Checklist of Latvian Lepidoptera - Latvijas Tauriņu Katalogs

Nikolay Savenkov, Ivars Šulcs, Sakari Kerppola & Larry Huldén

A critical review of the Latvian Lepidoptera is presented. Notes on some old records or rare species are given. At present 2360 species of Lepidoptera are known from Latvia.

Authors' addresses:

Nikolay Savenkov, Latvian Museum of Natural History, K. Barona iela, 4, LV-1712 Riga, Latvia

Ivars Šulcs, Stirnu iela. 18, LV-1082 Riga, Latvia

Sakari Kerppola, Hiihtomäentie 44 A 6, FIN-00800 Helsinki, Finland

Larry Huldén, Finnish Museum of Natural History, Zoological Museum, P.O. Box 17, FIN-00014 University of Helsinki, Finland

Checklist of Latvian Lepidoptera

The earliest reports on the Latvian Lepidoptera fauna were published in the works by Fischer (1778, and supplements in 1784 and 1791) recording our widespread butterflies. von Drümpelmann and Fribe (1811) published eight exercise-books with colour pictures of discovered Lepidoptera species. Sodoffsky (1837) included several new descriptions of moths in addition to reports on butterflies.

Lienig (1840) may be regarded as the first catalogue of the Latvian Lepidoptera. Her monograph (Lienig 1846) includes many new descriptions of moths.

Nolcken (1868, 1870 and 1871) still remains the most complete monograph on the whole Lepidoptera fauna of the Baltic countries.

C. A. Teich collected a very rich material of Lepidoptera from Latvia. His Lepidoptera catalogue (Teich 1899) is the latest survey of Latvian butterflies and moths.

After 1899 the knowledge on the Lepidoptera fauna was considerably increased due to collectings by C. Lutzau, B. Slevogt, F. Brandt, J. Muskars and A. Šulcs among others. The most recent survey on the

Latvijas Tauriņu Katalogs

Pirmās ziņas par Latvijas tauriņu faunu ir publicējis Fišers 1778 gada ar papildinājumiem 1784 un 1791 gados. Šajos darbos sniegtas ziņas par parastāko tauriņu sugu izplatību Latvijā. Pēc tam Dr. Drimpelmanns un Fribe (1811) publicēja astoņas burtnicas ar Latvijā novēroto krāsainu tauriņu attēliem. Sodofskis (1837) līdztekus samērā plašam tauriņu sugu uzskaitam ir publicējis arī dažu siktauriņu pirmaprakstus.

F. Linigas darbs (1840) uzskatāms kā pirmais Latvijas tauriņu katalogs. Savā vēlākā darbā (1846) F. Liniga publicē arī daudzus siktauriņu pirmaprakstus.

J. Nolkena darbi (1868, 1870 un 1871) joprojām uzskatāmi kā pilnīgākie darbi, kuri aptver visu Baltijas valstu tauriņu faunu.

Sevišķi intensīvi Latvijas tauriņu ir pētījis Rīgas skolotājs K. Teihs, Viņa 1899 gadā publicētais Latvijas tauriņu ir uzskatāms kā pēdējais mūsu zemes tauriņu pārskats.

Pēc 1899. gada Latvijas tauriņu faunas izpētē rosīgi darbojās K. Lutzaus, B. Slēogts, F. Brandts, J. Muskars, A. Šulcs un citi Pētnieki.

Kā lielākais nesen izdots visu Baltijas valstu pārskats jāmin A. Šulca un Viidalepa

Macrolepidoptera of the Baltic was published by A. Šulcs and J. Viidalepp (1967, 1969, 1972 and 1974). Nowadays the Latvian Lepidoptera fauna is studied by I. Šulcs and N. Savenkov.

This catalogue is a summary of all species found during the last 50 years and including all old, confirmed records in Latvia. Notes on some species are indicated with a number and a letter (f for faunistic notes and n for nomenclatoric notes). Species deposited in the collection of H. Carlile and reported by H. Saar are not included in the catalogue. Several reports of southern species from Latvia are considered doubtful by the present authors.

The classification is essentially the same as in Varis & al (1995).

The total number of species found in Latvia on 1. June 1996 is 2360 species.

darbi, kuri izdoti 1967, 1969, 1972 un 1974 gados.

Mūsu dienās Latvijas tauriņu faunas izpēti turpina I. Šulcs un N. Savenkovs.

