Preface

To understand one another, we need to speak each other's language. While the rich diversity of languages is one of the European Union's glories, when it comes to a field as complex and varied as fish and other aquatic organisms it is easy to lose one's bearings. This glossary should therefore be of inestimable value, not only for translators and scientists but for everyone working in the fishing and aquaculture industry.

In these sectors, perhaps more than in others, problems need to be solved by mutual understanding between the people working in them in the different Union countries: the fishermen themselves, the handlers and processors, the wholesalers and retailers, and of course the consumers. At stake is the survival of our fishing communities. Only together will we meet and overcome the difficult times ahead.

Overcapacity among our fishing fleets is cutting into the profitability of boats and encouraging cheating, the taking of immature fish is stopping stocks from renewing themselves, the globalisation of our markets is putting pressure on traditional business strategies – not to mention the challenges to our natural environment. All of these have to be tackled head on by the common fisheries policy (CFP).

The CFP's job is to set the 'rules of the game' in such a way as to elicit responsible behaviour, so that we can go on exploiting the wealth of the sea without wasting its resources or exhausting them altogether. The CFP needs to ensure that the industry has a future, that it will become more integrated and up to date, so that consumers can go on buying the good quality, healthy products they want at reasonable prices.

To achieve this, the CFP promotes conservation, surveillance and monitoring and research, it supports processing, marketing and promotional campaigns, it sets limits on fleet capacity, it arranges cooperation agreements with non-Community countries, and so on. In all of this, the various partners involved have to understand one another. Every effort to promote mutual comprehension is therefore to be heartily welcomed and this glossary is no exception.

The second edition covers more than 1 500 groups and individual species of fish, crustaceans, shellfish, molluscs, mammals and aquatic plants, giving their most commonly used names in all 11 languages of the Community plus their scientific name in Latin. Wherever possible, an illustration has been included as well.

This impressive volume would not have been feasible without the help of research institutes in the various member countries. It represents a convergence of interests between the world of research and the commercial fishing industry which, although far apart in their day-to-day work, share the same desire for a better understanding and use of the resources of the sea. The glossary is also the fruit of collaboration between research institutes and the Commission's departments dealing with terminology, statistics and fisheries policy.

A big thank you, then, to all those who have contributed to it. Your painstaking work has produced more than a beautiful-looking book – it has helped in a highly original way to advance the European enterprise.

Emma Bonino
Member of the European Commission

Prefacio

Para comprenderse, es imprescindible tener un lenguaje común. Si bien la pluralidad de lenguas constituye uno de los grandes patrimonios de la Unión Europea, en un universo de tanta diversidad como el de los recursos acuáticos resulta bastante fácil perderse en una maraña de términos.

La presente obra representa por tanto un valiosísimo instrumento, no sólo para lingüistas o científicos, sino también para todos los que trabajan en los sectores de la pesca y de la acuicultura.

En estos sectores, quizá más que en otros, las soluciones a los problemas dependen de la comprensión mutua y de la cooperación entre profesionales de los distintos países de la Unión Europea, de pescadores a distribuidores y consumidores, pasando por mariscadores y transformadores.

De ello depende incluso el futuro de la actividad pesquera en nuestras regiones, pues las dificultades que se nos plantean sólo se pueden afrontar y resolver de forma común.

El exceso de capacidad de las flotas pesqueras, que merma la rentabilidad de los buques e incita al fraude, la captura de peces juveniles e inmaduros, que compromete la renovación de las poblaciones, la globalización de los mercados, que desbarata las estrategias tradicionales de las empresas, y las cuestiones medioambientales son los retos a los que debe hacer frente la política pesquera común (PPC).

Ahora bien, la PPC debe fijar unas reglas de juego capaces de aportar soluciones «responsables» que, a la par que garantizan una explotación que evite el despilfarro y el agotamiento de los recursos marinos, aseguren el futuro y el desarrollo de una industria moderna e integrada y permitan satisfacer las necesidades de los consumidores, quienes exigen productos de calidad, sanos y a precios razonables.

Para ello, la PPC incluye medidas de conservación, control, investigación, ayuda a las actividades de transformación, comercialización y promoción, limitación de las capacidades de la flota y cooperación con terceros países, y muchas otras intervenciones para las que es necesario el entendimiento entre todas las partes interesadas.

Por este motivo, toda iniciativa que, como el presente glosario, contribuya a una mejor comprensión mutua debe ser aplaudida.

En esta segunda edición, se han catalogado más de mil quinientas especies o grupos de especies de peces, crustáceos, moluscos, mamíferos y plantas según sus denominaciones más corrientes en las once lenguas comunitarias, a las que se ha añadido el nombre científico (en latín), acompañadas de ilustraciones siempre que ha sido posible.

Este impresionante volumen no habría salido a la luz sin la aportación de los institutos de investigación de los distintos países de la Unión. Constituye un perfecto ejemplo de convergencia de intereses entre el mundo científico y el de los profesionales de la pesca que, aunque muy diferentes en cuanto a la naturaleza de su trabajo, comparten el afán de conocer y explotar mejor los recursos marinos. También es producto de la colaboración entre esos institutos de investigación y los servicios de la Comisión Europea encargados de la terminología, las estadísticas y la política pesquera.

Quiero expresar nuestro agradecimiento a todos los que han participado en esta obra, pues mediante su minuciosa investigación y su trabajo han contribuido a mucho más que a la publicación de un hermoso libro: han colaborado de una forma original en el progreso de la construcción europea.

Emma Bonino
Miembro de la Comisión Europea

Forord

For at kunne forstå hinanden må vi tale samme sprog. Ganske vist er sprogenes mangfoldighed et af EU's store aktiver, men man kommer let til kort, når man har at gøre med et så rigt og varieret fagområde som »vanddyr og -planter«.

Dette værk er derfor et vigtigt arbejdsredskab, ikke blot for sprogfolk og videnskabsmænd, men også for alle dem, som arbejder i sektoren for fiskeri og akvakultur.

Det gælder måske endnu mere i denne sektor end i andre sektorer, at hvis problemerne skal løses, er alle sektorens aktører i de forskellige EU-lande nødt til at samarbejde og forstå hinanden – både fiskere, distributører, engroshandlere, forarbejdningsvirksomheder og forbrugere.

Det drejer sig om selve fiskeriets fremtid i vore regioner, fordi de nuværende problemer kun kan imødegås og løses i fællesskab.

Den fælles fiskeripolitik står over for en række udfordringer: overkapaciteten i fiskerflåden, der nedsætter fartøjernes rentabilitet og forleder til svig; fiskeriet på umodne ungfisk, der bringer fornyelsen af bestandene i fare; globaliseringen af markederne, der truer virksomhedernes traditionelle strategier samt de miljømæssige problemer.

Den fælles fiskeripolitiks formål er at fastsætte nogle spilleregler, som kan udmøntes i »ansvarlige« løsningsstrategier, der sikrer et fiskeri uden spild af og rovdrift på havets ressourcer. På den måde kan fiskeripolitikken sikre udviklingen af et moderne og integreret erhverv og dets fortsatte eksistens, et erhverv, som kan tilfredsstille efterspørgslen fra forbrugere, der kræver gode og sunde produkter til rimelige priser.

I dette øjemed er der fastsat foranstaltninger til bevarelse, kontrol, forskning, støtte til forarbejdning, afsætning, fremme af forbruget, begrænsning af fiskerflådens kapacitet, samarbejde med tredjelande mv., som kræver, at alle involverede parter forstår hinanden.

Derfor er alle initiativer, der går i retning af en bedre gensidig forståelse, som dette glossar, yderst velkomne.

I den foreliggende udgave er der medtaget over 1 500 arter og grupper af arter af fisk, krebsdyr, skaldyr, bløddyr, pattedyr og planter under deres mest almindelige betegnelser på de elleve EU-sprog sammen med det videnskabelige navn (på latin). De er så vidt muligt illustreret.

Dette imponerende værk havde ikke kunnet udarbejdes uden hjælp fra de forskellige EU-landes forskningsinstitutter. Det er et eksempel på interessesammenfald mellem de videnskabelige kredse og fiskerierhvervet, som, selv om de har meget forskellige arbejdsfelter, er fælles om ønsket om bedre at kende og udnytte havets ressourcer. Værket er også resultatet af et samarbejde mellem disse forskningsinstitutter og Kommissionens afdelinger for terminologi, statistik og fiskeripolitik.

Tak til alle dem, der har bidraget til dette værk. Gennem deres omhyggelige forskning og arbejde har de deltaget i mere end udarbejdelsen af en meget vellykket bog: De har også på deres egen måde været med til at fremme udviklingen i EU.

Emma Bonino
Medlem af Europa-Kommissionen

Vorwort

Verständigung erfordert eine gemeinsame Sprache. Zwar ist die Sprachenvielfalt einer der größten Schätze der Europäischen Union, aber wenn wir auf die vielfältigen Schätze unserer Gewässer zu sprechen kommen, sind wir schnell mit unserem Latein am Ende. Dieses Werk bietet eine große Verständigungshilfe, nicht nur für Linguisten und Forscher, sondern für alle in der Fischerei und Aquakultur Tätigen. In diesen Wirtschaftszweigen vielleicht mehr noch als in anderen hängt die Lösung von Problemen von der Verständigung und der Zusammenarbeit der Wirtschaftsteilnehmer der Mitgliedstaaten der Europäischen Union ab, von den Fischern über die Seefischgroßhändler und Verarbeiter bis zum Einzelhandel.

Denn die Probleme der Zukunft der Fischerei in unseren Regionen können wir nur gemeinsam anpacken und bewältigen.

Die Überkapazitäten der Fischereiflotte, die die Rentabilität der Schiffe belastet und Betrug Tür und Tor öffnet, die Befischung von Jungfischen, die die Erneuerung der Bestände gefährdet, die Globalisierung der Märkte, die die überkommenen Strategien der Unternehmen in Frage stellt, aber auch die Umweltinteressen sind allesamt Herausforderungen an die gemeinsame Fischereipolitik (GFP).

Die gemeinsame Fischereipolitik muß vielmehr die Spielregeln festsetzen, mit denen verantwortungsvolle Lösungen ins Werk gesetzt werden können. Sie muß für eine Bewirtschaftung Sorge tragen, die den Raubbau und die Überfischung der Meeresschätze verhindert, die das künftige Gedeihen eines modernen, integrierten Industriezweigs ermöglicht und den Erwartungen des Verbrauchers gerecht wird, der hochwertige, gesunde und preisgünstige Erzeugnisse verlangt.

Dazu sieht sie Erhaltungs-, Kontroll-, Forschungs- und Stützungsmaßnahmen für die Verarbeitung, die Vermarktung und das Marketing vor, Maßnahmen zur Beschränkung der Flottenkapazität, zur Zusammenarbeit mit Drittländern und vieles mehr. Voraussetzung dafür ist aber, daß sich die Wirtschaftsteilnehmer miteinander verständigen können.

Somit ist jedwede Initiative für eine bessere Verständigung, wie das vorliegende Glossar, höchst willkommen.

Diese zweite Auflage umfaßt ein Verzeichnis der geläufigsten Namen von über 5 000 Arten oder Artengruppen von Fischen, Krustentieren, Schalentieren, Weichtieren, Säugetieren und Pflanzen in den elf Amtssprachen der Europäischen Union mit ihrem wissenschaftlichen Namen (Latein). Wann immer möglich, ist eine Abbildung enthalten.

Dieses eindrucksvolle Werk wäre ohne die Mithilfe von Forschungseinrichtungen der verschiedenen Mitgliedstaaten der Europäischen Union undenkbar gewesen. Sie ist beispielhaft für die Konvergenz der wissenschaftlichen und wirtschaftlichen Interessen im Fischereisektor, die zwar arbeitsbedingt unterschiedlich, jedoch gleichermaßen darauf gerichtet sind, die Fischereiressourcen besser zu verstehen und zu bewirtschaften.

Dieses Glossar ist ferner das Ergebnis der Zusammenarbeit dieser Forschungseinrichtungen und der für Terminologie, Statistik und Fischereipolitik zuständigen Dienststellen der Kommission.

Allen Mitwirkenden gebührt unser Dank, denn mit ihren sorgfältigen Recherchen und ihrem Fleiß haben sie weit mehr zustande gebracht als ein sehr schönes Lexikon, haben sie doch in originärer Weise einen Baustein zum europäischen Aufbauwerk beigetragen.

Emma Bonino
Mitglied der Europäischen Kommission

Πρόλογος

Για την ύπαρξη επικοινωνίας απαραίτητη προϋπόθεση αποτελεί η χρήση μιας κοινής γλώσσας. Επομένως, εάν η πολλαπλότητα των γλωσσών αποτελεί πλούτο για την Ευρωπαϊκή Ένωση, όταν πρόκειται να εξετασθεί ένας τομέας τόσο περίπλοκα πλούσιος όπως είναι ο τομέας των υδάτινων πόρων, είναι αρκετά εύκολο να χαθεί κανείς γλωσσικά.

Το παρόν έργο είναι επομένως ένα πολύτιμο εργαλείο. Όχι μόνον για τους γλωσσολόγους ή τους επιστήμονες αλλά και για όλους αυτούς που εργάζονται στους τομείς της αλιείας και της υδατοκαλλιέργειας.

Στους τομείς αυτούς, πράγματι, περισσότερο ίσως απ' ό,τι σε άλλους, οι λύσεις των προβλημάτων εξαρτώνται από την αμοιβαία κατανόηση και τη συνεργασία μεταξύ των επαγγελματιών φορέων των διαφόρων χωρών της Ευρωπαϊκής Ένωσης, από τους αλιείς μέχρι τους διανομείς και τους καταναλωτές, διαμεσολαβούντων των ιχθυοπωλών και των μεταποιητών.

Είναι το ίδιο το μέλλον της αλιευτικής δραστηριότητας που διακυβεύεται στις περιοχές μας, διότι τα προβλήματα που συναντούμε δεν μπορούν να αντιμετωπισθούν και να επιλυθούν, παρά μόνο από κοινού.

Η υπερικανότητα των αλιευτικών στόλων που μειώνει την απόδοση των σκαφών και ωθεί προς την απάτη, η αλιεία νεαρών ανώριμων ψαριών που θέτει σε κίνδυνο την ανανέωση των αποθεμάτων, η σφαιρική αντιμετώπιση των αγορών που αμφισβητεί τις παραδοσιακές στρατηγικές των επιχειρήσεων, αλλά και τους περιβαλλοντικούς στόχους, συγκαταλέγονται επίσης στις προκλήσεις που πρέπει να αντιμετωπίσει η κοινή αλιευτική πολιτική (ΚΑΠ).

Αλλά η κοινή αλιευτική πολιτική πρέπει να καθορίσει και τους κανόνες του παιχνιδιού που θα βοηθήσουν στην εξεύρεση υπευθύνων λύσεων, εξασφαλίζοντας την εκμετάλλευση που αποτρέπει τη σπατάλη, και μάλιστα την εξάντληση του θαλάσσιου πλούτου, διασφαλίζοντας το μέλλον και την ανάπτυξη μιας σύγχρονης και ολοκληρωμένης βιομηχανίας και επιτρέποντας την ικανοποίηση της ζήτησης των καταναλωτών οι οποίοι απαιτούν καλά προϊόντα, υγιεινά και σε λογικές τιμές.

