncommon	Restricted
Garden Skink	<i>Lampropholis guichenoti</i>		Not Dependent	Common	Widespread
Heath Goanna	<i>Varanus rosenbergi</i>	Rare	Partially Dependent	Rare	Restricted
Lined Worm Lizard	<i>Aprasia striolata</i>		Not Dependent	Common	Widespread
Little Whip Snake	<i>Suta flagellum</i>		Not Dependent	Uncommon	Widespread
Loggerhead Turtle	<i>Caretta caretta</i>		Not Dependent		
Mallee Black-headed Snake	<i>Suta spectabilis</i>		Not Dependent	Uncommon	Restricted
Mallee Snake-eye	<i>Morethia obscura</i>		Partially Dependent	Common	Restricted
Marbled Gecko	<i>Christinus marmoratus</i>		Not Dependent	Common	Widespread
Olive Snake-lizard	<i>Delma inornata</i>	Rare	Not Dependent	Uncommon	Restricted
Painted Dragon	<i>Ctenophorus pictus</i>		Dependent	Common	Restricted
Painted Frog	<i>Neobatrachus pictus</i>		Not Dependent	Common	Widespread
Red-bellied Black Snake	<i>Pseudechis porphyriacus</i>		Not Dependent	Common	Widespread
Sleepy Lizard	<i>Tiliqua rugosa</i>		Not Dependent	Common	Widespread
Southern Grass Skink	<i>Pseudemoia entrecasteauxii</i>		Not Dependent	Common	Restricted
Southern Four-toed Slider	<i>Lerista dorsalis</i>		Not Dependent	Uncommon	Restricted
Spotted Grass Frog	<i>Limnodynastes tasmaniensis</i>		Not Dependent	Common	Widespread
Tawny Dragon	<i>Ctenophorus decresii</i>		Not Dependent	Common	Widespread
Three-toed Earless Skink	<i>Hemiergis decresiensis</i>		Not Dependent	Common	Widespread
White's Skink	<i>Egernia whitii</i>		Not Dependent	Common	Widespread
Yellow-bellied Water Skink	<i>Eulamprus heatwolei</i>	Rare	Not Dependent	Common	Restricted

Appendix 5B – Reptile & Amphibian Species Distribution in the Southern Fleurieu

Common Name	Species	Habitat Occupies	Cell Recorded	Cells Species May Occupy
Adelaide Snake-lizard	<i>Delma mollerii</i>	Woodland, Coastal Shrubland, Shrubland, Grassland		F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Black Tiger Snake	<i>Notechis ater</i>		F1	
Bougainville's Skink	<i>Lerista bougainvillii</i>	Woodland, Coastal Shrubland, Shrubland, Grassland	F15	F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Brown Toadlet	<i>Pseudophryne bibronii</i>			F1, F2, F10, F11, F12, F14, F16, F17, F18, F19, F20, F22, F23, F24, F25
Brown Tree Frog	<i>Litoria ewingii</i>	Woodland, Shrubland, Grassland, Sedgeland	F20	F1, F2, F4, F5, F8, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F22, F23, F24, F25, F26, F27
Bull Frog	<i>Limnodynastes dumerilii</i>	Woodland, Shrubland, Grassland, Sedgeland		F1, F2, F4, F5, F8, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F22, F23, F24, F25, F26, F27
Common Froglet	<i>Crinia signifera</i>	Woodland, Shrubland, Grassland, Sedgeland		F1, F2, F4, F5, F8, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F22, F23, F24, F25, F26, F27
Common Long-necked Tortoise	<i>Chelodina longicollis</i>	Watercourses		F1, F2, F3, F4, F5, F7, F9, F10, F11, F12, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Common Scaly-foot	<i>Pygopus lepidopus</i>	Woodland		F11, F12, F14, F16, F17, F18, F19, F20, F22, F23, F24, F25
Cunningham's Skink	<i>Egernia cunninghami</i>	Coastal Cliffs	F14, F18	F12, F13, F15, F16, F17, F19, F20, F21, F22, F23
Dwarf Skink	<i>Menetia greyii</i>	Woodland, Coastal Shrubland		F2, F3, F4, F5, F9, F10, F11, F12, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26
Eastern Bearded Dragon	<i>Pogona barbata</i>	Woodland, Coastal Shrubland, Shrubland, Grassland	F15	F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Eastern Blue-tounge	<i>Tiliqua scincoides</i>	Woodland, Coastal Shrubland, Shrubland, Grassland	F12	F1, F2, F3, F4, F5, F8, F9, F10, F11, F13, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Eastern Brown Snake	<i>Pseudonaja textilis</i>	Woodland, Coastal Shrubland, Shrubland, Grassland	F7	F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Eastern Three-lined Skink	<i>Bassiana duperreyi</i>	Woodland, Shrubland		F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Eastern Tiger Snake	<i>Notechis scutatus</i>	Sedgeland		F1, F2, F3, F4, F5, F7, F9, F10, F11, F12, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Four-toed Earless Skink	<i>Hemiergis peronii</i>	Coastal Shrubland	F14, F15	F2, F3, F4, F5, F9, F10, F18, F19, F20, F21, F22, F23, F24, F25, F26
Garden Skink	<i>Lampropholis guichenoti</i>	Woodland	F15, F18	F11, F12, F14, F17, F19, F20, F22, F23, F24, F25
Heath Goanna	<i>Varanus rosenbergi</i>	Woodland, Shrubland, Coastal Shrubland		F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Lined Worm Lizard	<i>Aprasia striolata</i>	Woodland, Shrubland		F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Little Whip Snake	<i>Suta flagellum</i>	Woodland, Shrubland	F8	F1, F2, F4, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F22, F23, F24, F25, F27
Loggerhead Turtle	<i>Caretta caretta</i>		F20	
Mallee Black-headed Snake	<i>Suta spectabilis</i>	Woodland, Shrubland		F1, F2, F4, F8, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F22, F23, F24, F25, F27
Mallee Snake-eye	<i>Morethia obscura</i>	Woodland	F15	F11, F12, F13, F16, F17, F18, F19, F20, F22, F23, F24, F25
Marbled Gecko	<i>Christinus marmoratus</i>	Woodland, Shrubland	F14, F15, F18	F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F16, F17, F19, F20, F21, F22, F23, F24, F25, F26, F27
Olive Snake-lizard	<i>Delma inornata</i>	Woodland, Grassland		F1, F2, F11, F12, F14, F16, F17, F18, F19, F20, F22, F23, F24, F25
Painted Dragon	<i>Ctenophorus pictus</i>	Coastal Shrubland		F2, F3, F4, F5, F6, F7, F8, F9, F10, F11, F12, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Painted Frog	<i>Neobatrachus pictus</i>	Woodland, Sedgeland, Grassland, Coastal Shrubland, Sedgeland		F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Red-bellied Black Snake	<i>Pseudechis porphyriacus</i>	Woodland, Coastal Shrubland, Shrubland, Grassland		F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Sleepy Lizard	<i>Tiliqua rugosa</i>	Woodland, Coastal Shrubland, Shrubland, Grassland	F15	F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Southern Grass Skink	<i>Pseudemoia entrecasteauxii</i>	Woodland, Shrubland	F1	F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27
Southern Four-toed Slider	<i>Lerista dorsalis</i>	Woodland, Coastal Shrubland		F2, F3, F4, F5, F9, F10, F11, F12, F14, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26
Spotted Grass Frog	<i>Limnodynastes tasmaniensis</i>	Woodland, Shrubland, Grassland, Sedgeland		F1, F2, F4, F5, F8, F10, F11, F12, F13, F14, F15, F16, F17, F18, F19, F20, F22, F23, F24, F25, F26, F27
Tawny Dragon	<i>Ctenophorus decresii</i>	Woodland	F16, F18	F11, F12, F14, F17, F19, F20, F22, F23, F24, F25
Three-toed Earless Skink	<i>Hemiergis decresiensis</i>	Woodland, Shrubland	F18	F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F14, F15, F16, F17, F19, F20, F21, F22, F23, F24, F25, F26, F27
White's Skink	<i>Egernia whitii</i>	Woodland, Coastal Shrubland, Shrubland, Grassland	F14, F15, F18	F1, F2, F3, F4, F5, F8, F9, F10, F11, F12, F13, F16, F17, F19, F20, F21, F22, F23, F24, F25, F26, F27
Yellow-bellied Water Skink	<i>Eulamprus heatwolei</i>	Woodland, Shrubland		F1, F2, F3, F4, F5, F7, F9, F10, F11, F12, F14, F15, F16, F17, F18, F19, F20, F21, F22, F23, F24, F25, F26, F27

Appendix 6 – Combined Floral List Threatened Species

NSXCODE	Is Current	Is Indigenous	Species Name	Common Name	EPBC Act Status	NPWSA Act Status	Regional Status
A00108	Y		<i>Triglochin trichophorum</i>				K
A00124	Y		<i>Austrostipa acrocliata</i>	Graceful Spear-grass			R

Appendix 9 – Indigenous Plant Species

Ron Taylor (Field Botanist)

# of Records	Species	Species Number	NSX CODE	Is Current (BSB Flora List)	Is Indigenous (BSB Flora List)	Common Name	EPBE Act Status Code (BSB Flora List)	NPWSA Act Status Code (BSB Flora List)
18	<i>Acacia cupularis</i>	11426	C05237	Y		Cup Wattle		
3	<i>Acacia cyclops</i>	3268	Q01556	Y		Western Coastal Wattle		
1	<i>Acacia dodonaeifolia</i>	3276	K01561	Y		Hop-bush Wattle		R
1	<i>Acacia ligulata</i>	11427	E05238	Y		Umbrella Bush		
23	<i>Acacia longifolia</i> ssp. <i>sophorae</i>	13054	K03753	Y		Coastal Wattle		
3	<i>Acacia myrtifolia</i>	13791	K06209	Y		Narrow-leaf Myrtle Wattle		
1	<i>Acacia nematophylla</i>	8639	W04611	Y		Coast Wallowa		
2	<i>Acacia notabilis</i>	3337	C01593	Y		Notable Wattle		
11	<i>Acacia paradoxa</i>	3344	M01598	Y		Kangaroo Thorn		
8	<i>Acacia pycnantha</i>	3356	C01605	Y		Golden Wattle		
4	<i>Acacia retinodes</i> var. <i>uncifolia</i>	7311	U03758	Y		Coast Silver Wattle		
2	<i>Acacia rupicola</i>	3369	E01614	Y		Rock Wattle		
1	<i>Acacia</i> sp. Swamp (N.M.Smith 3022)	13335	M05426	Y		Swamp Wattle		
4	<i>Acacia spinescens</i>	3377	M01618	Y		Spiny Wattle		
1	<i>Acacia verniciflua</i>	3391	Z01627	Y		Varnish Wattle		
2	<i>Acacia verticillata</i> ssp. <i>ovoidea</i>	13046	Q01628	Y		Prickly Moses		
6	<i>Acaena echinata</i>	13207	U05842	Y		Sheep's Burr		
5	<i>Acaena novae-zelandiae</i>	9070	W04867	Y		Biddy-biddy		
1	<i>Acaena ovina</i>	13208	W05843	Y		Downy Sheep's Burr		
3	<i>Acaena</i> sp.	9450	Z10003	Y		Sheep's Burr		
2	<i>Acaena</i> X <i>anserovina</i>	13825	S01513	Y		Hybrid Burr		
2	<i>Acianthus caudatus</i>	13067	G05783	Y		Mayfly Orchid		
2	<i>Acianthus pusillus</i>	1538	Q00764	Y		Mosquito Orchid		
1	<i>Acrotriche affinis</i>	4941	E02406	Y		Ridged Ground-berry		
3	<i>Acrotriche cordata</i>	4943	G02407	Y		Blunt-leaf Ground-berry		
6	<i>Acrotriche patula</i>	4953	W02411	Y		Prickly Ground-berry		
1	<i>Acrotriche serrulata</i>	1236	G00583	Y		Cushion Ground-berry		
12	<i>Actites megalocarpa</i>	12962	Q03552	Y		Coast Sow-thistle		
2	<i>Adenanthos terminalis</i>	1737	Q00896	Y		Yellow Gland-flower		
3	<i>Adiantum aethiopicum</i>	47	W00035	Y		Common Maiden-hair		
8	<i>Adriana quadripartita</i>	12814	M05718	Y		Coast Bitter-bush		
3	<i>Allocasuarina muelleriana</i> ssp. <i>muelleriana</i>	7068	W03627	Y		Common Oak-bush		
2	<i>Allocasuarina pusilla</i>	7078	Q03632	Y		Dwarf Oak-bush		
1	<i>Allocasuarina</i> sp.	9481	E10034	Y		Sheoak/Oak-bush		
2	<i>Allocasuarina striata</i>	7083	W03635	Y		Stalked Oak-bush		
16	<i>Allocasuarina verticillata</i>	7085	A03636	Y		Drooping Sheoak		
6	<i>Alyxia buxifolia</i>	5106	C02481	Y		Sea Box		
1	<i>Amphipogon strictus</i> var. <i>setifer</i>	645	E00302	Y		Spreading Grey-beard Grass		
1	<i>Amyema miquelii</i>	1882	A00960	Y		Box Mistletoe		
1	<i>Amyema preissii</i>	1896	G00963	Y		Wire-leaf Mistletoe		
3	<i>Angianthus preissianus</i>	5840	M02946	Y		Salt Angianthus		
1	<i>Anogramma leptophylla</i>	49	C00037	Y		Annual Fern		R
1	<i>Apalochlamys spectabilis</i>	5960	S03017	Y		Showy Firebush		
2	<i>Aphanes australiana</i>	14114	Y06372	Y		Australian Piert		
10	<i>Apium annuum</i>	7425	W03811	Y		Annual Celery		
9	<i>Apium prostratum</i> var. <i>filiforme</i>	13073	C03813	Y		Native Celery		
6	<i>Apium prostratum</i> var. <i>prostratum</i>	13074	Y02352	Y		Native Celery		

1	<i>Apodasmia brownii</i>	12963	Z00595	Y		Coarse Twine-rush		
1	<i>Argentipallium obtusifolium</i>	6201	W03159	Y		Blunt Everlasting		
3	<i>Arthropodium fimbriatum</i>	8503	Y04528	Y		Nodding Vanilla-lily		
7	<i>Arthropodium strictum</i>	8581	A04576	Y		Common Vanilla-lily		
2	<i>Asperula conferta</i>	5124	G02491	Y		Common Woodruff		
1	<i>Asterolasia muricata</i>	7783	A04020	Y		Rough Star-bush		R
2	<i>Astroloma conostephioides</i>	4955	A02412	Y		Flame Heath

