Abstract. A catalogue is provided for the name-bearing type specimens of Trichoptera held by the Canadian National Collection of Insects, Arachnids & Nematodes (CNC). All 993 specimens are holotypes, representing 27 families from 29 countries, especially India (746 specimens), Pakistan (79), Iran (33) and Canada (29). Six taxa are unplaced to family; one of these, the amber-preserved *Electralberta cretacea* Botoşăneanu & Wichard from Alberta, is the sole fossil specimen held. Holotypes of four taxa are considered lost: *Setodes ekachringa* Schmid (Leptoceridae); *Ylodes schmidti* Manuel & Nimmo (Leptoceridae); *Tinodes pseudorostocki* Botoşăneanu (Psychomyiidae); *Himalopsyche angnorbui sherpa* Schmid (Rhyacophilidae). Fernand Schmid and his contributions to the CNC are discussed. Schmid was the only CNC staff member ever hired to study Trichoptera, working at the CNC from 1963 to 1985. He designated 900 of the Trichoptera holotypes held at the CNC and he collected 908 of the CNC Trichoptera specimens that were designated as types.

A catalogue is presented for the name-bearing types of Trichoptera (Insecta) deposited at the Canadian National Collection of Insects, Arachnids & Nematodes (CNC). This is the third study in an ongoing series documenting name-bearing type specimens in the CNC for those taxa without associated research staff - that is, excluding Nematoda, Acari, Coleoptera, Diptera, Hemiptera/Thysanoptera, Hymenoptera and Lepidoptera. An outline of these catalogues, including a discussion of type specimens and an estimated total number of name-bearing types in the CNC, was provided by Lonsdale & Locke (2018).

All name-bearing types are holotypes, totalling 993 specimens from 29 countries: Afghanistan (1), Bolivia (1), Bosnia and Herzegovina (5), Canada (29), China (6), Colombia (1), Denmark (1), France (1), Greece (1), Guinea (4), India (746), Iran (33), Japan (15), Macedonia (6), Mexico (8), Nepal (1), Pakistan (79), Peru (3), Romania (1), Russia (1), Slovakia (1), Spain (22), Sri Lanka (1), Switzerland (5), Thailand (6), Turkey (1), U.S.A. (12), Ukraine (1), Yugoslavia (1). Of

these, only 33 are types for species presently considered to be junior synonyms of other taxa, resulting in the CNC holding type specimens for 6.6% of all valid Trichoptera species. Numerous other specimens held by the CNC were formerly syntypes of species described by Banks and Hagen, but these were reduced to the status of paralectotypes following the actions of Ross (1938).

Holotypes at the CNC represent twenty-seven families of Trichoptera (Table 1). Six types belong to species unplaced to family, including the single fossil type *Electralberta cretacea* Botoşăneanu & Wichard, an amber-preserved specimen from Alberta. Most types belong to the families Leptoceridae (259), Rhyacophilidae (184), Psychomyiidae (88), Hydroptilidae (75) and Philopotamidae (69).

Type specimens belonging to the following four taxa could not be located during this study and are presumed lost: *Setodes ekachringa* Schmid (Leptoceridae), *Ylodes schmidti* Manuel & Nimmo (Leptoceridae), *Tinodes pseudorostocki*

Botoşăneanu (Psychomyiidae), and *Himalopsyche angnorbui sherpa* Schmid (Rhyacophilidae).

As of August 2019, there are nearly 2,700 terminal taxa of Trichoptera in the CNC, but the actual number is certainly much higher because large numbers of specimens are still unidentified beyond order, family or genus, especially those collected in south Asia, where much of the fauna likely remains undescribed.

Fernand Schmid

The Trichoptera collection at the CNC is mostly the result of the personal collecting and curatorial efforts of a single highly productive researcher, and discussion of the collection would be incomplete without also mentioning him. Fernand Schmid (Figs. 14–18) was born in Sion, Switzerland on May 12, 1924. His father ran the print shop in Valais and wanted Fernand to continue in the printing business. Despite this, Fernand instead chose to save his money and move to nearby Lausanne to continue his academics.

Fernand published out of the Zoological Museum in Lausanne from 1947, where he received his License in Science (1951) and his DSc (1953) under the mentorship of J. de Beaumont and R. Matthey (Weaver & Nimmo 1999). He gravitated to butterflies (especially the birdwings), the aquatic Diptera and the aquatic orders Plecoptera and Trichoptera, but spent the vast majority of his graduate work and subsequent career on caddisflies. He revised a number of trichopteran taxa, predominantly within the family Limnephilidae, and his doctoral thesis was an aggregate of contributions to that family. Many of his early works were treatments of the Swiss and Spanish fauna (Weaver & Nimmo 1999), resulting in part from material he collected locally and during his 1950 expedition to Spain (Figs. 17, 18), but also of the neotropical fauna.

After receiving his doctoral degree, Fernand embarked on a decade of intensive field work organized through the University of Lausanne that would provide an enormous cache of research material that he would continue to draw upon for the rest of his highly productive life. He jour-

neyed to Pakistan (1953–1954) (Fig. 19), Sri Lanka (1954), Guinea, Yugoslavia, Macedonia, Bosnia & Herzegovina (all 1955), Iran (1955–1956), and of course, India (1958–1962) (Figs 20–34). His expeditions were often lengthy, and he spent at least nine months of the year in the field for four years straight in India, except for 1960, when he was there for seven months.

