

LITERATURE CITED

The following bibliography gives full references to over 900 taxonomic works cited in the catalog. A concerted effort was made to examine as many of the cited references as possible in order to ensure accurate citation of authorship, date of publication, title, and pagination.

References are cited chronologically for multiple articles with the same authorship. In cases where more than one article was published by an author(s) in a particular year, a suffix letter supersedes the year (letters listed alphabetically according to publication chronology).

Authors' names: Surnames of authors are cited in the bibliography the same as they are in the text for proper association of literature citations with entries in the catalog. See under Explanatory Information in the Introduction for protocol in orthography of names of authors. Full given names and dates of birth and/or death are given where known. If vital dates could not be found, known minimum and maximum dates in which the author lived are given in parentheses prefixed by "FL." [= flourished].

Dates of publication: A concerted effort for obtaining dates of publication for taxonomic Diptera works was begun in Evenhuis *et al.* (1989) and has continued in similar catalogs by the senior author (e.g., Evenhuis, 1991b, 1994a, 1997). Dates of the works cited in this catalog were obtained through various methods in order to obtain as accurate a date of publication as possible for purposes of priority in nomenclature. Dates found in the original work or by outside evidence are placed in parentheses after the literature citation. Those found in the original work itself are not annotated or marked. Those dates marked with a single asterisk (*) are dated from library receipts at The Natural History Museum, London; those marked by two asterisks (**) are dated from library receipts at the National Museum of Natural History, Washington, D.C.; and those marked with three asterisks (***) are dated from library receipts at the Bishop Museum, Honolulu. Dating from other outside evidence (reviews in other journals, evidence through published research, dates of receipt at other libraries, etc.) are given with annotations in square brackets after the publication date. Where no accurate date of publication could be obtained other than the year, the date "31 December+" is given to distinguish it from published dates of 31 December. Dates with month only should be construed as being issued on the last day of that month until further evidence is found to restrict the actual date of publication further within the month. Where the actual year of publication, found through outside evidence, is different than a printed year within the work itself, the actual year of publication is given in square brackets in this bibliography and annotation explaining such evidence is given in square brackets after the date of publication.

Titles: Titles of articles in journals and books are given in full including secondary titles. Titles are given as on the title page of the original work (in some cases, titles on wrappers, covers, and tables of contents may vary somewhat). Titles are standardized to lowercase except for proper nouns and in cases where languages require capitalization. Where possible, titles in Eastern European languages, Cyrillic, Kanji, or Chinese have either been translated into English and placed in brackets or transliterated, with original language indicated in the annotation for that citation. Where no title was given for a work (such as notes at meetings), a title derived as close as possible to the note presented is provided in brackets.

Journals: Journals are abbreviated according to the Serial Sources for the BIOSIS database, Biosciences Information Service, and the International Standard (ISO). Abbreviations for journals not in the ISO have been formed on the same principles. Additional information, such as series number or name, is given in parentheses but not itali-

cized. Volume numbers are given in Arabic numbers in boldface, irrespective of whether or not Roman numerals were used in the work cited. Issue or part numbers are included in parentheses after the volume number only if each issue is separately paginated. In cases where there is no volume number, but the volume pertains to a particular year, that year is used as the volume number (even though the actual date of publication may differ) and placed in boldface type. Citation of plate and/or figure numbers is omitted in the citation except in cases when necessary for nomenclatural reasons within the catalog or for bibliographic retrieval. Pagination is given for the entire article except in those cases where the article has been published at different times due to separate issues.

Books: Single-volume books are cited with title (italicized), publisher (if known), place(s) of publication, and pagination (Roman and Arabic as appropriate). Multi-volume works are listed separately by volume with full reference as for single-volume books. Continuously paginated multi-volume works are listed singly for as many parts (or volumes) as were published in a single year (only if separate issue dates are not known). Unpaginated portions of a book are placed in square brackets.

Annotations: Annotations are given to clarify authors' spellings, explanations of dating, title variations, duplicate versions, translations, separate editions, and various other reasons.

- 1832 The class Insecta arranged by the Baron Cuvier, with supplementary additions to each order by Edward Griffith, F.L.S., A.S. &c. and Edward Pidgeon, Esq. and notices of new genera and species by George Gray, Esq. Volume the second. *In: Griffith, E., et al., The animal kingdom arranged in conformity with its organisation by the Baron Cuvier with supplementary additions to each order.* Volume the fifteenth. Whittaker, Treacher & Co., London. 793 p. (December)

[The 2 volumes on insects (marked “First” and “Second”) are by E. Griffith & E. Pidgeon, and comprise Volumes 14 and 15 of the whole work. These volumes, published in 1832, contain new genera and species by G.R. Gray. Though some authors have indicated that Griffith & Pidgeon should be included as authors, a statement on p. 780 of this work says that Gray is the sole author of the new taxa. For dating, see Evenhuis (1997: 328).]
