Contributions to the IUCN/Species Survival Commission and the 1996 IUCN Red List of Threatened Animals

The Species Survival Commission gratefully recognizes its extensive network of volunteers who make production of the IUCN Red List possible. Those individuals who have contributed time and expertise are listed in the Acknowledgements. SSC also wishes to acknowledge those donors whose major financial contributions support a wide variety of SSC activities, as well as development and publication of the IUCN Red List.

The Sultanate of Oman established the Peter Scott IUCN/SSC Action Plan Fund in 1990. The Fund supports Action Plan development and implementation; to date, more than 80 grants have been made from the Fund to Specialist Groups. As a result, the Action Plan Program has progressed at an accelerated level and the network has grown and matured significantly. The SSC is grateful to the Sultanate of Oman for its confidence in and support for species conservation worldwide.

The Chicago Zoological Society (CZS) provides significant in-kind and cash support to the SSC, including grants for special projects, editorial and design services, staff secondments, and related support services. The President of CZS and Director of Brookfield Zoo, George B. Rabb, serves as the volunteer Chair of the SSC. The mission of CZS is to help people develop a sustainable and harmonious relationship with nature. The Zoo carries out its mission by informing and inspiring 2,000,000 annual visitors, serving as a refuge for species threatened with extinction, developing scientific approaches to manage species successfully in zoos and the wild, and working with other zoos, agencies, and protected areas around the world to conserve habitats and wildlife.

The National Wildlife Federation (NWF) makes a significant annual contribution to the SSC Conservation Communications Fund, in addition to grants for in situ conservation coordinated by the SSC. NWF is the largest non-governmental, non-profit conservation education and advocacy organization in the United States. NWF's emphasis is on helping individuals and organizations of all cultures, in the United States and abroad, to conserve wildlife and other natural resources and to protect the earth's environment to assure a peaceful, equitable, and sustainable future.

The Council of Agriculture (COA), Taiwan, has awarded major grants to the SSC's Wildlife Trade Program and Conservation Communications Program. This support has enabled SSC to continue its valuable technical advisory service to the Parties to CITES as well as to the larger global conservation community. Among other responsibilities, the COA is in charge of matters concerning the designation and management of nature reserves, conservation of wildlife and their habitats, conservation of natural landscapes, coordination of law enforcement efforts, as well as promotion of conservation education, research, and international cooperation.

The World Wide Fund for Nature (WWF) provides significant annual operating support to the SSC. WWF's contribution supports the SSC's minimal infrastructure and helps ensure that the voluntary network and Publications Program are adequately supported. WWF aims to conserve nature and ecological processes by: (1) preserving genetic, species, and ecosystem diversity; (2) ensuring that the use of renewable natural resources is sustainable both now and in the longer term; and (3) promoting actions to reduce pollution and the wasteful exploitation and consumption of resources and energy. WWF is one of the world's largest independent conservation organizations, with a network of National Organizations and Associates around the world and more than 5.2 million regular supporters. WWF continues to be known as World Wildlife Fund in Canada and in the United States of America.

The following organizations also played an important role in relation to the IUCN Red List:

Publication of the *1996 IUCN Red List of Threatened Animals* was made possible by IUCN/SSC's co-publishing partner **Conservation International (CI)**. CI secured funds for the Red List production, including a generous grant from the **Margot Marsh Biodiversity Foundation** (US) and supported publication and distribution of the publication. CI helps people improve their standard of living while conserving their valuable natural resources. CI develops and promotes models to conserve ecological "hotspots," threatened rain forests, and other ecosystems in Latin America, Africa, and Asia. To ensure lasting solutions to conservation challenges, these models integrate economic, cultural, and ecological factors, and are designed to strengthen local capacity for conservation.

The World Conservation Monitoring Centre (WCMC) is SSC's data management partner, and manages the database from which the IUCN Red List is generated, and has provided much of the information for this edition. WCMC, based in Cambridge, UK, is a joint-venture between the three partners in the *World Conservation Strategy*, and its successor, *Caring for the Earth: IUCN, UNEP (the United Nations Environment Programme), and WWF*. WCMC provides information services on the conservation and sustainable use of species and ecosystems and supports others in the development of their own information systems.