5	<i>Atriplex australasica</i>	2465	U01222	Y				R
21	<i>Atriplex cinerea</i>	2256	Z01123	Y		Coast Saltbush		
3	<i>Atriplex nummularia</i> ssp. <i>nummularia</i>	2299	W01143	Y		Old-man Saltbush		
6	<i>Atriplex paludosa</i> ssp. <i>cordata</i>	2269	M01130	Y		Marsh Saltbush		
4	<i>Atriplex paludosa</i> ssp. <i>paludosa</i>	2301	A01144	Y		Marsh Saltbush		
10	<i>Atriplex semibaccata</i>	2310	W01151	Y		Berry Saltbush		
1	<i>Atriplex stipitata</i>	2316	E01154	Y		Bitter Saltbush		
4	<i>Atriplex suberecta</i>	2317	G01155	Y		Lagoon Saltbush		
5	<i>Atriplex vesicaria</i> ssp.	10768	Z20027	Y		Bladder Saltbush		
3	<i>Austrodanthonia auriculata</i>	13173	Q00164	Y		Lobed Wallaby-grass		
16	<i>Austrodanthonia caespitosa</i>	13174	S00165	Y		Common Wallaby-grass		
1	<i>Austrodanthonia eriantha</i>	13176	C00169	Y		Hill Wallaby-grass		
2	<i>Austrodanthonia fulva</i>	13177	Q00172	Y		Leafy Wallaby-grass		
2	<i>Austrodanthonia geniculata</i>	13178	M00170	Y		Knead Wallaby-grass		
1	<i>Austrodanthonia pilosa</i>	13200	C05837	Y		Velvet Wallaby-grass		
6	<i>Austrodanthonia racemosa</i> var. <i>racemosa</i>	13181	U00174	Y		Slender Wallaby-grass		
5	<i>Austrodanthonia setacea</i>	13183	C00177	Y		Small-flower Wallaby-grass		
10	<i>Austrodanthonia</i> sp.	13741	U06166	Y				
2	<i>Austrofestuca littoralis</i>	498	K00233	Y		Coast Fescue		
3	<i>Austrostipa acrocliata</i>	12881	A00124	Y		Graceful Spear-grass		
3	<i>Austrostipa curticomma</i>	12884	E00134	Y		Short-crest Spear-grass		
1	<i>Austrostipa drummondii</i>	12886	C00133	Y		Cottony Spear-grass		
1	<i>Austrostipa echinata</i>	12887	U03686	Y		Spiny Spear-grass		R
1	<i>Austrostipa elegantissima</i>	12888	Y00136	Y		Feather Spear-grass		
1	<i>Austrostipa exilis</i>	12889	C00141	Y		Heath Spear-grass		
21	<i>Austrostipa flavescens</i>	12891	Q03844	Y		Coast Spear-grass		
1	<i>Austrostipa hemipogon</i>	12893	M00138	Y		Half-beard Spear-grass		
1	<i>Austrostipa macalpinei</i>	12895	Z00139	Y		Annual Spear-grass		
3	<i>Austrostipa mollis</i>	12896	U00130	Y		Soft Spear-grass		
2	<i>Austrostipa mundula</i>	12899	Y00144	Y		Neat Spear-grass		
3	<i>Austrostipa nitida</i>	12900	K00145	Y		Balcarra Spear-grass		
3	<i>Austrostipa nodosa</i>	12901	M00146	Y		Tall Spear-grass		
1	<i>Austrostipa oligostachya</i>	12903	Q02144	Y		Fine-head Spear-grass		E
1	<i>Austrostipa platychaeta</i>	12906	Q00148	Y		Flat-awn Spear-grass		
2	<i>Austrostipa puberula</i>	12908	E00150	Y		Fine-hairy Spear-grass		R
7	<i>Austrostipa scabra</i> ssp. <i>falcata</i>	12910	S04769	Y		Slender Spear-grass		
1	<i>Austrostipa scabra</i> ssp. <i>scabra</i>	12911	G03911	Y		Rough Spear-grass		
1	<i>Austrostipa semibarbata</i>	12912	Y00152	Y		Fibrous Spear-grass		
2	<i>Austrostipa setacea</i>	12913	K00153	Y		Corkscrew Spear-grass		
7	<i>Austrostipa</i> sp.	13072	E10950	Y		Spear-grass		
9	<i>Austrostipa stipoides</i>	12914	M00154	Y		Coast Spear-grass		
1	<i>Avicennia marina</i> ssp. <i>marina</i>	13075	Z02575	Y		Grey Mangrove		
2	<i>Baeckea crassifolia</i>	4479	U02198	Y		Desert Baeckea		
4	<i>Banksia marginata</i>	1739	S00897	Y		Silver Banksia		
2	<i>Banksia ornata</i>	1741	U00898	Y		Desert Banksia		

10	<i>Baumea juncea</i>	7398	S03801	Y		Bare Twig-rush		
7	<i>Beyeria lechenaultii</i>	3947	Y01916	Y		Pale Turpentine Bush		
6	<i>Billardiera cymosa</i> ssp.	14158	W06415	Y				
1	<i>Billardiera cymosa</i> ssp. <i>cymosa</i>	14084	A06360	Y		Sweet Apple-berry		
1	<i>Billardiera uniflora</i>	3149	C01497	Y		One-flower Apple-berry		
1	<i>Billardiera versicolor</i>	3150	E01498	Y		Yellow-flower Apple-berry		
1	<i>Blennospora drummondii</i>	7074	M03630	Y		Dwarf Button-flower		
2	<i>Boerhavia dominii</i>	7855	U04070	Y		Tar-vine		
3	<i>Bolboschoenus caldwellii</i>	1212	Y00576	Y		Salt Club-rush		
1	<i>Boronia coerulescens</i> ssp. <i>coerulescens</i>	9185	A04920	Y		Blue Boronia		
2	<i>Boronia filifolia</i>	4025	A01956	Y		Slender Boronia		
1	<i>Bossiaea prostrata</i>	3421	W01639	Y		Creeping Bossiaea		
2	<i>Brachyloma ericoides</i> ssp. <i>ericoides</i>	4970	Y02416	Y		Brush Heath		
1	<i>Brachyscome cuneifolia</i>	12930	E03258	Y		Wedge-leaf Daisy		
1	<i>Brachyscome goniocarpa</i>	12936	S02973	Y		Dwarf Daisy		
1	<i>Brachyscome lineariloba</i>	12939	E02978	Y		Hard-head Daisy		
2	<i>Brachyscome perpusilla</i>	12942	G04455	Y		Tiny Daisy		
1	<i>Bromus arenarius</i>	444	W00211	Y		Sand Brome		
3	<i>Bulbine bulbosa</i>	1373	Q00668	Y		Bulbine-lily		
2	<i>Bulbine semibarbata</i>	1376	S00669	Y		Small Leek-lily		
3	<i>Burchardia umbellata</i>	1379	E00670	Y		Milkmaids

Appendix 10 – Indigenous Plant Species Cell

Plant list for Coastal strip from Chappell Road to Mills Rd Sugars Beach

* = Introduced species

Conservation rating →		AUS	SA	SL
	<i>Acacia longifolia</i> ssp. <i>sophorae</i>			
	<i>Acaena echinata</i>			
	* <i>Ammophila arenaria</i>			
	<i>Apium prostratum</i> var. <i>prostratum</i>			
	* <i>Atriplex prostrata</i>			
	<i>Austrostipa stipoides</i>			R
	* <i>Cakile maritima</i> ssp. <i>maritima</i>			
	<i>Clematis microphylla</i> var. <i>microphylla</i>			
	* <i>Conyza bonariensis</i>			
	<i>Dianella brevicaulis</i>			
	* <i>Ehrharta villosa</i> var. <i>maxima</i>			
	<i>Enchylaena tomentosa</i> var. <i>tomentosa</i>			
	* <i>Euphorbia paralias</i>			
	* <i>Euphorbia terracina</i>			
	<i>Frankenia pauciflora</i> var. <i>gunnii</i>			
	<i>Geranium potentilloides</i> var. <i>potentilloides</i>			Q
	<i>Isolepis nodosa</i>			
	<i>Juncus kraussii</i>			
	* <i>Lactuca saligna</i>			
	* <i>Lagurus ovatus</i>			
	* <i>Limonium binervosum</i>			
	* <i>Lycium ferocissimum</i>			
	<i>Muehlenbeckia florulenta</i>			R
	<i>Muehlenbeckia gunnii</i>			
	<i>Myoporum insulare</i>			
	<i>Olearia axillaris</i>			
	* <i>Oxalis pes-caprae</i>			
	* <i>Paspalum vaginatum</i>			
	<i>Pelargonium australe</i>			U
	<i>Pimelea serpyllifolia</i> ssp. <i>serpyllifolia</i>			
	* <i>Plantago coronopus</i> ssp. <i>coronopus</i>			
	* <i>Plantago lanceolata</i> var. <i>lanceolata</i>			
	<i>Poa poiiformis</i> var. <i>poiiformis</i>			
	* <i>Reichardia tingitana</i>			
	<i>Rhagodia candolleana</i> ssp. <i>candolleana</i>			
	<i>Samolus repens</i>			U
	<i>Sarcocornia quinqueflora</i>			
	* <i>Sonchus oleraceus</i>			
	<i>Spergularia</i> sp. <i>Butchers Gap</i> (P.Gibbons 234)			
	<i>Suaeda australis</i>			
	<i>Tetragonia implexicoma</i>			
	* <i>Thinopyrum junceiforme</i>			
	<i>Threlkeldia diffusa</i>			
	<i>Wilsonia backhousei</i>			V

Summary:

Regional Conservation Status

SL	
Q	1
R	2
U	2
V	1

Indigenous species: 26
 Alien species: 18
 Total number of species: 44

Southern Lofty

Identification code: CR 2 SB
 Surveyor/Source: Ron Taylor
 Survey dates: 5/06
 Vegetation Association: Very open *Acacia longifolia* ssp. *sophorae* shrubland
 Location: Coastal strip from Chappell road to Mills Rd Sugars Beach incl dunes
 Notes: Spring species missing due to timing
 Part Cell 1

Plant list for Mundoo channel north shoreline

* = Introduced species

Conservation rating →		AUS	SA	SL
* <i>Arctotheca calendula</i>	Cape Weed			
<i>Atriplex paludosa</i> ssp. <i>paludosa</i>	Marsh Saltbush			K
<i>Atriplex semibaccata</i>	Berry Saltbush			
<i>Austrostipa stipoides</i>	Coast Spear-grass			R
* <i>Avena barbata</i>	Bearded Oat			
* <i>Bromus diandrus</i>	Great Brome			
* <i>Cynodon dactylon</i> var. <i>dactylon</i>	Couch			
<i>Distichlis distichophylla</i>	Emu-grass			
<i>Enchylaena tomentosa</i> var. <i>tormentosa</i>	Ruby Saltbush			
<i>Frankenia pauciflora</i> var. <i>gunnii</i>	Southern Sea-heath			
* <i>Galenia pubescens</i> var. <i>pubescens</i>	Coastal Galenia			
<i>Halosarcia pergranulata</i> ssp. <i>pergranulata</i>	Black-seed Samphire			
* <i>Heliotropium europaeum</i>	Common Heliotrope			
* <i>Hordeum marinum</i>	Sea Barley-grass			
<i>Juncus kraussii</i>	Sea Rush			
* <i>Lagurus ovatus</i>	Hare's Tail Grass			
* <i>Limonium binervosum</i>	Dwarf Sea-lavender			
<i>Maireana oppositifolia</i>	Salt Bluebush			
* <i>Malva parviflora</i>	Small-flower Marshmallow			
* <i>Marrubium vulgare</i>	Horehound

Appendix 13 – Government Roles, Policies and Legislation Relevant to this Project

Commonwealth Government Responsibilities

The Commonwealth has, under the Australian Constitution, few powers directly related to environmental management. However, it has an important role in planning and management through its indirect, financial and funding powers, by leading national policy setting in a range of related areas, and through its influence, particularly through the Council of Australian Governments (COAG). The changing overall patterns of Commonwealth and State government relations are especially salient to the actual role played by the Commonwealth in environmental management.

The Heads of Government agreement in 1999 has the potential to make significant changes to Commonwealth – State relations over the environment. The resulting Act, Environment Protection and Biodiversity Conservation 1999 (EPBC), came into effect on 16/7/00, replacing a number of Commonwealth statutes, including:

- *Environmental Protection (Impact of Proposals) Act 1974*
- *National Parks and Wildlife Conservation Act 1975*
- *World Heritage Properties Conservation Act 1983*
- *Endangered Species Act 1992*
- *Whale Protection Act 1990*

Under the *Environment Protection and Biodiversity Conservation Act 1999*, an action will require approval from the Federal Environment Minister if:

the action has, will have, or is likely to have a significant impact on a matter of national environmental significance*; and the action is not subject to one of the exceptions identified below.

- The matters of national environmental significance are:
- World Heritage properties,
- Ramsar wetlands of international importance,
- listed threatened species and communities,
- migratory species protected under international agreements,
- nuclear actions, and
- the Commonwealth marine environment.

Other matters could be added to this list by regulation. Actions affecting Commonwealth lands may also require approval.

Proponents of actions can determine if there are likely to be matters of national environmental significance located in the area of the proposed action by using a search tool on the Commonwealth DEH website.

The search tool is located on the Department's web site:

<http://www.deh.gov.au/erin/ert/epbc/index.html>

A list of National Heritage places and a map showing their general location, can be found at: <http://www.deh.gov.au/heritage/national/index.html>

A list of World Heritage properties and a map showing their general location, can

be found at: <http://www.deh.gov.au/heritage/national/index.html>

A list of Australia's Ramsar Wetlands and a map showing their location can be found at: <http://www.deh.gov.au/water/wetlands/publications/index.html>

Lists of threatened species and ecological communities can be accessed from the following web pages:

<http://www.deh.gov.au/biodiversity/threatened/species/index.html>

A list of migratory species is can be accessed from the following web page:

<http://www.deh.gov.au/epbc/matters/migratory.html>

For listed threatened species and ecological communities an action will require approval if the action has, will have, or is likely to have a significant impact on a species listed in any of the following categories:

- extinct in the wild,
- critically endangered,
- endangered, or
- vulnerable.

An action will also require approval if the action has, will have, or is likely to have a significant impact on an ecological community listed in any of the following categories:

- critically endangered, or
- endangered.

Within the Fleurieu region there are migratory species, endangered species and endangered communities for which actions could trigger the Act. The lists within the Commonwealth search site are under active revision, (October 2005) and are not separately listed here.

Actions, commenced after 16/7/00, which might have significant impact on matters of national environmental significance, must be approved by the Minister. With regard to coastal areas, these could include, for example, coastal development, fishing, aquaculture, and vegetation clearance.

Commonwealth approval of actions runs in parallel with state processes, which still apply. Penalties for failure to comply with the EPBC Act can be severe: including imprisonment and fines up to \$5.5M. The Act provides for the identification of threatening processes, critical habitats and the preparation of recovery plans, threat abatement plans and conservation plans.

Other Commonwealth legislation is directly significant at particular parts of the Fleurieu coast, including:

- *Australian Heritage Council Act, 2003*. The Council to establish a list of Heritage Places of National Significance, (7 so far, none in SA). Also to maintain the Register of the National Estate Entering a place of natural or cultural significance on the Register places obligations on Commonwealth decision makers.
- *Native Title Act, 1993*. This Act deals with the recognition and protection of native title rights and interests.

Australia has entered into a number of international conventions that deal with environmental issues at regional, national or international levels. Some of the more important conventions include:

The 1992 UN Conference on Environment and Development (UNCED): Agenda 21, signed by Australia in Rio de Janeiro, covers a wide range of issues bringing together a number of earlier conventions. Commitment to Local Agenda 21 has the potential to make a major impact in the area of coastal management. Chapter 17 of Agenda 21 is devoted to marine and coastal management and commits signatories to Integrated Coastal Zone Management.

Convention on Biological Diversity (1992) (Ratified)

The objectives are the conservation and sustainability of biological diversity, and the equitable sharing of benefits arising out of the utilization of genetic resources.

The Framework Convention on Climate Change (ratified 1992). This convention aims to achieve stabilization of Greenhouse Gas emissions. Monitoring and reporting on Greenhouse gas emissions; research on responses, including coastal vulnerability to sea level rise.

Convention for the Protection of World Cultural and Natural Heritage (1975) (Ratified)

The objective of this convention is to promote cooperation among nations to protect heritage which is of such universal value that its conservation is of value to all people. The Great Barrier Reef and South West Tasmania are examples of coastal and marine areas covered by this convention.

Convention on Wetlands of International Importance (the Ramsar Convention) (1971) (Ratified)

This convention originated as a way to protect wetlands important to migratory birds as habitats. In 1990 the name was changed to reflect the interest in the conservation and protection of all wetland values and to encourage their management in line -with ecologically sustainable principles. Moreton Bay is an example of a significant coastal area listed under this convention.

International Convention for the Regulation of Whaling (1946) and Protocol (1956) (Ratified)

This convention was originally an instrument for the controlled harvesting of whales, but has evolved into a means to effectively end commercial whaling.

Convention on the Conservation of Migratory Species of Wild Animals (1979) (Ratified)

This convention commits signatories to take action to conserve migratory species. An agreement for the conservation of the albatross is currently being formulated.

Bilateral Agreements on the protection of migratory birds

Australia has negotiated bilateral agreements with China (CAMBA) and Japan (JAMBA) to protect migratory bird species. The agreements also foster scientific and cultural interchanges between the countries involved, as well as reinforcing the Ramsar Convention.

UN Convention on the Law of the Sea, UNCLOS, (1982, 1984, 1994)

This convention establishes conservation and management regimes for fisheries in exclusive economic zones (includes all Australian coastal waters, 3 – 200 nautical miles offshore). It imposes obligations to prevent, reduce and control marine pollution from land, the atmosphere, and vessels and from dumping. It also includes a regime for the enforcement of marine pollution laws.

The International Convention for the Prevention of Pollution from Ships, ratified by Australia in 1987, requires annual reporting of incidents involving ship-based pollution.