He embraced the nomadic, simple life that these travels afforded him, and enjoyed eating food collected in the field, including berries and wild honey. Field notes for his trips to India, preserved in the CNC as a series of small black softcover notebooks, have provided invaluable information for the present work. These books detail the specifics of his collection events, including notes on collection method, habitat and other potentially relevant locality information not present on his scant specimen labels (Fig. 35). Among his observations, he noted such things as Trichoptera being most active before sunset because of the heat of the day and collecting was most successful when it rained. In his notes for his 1958 trip to the Kumaon Region, he was accompanied by a zoologist, who had a liaison officer role, and two sherpas; he visited 290 biotopes, and captured about 15,000 Trichoptera that he estimates represents about 70% of the Trichoptera of that region. In his notes for the Sikkim expedition, he talked about travelling to avoid the monsoons, and how he collected around 60,000 specimens from 352 biotopes; about 80% of his material from that trip was Trichoptera representing about 380 species, or what he thought was 80% of the local fauna. He also recalled his Sri Lankan expedition, where he captured around 6,000 specimens representing approximately 270 Trichoptera species. Scans of these books are available from the author upon request, but preparations are presently being made to make these works freely available on the *Biodiversity Heritage Library* (<https://www.biodiversitylibrary.org/>) as part of the *BHL Field Notes Project*. If field notes exist for his other expeditions, their location is unknown.

After returning from his final trip to India, he had the option to continue his work at Lausanne, but he instead decided to accept a position in

Ottawa at the Entomological Research Institute (ERI), which was part of the Canadian Department of Agriculture (now Agriculture and Agri-Food Canada). The ERI would later be called the Biosystematic Research Institute (BRI), and is today known as the Canadian National Collection of Insects, Arachnids & Nematodes (CNC). Fernand had to postpone his first day of work until later in 1963 because he needed time to recover from an illness he acquired in India. In the interim, he worked elsewhere within the Canadian Department of Agriculture, surveying the biting flies of Thunder Bay, Ontario.

Soon after moving to Ottawa, he joined a Swiss hiking club in Gatineau, which is in Quebec on the opposite side of the Ottawa River from Ottawa. While in the club, he was introduced by a friend to his future partner, Monique Mettan, who grew up only a few villages away from him in Switzerland. Soon thereafter, Fernand and Monique moved in together in a house on Craig Street in “the Glebe” neighbourhood in Ottawa.

Fernand worked as a research scientist at the CNC from 1963 to 1985, although he would continue his research at the collection after his retirement until his death in 1998 at the age of 74. He was the only scientist at the collection ever hired to work specifically on Trichoptera (Lonsdale & Huber 2012). His obituary was written by Weaver & Nimmo (1999), who provided a full list of Schmid’s publications and authored species, and several details on Fernand’s life not duplicated here. Schmid explored western Canada and the northwestern United States in 1965, but his field-work essentially discontinued after that point when he began the immense task of processing and studying his collections. He continued to travel frequently with Monique on many vacations, however, and he particularly enjoyed his time in the French Islands and Costa Rica.

Part of Fernand’s motivation for moving to Canada was apparently to escape the rigidity of Swiss culture, which was very much at odds with his personality – a unique combination of free-willed, headstrong and eccentric. Having a very

strong sense of self and perhaps little interest for society at large, he did not seem to have much time for externally imposed rules (including the law or social etiquette), but instead relied on his own internal moral compass. He did not engage in departmental activities more than was necessary and was often left to himself to pursue his work. Despite this, he was able to work well most of the time with his colleagues at the Collection and the adjacent offices of the Canadian Food Inspection Agency.

Similarly, Fernand did not interact much with the international community of trichopterists and rarely attended meetings. Of all the triennial International Symposia on Trichoptera convened during his lifetime, Fernand participated in only the 4th (1983, in Clemson, South Carolina, USA) and the 5th (1986, in Lyon, France) (J. Morse, personal communication). He did, however, sometimes openly engage in lively (and sometimes unfiltered) debate when he disagreed with what his peers had published. This apparent social distance must have been counterbalanced by a sense of fellowship, as many *Stactobia* were named for friends and colleagues, and in his last systematic paper (Schmid 1997), 43 species of *Psychomyia* were similarly named, being one of the most impressive examples of patronyms ever given in a single publication.

Unsurprisingly, Fernand preferred isolation and austerity, but this was offset by an inner life that derived satisfaction from his near constant work and other interests that he sometimes pursued to excess. His great loves were classical music and books, especially rare books and books on fine art. Most of what he read was written in French, but he was familiar with several languages and is reported to have read the Dead Sea Scrolls in their original untranslated text. His hobbies of cross-stitching and needlepoint overlapped with his love of fine art, using these techniques to reproduce several full-size paintings by the European masters. For much of the day, Fernand was also inseparable from his pipe (Fig. 14), which he enjoyed smoking while building small fires in his ashtray. Fernand additionally preferred

to sit on the floor, a habit he picked up while travelling in Iran and India, and he was a practicing naturist.

Most of Fernand's free days were spent at his cottage in Wakefield (Fig. 14), just over the border in Quebec north of Gatineau, where he enjoyed the peace and solitude. Many of his publications were written while ensconced there. He took great effort to clear the land and prepare it in a manner typical of a Swiss mountain chalet, including gardens complete with lupines. He also gardened at his home on Craig Street, where he maintained a greenhouse that housed cacti, *Bougainvillea*, and over 50 epiphytic orchids that grew on the wall. In one year, he planted 500 crocuses on the property, resulting in a spectacular spring emergence.

Schmid worked prodigiously on his systematic papers, producing 111 publications on Trichoptera that included descriptions of 1,442 species groups (Weaver & Nimmo 1999), representing almost 10% of all known Trichoptera species. The majority of Schmid's types are held at the CNC, including 900 Trichoptera holotypes that represent 62.4% of those he designated during his entire career. Schmid himself collected 908 Trichoptera specimens that ended up being designated as name-bearing types deposited at the CNC. These specimens were collected in 12 countries: Bosnia & Herzegovina (4), Canada (3), Guinea (4), India (744), Iran (33), Macedonia (6), Pakistan (79), Spain (21), Sri Lanka (1), Switzerland (5), the United States of America (7) and Yugoslavia (1).

Outside of Trichoptera, the CNC holds 37 additional type specimens collected by Schmid: 1 Dermaptera, 30 Diptera, 3 Hymenoptera, 1 Lepidoptera and 2 Megaloptera. Nineteen Diptera types of the family Thaumaleidae in the CNC were designated by Schmid, all but one of which he collected. The remaining thaumaleid types designated by Schmid, which were listed by Schmid (1970c), ended up at the California Academy of Sciences.