BirdLife International compiles and maintains the bird component of the IUCN Red List. BirdLife is a worldwide partnership of conservation organizations that seeks to conserve all wild bird species and their habitats. Through this, BirdLife helps protect the world's biological diversity and supports the sustainable use by humans of the world's natural resources. BirdLife is a national force in 58 countries around the world and represented in a further 26 nations.

The Nature Conservancy (TNC) supplied data for many of the North American species included in the IUCN Red List. TNC is an international non-governmental organization whose mission is to preserve the plants, animals, and ecological communities that represent the diversity of life on Earth. With more than 800,000 members, the Conservancy owns and manages over 1,600 preserves, the largest private system of nature sanctuaries in the world. Internationally, the Conservancy works to support in-country organizations and agencies that share its focus on the protection of biological diversity. The Conservancy has also helped establish a network of Natural Heritage Programs and Conservation Data Centers, based in state and national agencies and private organizations throughout the United States, Canada, and Latin America.

Foreword

The Red List of Threatened Animals is a warning flag, signalling for global attention to the perilous status of many species. In its approach, this Red List is different from all its predecessors and the existing Red Data books. It employs a more rigorous system for assessing degree of threat of extinction, a system reflecting current knowledge in population biology in relation to conservation concerns. This more objective approach should help focus attention on the causative factors behind the diminished geographic ranges, declining populations, and small numbers that characterize endangerment in many species.

The Red List is incomplete because of our ignorance of the vast majority of life forms on the planet, most of them invertebrates and other microfauna. Nevertheless, the status of the larger species covered by the Red List is indicative of the circumstances for many smaller species that occupy the same environments as the larger species. In this connection, a notable achievement in preparation of this edition of the Red List was review of all species of mammals. Thanks to this work and to the prior work of BirdLife International, two classes of vertebrates have now been assessed. It is of significance for conservation planning and action that the less vagile group, the mammals, has proportionately more species at risk of extinction than the birds.

The observations above reflect very considerable accomplishments. First, the development of the new system for categorizing threats was a formidable task. Led by Georgina Mace, the effort involved hundreds of consultations and much debate over several years before there was a product suitable for adoption by IUCN-The World Conservation Union. The conservation community is truly indebted to Dr. Mace and her many collaborators for their work.

Second, the application of the new system to species on prior lists and to other species was also a daunting undertaking. Many Specialist Groups of the Species Survival Commission and BirdLife International carried out this work. Jonathan Baillie gave crucial attention to coordination and instruction of this work, and his service deserves the gratitude of conservationists everywhere.

Most conservation actions are carried out in national contexts, and going forward, the new approach to categorizing conservation status needs to be adapted for use at the national level. The IUCN is encouraging the development of National Biodiversity Conservation Groups, and it is important that they be suitably equipped with cogent information in directing their efforts to effect conservation of endemic species.

As biological gauges of endangerment, the Red Lists of species should be considered as calls for attention to causal factors. The causes of endangerment range from habitat destruction and overharvesting to pollution and introduction of invasive species. Thoroughgoing review of the Red List in relation to these proximate causes may help focus relevant research, education, training, and policy development within the IUCN networks and the conservation community generally. In turn, such work can inform and inspire appropriate governmental and social actions to stem the loss of biological diversity illustrated so explicitly by this Red List. Looking ahead, such responsiveness will be obligatory if we are to deal at all adequately with global change phenomena that are impacting the long term survival prospects for ecosystems and their distinctive complements of species.

*George B. Rabb
SSC Chair*

Acknowledgements

The assistance of many people has been essential during the compilation of the 1996 IUCN Red List. In particular, we must acknowledge the many SSC Specialist Group chairs and other members, and the many other field scientists, who have provided data and opinions for this revision, usually in addition to already heavy workloads. We hope that we have not overlooked anyone in the list below, and trust that those who have made especially valuable contributions will not object to our alphabetical sequence.

