### ABSTRACT

*Neoechinorhynchus cribbi* sp.n. (*Neoechinorhynchidae*) is described from the marine fish *Liza subviridis* (Valenciennes, 1836) from Karachi coast, Pakistan. The new species is distinguished from all other species of the genus *Neoechinorhynchus* by a combination of characters and the most significant being overlapping of the testes. It is specifically separated from all the other species of the genus *Neoechinorhynchus* by a combination of characters including body size, proboscis size, lengths of proboscis hooks, length of lemnisci, egg size and size of bursa. This is the tenth species of genus *Neoechinorhynchus* being reported from Pakistan.

**Keywords:** *Neoechinorhynchus cribbi* n. sp., fish, small intestine, Karachi coast, Pakistan.

---

### INTRODUCTION

The genus *Neoechinorhynchus* erected by Stiles and Hassall, 1905 to accommodate acanthocephalans from freshwater, marine fish and turtles. Yamaguti 1963 listed forty species of the genus from different hosts. Later, during 2002, Amin revised the genus, out of 109 species he considered 88 were validated and assigned in one or two subgenera; *Neoechinorhynchus* having eggs without polar prolongation and *Hebesoma* with polar prolongation; ovoid or elliptical eggs. The species of the genus reported from Pakistan are *N. karachiensis* Bilquees, 1972; *N. johnii* (Yamaguti, 1939) Bilquees, 1972; *N. formosanum* (Harada, 1938) Bilquees, 1972; *N. gibsoni* Khan and Bilquees, 1989; *N. nickoli* Khan et al., 1999; *N. longiorchis* Khatoon and Bilquees, 2007; *N. brayi* Bilquees et al., 2011; *N. macrorchis* Shaikh et al., 2011; *N. nawazi* Naqvi et al., 2012.

Recently, worms of a new species of *Neoechinorhynchus* Stiles and Hassall, 1905 were collected by one of us (M. I.) from Karachi coast from fish *Liza subviridis* (Valenciennes, 1836). This material is described herein as a new species of the genus *Neoechinorhynchus* Stiles and Hassall, 1905. This is the tenth species of the genus being reported from Pakistan.

### MATERIALS AND METHODS

Fourteen fish were caught from the Karachi coast. Two fish were infected and yielded two worms each. The acanthocephalans on being removed from the intestine allowed dying in refrigerated tap water, fixed in Alcohol-Formaldehyde-Acetic Acid for 48 hours, then stored in 70% ethanol. Specimens were stained with Mayer's carmalum and mounted in Canada balsam for examination as whole mounts. Figures were drawn with the help of camera Lucida. Measurements are given in millimeters unless otherwise stated. Specimens are deposited in the museum, Department of Zoology, University of Karachi, Karachi-75270.

#### *Neoechinorhynchus cribbi* sp.n.

(Figs. 1-4)

- Host: *Liza subviridis* (Valenciennes, 1836)  
Locality: Karachi coast, Pakistan  
Location: Small intestine  
No. of fish examined: 12  
No. of worms recorded: 4 from 2 hosts

## DESCRIPTION

*Neoechinorhynchidae*; with characters of the genus *Neoechinorhynchus* Stiles and Hassall, 1905. All females larger as compared to males. Body cylinder normally widest almost at anterior one third of the body, tapering posteriorly. Body wall having reticular lacunar system, containing 3 to 5 hypodermic nuclei. Proboscis small, round to oval. Neck very short. Hooks on proboscis arranged in 3 circular rows of 6 hooks each. Hooks of the first row largest followed by second and third row. Proboscis receptacle almost two times as long as proboscis with a large cephalic ganglion at the base.

Lemnisci large, sub equal, the longer almost reaching anterior testis. The two oval testes overlapping each other, almost similar in size. Cement gland elongate contiguous to posterior testis by its anterior end. Cement reservoir and saefftigen's pouch elongated. Bursa almost kidney shaped. Genital pore sub-terminal connected by a canal measuring 0.12-0.14 to the vagina. Eggs oval in shape without polar prolongation.

