

SUPER SWEET JUBILEE

Sweet Corn

Jubilee Sweet Corn is a hybrid, standard (su) sweet corn variety known for its traditional corn flavor with more starch and less sugar. Large ears with golden yellow kernels

NOTES

VARIETY INFO

Botanical Name: *Zea mays* "Super Sweet Jubilee"

Plant Dimensions: 72-84"

Days to Maturity: 100

Zone: 2-9

SOWING INFO

Sow Outside: Sow 3/4-1" deep, 6-7" apart, rows 30-36" apart. Arrange in blocks of at least 4 rows for proper pollination, which is needed for well-filled ears. Successive plantings can be made through early summer; most growers prefer to extend the sweet corn season by planting a few varieties of different maturities. Once corn reaches to be 4 inches tall, thin out to 8-12 inches apart.

Start Inside: Not Recommended.

Days to Emerge: 3-10 days

Seed Depth: 1"

Seed Spacing: 4- 6"

Row Spacing: 2-3"

Thinning: Not required.

GROWING INFO

Harvesting: When kernels are full and "milky," generally indicated by a drying and browning of the ear silks. Record the date on which about half the plants show silk. Corn is ready to eat 18-24 days after ear silks first show; the warmer the weather, the sooner you can pick it.

Fruit: 8-1/2 to 9 inch ears filled with 16 to 18 rows of tender, sugar sweet, crispy kernels.