Για να το επιτύχει αυτό, προβλέπει μέτρα διαχείρισης, ελέγχου, έρευνας και στήριξης των δραστηριοτήτων μεταποίησης, εμπορίας, προώθησης, μέτρα περιορισμού της ικανότητας του στόλου, συνεργασίας με τις τρίτες χώρες και, για να μη μακρηγορώ, μέτρα για τα οποία είναι αναγκαίο να υπάρξει ομοφωνία με όλους τους ενδιαφερόμενους εταίρους.

Γι' αυτόν το λόγο πρέπει να επιδοκιμάζεται κάθε πρωτοβουλία που αποβλέπει στην καλύτερη αμοιβαία κατανόηση, όπως είναι το παρόν γλωσσάριο.

Στη δεύτερη αυτή έκδοση, συγκεντρώνονται περισσότερα από 1 500 είδη ή ομάδες ειδών ψαριών, καρκινοειδών, οστρακόδεσμων, μαλακίων, θηλαστικών και φυτών με τις τρέχουσες ονομασίες τους, σε ένδεκα κοινοτικές γλώσσες στις οποίες προστίθεται η επιστημονική ονομασία στα λατινικά. Κάθε φορά που είναι δυνατόν, υπάρχει και εικονογράφηση.

Το εντυπωσιακό αυτό έργο δεν θα μπορούσε να πραγματοποιηθεί χωρίς τη συνεισφορά των ερευνητικών ιδρυμάτων των διαφόρων χωρών της Ένωσης. Αποτελεί παράδειγμα σύγκλισης των ενδιαφερόντων του επιστημονικού κόσμου και των επαγγελματιών φορέων του τομέα της αλιείας που, αν και διαφορετικοί, λόγω φύσης και αντικειμένου εργασίας, έχουν την ίδια μέριμνα να γνωρίσουν καλύτερα και να εκμεταλλευτούν με τον καλύτερο δυνατό τρόπο τους αλιευτικούς πόρους. Το γλωσσάριο αυτό αποτελεί επίσης αποτέλεσμα συνεργασίας

μεταξύ των ερευνητικών ιδρυμάτων και των υπηρεσιών της Ευρωπαϊκής Επιτροπής που είναι επιφορτισμένοι με την ορολογία, την κατάρτιση στατιστικών στοιχείων και την πολιτική της αλιείας.

Ευχαριστώ όλους όσους συνέβαλαν στην εργασία αυτή, γιατί μέσω της σχολαστικής έρευνάς τους και της εργασίας τους θα έχουν συμβάλει σε ένα έργο που σημαίνει κάτι περισσότερο από την υλοποίηση ενός ωραίου βιβλίου, θα έχουν συμβάλει με τρόπο πρωτότυπο στην προώθηση της ευρωπαϊκής οικοδόμησης.

Emma Bonino

Μέλος της Ευρωπαϊκής Επιτροπής

Préface

Pour pouvoir se comprendre, il est indispensable d'utiliser un langage commun. Or, si la diversité des langues est une des principales richesses de l'Union européenne, lorsqu'il s'agit de traiter d'un domaine tout aussi riche en diversité que celui des ressources aquatiques, il est assez facile d'y perdre son latin.

Le présent ouvrage est donc un outil précieux non seulement pour les linguistes ou les scientifiques, mais également pour tous ceux qui travaillent dans les secteurs de la pêche et de l'aquaculture.

Dans ces secteurs, en effet, plus peut-être que dans d'autres, les solutions aux problèmes dépendent de la compréhension mutuelle et de la coopération entre les professionnels des différents pays de l'Union européenne, des pêcheurs aux distributeurs, et jusqu'aux consommateurs, en passant par les mareyeurs et les transformateurs.

Il en va de l'avenir même de l'activité de pêche dans nos régions, car les problèmes auxquels nous sommes confrontés ne peuvent être affrontés et résolus qu'en commun.

La surcapacité des flottes de pêche, qui réduit la rentabilité des navires et pousse à la fraude, la capture de jeunes poissons immatures, qui met en péril le renouvellement des stocks, la globalisation des marchés, qui remet en cause les stratégies traditionnelles des entreprises, mais également les enjeux environnementaux, sont autant de défis que la politique commune de la pêche (PCP) doit relever.

La PCP doit fixer les règles du jeu susceptibles d'apporter des solutions «responsables», assurant une exploitation qui évite le gaspillage voire l'épuisement des richesses de la mer, garantissant l'avenir et le développement d'une industrie moderne et intégrée et permettant la satisfaction des demandes des consommateurs qui exigent des produits bons, sains et à des prix raisonnables.

Pour ce faire, elle prévoit des mesures de conservation, de contrôle, de recherche, de soutien aux activités de transformation, de commercialisation, de promotion, des mesures de limitation des capacités de la flotte, de coopération avec les pays tiers, et j'en passe, pour lesquelles il est nécessaire que l'on s'entende entre tous les partenaires concernés.

C'est pourquoi toute initiative qui va dans le sens d'une meilleure compréhension mutuelle, comme le présent glossaire, doit être saluée.

Dans cette deuxième édition, plus de mille cinq cents espèces ou groupes d'espèces de poissons, de crustacés, de coquillages, de mollusques, de mammifères et de plantes sont recensées suivant leurs appellations les plus courantes dans les onze langues communautaires, auxquelles est ajouté le nom scientifique (en latin). Une illustration est fournie chaque fois que possible.

Cet ouvrage impressionnant n'aurait pu être réalisé sans l'apport d'instituts de recherche de différents pays de l'Union. Il constitue un exemple de convergence d'intérêts entre le monde scientifique et celui des professionnels de la pêche, qui, bien que différents par la nature de leur travail, se retrouvent dans le souci de mieux connaître et de mieux exploiter les ressources de la mer.

Il est également le résultat d'une collaboration entre ces instituts de recherche et les services de la Commission européenne chargés de la terminologie, des statistiques et de la politique de la pêche.

Que tous ceux qui y ont contribué en soient remerciés, car, à travers leur recherche méticuleuse et leur travail, ils auront participé à bien plus qu'à la réalisation d'un très beau livre, ils auront contribué de manière originale à faire avancer la construction européenne.

Emma Bonino
Membre de la Commission européenne

Prefazione

Elemento indispensabile per la comprensione reciproca è l'uso di un linguaggio comune. Ebbene, se è vero che la diversità delle lingue costituisce una delle principali ricchezze dell'Unione europea, quando si affronta un campo tanto ricco di diversità quanto quello delle risorse acquatiche, si corre il rischio di non venirme a capo. Questo libro rappresenta dunque uno strumento prezioso non solo per i linguisti o gli scienziati, ma anche per tutti coloro che lavorano nei settori della pesca e dell'acquacoltura.

È in questi settori infatti, forse più che in altri, che le soluzioni ai diversi problemi dipendono dalla comprensione reciproca e dalla cooperazione tra gli operatori dei differenti paesi dell'Unione europea: dai pescatori ai distributori e ai consumatori, passando per i grossisti e i trasformatori.

La posta in gioco è l'avvenire stesso dell'attività della pesca nelle nostre regioni, poiché i problemi attuali possono essere affrontati e risolti solo cooperando.

La sovraccapacità delle flotte da pesca che riduce la redditività dei pescherecci e incita alla frode, la cattura di pesci ancora giovani e immaturi che compromette il rinnovamento degli stock, la globalizzazione dei mercati che rimette in discussione le strategie tradizionali delle imprese così come i problemi ambientali sono alcune tra le sfide che la politica comune della pesca deve raccogliere.

Tale politica deve fissare le regole del gioco che consentano di trovare soluzioni «responsabili», che assicurino uno sfruttamento razionale evitando lo spreco, o addirittura, l'esaurimento delle risorse marine, che garantiscano la nascita e lo sviluppo di un'industria moderna e integrata e che permettano di soddisfare la richiesta, da parte dei consumatori, di prodotti di buona qualità, sani e a prezzi ragionevoli.

A tal fine la politica della pesca prevede misure di conservazione, di controllo, di ricerca e di sostegno alle attività di trasformazione, commercializzazione e promozione nonché misure di limitazione della capacità delle flotte, di cooperazione con i paesi terzi, ecc., sulle quali è necessario che tutte le parti interessate concordino.

Per tal motivo è benvenuta qualsiasi iniziativa che, come il presente glossario, possa contribuire ad una comprensione reciproca.

In questa seconda edizione figurano più di millecinquecento specie o gruppi di specie di pesci, crostacei, molluschi, mammiferi e piante con le loro denominazioni più diffuse nelle undici lingue comunitarie, alle quali è aggiunto il nome scientifico (in latino). Ove è possibile, vi è inserita la relativa illustrazione.

Per la realizzazione di quest'opera imponente è stato fondamentale il contributo di istituti di ricerca di diversi paesi dell'Unione. Essa costituisce un esempio di convergenza di interessi tra gli ambienti scientifici e coloro che operano nel settore della pesca; nonostante la diversità del lavoro svolto, essi sono accomunati dall'esigenza di conoscere più a fondo le risorse del mare e sfruttarle al meglio. È frutto, inoltre, della collaborazione tra i suddetti istituti di ricerca e i servizi della Commissione europea che si occupano della terminologia, delle statistiche e della politica della pesca.

Ringrazio tutti coloro che vi hanno collaborato: il loro impegno e la loro meticolosa ricerca non solo hanno permesso la realizzazione di un libro bellissimo, ma hanno anche contribuito in maniera originale al progetto europeo.

Emma Bonino
Membro della Commissione europea

Voorwoord

Onderlinge verstaanbaarheid vergt een gemeenschappelijk begrippenapparaat. De veelheid van talen, die een van de belangrijkste rijkdommen is van de Europese Unie, is er anderzijds de oorzaak van dat men, bij het werk met betrekking tot de natuurlijke hulpbronnen van de zee, met een zo grote verscheidenheid aan soorten, gemakkelijk uit de koers raakt.

Dit glossarium is dan ook een kostbaar instrument, niet alleen voor vertalers of wetenschapsmensen, maar voor iedereen die te maken heeft met de visserij en de aquacultuur. In deze sectoren zijn de oplossingen voor de problemen namelijk, meer wellicht dan in andere, afhankelijk van wederzijds begrip en samenwerking tussen het bedrijfsleven in de verschillende landen van de Europese Unie, van de vissers tot de viswinkel via de groothandel en de verwerkende bedrijven, en zelfs tot de consument.

Hierbij staat de toekomst van de visserij in onze regio's op het spel: de problemen waarmee wij worden geconfronteerd kunnen wij alleen samen oplossen.

De overcapaciteit van de visserijvloeden, die de rentabiliteit van de schepen drukt en fraude bevordert, de vangst van ondermaatse vis, die een gevaar is voor de vernieuwing van de visbestanden, de mondialisering van de markten, die een bedreiging vormt voor de traditionele strategieën van de ondernemingen, maar ook de situatie van het milieu, dat zijn allemaal uitdagingen waaraan het gemeenschappelijk visserijbeleid (GVB) het hoofd moet bieden.

Het GVB moet spelregels geven die verantwoorde oplossingen bieden, die zorgen voor een bevissing waarbij verspilling en zelfs volledige uitputting van de rijkdommen van de zee wordt voorkomen, die waarborgen geven voor de toekomst en voor de ontwikkeling van een moderne, geïntegreerde bedrijfsketen, en waardoor tot tevredenheid kan worden voldaan aan de vraag van de consument, die tegen redelijke prijzen producten van goede kwaliteit wil.

Om al die doelstellingen te bereiken, worden in het kader van het GVB maatregelen genomen voor behoud van de visstand, controle, onderzoek, verwerking, afzet en afzetbevordering, beperking van de vlootcapaciteit, samenwerking met derde landen, enzovoort, waarover tussen alle betrokken partijen overeenstemming dient te bestaan.

Daarom verdient ieder initiatief dat, zoals dit glossarium, een beter onderling begrip bevordert, de grootste waardering.

In deze tweede editie is, in de elf talen van de Europese Unie, de meest gangbare benaming opgenomen van meer dan 1 500 soorten of groepen van vissen, schaal- en schelpdieren, weekdieren, zoogdieren en planten, terwijl daarvoor ook de wetenschappelijke naam in het Latijn is vermeld. Waar mogelijk is tevens een afbeelding gegeven.

Dit indrukwekkende glossarium had niet tot stand kunnen worden gebracht zonder de medewerking van onderzoeksinstituten uit de verschillende landen van de Unie. Het is een voorbeeld van een gemeenschappelijk belang van de wetenschap enerzijds en de visserijsector anderzijds die, hoewel de aard van hun werk verschilt, elkaar vinden bij het streven naar meer kennis over en een betere exploitatie van de rijkdommen van de zee.

Het is ook het resultaat van samenwerking tussen deze onderzoeksinstituten en de diensten van de Europese Commissie voor terminologie, statistiek en visserijbeleid.

Allen die aan dit glossarium hebben meegewerkt, verdienen een woord van dank. Via hun nauwgezet onderzoek hebben zij niet alleen bijgedragen aan de totstandkoming van een heel verzorgd boek, maar ook een heel eigen bijdrage geleverd aan de opbouw van Europa.

Emma Bonino
lid van de Europese Commissie

Prefácio

Para nos compreendermos, é indispensável que utilizemos uma linguagem comum. Ora, se é verdade que a diversidade das línguas constitui uma das principais riquezas da União Europeia, quando se trata de um domínio tão rico pela sua diversidade como o dos recursos aquáticos, é fácil perder o rumo.

O presente glossário constitui, pois, um instrumento precioso, não só para os linguistas e cientistas, como para todos os que trabalham nos sectores das pescas e da aquicultura.

Com efeito, nestes sectores, talvez mais do que noutros, as soluções para os problemas dependem da compreensão mútua e da cooperação entre os profissionais dos vários países da União Europeia, dos pescadores aos distribuidores, passando pelos grossistas e transformadores, sem esquecer os consumidores.

É o próprio futuro da actividade da pesca nas nossas regiões que está em causa: os problemas que se nos deparam só podem ser enfrentados e resolvidos em comum.

A política comum da pesca (PCP) deve fazer face a desafios tão diversos como a sobrecapacidade das frotas de pesca, que reduz a rendibilidade dos navios e incita à fraude, a captura de peixes imaturos, que ameaça a renovação das unidades populacionais, a globalização dos mercados, que põe em causa as estratégias tradicionais das empresas, e ainda as questões ambientais.

A PCP deve fixar as regras do jogo susceptíveis de proporcionar soluções «responsáveis», assegurando uma exploração que evite o desperdício ou mesmo o esgotamento das riquezas marinhas, garantindo o futuro e o desenvolvimento de uma indústria moderna e integrada e permitindo satisfazer a procura dos consumidores, que exigem produtos são e de boa qualidade, a preços razoáveis.