**Male (based on two mature specimens):** Trunk 6.5-7.4 by 1.12-1.20. Proboscis measuring 0.36-0.52 by 0.18-0.28 with 18 hooks in three rows of six each. The anterior measuring 0.13-0.14 by 0.028-0.032, the second row 0.078-0.082 by 0.012-0.014 and the third measure 0.070-0.072 by 0.008-0.010. Neck 0.04-0.42 long. Proboscis receptacle measuring 0.66-0.72 by 0.18-0.28. Lemnisci right measuring 2.79-3.25 by 0.11-0.13 and the left measuring 2.50-2.72 by 0.11-0.13. Testis the anterior measuring 0.80-0.88 by 0.46-0.51 and the posterior testis 0.80-0.92 by 0.40-0.46. Cement gland 1.12-1.32 by 0.38-0.42. Cement reservoir 0.90-0.96 by 0.36-0.42. Saeftigen's pouch 1.15-1.18 by 0.32-0.39. Bursa measuring 0.68-0.74 by 0.38-0.46.

**Female (based on 2 gravid specimens):** Trunk 8.2-15.8 by 1.24-1.32. Proboscis 0.12-0.35 by 0.21-0.30, with spines of three rows same in size as in males. Neck 0.04 long. Proboscis receptacle 0.28-0.48 by 0.18-0.29. Lemnisci right measuring 3.52-3.86 by 0.12-0.14. Lemnisci left measuring 2.64-2.76 by 0.10-0.11. Eggs measuring 0.078-0.088 by 0.048-0.054.

