Rail-Mounted Terminal Blocks for Matrix Patching

3-conductor front entry double potential terminal blocks of the 280 series can be used for the linking of incoming field wires with the central process controller devices.

Bushbar Terminal Blocks

Using the series 812 bushbar terminal blocks in switchgear cabinets and distribution boards allows simple and safe potential distribution on standard 10 x 3 mm bushbars.

Matrix Patchboards

Safe patching despite high density wiring: WAGO matrix patchboards with CAGE CLAMP®-connection.

Terminal blocks for matrix patching and same potential terminal blocks

For enclosures with a single opening. These matrixes series 727 are used on rails typically mounted on a wall. Like the matrix patch boards, the field side mirrors the patch side.