The High Court of Australia has acknowledged that ratified treaties imply obligations on states as well as the Commonwealth. Some international agreements require action primarily by the Commonwealth, for example a national state of the environment reporting process is a condition of Australia's membership of the OECD. However, most issues involve state powers and need ratification by the states. Frequently the Commonwealth has set standards (as for example in the ANZEC Water Quality Guidelines), and required reports and

management plans (for instance management plans for Ramsar sites). Most conventions involve reporting responsibilities, often involving the states and local government: this places a number of significant coastal conservation issues (e.g. wading bird habitat) on agendas for funding and action, from which they might otherwise be absent. Additionally, a ratified international agreement may trigger the EPBC Act.

State Government Responsibilities

State Government has a long-standing responsibility under the Australian Constitution for resource management. In the past three decades South Australia has developed legislation and managerial instruments in resource use, in environmental management, conservation and pollution control. Many state agencies have been set up to regulate activities in coastal areas. The table below attempts to relate issues and activities relevant to the actions undertaken within the Southern Fleurieu coastal boundary to state agencies and legislation. The table is adapted from a discussion paper for the South Australian Estuaries strategy.

Legislation, Issues And Agencies

	Changes to water flows in catchment	Land use change in catchm. 1 LOCAL GOVERNMENT RESPONSIBILITIES

Local Government has a range of regulatory and planning powers that are significant in the management of the coastal zone. Local Government has a direct role in coastal areas, though many of these powers are shared with State Government.

The following list of responsibilities has been obtained from the Local Government Association Coastal Management Policy, published on the LGA website.

The roles and responsibilities for Local Government derive primarily from the *Local Government Act 1999* and the *Development Act 1993*. However the particular duties of one council will not always include the entire list, but will depend on the nature of the coastal areas and the development that has taken place. The list attempts to be comprehensive, though there are great regional contrasts in concerns and actions between councils. Within the list below, most physical actions by councils take place on those reserves for which Council has care and control, including road reserves.

1.1 Regional and local infrastructure development and maintenance

Infrastructure provision for amenity, recreation and development on public lands at the coast; e.g. provision of new or upgraded public coastal facilities such as toilets, walkways, car parks Access to coastal and marine areas and resources Construction and maintenance of coast protection works, against flooding and erosion.

1.2 Stormwater and sewerage infrastructure and management

Management of urban runoff

Management of rural runoff

Specific effort to reduce pollution of estuarine and marine waters from stormwater pollution e.g. installation and maintenance of wetlands, trash racks, street sweeping, sewage treatment and disposal, litter and waste minimisation and management.

1.3 Land use planning and management

Routine planning activities, including development assessment, land use planning, relating to coastal areas

Development and implementation of a regional coastal strategy

The management and maintenance of marinas, ports, jetties and ramps

Public lands management

Regulation of activities on the foreshore and coastal reserves

Provision of coastal tourism information.

1.4 Community awareness and development

Community education and advocacy

Facilitating community-based initiatives, including Coastcare

Publications, signs, events, answering enquiries.

1.5 Environmental protection

Protection of biodiversity, bushland, estuarine and marine habitat

Control of pest plants and animals

Maintenance of coastal and marine aesthetic values

Monitoring of environmental change, e.g. beach profiling; water quality monitoring.

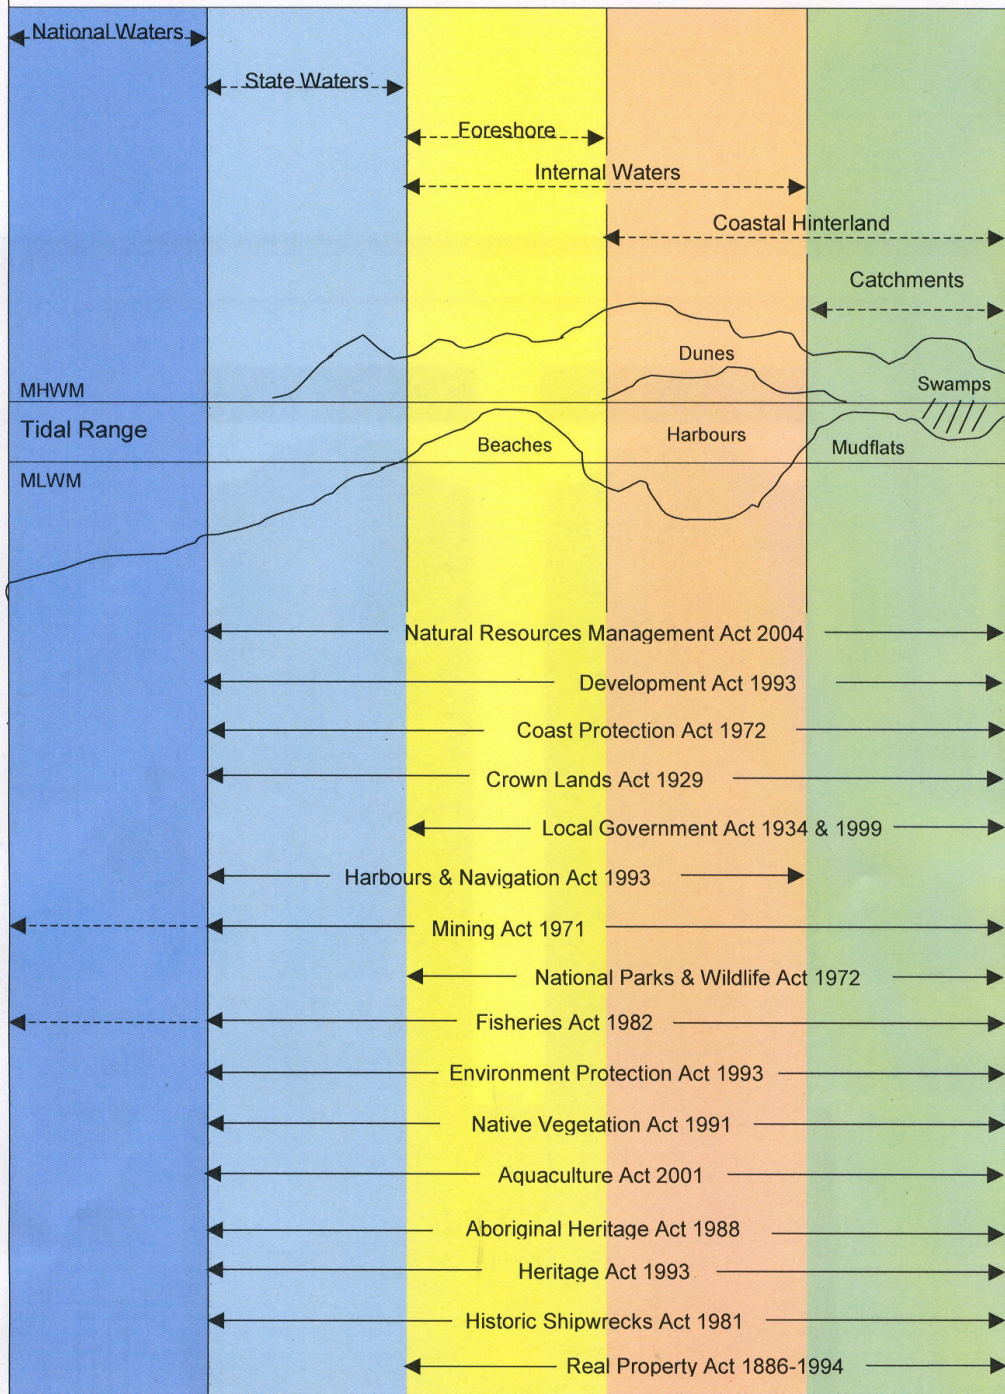

Council functions in planning, development control, drainage and land management are vital parts of coastal management around the Fleurieu coastline. Many councils face difficult and chronic problems in managing coastal resources; and may lack the expertise and financial base to properly address these problems.

While council decisions are usually made in cognizance of state policies and priorities and council decisions may be over-ridden by state government, councils make the majority of planning and development decisions at the coast. Councils make decisions on developments at the coast through strategic and local plans and through individual decisions in response to development applications involving the interpretation of development plans.

Council's development control role has strong links with the treatment, use and / or disposal of wastewaters. The planning, construction and maintenance of stormwater and of sewage systems are either carried out by councils, or closely involve councils. Decisions to avoid marine or estuarine disposal or to mitigate the impact of such disposal are often, in the first instance, a council matter.

Local government is responsible for the day-to-day maintenance of the beaches and coastal facilities and it shares with state governments the task of shore protection. Councils are also involved in such decisions as location of access paths, roads and carparks; the keeping of public coastal land in public use; the development and maintenance of coastal reserve facilities; the maintenance of many boat ramps and jetties. During the nineteenth century survey of the Crown lands of the colonies of Australia, a narrow strip of coastal reserve was often left above high water mark, usually 30 to 60 metres wide. While many such reserves have been lost through coastal erosion, most remain and to day they are of great importance to local users and in coastal management. Along the settled parts of the Southern Fleurieu coast these Crown coastal reserves are usually under the care and control of the local council, but community groups frequently play a vital part in their management. These reserves secure access rights along the coast and provide buffer zones for erosion. Many of the proposals for action within this report relate to these reserves.

SOUTH AUSTRALIAN MAIN LEGISLATIVE COVERAGE IN THE COASTAL ZONE

Note: National Economic Exclusion Zone extends to 200 nautical miles offshore
State Waters extend to 3 nautical miles offshore. Includes whole of SA Gulfs

SOUTH AUSTRALIAN RECOVERY PLAN FOR THE
HOODED PLOVER
Thinornis rubricollis

David Baker-Gabb and Michael Weston

FOURTH DRAFT
August 2006

1 SPECIES INFORMATION

1.1 Taxonomic comments

The Hooded Plover *Thinornis rubricollis* (Christian *et al* 1992), is endemic to southern Australia. Its closest relative is the endangered Shore Plover *T. novaeseelandiae* of New Zealand (Marchant and Higgins 1993). Mathews (1913-14) split the species into two subspecies in eastern and western Australia, as birds in Western Australia have longer bills and legs and darker backs (Marchant and Higgins 1993), but these subspecies are not currently recognised (Christidis and Boles 1994). Further study of geographical variation should result in the official resurrection of Mathew's subspecies (Weston 2003) as pre-empted by Garnett and Crowley (2000).

1.2 Legal status

The national conservation status of the Hooded Plover is in a state of flux. In 2000 the species was removed from the federal *Endangered Species Act* (1992) and was not listed under the *Environment Protection and Biodiversity Conservation Act* (1999) on the basis that secure populations exist in Western Australia (Weston 2003). If the subspecies are officially recognised then the eastern subspecies, which occurs in South Australia, is likely to be listed as vulnerable under the EPBC Act, and the western subspecies is 'near threatened' (Garnett and Crowley 2000).

Under the South Australian *National Parks and Wildlife Act* (1972) the Hooded Plover is listed as vulnerable, it is vulnerable in Victoria (DSE 2003) and listed under the *Flora and Fauna Guarantee Act* (1988). In New South Wales the Hooded Plover is listed as endangered under the *Threatened Species Conservation Act* (1995), and in Tasmania it is listed as a protected species under the *Nature Conservation Act 2002* and treated as a species of conservation significance.

1.3 Description

The Hooded Plover is a medium-sized, stocky shorebird about 10 cm tall, 20 cm long, and weighing 90-100 g (Marchant and Higgins 1993). Both sexes have grey and white bodies with a black hood, red bill tipped black, and short, dull orange-pink legs. In flight, Hooded Plovers have a striking wing pattern with a broad white wing-bar contrasting with a black trailing edge and primary coverts. The white sides of their tail also contrasts with a black subterminal band and black central upper tail coverts. Juvenile Hooded Plovers lack the black head and hindneck, these being sandy brown or grey in colour; the bill is brown with an orange base and the legs are pale orange (Schulz 1992, Weston and Paton 2001).

The distinctive adult Hooded Plover is unlikely to be confused with any other shorebird, except perhaps Ruddy Turnstones *Arenaria interpres* in flight. The most common misidentifications occur with juveniles (Cameron and Weston 1999), which are basically grey versions of adults. Juvenile Hooded Plovers could be confused with Sanderlings *Calidris alba* and Double-banded Plovers *Charadrius hiaticula*. Unattended Hooded Plover chicks can be distinguished from Red-capped Plover *Charadrius ruficapillus* chicks by their white nape.

1.4 Distribution

Endemic to southern Australia, the Hooded Plover is now mainly found along the coast from near Jervis Bay in New South Wales, south through Victoria to Fowlers Bay in western South Australia (Garnett and Crowley 2000). They are also found in Tasmania, Kangaroo Island, King Island, Flinders Island and other nearby islands (Cameron and Weston 1999). In south-west Western Australia the Hooded Plover is not restricted to the coast, and can also live and breed around inland salt lakes (Blakers *et al* 1984).

The range of the Hooded Plover has declined in eastern Australia since European settlement (Blakers *et al*. 1984, Cameron and Weston 1999). Southern coastal Queensland and northern New South Wales were probably once part of the range of the Hooded Plover, but they were gone from these areas by the 1920s (Cameron and Weston 1999). The Hooded Plover has not been seen north of Sydney since the 1940s (Hindwood and Hoskin 1954, Cameron and Weston 1999). McAllan (2001) has challenged the extent of the range contraction.

In South Australia, Hooded Plovers have been sighted from the eastern edge of the Great Australian Bight (Fowlers Bay area) through to the SA/Victorian border. Birds have not been recorded in the upper reaches of the Spencer Gulf or St Vincent's Gulf. Hooded Plovers have also been located at several non-coastal sights, including Lake Malata, Lake Greenly and Lake George (refer to Figs. 1-3).

1.5 Populations

There are about 3,000 Hooded Plovers in eastern Australia and 4,000 in the west (Garnett and Crowley 2000). The total population in South Australia is about 540 birds (Natt and Weston 1995). There are at least 470 and probably 600 in Victoria (Murlis 1989, Weston 1995, 2003), about 1,700 in Tasmania (Newman and Patterson 1984, Holdsworth and Park 1993), and about 60 in New South Wales (Morris 1989).

Densities south of Narooma (NSW) to the Victorian border of around 0.6 birds per km are similar to those throughout Victoria (0.7 birds per km). Victorian populations have been generally stable over recent years (Murlis 1989), with wide variation in counts between years due to weather conditions during surveys, though there has been a decline during 1980 and 1992 between Westernport and Wilson's Promontory (Weston 1993) and on Phillip Island (Baird and Dann 2003). Bransbury (1991) recorded 1.6 birds per km on Kangaroo Island! See Dennis and Masters 2006 for updated data, but only 0.5 per km in south-east South Australia (Bransbury 1983). Kangaroo Island is home to about one-third of South Australia's Hooded Plovers, and over the last 20 years the population there has declined by c.24%, with greatest declines (44%) on the eastern and northern coasts where there is greatest human disturbance (Dennis and Masters 2006). Similar declines and some local extinctions occurred on highly disturbed Tasmanian beaches during 1988-96 (Woehler and Park 1997). Densities of Hooded Plovers are highest on the coasts of Tasmania (Schulz and Menkhorst 1984) and western Victoria (Murlis 1989, Weston 1993) at 3.5 - 4.4 birds per km.