Although it is always dangerous to draw attention to particular names from such a list, special mention must be made of the extraordinary effort made by the SSC Mollusc Specialist Group, under the leadership of Mary Seddon and Philippe Bouchet, which evaluated a huge number of species for inclusion in the 1996 IUCN Red List of Threatened Animals.

The data on birds are taken from BirdLife International's 1994 publication *Birds to Watch 2*, which is

the official source for birds on the IUCN Red List. We would like to thank Nigel Collar and Alison Stattersfield for their assistance in making the bird data available. Data for a number of species of North American reptiles, amphibians, fishes, and invertebrates are generously provided by the Nature Conservancy, and we thank Bruce Stein and Jeff Lerner for their help. Data on marine fishes were provided through a workshop supported by the Institute of Zoology (UK) and the World Wide Fund for Nature, and special thanks are due to Elodie Hudson, Georgina Mace, and Mike Sutton for making this possible. Additional thanks goes to Maurice Kottelat for his advice on Eurasian fishes. We also would like to thank Flora and Fauna International for supporting Simon Mickleburgh and Mark Day in their contributions to the Red List.

Particular thanks are due to Ulf Gärdenfors and Alison Stattersfield for writing the Guest Essays. Ulf's essay introduces the process that has now started to develop guidelines for the application of the new IUCN Red List categories at regional and national levels. Alison's essay highlights some of the lessons learned in using the new categories in the compilation of *Birds to Watch 2*.

Particular mention must be made of the extraordinary amount of work undertaken by the World Conservation Monitoring Centre in support of the *1996 IUCN Red List of Threatened Animals*. Research, fact-checking, and data entry were carried out by Angela Barden, Neil Cox, and Belinda Gray. Electronic data merges were undertaken by Martin Sneary, who also designed and implemented changes to the database, and produced output files for data tables and taxonomic lists. Julie Reay supervised the final production of tables and lists. Terry Hart was responsible for the final production of the tables and lists to produce the camera-ready copy. Overall quality control and coordination was provided by Brian Groombridge. Tim Johnson and Brian Groombridge were the project managers. WCMC generously supported this project over and above the level of funding provided by IUCN, without which this edition could not be produced.

The task of compiling the *1996 IUCN Red List of Threatened Animals* presented particular challenges, resulting from the adoption of the new IUCN Red List categories in November 1994. This made it impossible to carry listings forward from the 1994 IUCN Red List.

Jonathan Baillie took the responsibility of assisting the SSC Specialist Groups and other experts to use the new system, and apply it to thousands of species. Without Jonathan's assistance, the first ever evaluation of all mammal species for their threatened status would not have been completed in time for this edition. Jonathan developed a guide on how to use the new categories and criteria, which was widely used by SSC members. He was also responsible for writing most of the Introduction and Analysis sections of the *1996 IUCN Red List of Threatened Animals*. Brian Groombridge provided considerable assistance with the introductory section and, in particular, was responsible for the Organization of Information, Information Sources and Quality, and Data Table sections. Mariano Gimenez Dixon played a major role in helping to evaluate a number of the lesser-known species under the new system, and assisted Jonathan in providing support and advice to SSC members. Georgina Mace was a constant source of wisdom and advice throughout the process, and provided valuable editorial comments. Simon Stuart was the IUCN project manager, and served as overall editor of the introductory sections.

Production of the camera-ready copy at the offices of the Chicago Zoological Society was carried out by Diane Cavalieri. Elizabeth McCance oversaw the final compilation, and Susan Tressler also assisted during the final stages of production.

