

# Home Farm, Harmondsworth Lane, Sipson, London borough of Hillingdon

Museum of London Archaeology, 2011. <https://doi.org/10.5284/1000146>

## Introduction

Archaeological excavations/watching briefs were undertaken by Museum of London Archaeology in phases between 1999 and 2002, on the site of Home Farm, Harmondsworth. The watching brief was commissioned by SITA in response to an application to extract gravel.

The completion of the post-excavation assessment and updated project design for the archaeological investigations at Home Farm was funded by Aggregates Levy Sustainability Fund (ALSF) administered by English Heritage. Planning condition for the aggregates extraction at Home Farm was granted in 1989 and no provision was made for the assessment, analysis or publication costs of the archaeological investigations in the relevant planning condition.

The excavation has revealed Neolithic activity, primarily pits, and elements of an extensive later prehistoric droveway and enclosure system, comprising of a series of smaller track ways, enclosures, boundary ditches, fences/palisades, drainage ditches, and livestock control features. Associated with this are cooking pits, water holes/wells and a four-post structure. Three features were either heavily truncated or token cremations, or deposits including pyre debris. This droveway/enclosure system appears to date from the later Bronze Age, and may have been abandoned in the later Iron Age.

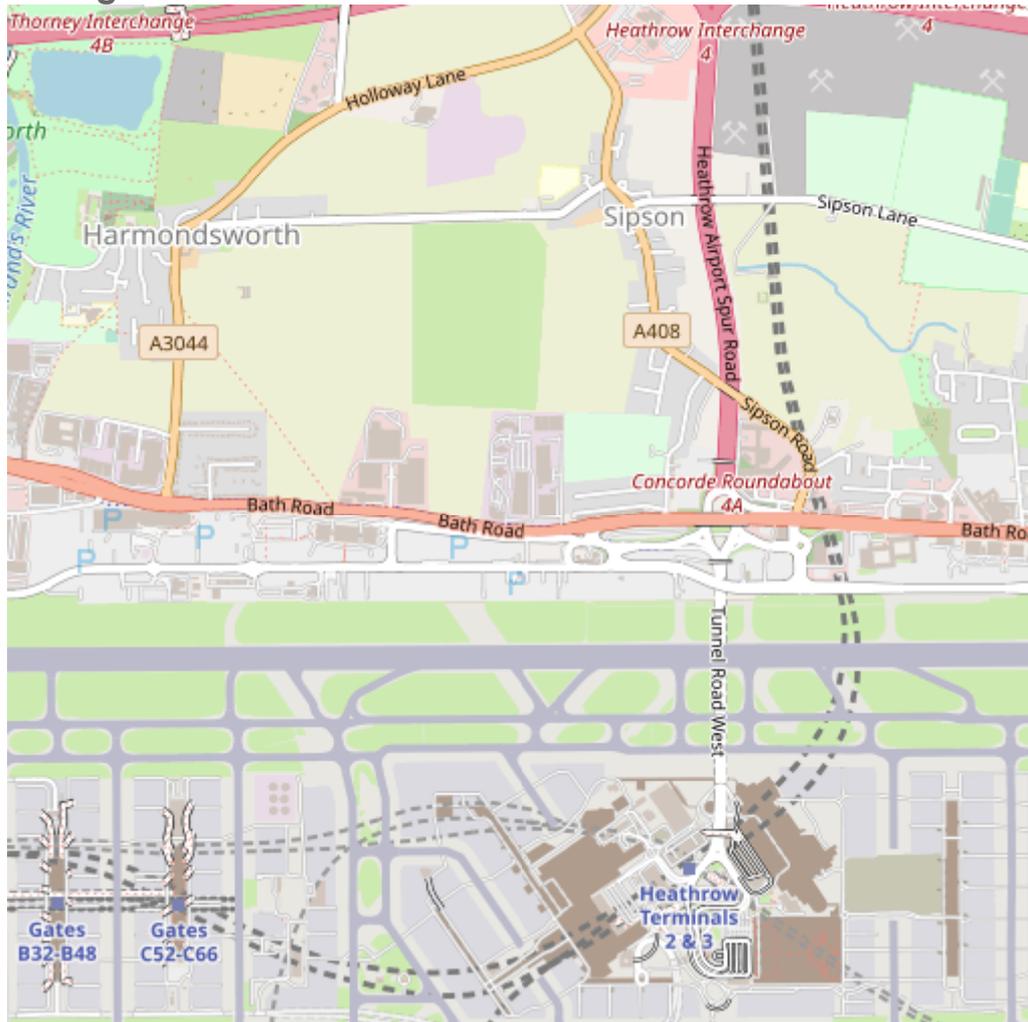

Six fragments of moulds and/or crucibles for bronze casting, had been discarded in a Late Bronze Age well. Further analysis is required to phase and date this activity, and to determine the extent, if any, of Romano-British activity on the site. An undated feature appeared on stylistic grounds to be a Saxon sunken featured building, and stakehole and posthole structures may have been associated with it. Elements of post-medieval, and possibly medieval, field boundary and trackway ditches were also present.