Schmid's species names should be readily recognizable to Trichoptera workers, even if they

do not know the individual names specifically, as these names tend to be characteristically lengthy, unwieldy and/or confusingly similar. While this interpretation is admittedly subjective, Schmid's distinctive naming system often led him to regularly misspell the names on his own type labels and/or in his publications. At least in the case of *Leptocerus sukhabddha* Schmid, misspellings necessitate a nomenclatural act to select the correct original spelling of the name. Many of these names belong to Schmid's numerous Indian species, which Holzenthal & Andersen (2007) noted were derived from Sanskrit (and subsequently Latinized to varying degrees of success). An interesting example of Schmid's naming system is his 1983 revision of the genus *Stactobia*, where he named most of his many new species for characters in J.R.R. Tolkein's book *The Hobbit*, which have names that are mostly short and highly similar. This playfulness with his taxa and his prodigious output until his last days indicate a love for Trichoptera and systematic work that the CNC, among other collections, certainly benefited from. His contributions were recognized by the community in part by dozens of patronyms in his honour. Types of both species of the genus *Fernandoschmidia* Holzenthal & Andersen are deposited in the CNC, and types for nine species that bear his name are also deposited there (see Figs. 3–6, for example).

While Schmid deposited or perhaps sold much of his collection to the CNC, large portions were also apparently sold or donated elsewhere. These specimens, for the most part, belong to specific orders or families, or they belong to collections from specific geographic regions. Unfortunately, no documentation regarding these transfers can be located, and no justification can be found to explain apparent exceptions for specimens from these collections retained by the CNC, but they are provisionally accepted until relevant paperwork is discovered. The Royal Ontario Museum apparently purchased types of only two families – Phryganeidae and Limnephilidae – although specimens of four species of Limnephilidae collected and described by Schmid were retained for the CNC: *Grammotaulius alasensis* Schmid, *G.*

subborealis Schmid, *Asynarchus tibetanus* Schmid, and *Limnephilus tibeticus* Schmid. Name-bearing types of species from Sri Lanka and the Neotropics were sold to the National Museum of Natural History in Washington, D.C., although the Sri Lankan *Gunungiella madakumbura* Schmid was retained for the CNC. A portion of Schmid's Pakistani material was deposited in the Musée de Zoologie, Lausanne, according to the museum's website, where it was likely either left behind or sold by Schmid.

In addition to his own specimens, Schmid frequently retained types he designated from new species sent to him by other collectors. These were incorporated into the CNC after he moved to Ottawa, but prior to this they were kept in his personal collection. Specimens are mostly paratypes, but several name-bearing types were also incorporated as such, including some Neotropical specimens. His approach to name-bearing type retention was irregular, where types from one collector (e.g., Foerster) in a single publication may have ultimately been sent to multiple depositaries or back to the collector, but this may have been by individual arrangement.

MATERIALS & METHODS

Specimen entries follow that outlined in Lonsdale & Locke (2018), including the inclusion of alphanumeric codes. These codes include at the very least a unique identifier beginning with "CNC" that corresponds to a database entry. Other numbers may include the obsolete CNC type numbers ("CNC No." / "CNC Type No."), which are not unique and sometimes applied to multiple specimens in the type series.

All specimen records can be located by unique identifier or taxonomic name in the searchable CNC Database, which is available online at <https://cnc.agr.gc.ca/taxonomy/TaxonMain.php>; high-resolution photographs of all pinned types, including labels, are appended to the specimen records.

Specimens are presented alphabetically by original specific epithet within each family. Text

as it appears on labels is presented fully in the "Verbatim" field, with the present author's notes given in square brackets; labels including identifications or type information are included verbatim in the "Determination" field. Also as in Lonsdale & Locke (2018), the field "Interpreted data" will "use contemporary geopolitical units and provide latitude and longitude where named localities could be verified and geocoded with confidence, although the exact locations of field sites around these points are expected to differ somewhat; when a municipality is given as the collection site, latitude and longitude are derived from the approximate centre of the municipality. It will incorporate additional locality information from published descriptions and other sources, [and] convert feet to meters (when provided)". Elevation is only provided if stated directly on the collection label, and not added from either publications or field notes if otherwise available.

Geocoding was comparatively simple for Schmid's trips to Iran and Pakistan, as he published maps of his travels in subsequent publications, and the roads traversed in Pakistan are usually bordered by high mountains that limit accessibility to surrounding regions. No such maps exist for his more extensive travels in India, however, which occurred in more open and densely populated areas that made attempts to retrace his steps more difficult. To complicate matters, placenames recorded by Schmid sometimes also appear to have been misspelled or written phonetically, making them difficult or impossible to find on maps. Aside from these misspellings, verbatim and interpreted data will sometimes also differ severely because Schmid's original labels are sparse and predate the construction of modern political subdivisions for some countries, including India, Iran and Pakistan, which have undergone much restructuring since his visits.

It must also be noted that there are numerous discrepancies between Schmid's labels and his published data, further contributing to differences between verbatim and interpreted data. There are many transcription errors, especially for dates, and labels were sometimes incorrectly applied to specimens. There are also numerous misspellings

on type labels, and a smaller number of misspellings in his publications (see entry below for *Leptocerus suhabddha*, for example). Corrections to these errors and the identification of misspellings are made where possible, but a number of issues require further examination by taxonomic experts for proper resolution, if resolution is indeed

possible – see entries below for *Rhyacophila muktepa* Schmid, *Setodes ekachringa* Schmid and *Stactobia grolin* Schmid, among many others. When discrepancies between label and published collection data were encountered for Indian specimens, Schmid's field notes were used to aid in the verification of those data. It must also be

assumed that other errors, including those resulting from the initial misapplication of collection labels, may never be detected.