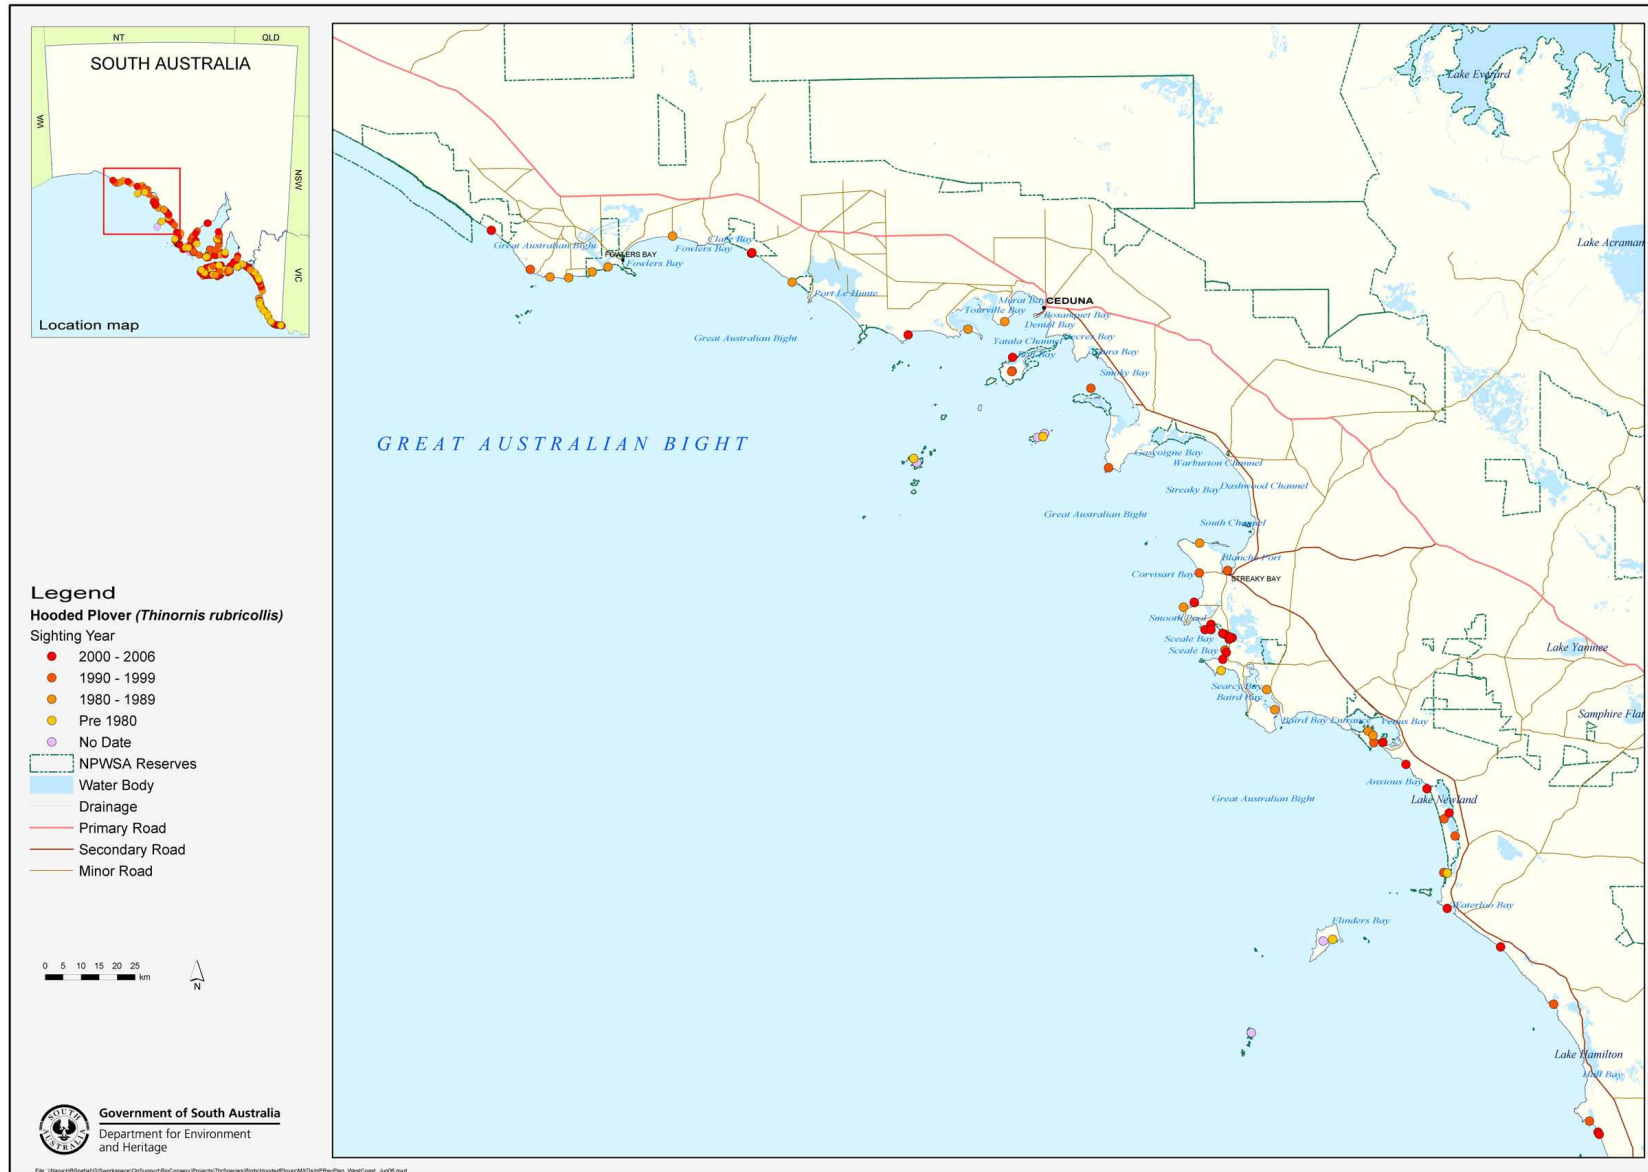

Figure 1: Records of Hooded Plover (*Thinornis rubricollis*) on the west coast of South Australia. Records are from the DEH Biological Database of SA and the SA Museum. Records are grouped in time periods, with more recent records overlaying older records.

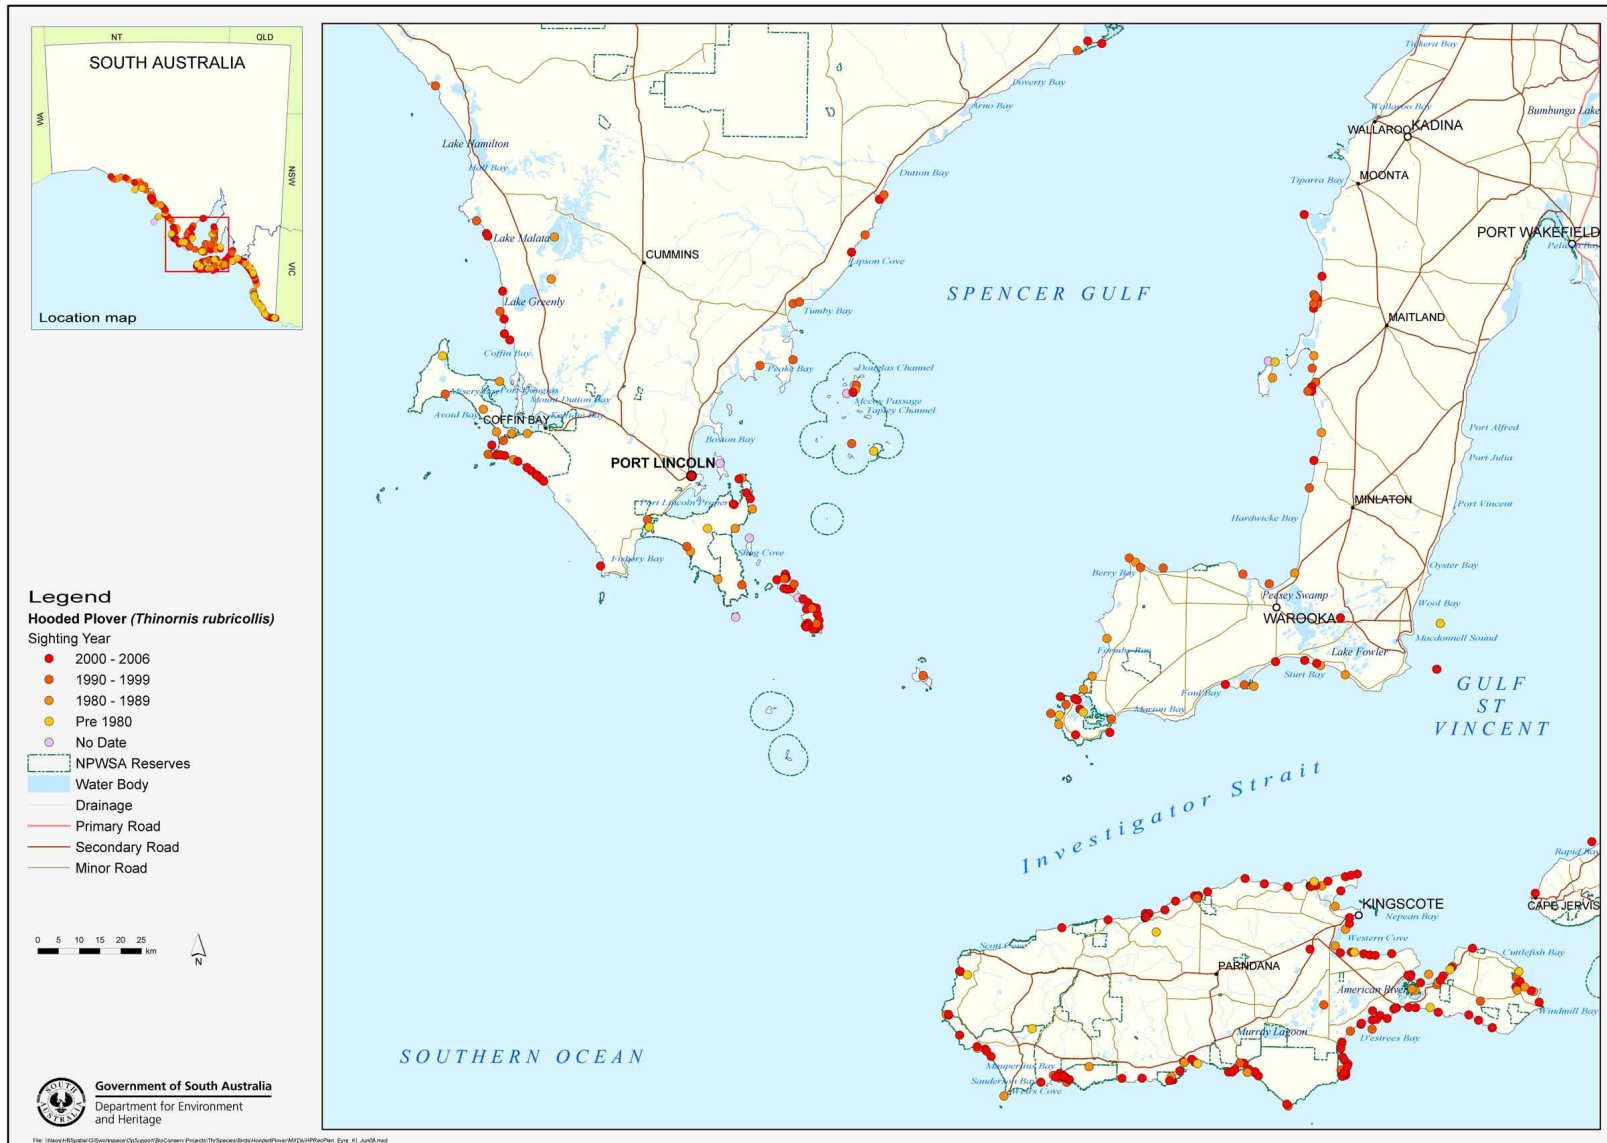

Figure 2: Records of Hooded Plover (*Thinornis rubricollis*) on Eyre Peninsula, Yorke Peninsula and Kangaroo Island, in South Australia. Records are from the DEH Biological Database of SA and the SA Museum. Records are grouped in time periods, with more recent records overlaying older records.

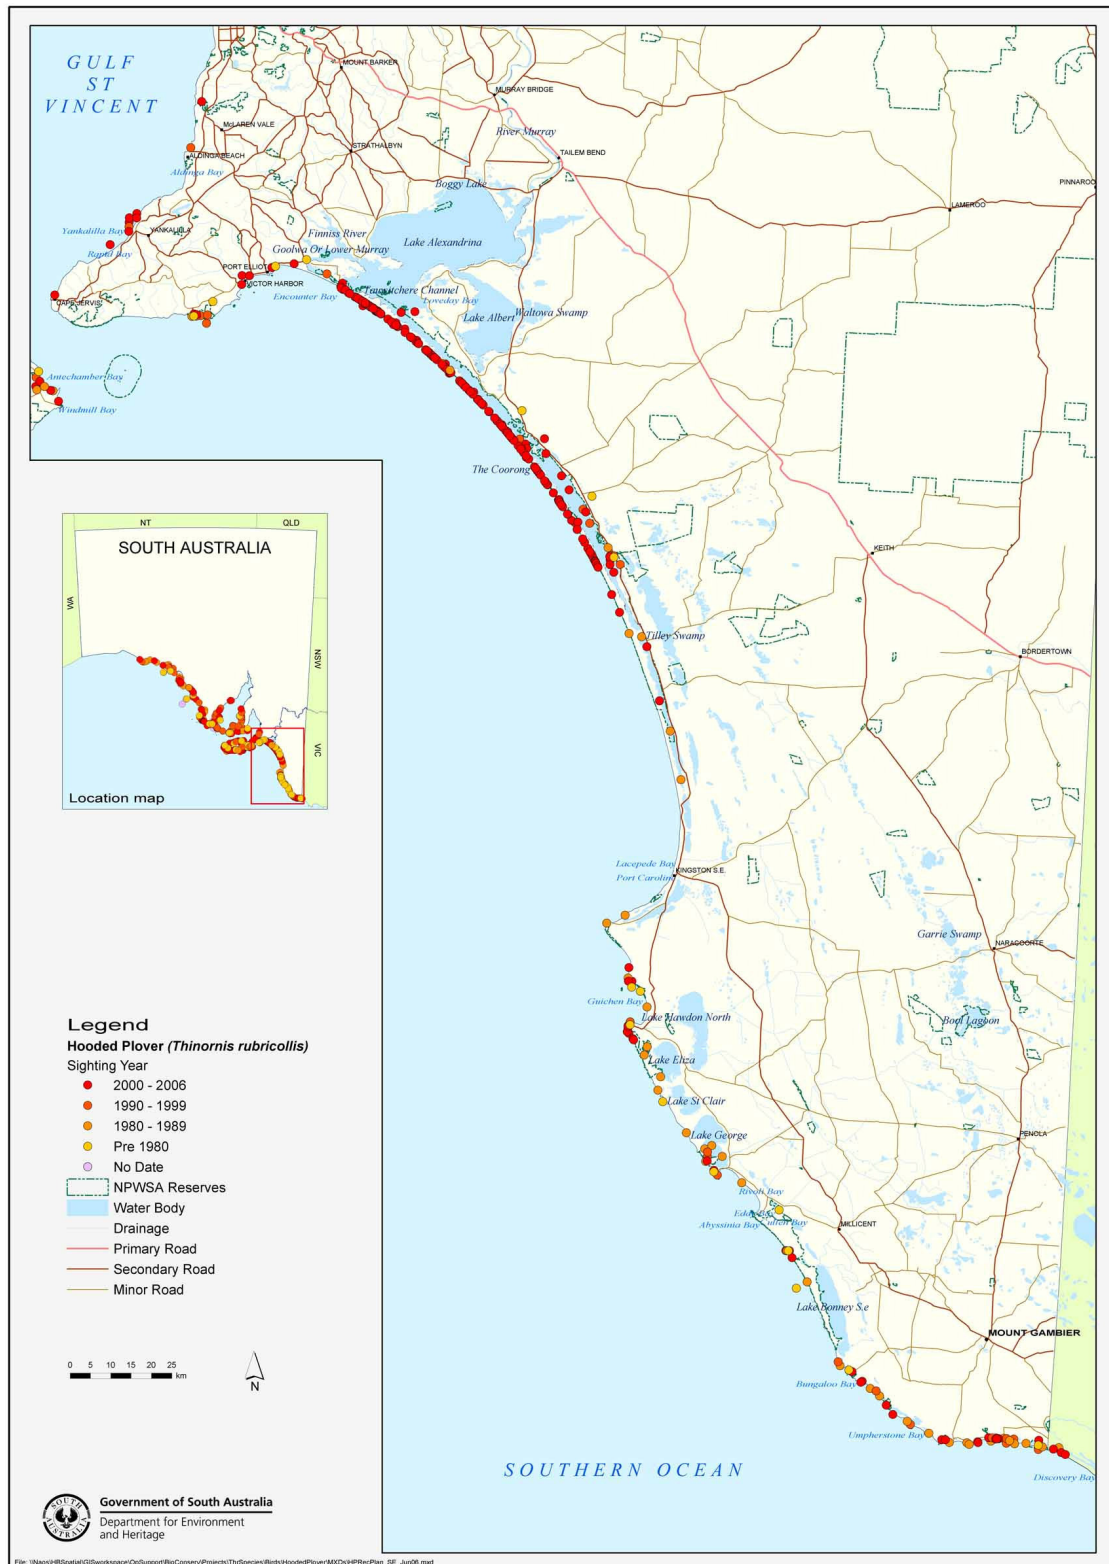

Figure 3: Records of Hooded Plover (*Thinornis rubricollis*) on the Fleurieu Peninsula and south east coast of South Australia. Records are from the DEH Biological Database of SA and the SA Museum. Records are grouped in time periods, with more recent records overlaying older records.