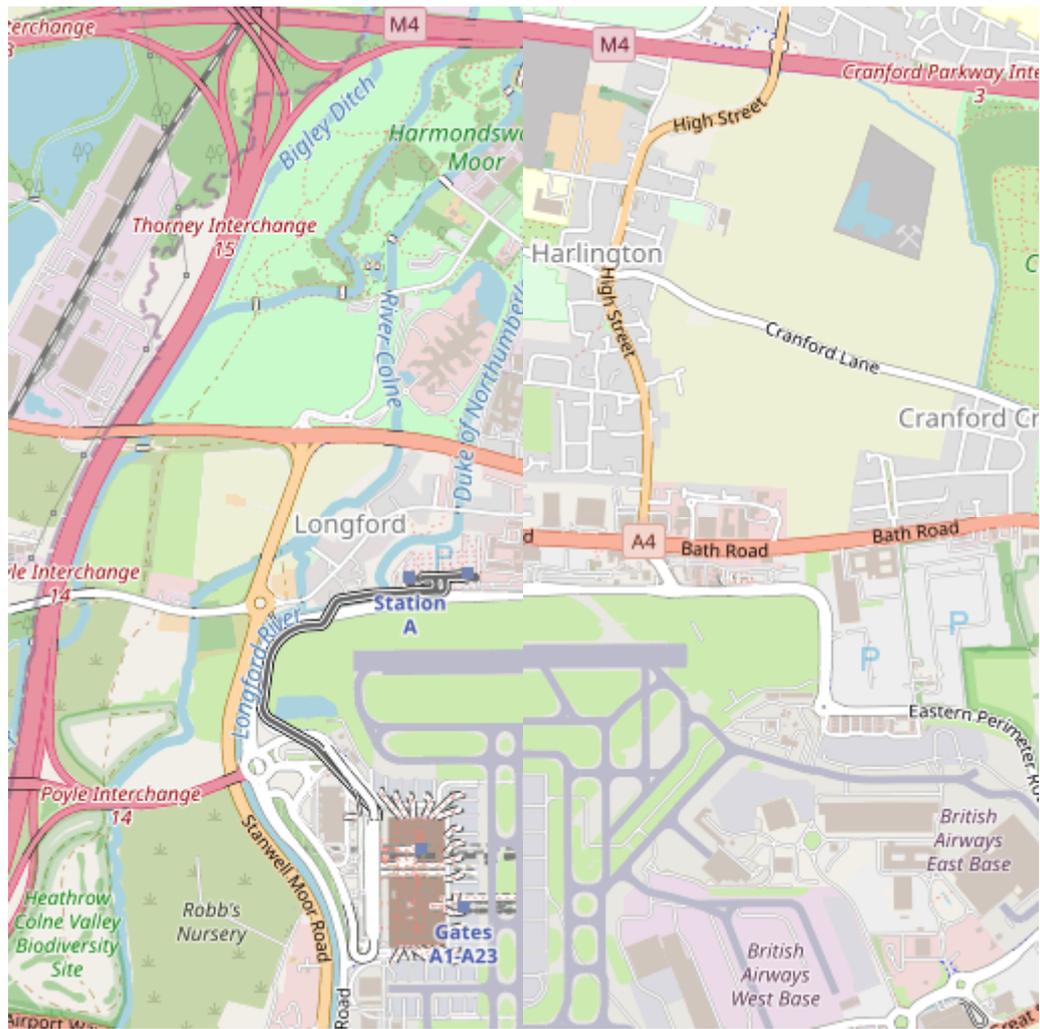

The sequence provides further data for Neolithic, later prehistoric, Roman, and early Saxon activity in the Heathrow area, which directly complements that in the proposed English