Para o efeito, a política comum da pesca prevê medidas de conservação, de controlo, de investigação e de apoio às actividades de transformação, comercialização e promoção, bem como medidas de limitação das capacidades da frota e de cooperação com os países terceiros – para só citar algumas – que exigem uma concertação entre todos os parceiros interessados.

Qualquer iniciativa que, como o presente glossário, contribua para uma melhor compreensão mútua deve, pois, ser saudada.

Nesta segunda edição, são recensadas mais de mil e quinhentas espécies ou grupos de espécies de peixes, crustáceos, moluscos, mamíferos e plantas, sob as suas designações mais correntes nas 11 línguas comunitárias, com indicação do nome científico (em latim). Sempre que possível, é igualmente apresentada uma ilustração.

Esta publicação impressionante não poderia ter sido realizada sem a contribuição de institutos de investigação de vários países da União, constituindo um exemplo de convergência de interesses entre o mundo científico e o dos profissionais da pesca que, embora diferentes pela natureza do trabalho envolvido, coincidem na preocupação de melhor conhecer e explorar os recursos marinhos. Constitui, igualmente, o resultado da colaboração entre os institutos de investigação e os serviços da Comissão Europeia incumbidos da terminologia, estatísticas e política da pesca.

A todos os que colaboraram e que, através da sua meticolosa investigação e do seu trabalho, não só participaram na realização de uma excelente obra como contribuíram de forma original para fazer progredir a construção europeia, um muito obrigado!

Emma Bonino
Membro da Comissão Europeia

Esipuhe

Voidaksemme ymmärtää toisiamme meidän on löydettävä yhteinen kieli. Vaikka kielten moninaisuus onkin osaltaan Euroopan unionin kallisarvoisinta pääomaa, toiminta kalavarojen kaltaisella äärimmäisen monimuotoisella alalla aiheuttaa helposti hämmennystä.

Siksi tämä teos onkin arvokas väline sekä kielitieteilijöille ja tiedemiehille että kaikille kalastuksen ja vesiviljelyn alalla työskenteleville.

Ratkaisujen löytäminen nimenomaan tämän alan ongelmiin edellyttää keskinäistä ymmärrystä ja yhteistyötä Euroopan unionin kaikkien jäsenvaltioiden ammatillisten piirien välillä – kalastajista tukkukauppiaisiin, jalostajiin ja jakeluportaaseen, unohtamatta myöskään kuluttajia.

Kyseessä on jopa kalastustoiminnan tulevaisuus unionissa, sillä vastassamme on ongelmia, jotka voidaan selvittää ainoastaan yhdessä.

Kalastuslaivastojen ylikapasiteetti heikentää alusten kannattavuutta ja johtaa helposti petoksiin; alamittaisten nuorten kalojen pyynti vaarantaa kalakantojen uudistumisen; markkinoiden globalisoituminen uhkaa viedä pohjan yritysten perinteisiltä strategioilta... Kaikki nämä ovat haasteita, joihin yhteisen kalastuspolitiikan on kyettävä vastaamaan. Lisäksi on otettava huomioon ympäristökysymykset.

Yhteisen kalastuspolitiikan tehtävänä on vahvistaa pelisäännöt, joiden avulla voidaan löytää vastuullisia ratkaisuja ja varmistaa meren rikkauksien kohtuullinen hyödyntäminen siten, että vältetään niiden ehtyminen. On turvattava nykyaikaisen yhtenäisen elinkeinon tulevaisuus ja kehittyminen, jotta kuluttajille voidaan toimittaa näiden edellyttämiä hyvälaatuisia, terveellisiä ja kohtuuhintaisia tuotteita.

Yhteiseen kalastuspolitiikkaan sisältyykin säilyttämis-, valvonta-, tutkimus- ja tukitoimenpiteitä, joita sovelletaan jalostuksen, markkinoinnin ja menekinedistämisen aloilla. Siinä myös rajoitetaan kalastuslaivastokapasiteettia ja säännellään yhteistyötä kolmansien maiden kanssa. Näiden toimenpiteiden toteuttaminen edellyttää kaikkien osapuolten välistä yhteisymmärrystä.

Tästä syystä kaikki sellaiset aloitteet, kuten tämä sanasto, joilla voidaan lisätä keskinäistä ymmärrystä, ovat tervetulleita.

Tähän toiseen painokseen on koottu yli 1 500 kala-, äyriäis-, simpukka-, nisäkäs- ja kasvilajin tai lajiryhmän yleisimmin käytetyt nimitykset yhteisön yhdellätoista virallisella kielellä sekä niiden tieteelliset (latinankieliset) nimet. Aina kun suinkin mahdollista, mukana on myös kuva.

Tämä vaikuttava saavutus ei olisi ollut mahdollinen ilman unionin eri jäsenvaltioiden tutkimuslaitosten panosta. Teos on esimerkki tieteen ja ammattikalastuksen etujen lähentymisestä. Vaikka näiden alojen toiminta on luonteeltaan varsin erilaista, niitä yhdistää pyrkimys meren rikkauksien perusteellisempaan tuntemukseen ja tasapainoisempaan hyödyntämiseen. Teos on myös jäsenvaltioiden tutkimuslaitosten ja termityöstä, tilastoista ja kalastuspolitiikasta vastaavien komission yksiköiden välisen yhteistyön tulos.

Kiitän lämpimästi kaikkia työhön osallistuneita. Perinpohjaisella tutkimustyöllään ja ponnistuksillaan he eivät ole olleet yksinomaan mukana luomassa erittäin hienoa teosta, vaan he ovat myös edistäneet omaperäisellä tavalla Euroopan rakentamista.

Emma Bonino
Euroopan komission jäsen

Förord

För att förstå varandra måste man använda ett gemensamt språk. Språkmångfalden är en av Europeiska unionens viktigaste rikedomar, men när det handlar om ett område som har så rik mångfald som fiskeriresurserna är det lätt att det uppstår språkliga oklarheter.

Detta uppslagsverk är därför ett ovärderligt redskap. Inte bara för översättare, tolkar och vetenskapsmän, utan också för alla dem som arbetar inom fiskeri- och vattenbrukssektorn.

Kanske är det så att lösningen på problemen inom denna sektor mer än inom andra sektorer är beroende av ömsesidig förståelse och samarbete mellan de yrkesverksamma i Europeiska unionens olika länder, från fiskare och distributörer till konsumenter, via fiskgrossister och beredningsföretag.

Detta är också viktigt för fiskets framtid i våra regioner, eftersom de problem som vi ställs inför endast kan bemötas och lösas gemensamt.

Fiskeflottornas överkapacitet som minskar fartygens inkomster och främjar bedrägeri, fångsten av småfisk som äventyrar fiskbeståndens återhämtning, globaliseringen av marknaderna som får till följd att företagens traditionella strategier ifrågasätts, men också miljöfrågorna är utmaningar som väger lika tungt inom den gemensamma fiskeripolitiken.

Den gemensamma fiskeripolitiken skall fastställa de spelregler som kan leda till "ansvarsfyllda" lösningar genom att säkerställa en hantering där man undviker att slösa med och uttömma havets rikedomar och där man garanterar framtid och utveckling för en modern och integrerad industri som kan möta kraven från konsumenterna som vill ha bra och hälsosamma produkter till rimliga priser.

För att uppnå detta mål föreskriver den gemensamma fiskeripolitiken åtgärder för bevarande, kontroll, forskning och stöd till verksamheten inom bearbetning, saluföring, marknadsföring samt åtgärder för begränsning av flottans kapacitet och samarbete med tredje land. Uppräkningen av de områden där alla berörda parter måste komma överens kunde göras längre.

Det är därför som alla initiativ i riktning mot bättre ömsesidig förståelse, som till exempel det här uppslagsverket, bör välkomnas.

Denna andra utgåva tar upp mer än ettusenfemhundra arter eller artgrupper av fiskar, skaldjur, snäckor, mollusker, däggdjur och växter som anges med sin vanligaste benämning på de elva gemenskapsspråken, följd av den vetenskapliga benämningen (på latin). Så ofta som möjligt ges en illustration.

Detta imponerande verk hade aldrig kunnat förverkligas utan medverkan från forskningsinstituterna i unionens olika länder. Den är ett exempel på att den vetenskapliga världen och yrkesvärlden inom fisket har sammanfallande intressen och att dessa två världar vars arbete skiljer sig väsentligt åt båda är angelägna om att lära känna och utnyttja havets resurser på ett bättre sätt. Uppslagsverket är i lika hög grad resultatet av ett samarbete mellan dessa forskningsinstitut och de enheter vid kommissionen som ansvarar för terminologi, statistik och fiskeripolitik.

Jag vill rikta ett tack till alla dem som har varit delaktiga, ty genom deras ytterst noggranna forskning och deras arbetsinsats har de inte bara förverkligat en mycket vacker bok utan också på ett originellt sätt bidragit till att främja Europabygget.

Emma Bonino
Ledamot av kommissionen

Preliminary remarks

Coverage

The dictionary contains information on 1 532 species of fish, crustaceans, molluscs, aquatic mammals, seaweeds and other fishery products.

The dictionary has been compiled by a working group of national fishery experts convened by the European Commission and is based on contents of the Commission's multilingual Eurodicautom database and on a listing supplied by the Food and Agriculture Organisation (FAO) of all the species appearing in the commercial catch statistics. The members of this expert working group are listed on page XL. The working group reviewed this listing on the principle that each item should be precisely identifiable, at least to the level of the taxonomic family. More general items were excluded. The list of species was extended to include a number of species which, although not of commercial interest, were considered by the expert group to be of interest to resource managers and conservationists.

Presentation

The presentation of each item in the dictionary is as follows:

Reference number	Family name	Three-alpha identifier
SC	<i>Scientific name(s)</i>	
ES	Spanish name(s)	
DA	Danish name(s)	
DE	German name(s)	
EL	Greek name(s)	
EN	English name(s)	
FR	French name(s)	
IT	Italian name(s)	
NL	Dutch name(s)	
PT	Portuguese name(s)	
FI	Finnish name(s)	
SV	Swedish name(s)	

Notes on the entries

Reference number: the number accorded to the species to facilitate the use of the indexes. It has no significance outside this publication.

Family: the family to which the species has been assigned, based on the taxonomic classification used in the 'taxonomic authority list' ⁽¹⁾. Those parts of the classification used in this publication are shown on page XLVIII. The items in this dictionary are in the order in which the family to which they belong appears in the classification. An index of the family names is included in this publication (page 397). The ordering within the family groups is for items covering the whole family to come first (e.g. *Merluccidae*), followed by identified species within each genus (e.g. *Merluccius hubbsi*), followed by non-specified items within a genus (e.g. *Merluccius* spp.).

Scientific (Latin) name: the name indicated is that by which the species is known in scientific literature. Where more than one is given, the first is the common name and the others are those by which the species has been known but which are considered as superseded.

Three-alpha identifier: this 'inter-agency three-alpha identifier' was assigned to the species by the coordinating working party on fishery statistics for use in international statistical publications. However, this identifier is now widely used outside of the statistical sector in documentation related to fisheries (for example, in fishing logbooks). The depository agency for these identifiers is the FAO (to whom application should be made for the allocation of additional items). Identifiers are generally only available for those species individually identified in fishery statistics: in many cases, commercial species which are aggregated for statistical purposes have not been allocated individual identifiers. The important concept in the allocation of this identifier is that, while scientific and 'common' names are prone to frequent changes, the identifier, once allocated, is permanent.

Names in the 11 official EU languages: the names selected by the expert working group are those considered most appropriate to the species in each language. In many cases alternative names have been given but it is stressed that these alternatives are not an exhaustive list of the regional variations or variations due to the stage in the life cycle, the season of the year, the fishery in which it was taken, the degree of treatment after capture, etc. As a general rule, the name refers to the species as it was taken out of the water. If several alternative names appear in a language, it is always the first one which the experts consider to be the most suitable.

It has been impossible to find existing names for all species. The species are not caught and traded universally and thus, for example, it is not unusual to find no Danish name for a species which is only caught and traded in the south-east Pacific Ocean. However, where no names were readily available, the expert working group attempted to complete the list by making literal translations of the names in one of the other languages. Even this has not been possible in all cases.

Drawings: efforts have been made to include an illustration for each of the species. These illustrations are not intended to enable the precise identification of a species but are included to provide a useful indication of the general characteristics of the species. Where an item refers to a family or a group of species an illustration has been selected which shows the major characteristics of that grouping.

Indexes: Indexes have been compiled for each of the languages, the scientific names and the three-alpha identifiers. These indexes are 'intelligent', for example, 'Atlantic herring' will be found under 'Atlantic herring' and 'herring, Atlantic'.

Some difficulties were experienced in developing the indexes for certain languages due to the formulation of compound names. For example, the English name of the family *Sparidae* may be found in literature written as 'sea breams', 'sea-breams' and 'seabreams'. In order that the various forms of compound names of related species are in adjacent positions in the indexes, a harmonised format has been selected for use in the indexes. This may differ from the form in the body of the dictionary where the form given is that most frequently encountered in literature. However, it must be stressed that, for many names, there appear to be no hard and fast rules as to the correct form of the names.

Observaciones preliminares

Selección de términos

Este glosario abarca 1 532 especies de peces, crustáceos, moluscos, mamíferos acuáticos, plantas marinas y otros productos de la pesca.

Teniendo como punto de partida Eurodicautom, la base de datos plurilingüe de la Comisión, y una lista, facilitada por la FAO, de todas las especies que figuran en las estadísticas de pesca comercial, este glosario ha sido elaborado por un grupo de trabajo, reunido a instancias de la Comisión Europea y compuesto por expertos nacionales en el campo de la pesca, cuyos miembros figuran relacionados en la página XL. El grupo de trabajo ha revisado las listas con el siguiente criterio: cada especie debe poder ser identificada con precisión, por lo menos a nivel de la familia taxonómica. Los términos más genéricos han sido excluidos. La lista de las especies se ha ampliado con aquellas que, aun no representando un interés comercial, han sido consideradas útiles para las personas encargadas de la protección de los recursos haliéuticos.

Presentación de los términos

Para cada especie figuran las siguientes indicaciones:

Número de referencia	Nombre de familia	Identificador alfa-3
SC	<i>Nombre(s) científico(s)</i>	
ES	Nombre(s) español(es)	
DA	Nombre(s) danés(es)	
DE	Nombre(s) alemán(es)	
EL	Nombre(s) griego(s)	
EN	Nombre(s) inglés(es)	
FR	Nombre(s) francés(es)	
IT	Nombre(s) italiano(s)	
NL	Nombre(s) neerlandés(es)	
PT	Nombre(s) portugués(es)	
FI	Nombre(s) finés(es)	
SV	Nombre(s) sueco(s)	

He aquí algunas observaciones a propósito de estos datos

Número de referencia: Número asignado a las especies para facilitar la utilización de los índices. No tiene ningún otro significado fuera del contexto de la presente publicación.