Other serious issues involve the improper designation of name-bearing types, exasperated by Schmid's tendency sometimes to designate types only indirectly, or to list only partial or no collection data in his descriptions. Elsewhere, holotypes are not explicitly chosen (e.g., *Hydroptila armathai* Schmid, *Agapetus turcomanorum* Schmid), or the specimen labeled as the holotype may not actually represent the actual type as designated in the description (e.g., *Setodes atiloma* Schmid, *Setodes bhimachringa* Schmid, *Psychomyia neboissi* Schmid, *Hydroptila fumentaldeala* Schmid, *Hydropsyche sakarawaka* Schmid). Resolution of these issues is not attempted here.

Interpretive data: INDIA. Sikkim: Singtam, 27° 8'13"N 88°23'34"E, 11.iii.1959, F. Schmid, CNC311892.

Determination: holotype ♂ Trichosetodes atidhanin 1984 F. Schmid / LECTOTYPE CNC No. 18952 Tr. atidhanin.

Comments: The additional Lectotype label associated with the holotype is misleading, as no lectotype has been designated, nor is it necessary, with the holotype explicitly listed in the original description.

atidvaya* Schmid 1987, *Leptocerus

holotype (1 male, pinned)

Verbatim: Assam (Kameng) Amatulla 23-V-1961 F.Schmid / CNC 311731.

Interpretive data: INDIA. Arunachal Pradesh: West Kameng District, Amatulla, 26°55'47"N 92°7'18"E, 23.v.1961, F. Schmid, CNC 311731.

Determination: holotype ♂ Leptocerus atidvaya [sic] 1984 F. Schmid / HOLOTYPE CNCNo. 18993 Leptocerus atidvaya.

atiguna* Schmid 1987, *Setodes

holotype (1 male, pinned: minuton)

Verbatim: Inde (U.J.K.H.) [=United Jaintia and Khasi Hills] Jarain 13-IV-1960 F.Schmid / CNC 311859.

Interpretive data: INDIA. Meghalaya: Jaintia Hills District, Jarain, 25°22'50.01"N 92°8'58"E, 13.iv.1960, F. Schmid, CNC311859.

Determination: holotype ♂ Setodes atiguna 1985 F. Schmid / HOLOTYPE CNCNo. 18923 Setodes atiguna.

atiharin* Schmid 1987, *Trichosetodes

holotype (1 male, pinned: minuton)

Verbatim: Inde (Bombay) Patan 3-II-1959 F.Schmid / CNC 311903.

Interpretive data: INDIA. Gujarat: Patan, 23° 50'58"N 72°7'35"E, 3.ii.1959, F. Schmid, CNC311903.

Determination: holotype ♂ *Trichosetodes atisukha* [lapsus] 1984 F. Schmid / Holotype *Trichosetodes atiharin* Schmid, Det. O. Lonsdale / LECTOTYPE CNCNo. 18961 Tr. atiharin.

Comments: The holotype labels for *T. atisukha* and *T. atiharin* appear to have been placed on the incorrect specimens by Schmid, as suggested by agreement between collection data in the descriptions and labels. The additional Lectotype label associated with the holotype is misleading, as no lectotype has been designated, nor is it necessary, with the holotype explicitly listed in the original description.

atiloma* Schmid 1987, *Setodes

holotype[?] (1 male, pinned: minuton)

Verbatim: Inde (Mysore) Uppinangadi 17-I-1959 F.Schmid / CNC 311883.

Interpretive data: INDIA. Karnataka: Uppinangady, 12°50'23"N 75°23'52"E, 17.i.1959, F. Schmid, CNC311883.

Determination: holotype ♂ *Setodes atiloma* 1985 F. Schmid / HOLOTYPE CNCNo. 18946 *Setodes atiloma*.

Comments: Data for the holotype in the description is "Mysore, Yodpai 16-I-1959", which among available specimens is found on ten non-types, the female allotype, and seven male and four female paratypes. Uppinangadi is not mentioned in the description. The only remaining specimen identified as *S. atiloma* is one dissected specimen without a paratype label (Madras, Krishnappanayakkan, 21.i.1962, F. Schmid). Therefore, the specimen labeled as the holotype may not actually represent the holotype. Closer scrutiny of these specimens is required before type designation for this species is considered definitive.

atipunya* Schmid 1987, *Setodes

holotype (1 male, pinned: minuton)

Verbatim: Inde (Mysore) Subrahmany 20-I-1959 F.Schmid / CNC 311826.

Interpretive data: INDIA. Karnataka: Subrahmany, 12°40'9"N 75°36'38.01"E, 20.i.1959, F. Schmid, CNC311826.

Determination: holotype ♂ *Setodes atipunya* 1985 F. Schmid / HOLOTYPE CNCNo. 18890 *Setodes atipunya*.

atiramaniya* Schmid 1987, *Trichosetodes

holotype (1 male, pinned: minuton)

Verbatim: Inde (U.J.K.H.) [=United Jaintia and Khasi Hills] Serrarim 3-X-1960 F.Schmid / CNC 311902.

Interpretive data: INDIA. Meghalaya: United Jaintia and Khasi Hills [now divided into East and West Khasi Hills Districts and East and West Jaintia Hills Districts], Serrarim, 3.x. 1960, F. Schmid, CNC311902.

Determination: LECTOTYPE CNCNo. 18956 Tr. *atiramaniya* / holotype ♂ *Trichosetodes atiramaniya* 1984 F. Schmid.

Comments: The locality is possibly Soharim (25°20'59"N 91°44'51"E), which is close to other localities visited in October 1960. The additional Lectotype label associated with the holotype is misleading, as no lectotype has been designated, nor is it necessary, with the holotype explicitly listed in the original description.

atiraskrita* Schmid 1987, *Leptocerus

holotype (1 male, pinned: minuton)

Verbatim: Inde (Mysore) Yellapur 30-I-1959 F.Schmid / CNC 311727.

Interpretive data: INDIA. Karnataka: Yellapur, 14°57'49"N 74°42'43"E, 30.i.1959, F. Schmid, CNC311727.