1.6 Population surveys and monitoring

The Australasian Wader Studies Group (AWSG), a special interest group of Birds Australia, has coordinated a volunteer-based national Hooded Plover survey every two years during the breeding season since 1980 (see Weston 1993). Weston (2003) calculated that because the rate of population change is slow, there is little benefit to be gained from increasing surveys from once every two years to annual surveys. Biennial counts have an established organisational structure, are cost-effective, and are reliable. Processes are already in place for data collection, data entry and information dissemination. Weston (2003) advocated some methodological improvements to the biennial counts such as the widespread use of Global Positioning System (GPS) units, and conducting an additional post-breeding biennial count to estimate breeding success.

1.7 Habitat critical for survival

Habitat critical for survival needs to contain all known sites for breeding, food resources, water, shelter, essential travel routes, dispersal, buffer areas, and sites needed for future recovery as defined by the EPBC Act 1999. The habitat critical to the survival of the Hooded Plover is described in section 1.8 and is defined in this Recovery Plan as all potential habitat within its 'current normal range'. Most of the habitat is on public land.

1.8 Habitat

In south-eastern Australia Hooded Plovers prefer sandy ocean beaches, especially those that are broad and flat, with a wide wave-wash zone for feeding, much beachcast seaweed, and backed by sparsely vegetated sand-dunes for shelter and nesting (Smith 1964, Lane 1981, Schulz *et al* 1984, Murlis 1989, Weston 2003). In south-east South Australia and Kangaroo Island, Stephens (2004) found that breeding sites were mostly associated with beaches that were less than 10 km long and 20 m wide, with more headlands and complex dune systems, and remote from settlements and sites frequented by walkers, fishers and dogs. On Kangaroo Island, only c.50 km (10%) of the coastline was occupied by Hooded Plovers during 1985-2004 (Dennis and Masters 2006). They generally avoid narrow, steep beaches with little seaweed and waves washing up to the base of the dunes. They also tend to avoid beaches where backing dunes are absent, bare, or heavily vegetated; extensive rocky or pebble-covered shores and coasts with continuous cliffs (Lane 1981, Bransbury 1988, Hewish 1989, Schulz 1990), though around Cape Otway they are commonly found on small beaches surrounded by long lines of cliffs (MA Weston pers. comm.). Hooded Plover chicks rely heavily on fore-dunes and dunes as their main site of concealment from potential predators (Weston and Elgar 2005). Occasionally Hooded Plovers are found on tidal bays and estuaries, rock platforms and rocky or sand-covered reefs near sandy beaches, and small beaches in lines of cliffs (Schulz 1986, Bransbury 1988, Hewish 1989, Weston and Peter 2004). Hooded Plovers regularly use near-coastal saline and freshwater lakes and lagoons, often with saltmarsh, though the importance of this habitat is not well known (Thomas 1968, Bransbury 1988, Marchant and Higgins 1993).

Hooded Plovers obtain their annual life cycle needs from ocean beaches, foraging in sand at all levels of the zone of wave wash during low and mid-tide or among seaweed at high-tide, and occasionally in dune blowouts after rain (Reed 1975, Schulz *et al* 1984, Marchant and Higgins 1993). At night they favour the upper zones of beaches (Schulz 1984). When on rocks they forage in crevices in the wave-wash or spray zone, avoiding elevated rocky areas and boulder fields (Schulz 1986, Lane 1987, Marchant and Higgins 1993). However, at some area they routinely forage in boulder fields (MA Weston pers. comm.). When at coastal lagoons they forage in damp or dry substrates and in shallow water, depending on the season and water levels (Marchant and Higgins 1993).

On beaches Hooded Plovers roost, loaf or shelter mainly in the upper beach zones, often next to hummocks of beachcast seaweed, rocks, and other debris (Schulz 1984, Reed 1975, Bransbury 1988, Hewish 1989). They may also roost in dunes and, occasionally, on sandbars (Reed 1975, Bransbury 1988).

In eastern Australia, Hooded Plovers usually breed on sandy ocean beaches strewn with beachcast seaweed, in a narrow strip between the high-water mark and the base of the fore-dunes. They often nest within 6 m of the fore-dune, mostly within 5 m of the high-water mark, but occasionally among or behind dunes (Reed 1975, Lane 1981, 1987, Bransbury 1988, Buick and Paton 1989, Marchant and Higgins 1993). However, dunes have been under-rated as a breeding habitat for Hooded Plovers because nests are harder to locate there, and most observers confine their activities to the beach. At Mornington Peninsula National Park, Victoria, 33% of nests were in the primary dune (Dowling and Weston 1999) and on the Bellarine Peninsula, Victoria, during 1995-98, most nests were in the dunes (MA Weston unpubl). Nests are sometimes found hundreds of metres from the beach, as are broods and flocks roosting in large dune blowouts (Weston 1998a, MA Weston

unpubl). Further evidence of the importance of sandy dunes comes from a section of the Tasmanian coast where Hooded Plovers can no longer nest because of the use of marram grass *Ammophila arenaria*, for erosion control (Park 1994). The introduced sea spurge *Euphorbia paralias* which colonises primary dunes may have a similar impact (Schulz 1992).

1.9 Movements

In south-eastern Australia, some movement occurs in the autumn-winter non-breeding season with birds absent from or sparse in several sites where they breed in spring-summer (Bransbury 1985). Hooded Plovers and their broods move up to 2 km in a day (Weston 2000). Hooded Plovers occasionally move small distances inland, particularly in winter, to salt lakes immediately behind beaches (Blakers *et al* 1984). They can also cross considerable stretches of water, with three colour-banded birds known to have moved across the 16 km of open sea in Backstairs Passage, separating Kangaroo Island from the mainland (T Dennis and MA Weston pers. comms). Recent colour-banding studies indicate that the movements of breeding adults and juveniles has been considerably underestimated, with some juveniles moving over 100 km (MA Weston and T Dennis unpubl. data), and one extreme case of a juvenile moving at least 900 km (Cameron and Weston 1999). Hooded Plovers may breed considerable distances from their natal territory, or they may breed nearby (Dowling and Weston 1999, Weston 2000).

1.10 Diet

Hooded Plovers feed on a wide range of polychaetes, molluscs, crustaceans, insects, turions and seeds (Schulz *et al* 1984, Schulz 1986). One prey that seems particularly important in salt-lakes are gastropods in the genus *Coxiella* (MA Weston unpubl.). They forage diurnally and nocturnally on beaches, especially in wave-wash, lagoons and saltpans. Paired birds do not usually forage more than 500 m from their nest (Buick and Paton 1989), but may forage in sub-coastal wetlands rather than on the beach adjacent to the nest (MA Weston pers. comm.).

1.11 Population structure and activity patterns

Hooded Plovers are seen singly, in pairs, family groups or small flocks (Buick and Paton 1989, Marchant and Higgins 1993). During winter, very few birds are in pairs (Schulz 1987), and flocks of 30-40 birds, and rarely 100 birds, occur on some beaches in the south-eastern States (Marchant and Higgins 1993, Weston 1998a). Aggression is common in flocks or when pairs defend territories from intruders (Weston 1998a). Interspecific aggression has been directed at a range of waders, two species of gull, and even at some beach-inhabiting passerines (Marchant and Higgins 1993, Weston 1998b).

Hooded Plovers breed in single pairs with 70-80% of birds in pairs during summer (Buick and Paton 1989, Weston 1993). They have high nest site fidelity and nest solitarily. On mainland Australia, nests may be 2-5 km apart (Buick and Paton 1989, Bransbury 1991), with breeding densities sometimes more than double this on Tasmania and Kangaroo Island (Marchant and Higgins 1993). From August to March, clutches of 2-3 eggs (one and four egg clutches have been recorded) are laid in a depression in the sand that may or may not be lined with pebbles, fragments of shell and seaweed (Morris *et al* 1981, Marchant and Higgins 1993, Weston *et al* 1998). Incubation begins in earnest once laying is completed (Weston and Elgar 2005b). Both birds incubate for a total of 27-28 days (Bransbury 1991), although incubation periods of up to 31 days have been recorded (Tomkovich and Weston *In press*). Birds incubate for extended periods, the most common uninterrupted bout duration being 25 minutes (Weston and Elgar 2005b). Hatching success is low at around 27% of eggs laid and only 0.1 young fledge per pair (Buick and Paton 1989, Marchant and Higgins 1993). The young leave the nest shortly after hatching and accompany the adults until they fledge 33-36 days later (Newman 1986, Marchant and Higgins 1993). Occasionally they may remain until a subsequent nest is laid (Whitelaw *et al*. 2005). Hooded Plovers may breed when a little over one year old. It is not known how long they live in the wild, though they are probably long-lived, with two banded birds being more than ten years old (Weston 2000, MA Weston unpubl). In the closely-related Shore Plover mean longevity is six years, with some birds living for at least 17 years (Marchant and Higgins 1993).

The sex ratio of adults and juveniles in Victoria approximates parity (Weston *et al*. 2004).

If an avian predator flies over a nest then the sitting bird often stays on the nest, but if a terrestrial predator such as a fox or dog approaches, the bird runs rapidly from the nest and waits near the surf zone or walks ahead of the predator until it is 100-300 m from the nest. The Hooded Plover then runs or flies back along the water's edge (Schulz 1988, Bransbury 1991). Buick and Paton (1989) observed that incubating birds remained on the nest if vehicles passed more than 20 m from them, but occasionally left the nest if they came

closer than 20 m. People on a beach caused incubating birds to leave the nest on 70% of occasions. Birds leave the nest when a person is 150-200 m away early in the incubation period and when they are 50-60 m away just before hatching (Buick and Paton 1989). They remain off the nest for varying periods, averaging 232 s (93-330 s) when disturbed by walkers and 207 s (62-632) when disturbed by vehicles (Buick and Paton 1989, Bransbury 1991). Weston and Elgar (2005a) have described the response of incubating birds to disturbance in Victoria. There, a range of stimuli caused birds to leave the nest, and the response to disturbance was mediated by stimulus type and the habitat in which the nest was located. If an intruder stops near their nest, Hooded Plovers may crouch or sit as if on a nest. Parents may feign injury to lure predators away from fledglings, distraction displays being rare during the egg-phase (Marchant and Higgins 1993, Weston and Elgar 2005b).

The incubation temperature of most avian species lies between 35 – 38°C (mean = 37.5°C) which is close to the upper lethal temperature tolerated of 42 – 48°C, depending on the age of the embryo (Drent 1975). Drent (1970) found that on a sunny 18°C morning the internal temperature of an abandoned Herring Gull *Larus argentatus* egg reached 44°C within two hours and exceeded the lethal limit. Where air temperatures are higher, the risk to the embryo is far greater, and the time to reach the lethal limit is much shorter (Drent 1975). Even under uninterrupted incubation, Hooded Plover egg temperature varies to some extent with ambient temperature (Weston and Elgar 2005b). However, disturbance-caused absences cause greater thermal variation in eggs than absences when the parents choose to leave the nest (Weston 2000). Temperatures from false eggs suggest thermal upper lethal limits are at least sometimes exceeded during disturbance. The fact that egg mortality rates reflect the pattern in response rates and durations in different habitats suggests that disturbance causes some reproductive failure (Weston 2000).

2 THREATS

Many of the disturbances faced by Hooded Plovers are common to other beach-nesting birds. However, the Hooded Plover has a long incubation and fledgling period of nearly two months, as well as being much shyer than some beach-nesting birds, making it more vulnerable than most (Schulz 1992). Most threats have an impact on reproductive success rather than flying birds. Threats that are probably insignificant (Weston 2003) are not listed below. While breeding failure is common in Hooded Plovers, they can re-nest and thus compensate for the loss to some extent. On the other hand, the death of flying birds is more problematic at the population level because the birds are difficult to produce and have the potential to breed for many years (Weston 2003).

Across South Australia, five threats are likely to have high impacts on Hooded Plovers relative to other risks. These threats are: humans, dogs, vehicles, introduced predators, and habitat modification. Another potential threat includes silver gull predation due to increased numbers in the south east of South Australia (I Stewart pers. comm.).

2.1 Humans and their companion animals (*Major threat*)

The Hooded Plover's nesting season extends from August to March, which includes the peak time of beach use by holiday-makers (Baird and Dann 2003). Moreover, populations of humans in many coastal towns have increased greatly. Hence the species is often disturbed by recreationists and their dogs, and its eggs and chicks are frequently crushed by residents as well as holiday beach users (Schulz 1992, Schulz and Bamford 1987, Dowling and Weston 1999).

The bird's habit of leaving the nest and not returning until people and their dogs have left the area has an important influence on breeding success (Schulz 1992, Dowling and Weston 1999, Weston 2000a). While the parent is absent the eggs or chicks are vulnerable to predators such as gulls (*Larus* spp) and ravens (*Corvus* spp) and to high temperatures (Weston 2000a, Weston and Elgar *in press*). At Mornington Peninsula National Park in Victoria, Dowling and Weston (1999) found that 30% of nests were trampled by recreationists. In western Victoria 20% of nests were at a high risk from crushing, being close to human access points (Weston and Morrow 2000). Incubating Hooded Plovers left their nests on 91% of 580 occasions when they were exposed to a disturbance, and three-quarters of those disturbances on central Victoria beaches were from humans and their companion animals (Weston and Elgar *in press*). Leashed dogs caused no more disturbance than unaccompanied humans, presumably because they moved slowly and predictably along the mid-beach. Unleashed dogs were highly disturbing, probably because they tended to move more rapidly up and down the beach perpendicular to the water's edge, and because they pursued Hooded Plovers at times (Weston and Elgar *in press*).

Weston and Elgar (2005) found that brood-rearing Hooded plovers spent 12% of their time responding to disturbance and that over 80% of disturbances were caused by humans. Encounters with humans often caused brooding to stop and almost always ended foraging, exposing the chicks to temperature and food stresses that could have an impact on chick survival (Weston and Elgar 2005). Nevertheless, Hooded Plovers can sometimes breed successfully on beaches that are regularly visited (Marchant and Higgins 1993). Indeed, appropriate management seemed to increase breeding success in the very heavily used Mornington Peninsula National Park in Victoria (Dowling and Weston 1999). There seems to have been a coincident increase in the population size in the park (B. Dowling unpubl). At popular Phillip Island in Victoria, only one of 12 nests were successful in 1982, the rest failing due to disturbance (Lane 1987). With the deployment of nest protecting cages hatching success was substantially increased (Dann and Baird 1997), and volunteer wardening further increased breeding success to seven flying young from 14 nests in 1998 (P Dann pers. comm.).

2.2 Vehicles on beaches (*Major threat*)

Vehicles driving along beaches can have a major impact on breeding success, particularly in South Australia where this is generally permitted (Buick and Paton 1989, Garnett 1992). The growing number of off-road vehicles has resulted in increased recreational driving on isolated stretches of coastline where the birds previously lived undisturbed (Schulz and Bamford 1987). Hooded Plover densities are more than twice as high in western Victoria as they are in neighbouring parts of South Australia (Lane 1987, Lane 1990), suggesting that the effect of vehicles on the status of the species is significant. Victorian legislation that prohibits driving on beaches may result in increased driving on beaches in nearby parts of South Australia because over 60% of vehicles on the beach at Little Dip National Park in neighbouring South Australia had Victorian number plates (Coxon 1997). Stephens (2004) found higher densities of Hooded Plovers on beaches in south-east South Australia and on Kangaroo Island that had low vehicle use, and Dennis and Masters (2006) reported greatest declines on Kangaroo Island's beaches where vehicles have unregulated access. At the Coorong in South Australia, 81% of nests in one year were run over by vehicles (Buick and Paton 1989). In western Victoria, illegally driven vehicles crushed 18% of nests (Weston and Morrow 2000). Chicks may also shelter in wheel ruts and up to 30% on the Coorong are crushed (Buick and Paton 1989). As a result of this information, for over a decade about 110 km of the northern end of the Coorong has been closed to vehicles from 24 October to 24 December each year, specifically to protect the Hooded Plover (SA Government 1993). A small number of commercial vehicles use the northern Coorong under permit. Nocturnal driving on beaches in poor weather is also known to kill adults (MA Weston pers. comm.).