Familia: Familia a la que pertenece la especie según la clasificación taxonómica utilizada en la «Taxonomic Authority List»¹ (lista taxonómica de referencia, publicada por la FAO). Los elementos de esta clasificación utilizados en la presente publicación figuran en la página XLVIII. En este glosario, los términos aparecen clasificados según el orden de la familia a la que pertenece la especie. El índice de los nombres de familia figura en la página 397. En la clasificación correspondiente a cada grupo de familia, aparece en primer lugar el nombre genérico de la familia (por ejemplo, *Merluccidae*), seguido de los nombres de las especies identificadas dentro de cada género (por ejemplo, *Merluccius hubbsi*) y, por último, los nombres de los elementos no específicos que forman parte de un mismo género (por ejemplo, *Merluccius* spp.).

Nombre científico (latino): El nombre que se indica en el glosario es aquel por el que se conoce la especie en la literatura científica. Cuando en esta sección figuran varios nombres, el primer nombre que aparece es el utilizado más corrientemente; los otros corresponden a denominaciones actualmente consideradas como obsoletas, pero que todavía se utilizan.

Identificador alfa-3: Este «identificador alfa-3», utilizado por distintos organismos, ha sido asignado a las especies por el Grupo de trabajo de coordinación de las estadísticas de la pesca en el Atlántico, debido a su uso en las publicaciones estadísticas internacionales. Actualmente se utiliza muy frecuentemente este identificador, fuera del campo de la estadística, en documentos referentes a la pesca (por ejemplo, en los diarios de pesca). El organismo depositario de estos identificadores es la FAO (a quien hay que dirigirse para posibles inclusiones en la lista). Generalmente, sólo se puede disponer de identificadores para las especies identificadas individualmente en las estadísticas de pesca: en numerosos casos, las especies comerciales reagrupadas bajo el mismo epígrafe por necesidades estadísticas no han recibido identificador individual. Insistimos, no obstante, sobre el hecho de que, si bien los nombres científicos y «comunes» son susceptibles de frecuentes cambios, el identificador no varía nunca una vez que ha sido asignado.

Nombres en las once lenguas oficiales de la UE: Los nombres seleccionados por el grupo de trabajo han sido considerados como los más apropiados para cada especie en cada una de las lenguas. No se han considerado de forma sistemática las variantes regionales o las diferentes denominaciones que corresponden a un período cíclico de la vida, a una época del año, al lugar de pesca, al tipo de tratamiento después de la captura, etc. De manera general, el nombre indicado corresponde a la especie tal y como es capturada. Si en una lengua aparecen varias denominaciones, siempre es la primera la considerada por los expertos como la más apropiada.

No ha sido siempre posible encontrar un nombre que ya existiera para cada especie. En efecto, las especies no son siempre capturadas y comercializadas en todo el mundo, y no es extraño, por ejemplo, no hallar ningún nombre danés para una especie capturada y comercializada únicamente en el sudeste del Océano Pacífico. Sin embargo, cuando no se ha podido encontrar un nombre, el grupo de trabajo ha intentado completar la lista haciendo traducciones literales a partir del nombre en una u otra lengua. A pesar de todo, esto no ha sido siempre posible.

Ilustraciones: En la medida de lo posible, cada especie aparece ilustrada. Las ilustraciones no tienen por objeto permitir la identificación precisa, sino facilitar una indicación de las características generales de la especie. Cuando se trata de una familia o de un grupo de especies, la ilustración muestra los rasgos principales de dicho grupo.

Índice: Se han establecido índices para cada lengua, para los nombres científicos y para los identificadores alfa-3. Son de tipo analítico: por ejemplo, «Atlantic herring» figura a la vez bajo «Atlantic herring» y bajo «Herring, Atlantic».

La elaboración de los índices ha presentado algunas dificultades en ciertas lenguas a causa de las palabras compuestas. Por ejemplo, el nombre inglés de la familia *Sparidae* puede revestir las formas «sea breams», «sea-breams» y «seabreams». Para que las diferentes formas de los nombres compuestos de las especies de la misma familia figuren en los índices de forma agrupada, se ha elegido un formato armonizado. Éste puede ser diferente de la forma adoptada para el corpus del glosario, que es la que se encuentra más frecuentemente en la literatura. Sin embargo, hay que señalar que, para muchos nombres, no parecen existir reglas precisas respecto a la ortografía correcta.

¹ Taxonomic authority list (1988), *Aquatic sciences and fisheries information system reference series*, n° 8, FAO, Roma, 465 pp.

Indledende bemærkninger

Indhold

Glossaret indeholder oplysninger om 1 532 fiskearter, krebsdyr, bløddyr, vandpattedyr, alger og andre fiskeriprodukter.

Basismaterialet er sammensat af termer fra Europa-Kommissionens flersprogede terminologidatabank, Eurodicautom, og fra FAO's lister over de arter, der forekommer i kommercielle fangststatistikker. Det er bearbejdet af en arbejdsgruppe bestående af sagkyndige fra de enkelte medlemslande samt medarbejdere ved Kommissionen. På side XL findes en liste over medlemmerne af denne arbejdsgruppe. Ved udarbejdelsen af glossaret har arbejdsgruppen arbejdet ud fra det princip, at hver enkelt term skal kunne identificeres ned til det taksonomiske familieniveau. Mere generelle termer er udeladt. Listen blev udvidet til at omfatte en række arter, som godt nok ikke er af handelsmæssig interesse, men som gruppen anså for relevante i forbindelse med bevaring af bestanden af truede arter.

Præsentation

De enkelte termposter præsenteres som vist nedenfor:

Reference-nummer	Familienavn	3-alfa-kode
SC	<i>videnskabelige (latinske) navne</i>	
ES	spanske navne	
DA	danske navne	
DE	tyske navne	
EL	græske navne	
EN	engelske navne	
FR	franske navne	
IT	italienske navne	
NL	nederlandske navne	
PT	portugisiske navne	
FI	finske navne	
SV	svenske navne	

Til disse termposter er der følgende bemærkninger

Referencenummer: Det nummer, som arten har fået tildelt for at lette brugen af indekserne. Det har ingen betydning uden for denne publikation.

Familie: Den familie, som arten tilhører, baseret på den taksonomiske klassifikation, der anvendes i FAO's »Taxonomic Authority List« (1). De dele af klassifikationen, der er benyttet i denne publikation, er vist på side XLVIII. Arterne er opført i den rækkefølge, som den familie, de tilhører, har i klassifikationen. Der findes et indeks over familienavne på side 397. Inden for familiegupperne anføres først termposter, der dækker hele familien (f. eks. *Merluccidae*), derefter følger identificerede arter inden for hver slægt (f. eks. *Merluccius hubbsi*), og til sidst termposter for ikke-specificerede arter inden for en slægt (f. eks. *Merluccius spp.*).

Videnskabeligt (latinsk) navn: Det navn, der er anført, er det, som arten kendes under i faglitteraturen. Hvis der er anført mere end ét, er det første navn det gængse, og de andre navne er dem, der anses for forældede, selv om de stadig bruges.

3-alfa-kode: Denne »Inter-Agency 3-Alpha Identifier« (3-alfa-kode) er en identifikator, som er tildelt arterne af Den Koordinerende Arbejdsgruppe vedrørende Statistikker over Fiskeriet i Atlanterhavet til brug i internationale statistiske publikationer. Nu anvendes denne kode dog også i vid udstrækning uden for den statistiske sektor i dokumenter vedrørende fiskeri (f.eks. i fiskernes logbøger). Det er FAO, der administrerer disse koder, og det er til denne organisation, der skal rettes anmodninger om tildeling af yderligere koder. Normalt foreligger der kun koder for de arter, der identificeres individuelt i fiskeristatistikkerne. En del af de arter, der indgår i handelen, samles i grupper af statistiske hensyn, og har derfor ikke fået tildelt en kode. Et vigtigt princip i forbindelse med tildelingen af denne kode er, at mens de videnskabelige og »gængse« navne eventuelt ændres, så forbliver koden den samme, når den først er tildelt.

Navne på de 11 officielle EU-sprog: De navne, som arbejdsgruppen har anført, er dem, der anses for at være de gængse for arterne på hvert enkelt sprog. I mange tilfælde er der givet alternative navne, men det skal understreges, at disse alternativer ikke er en udtømmende liste over regionale varianter eller varianter, der refererer til stadium i livscyklus, årstid, fangststed, bearbejdningsgrad efter fangst osv. Almindeligvis refererer navnet til arten, således som den findes i vandet. Hvis der på et sprog er anført flere navne, står det foretrukne navn altid først.

Det har ikke været muligt at finde eksisterende navne på alle EU-sprog for alle arter. Det er ikke alle arter, der fanges og indgår i handelen overalt, og det er derfor ikke usædvanligt, hvis der f.eks. ikke findes et dansk navn for en art, som kun fanges og indgår i handelen i den sydøstlige del af Stillehavet. Når der ikke umiddelbart forelå et navn, har arbejdsgruppen forsøgt at fuldstændiggøre glossaret ved at lave en direkte oversættelse af navnet på et af de andre sprog. Dette har dog heller ikke kunnet lade sig gøre i alle tilfælde.

Tegninger: Så vidt det har været muligt, findes der en illustration af hver enkelt art. Hensigten med disse illustrationer er ikke at give en præcis identifikation af arten, men at give læseren en idé om artens generelle karakteristika. Til termposter, der refererer til en familie eller artsgruppe, er der valgt en illustration, som viser pågældende gruppes væsentligste karakteristika.

Indekser: Der er udarbejdet indeks for hvert sprog, for de videnskabelige (latinske) navne og for 3-alfa-koderne. Disse indekser er »intelligente«: Dvs. at f.eks. »Atlantisk Menhaden« vil kunne findes under »Atlantisk Menhaden« og under »Menhaden, Atlantisk«.

Der har været visse vanskeligheder med at udarbejde indekserne for nogle af sprogene på grund af sammensatte navne. For eksempel findes det engelske navn for familien *Sparidae* skrevet i litteraturen som »sea breams«, »sea-breams« og »seabreams«. For at de forskellige former af sammensatte navne på beslægtede arter kan komme til at stå efter hinanden i indekserne, er der valgt et harmoniseret format til brug i indekserne. Dette kan være forskelligt fra glossarets korpus, hvor der er valgt den form, der hyppigst mødes i litteraturen. Det skal dog understreges, at der ikke synes at være faste regler for, hvad der er navnenes korrekte form.

(1) Taxonomic authority list (1988), *Aquatic sciences and fisheries information system reference series*, No 8, FAO, Rome, 465 s.

Einleitende Bemerkungen

Umfang

Das Glossar enthält Angaben zu 1 532 Arten von Fischen, Krebstieren, Weichtieren, Wassersäugetieren, Algen und anderen Fischereierzeugnissen.

Ausgangspunkt für dieses Glossar waren die in Eurodicautom, der terminologischen Datenbank der Kommission, gespeicherten sowie die in den Fangstatistiken der FAO angeführten Arten. Eine aus nationalen Experten und Mitarbeitern der zuständigen Dienststellen der Europäischen Kommission zusammengesetzte Arbeitsgruppe, deren Mitglieder auf Seite XL genannt sind, erarbeitete das vorliegende Glossar nach dem Prinzip, daß jedes Stichwort zumindest auf der Ebene der taxonomischen Familie genau identifizierbar sein sollte. Weniger spezifische Stichwörter wurden nicht aufgenommen. Diese Liste wurde erweitert um eine Anzahl weniger kommerziell als vielmehr für die Erhaltung der Bestände relevanter Arten.

Darstellung

Die Einträge sind folgendermaßen dargestellt:

Bezugsnummer	Familie	Drei-Alpha-Kode
SC	Wissenschaftliche Bezeichnung(en)	
ES	Spanische Bezeichnung(en)	
DA	Dänische Bezeichnung(en)	
DE	Deutsche Bezeichnung(en)	
EL	Griechische Bezeichnung(en)	
EN	Englische Bezeichnung(en)	
FR	Französische Bezeichnung(en)	
IT	Italienische Bezeichnung(en)	
NL	Niederländische Bezeichnung(en)	
PT	Portugiesische Bezeichnung(en)	
FI	Finnische Bezeichnung(en)	
SV	Schwedische Bezeichnung(en)	

Bei diesen Einträgen ist folgendes zu beachten:

Bezugsnummer: Dabei handelt es sich um die Nummer, die der Art im Index zugeordnet ist. Außerhalb dieser Veröffentlichung ist die Nummer ohne Bedeutung.

Familie: Die Zuordnung der einzelnen Arten entspricht der „Taxonomic Authority List“ ⁽¹⁾ (taxonomische Referenzliste, veröffentlicht von der FAO). Die Teile der in dieser Veröffentlichung benutzten taxonomischen Klassifikation sind auf Seite XLVIII wiedergegeben. Die Arten sind in der gleichen Reihenfolge angeordnet, in der die Familien, zu denen sie gehören, in der Klassifikation erscheinen. Ein Index der Familien befindet sich auf Seite 397. Innerhalb der Familiengruppen erscheinen zuerst die Einträge, die die ganze Familie umfassen (z. B. Merluccidae), danach folgen die innerhalb einer Gattung identifizierten Arten (z. B. *Merluccius hubbsi*) und zuletzt die nicht identifizierten Arten innerhalb einer Gattung (z. B. *Merluccius* spp.).

Wissenschaftliche bzw. lateinische Bezeichnung: In wissenschaftlichen Veröffentlichungen ist die Art unter dem hier angegebenen Namen zu finden. Wird mehr als eine Bezeichnung angeführt, so ist die erste die geläufige, während die anderen allgemein als überholt gelten, jedoch nach wie vor verwendet werden.

Drei-Alpha-Kode: Dieser „Inter-Agency 3-Alpha Identifier“ wurde den einzelnen Arten von der Arbeitsgruppe für die Koordinierung der Statistiken über Fischerei im Atlantik zur Verwendung in internationalen statistischen Veröffentlichungen zugeteilt. Dieser Kode wird jedoch inzwischen auch oft in fischereibezogenen Dokumenten (z. B. in Logbüchern von Fischereifahrzeugen) außerhalb des statistischen Bereichs benutzt. Die FAO registriert die vergebenen Kodes (Anträge auf Kodierung weiterer Arten sind an die FAO zu richten). Im allgemeinen stehen nur für die Arten Kodes zur Verfügung, die in Fischereistatistiken einzeln aufgeführt werden; in vielen Fällen sind kommerzielle Arten, die zu statistischen Zwecken zusammengefaßt worden sind, nicht einzeln kodiert. Die Vergabe eines Kodes ist deshalb sinnvoll, weil der einmal zugeteilte Kode nicht mehr geändert wird, im Gegensatz zu den wissenschaftlichen und gebräuchlichen Bezeichnungen.