Šajā katalogā minētas visas tauriņu sugas, kuras atrastas Latvijā pēdējos 50 gados kā arī ietverti visi vecie ar paraugeksemlāriem apstiprinātie dati. Piezīmes par atsevišķām sugām ir atzīmētas ar nummuru un burtu (f - faunistiskās piezīmes un n - nomenklatūras piezīmes). Sugas, kuras glabājas H. Carliles kolekcijā un minētas H. Zāra ziņojumos, katalogā nav ietventas, jo minēto autoru daudzu dienvidu sugu atradumi Latvijā ir stipri apšaubāmi.

Nomenklatūrā autori ir vadījušies pēc Varis u. c. (1995) darba.

Tauriņu sugu kopskaits Latvijā uz 1996 gada 1. jūniju sastāda 2360 sugas.

Omissions

1. Species previously recorded from Latvia but omitted from the check-list because no voucher specimens are known or because of incorrect determinations.

Stigmella perpygmaeella (Doubleday, 1859): Teich, C. A. 1899

Stigmella mespilicola (Frey, 1856): Savenkov, N. 1991

Stigmella atricapitella (Haworth, 1828): Savenkov, N. 1990

Adela fasciella Fabricius, 1775: Lienig, F. 1846

Incurvaria masculineella (Denis & Schiffermüller, 1775): Lienig, F. 1846

Lampronia morosa Zeller, 1852: Šulcs, A. 1953

Infurcitinea roeslerella (Heyden, 1865): Teich, C. A. 1899

Anemapogon quercicolellus (Herrich-Schäffer, 1851): Teich, C. A. 1899

Calybites quadrisignella (Zeller, 1839): Teich, C. A. 1899

Parornix polygrammella (Wocke, 1862): Teich, C. A. 1899

Parornix torquilella (Zeller, 1850): Teich, C. A. 1899

Phyllonorycter viminiella (Sircom, 1848): Savenkov, N. 1986

Phyllonorycter scopariellus (Zeller, 1846): Lienig, F. 1846

Phyllonorycter nigrescentellus (Logan, 1851): Teich, C. A. 1899

Phyllonorycter oxyacanthae (Frey, 1856): Saar, H. 1927, 1930

Roeslerstammia pronubella (Denis & Schiffermüller, 1775): Nolcken, J. H. W. 1868-1871

Kessleria saxifragae (Stainton, 1868): Teich, C. A. 1899

Paraswammerdamia albicapitella (Scharfenberg, 1805): Teich, C. A. 1899

Argyresthia illuminatella Zeller, 1839 (Lienig, F. 1846)

Argyresthia fundella (Fischer von Röslerstamm, 1835): Lienig, F. 1846

Ochsenheimeria mediopectinellus (Haworth, 1828): Šulcs, A. & Šulcs I. 1983

Leucoptera spartifoliella (Hübner, 1813): Lienig, F. 1846

Lyonetia frigidariella Herrich-Schäffer, 1855: Petersen, W. 1924

Depressaria libanotidella Schläger, 1849: Teich, C. A. 1899

Depressaria hofmanni Stainton, 1861: Šulcs, A. 1959

Agonopterix pallorella (Zeller, 1839): Teich, C. A. 1899

Agonopterix purpurea (Haworth, 1811): Nolcken, J. H. W. 1868-1871

Pseudatemelia subochreella (Doubleday, 1859): Teich, C. A. 1899

Schiffermuelleria stroemella (Fabricius, 1781): Nolcken, J. H. W. 1868-1871

Batia unitella (Hübner, 1796): Šulcs, A. 1976

Elachista quadripunctella (Hübner, 1825): Lienig, F. 1846

Elachista biatomella (Stainton, 1848): Teich, C. A. 1899

Elachista chrysodesmella Zeller, 1850: Teich, C. A. 1899

Biselachista scirpi (Stainton, 1887): Šulcs, A. & Šulcs I. 1983

Cosmiotes stabilella (Stainton, 1858): Savenkov, N. 1984, Šulcs, A. & Šulcs I. 1983

Coleophora coracipennella (Hübner, 1796): Savenkov, N. 1984, Šulcs, A. & Šulcs I. 1984