Production of the *1996 IUCN Red List of Threatened Animals* would not have been possible without the ongoing support of the long-term donors to the IUCN Species Survival Commission: the Sultanate of Oman (which established the Peter Scott IUCN/SSC Action Plan Fund); the Chicago Zoological Society; the National Wildlife Federation; the Council of Agriculture, Taiwan; and the World Wide Fund for Nature. English Nature has also provided financial support to assist in the publication of this Red List. In particular, publication of the 1996 IUCN Red List was made possible by IUCN/SSC's co-publishing partner, Conservation International. Conservation International secured funds from the Margot Marsh Biodiversity Foundation (US) and supported the publication and distribution of the publication. Particular thanks are due to Russ Mittermeier and Jorgen Thomsen of Conservation International for making all this possible.

Introduction

For more than thirty years, the Species Survival Commission (SSC) has been assessing the conservation status of species and subspecies on a global scale in order to highlight taxa threatened with extinction, and therefore promote their conservation. Although today we are operating in a very different political, economic, social, and ecological world from that of the first IUCN Red Data Book, the SSC remains firmly committed to providing the world with the most objective, scientifically-based information on the current status of globally threatened biodiversity. As species and subspecies are the bearers of genetic diversity and the building blocks of ecosystems, information on their conservation status and distribution provides the foundation for making informed decisions about preserving biodiversity at local to global levels.

Goals

The goals of the *1996 IUCN Red List of Threatened Animals* are to:

- Provide scientifically-based information on the status of species and subspecies at a global level
- Draw attention to the magnitude and importance of threatened biodiversity
- Influence national and international policy, and decision making
- Provide information to guide actions to conserve biological diversity

Improving the Red List as a Conservation Tool

We have introduced several innovations which have enhanced the effectiveness of the 1996 IUCN Red List as a conservation tool:

- At the species level, the conservation status of all vertebrates and the majority of invertebrates listed in the 1994 Red List has been re-assessed;
- For the first time, all mammal species have been assessed, in addition to many other species that had not previously been evaluated;
- We have adopted and applied a more objective system for classifying conservation status, that allows comparisons to be made across species in assessing likelihood of extinction;

- The information is presented in a more user-friendly manner so that it may be used by a much larger and varied audience; and
- We have tried to make the information more accessible as it is posted on the World Wide Web, with links to other threatened biodiversity information sources.

With the help of a network of more than 6,000 SSC Specialist Group members, and data from BirdLife International, the World Conservation Monitoring Centre, and The Nature Conservancy, the *1996 IUCN Red List of Threatened Animals* is the most comprehensive inventory ever of threatened species and subspecies on a global scale. The efforts of the large network of volunteers and partner organizations have resulted in the recognition of the 5,205 threatened taxa listed in this book.

The conservation status of every mammal species in the world is assessed for the first time in the 1996 IUCN Red List. The only other major taxonomic group that has been comprehensively evaluated is birds (Collar *et al.* 1994). Assessing every species in these taxonomic groups represents a major milestone in conservation, enabling us to determine clearly the overall status of mammals and birds, and to continue to monitor the trends within these higher-taxon groups.

Although determining the conservation status of all birds and mammals is a great step forward in conservation, these two classes represent about 30% of vertebrates and only 0.8% of all named species. Within the next five to ten years, we hope to have all known higher vertebrates and freshwater fishes completely assessed. Unfortunately, given lack of financial resources, and the sheer magnitude of the numbers of lower vertebrate and invertebrate species, it will probably be a long time before these taxa receive comprehensive conservation assessments. Furthermore, there are currently about 1.5 to 1.8 million named species, but it is estimated that the actual number of species in the world ranges from 5 to 10 million (May *et al.* 1995). If this prediction is correct, then thousands to millions of species may be missing from the Red List because they have not yet been discovered or described. Nevertheless, despite these difficulties, the number of invertebrate and fish species included within the Red List has risen sharply in the last three published editions.

To improve the quality and usefulness of the information in the Red List, we have used the new IUCN categories and criteria, approved by IUCN Council in 1994. This system improves the objectivity of the listing process by providing quantitative criteria that define each category of threat (Critically Endangered, Endangered, and Vulnerable). It also requires specialists who provide assessments to give a reason for the listing of each species or subspecies in a particular threat category. Providing specific reasons for listing: (1) improves the accountability of the system; (2) provides information that may lend insight into processes driving extinction for a specific species, taxonomic groups, or taxa in a particular region; and (3) provides the basis for systematically monitoring changes in status over time. Details of the new system can be found in the section entitled The New IUCN Categories and Criteria, and also in Annex 2 at the end of this publication.