Although the major recorded impact of disturbance of people and vehicles is on breeding success (eg Weston 2003), Stephens (2004) found that the highest concentrations of non-breeding Hooded Plovers were also on the least disturbed beaches. Citing overseas studies of shorebirds (eg Lafferty 2001), Stephens (2004) postulated that frequent short flights to avoid disturbances are energetically costly, reduce foraging time, deplete fat stores and lower survival rates of non-breeding birds.

2.3 Introduced predators (*Major threat*)

The introduced fox and uncontrolled domestic dogs are known to eat eggs and young Hooded Plovers (Stewart 1989, Whiter 1991, Dowling and Weston 1999). Dowling and Weston (1999) found that 2% of nests were predated by foxes in an area where control programs had been implemented, and up to 27% of nests where foxes were not controlled (Weston 2003). Even though urban development can encourage fox densities three or more times greater than in rural Australia (Coman *et al.* 1991, Marks and Short 1996), it is in relatively pristine areas that foxes become the dominant local threat to mainland Hooded Plover populations (Weston 2003). Fox control for Hooded Plover management has been initiated in some coastal national parks in Victoria. Counts have been conducted to determine the effectiveness of baiting, but they do not provide conclusive evidence in the absence of contemporary studies of breeding success such as those at Mornington Peninsula. Fox-baiting combined with temporary beach closure on the northern Coorong is thought to have increased the numbers of Hooded Plovers, eggs and chicks located during surveys (Hockley 2000, Weston 2003). Note however, that Kangaroo Island has no foxes and densities of Hooded Plovers have declined there by c.24% over the last 20 years (Dennis and Masters 2006), with greatest declines (44%) on the most highly disturbed beaches.

Domestic dogs chase adults (Retallick and Bolitho 1993, Weston and Morrow 2000) and have been seen mauling (Weston 1998c) and killing chicks (B. Baird pers comm.). At Mornington Peninsula National Park, Victoria, enforcement of dog laws can significantly increase compliance, though overall compliance remains low (Dowling and Weston 1999).

Cats *Felis catus* and rats *Rattus* sp. have been recorded preying on Hooded Plover nests (Hanisch 1998) and cats may kill adult birds (Weston 2003). The impacts of these nocturnal predators, which occur on Kangaroo Island and some other offshore islands, are difficult to assess.

2.4 Habitat modification (*Major threat*)

Erosion control in dunes is widespread in south-eastern Australia, and generally consists of planting species of grass or covering exposed dunes with branches, with the result that fore-dunes can become vegetated and steeper (Park 1994, Weston 2003). Erosion control has permanently removed some Hooded Plover breeding habitat, because steep, heavily vegetated dunes are unsuitable for nesting (Park 1994, Weston 2003). Dune blowouts are a major part of Hooded Plover breeding habitat in some areas, and the re-colonisation of such areas can threaten some pairs' breeding success (Weston 2003).

Kelp and seaweed harvesting may disturb birds, destroy nests and kill chicks, and reduces food availability (Schulz 1992, Weston and Morrow 2000). If kelp harvesting is to take place it should only take place during the non-breeding season.

Sheep have unrestricted access to beaches along much of Kangaroo Island's northern coastline and feral goats are frequently recorded grazing on fore-dune vegetation and on beaches on the western coastline in Flinders Chase National Park (Dennis and Masters 2006). Hooded Plovers on Phillip Island in Victoria have abandoned their territories when trampled by sheep (Baird and Dann 2003).

2.5 Communication gaps (*Moderate threat*)

Most of the threats from humans and their companion animals can be addressed by education and effective communication, supplemented in some areas with well-planned infrastructure such as fencing beach access points. A large number of brochures, posters, cards, and interpretive signs on Hooded Plovers have been used in coastal areas and these methods and their relative effectiveness are described by Weston (2003). Additional interpretive material has become available in recent years (MA Weston pers. comm.), and information on its effectiveness is growing (e.g. Dodge *et al.* 2005). Wildlife agencies and volunteers have played important roles in distributing information on Hooded Plovers, but there are still many gaps in the distribution network. Moreover, the variation in occurrence and impact of threats, such as vehicles on beaches, means that managers face complicated decisions about what threats to manage, where to manage them, and what communication messages to broadcast in particular areas. A combination of communication approaches and management strategies has been found to be effective in highly visited areas (Weston and Dowling 1999), but even then some messages such as the need to keep dogs on leashes have very low rates of compliance. Shorebird conservation projects in Australia vary in their success at increasing awareness, and careful planning and a commitment to communicating characterises the most successful efforts (Antos *et al. in press*).

2.6 Flooding of nests (*Moderate threat*)

Inundation of nests by high tides appears to be an important cause of loss of beach-nesting birds' clutches (McGarvie and Templeton 1974, Murlis 1989, Stewart 1989), but Dowling and Weston (1999) and Weston (2000a) found that only 2% of 295 nests were flooded in Victoria. About 7% of 79 nests were flooded in Tasmania (Hanisch 1998, Weston 2003). Flooding of nests may become more frequent as sea levels rise.

2.7 Information gaps (*Moderate threat*)

Weston (2003) identified 14 areas of research needed to address information gaps. Of the six highest priorities, two focus on the species: determining the causes of chick mortality, and the effectiveness of artificial shelters for chicks. Two high research priorities that focus on breeding habitat are: habitat factors influencing territory stability, and developing methods for rehabilitating dunes colonised by invasive dune-stabilising plants. The two highest research needs that focus on management are: compliance with dog laws, and determining the effectiveness of predator control. All of these high priority topics will be studied as part of postgraduate research at Deakin University in Victoria in 2006-07 (Birds Australia 2006).

2.8 Oil spills (*Minor threat*)

Oil spills have the potential to have a major local impact on adult Hooded Plovers (Schulz and Bamford 1987). Although the likelihood of an oil spill is low, the threat can be reduced by ensuring that there is a plan in place to contact and employ suitably qualified and experienced Hooded Plover trappers in the event of a spill, and to

deliver birds to an Oil Spill Response Team for treatment. In previous oil spills, the care and rehabilitation of Hooded Plovers has been neglected in favour of caring for higher numbers of common species such as the Little Penguin *Eudyptula minor*. In south-eastern Australia, the Hooded Plover and the Little Tern *Sterna albifrons*, as threatened species, should receive priority in any oil spill treatment. Oiled Hooded Plovers have been successfully trapped, cleaned and released in a Victorian oil spill (MA Weston unpubl.).

3 RECOVERY OBJECTIVES AND TIMELINES

3.1 Overall Objective

To demonstrate within five years a reversal of recent population declines, and to initiate longer-term measures designed to achieve a down-listing in South Australia from Vulnerable to Conservation Dependent.

3.1.1 Primary Recovery Actions

Primary Recovery Actions are necessary to provide a broad knowledge base on which to proceed with Secondary Recovery Actions.

1. Establish current baselines on the following:

a). Hooded Plovers

General distribution: the extent of occurrence and area of occupancy;

Specific distribution: on which beaches they do (?) and do not (?) occur; geomorphic occurrence (what types of beaches they occupy); which regions/districts have reliable data.

b). Threats

Establish/Define relative threat baselines (i.e. zones, e.g. baited vs unbaited; dogs vs no dogs; vehicle access; weeds);

Ascertain the extent of occurrence of habitat modification (i.e. erosion control, invasive plants, extractive processes, coastal development).

2. Identify gaps in knowledge/data

distribution – general and nesting

relative recruitment rates

movements, e.g. from islands to mainland

different threats

3. Identify key locations for long-term monitoring based on:

ease of access/proximity to regular observer(s)/reliability of observers

different threat zones (even spread if possible) (target specific beaches)

different management regimes (target specific areas)

4. Analyse available data to determine site-specific/district/region/state SMART targets

5. Ensure Recovery Plan remains relevant through regular review processes

6. Establish/Identify monitoring network members by area – seek their feedback/comments on draft maps and Recovery Plan

7. Develop monitoring (and extra survey) protocols and test-run them.

To deal with threats to the Hooded Plover and thereby improve its status within five years by:

Increasing recruitment success (e.g. on KI)

Increasing total population size;

Reversing recent declines in extent of occurrence;

Improving management of people, vehicles, and introduced predators on beaches;

Increasing community awareness and involvement;

Implementing the Recovery Plan through a Recovery Team.

4 SECONDARY RECOVERY ACTIONS:

4.1 Threat Abatement Objective

Increase Hooded Plover numbers by increasing nesting success, through introducing strategies to mitigate the impacts of humans and their companion animals on selected beaches, and modifications to habitat.

4.1.1 Performance criterion

Improve Hooded Plover numbers by reversing current trends in recruitment success, based on the results of 3.1.1. 1.b).

Actions

- (a) Map and prioritise the current and historical distribution of Hooded Plovers and record each area's disturbance regimes and other threats.
- (b) Develop appropriate management strategies for selected sites, as undertaken for national parks and reserves in Victoria by Weston (2003).
- (c) Liaise with beach-user groups, government agencies, local planning authorities, and other relevant groups.
- (d) Integrate threat abatement strategies into reserve and regional plans to help reverse indiscriminate use of important Hooded Plover habitat.
- (e) Work with local government representatives and managers of coastal reserves to ensure that they are aware of the need to exclude uncontrolled dogs from important Hooded Plover breeding sites.
- (f) Develop appropriate management strategies to address habitat modification identified in 3.1.1.1.b).

4.2 Threat Abatement Objective

Increase Hooded Plover numbers by increasing nesting success through implementing strategies to deal with vehicles crushing nests and chicks on beaches.

4.2.1 Performance criterion

Improve Hooded Plover numbers by increasing nesting success, through increasing the number of beaches with restricted vehicle access over the next five years.

Actions

- (a) Continue the breeding season closure of the northern Coorong to vehicles.
- (b) Implement temporary beach closures for vehicles on other high priority beaches, particularly in national parks or where complimentary threat mitigation activities are implemented.

(c) Train drivers of management vehicles that require beach access to only drive at low tide and to adhere to the lower half of the beach.

(d) Investigate alternatives for vehicle access or closures to beaches.

4.3 Threat Abatement Objective

Increase Hooded Plover numbers by increasing nesting success, through expanding strategies to combat introduced predators.

4.3.1 Performance criterion

A system of managed and baited areas reduces the number of key sites that are heavily impacted by foxes during the Hooded Plover breeding season.

Actions

(a) Implement and monitor control programs for foxes near Hooded Plover breeding sites, noting that foxes may be the sole major threat in remote areas.

(b) Keep abreast of developments to protect breeding shorebirds from introduced predators such as nest cages and fencing, and implement those that are appropriate.

4.4 Objective

Help fill information and data analysis gaps on the relative abundance and distribution of Hooded Plovers and their biological requirements.

4.4.1 Performance criterion

Trends in relative abundance of Hooded Plovers are monitored every year and analysed, and new information is incorporated into management strategies.

Actions

(a) Assist the Australasian Wader Study Group to conduct their established volunteer-based biennial national survey of Hooded Plovers, and their new survey of breeding success through counts of flying young.

(b) Support the publication of all shorebird count data from South Australia.

(c) Keep abreast of new studies on Hooded Plover management by holding a workshop with participation by relevant interstate experts and attend interstate workshops as well.

4.5 Objective

Increase (1) community involvement and (2) community awareness in the conservation of the Hooded Plover and its needs.

4.5.1 Performance criterion

An increase in the number of (1) people involved in and (2) aware of the recovery program, and (3) an increase in the area outside reserves managed sympathetically for the Hooded Plover.

Actions

(a) Develop a communication strategy that identifies the ways in which people can be made aware of threats to Hooded Plovers and how they can become involved in a range of actions that are planned for different areas of the coast.

(b) Provide information to beach-user groups, government agencies, local planning authorities, oil spill response teams, and other relevant groups.

(c) Use existing templates for community awareness packages (e.g. Weston 2003), signs on beaches and direct communication with beach-user groups.

(d) Involve community volunteers in wardening Hooded Plover nests at selected disturbed sites, e.g. Fleurieu Birdwatch Group volunteers at Encounter Bay.

(e) Support training of volunteer participants in Australasian Wader Studies Group surveys and activities such as wardening.

(f) Provide regular feedback on progress and improvements to management regimes to community groups, participants, agencies and local authorities.

(g) Employ a part-time Shorebird Co-ordinator to develop management strategies for selected beaches, organise workshops, liaise widely, involve and train volunteers, provide feedback, and develop a communication strategy.

4.6 Objective

Implement the Recovery Plan through a Recovery Team.

4.6.1 Performance criteria

Successful operation of the recovery program over five years.

Actions

(a) Establish a recovery team with appropriate stakeholder representation.

(b) Guide and review the recovery program.

(c) Ensure the recovery team functions efficiently and communicates well.

(c) Report on progress against objectives and performance criteria.

(d) Undertake an external review of the recovery program after four years.

5 BIODIVERSITY BENEFITS

Many of the disturbances faced by Hooded Plovers are common to other beach-nesting birds (Schulz 1992, Birds Australia 2006). The Hooded Plover could become a 'flagship' species in the effort to conserve threatened shorebirds in south-eastern Australia (Birds Australia 2006). Hooded Plovers commonly occur and breed in or near the same areas as endangered Little Terns and Fairy Terns in South Australia. They may also occur in the same areas as declining resident shorebirds, and migratory shorebirds listed under the Japan Australia Migratory Bird Agreement and the China Australia Migratory Bird Agreement, e.g. sanderlings.

Many of the actions in this Recovery Plan, such as fox control, dog exclusion and community information programs will benefit a range of coastal species including those living in nearby parks and reserves.

6 COSTS OF THE RECOVERY PLAN

Many of the core tasks have been allocated to a part-time (c. \$40,000 pa) Shorebird Co-ordinator. This is a key position for this recovery plan to work efficiently and effectively.

Action	Cost estimate \$,000 pa	Responsibility	Timeframe
4.1 Reduce human & companion animal impacts			
4.4.1. (a) Map distribution and disturbance	10	Co-ordinator	Year 1
4.1.1. (b). Develop site-specific strategies	15	Co-ordinator	Year 2
4.1.1. (c). Liaise with groups	5	Co-ordinator & NPWS	Ongoing

4.1.1. (d). Integrate strategies into other plans	5	NPWS & Co-ordinator	Years 1-5
4.2. Reduce vehicle impacts			
4.2.1. (a) Continue Coorong seasonal closure	-	NPWS	Ongoing
4.2.1. (b) Implement other temporary beach closures	-	NPWS	Years 1-5
4.2.1. (c) Train management drivers	-	NPWS	Year 1
4.3. Control predators			
4.3.1. (a) Exclude uncontrolled dogs from key sites	-	NPWS & Local Govt	Ongoing
4.3.1. (b) Control and monitor foxes at key sites	-	NPWS	Years 1-5
4.3.1. (c) Keep abreast of developments	-	Co-ordinator	Ongoing
4.4. Monitor populations			
4.4.1. (a) Assist AWSG biennial counts	5	Co-ordinator & NPWS	Years 2 & 4
4.4.1. (b) Support publication of AWSG data	-	NPWS	Years 1 & 5
4.4.1. (c) Workshop new developments	5	Co-ordinator	Year 3
4.5. Community involvement			
4.5.1. (a) Develop a communication strategy	15	Co-ordinator	Year 3
4.5.1. (b) Provide information to groups	5	Co-ordinator	Ongoing
4.5.1. (c) Use community awareness packages	5	NPWS & Co-ordinator	Ongoing
4.5.1. (d) Involve volunteers in wardening	5	NPWS & Co-ordinator	Years 1-5
4.5.1. (e) Support volunteer training	-	AWSG	Ongoing
4.5.1. (f) Provide feedback to groups	5	Co-ordinator	Ongoing
4.5.1. (g) Employ a part-time Shorebird Co-ordinator	See above	NPWS	Years 1-5
4.6. Implement the Recovery Plan			
4.6.1 (a) Establish a recovery team	-	Recovery Team	Year 1
4.6.1. (b) Guide and review the recovery plan	-	Recovery Team	Ongoing
4.6.1. (c). Ensure efficiency	-	Recovery Team	Ongoing
4.6.1. (d) Report on progress	-	Recovery Team	Years 1-5
4.6.1. (e) Review Recovery Plan	5	Consultant	Year 4

Summary of Costs

	Year 1	Year 2	Year 3	Year 4	Year 5
Total	\$45,000	\$55,000	\$55,000	\$45,000	\$40,000

7 MANAGEMENT PRACTICES THAT MAY HAMPER VIABILITY AND RECOVERY

- Failure to develop and effectively promulgate site-specific strategies.
- Inadequate cooperation secured from beach-user groups.
- Successful opposition to further temporary closures of select beaches to vehicles.
- Failure to reduce feral predator impacts at key sites.
- Coastal land-use changes that increase disturbance at key beaches.
- Lack of training and support for volunteers.
- Insufficient funds to implement recovery actions.