## DISCUSSION

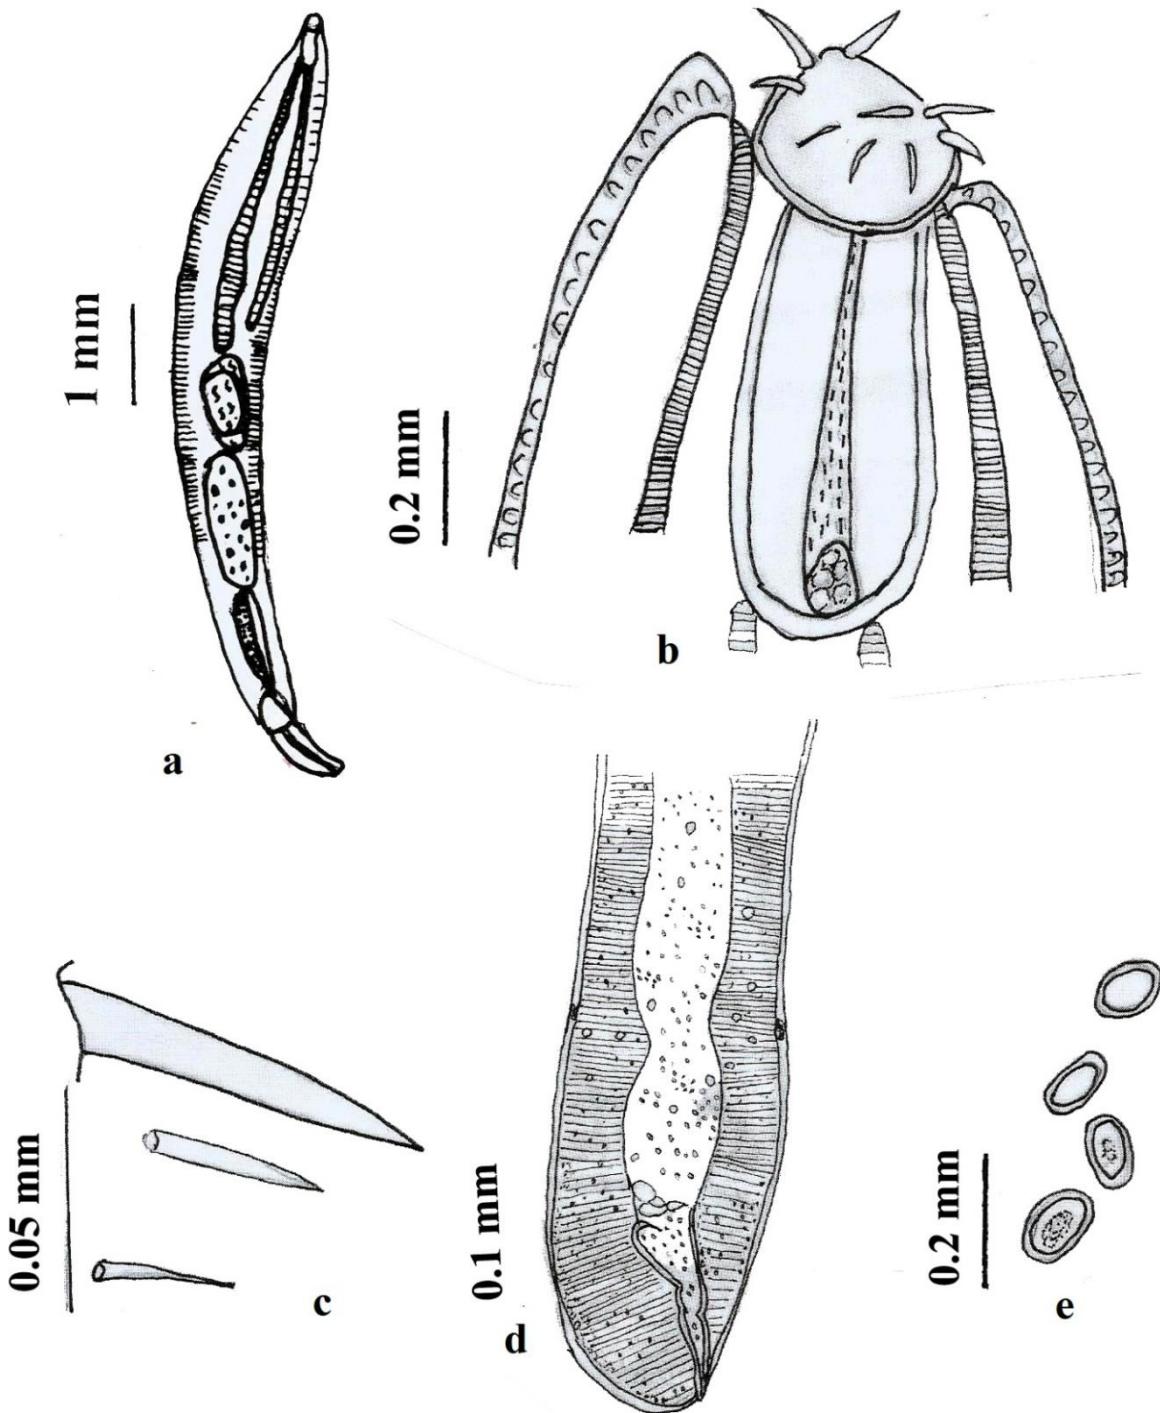

*Neoechinorhynchus cribbi* n.sp. is distinguished from all the other species of the genus in having, proboscis small, round to oval, both the testes are overlapping each other. The body size of male (6.5-7.4 by 1.12-1.20) is larger as compared to *N. australis* Van Cleave, 1931; *N. zacconis* Yamaguti, 1935; *N. devdevi* (Datta, 1936) Kaw, 1951; *N. nematalosi* Tripathi, 1959; *N. gibsoni* Khan and Bilqees, 1989; *N. pimelodi* Brasil-Sato and Pavanelli, 1998; *N. nickoli* Khan et al., 1999; *N. didelphis* Amin, 2001; *N. longiorchis* Khatoon and Bilqees, 2007; *N. macrorchis* Shaikh et al., 2011; *N. brayi* Bilqees et al., 2011; *N. brentnickoli* Monks et al., 2011; *N. pennahia* Amin et al., 2011; *N. colastinense* Arredondo and Gil de Perterra, 2012; *N. nawazi* Naqvi et al., 2012; *N. veropesoi* Melo et al., 2013 and *N. dighanensis* Gautum et al., 2018.