The Red List was traditionally written for a scientific audience (Scott *et al.* 1987), but as the imperiled status of biological diversity has become increasingly evident, the general public and policy makers have taken a much stronger interest in the growing list of threatened taxa. We have changed the format of the publication to appeal to a much wider audience while retaining scientific content. Where possible, common names have been included for all species and subspecies.

The 1996 IUCN Red List of Threatened Animals is now on the World Wide Web at (http://www.wcmc.org.uk/data/database/rl_anml_combo.html). This allows any person with Web access to use the database to obtain information such as:

- What percent of known and assessed species are threatened?
- Which species and subspecies are the most threatened?
- Which taxonomic groups are at the greatest risk of extinction?
- Where are the most threatened species located?

Currently, links are being developed to allow direct access to relevant SSC Specialist Group Action Plans or Specialist Group home pages. IUCN will be developing Web connections between the Red List and other biodiversity information sources. This will enhance the value of the Red List as a starting point for exploration of conservation options, ranging from the genetic to the ecosystem level.

Organization of Information

The 1994 IUCN Red List of Threatened Animals was a major advance on its predecessors in clarity of layout and amount of information presented on each species. This is maintained in 1996, and the lists further reflect the refinement built into the revised system of categories.

There are eight categories in the new system. All taxa within these categories have an entry in the seven lists below except those in the Not Evaluated category (NE) and those in the Lower Risk subcategory of "least concern" (LR:lc). All assessments (except the small number of geographically isolated populations in List 6, which are not recognized taxonomically) are of the taxon as a whole, i.e. indicate the global risk of extinction.

The first priority in compiling this present edition of the Red List was to assess all known mammal species; the second was to re-assess all other vertebrates in the 1994 Red List; the third was to cover the invertebrate groups in the 1994 Red List for which an active IUCN Specialist Group exists. These goals have been achieved. It can be assumed therefore that any bird or mammal species (unless described too recently to have been evaluated, or not generally accepted as a full species) that is not in one of the lists in this publication falls within the "least concern" division of the Lower Risk category. The fourth priority was to deal with remaining invertebrates; relatively few of these have been assessed.

Contents of Taxonomic Lists

List 1

Threatened Species

This list includes all the full species categorized at global level as either Critically Endangered (CR), Endangered (EN), or Vulnerable (VU). Only taxa within any of these three categories are collectively termed "threatened", and this list is the current central catalogue of animal species identified as globally threatened under the new category system.

List 2

Lower Risk: conservation dependent

Species for which sufficient data exist for an assessment to be made, but which are not in a threatened category (List 1) or extinct (List 4) are Lower Risk. This has three sub-divisions. Of these, Lower Risk: conservation dependent (LR:cd) includes species that are the subject of a targeted conservation program, the ending of which would result in the taxon moving into a category of threat within five years.

List 3

Lower Risk: near threatened

This includes species in the "near threatened" subcategory of the Lower Risk category (LR:nt). Taxa in this subcategory are "near threatened" in the sense of being close to the threshold of the Vulnerable category.

List 4

Extinct and Extinct in the Wild

The second list in the 1994 Red List was a compilation of species categorized by IUCN as extinct or probably extinct in the wild, and a number of species that had not been categorized by IUCN but which were known to have become extinct since around 1600 AD. That previous compilation is the basis for this list, which includes two distinct categories in the revised system, Extinct (EX) and Extinct in the Wild (EW). This list reflects some movement of species between extinct and threatened categories as a result of new information or interpretation.

List 5

Data Deficient

This category includes species that lack the data needed to make an assessment of risk possible. Taxa in this category differ from those in the Not Evaluated category in that the question of data availability has been considered in the former but has not yet been considered in the latter.