8 MONITORING, REPORTING AND REVIEW

Progress will be monitored and evaluated yearly by members of the Recovery Team through an annual review. The monitoring process will include:

- Compiling information and data, assessing progress made for all actions with the criteria and objectives of the Recovery Plan in mind.
- There will be an external review after four years of Recovery Plan implementation.

9 INTERESTS THAT WILL BE AFFECTED BY THE RECOVERY PLAN'S IMPLEMENTATION

- SA Department for Environment and Heritage
- South Australian coastal NRMs , including South East, Adelaide & Mount Lofty Ranges, Kangaroo Island, Northern & Yorke and Eyre Peninsula
- Local Government
- Coastal Shires, including District Council (DC) Grant, Wattle Range Council, DC Robe, Kingston DC, The Coorong DC, Alexandrina Council, City of Victor Harbor, DC Yankalilla, City of Onkaparinga, DC Kangaroo Island, DC Yorke Peninsula, DC Tumby Bay, City of Port Lincoln, DC Lower Eyre, DC Elliston, DC Streaky Bay, and DC Cednua
- Indigenous groups
- Research organisations such as universities
- Bird groups such as the Australasian Wader Study Group, South Australian Ornithologists Association and Birds Australia
- Non-government organisations such as the Threatened Species Network
- Coastal action groups such as Coastcare
- Australian Government, Department of Environment and Heritage
- Recreational fishing groups

This list of stakeholders covers the main bodies but should not be considered exhaustive. There may be other interest groups which need to be considered when particular tasks need to be undertaken.

10 NATIVE TITLE

The requirements of the *Native Title Act* 1993 only apply to land where Native Title rights and interests may exist. When implementing any recovery actions in this threatened species plan where there has been no Native Title determination, or where there has been no clear extinguishment of Native Title, there needs to be consideration of the possibility that Native Title may continue to exist. Generally the *Native Title Act* 1993 requires certain procedures to be followed before undertaking activities – known as future acts that may include certain recovery actions in this plan – which may affect Native Title rights and interests.

This threatened species plan is released and will be adopted subject to any Native Title rights and interests that may continue in relation to the land and/or waters. Nothing in the plan is intended to affect Native Title. The relevant provisions of the *Native Title Act* 1993 should be considered before undertaking any future acts that might affect Native Title. Procedures under the *Native Title Act* 1993 are additional to those required to comply with the *Aboriginal Heritage Act* 1998.

11 SOCIAL AND ECONOMIC IMPACTS

The main impact of this Recovery Plan will be the restriction of some activities such as driving along selected beaches and taking dogs onto a small number of beaches that are important Hooded Plover habitat. These limitations will be localised leaving the majority of beaches available for unrestricted recreation. Any impacts on beach users, and tourism generally, can be minimised by consulting relevant community groups and by incorporating shorebird conservation requirements into plans for nearby resorts, walking tracks, and beaches. Experience with Little Tern conservation shows that protecting breeding sites by restricting access to parts of beaches can enhance the tourist values of a particular area and can be easily accepted by most beachgoers (Schulz 1992). This has also been shown for Temporary Beach Closures implemented for Hooded Plovers (Dodge *et al.* 2005).

With a growing human population, further residential and resort development along the coast, increasing outdoor recreation, and an increasing desire by many people to seek out remote areas. Such areas include small offshore islands where there is currently small scale visitation, often no introduced predators and reasonable recruitment rates among Hooded Plovers. There is a likelihood of further disturbance of breeding shorebirds and declines in the number of Hooded Plovers in South Australia if the use of some important beaches is not well managed. The main impact of the implementation of this Recovery Plan will be the restriction of some activities such as taking dogs onto a small number of beaches that are important Hooded Plover habitat. Directing the public away from some remote beaches may also be necessary, particularly if these same beaches are also used by threatened Little Terns or Fairy Terns. However, these limitations will be localised leaving the majority of beaches available for unrestricted recreation. Some restrictions will only need to be in place during the breeding season. Further, any social and economic impacts on beach users, and tourism generally, can be minimised by consulting relevant community groups and by incorporating shorebird conservation requirements into plans for nearby resorts, walking tracks, and beaches. Another way of minimising social and economic impacts is to use measures that ensure the beach is shared fairly between humans and Hooded Plovers. For example, Temporary Beach Closure signs were effective at Mornington Peninsula National Park, and allowed humans to use the beach when the Hooded Plovers were not attempting to breed (Dowling and Weston 1999, Dodge *et al.* 2005).

The economic aspects of coastal areas are important because nearby beaches provide a livelihood and an economic return to tourism operators. Given, for example, that only 10% of Kangaroo Island's 590 km of beaches is occupied by one-third of the Hooded Plovers in South Australia (Dennis and Masters *in press*), it should be possible to manage most Hooded Plover habitat there to minimise disturbance during the breeding season without making any inroads into the economic viability of coastal businesses. Where such restrictions have been applied at very busy tourist destinations such as Phillip Island in Victoria, let alone remote beaches, there has been no reported negative impact on tourism. Indeed, tourism at Phillip Island, with its focus on natural areas and wildlife, is booming. At Mornington Peninsula National Park, many visitors to Victoria's busiest park were able to assist and participate in the effort to protect the Hooded Plover, even if only by cooperating with staff and obeying regulations. Many reported that their experiences with Hooded Plovers had enriched their visit (Dowling and Weston 1999). Experience with Little Tern conservation shows that protecting breeding sites by restricting access to parts of beaches can enhance the tourist values of a particular area and can be easily accepted by most beachgoers. Sensitive use of public viewing facilities can also benefit beach users (Schulz 1992).

Some of the costs of limiting access to some beaches may include: research and marketing needs to establish modified enterprises, and the costs of operating new recreation and tourism ventures. Commercial horse riding tours have been prohibited from using a beach at Cape Otway, Victoria, because of concern regarding the crushing of Hooded Plover nests. The operators admitted that it was impossible for them to remain below the high tide mark during the tours.

Restrictions on driving along a few beaches and taking dogs to these areas will limit the aspirations of a few people who have undertaken these activities in the past and who wish to continue to do so. Most of these concerns can be overcome by consulting relevant community groups, distributing information material, erecting signs, organising and training volunteer wardens, and incorporating shorebird conservation requirements into plans for nearby resorts, walking tracks, and beaches. All these things were conducted at Mornington Peninsula National Park but enhanced enforcement also played a big role. Even so, compliance with many laws such as keeping dogs on leads is still low (Dowling and Weston 1999, Weston 2000a).

The community, and particularly the members of the Australasian Wader Study Group of Birds Australia and its State affiliates, together with and members of other bird clubs have undertaken much of the survey work to conserve the Hooded Plover over the past two decades. This activity has provided these groups with a

shared challenge, and an enjoyable means of fulfilling their mission. Wildlife agency personnel have assisted in these counts and forged links between the agencies and community groups.

Experience has shown that some of the benefits of restricting dogs from a few beaches with breeding Little Terns can be to enhance the tourist values of these sites (Schulz 1992). Beaches that are promoted for their wildlife values provide opportunities for new tourism enterprises, personal satisfaction and biodiversity conservation.

12 ACKNOWLEDGMENTS

Many volunteers have undertaken surveys and studies of Hooded Plovers over the past two decades, and their efforts have made a major contribution to this Recovery Plan and other conservation work. Birds Australia, the Australasian Wader Study Group and State Wader Study Groups have co-ordinated the work of volunteers with assistance from State wildlife agencies. Jason van Weenen from DEH National Parks and Wildlife provided assistance in the preparation of the Recovery Plan and Peter Copley, Kate Fitzherbert, Sharon Gillam, Emma Ginman, Jason van Weenen, Jane Cooper, Terry Dennis and Wendy Stubbs provided editorial comments.

Appendix 15 – Estuary Entrance Management Support System

EEMSS

estuary entrance management support system

copyright
adz@work 2006

The Estuary Entrance Management Support System (EEMSS) will ensure a consistent process is in place for decisions on openings and closures and openings are

Estuaries and associated wetlands...

are one of the most valuable ecosystems. They provide spawning and nursery areas for fish and breeding and foraging areas for birds.

Estuaries also have an important function as natural sediment and nutrient filters thereby providing cleaner water to the estuary and inshore zone. Apart from their ecological value, estuaries are an important tourist destination and provide many recreational opportunities such as fishing, bird watching and boating.

Many estuaries in Victoria intermittently close following the formation of a sand bar at the mouth of the estuary. The resultant increase in water level within the estuary has an environmental benefit when adjoining wetlands and fringing vegetation are flooded. However, there are also economic costs associated with flooding of infrastructure and agricultural land. While estuary closure is a natural event catchment activities such as clearing and water extraction can alter the flow to estuaries and potentially affect the timing or extent of estuary mouth closure.

Historically estuaries in Victoria have been opened to protect infrastructure and agricultural land. There has been limited consideration of environmental values which could potentially be compromised by the decision to either open or not open the estuary.

DEVELOPMENT OF EEMSS

Community workshops were used to identify the uses and functions of estuaries and surrounding land that should be protected when making the decision whether or not to open an estuary. The range of assets listed reflected the value of estuaries as important habitats, cultural sites, areas for recreation and sites for economic development, particularly for tourism and agriculture.

SOCIO-ECONOMIC

- | | |
|-------------------|----------------------|
| Roads & bridges | Agricultural land |
| Fishing | Jetties |
| Walking tracks | Boat ramps |
| Recreational land | Camping |
| Swimming | Built Infrastructure |
| Stormwater | Septics |
| Human health | Watercraft |

ENVIRONMENTAL

- Fish
- Plant communities
- Birds

CULTURAL

- Cultural heritage
- Indigenous culture

The workshops also identified some concerns with current estuary entrance management. In summary the community wanted:

- Consistency
- Education to promote estuarine values
- 'Indicators' other than water height to be considered
- Other ways to minimise the impacts of flooding
- Stronger, ongoing communication between researchers, community and managers
- The impact of artificially opening the mouth of an estuary to be monitored

Agencies responsible for estuary management required that the decision support system be:

- A transparent system
- Easy to use
- Not reliant on extensive data collection
- Adaptive i.e.able to respond to monitoring
- Applicable to all intermittently - closed estuaries in Victoria but able to incorporate the uniqueness of each estuary

t System (EEMSS) is a database that will guide n whether or not to artificially open an estuary. followed each time so all assets are considered e safe and effective.

COMPONENTS OF EEMSS

EEMSS comprises three basic components:

1. An impact assessment

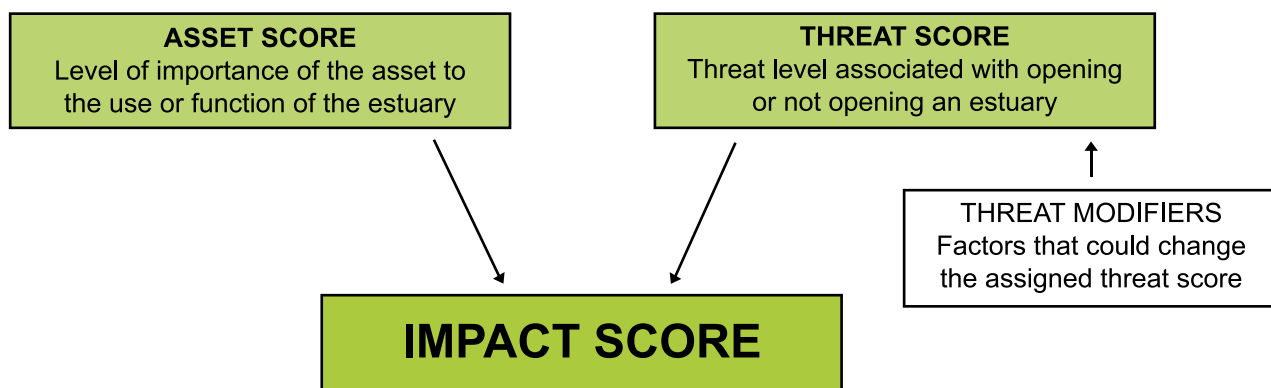

2. A checklist

3. Data storage

An **impact assessment**, based on an assets-threats model ensures a consistent process is used when making the decision whether or not to open an estuary. It also ensures that the decision considers the environmental, cultural and socioeconomic values of each estuary.

Experts in the relevant disciplines were engaged to develop the rules for scoring both the assets and the threat to those assets posed by opening or not opening an estuary. **Threat modifiers** were also identified for some assets. These included, how long the water has been at a given level, whether the area is affected by drought, and dissolved oxygen levels of the water. Rules have been developed to describe how these factors alter the level of threat associated with opening or not opening an estuary.

For each estuary, the community and other experts will be asked to use the rules developed to assign scores to both the assets, and the threat to those assets of opening or not opening an estuary. Scores will vary with water level and time of the year.

At the time of making a decision about opening an estuary, the manager will input information about the threat modifiers. This may change some of the threat scores previously assigned. EEMSS will combine the asset and threat scores to produce an impact score. The **impact assessment report** will list the impact of opening and not opening the estuary on the assets identified for that estuary. If after consideration of the impact assessment report the manager decides to open an estuary they are required to complete a **checklist report**. This ensures a consistent protocol is followed when the mouth is opened so openings are safe and effective. Examples of the information required includes placement of warning signs, sea conditions and tides.