Bezeichnungen in den elf Amtssprachen der Europäischen Union: Die Arbeitsgruppe hat die in den einzelnen Sprachen für die einzelnen Arten als adäquat geltenden Bezeichnungen ausgewählt. Es wurde kein Versuch unternommen, einige der zahlreichen regionalen Varianten, die für ein Entwicklungsstadium, die Jahreszeit, das Fanggebiet, die Art der Verarbeitung nach dem Fang usw. stehen, ebenfalls aufzunehmen. Als allgemeine Regel gilt, daß der Name sich auf den Zustand der Art zum Zeitpunkt des Fangs bezieht. Wird in einer der Sprachen mehr als eine Bezeichnung angegeben, so wird immer die an erster Stelle genannte von den Sachverständigen als adäquat angesehen.

Es erwies sich als unmöglich, Bezeichnungen für alle Arten in allen Amtssprachen zu finden, weil die Arten nicht überall gefangen und in den Handel gebracht werden. Es ist deshalb nicht verwunderlich, daß es keine dänische Bezeichnung für eine Art gibt, die nur im Südostpazifik gefangen und verkauft wird. In den Fällen, in denen keine Bezeichnung ausfindig zu machen war, versuchte die Arbeitsgruppe jedoch, das Verzeichnis durch wörtliche Übersetzung der in einer der anderen Sprachen vorhandenen Bezeichnung zu ergänzen. Doch auch das war nicht in allen Fällen möglich.

Abbildungen: Nach Möglichkeit sind die Einträge mit einer Illustration versehen. Diese Abbildungen sind nicht zur exakten Identifizierung jeder einzelnen Art gedacht, sondern sollen lediglich eine Vorstellung der allgemeinen Charakteristika der verschiedenen Arten vermitteln. Begriffe für eine Familie oder Gruppe sind mit einer Abbildung versehen, die die für diese Gruppe typischen Merkmale aufweist.

Indizes: Für jede Sprache sowie für die wissenschaftlichen Bezeichnungen und den Drei-Alpha-Kode gibt es jeweils einen Index. Die Indizes für die einzelnen Sprachen sind „intelligent“, d. h., „Atlantischer Hering“ z. B. ist im deutschen Index sowohl unter „Atlantisch“ als auch unter „Hering“ zu finden.

Bei einigen Sprachen ergaben sich Schwierigkeiten bei der Erstellung der Indizes aufgrund der zusammengesetzten Namen. So findet man z. B. die englische Bezeichnung für den lateinischen Namen der Familie *Sparidae* in folgenden Schreibweisen: „sea breams“, „sea-breans“ und „seabreams“. Damit die verschiedenen Schreibweisen der Namen zusammengehöriger Arten auch in der richtigen Reihenfolge erscheinen, hat man sich für eine einheitliche Darstellung in den Indizes entschieden, die nicht immer mit der im Korpus erscheinenden identisch ist, da dort die in der Literatur am häufigsten verwendete Schreibweise erscheint. Es muß jedoch darauf verwiesen werden, daß es anscheinend keine fest vorgeschriebene Schreibweise für alle diese Namen gibt.

Εισαγωγικές παρατηρήσεις

Περιεχόμενο

Το γλωσσάριο αυτό περιέχει πληροφορίες για 1532 είδη ψαριών, οστρακοειδών, μαλακίων, υδρόβιων ζώων, φυκιών και άλλων προϊόντων αλιείας.

Αφετηρία του γλωσσαρίου αυτού αποτέλεσε το Eurodicautom, η ηλεκτρονική τράπεζα ορολογίας της Επιτροπής, καθώς και τα είδη τα αναφερόμενα στις στατιστικές αλιευμάτων της FAO. Μια ομάδα εργασίας, αποτελούμενη από εθνικούς εμπειρογνώμονες σε θέματα αλιείας, που συγκάλεσε η Επιτροπή των ΕΚ, τα μέλη της οποίας αναφέρονται στη σελίδα XL, κατάρτισε τον κατάλογο των ειδών με γενικό κριτήριο την αρχή ότι κάθε είδος πρέπει να είναι δυνατό να προσδιορίζεται με ακρίβεια τουλάχιστον στο επίπεδο της ταξινομικής του οικογένειας. Άλλες γενικότερες κατηγορίες αποκλείστηκαν. Ο κατάλογος αυτός επεκτάθηκε με έναν αριθμό ειδών μικρότερου εμπορικού ενδιαφέροντος, επειδή η ομάδα εργασίας θεώρησε ότι παρουσιάζουν ενδιαφέρον για τους αρμόδιους διαχειρίσις των αλιευτικών πόρων και τους οικολόγους.

Παρουσίαση

Για το κάθε λήμμα αναφέρονται τα εξής στοιχεία:

Αριθμός αναφοράς	Ονομασία οικογένειας	Αναγνωριστικός κωδικός τριών γραμμάτων
------------------	----------------------	--

SC	Επιστημονική (λατινική) ονομασία
ES	Ισπανική ονομασία
DA	Δανική ονομασία
DE	Γερμανική ονομασία
EL	Ελληνική ονομασία
EN	Αγγλική ονομασία
FR	Γαλλική ονομασία
IT	Ιταλική ονομασία
NL	Ολλανδική ονομασία
PT	Πορτογαλική ονομασία
FI	Φινλανδική ονομασία
SV	Σουηδική ονομασία

Σχετικά με τα στοιχεία αυτά σημειώνονται τα εξής

Αριθμός αναφοράς: ο αριθμός που δίδεται στο κάθε είδος για να διευκολύνεται η χρήση των ευρετηρίων. Έξω από το πλαίσιο αυτής της έκδοσης ο αριθμός αυτός δεν έχει απολύτως καμία σημασία.

Ονομασία οικογένειας: η οικογένεια που αποδίδεται σε κάθε είδος αντιστοιχεί στην «Taxonomic authority list»⁽¹⁾ (ταξινομικός κατάλογος αναφοράς που δημοσιεύει η FAO). Τα μέρη της

⁽¹⁾ Taxonomic authority list (1988), *Aquatic sciences and fisheries information system reference series*, No 8, FAO, Rome, 465 pp.

ταξινόμησης που χρησιμοποιούνται στη δημοσίευση αυτή αναφέρονται στη σελίδα XLVIII. Τα είδη του γλωσσαρίου αναφέρονται με τη σειρά ταξινόμησης της οικογένειας στην οποία ανήκουν. Το ευρετήριο των οικογενειών περιλαμβάνεται στη σελίδα 397. Μέσα στις ομάδες των οικογενειών τα είδη που καλύπτουν το σύνολο της οικογένειας αναφέρονται πρώτα (π.χ. Merluccidae), ενώ στη συνέχεια ακολουθούν τα είδη που εντοπίζονται μέσα σε κάθε γένος (π.χ. Merluccius hubbsi), ακολουθούμενα από τα μη καθοριζόμενα είδη μέσα σ' ένα γένος (π.χ. Merluccius spp).

Επιστημονική (λατινική) ονομασία: αναφέρεται η ονομασία με την οποία ένα είδος είναι γνωστό στην επιστημονική βιβλιογραφία. Όταν δίνονται περισσότερες από μία ονομασίες, η τρέχουσα είναι η πρώτη, ενώ οι επόμενες είναι παλαιότερες ονομασίες του είδους αυτού, που θεωρούνται γενικά απαρχαιωμένες.

Αναγνωριστικός κωδικός τριών γραμμάτων: ο αναγνωριστικός αυτός κωδικός τριών γραμμάτων δόθηκε στο κάθε είδος από την ομάδα εργασίας συντονισμού των στατιστικών αλιείας Ατλαντικού για να χρησιμεύσει στις διεθνείς στατιστικές δημοσιεύσεις. Ωστόσο, ο αναγνωριστικός αυτός κωδικός χρησιμοποιείται σήμερα ευρύτατα και εκτός του στατιστικού τομέα, στα έγγραφα που έχουν σχέση με την αλιεία (για παράδειγμα, στα ημερολόγια αλιείας). Το εξουσιοδοτημένο όργανο στο οποίο κατατίθενται τα σύμβολα αυτά είναι η οργάνωση FAO (στην οποία πρέπει να γίνεται αίτηση για τη χορήγηση άλλων κωδικών). Σε γενικές γραμμές, αναγνωριστικοί κωδικοί υπάρχουν μόνον για τα είδη που προσδιορίζονται στις στατιστικές αλιείας μεμονωμένα· σε πολλές περιπτώσεις, σε ορισμένα εμπορικά είδη τα οποία ομαδοποιούνται για στατιστικούς λόγους, δεν δίνεται αναγνωριστικός κωδικός. Η βασική αρχή η οποία διέπει την εισαγωγή αναγνωριστικού κωδικού είναι ότι, ενώ οι επιστημονικές και οι «κοινές» ονομασίες υπόκεινται συχνά σε μεταβολές, ο αναγνωριστικός κωδικός, από τη στιγμή που θα χορηγηθεί, παραμένει αμετάβλητος.

Ονομασίες στις ένδεκα επίσημες γλώσσες της ΕΚ: η ομάδα εργασίας επέλεξε τις ονομασίες που έκρινε καταλληλότερες για το κάθε είδος στην κάθε γλώσσα. Σε πολλές περιπτώσεις αναφέρονται εναλλακτικές ονομασίες, αλλά δεν κατονομάζονται όλες οι παραλλαγές των περιφερειακών ονομασιών ή οι παραλλαγές που οφείλονται στο στάδιο του κύκλου της ζωής, στην εποχή του έτους, στο ιχθυοτροφείο στο οποίο έγινε η αλιείωση, στο βαθμό επεξεργασίας μετά την αλιείωση, κλπ. Γενικός κανόνας είναι ότι η ονομασία αφορά ένα είδος όπως αλιεύτηκε.

Η εξεύρεση γνωστών ονομασιών σε όλες τις κοινοτικές γλώσσες για όλα τα είδη αποδείχθηκε αδύνατη. Επειδή η αλιεία και η εμπορία των διαφόρων αυτών ειδών δεν γίνεται σε παγκόσμια κλίμακα, αντιμετωπίστηκε συχνά η εξής δυσκολία, όπως, για παράδειγμα: δεν υπήρχαν δανικές ονομασίες για τα υδρόβια είδη των οποίων η αλιεία και η εμπορία περιορίζεται στην περιφέρεια του νοτιοανατολικού Ειρηνικού. Στις περιπτώσεις που σε ορισμένες γλώσσες δεν υπήρχαν αμέσως διαθέσιμες ονομασίες για ορισμένα είδη, η ομάδα εργασίας προσπάθησε να συμπληρώσει τον κατάλογο με την κατά λέξη μετάφραση των επιστημονικών ονομασιών σε κάθε μία από τις υπόλοιπες γλώσσες. Αλλά ακόμη κι αυτό δεν ήταν δυνατό σε όλες τις περιπτώσεις.

Σχεδιαγράμματα: καταβλήθηκαν προσπάθειες να περιληφθούν εικόνες για κάθε είδος. Οι εικόνες αυτές δεν έχουν σκοπό την αναγνώριση του είδους με ακρίβεια αλλά περιλαμβάνονται για να παρέχουν χρήσιμες πληροφορίες σχετικά με τα γενικά χαρακτηριστικά των ειδών. Όπου ένα λήμμα αναφέρεται σε μια οικογένεια ή μια ομάδα ειδών, η εικόνα που έχει επιλεγεί δείχνει τα γενικά χαρακτηριστικά της ομάδας.

Ευρετήρια: καταρτίστηκαν ευρετήρια με βάση την κάθε γλώσσα, τις επιστημονικές ονομασίες και τα αναγνωριστικά σύμβολα τριών γραμμάτων. Τα ευρετήρια αυτά είναι «έξυπνα», δηλαδή, για παράδειγμα: ο όρος «Atlantic herring» μπορεί να αναζητηθεί στο αγγλικό ευρετήριο είτε στο λήμμα «Atlantic» είτε στο λήμμα «herring».

Σε ορισμένες γλώσσες αντιμετωπίστηκαν δυσκολίες κατά την κατάρτιση των ευρετηρίων λόγω της διατύπωσης των σύνθετων λέξεων. Για παράδειγμα η αγγλική ονομασία της οικογένειας *Sparidae* αναφέρεται στη βιβλιογραφία ως «sea bream», «sea-bream» και «seabream». Για να ευρίσκονται σε γειτονικές θέσεις στο ευρετήριο οι διάφορες μορφές των σύνθετων ονομασιών των αντίστοιχων ειδών έχει επιλεγεί μια εναρμονισμένη μορφή η οποία και χρησιμοποιείται στα ευρετήρια. Η μορφή αυτή ενδέχεται να διαφέρει από τη μορφή του κύριου σώματος του γλωσσαρίου, όπου έχει δοθεί η πιο συνήθης που συναντάται στη βιβλιογραφία. Εντούτοις, πρέπει να τονισθεί ότι, για πολλές ονομασίες, φαίνεται ότι δεν υπάρχουν καθορισμένοι κανόνες για την ορθή μορφή των ονομασιών.

Remarques préliminaires

Sélection des termes

Ce glossaire couvre 1 532 espèces de poissons, de crustacés, de mollusques, de mammifères aquatiques, de plantes marines et d'autres produits de la pêche.

Partant de Eurodicautom, la base de données multilingues de la Commission, et d'une liste, fournie par la FAO, de toutes les espèces figurant dans les statistiques de pêche commerciale, ce glossaire a été élaboré par un groupe de travail réuni à l'initiative de la Commission européenne et composé d'experts nationaux dans le domaine de la pêche. La liste des membres de ce groupe de travail figure à la page XL. Le groupe de travail a revu les listes sur la base du critère suivant: chaque espèce doit pouvoir être identifiée avec précision au moins au niveau de la famille taxinomique. Les termes plus génériques ont été exclus. La liste des espèces a été étendue à celles qui, bien que ne présentant aucun intérêt commercial, ont été considérées utiles aux personnes chargées de la protection des ressources halieutiques.

Présentation des termes

Pour chaque espèce figurent les indications suivantes:

Numéro de référence	Nom de famille	Identificateur alpha-3
SC	<i>nom(s) scientifique(s)</i>	
ES	nom(s) espagnol(s)	
DA	nom(s) danois	
DE	nom(s) allemand(s)	
EL	nom(s) grec(s)	
EN	nom(s) anglais	
FR	nom(s) français	
IT	nom(s) italien(s)	
NL	nom(s) néerlandais	
PT	nom(s) portugais	
FI	nom(s) finnois	
SV	nom(s) suédois	

Quelques remarques au sujet de ces données sont mentionnées ci-après.

Numéro de référence: numéro attribué aux espèces pour faciliter l'utilisation des index. Il n'a aucune signification en dehors de la présente publication.

Famille: famille à laquelle appartient l'espèce selon la classification taxinomique utilisée dans la *Taxonomic authority list*⁽¹⁾ (liste taxinomique de référence, publiée par la FAO). Les éléments de cette classification utilisés dans la présente publication figurent à la page XLVIII. Dans ce glossaire, les termes apparaissent dans l'ordre selon lequel leur famille d'appartenance figure dans la classification. Un index des noms de famille est inclus dans cet ouvrage (p. 397). À l'intérieur des groupes de familles, les espèces **couvrant l'ensemble** de la famille **sont mentionnées** en premier lieu (par exemple *Merluccidae*), viennent ensuite les espèces identifiées à l'intérieur de chaque genre (par exemple *Merluccius hubbsi*), suivies des espèces non spécifiées à l'intérieur d'un genre (par exemple *Merluccius ssp.*).