The proboscis (Male 0.36-0.52 by 0.18-0.28; Female 0.12-0.35 by 0.21-0.30) is larger as compared to *N. idahoensis* Amin and Heckmann, 1992; *N. dimorphospinus* Amin and Sey, 1996; *N. pimelodi* Brasil-Sato and Pavanelli, 1998; *N. didelphis* Amin 2001; *N. iraqensis* Amin et al., 2001; *N. qatarensis* Amin et al., 2002; *N. zabensis* Amin et al., 2003; *N. buckneri* Amin and Heckmann, 2009; *N. chimalapasensis* Salgado-Maldonado et al., 2010; *N. longinucleatus* Amin et al., 2011; *N. pennahia* Amin et al., 2011; *N. ascus* Amin et al., 2011; *N. brentnickoli* Monks et al., 2011; *N. colastinense* Arredondo and Gil de Perterra, 2012; *N. vittiformis* Smales, 2013; *N. bryanti* Smales, 2013; *N. veropesoi* Melo et al., 2013 and *N. yamagutii* Tkach et al., 2014.

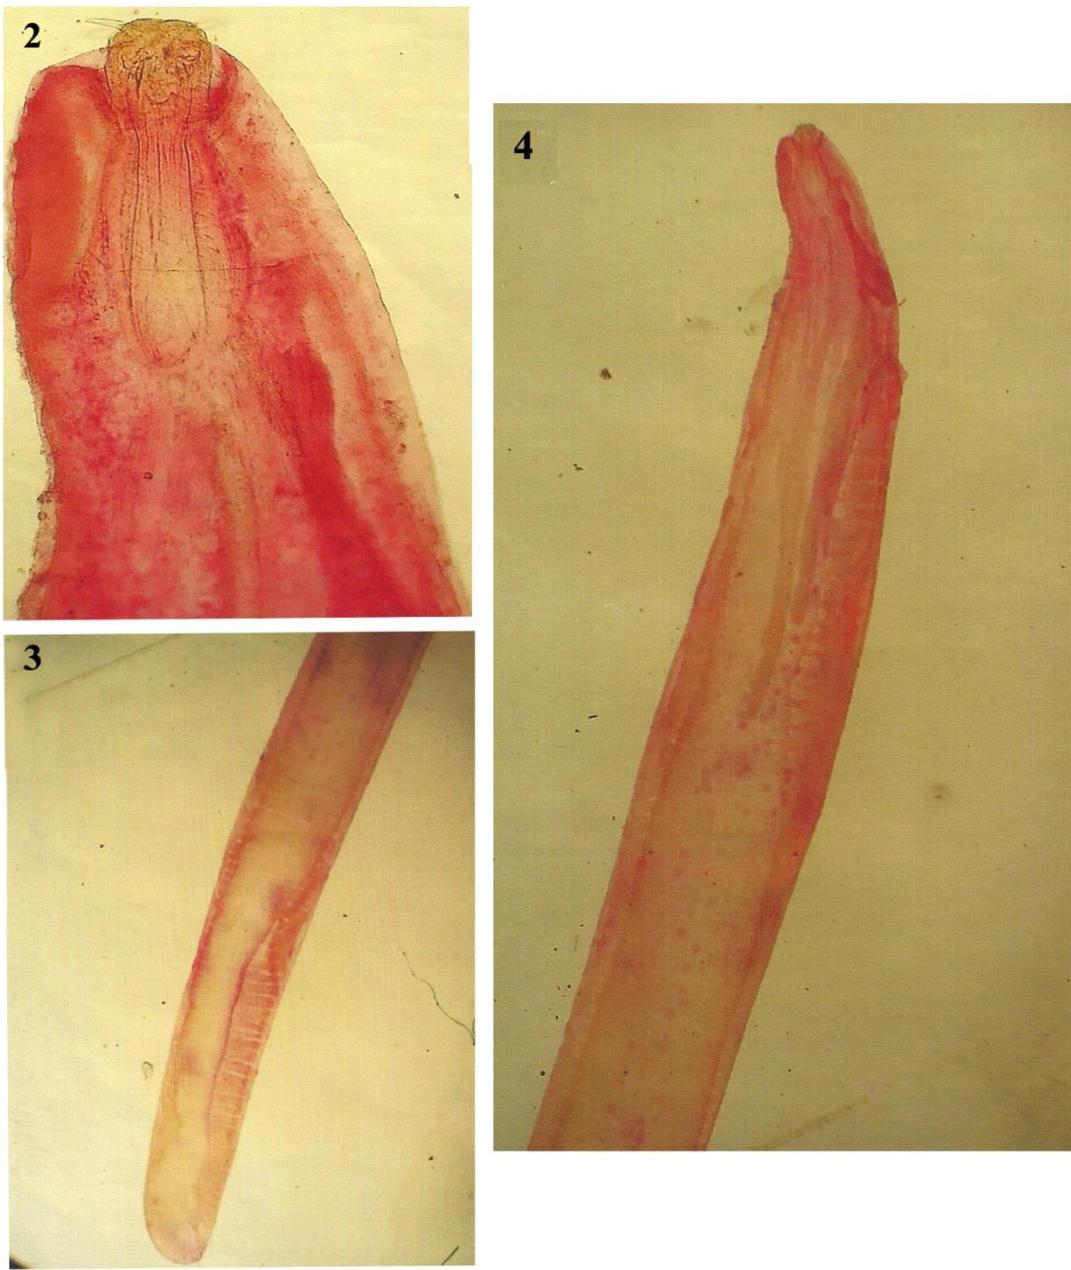

The lemnisci in the present specimen is sub equal while they are equal in *N. topseyi* Podder, 1937; *N. africanus* Troncy, 1969 whereas, they are larger in size as compared to *N. idahoensis* Amin and Heckmann, 1992; *N. didelphis* Amin 2001; *N. buckneri* Amin and Heckmann, 2009; *N. chimalapasensis* Salgado-Maldonado et al., 2010; *N. brentnickoli* Monks et al., 2011; *N. plaquensis* Amin et al., 2011; *N. manubriensis* Amin et al., 2011; *N. colastinense* Arredondo and Gil de Perterra, 2012; *N. veropesoi* Melo et al., 2013 and when compared to other species the proboscis hooks in the present specimens are larger compared to *N. gibsoni* Khan and Bilqees, 1989; *N. idahoensis* Amin and Heckmann, 