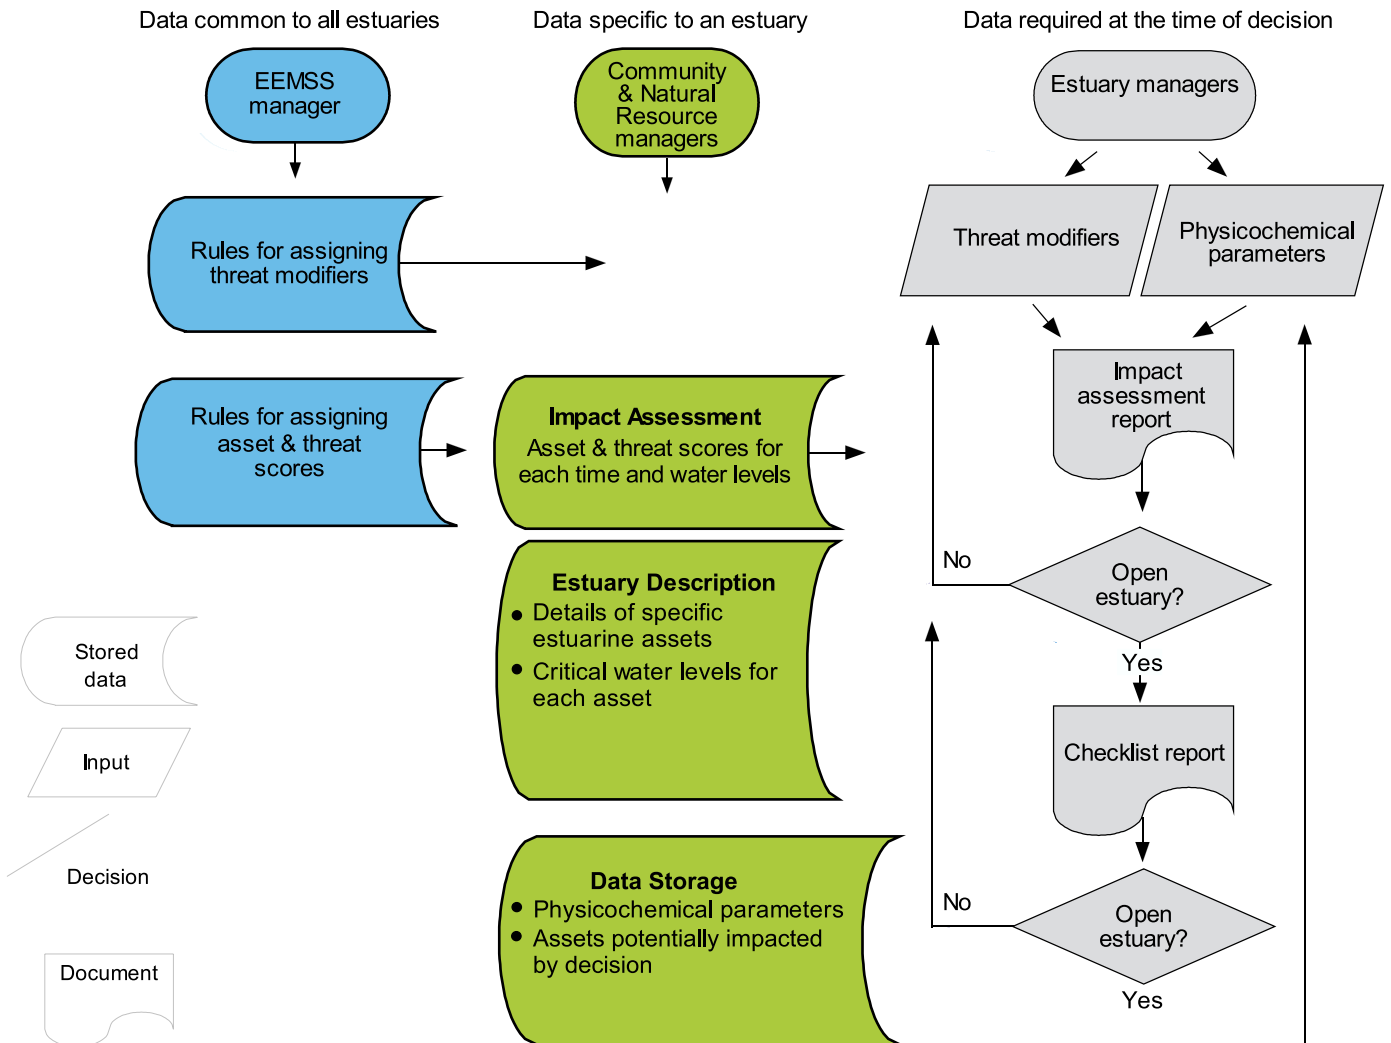

For an estuary to be artificially opened, both the impact assessment report and the checklist report must support that decision.

A **data storage** section will store information about physicochemical parameters such as, estuarine water levels, mouth status, oxygen levels, salinity and temperature. Some of this information is currently collected by community members and agencies. Managers will also be able to store information about assets that were identified in the impact assessment report as potentially impacted by their decision.

The data collected will help inform future management decision and allow agencies to better target monitoring programs.

Further Information

For further information about the EEMSS project contact your local catchment management authority.

Acknowledgements

Australian Government

Development of EEMSS was funded by the Natural Heritage Trust. A steering committee with representatives of Deakin University, Glenelg Hopkins Catchment Management Authority, Corangamite Catchment Management Authority, The Environment Protection Authority, Parks Victoria, the Western Coastal Board, Department of Sustainability and Environment and Department of Primary Industries provided ongoing guidance.

Appendix 16 – Glossary Of Terms

AEOLIANITE

A rock formed from calcareous dune sands, a dune calcarenite

ALIEN

Species from outside the region

BASE GIS LAYER

The original GIS (Geographic Information System) layers stored within

databases which are used as the basis for analysis. The Base GIS layers are represented as vector datasets within databases, with these vector datasets representing a wide range of real world features (with a geographic location).

These GIS features are of three types:

Points (eg. the location of Biological Survey Sites),

Lines (eg. the location of an unsealed roads or tracks) &

Polygon (eg. the location of Mangrove Habitat or the location of Conservation Parks).

Each base GIS layer may be an accumulation of many occurrences of the same type and theme – for example the 'Biological Survey Flora Points' will include thousands of individual survey sites each containing a number of plant types at each site.

BEACH

A sand or pebble slope, gently or moderately inclined, built up or eroded by waves, forming the shore of a lake or sea (McDonald et al, 1990), over which the swash and backwash operate (Short & Fotheringham, 1986)

BEACH RIDGE

A very long, nearly straight low ridge, built up by waves and usually modified by wind. A beach ridge is often a relict feature remote from the beach (McDonald et al, 1990), formed of shingle or shell debris, (Short & Fotheringham, 1986) see foredune ridge

BEACH RIDGE PLAIN

level to gently undulating landform pattern of extremely low relief on which stream channels are absent or very rare: it consists of relict parallel beach ridges (McDonald et al, 1990), beach ridges are linear, symmetric or asymmetric, convex ridges formed of shingle or shell debris., storm or swash wave derived (Short & Fotheringham, 1986)

BLOWOUT

erosional trough generally initiated through vegetation loss within a coastal dune by natural (e.g. wave erosion, fire) or other causes (e.g. impact of vehicle or foot traffic).

CALCAREOUS SANDS

Beach or dune sands that contain high carbonate content; usually derived from the fragmented shells of marine organisms.

CELL

A term used in this report to indicate a small coastal area, defined on landform grounds, for the purpose of description within the coastal boundary. [The Southern Fleurieu coastal boundary is divided into 27 cells].

CHENIER

Long low ridges composed of wave washed sand-shell material. Commonly occur within saltmarsh supratidal areas, marking the limit of a storm surge induced flood episode.

CLIFF

Steep, vertical or overhanging slope, usually over 5m high, at the coast. Cliffs are eroded by a variety of processes, and over time the steepness is maintained by wave removal of debris from the cliff base. If marine processes are excluded from the base, debris will slowly accumulate and the cliff slope reduced.

CONSOLIDATED DUNEFIELD

level or rolling landform pattern of very low or extremely low relief without stream channels, built up or locally excavated, eroded or aggraded by wind and consolidated by stabilising effects of vegetation (modified from McDonald et al, 1990), *not lithified*

DATA THEME/ DATA LAYER

The expression used to define one type of GIS data. This data will always be of the same geographic type eg. points. In some occasions numerous data sources concerning the same type of information can be combined to form one Data Theme or Layer.

DUNE/CONSOLIDATED DUNE

moderately inclined to very steep ridge or hillock built up by wind. This element may comprise dunecrest and duneslope. May also be consolidated due to stabilising effects of vegetation (modified McDonald et al, 1990), includes hind dunes.

DUNEFIELD

level to rolling landform pattern of very low or extremely low relief without stream channels, built up or locally excavated, eroded or aggraded by wind (McDonald et al, 1990), *not lithified*

DUNEFIELD LITHIFIED; DUNE CALCARENITE/DUNEROCK

whole or portion of a sand dune that has been lithified to some degree, lithification is usually associated with partial solution and precipitation of calcium carbonate which cements the sand grains (Short & Fotheringham, 1986)

ENDEMIC/

native to or confined to a certain region

ENVIRONMENTAL WEED

Term that refers to those naturalised plant species that have invaded areas of native vegetation. The species is presumed to impact negatively on native species diversity or ecosystem function. Environmental weeds are usually non-native species, although native plants species that are invasive beyond their indigenous range are also included

ESCARPMENT

steep to precipitous landform pattern forming a linearly extensive, straight or sinuous inclined surface, which separates terrains at different altitudes, that above the escarpment commonly being a plateau. Relief within the landform pattern may be high (hilly) or low (planar). The upper margin is often marked by an included cliff or scarp (McDonald et al, 1990)

EXOTIC

Species from outside the region

FOREDUNE

very long, nearly straight, moderately inclined to very steep ridge built up by the wind from material from an adjacent beach (McDonald et al, 1990), The foredunes are formed by vegetation trapping aeolian sand on the backshore zone, above the tide line. Foredunes range from quite small (approximately 2m) to very large (over 30m), very stable to very unstable (ie vegetation cover may display great variation) and may be morphologically diverse. Generally they comprise a frontal or stoss slope, crest and lee or landward slope (Short & Fotheringham, 1986)

FOREDUNE RIDGE

foredune ridges are dune ridges which were initiated as foredunes and then later were removed from the influence of beach processes by seaward secretion, and the formation of a new foredune, (Short & Fotheringham, 1986), they are aeolian in origin in contrast to beach ridges which are wave derived

GEOREFERENCED

The state in which a raster dataset is positioned in space using map coordinates. Each feature within the GIS layer will have a corresponding real-world feature on the ground at the same geographic location. Georeferencing data allows it to be viewed, queried, and analysed with other geographic data.

GIS (Geographic Information System)

An organised collection of computer hardware, software, geographic data, and personnel designed to efficiently capture, store, update, manipulate, analyse, and display all forms of geographically referenced information. A GIS may be used for a project (also called project GIS, or single-user GIS), by a department of an organisation to support a key function of that department (called departmental GIS), or by an organisation to support daily activities and strategic decision making (called enterprise GIS).

GRID

A geographic representation of the world as an array of equally sized square cells arranged in rows and columns. Each grid cell is referenced by its geographic x,y location.

GRID CELL: See RASTER CELL.

GULLY

open depression with short, precipitous walls and moderately inclined to very gently inclined floor or small stream channel, eroded by channelled stream flow and consequent collapse and water-aided mass movement (McDonald et al, 1990)

HIND DUNE

any dune or dune system lying landwards of the foredune (Short & Fotheringham, 1986)

INCIPIENT FOREDUNE

newly forming foredunes occupying a primary beach location behind the spring tide swash limit, and vegetated by pioneer colonisers, semi-erect and erect grasses and prostrate herbaceous plants. The incipient foredunes are formed by vegetation trapping aeolian sand on the backshore zone, above the tide line. Once secondary (woody) plant species colonise the incipient foredune, it may be simply termed foredune. (Short & Fotheringham, 1986)

INTERDUNE CORRIDOR

generally wide, linear, level floored open depression between parallel dunes (modified McDonald et al, 1990)

INTER-TIDAL FLAT

an area of low relief that lies within the range of the astronomical tides. If the area lies on the seaward side of the saltmarsh it may also be influenced by wave action.

INTER TIDAL SALTMARSH

the area that is regularly (daily) flooded by the astronomical tide

INTRODUCED

Species from outside the region

INVASIVE PLANTS

Naturalised species that are spreading

LEVEE BANK

an artificial bank built to limit the area of flooding

LIMESTONE PLAIN

large, very gently inclined or level element of hard almost horizontally bedded limestone (a class of rock which contains at least 80% of the carbonates of calcium or magnesium)

LITHIFIED

the state of having been cemented or compacted so as to form solid rock

LONGITUDINAL DUNEFIELD

dunefield characterised by long narrow sand dunes and wide flat swales. The dunes are orientated parallel with the direction of the prevailing wind, and in cross section one slope is typically steeper than the other (McDonald et al, 1990)

MANGROVE

forest plant community that occupies the narrow intertidal zone between the land and the sea. South Australia has only one species of mangrove (*Avicenna marina ssp resinifera*, the Grey Mangrove).

NATURALISED SPECIES

Species from outside the region in question that can maintain populations in the wild without cultivation.

PARABOLIC DUNEFIELD

dunefield characterised by sand dunes with a long scoop-shaped form, convex in the downwind direction so that its trailing arms point upwind: (McDonald et al, 1990)

PLAIN

level to undulating or, rarely, rolling landform pattern of extremely low relief (less than 9m) (McDonald et al, 1990)

PLATEAU

level to rolling landform pattern of plains, rises or low hills standing above a cliff, scarp or escarpment that extends around a large part of its perimeter. A bounding scarp or cliff landform element may be included or excluded: a bounding escarpment would be an adjacent landform pattern (McDonald et al, 1990)

RASTER

Represents any data source that uses a grid structure to store geographic information.

RASTER CELL

A discretely uniform unit (square or rectangle) that represents a portion of the earth such as a square meter or square mile. Each pixel has a value that corresponds to the feature or characteristic at that site such as a soil type, census tract, or vegetation class.

RASTERISATION

The process by which base vector GIS layers are modified and stored as a raster layer.

RESISTANCE

The ability of an ecosystem to withstand disturbance without undergoing a phase shift or losing neither structure nor function (Odum, 1989). For example, a swamp paperbark's ability to withstand groundwater salinity change and mortality.

RESILIENCE

The ability of a system to absorb or recover from disturbance and change, while maintaining its functions and services (Adapted from Carpenter et al, 2001). For example a vegetation association's ability to recover from an extended drought event.

SALTMARSH

saltwater wetland occupied mainly by herbs and dwarf shrubs, characteristically able to tolerate extremes of environmental conditions, notably waterlogging and salinity

SAMPHIRE

A community of halophytic plants either herbaceous or shrubby that occur to the landward side of the mangroves (and sometimes within)

SEAGRASS

marine plant that colonises either the intertidal mud or sandflat to the seaward side of the mangroves or saltmarsh. Seagrass also extends to the subtidal.

SCARP

very wide steep to precipitous maximal slope eroded by gravity, water-aided mass movement or sheet flow (McDonald et al, 1990)

SHORE PLATFORM or ROCKY REEF

Exposed rocky substrate within the intertidal zone.

STRANDED TIDAL

An area formerly tidal, but which have since been isolated from tidal influence by dunal development, levee bank (road) construction, or by changes in sea level or landform uplifting

SUB-TIDAL

SUPRA-TIDAL

the drier area less frequently inundated by the tides (monthly)

SWALE

linear, level-floored open depression excavated by wind, or left relict between ridges built up by wind or waves, or built up to a lesser height than them (McDonald et al, 1990)

TURBIDITY

Cloudy water, usually caused by the suspension of fine particles in the water column. The particles may be inorganic (e.g. silt) or organic (e.g. single-celled organisms).

WEED

Species that adversely affect biodiversity, the economy or society

Geological Time

HOLOCENE

10 000 years before present to present - predominantly unlithified

PLEISTOCENE

1.6-1.8 millions of years before present - lithified

TERTIARY

from 5-65 million years before present - limestones

PRECAMBRIAN

2600 millions of years before present - metasediments, granites etc

Conservation Categories

E	Endangered: in danger disappearing from the wild state within one or two decades if present land use and other causal factors continue to operate
V	Vulnerable: rare and at risk from potential threats or long term threats which could cause the species to become endangered in the future
R	Rare: has a low overall frequency of occurrence (may be locally common with a very restricted distribution or may be scattered sparsely over a wider area). Not currently exposed to significant threats, but warrants monitoring and protective measures to prevent reduction of population size
T	Threatened: likely to be either Endangered or Vulnerable but insufficient data for a more precise assessment
K	Uncertain: likely to be either Threatened or Rare but insufficient data for a more precise assessment
Q	Not yet assessed but flagged as being of possible significance
U	Uncommon: less common species of interest but not rare enough to warrant special protective measures
N	Not of particular significance/Common

South Australian Vegetation Structural Formations

	Projective Foliage Cover of Tallest Stratum			
Life Form/ Height Class	Dense 70 - 100%	Mid-Dense 30 - 70%	Sparse 10 - 30%	Very Sparse 1 - 10%
Trees > 30m	Tall closed forest	tall open forest	tall woodland	tall open woodland
Trees 10 - 30m	Closed forest	open forest	woodland	open woodland
Trees 5 - 10m	Low closed forest	low open forest	low woodland	low open woodland
Trees < 5m	Very low closed forest	very low open forest	very low woodland	very low open woodland
Mallee (>3m)	Closed mallee	mallee	open mallee	very open mallee
Low Mallee (<3m)	Closed low mallee	low mallee	open low mallee	very open low mallee
Shrubs > 2m	Tall closed shrubland	tall shrubland	tall open shrubland	tall very open shrubland
Shrubs 1-2m	Closed shrubland	shrubland	open shrubland	very open shrubland
Shrubs <1m	low closed shrubland	low shrubland	low open shrubland	low very open shrubland
Mat plants	closed mat plants	mat plants	open mat plants	very open mat plants
Hummock grass	closed hummock grassland	hummock grassland	open hummock grassland	very open hummock grassland
Tussock Grasses	closed tussock grassland	tussock grassland	open tussock grassland	very open tussock grassland
Herbs	closed herbland			
Sedges)	closed sedgeland	sedgeland	open sedgeland	very open sedgeland
Ferns	closed fernland	fernland	open fernland	very open fernland