List 6

Subspecies and Populations

This includes all subspecies that were listed in 1994 and which have been reassessed for 1996. All categories are included here, except Lower Risk: least concern. In most instances subspecies are only listed if the full species of which they are a component has also been evaluated. For the first time, a number of geographically isolated intraspecific populations have also been listed where a special conservation need has been identified. In List 6 the letters "cd" and "nt" in place of the criteria shown in List 1 indicate, respectively, the "conservation dependent" and "near threatened" subcategories of Lower Risk.

List 7

Taxa Removed from the 1996 Red List

Of the taxa that appeared in previous Red Lists, some have been evaluated using the new categories and some have not. In the former group, many have been assessed as Lower Risk: least concern (LR:lc). Taxa in this subcategory are not in general listed in this publication, but

an exception is made for taxa that were formerly listed in order to highlight the change in status. These appear in the first part of List 7. The names of taxa previously listed but not evaluated at the time of going to press appear in the second part of List 7. The second part of List 7 also contains a small number of as yet undescribed species for which full details have not been provided (see below) and which therefore have not been included in the main lists. It is possible that unresolved taxonomic problems may have led to some duplication of entities in List 7 and Lists 1-6.

We do not list any of the species formerly listed in the Commercially Threatened category (List 5 in the 1994 Red List). This category was a form of threat classification, not a risk assessment, and so is not recognized in the new system. Of the species formerly listed in this category, none has been assessed for the 1996 Red List, except the single vertebrate (*Macaca nemestrina*, now VU). We do not list any of the genera and other higher taxa formerly listed in List 3 of the 1994 Red List. Many of the Lake Victoria cichlid fishes have now been assessed at species level and appear in appropriate sections of the present Red List; none of the other groups has yet been assessed at species level. The new category system is valid only for species and subspecies, not higher taxa.

Notes on Species Category Lists

Each standard entry in Lists 1, 4 and 6 has the following format:

- scientific name
- common name (where available)
- category abbreviation (in bold), source of category assessment (in superscript, see key in Annex 1), criterion or criteria (for threatened categories only)
- range countries

Lists 2, 3 and 5 each contain species in a single category; the category in these cases appears in the title header for the list (left-hand page) rather than in the species entry itself. Some of the stocks and populations included with subspecies in List 6 have a distinguishing geographic or common name in an additional line under the scientific or common name.

We give the criteria for the highest category to which the species can be assigned but not for any lower category that might also apply (for birds this corresponds to the criterion or criteria printed in bold in *Birds to Watch 2*).

A small number of marine fishes in List 1 and List 6 have the letter C in parentheses after the species name. This indicates that a caveat formulated at the workshop

on categorizing marine fishes (Hudson and Mace 1996) applies in particular to these populations. The text of this caveat is reproduced in the following paragraph. A note at the start of the fish section of List 1 stresses the preliminary nature of the marine fish assessments in general.

The criteria (A-D) provide relative assessments of trends in the population status of species across many life forms. However, it is recognized that these criteria do not always lead to equally robust assessments of extinction risk, which depend upon the life history of the species. The quantitative criterion (A1a, b, d) for the threatened categories may not be appropriate for assessing the risk of extinction for some species, particularly those with high reproductive potential, fast growth and broad geographic ranges. Many of these species have high potential for population maintenance under high levels of mortality, and such species might form the basis for fisheries.

Except where a species is known only by fossil material, it is typically an accumulation of negative evidence, i.e. repeated failure to find a species, that leads to the conclusion that extinction has occurred. Several species once thought recently extinct have been rediscovered and doubtless others will be in future; conversely it is certain that many species will have become extinct unnoticed and sometimes undescribed. The extinct species list is thus liable to change significantly over time because of these factors, and also because of changes in species level taxonomy.

Distribution Information

Distribution is recorded in terms of country names. Unless geographically very remote from each other, islands and other territories are included with the parent country. In the case of species that only inhabit islands significantly distant from the mainland, the island name is given in parentheses (e.g. Spain (Canary Is)).

