

In 1973 at the Tartu University she defended her doctor's thesis on Caddisflies of Latvian Rivers. Material of the thesis was included in a separate book published 1972 in Riga which gave detailed descriptions of those invertebrates which most often coexisted with caddisflies. Attention should be drawn to her "Key to larvae of caddisflies of the European part of the USSR" published in 1977. Trichopterologists should remember that the book is not merely a scientific work but is also meant for practical workers who control pollution levels of waters. Unfortunately, the length of the work had to be cut so that the author could not include all the species. Her last important work was the "Key to adult caddisflies of the European part of the USSR". One shortcoming was insufficient consideration of the Carpathian fauna but nevertheless this work stands as a major contribution to the study of Trichoptera.

O.Kachalova published more than 100 scientific works (The following bibliography contains only those works dealing with caddisflies as well as some on zoobenthos of lakes, which contain data on caddisflies). The titles of these works indicate the range of her studies on Trichoptera. All who met Dr.Kachalova were impressed by her kindness, her willingness to impart knowledge and her enthusiasm for her subject.

**Luis REYES ARRUNATEGUI**

Senior Biology student at the Universidad Nacional de Trujillo, Las Palmeras 488, Urb.Fatima, TRUJILLO, Peru.

Present interest: Trichoptera of Peru: Taxonomy, distribution, ecology, bionomics. Finish a catalogue or monograph of Trichoptera of Peru. Previously studied: Rivers, streams and communities of freshwater from different biogeographical regions of Peru.

Information wanted: All information about holotypes and paratypes from Peru in museums and institutions around the world.

Other interests: Taxonomy of Odonata and aquatic Coleoptera of Peru. Biodiversity of aquatic insects.