Determination: holotype ♂ *Leptocerus atiraskrita* 1984 F. Schmid / HOLOTYPE CNCNo. 18977 *Leptocerus atiraskrita*.

Comments: Two wings slide-mounted on pin.

atirupa* Schmid 1987, *Trichosetodes

holotype (1 male, pinned: minuton)

Verbatim: Inde (U.J.K.H.) [=United Jaintia and Khasi Hills] Nongjni [sic] 19-IV-1960 F.Schmid / CNC 311896.

Interpretive data: INDIA. Meghalaya: West Jaintia Hills District, Nongjngi, 25°32'32"N 92°16'

20°E, 19.iv.1960, F. Schmid, CNC311896.

Determination: holotype ♂ *Trichosetodes atirupa* 1984 F. Schmid / LECTOTYPE CNCNo. 18957 Tr. atirupa.

Comments: The additional Lectotype label associated with the holotype is misleading, as no lectotype has been designated, nor is it necessary, with the holotype explicitly listed in the original description.

atisubhaga* Schmid 1987, *Setodes

holotype (1 male, pinned: Minuten)

Verbatim: Inde (Manipur) Marou 14-VIII-1960 F. Schmid / CNC 311869.

Interpretive data: INDIA. Manipur: Marou, 24° 54'28"N 94°15'0"E, 14.viii.1960, F. Schmid, CNC311869.

Determination: holotype ♂ *Setodes atisubhaga* 1985 F. Schmid / HOLOTYPE CNCNo. 18932 *Setodes atisubhaga*.

atisudhara* Schmid 1987, *Trichosetodes

holotype (1 male, pinned: Minuten)

Verbatim: Inde (Manipur) Tipaimukh 6-7-IX-1960 F. Schmid / CNC 311890.

Interpretive data: INDIA. Manipur: Tipaimukh, 24°14'5"N 93°1'13"E, 6-7.ix.1960, F. Schmid, CNC311890.

Determination: holotype ♂ *Trichosetodes atisudhara* 1984 F. Schmid / LECTOTYPE CNCNo. 18950 Tr. atisudhara.

Comments: The additional Lectotype label associated with the holotype is misleading, as no lectotype has been designated, nor is it necessary, with the holotype explicitly listed in the original description.

atisukchma* Schmid 1987, *Trichosetodes

holotype (1 male, pinned: Minuten)

Verbatim: Inde (Madhya Pr.) Satanwara [sic] 28-XI-1961 F. Schmid / CNC 311891.

Interpretive data: INDIA. Madhya Pradesh: Satanwada, 25°44'51.21"N 77°24'29.44"E, 28.xi.1961, F. Schmid, CNC311891.

Determination: holotype ♂ *Trichosetodes atisukchma* 1984 F. Schmid / LECTOTYPE CNC No. 18951 Tr. atisukchma.

Comments: Description incorrectly listed year of

collection as 1960. The additional Lectotype label associated with the holotype is misleading, as no lectotype has been designated, nor is it necessary, with the holotype explicitly listed in the original description.

atisukha* Schmid 1987, *Trichosetodes

holotype (1 male, pinned: Minuten)

Verbatim: Inde (U.J.K.H.) [=United Jaintia and Khasi Hills] Thangrain 22-IV-1960 F. Schmid / CNC 311893.

Interpretive data: INDIA. Meghalaya: Jaintia Hills District, Thangrain, 25°34'48"N 92°26' 22"E, 22.iv.1960, F. Schmid, CNC311893.

Determination: holotype ♂ *Trichosetodes atiharin* [lapsus] 1984 F. Schmid / LECTOTYPE CNC No. 18958 Tr. atisukha Holotype / *Trichosetodes atisukha* Schmid, Det. O. Lonsdale.

Comments: The holotype labels for *T. atisukha* and *T. atiharin* appear to have been placed on the incorrect specimens by Schmid, as suggested by agreement between collection data in the descriptions and labels. The additional Lectotype label associated with the holotype is misleading, as no lectotype has been designated, nor is it necessary, with the holotype explicitly listed in the original description.

atitejas* Schmid 1987, *Setodes

holotype (1 male, pinned)

Verbatim: Inde (Lushai) [=Mizo Hills] Sonai 15-IX-1960 F. Schmid / CNC 311772.

Interpretive data: INDIA. Mizoram: Sonai, 15.ix.1960, F. Schmid, CNC311772.

Determination: holotype ♂ *Setodes atitejas* 1985 F. Schmid HOLOTYPE CNCNo. 18857 *Setodes atitejas*.

atymanjula* Schmid 1987, *Setodes

holotype (1 male, pinned: Minuten)

Verbatim: Inde (Madras) Perumalmalai 9-XII-1961 F. Schmid / CNC 311878.

Interpretive data: INDIA. Tamil Nadu: Perumal Malai, 10°15'57"N 77°32'42"E, 9.xii.1961, F. Schmid, CNC311878.

Determination: holotype ♂ *Setodes atymanjula* 1985 F. Schmid / HOLOTYPE CNCNo. 18941 *Setodes atymanjula*.

atyudatta Schmid 1987, *Leptocerus*

holotype (1 male, pinned: minutus)

Verbatim: Inde (Manipur) Vangai Chungpao 21-V-1960 F. Schmid / CNC 311734.

Interpretive data: INDIA. Manipur: Vangai Chungpao, 24°45'23"N 93°10'40"E, 21.v.1960, F. Schmid, CNC 311734.

Determination: holotype ♂ Leptocerus atyudatta 1984 F. Schmid / HOLOTYPE CNCNo. 18992 Leptocerus atyudatta.

atyutkata Schmid 1987, *Setodes*

holotype (1 male, pinned)

Verbatim: Teri Garhwal Jakhanr 24-IV-1958 F. Schmid / CNC 311856.

Interpretive data: INDIA. Uttarakhand: Tehri Garhwal District, Jakhanr, 24.iv.1958, F. Schmid, CNC 311856.