With regard to marine species, country records are provided only for strictly coastal or inshore (or riverine) cetaceans, and for otherwise marine species that return to land to breed or nest (note that species without a country range in the database from which the Red List is generated are not represented in the data tables). For some marine species, and most strictly marine species we show generalized ranges in terms of FAO Fishery Areas, indicated by square brackets (e.g. [Atlantic (northeast, northwest), Indian Ocean (eastern)]). For many freshwater species, usually those restricted to a single water sys-

tem, freshwater ranges are also indicated by square brackets. Rivers and lakes are distinguished by R. and L. respectively (e.g. [R. Cetina], [L. Toba]). In a few instances, a second river name (e.g. [R. Danube (R. Tisla)]) indicates a section of the drainage in which the species occurs.

In most cases where populations are known to have been introduced or reintroduced to a country, this is indicated by [int] or [re-int] after the country name in the distribution text. Similarly, where populations are known or suspected to have been extirpated from a country, this is indicated by (ex) or (ex?).

Geopolitical events during recent years may have led to some inconsistency or errors in the distribution infor-

mation provided. Within reasonable limits every effort has been made to determine which of the new nations that were part of the former Czechoslovakia, Yugoslavia and USSR support species previously attributed to the larger unit. Thus, any record for "Yugoslavia" should refer to the current Serbia-Montenegro, but might in some cases refer to the former federation.

In List 6, containing subspecies and a number of stocks and other geographically isolated populations, the latter are indicated by (S) after the species name, and unless otherwise clear, the population or stock is indicated on the line under the species name (e.g. *Acipenser gueldenstaedti* (S), (Caspian Sea stock)).

Information Sources and Quality

Conservation Information

In the threatened species lists, the superscript number following the category abbreviation keys to the list of sources (Annex 1); note that this indicates the person or group responsible for the category and criteria designated, not usually the source of any other data represented in that entry. When the assessment is attributed to more than one person, names are in alphabetical order.

Where an active SSC Specialist Group exists for a taxon, that group has in general undertaken the status assessment and provided the resulting category and specification of criteria. In some cases these assessments have been the product of group discussion, but often they represent the judgement of individual Specialist Group members. Gaps in Specialist Group coverage of vertebrates have been filled by SSC staff (Jonathan Baillie: most mammals, Mariano Gimenez Dixon: North American “lower” vertebrates) and WCMC Species Unit staff (several groups, including Eurasian fishes). North American assessments were based in most cases on data provided by The Nature Conservancy (TNC). The assessment of Australian amphibians was based on data provided by the Australian Nature Conservation Agency (ANCA). The final assessments of these species to be made by ANCA may differ from those provided here.

The information from TNC was provided as print-outs from their databases. TNC has its own Biodiversity Element Ranking System (see Master 1991) which is based on very similar information requirements to those used in assigning the new IUCN Red List categories. As a result, it was possible to apply the IUCN categories, using species-related data supplied by TNC.

All categorizations of bird taxa have been provided by BirdLife International, and reflect the contents of *Birds to Watch 2* (Collar *et al.* 1994). This is the world list of threatened birds, and includes lists of Data Deficient and other species not in the threatened category group. BirdLife International originally employed an earlier version of the revised category system than that finally approved by IUCN Council. Subsequently, “conservation dependent” has been subsumed in the Lower Risk category, and there is an additional qualifier for the A (Declining Populations) criterion; these changes have been made in this present list. A small number of Specialist Groups covering birds have later made further assessments of species using the final version of the new category system, but it was decided in the interests of standardization to maintain the BirdLife International

assessments. Some of the later assessments are incorporated in recently published Action Plans.

While nominally all mammal species (i.e. those listed in Wilson and Reeder, 1993, but not all of those subsequently described) have now been assessed, the assessment process has been based on relatively poor or sparse information in the case of many rodents, insectivores, and microbats. The need for better data is most pressing among these groups that are generally small or very small in body size, but very rich in species.