Coleophora auricella (Fabricius, 1794): Teich, C. A. 1899

Stigmatophora serratella (Treitschke, 1833): Lienig, F. 1846

Metzneria paucipunctella (Zeller, 1839): Lienig, F. 1846

Bryotropha basaltinella (Zeller, 1839): Teich, C. A. 1899

Teleiodes sequax (Haworth, 1828): Teich, C. A. 1899

Mirificarma lentiginosella (Zeller, 1839): Teich, C. A. 1899

Filatima spurcella (Duponchel, 1843): Teich, C. A. 1899

Prolita solutella (Zeller, 1839): Teich, C. A. 1899

Scrobipalpa halonella (Herrich-Schäffer, 1854): Teich, C. A. 1899

Scrobipalpa instabilella (Douglas, 1846): Teich, C. A. 1899

Caryocolum blandelloides Karsholt, 1981 (= *proximum* auct. nec Haworth, 1828): Šulcs, A. & Šulcs I. 1978

- Caryocolum marmorea* (Haworth, 1828): Teich, C. A. 1899
- Syncopacma coronillella* (Treitschke, 1833): Teich, C. A. 1899
- Syncopacma taeniolella* (Zeller, 1839): Šulcs, A. 1959
- Nothris verbascella* (Denis & Schiffermüller, 1775): Lienig, F. 1846
- Dichomeris ustalella* (Fabricius, 1794): Lienig, F. 1846
- Aphelia ochreana* (Hübner, 1799): Lienig, F. 1846
- Acleris lacordairana* (Duponchel, 1836): Lienig, F. 1846, Teich, C. A. 1899
- Aethes deutschiana* (Zetterstedt, 1839): Teich, C. A. 1899
- Cochylis hybridella* (Hübner, 1813): Teich, C. A. 1899
- Cochylis roseana* (Haworth, 1811): Teich, C. A. 1899
- Aterpia sieversiana* (Nolcken, 1870): Teich, C. A. 1899
- Aterpia corticana* (Denis & Schiffermüller, 1775): Teich, C. A. 1899
- Epiblema subsequana* (Haworth, 1811): Teich, C. A. 1899
- Zeiraphera rufimitrana* (Herrich-Schäffer, 1851): Teich, C. A. 1899
- Epiblema costipunctana* (Haworth, 1811) (= *trigeminana* (Stephens, 1834)): Teich, C. A. 1899
- Thiodia trochilana* (Frölich, 1828) (= *delitana* (Fischer von Röslerstamm, 1840)): Teich, C. A. 1899
- Pelochrista mollitana* (Zeller, 1847): Teich, C. A. 1899
- Clavigesta sylvestrana* (Curtis, 1850): Teich, C. A. 1899
- Pammene albuginana* (Guenée, 1845): Šulcs, A. 1964
- Pammene aurana* (Fabricius, 1775): Lienig, F. 1846

Cosmia affinis (Linnaeus, 1767): Teich, C. A. 1899

Conistra rubiginosa (Scopoli, 1763) (= *vau-punctatum* (Esper, 1786)): Slevogt, B. 1910

Luperina dumerilii (Duponchel, 1826): Šulcs, A. 1964

2. Voucher specimens are present but of unknown origin, or specimens have been mislabelled or have been collected outside the borders of present day Latvia.

Synanthedon flaviventris (Staudinger, 1883): Šulcs, A. & Viidalepp, J. 1967

Scoliantides orion (Pallas, 1771): Šulcs, A. & Viidalepp, J. 1974

Ammobiota festiva (Hufnagel, 1766): Šulcs, A. & Viidalepp, J. 1967

Eilema cereolum (Hübner, 1803): Šulcs, A. & Viidalepp, J. 1967

Coenocalpe lapidata (Hübner, 1809): Šulcs, A. & Viidalepp, J. 1972

Nudaria mundana (Linnaeus, 1761): Šulcs, A. & Viidalepp, J. 1967

Amphipyra livida (Denis & Schiffermüller, 1775): Šulcs, A. & Viidalepp, J. 1969

Calloplistria juvenina (Stoll, 1792): Šulcs, A. & Viidalepp, J. 1969

Polymixis polymita (Linnaeus, 1761): Šulcs, A. & Viidalepp, J. 1969

Egira conspiciellaris (Linnaeus, 1758): Šulcs, A. & Viidalepp, J. 1969

Eugnorisma depunctum (Linnaeus, 1761): Šulcs, A. & Viidalepp, J. 1969

Lycophotia molothina (Esper, 1789): Šulcs, A. & Viidalepp, J. 1969

Xestia ditrapezium (Denis & Schiffermüller, 1775): Teich, C. A. 1899, Slevogt, B. 1910, Šulcs, A. & Viidalepp, J. 1969

Heliothis ononis (Denis & Schiffermüller, 1775): Šulcs, A. & Viidalepp, J. 1969

Periphanes delphini (Linnaeus, 1758): Šulcs, A. & Viidalepp, J. 1969

Introduced species

The following seven species are only introductions in Latvia.