Nom scientifique (latin): le nom indiqué est celui sous lequel l'espèce est connue dans la littérature scientifique. Lorsque plusieurs noms figurent dans cette rubrique, le premier est le nom couramment utilisé; les autres correspondent à des dénominations actuellement considérées comme obsolètes, mais qui sont encore utilisées.

Identificateur alpha-3: cet «identificateur interinstitutions alpha-3» a été attribué aux espèces par le groupe de travail de coordination des statistiques de la pêche dans l'Atlantique pour les besoins des publications statistiques internationales. Cet identificateur est actuellement largement utilisé en dehors du domaine statistique dans les documents concernant la pêche (par exemple dans les journaux de pêche). L'organisme dépositaire de ces identificateurs est la FAO (à qui il convient de s'adresser pour obtenir des adjonctions à la liste). Des identificateurs ne sont généralement disponibles que pour les espèces identifiées individuellement dans les statistiques de la pêche: dans de nombreux cas, les espèces commerciales regroupées sous la même rubrique pour les besoins de la statistique n'ont pas reçu d'identificateur individuel. Insistons toutefois sur le fait que, si les noms scientifiques et «communs» sont sujets à des changements fréquents, l'identificateur ne varie plus dès lors qu'il a été attribué.

Noms dans les onze langues officielles de l'Union européenne: les noms retenus par le groupe de travail sont considérés comme les plus appropriés pour chaque espèce dans chacune des langues. Il n'a pas été tenu compte systématiquement des variantes régionales ou des différentes dénominations correspondant à un stade du cycle de vie, à une époque de l'année, au lieu de pêche, au type de traitement après capture, etc. D'une manière générale, le nom indiqué correspond à l'espèce telle qu'elle a été retirée de l'eau. Si, dans une langue, plusieurs dénominations sont mentionnées, c'est toujours la première qui est considérée par les experts comme la plus appropriée.

Il n'a pas toujours été possible de trouver un nom existant pour chaque espèce. Les espèces ne sont en effet pas toujours capturées et commercialisées dans le monde entier et il n'est pas rare, par exemple, de ne trouver aucun nom danois pour une espèce capturée et mise sur le marché uniquement dans le sud-est de l'océan Pacifique. Cependant, lorsqu'aucun nom n'a pu être repéré, le groupe de travail a tenté de compléter la liste en faisant des traductions littérales à partir du nom de l'une ou de l'autre langue. Malgré tout, cela n'a pas toujours été possible.

Illustrations: dans toute la mesure du possible, chaque espèce est illustrée. Les illustrations n'ont pas pour but de permettre l'identification précise, mais de fournir une indication des caractéristiques générales de l'espèce. Lorsqu'il s'agit d'une famille ou d'un groupe d'espèces, l'illustration montre les traits principaux de ce groupe.

Index: des index ont été établis pour chaque langue, pour les noms scientifiques et pour les identificateurs alpha-3. Ils sont de type analytique: par exemple, «Atlantic herring» figure à la fois sous «Atlantic herring» et «Herring, Atlantic».

L'élaboration des index a présenté quelques difficultés pour certaines langues à cause des mots composés. Par exemple, le nom anglais de la famille *Sparidae* peut revêtir les formes «sea breams», «seabreams» et «seabreams». Afin que les différentes formes des noms composés des espèces de la même famille figurent dans les index de façon groupée, un format harmonisé a été choisi. Celui-ci peut être différent de la forme retenue pour le corpus du glossaire, qui est celle que l'on rencontre le plus fréquemment dans la littérature. Cependant, il faut souligner que, pour de nombreux noms, il ne semble pas exister de règles précises concernant l'orthographe correcte.

(1) *Taxonomic authority list* (1988), *Aquatic sciences and fisheries information system reference series*, n° 8, FAO, Rome, 465 p.

Osservazioni preliminari

Copertura

Il glossario contiene informazioni su 1 532 specie di pesci, crostacei, molluschi, mammiferi acquatici, alghe e altri prodotti della pesca.

Il glossario è stato elaborato da un gruppo di lavoro di esperti nazionali e di funzionari dei servizi competenti della Commissione europea che si sono basati su quanto contenuto nella base di dati multilingue Eurodicautom della Commissione e su un elenco FAO di tutte le specie figuranti nelle statistiche delle catture commerciali. I membri del gruppo di lavoro di esperti sono elencati a pagina XL. Il gruppo di lavoro ha elaborato il glossario seguendo il criterio generale per cui ogni voce deve poter essere identificata con precisione se non altro a livello della famiglia tassonomica. Voci di carattere più generale sono state escluse. Il gruppo di lavoro ha ritenuto di dover allargare l'elenco inserendovi alcune specie che, pur non rivestendo interesse commerciale, sono importanti ai fini della protezione e conservazione delle risorse ittiche.

Presentazione

Ogni voce del glossario è così presentata:

Numero di riferimento	Nome della famiglia	Codice a tre lettere
SC	<i>Nome scientifico</i>	
ES	Nome spagnolo	
DA	Nome danese	
DE	Nome tedesco	
EL	Nome greco	
EN	Nome inglese	
FR	Nome francese	
IT	Nome italiano	
NL	Nome neerlandese	
PT	Nome portoghese	
FI	Nome finlandese	
SV	Nome svedese	

Osservazioni utili

Numero di riferimento: il numero attribuito alle specie serve a facilitare la consultazione degli indici. Non ha riscontro alcuno al di fuori della presente pubblicazione.

Famiglia: famiglia alla quale la specie è assegnata in base alla classificazione tassonomica figurante nell'elenco ufficiale pubblicato dalla FAO⁽¹⁾. Le parti di tale elenco usate nella presente pubblicazione sono riprodotte a pagina XLVIII. Le singole voci figurano nel glossario nell'ordine in cui le famiglie di appartenenza sono ordinate nella classificazione di cui sopra. L'indice dei nomi di famiglia figura a pagina 397. I gruppi di famiglie sono così ordinati: innanzitutto figurano le voci che coprono un'intera famiglia (ad es., Merlucciidae), seguite dalle specie individuate nell'ambito di un singolo genere (ad es., *Merluccius hubbsi*), per finire con le voci non meglio specificate nell'ambito di un genere (ad es., *Merluccius spp.*).

Nome scientifico (latino): si riporta il nome con il quale la specie è nota nella letteratura scientifica. In caso di più nomi, il primo è il nome abituale e gli altri sono i nomi con i quali le specie erano note in passato, ma che ora sono da considerarsi desueti.

Codice a tre lettere: il codice internazionale a tre lettere è stato attribuito alle specie dal gruppo di lavoro per il coordinamento delle statistiche della pesca nell'Atlantico ad uso delle pubblicazioni internazionali di statistica. Il codice trova tuttavia attualmente ampio impiego anche al di fuori del campo statistico in varie documentazioni relative alla pesca (ad esempio, nei registri di bordo della pesca). L'organizzazione depositaria di tali codici è la FAO (alla quale è opportuno rivolgersi per ogni richiesta di aggiunta di voci). I codici sono generalmente disponibili soltanto per le specie singolarmente indicate nelle statistiche della pesca: in molti casi non è stato attribuito un proprio codice alle specie che sono state aggregate per fini statistici. Elemento essenziale nell'attribuzione del codice è che, mentre i nomi scientifico e «volgare» sono soggetti a frequenti variazioni, il codice, una volta fissato, resta immutato.

Nomi nelle undici lingue ufficiali dell'UE: i nomi selezionati dal gruppo di lavoro di esperti sono quelli considerati più consoni alle specie nelle varie lingue. In alcuni casi sono riportati nomi alternativi sottolineando però che non si tratta di un elenco esaustivo delle varianti regionali o delle varianti attribuibili alla fase del ciclo vitale, alla stagione dell'anno, alla zona in cui è avvenuta la pesca, al grado di trattamento dopo la cattura ecc. Di norma, il nome si riferisce alla specie così come è stata catturata.

In caso di più denominazioni, la prima riportata è quella giudicata più consona dagli esperti.

È stato impossibile trovare un nome in tutte le lingue per ogni singola specie. Non tutte le specie sono catturate e commercializzate in tutto il mondo: può quindi succedere che non esista un nome danese per una specie catturata e commercializzata nel solo Pacifico sud-orientale. In caso di mancanza di ogni denominazione in una lingua, il gruppo di lavoro di esperti ha tuttavia cercato di completare l'elenco traducendo letteralmente il nome da un'altra lingua, ma nemmeno questo è stato sempre possibile.

Illustrazioni: per ogni specie si è cercato di accludere un'illustrazione. Lo scopo non è quello di rendere possibile l'esatta identificazione di una specie, ma di fornire alcune utili indicazioni sulle caratteristiche generali della specie in questione. Quando la voce si riferisce ad una famiglia o ad un gruppo di specie, è stata scelta un'illustrazione che mostri le principali caratteristiche del raggruppamento.

Indici: sono stati compilati gli indici nazionali, dei nomi scientifici e del codice a tre lettere. Si tratta di indici «intelligenti»: l'inglese «Atlantic herring» potrà ad esempio essere ricercato sotto «Atlantic herring» o sotto «herring, Atlantic».

Si è incontrata qualche difficoltà nell'elaborare gli indici di alcune lingue in seguito all'uso di nomi composti. Il nome inglese della famiglia *Sparidae* appare ad esempio nella letteratura sotto tre diverse forme: «sea breams», «sea-breams» e «seabreams». Per gli indici è stata quindi adottata una forma armonizzata in modo che le varie forme dei nomi composti delle specie correlate non perdano ogni rapporto di contiguità. Tale forma armonizzata può differire dalla forma riportata nel corpo del glossario dove figurano le forme di uso più comune. Va tuttavia sottolineato che, per molti nomi, non sembrano esistere precise regole ortografiche.

(1) Taxonomic Authority List (1988) – *Aquatic Sciences and Fisheries Information System Reference Series*, n. 8, FAO, Roma, 465 pagg.

Toelichting

Inhoud

Dit glossarium bevat gegevens over 1 532 soorten: vissen, zeezoogdieren, schelpdieren, weekdieren, zeewierren, algen en andere visserijproducten.

Als basis voor het corpus van deze woordenlijst dienden de soortbenamingen zoals opgenomen in Eurodicautom, de terminologische gegevensbank van de Commissie, en de benamingen ontleend aan de visserijstatistieken van de FAO. Het glossarium werd samengesteld door een werkgroep bestaande uit deskundigen uit de lidstaten en ambtenaren van de Commissie. Een overzicht van de werkgroep is te vinden op blz. XL. Bij de samenstelling van het glossarium werd uitgegaan van het principe dat iedere soort ten minste tot op het niveau van de taxonomische familie geïdentificeerd moet zijn. Minder gebruikelijke soortbenamingen werden niet opgenomen. De lijst is aangevuld met een aantal soorten die eerder op grond van hun behoud dan om hun commerciële betekenis van belang zijn.

Presentatie

De soorten zijn op volgende wijze weergegeven:

Referentie- nummer	Familie- naam	Drie-Alpha- Code
SC	<i>Wetenschappelijke benaming(en)</i>	
ES	Spaanse benaming	
DA	Deense benaming	
DE	Duitse benaming	
EL	Griekse benaming	
EN	Engelse benaming	
FR	Franse benaming	
IT	Italiaanse benaming	
NL	Nederlandse benaming	
PT	Portugese benaming	
FI	Finse benaming	
SV	Zweedse benaming	

Opmerking

Referentienummer: het referentienummer wordt in het register aan de soortnaam toegevoegd. Dit nummer is uitsluitend binnen deze publicatie van belang.

Familie: hieronder wordt verstaan de familie waartoe een soort behoort op grond van de taxonomische classificatie van de „Taxonomic Authority List”⁽¹⁾ (taxonomische referentielijst van de FAO). De in dit glossarium gebruikte delen van de taxonomische classificatie zijn vermeld op blz. XLVIII. De soorten zijn opgenomen in de volgorde waarin de families waartoe zij behoren in de classificatie zijn gerangschikt. Het register op familienaam bevindt zich op blz. 397. Binnen de familiegroepen staan eerst die termen die de familie als geheel aanduiden (bijv. Merluccidae); daarna komen de volledige soortnamen binnen elk geslacht (bijv. *Merluccius hubbsi*), en ten slotte de niet nader gedefinieerde soorten binnen een geslacht (bijv. *Merluccius* spp.).

Wetenschappelijke (Latijnse) benaming: dit is de benaming waaronder de vissoort in de wetenschappelijke literatuur bekend staat. Indien meer dan één benaming vermeld wordt, is de eerst vermelde benaming de gangbare en de volgende de achterhaalde benaming, die overigens nog wel gehanteerd wordt.

De Drie-Alpha-Code: dit is de „Inter-Agency 3-Alpha Identifier”, een drielettercode die door de „Coordinating Working Party of Atlantic Fishery Statistics” aan de afzonderlijke vissoorten wordt toegekend voor gebruik in internationale statistische publicaties. Deze code wordt echter inmiddels ook op brede schaal gebruikt buiten de statistische sector in documentatie betreffende de visserij (bijvoorbeeld in visserslogboeken). De eenmaal toegekende codes worden door de FAO geregistreerd (aanvraag tot codering van „nieuwe” soorten moet bij de FAO ingediend worden). Codes worden doorgaans uitsluitend toegekend aan die soorten die in de statistieken afzonderlijk vermeld worden; in veel gevallen zijn handelsoorten die voor de statistiek zijn samengevoegd, niet van een code voorzien. Toekenning van codes is zinvol omdat zij, in tegenstelling tot de wetenschappelijke en de gangbare benamingen, niet meer gewijzigd worden.

Benamingen in de elf officiële EG-talen: voor ieder van de officiële talen heeft de werkgroep de voor elke soort meest adequate benaming gekozen. Er werd afgezien van het opnemen van enkele van de talrijke regionale varianten die het ontwikkelingsstadium, het seizoen, het vanggebied, de verwerkingswijze, enzovoort, van de vangst weerspiegelen. Algemeen geldt dat de benaming gebaseerd is op de toestand van de soort op het moment van de vangst. Wanneer in één van de talen meer dan één benaming wordt gegeven, geldt de eerst vermelde benaming als de meest adequate.

Het is niet mogelijk gebleken voor alle soorten de benamingen in alle talen van de Gemeenschap te vinden, omdat niet alle soorten overal gevangen en verhandeld worden. Het mag daarom geenszins verbazing wekken dat er bijvoorbeeld geen Deense benaming bestaat voor een soort die alleen in het zuidoostelijke gebied van de Stille Oceaan wordt gevangen en verhandeld. In die gevallen waarin geen overeenkomstige benaming werd gevonden, heeft de werkgroep haar toevlucht genomen tot een letterlijke vertaling van een authentieke benaming uit één van de andere talen. Ook dit bleek niet in alle gevallen haalbaar.

