

VPHYTE

Phytase Enzyme

DESCRIPTION

VPHYTE is a phytase enzyme that catalyses the removal of inorganic phosphorus from Phytic acid thus making the feed readily digestible. Along with phosphorus other minerals like Ca, Zn, Cu, Mn and amino acids are released from phytate complex for physiological functions of body.

COMPOSITION

Phytase	3,000 u/g
Phytase	5,000 u/g
Phytase	10,000 u/g

BENEFITS

- Easily utilizations of phosphorus
- Improves the digestibility of all key feed components
- Gives better growth performance and improved FCR
- Allows the use of economical diets while obtaining optimum production
- Fat levels can be reduced by 4%
- Decreases fat storage in broilers
- Reduce wet droppings and odor
- Can be used in pellets with high tolerance/stability
- Better pellet quality

DOSAGE APPLICATIONS

VPHYTE 10,000 = 40-50 gram per Ton of feed
VPHYTE 5000 = 80-100 gram per Ton of feed
VPHYTE 3000 = 150-200 gram per Ton of feed
Or as recommended by veterinarian