Tinea translucens Meyrick, 1917

Sitotroga cerealella (Olivier, 1789)

Cydia pyrivora (Danilevsky, 1947)

Cydia molesta (Busck, 1916)

Paralipsa gularis (Zeller, 1877)

Corcyra cephalonica (Stainton, 1866)

Ectomyelois ceratoniae (Zeller, 1839)

Notes on nomenclature

1. *Elachista* sp.1.

An undescribed species previously reported as *E. zernyi* Hartig, 1941 (Savenkov in press.).

2. *Acleris nigrilineana* Kawabe, 1963

Latvian materials are not yet completely worked up, but probably, *A. abietana* (Hübner, 1822) is not presented in the Latvian fauna.

3. *Endothenia gentianaeana* (Hübner, 1825)

In Latvian materials there is another species, which is similar to *E. oblongana* (Haworth, 1811), but does not completely match with Swedish specimens of this species. Until the solving of this problem, we prefer not to put *E. oblongana* in the list.

4. *Bactra* sp.1.

An undescribed species known in Latvia from two localities: Berzciems and Antinciems. Furthermore the species is known from Sweden (I. Šulcs in press).

5. *Epinotia indecorana* (Zetterstedt, 1839)

We leave the species status of this taxon. The only one specimen has been obtained in the right biotope: Mazsalaca (Oījas) 21.9.1988, I. Šulcs leg.

6. *Epinotia nisella* (Clerck, 1759)

The *Salix*-feeding form *cinereana* Hw., has also been reported from Latvia (Savenkov, 1984), but we leave it only as an infraspecific taxon.

7. *Dichrorampha* sp. 1

A long series of this new species has been obtained in the valley of Daugava river in the vicinity of Daugavpils in 1990-1995, I. Šulcs and N. Savenkov leg. (I. Šulcs in press, to be published in *Nota Lepidopterologica*)

8. *Pterophorus* Geoffroy, 1762

The International Commission on Zoological Nomenclature (ICZN) decided in 1964 (Opinion 703) that the authorship of the name is *Pterophorus* Schäffer, 1766, but in 1992 this was changed into *Pterophorus* Geoffroy, 1762 (Opinion 1754).

9. *Ochlodes faunus* (Turati, 1905)

According to V. Anikin et al. (1993) this ssp. of *O. venatus* is a separate species, *O. venatus* (Bremer & Gray, 1853) being limited to Amur region and Primorie, (Russian Far East).

10. *Timandra comai* Schmidt, 1931

Following the opinion of L. Kaila and A. Albrecht (1994) we discovered that in Latvia there is only one species of that genus. So, *T. griseata* is omitted from Latvian fauna.

11 *Euxoa* sp. 1

This taxon was previously known as *E. tritici*. We do not know the oldest available name for this taxon. (cf. Mikkola & Honey 1993)

Notes on faunistics

1. *Elatobia fuliginosella* (Lienig & Zeller, 1846)

Last found in Valka 12.6.1905 1 ex. (I. Šulcs coll.).

2. *Exaeretia ciniflonella* (Lienig & Zeller, 1846)

Described from Latvia; last observed in the 1930's (Brandt, 1942). No specimen is traceable.

3. *Scrobipalpa murinella* (Duponcel, 1843), *S. salinella* (Zeller, 1847) and *S. bryophiloides* Povolný, 1966.

Unpublished records, recently determined by Ole Karsholt (Denmark).

4. *Pammene gallicolana* (Lienig & Zeller, 1846)

Described from Latvia, but not observed subsequently.

5. *Choreutis diana* (Hübner, 1822)

Only noted by F. Lienig (1846) and F. Brandt (1942). Material was checked by A. Danilevsky and V. Kuznetsov (1973): Livonia (Lienig) 3 females.

6. *Epermenia strictella* (Wocke, 1867)

The species has been noted by K. Teich (1889), later it has been mentioned by R. Gaedike (1966): Grobina 1 ex. Brehm leg. (probably collected in the beginning of this century).