Determination: holotype ♂ Setodes atyutkata 1985 F. Schmid / HOLOTYPE CNCNo. 18920 Setodes atyutkata.

bagha Schmid 1968 a, *Poecilopsyche*

holotype (1 male, pinned: minutus)

Verbatim: Assam (Kameng) Amatulla 17-V-1961 F. Schmid / CNC 311672.

Interpretive data: INDIA. Arunachal Pradesh: West Kameng District, Amatulla, 26°55'47"N 92°7'18"E, 17.v.1961, F. Schmid, CNC 311672.

Determination: holotype ♂ Poecilopsyche bagha 1967 F. Schmid / HOLOTYPE CNCNo. 11397 Poec. bagha.

bahuchaka Schmid 1987, *Leptocerus*

holotype (1 male, pinned: minutus)

Verbatim: Inde (Manipur) Khopum [sic] 27-V-1960 F. Schmid / CNC 311703.

Interpretive data: INDIA. Manipur: Khoupum, 24°39'16"N 93°26'52"E, 27.v.1960, F. Schmid, CNC 311703.

Determination: holotype ♂ Leptocerus bahuchaka 1984 F. Schmid / HOLOTYPE CNCNo. 18973 Leptocerus bahuchaka.

balcanica Botoșaneanu & Novák 1965, *Adicella*

holotype (1 male, pinned)

Verbatim: Macédoine Capari 11-VIII-1955 F. Schmid / CNC 311545.

Interpretive data: MACEDONIA. Capari, 41°3'25"N 21°10'40"E, 11.viii.1955, F. Schmid, CNC 311545.

Determination: Adicella balanica Bots. & Nov. / Holotype ♂ / HOLOTYPE CNCNo. 12181 Adicella balanica.

bhairava Schmid 1995a, *Oecetis*

holotype (1 male, pinned)

Verbatim: Inde (Madras) Komadi 18-19-I-1962 F. Schmid / CNC 311738.

Interpretive data: INDIA. Madras [likely in either present day Kerala or Tamil Nadu State], Komadi, 18-19.i.1962, F. Schmid, CNC 311738.

Determination: holotype ♂ Oecetis bhairava 1995 F. Schmid / HOLOTYPE Oecetis bhairava S. CNC No. 22075.

bhavabhuti Schmid 1995a, *Oecetis*

holotype (1 male, pinned)

Verbatim: Inde (Manipur) Tangkhul Hungdung 18-VIII-1960 F. Schmid / CNC 311746.

Interpretive data: INDIA. Manipur: Tangkhul Hungdung, 25°4'29.28"N 94°13'51.96"E, 18.viii.1960, F. Schmid, CNC 311746.

Determination: holotype ♂ Oecetis bhavabhuti 1995 F. Schmid / HOLOTYPE Oecetis bhavabhuti S. CNC No. 22083.

bhimachringa Schmid 1987, *Setodes*

holotype[?] (1 male, pinned: minutus)

Verbatim: Inde (Bombay) Patan 3-II-1959 F. Schmid / CNC 311816.

Interpretive data: INDIA. Gujarat: Patan, 23°50'58"N 72°7'35"E, 3.ii.1959, F. Schmid, CNC 311816.

Determination: holotype ♂ Setodes bhimachringa 1985 F. Schmid / HOLOTYPE CNCNo. 18884 Setodes bhimachringa.

Comments: Data for the holotype in the description is "Mysore, Nagodi 28-I-1959", which is found on two males labeled as paratypes in the CNC; one of these, like the specimen labeled as the holotype, is dissected. Patan is not mentioned in the description, although it may be alluded to by reference of additional unlisted material examined from Bombay. Closer scru-

tiny of these specimens is required before type designation for this species is considered definitive.

Interpretive data: INDIA. Manipur: Tipaimukh, 24°14'5"N 93°1'13"E, 6-7.ix.1960, F. Schmid, CNC311573.

Determination: holotype ♂ *Adicella core* 1993 F. Schmid / *Adicella core* Schm. CNC [type no.] 21734 Holotype ♂.

dakchineswara* Schmid 1995c, *Oecetis

holotype (1 male, pinned)

Verbatim: Inde (Mysore) Someshwar 27-I-1959 F.Schmid / CNC 311613.

Interpretive data: INDIA. Karnataka: Someshwar, 13°29'33"N 75°3'51"E, 27.i.1959, F. Schmid, CNC311613.

Determination: holotype ♂ *Oecetis pradyumna* [lapsus] 1995 F. Schmid / Holotype *Oecetis dakchineswara* Sch. Det. O. Lonsdale / HOLOTYPE *Oecetis dakchineswara* CNC No. 22141.

Comments: The incorrect type label was placed on the holotype, as suggested by the data on the label and in the description, and perhaps represents a manuscript name.

damchtragada* Schmid 1987, *Trichosetodes

holotype (1 male, pinned: minuton)

Verbatim: Inde (Mysore) Subrahmany 20-I-1959 F.Schmid / CNC 311900.

Interpretive data: INDIA. Karnataka: Subrahmany, 12°40'9"N 75°36'38.01"E, 20.i.1959, F. Schmid, CNC311900.

Determination: holotype *Trichosetodes damchtragada* 1984 F. Schmid / LECTOTYPE CNCNo. 18959 Tr. *damchtragada*.

Comments: The additional Lectotype label associated with the holotype is misleading, as no lectotype has been designated, nor is it necessary, with the holotype explicitly listed in the original description.

danae* Schmid 1994c, *Adicella

holotype (1 male, pinned)

Verbatim: Inde (Madras) Kattalaimala 25-26-XII-1961 F.Schmid / CNC 311551.

Determination: holotype ♂ Leptocerus sukha-
badda 1984 F. Schmid / HOLOTYPE CNCNo.
18967 Leptocerus sukhabaddha.

