Introducing M&A Pharmachem

Founded over 40 years ago by Frank Armstrong, to this day the company prides itself on its core beliefs of integrity, quality and strong family values which our customers have come to trust and rely on.

Our wide range of M&A Pharmachem products, from complex molecules like Co-Dydramol to OTC Paracetamol, have a long held reputation of being second to none in quality.

Our client list boasts leading High Street retailers, Community Pharmacies and distributors in the UK and beyond, demonstrating both our value offering within this highly competitive market and our ability to respond to individual customer needs such as production of new, own label products. Our expanding export operation ships product extensively to Europe as well as developing African countries.

Quality is and always has been our watchword and our UK headquarters boasts an impressive laboratory facility with a wide capability, including gas and liquid chromatography and UV and visible spectrophotometry.

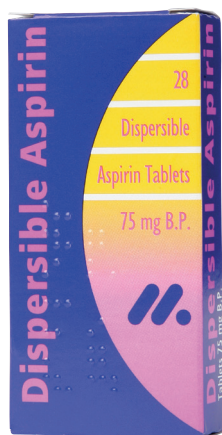

M&A Pharmachem are a leading UK manufacturer of premium Analgesic products made in the UK at our Bolton manufacturing plant.

Our state-of-the-art manufacturing plant is testimony to our belief in investing in our capability to ensure M&A Pharmachem stays at the forefront of the pharmaceutical industry.

To keep up with the demands of our clients, our granulation suites are based upon high speed mixer granulators and fluid bed dryers. For tablet compression we use several modern, high speed presses running at 6,000 per minute. Sugar and film coating is based on the latest semi-automatic processing machinery, capable of producing over 350kg of coated tablets per batch.

Most of our tablet and caplet production is blister packed using one of our four state-of-the-art blister packing lines which are capable of producing over 450 blisters per minute. The very latest tablet counting technology gives us the capability to pack into plastic pots.

M&A Own Manufacture

Aspirin Dispersible 75mg Tablets Blister

Co-Codamol 8/500mg Tablets Blister

Co-Dydramol 10/500mg Tablets Blister