7. *Pyralis lienigialis* (Zeller, 1843)

Described from Latvia, but not registered during this century.

8. *Agriphila biarmica* (Tengström, 1865)

The only one found in Latvia: Paplaka 10.7.1935 numerous moths A. Šulcs leg., later not observed.

9. *Thyris fenestrella* Scopoli, 1763

The last record: Renge 1934 1 ex. J. Muskarš leg. The specimen has been checked by A. Šulcs, but now it is not traceable because later it has been destroyed.

10. *Erynnis tages* (Linnaeus, 1758)

Only one old specimen is traceable: Dzerve, 18.6.1862 (K. Lutzau leg., I. Šulcs coll.).

11. *Iphiclides podalirius* (Scopoli, 1763)

The last find in Taurkalne 18.6.1942 1 ex. V. Gulbis leg.

12. *Euchloe chloridice* (Hübner, 1813)

The closely related *P. edusa* (Fabricius, 1777) may be included in the records of this species.

13. *Pontia daplidice* (Linnaeus, 1758)

The only information by Brandt (1942), the species has been found in Amata 20.7.-beg.8.1932.

14. *Colias hyale* (Linnaeus, 1758)

C. alfariensis Ribbe was also reported from Latvia (Kuznetsov, 1982), but the determination, based only on one female, is not sure. We abstain from including this species in the fauna until new material is available.

15. *Nymphalis vau-album* (Denis & Schiffermüller, 1775)

In V. Bergner's collection there are 3 specimens from Jūrmala (Bulduri), probably obtained in 1880-1900.

16. *Lythria purpuraria* (Linnaeus, 1761)

Only one female without concrete data (but undoubtedly Latvian specimen) is traceable (J. Seglinieks leg., probably Central Latvia, 1960-1970).

17. *Xanthorhoe munitata* (Hübner, 1809)

Only four old specimens are traceable: Jūrmala (Dubulti) 1.6., 20.6. and 23.6 (probably 1880-1900), K. Teich leg., Bata 12.7.1897 B. Slevogt leg.

18. *Entephria caesiata* (Denis & Schiffermüller, 1775)

Last found in Amata in the 1930's (Brandt, 1942).

19. *Colostygia aptata* (Hübner, 1813)

In V. Bergner's collection there is one specimen with the label "Asari VII", probably collected in 1880-1900.

20. *Eupithecia extensaria* Freyer, 1844

This species has been found in the vicinity of Koknese by F. Lienig (1846) and described as *E. prolongata* sp.n. by P. Zeller. Later it has not been obtained in Latvia but has been registered in Lithuania and Pskov district in NW Russia.

21. *Acasis appensata* (Eversmann, 1842)

One specimen in V. Bergner's collection: Kemeris, 21.6. (probably 1880-1900).

22. *Uteheisa pulchella* (Linnaeus, 1758)

In V. Bergner's collection there is one specimen labelled: Riga, VII (probably obtained in 1880-1900).

23. *Tyria jacobaeae* (Linnaeus, 1758)

In V. Bergner's collection there are two specimens which have been found in Salaspils 31.5. and 2.6 (probably, 1880-1900).

24. *Cucullia scrophulariae* (Denis & Schiffermüller, 1775)

Only two specimens in V. Bergner's collection: Kurland 7.7. and 10.7. (probably 1880-1900).

25. *Schinia scutosa* (Denis & Schiffermüller, 1775)

Last found in Riga in the summer 1942, 1 ex., A. Šulcs leg.

26. *Lithophane ornitopus* (Hufnagel, 1766)

In the V. Bergner's collection: Jūrmala (Dubulti) 18.8.1896, 2 ex. and 26.8.1896, 1 ex.

27. *Luperina ferrago* (Eversmann, 1844)

Only one specimen of this rare south-eastern migrant is known: Riga, July 1933, J. Akmens leg. (I. Šulcs coll.).

28. *Xestia speciosa* (Hübner, 1813)

Only two specimens are traceable: Amata 2.8.1932, F. Brandt leg.

29. *Euxoa ochrogaster* (Guenée, 1852)

Only two specimens are traceable: Latvia, K. Teich leg. (no detailed data, I. Šulcs coll.) and Kemeris 28.7. (probably 1880-1900, V. Bergner coll.).