Comments: The specific epithet for this taxon is
spelled quite inconsistently by Schmid; it is
presented as "sukhabadda" on the type label,
"sukhabaddha" on the CNC type number label
and in the original work by Schmid (1987) in
both the index (p. 146) and the species list (p.
138); the actual species description (Schmid,
1987: 117) presents the name as "suk-
habddha", which is provisionally accepted
here.

Comments: Specimen possibly lost – unique identifier added to unit tray for eventual addition to specimen. Some paratype specimens of *Himalopsyche a. angnorburi* share the collection data of the missing *H. a. sherpa* type, but all bear type labels of the nominal subspecies. One of these male paratypes is dissected and may be mislabeled, but it is impossible to determine with certainty as Schmid did not always provide a complete list of collection localities for type materials.

Verbatim: Inde (Manipur) Chattrik 23-VII-1960 F.Schmid / CNC 236412.

Interpretive data: INDIA. Manipur: Chattrik, 24°57'29.01"N 94°37'12"E, 23.vii.1960, F. Schmid, CNC236412.

Determination: holotype ♂ Drepanocentron turvasu 1980 F. Schmid / HOLOTYPE CNC No. 16371 Drepanocentron turvasu 1980.

Comments: Four wings slide-mounted on pin.

uchinara* Schmid 1982, *Abaria

holotype (1 male, pinned)

Verbatim: Sikkim Manu 10-V-1959 F.Schmid / CNC 236426.

Interpretive data: INDIA. Sikkim: Manu, 27° 31'2"N 88°34'58"E, 10.v.1959, F. Schmid, CNC236426.

Determination: holotype ♂ Abaria uchinara 1980 F. Schmid / HOLOTYPE CNCNo. 16384 Abaria uchinara 1980.

Comments: Four wings slide-mounted on pin, remainder of body mounted on second slide on same pin.

ugrasena* Schmid 1982, *Drepanocentron

holotype (1 male, pinned: minutus)

Verbatim: Inde (Manipur) Huiahu [sic] 3-VII-1960 / CNC 236408.

Interpretive data: INDIA. Manipur: Huishu, 25°12'47.01"N 94°33'10"E, 3.vii.1960, F. Schmid, CNC236408.

Determination: holotype ♂ Drepanocentron ugrasena 1980 F. Schmid / HOLOTYPE CNC No. 16367 Drepanocentron ugrasena 1980.

Comments: Four wings slide-mounted on pin, genitalic slide missing.

uparichara* Schmid 1982, *Melanotrichia

holotype (1 male, pinned: minutus)

Verbatim: Inde (U.J.K.H.) [=United Khasi and Jaintia Hills] Muktapur 11-12-XII-1959 F.Schmid / CNC 236377.

Determination: holotype ♂ Abaria yakcha 1980 F. Schmid / HOLOTYPE CNCNo. 16381 Abaria yakcha 1980.

Comments: Four wings slide-mounted on pin.

yayati Schmid 1982, *Drepanocentron*

holotype (1 male, pinned: minutens)

Verbatim: Inde (U.J.K.H.) [=United Jaintia and Khasi Hills] Larem Shyip 17-XII-1959 F.Schmid / CNC 236405.

Interpretive data: INDIA. Meghalaya: Jaintia Hills District, Larem Shyip, 25°10'46"N 92°11'55"E, 17.xii.1959, F. Schmid, CNC236405.

Determination: holotype ♂ Drepanocentron yayati 1980 F. Schmid HOLOTYPE CNCNo. 16365 Drepanocentron yayati 1980.

Comments: Description incorrectly listed date of collection as the 16th.

FOSSIL SPECIES

cretacica Botoșaneanu & Wichard 1983, *Electr-alberta*

holotype (1 male, fossil:amber)

Verbatim: CAS 420 / TRICHOPTERA Polycentropodidae MEDICINE HAT ALTA JULY 8-11 1971 J.F.McALPINE.

Interpretive data: CANADA. Alberta: Grassy Lake, near Medicine Hat, 49°46'39"N 111°41'39"W, amber collected from tailings at open pit coal measure, 8-11.vii.1971, J.F. McAlpine, CAS420.

Determination: HOLOTYPE / Trichoptera: Electralbertha cretacica Botosaneanu ♂ holotype.

Comments: Upper Cretaceous, Belly River Series, Foremost Formation. Details of type locality derived from Lonsdale & Locke (2018).

EXTANT SPECIES NOT CLASSIFIED TO FAMILY

didinki Schmid 1993c, *Karomana*

holotype (1 male, pinned)

Verbatim: Inde (Madras) Senbaganur 3-8-XII-1958 F.Schmid / CNC 311461.

Interpretive data: INDIA. Tamil Nadu: Senbaganur, 10°13'59.01"N 77°30'49"E, 3-8.xii.1958, F. Schmid, CNC311461.

Determination: holotype ♂ Karomana didinki 1992 F.Schmid / Karomana didinki Schmid CNC1566.

Comments: Four wings slide-mounted on pin, remainder of body mounted on second slide on same pin.

elwe Schmid 1993c, *Ngoya*

holotype (1 male, pinned: minuton)

Verbatim: Inde (Kerala) Velela Mudi 15-XII-1961 F.Schmid / CNC 311463.

Interpretive data: INDIA. Kerala: Vellala Mudi, 15.xii.1961, F. Schmid, CNC311463.

Determination: holotype ♂ Ngoya elwe 1992 F. Schmid / Ngoya elwe Schm. CNC 21569.

lafcadiello Schmid 1993c, *Mpuga*

holotype (1 male, pinned: minuton)

Verbatim: Inde (Madras) Devala 8-I-1959 F.Schmid / CNC 311448.

Interpretive data: INDIA. Tamil Nadu: Devala, 11°28'21"N 76°22'55"E, 8.i.1959, F. Schmid, CNC311448.

Determination: holotype ♂ Mpuga lafcadiello 1992 F. Schmid / Mpuga lafcadiello Schm. CNC 21568.

lafcadio Schmid 1993c, *Mpuga*

holotype (1 male, pinned: minuton)

Verbatim: Inde (Madras) Attikati 22-XII-1958 F.Schmid / CNC 311449.