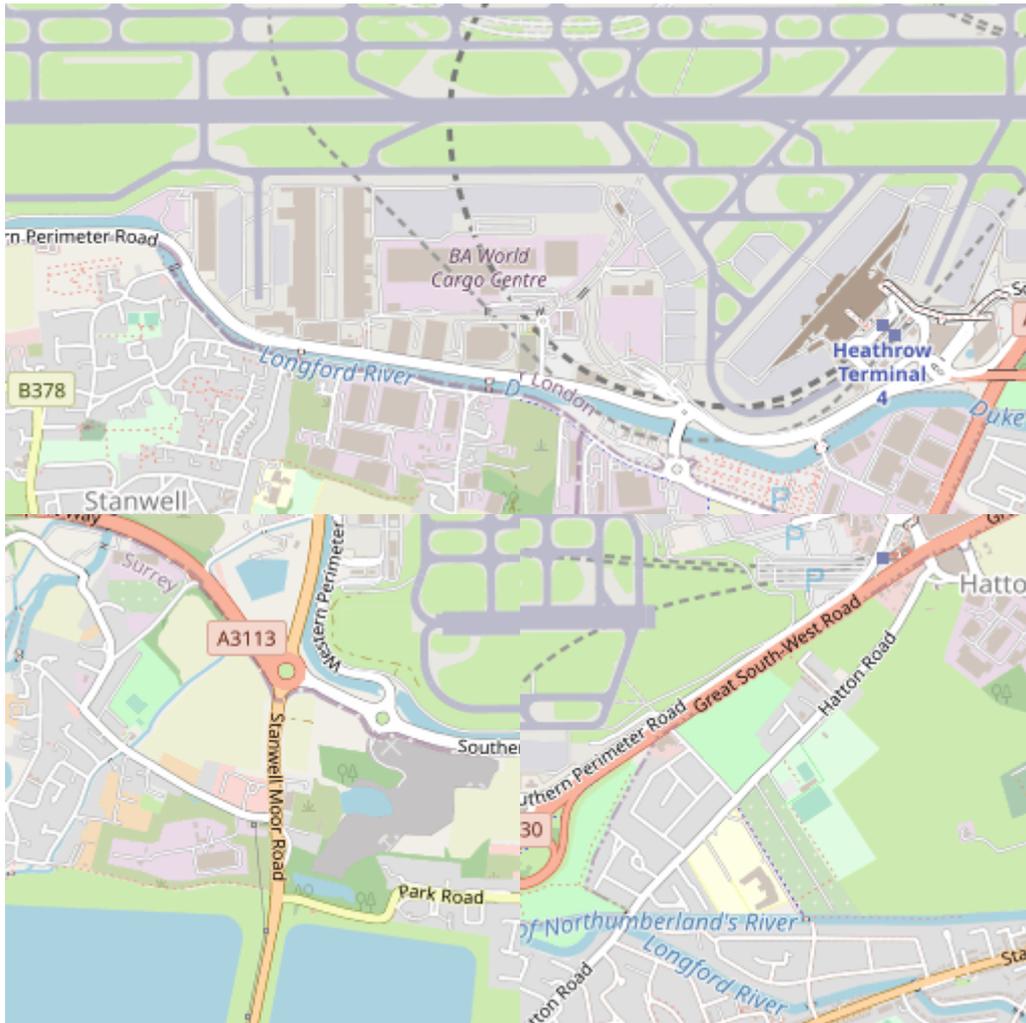

Heritage-funded backlog publication project 'West London Landscapes', and a recent MOLA publication on early Saxon occupation in the London region.

It is therefore proposed that this data is further analysed to allow the prehistoric and Roman phases to be published as an integral part of the West London Landscape Project and depending on the results of further analysis, for the Saxon sunken featured building to be published as a brief article in an appropriate journal.

## Overview

Home Farm is situated to the north of Heathrow Airport, between the villages of Harmondsworth and Sipson). It is bounded to the east by the rear of houses which front onto the west side of Sipson Road, by Harmondsworth Lane to the north, by open fields of Home Farm, Harmondsworth to the west and the rear of industrial premises fronting onto Bath Road and a recreation ground to the south. The site is centred on NGR 150700 177500. The site of Home Farm is located on the northern Taplow terrace of the River Thames, to the north of Heathrow Airport.

The archaeological watching brief/excavation was been commissioned and funded by SITA Waste Systems and Quarry Products in response to English Heritage advice to the Local Planning Authority to determine if there were any archaeological implications to the proposed mineral (sand and gravel) extraction on the site.

A field evaluation was carried out by MoLAS (now MOL Archaeology, MOLA) between 24th August 1998 and 24th September 1999 the results of which were produced in the subsequent Evaluation Report. This document, which also includes the geological, archaeological and historical background of the site, informed the design (Method Statement) for the watching brief/excavation. The Greater London Archaeology Advisory Service, advising the Borough of Hillingdon, reviewed the results of the evaluation, which indicated the presence of significant archaeological features dating to the prehistoric, Roman and medieval periods. It was decided that further work was required within certain areas of the site. Subsequent archaeological excavations/watching briefs were undertaken by the Museum of London Archaeology Service, in October 1999, May 2000, March-July 2001, September-October 2001, May-June 2002, and August-November 2002.

IN 2009 MOLA submitted a project design as an application for funding from the Aggregates Levy Sustainability Fund (ALSF) to English Heritage for the completion of the post-excavation assessment and updated project design for the archaeological investigations at Home Farm.
