

Candidicidin complex

Code No.: **BIA-C1564**Pack sizes: **1 mg, 5 mg**

Synonyms : Levorin

Specifications

CAS #	: 1403-17-4
Molecular Formula	: C₅₉H₈₄N₂O₁₈ (for Candidicidin D)
Molecular Weight	: 1109.3
Source	: Streptomyces griseus
Appearance	: Dull yellow solid
Purity	: >95% by HPLC
Long Term Storage	: -20°C
Solubility	: Soluble in ethanol, methanol, DMF or DMSO.

Application Notes

Candidicidin is a macrocyclic heptaene antifungal complex produced by *Streptomyces griseus* and isolated by Lechevalier and colleagues in 1953. The candidicidin complex comprises analogues A, B, C and D, with candidicidin D as the major component. Candidicidin is active against fungi, in particular *Candida albicans*, and is used clinically to treat vaginal candidiasis. Like all polyene antifungal metabolites, candidicidin acts by binding to ergosterol and disrupting the fungal membrane.