1992; *N. dimorphospinus* Amin and Sey, 1996; *N. rostratum* Amin and Bullock, 1998; *N. nickoli* Khan et al., 1999; *N. didelphis* Amin 2001; *N. iraqensis* Amin et al., 2001; *N. qatarensis* Amin et al., 2002; *N. zabensis* Amin et al., 2003; *N. dorsovaginatus* Amin and Christison, 2005; *N. buckneri* Amin and Heckmann, 2009; *N. indicus* Gudivada et al., 2010; *N. brayi* Bilqees et al., 2011; *N. macrorchis* Shaikh et al., 2011; *N. ascus* Amin et al., 2011; *N. longinucleatus* Amin et al., 2011; *N. manubriensis* Amin et al., 2011; *N. brentnickoli* Monks et al., 2011; *N. colastinense* Arredondo and Gil de Perterra, 2012; *N. yamagutii* Tkach et al., 2014 and *N. costarricense* Pinacho-Pinacho et al., 2018.

The eggs in the present specimens measure (0.078-0.088 by 0.048-0.054) which are larger as compared to *N. idahoensis*; *N. dimorphospinus*; *N. rostratum*; *N. pimelodi*; *N. iraqensis*; *N. qatarensis*; *N. zabensis*; *N. dorsovaginatus*; *N. buckneri*; *N. chimalapasensis*; *N. longinucleatus*; *N. plaquensis*; *N. colastinense*; *N. bryanti*; *N. veropesoi*; *N. personatus*; *N. yamagutii*; *N. costarricense* and *N. dighaensis*.

Almost complete overlapping of the testes has not been seen in any previous described species of the genus. Based on these characteristics, the present work describes a new species *N. cribbi* from Pakistan. Thus the present work contributes to the knowledge of Pakistani parasites by adding a new species. The species is named in honour of eminent Parasitologist Dr. Thomas Cribb, Australia.