Illustraties: waar mogelijk werden aan de soorten illustraties toegevoegd. Deze zijn niet alleen nuttig voor het nauwkeurig identificeren van de soort, maar geven ook een indruk van de typische kenmerken van de soort. Begrippen met betrekking tot een bepaalde familie of groep werden eveneens van illustraties voorzien om de typische kenmerken duidelijk te maken.

Registers: registers werden gemaakt op de volgende onderdelen: de talen, de wetenschappelijke benamingen, en de „Drie-Alpha-Code”. De namen in de registers zijn verwisselbaar, dat wil zeggen dat, bijvoorbeeld, „Atlantische haring” zowel onder „Atlantische” als onder „haring” kan worden gevonden.

In sommige talen is het opstellen van de registers niet zonder problemen. Zo bestaan er bijvoorbeeld voor de Engelse aanduiding voor de Latijnse benaming van de familie der *Sparidae* de volgende schrijfwijzen: „sea breams”, „sea-breams”, en „seabreams”. Om de verschillende schrijfwijzen van bij elkaar behorende soorten in de juiste volgorde te krijgen werd gekozen voor een uniforme presentatie die overigens niet altijd overeenkomt met die in het corpus, omdat daar immers de meest frequente schrijfwijze aangehouden wordt. Er dient op gewezen te worden dat er niet altijd één voorgeschreven schrijfwijze bestaat.

⁽¹⁾ Taxonomic Authority List (1988), *Aquatic sciences and fisheries information system reference series*, No 8, FAO, Rome, 465 pp.

Observações prévias

Cobertura

O glossário contém informação sobre 1 532 espécies de peixes, crustáceos, moluscos, algas marinhas e outros produtos da pesca.

O ponto de partida para este glossário foi a base de dados terminológicos da Comissão (Eurodicautom) e uma lista de espécies fornecida pela FAO, que um grupo de trabalho criado pela Comissão das CE, constituído por peritos de pesca nacionais, desenvolveu (os membros deste grupo encontram-se indicados na página XL). O grupo de trabalho estabeleceu esta lista utilizando um critério geral segundo o qual cada item deveria ser identificado de forma precisa, pelo menos ao nível da família taxonómica. Os itens de carácter mais geral foram, assim, excluídos. A presente lista poderá ser aumentada no futuro, tendo em conta questões menos comerciais, destacando-se como principal preocupação a conservação das espécies.

Apresentação

A apresentação de cada entrada no glossário é a seguinte:

Número de referência	Nome da família	Identificador alfabético com três letras
SC	<i>Nome científico</i>	
ES	Nome espanhol	
DA	Nome dinamarquês	
DE	Nome alemão	
EL	Nome grego	
EN	Nome inglês	
FR	Nome francês	
IT	Nome italiano	
NL	Nome neerlandês	
PT	Nome português	
FI	Nome finlandês	
SV	Nome sueco	

São de notar os seguintes aspectos sobre estas entradas

Número de referência: é o número atribuído à espécie nos índices. Não possui qualquer significado fora desta publicação.

Família: a família em que se inclui a espécie em questão, com base na classificação utilizada pela «Taxonomic Authority List»⁽¹⁾ (lista de referência da FAO). Os elementos da classificação utilizados encontram-se na página XLVIII. As espécies neste glossário são apresentadas na ordem em que a sua família aparece na classificação. Na página 397 é apresentado um índice dos nomes das famílias. No interior dos grupos de famílias, primeiro são apresentados os itens que abrangem toda a família (por exemplo, *Merlucidae*), seguidos das espécies identificadas em cada género (por exemplo, *Merluccius hubbsi*), por último, dos itens não especificados num género (por exemplo, *Merluccius ssp.*).

Nome científico (latim): o nome indicado é aquele pelo qual a espécie é conhecida na literatura científica. Sempre que se apresenta mais do que um nome, o primeiro corresponde ao nome actual e os restantes são os nomes pelos quais a espécie tem sido conhecida, mas que se consideram, geralmente, ultrapassados.

Identificador alfabético com três letras: este identificador foi atribuído às espécies pelo Grupo de Trabalho Coordenador das Estatísticas Pesqueiras do Atlântico, para ser utilizado por publicações estatísticas internacionais. Todavia, é, hoje em dia, amplamente utilizado fora do sector estatístico, no âmbito da documentação das pescas (por exemplo, nos livros de pesca das embarcações pesqueiras). A organização depositária destes identificadores é a FAO, que tem de autorizar a introdução de novos itens. Normalmente, os identificadores apenas se encontram disponíveis para as espécies individualmente identificadas nas estatísticas da pesca: verifica-se com frequência que não são atribuídos identificadores às espécies comerciais agrupadas para fins estatísticos. Importa destacar, ao atribuir este identificador, que enquanto os nomes científicos e «comuns» são susceptíveis de ser alterados frequentemente, o identificador é atribuído com carácter permanente.

Nomes nas 11 línguas oficiais da UE: os nomes seleccionados pelo grupo de trabalho são considerados os mais apropriados para a espécie em cada língua. Não se incluíram as variações regionais ou as que se devem às diferentes fases do ciclo de vida, às estações do ano, às campanhas em que a espécie foi capturada, ao grau de tratamento, etc. Em regra geral, o nome refere-se à espécie tal qual é retirada da água. Sempre que se considerar mais de que um nome na mesma língua, o primeiro é o mais adequado, segundo os peritos.

Foi impossível fazer corresponder a todas as espécies nomes existentes em todas as línguas comunitárias. As espécies não são capturadas e comercializadas a nível mundial e assim, por exemplo, pode não existir nome dinamarquês para uma espécie só capturada e comercializada na região sudeste do oceano Pacífico. Todavia, sempre que não se encontraram nomes disponíveis, o grupo de trabalho procurou completar a lista, procedendo a traduções literais dos nomes existentes numa outra língua, o que, mesmo assim, não foi possível em todos os casos.

Ilustrações: sempre que possível foram incluídas ilustrações para cada espécie. Estas são apresentadas com o intuito de dar uma indicação das características gerais de cada espécie, sem pretender fazer uma identificação precisa da mesma. Sempre que um item se refere a uma família ou a um grupo de espécies, foi seleccionada uma ilustração que apresenta as principais características desse grupo.

Índices: foram compilados índices para cada uma das línguas, para os nomes científicos e para os identificadores alfabéticos de três caracteres. Estes índices são «inteligentes», ou seja: por exemplo, «Atlantic herring» pode ser encontrado no índice inglês em «Atlantic» ou em «herring».

Deparou-se com algumas dificuldades ao criar os índices para certas línguas devido à formulação dos nomes compostos. Por exemplo, a família dos *Sparidae* pode ser encontrada na literatura especializada como «sea breams», «sea-breams» e «seabreams». Para conseguir que as várias formas de nomes compostos das espécies relacionadas se encontrem em posições adjacentes, foi escolhido um formato harmonizado para os índices. Este facto pode levar a que a forma consagrada no glossário seja diferente daquela que frequentemente se encontra na literatura especializada. No entanto, deve salientar-se que para a maioria dos nomes parecem não existir normas rígidas.

⁽¹⁾ Taxonomic Authority List (1988), *Aquatic sciences and fisheries information system reference series*, n.º 8, FAO, Roma, 465 p.

Yleistä

Sisältö

Sanasto kattaa yhteensä 1 532 kala-, äyriäis-, nilviäis-, vesinisäkäs- ja vesikasvilajia sekä kalastustuotetta.

Euroopan komission aloitteesta kokoonkutsuttu, kalastusalan kansallisista asiantuntijoista koostuva työryhmä on laatinut tämän sanaston. Sanasto perustuu komission monikielisen tietokannan Eurodicautomin sisältöön sekä FAO:n laatimaan luetteloon lajeista, jotka esiintyvät kaupallisen kalastuksen tilastoissa. Luettelo työryhmän jäsenistä on sivulla XL. Työryhmän lähtökohtana luetteloa tarkistettaessa oli, että jokainen laji tulee voida tunnistaa täsmällisesti vähintään systemaattisen luokittelun mukaan. Yleisnimikkeet on rajattu tämän sanaston ulkopuolelle. Lajiluettelo on laajennettu kattamaan myös ne lajit, joilla ei ole kaupallista merkitystä mutta jotka asiantuntijaryhmä katsoi kalakannan suojelusta vastaaville henkilöille hyödyllisiksi.

Termien esitystapa

Lajit esitellään seuraavin merkinnöin:

Viitenumero	Heimo	Kolmikirjaiminen tunnus
SC	<i>tieteellinen nimi (nimet)</i>	
ES	espanjankielinen nimi	
DA	tanskankielinen nimi	
DE	saksankielinen nimi	
EL	kreikankielinen nimi	
EN	englanninkielinen nimi	
FR	ranskankielinen nimi	
IT	italiankielinen nimi	
NL	hollanninkielinen nimi	
PT	portugalinkielinen nimi	
FI	suomenkielinen nimi	
SV	ruotsinkielinen nimi	

Huomautuksia

Viitenumero: Numero, joka on annettu kullekin lajille hakemiston käytön helpottamiseksi. Viite-numerolla ei ole mitään merkitystä tämän julkaisun ulkopuolella.

Heimo: Heimo, johon laji kuuluu FAO:n julkaisussa "Taxonomic authority list"⁽¹⁾ esiintyvän taksonomisen luokituksen mukaan. Tässä julkaisussa käytetyt kyseisen luokituksen osat esitetään sivulla XLVIII. Sanastoon otettujen lajien järjestys on sama kuin niiden heimojen järjestys luokituksessa. Teokseen sisältyy myös hakemisto heimoista (s. 397). Heimoryhmien sisällä järjestys määräytyy siten, että koko heimoa tarkoittava nimi tulee ensimmäisenä (esim. *Merluccidae*), sen jälkeen tulevat kunkin suvun eriteltyt lajit (esim. *Merluccius hubbsi*) ja lopulta sukuun sisältyvät erittelemättömät lajinimikkeet (esim. *Merluccius* spp.).

Tieteellinen (latinankielinen) nimi: Annettu nimi on sama, jolla lajiin viitataan tieteellisessä kirjallisuudessa. Mikäli tieteellisen nimen kohdalla esiintyy useampi kuin yksi nimi, ensimmäinen on yleinen nimi ja muut nimiä, joilla lajit tunnetaan mutta jotka ovat jo vanhentuneita.

Kolmikirjaiminen tunnus: Kyseessä on se tunnus (Inter-Agency 3-alpha identifier), jonka Atlantin valtameressä tapahtuvan kalastuksen tilastoinnin yhteistyöstä vastaava työryhmä on antanut lajeille kansainvälisiä tilastojulkaisuja varten. Kyseistä tunnusta käytetään nykyään laajasti tilastotieteen ulkopuolella kalastukseen liittyvissä asiakirjoissa (esimerkiksi kalastusalan lehdissä). Tunnukset rekisteröi FAO (jonne tulee myös osoittaa hakemukset mahdollisista lisäyksistä). Tunnuksia käytetään yleensä vain kalastusalan tilastoissa yksittäisesti tunnistettavien lajien kohdalla: useissa tapauksissa kaupalliset lajit, jotka esiintyvät tilastoissa saman otsikon alla, eivät ole saaneet omaa tunnusta. On tärkeää huomata, että annettu tunnus ei muutu tieteellisten ja yleisnimien vaihtuessa.

Nimet Euroopan unionin yhdellätoista virallisella kielellä: Työryhmä on valinnut nimet, joita pidetään kussakin kielessä lajeille sopivimpina. Monessa tapauksessa lajeille on annettu myös vaihtoehtoisia nimiä. Tässä luettelossa ei ole kuitenkaan otettu järjestelmällisesti huomioon alueellisia nimityksiä tai lajin elämänsyklinän vaihetta, vuodenaikaa, kalastuspaikkaa tai saaliin käsittelytapaa vastaavia nimityksiä. Yleisesti ottaen voidaan todeta, että annettu nimi viittaa lajiin siinä muodossa, jossa tämä nostetaan vedestä.

Mikäli jossakin kielessä yhden lajin kohdalla esiintyy useita nimiä, ensimmäinen niistä on asiantuntijoiden mukaan suositeltavin.

Aina ei kuitenkaan ole ollut mahdollista löytää käytössä olevaa nimeä jokaiselle lajille. Koska kaikkia lajeja ei välttämättä pyydystetä eikä niillä käydä kansainvälistä kauppaa, ei ole lainkaan harvinaista, ettei esimerkiksi kaakkoisella Tyynellä valtamerellä pyydystetyille ja siellä markkinoiduille lajeille ole lainkaan tanskankielistä nimeä. Tapauksissa, joissa lajille ei ole olemassa yhtään nimeä, asiantuntijatyöryhmä on kuitenkin yrittänyt täydentää luetteloa kääntämällä sanatarkasti vieraskielisen nimen. Tämä ei kuitenkaan ole aina ollut mahdollista.

Kuvitukset: Kaikki lajit on pyritty kuvittamaan. Kuvan perusteella ei välttämättä voida aina tunnistaa lajeja, vaan niiden avulla pyritään antamaan hyödyllistä tietoa lajien yleisistä tunnuspiirteistä. Tietyn heimon tai suvun kohdalla kuva esittää kyseisen heimon tai suvun pääasialliset tunnuspiirteet.

Hakemistot: Kaikilla kielillä, tieteellisillä nimillä ja kolmikirjaimisilla tunnuksilla on omat hakemistonsa. Hakemistoista on pyritty tekemään mahdollisimman kattavat: esimerkiksi 'kummeliturkska' löytyy sekä hakusanalla 'kummeliturkska' että 'turska, kummeli-'.

Erityisesti germaanisten kielten ja suomen kielen kohdalla yhdyssanat vaikeuttavat hakemistojen luomista. Esimerkiksi englanninkielinen nimi *Sparidae*-heimolle esiintyy kirjallisuudessa sekä muodossa 'sea-bream' että 'seabream'. Hakemistoja varten on valittu yhdenmukaistettu muoto, jotta kaikki saman heimon eri yhdyssanamuodot esiintyisivät hakemistoissa oikeilla paikoillaan. Muoto voi erota itse sanastosta löytyvästä muodosta, joka puolestaan on usein kirjallisuudessa esiintyvä muoto. On kuitenkin huomattava, että useille nimille ei ole olemassa täsmällisiä oikeinkirjoitussääntöjä.

⁽¹⁾ Taxonomic authority list (1988), *Aquatic sciences and fisheries information system reference series*, No 8, FAO, Rome, 465 s.

Inledande anmärkningar

Innehåll

Ordboken innehåller uppgifter om 1 512 arter av fiskar, kräftdjur, blötdjur, marina däggdjur, alger och andra fiskeriprodukter.

Grundmaterialet har sammanställts av termer från kommissionens flerspråkiga termdatabas Eurodicautom och från FN:s livsmedels- och jordbruksorganisations (FAO) listor över arter som ingår i kommersiell fångststatistik. Ordboken har bearbetats av en arbetsgrupp bestående av fiskeexperter från de olika medlemsstaterna samt av anställda vid kommissionen. På sidan XL finns en lista över medlemmarna i denna arbetsgrupp. När ordboken utarbetades, utgick arbetsgruppen från principen att varje enskild term åtminstone skulle kunna identifieras taxonomiskt ned till familjenivå. Mer allmänna termer har utelämnats. Listan utvidgades till att omfatta ett antal arter som, trots att de inte är av kommersiellt intresse, ansågs relevanta för bevarandet av fiskeresurserna samt för naturvården.