Interpretive data: INDIA. Karnataka: Attikati, 22.xii.1958, F. Schmid, CNC311449.

Determination: holotype ♂ Mpuga lafcadio 1992 F. Schmid / Mpuga lafcadio Schm CNC 21567.

olwe Schmid 1993c, *Ngoya*

holotype (1 male, pinned: minuton)

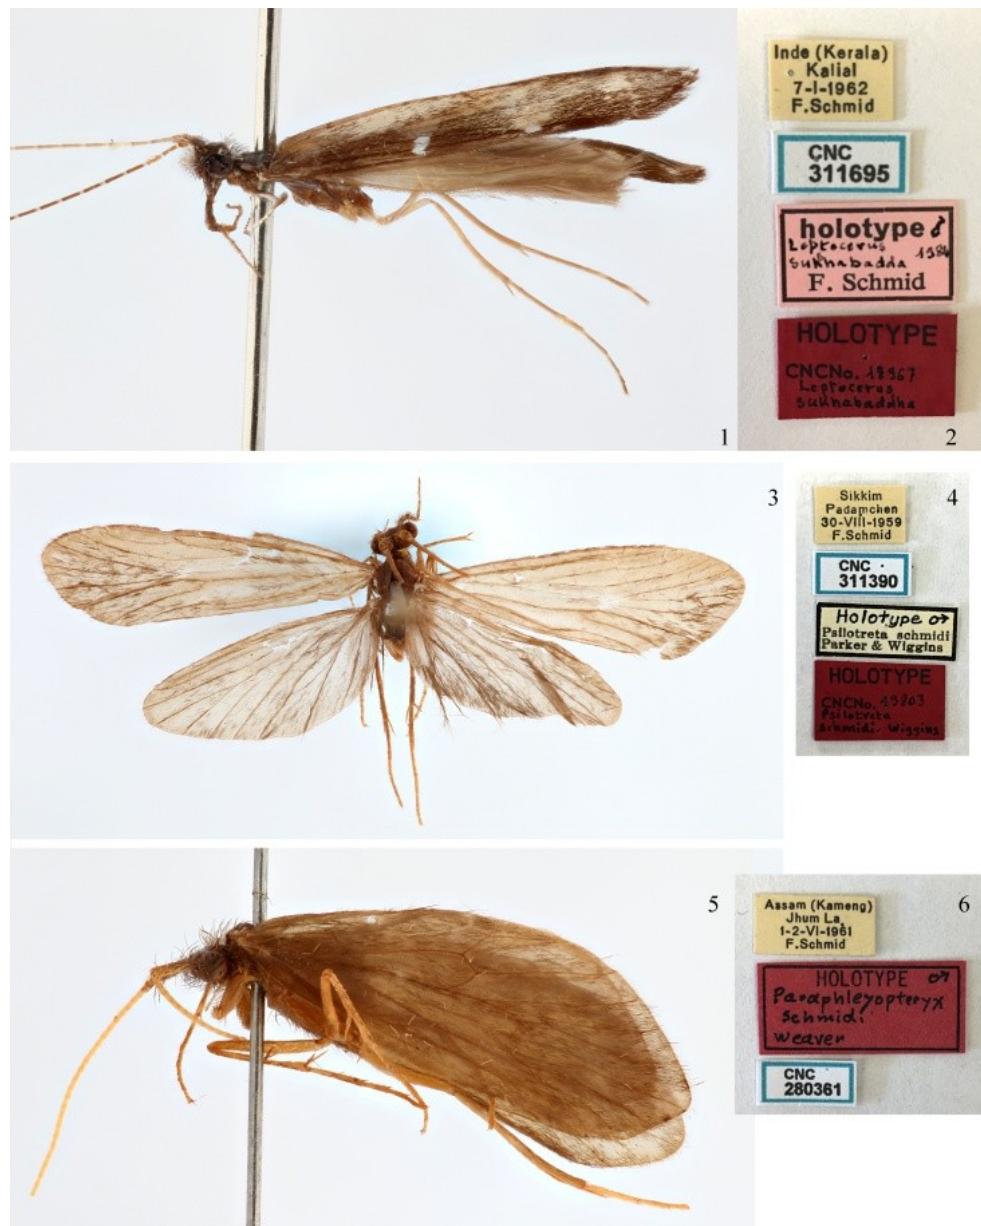

Verbatim: Inde (Madras) Meppadi 9-I-1959 F.Schmid / CNC 311426.

Interpretive data: INDIA. Kerala: Meppadi, 11°33'17"N 76°8'7"E, 9.i.1959, F. Schmid, CNC311462.

Determination: holotype ♂ Ngoya olwe 1992 F. Schmid / Ngoya olwe Schm. CNC 21570.

Acknowledgements – Oliver Flint Jr. provided information on the deposition of Schmid material in the ROM and the USNM. Many of the details regarding Fernand Schmid's life were derived from conversations with family members Noelle Harris and Sean Cahill, who are thanked for their time and encouragement. Figures 15 and 16 belong to the CNC archives; the remaining images of Schmid, his field photos and the scanned image of his field notes belong to the personal archives of Noelle Harris and are reprinted with permission. Specimen photographs of all pinned types of Trichoptera in the CNC were taken by Mariah Fleck and are copyright of Agriculture and Agri-Food Canada. Sonia Gagnon translated some of the passages in Schmid's field notes. Some localities in Asia were geocoded by Vazrick Nazari, Pritha Dey and Mohandas Giriyappa. Comments provided by reviewers J. Oláh and J. Morse were much appreciated.

This paper is dedicated to Oliver Flint Jr. and his wonderful wife Carol, who went out of their way to make this Canadian author feel at home during his postdoctoral fellowship in Washington, D.C. Ollie was a giant of Trichoptera research and a specialist of many other interesting and mostly aquatic groups. He passed away in May 2019 and is deeply missed.
