Lucknow University, Lucknow

Abstract:A selective Dissemination information (SDI) system attempts to facilitate users information retrieval and information filtering needs with the rise of the interest as an information source .It also discusses some finally the paper explores some possible requirements for performing online SD service. The goal of an SDI system is to deliver new information arriving at an SDI aware information Provider to users who express .Their interests via user Profiles.

Keywords: SDI Information, Services, systems, Matching Process

1.0 Introduction: Selective Dissemination of information (SDI) was originally a phrase related to library and information science S.D.L. refers to tools and resources used to keep a user informed of new resources on specified topics with the rapid. Expansion of different media source (newspaper) radio Television internet) it is different to keep track of over   all strategic information Both in Business and governmental agencies ,private/publication .The last Few year have show a large market demand for watching these sources showing the media monitoring is crucial activity emerging as a new and stored for area. However these activities are Largely based on operation on manual processing to discern the meaning of the information and it relevance to the end-user need the world wide web and term it self is somewhat dated contemporary analogous systems that for SDL serves include alerts current awareness tools or trackers .These system provide automated searches that information the availability of new resources meeting the users specified key world and search parameters alerts cab be received a number of way's including email R.S.S. Feeds voice mail instant messing and text messaging.

1.1 Concept & Definition Of SDI
The basic concept of SDI consists of matching of the information with the interest of the readers SDI is based on the concept of Personal service. " The SDI is that service with in an organization which concerns itself with the channeling of new items of information from whatever source to those Points within the organization where the Probability of usefulness is connection with current work or interest is high .'' Selective dissemination of information (SDI) is advanced kind of service directed towards individuals .This is a highly personalized service.

1.2 Information Service
The libraries could use in house database as well as external bibliographic and full text database for organizing information dissemination service. The latest publications in yours specified field of interest .A user registers at such a system with KYA words representing his or her fields of interest called a search Profile when new Publication matching the search Profile appear , the system informs the user of them instantly periodically or upon request some system may also be able to inform the user if changes in already notified Publications occur. The need bibliographic information condensed information analytical information repacked information and consolidated information and such other content oriented information for under standing latest developments in the field, state of the art in the subject and complete overview of the topic. The most common service the libraries have been offering over the years is the access to document collections. How the exceptions of both the constitution from the libraries go for beyond the accessibility to internal collections the adult community is more interested in getting useful information than just the documents give their to socioeconomic status and their law literacy level they need Practical Processed information useful in making informed choices or taking decisions

on meters relating to their lively hood and living standard and guarding themselves against exploitation and deprivation etc.

2.0 Type of library and information services:-

Broadly libraries offer different types of library and information services that should be of relevance to both the user constituencies in the adult education sector. these service included (i) current information services (ii) Catching up information services and (iii) exhaustive information. Let us now discuss each type in some what more detail.

(i)Exhaustive information services:- Exhaustive information service are important for assessing and understanding over all   development in the subject these services include literature   such Bibliography compilations and sate of the art reports and critical reviews etc.