Uppställning

Varje post är uppställd på följande sätt:

Referensnummer	Familjenamn	3-bokstavs-kod
SC	<i>vetenskapligt namn</i>	
ES	spanskt namn	
DA	danskt namn	
DE	tyskt namn	
EL	grekiskt namn	
EN	engelskt namn	
FR	franskt namn	
IT	italienskt namn	
NL	nederländskt namn	
PT	portugisiskt namn	
FI	finskt namn	
SV	svenskt namn	

Anmärkningar rörande dessa poster

Referensnummer: Det nummer som arten tilldelats för att göra det lättare att använda registren. Numret är endast av betydelse för denna publikation.

Familj: Den familj som arten tillhör, som grundar sig på klassificeringen i FAO:s *Taxonomic Authority List* ⁽¹⁾. De delar av klassificeringen som används i denna publikation anges på sidan XLVIII. Arterna har ställts upp enligt den familjeordning som finns i klassificeringen. Ett register över familjenamn finns på sidan 397. Ordningsföljden inom varje familj är följande: Först anges namn på familjegruppsnivå (t.ex. *Merluccidae*), därefter namn specificerade till artnivå (t.ex. *Merluccius hubbsi*), och slutligen inom varje släkte namn endast specificerade till släktesnivå (t.ex. *Merluccius spp.*).

Vetenskapliga (latinska) namn: Det namn som anges är det som arten är känd under i facklitteraturen. Om fler än ett namn anges, är det första namnet det vanligaste, och de andra namnen de som anses föråldrade, trots att de ibland fortfarande används.

3-bokstavskod: Denna *Inter-Agency 3-Alpha Identifier* (3-bokstavskod), som används för att identifiera arterna, har tilldelats dem av Samordnande arbetsgruppen för statistik över fiske i Atlanten för användning i internationella publikationer om statistik. Nu används denna kod även i stor utsträckning utanför det statistiska området i dokumentation om fiske (till exempel i loggböcker). Det är FAO som administrerar dessa koder och det är till denna organisation som ansökningar om tilldelning av ytterligare koder skall riktas. Normalt finns endast koder för de arter som anges separat i fiskestatistiken. En del av de arter som är föremål för handel samlas av statistiska hänsyn i grupper, och har därför inte fått en individuell kod. Skälet till att dessa koder har skapats är att de vetenskapliga namnen och trivialnamnen ofta kan ändras men koden, när den en gång har tilldelats, alltid förblir densamma.

Namn på de elva officiella EU-språken: De namn som arbetsgruppen har angett är de som anses vara de lämpligaste för arterna på varje enskilt språk. I många fall har ett alternativt namn angetts, med det bör betonas att dessa alternativ inte utgör en uttömmande lista över regionala namn eller speciella namn beroende på ett stadium i livscykel, årstid, fiskevatten, bearbetningsgrad efter fångst osv. Generellt sett syftar namnet på det tillstånd arten har i vattnet. Om flera olika namn har angetts på ett språk, är det alltid det som anges först som experterna anser vara det lämpligaste.

Det har inte varit möjligt att hitta befintliga namn på alla gemenskapens språk för alla arter. Det är inte alla arter som fångas eller ingår i handeln överallt, och det är därför inte ovanligt att det t.ex. inte finns ett danskt namn för en art som endast fångas och ingår i handeln i den sydöstra delen av Stilla havet. När inga namn omedelbart fanns att tillgå, försökte arbetsgruppen komplettera listan genom att göra en direkt översättning av namnet på ett av de andra språken. Detta har dock inte heller kunnat göras i alla enskilda fall.

Teckningar: Så långt det har varit möjligt har en illustration tagits med för varje art. Avsikten med dessa illustrationer är inte att exakt identifiera arten, utan att ge läsaren en uppfattning om artens allmänna kännetecken. Till poster som hänvisar till en familj eller en grupp av arter har en illustration valts som visar de viktigaste karaktärsdragen hos denna grupp.

Register: Ett register har utarbetats för varje språk, för de vetenskapliga namnen och för 3-bokstavskoderna. Dessa register är *intelligenta*, dvs. *brasiliansk rovansjovis* kan hittas under *brasiliansk rovansjovis*, *rovansjovis*, *brasiliansk* och under *ansjovis*, *brasiliansk rov*.

En del svårigheter uppstod när registren skulle utarbetas för några av språken på grund av sammansatta namn. Till exempel anges engelska namn för familjen *Sparidae* i litteraturen som *sea bream*, *sea-bream* och *seabream*. Så att de olika formerna av sammansatta namn på besläktade arter skall kunna stå efter varandra i registren, har ett harmoniserat format valts för användning i registren. Detta kan skilja sig från ordbokens textmassa, där den form som oftast stöts på i litteraturen har valts. Det bör dock betonas att det inte verkar finnas fasta regler för vad som är namnens korrekta form.

Classification of aquatic animals and plants

The classification used is based on that of the 'taxonomic authority list'⁽¹⁾. However, only those families represented in the body of this glossary have been listed below.

The code indicated alongside each entry is the FAO taxonomic code which comprises eight digits to the level of the genus. The classification listed below only descends to the level of the family (five digits of the FAO code) which is given for each entry in the body of the glossary. The first digit is used to separate the main groups of aquatic organisms, the next two to provide a separation at about the level of the order. The last two digits (in brackets) refer to the family.

Clasificación de animales y plantas acuáticos

La clasificación utilizada es la de la «Taxonomic Authority List»¹ (lista taxonómica de referencia, publicada por la FAO). Sin embargo, en la lista facilitada a continuación sólo aparecen las familias representadas en el corpus de este glosario.

El código indicado junto a cada entrada es el código taxonómico FAO, que consta de ocho dígitos hasta el nivel de género. La clasificación que figura a continuación sólo descende hasta el nivel de la familia (cinco dígitos del código FAO), que aparece con cada entrada del corpus del glosario. El primer dígito se utiliza para separar los grupos principales y los dos siguientes como separación aproximadamente a nivel del orden. Los dos últimos dígitos (entre paréntesis) se refieren a la familia.

⁽¹⁾ Taxonomic authority list (1988), *Aquatic sciences and fisheries information system reference series*, No 8, FAO, Rome, 465 pp.

Klassifikation af vanddyr og -planter

Den benyttede klassifikation er »Taxonomic Authority List«⁽¹⁾. Nedenstående liste indeholder dog kun de familier, der forekommer i dette glossar.

Den kode, der findes sammen med hver termpost, er FAO's taksonomiske kode, som består af 8 cifre på slægtsniveau. Nedenstående klassifikation går kun ned til familieniveau (5 cifre af FAO's kode), som er det niveau, der er anført ved hver termpost i glossaret. Det første ciffer giver en opdeling i hovedgrupper, de næste to giver en underopdeling, som omtrent svarer til ordensniveau. De sidste to cifre (i parentes) henviser til familien.

Klassifikation der Wassertiere und -pflanzen

Die hier zugrunde gelegte Klassifikation ist die „Taxonomic Authority List“⁽¹⁾ (von der FAO veröffentlichte Referenzliste). Aufgeführt werden jedoch nur die in diesem Band erscheinenden Familien.

Jeder Eintrag ist auf der Ebene der Gattung durch den achtstelligen taxonomischen FAO-Kode gekennzeichnet. Die nachstehend aufgeführte Klassifikation reicht für alle im Korpus enthaltenen Arten nur bis zur Familie (5 Ziffern des FAO-Kodes). Die erste Ziffer dient zur Unterscheidung der Hauptgruppen, die folgenden zwei unterscheiden auf der Ebene der Ordnung (Abweichungen sind dabei möglich), während die letzten beiden (in Klammern) sich auf die Familie beziehen.

⁽¹⁾ Taxonomic authority list (1988), *Aquatic sciences and fisheries information system reference series*, No 8, FAO, Rome, 465 pp.

Ταξινόμηση υδρόβιων ζώων και φυτών

Χρησιμοποιήθηκε η ταξινόμηση της «Taxonomic Authority List»⁽¹⁾. Εντούτοις, μόνο οι οικογένειες που περιλαμβάνονται στο κύριο σώμα του γλωσσαρίου αυτού αναφέρονται παρακάτω.

Ο κωδικός που αναγράφεται δίπλα από κάθε λήμμα είναι ο ταξινομικός κωδικός της FAO ο οποίος περιλαμβάνει οκτώ ψηφία στο επίπεδο του γένους. Η παρακάτω ταξινόμηση κατέρχεται μόνο ως το επίπεδο της οικογένειας (πέντε ψηφία του κωδικού FAO) η οποία για κάθε λήμμα αναγράφεται στο κύριο σώμα του γλωσσαρίου. Το πρώτο ψηφίο χρησιμοποιείται για να διαχωρίσει τις κύριες ομάδες υδρόβιων οργανισμών, ενώ τα δύο επόμενα ως διαχωρισμός κατά προσέγγιση σε επίπεδο συνομοταξίας. Τα τελευταία δύο ψηφία (μέσα σε παρενθέσεις) αναφέρονται στην οικογένεια.

Classification des animaux et des plantes aquatiques

La classification utilisée est celle de la *Taxonomic authority list*⁽¹⁾ (liste taxinomique de référence, publiée par la FAO). Cependant, seules les familles figurant dans le corpus de ce glossaire apparaissent dans la liste ci-dessous.

Le code indiqué pour chaque entrée est le code taxinomique de la FAO, qui comprend huit positions jusqu'au niveau du genre. La classification ci-dessous s'arrête au niveau de la famille (cinq positions du code FAO), qui est mentionnée pour chaque entrée dans le corpus de ce glossaire. La première position est utilisée pour identifier les groupes principaux, les deux suivantes marquent la séparation approximativement au niveau de l'ordre. Les deux dernières positions (entre parenthèses) se réfèrent à la famille.

⁽¹⁾ Taxonomic authority list (1988), *Aquatic sciences and fisheries information system reference series*, No 8, FAO, Rome, 465 pp.

Classificazione degli animali e piante acquatici

La classificazione usata è quella della «Taxonomic Authority List»⁽¹⁾. Sono qui elencate soltanto le famiglie riportate nel corpo del glossario.

Il codice che accompagna ogni voce è il codice tassonomico FAO che comprende 8 cifre a livello del genere. Per tutte le voci del glossario la nostra classificazione si arresta al livello della famiglia (5 cifre del codice FAO). La prima cifra opera una distinzione fra i principali gruppi degli organismi acquatici, le due successive si collocano al livello dell'ordine, le ultime due (fra parentesi) si riferiscono alla famiglia.

Classificatie van waterdieren en waterplanten

De gebruikte classificatie is die van de „Taxonomic Authority List”⁽¹⁾ (Taxonomische Referentielijst). In onderstaande lijst zijn echter uitsluitend die families opgenomen die ook in het corpus van het glossarium vermeld worden.

De achter elk trefwoord aangegeven code is de taxonomische code van de FAO. Deze heeft acht posities en gaat tot op het niveau van het genus. De onderstaande classificatie gaat niet dieper dan het niveau van de familie (vijf posities in de FAO-code), deze wordt in het corpus van het glossarium bij elk trefwoord vermeld. De eerste positie wordt gebruikt om de hoofdgroep aan te duiden, de volgende twee posities onderscheiden tot op het niveau van de orde (hierin zijn afwijkingen mogelijk). De laatste twee posities (tussen haakjes) geven de familie aan.

⁽¹⁾ Taxonomic authority list (1988), *Aquatic sciences and fisheries information system reference series*, No 8, FAO, Rome, 465 pp.

Classificação das plantas e animais aquáticos

A classificação usada é a da «Taxonomic Authority List»⁽¹⁾. No entanto, só são apresentadas em seguida as famílias referidas neste glossário.

O código indicado em cada entrada é o código taxonómico da FAO, que inclui oito dígitos até ao nível do género. A classificação abaixo referida apenas desce até ao nível da família (cinco dígitos do código FAO) que é dado a cada entrada neste glossário. O primeiro dígito é usado para separar os principais grupos de organismos aquáticos, os seguintes para distinguir a nível da ordem, ou aproximadamente. Os dois últimos dígitos (entre parênteses) referem-se à família.

Vesieläinten ja -kasvien luokitus

Julkaisussa käytetty luokitus perustuu FAO:n luetteloon "Taxonomic authority list"⁽¹⁾. Seuraavassa on kuitenkin lueteltu vain tässä sanastossa esiintyvät heimot.

Sanastossa lajin rinnalla esitetään FAO:n taksonominen, kahdeksannumeroinen lajikoodi. Alla oleva lista ulottuu vain heimotasolle vastaten FAO-koodin viittä ensimmäistä numeroa. Jokaisella sanastoon otetulla lajilla on oma koodinsa. Ensimmäinen numero viittaa yleensä pääjakssoon tai luokkaan; kaksi seuraavaa numeroa karkeasti sijoittumiseen lahkoon tasolla. Kaksi viimeistä numeroa (sulkeissa) viittavat heimoon.

⁽¹⁾ Taxonomic authority list (1988), *Aquatic sciences and fisheries information system reference series*, No 8, FAO, Rome, 465 pp.

Klassificering av vattendjur och -växter

Den klassificering som har använts är FAO:s *Taxonomic Authority List* ⁽¹⁾. Listan nedan omfattar emellertid bara de familjer som är representerade i denna ordbok.

Den kod som anges vid varje post är FAO:s taxonomiska kod som består av 8 siffror på släktesnivå. Klassificeringen nedan sträcker sig endast ned till familjenivå (5 siffror av FAO:s kod), som är den nivå som anges vid varje post i ordboken. Den första siffran används för att göra en uppdelning i huvudgrupper, de följande två för en uppdelning som ungefär motsvarar ordningsnivå. De två sista siffrorna (inom parentes) hänvisar till familjen.

European Commission

Multilingual illustrated dictionary of aquatic animals and plants

Second edition

Luxembourg: Office for Official Publications of the European Communities

1998 – LI + 548 pp., num. illustrations – 17.6 × 25 cm

ISBN 92-828-1886-1

Price (excluding VAT) in Luxembourg: ECU 90

The second edition of this acclaimed illustrated dictionary sets out information on more than 1 500 species or groups of species of fish, crustaceans, molluscs, mammals and seaweeds which are either the object of international trade or the subject of rules designed to protect them. In each case the scientific name and family are given along with the most common names in 11 languages — English, French, German, Italian, Dutch, Danish, Spanish, Portuguese, Greek, Finnish and Swedish — accompanied wherever possible by a detailed line illustration. Over 1450 illustrations are provided.

This volume will facilitate communication at all levels — linguistic, commercial, scientific and technical. It will be an essential reference for those who are involved in the commercial fishing and seafood industries within and beyond the boundaries of the European Union.