Future editions of the Red List will aim, higher-taxon group by higher-taxon group, to produce complete assessments of all reptiles, amphibians and fishes.

Nomenclature

We have followed standard world checklists whenever possible in order to promote nomenclatural stability. In a very few instances a Specialist Group has used alternative systematic opinion.

The following paragraphs note the main taxonomic sources used. We have adopted the names of phyla used by Margulis and Schwartz (1988), but list them in reverse sequence; classes are listed in alphabetical sequence within phyla (phylum names do not appear in the lists). The world list of amphibians edited by Frost (1985) and revised by Duellman (1993) lists orders, families, genera, and species in nested alphabetical sequence. There is much to commend this practice, particularly where no one system is familiar to all users, and we have treated reptiles and invertebrates in this way.

Mammals

The names and sequence of orders and families, and the species content of families follows Wilson and Reeder (1993). Genera and species are alphabetical within families. Species nomenclature generally also follows this source, except when a Specialist Group has expressed a very strong preference for another system, or has used nomenclature different from Wilson and Reeder and we have been unable to resolve consequent ambiguities about the population content of species and their distribution. Principal departures from Wilson and Reeder, relatively few in number, are found in the primates and bovids.

Birds

Nomenclature for genera and species generally follows Sibley and Monroe (1990, 1993). Solely to maintain uni-

formity with *Birds to Watch 2*, we use the names and sequence of orders and families, and the species content of families of Morony, Bock, and Farrand (1975).

Reptiles

Turtles and tortoises generally follow Iverson (1992); crocodilians follow King and Burke (1989); tuatara systematics are after Daugherty *et al.* (1990). Names in common use, including by Specialist Groups or in national sources, have been employed for other groups of reptiles: there is as yet no standard world species checklist for lizards or snakes.

Amphibians

Nomenclature and sequence consistently follow Frost (1985) as updated by Duellman (1993).

Fishes

The names and sequence of orders and families, and the species content of families follows Eschmeyer (1990). Genera and species are alphabetical within families. Names in common use, including by Specialist Groups or in national sources, have been employed at the species level: there is as yet no published standard world species checklist for fishes. We have changed some family names given in contributions from the SSC Freshwater Fish Specialist Group in order to conform with the taxonomy of Eschmeyer.

Invertebrates

Parker (1982) has generally been followed for nomenclature at class, order, and family level and above. There is a lack of widely accepted class-level checklists for invertebrates and in the absence of such sources no attempt has been made to standardize names submitted for inclusion.

Undescribed Species

We have followed a policy developed by SSC regarding listing of undescribed species. These can be accepted only under the following conditions:

- There is general agreement that the undescribed taxon is in fact a species.
- Clear distribution information can be provided.
- Listing the undescribed species will potentially aid in its conservation.
- Specimen reference numbers are provided by which the species can be traced without confusion.
- The museum or other institution holding the collection and the individual responsible for the proposal can be identified.
- Whenever possible a common name can be added.

Undescribed species are represented in the lists by the generic name and the abbreviation "sp." Details of specimen numbers and institution are available on request from WCMC.

The New IUCN Categories and Criteria

After a long process of review and consultation, the new IUCN categories and criteria were adopted by the IUCN Council on November 30, 1994. This system was developed to improve the objectivity of classifying the conservation status of species, subspecies, and populations on a global scale and to provide more useful information about the status of taxa.

Why a New System?

To create a meaningful list of threatened species, those applying the classification system must have a common understanding of the categories of threat. The definitions for the former IUCN threatened species categories were largely subjective. Thus, different individuals could obtain widely different assessments for the same taxon, even using the same information. This was not a major problem in the 1960s and 1970s, because there was one person responsible for determining the status of all the species in the Red Data Books. Thus the system was consistently applied despite the vague threatened category definitions (Collar 1992). However, since the early 1980s, the SSC has expanded greatly, and the responsibility of assessing the conservation status of species shifted to the numerous SSC Specialist Groups. As more people became involved in the assessment process and used their own interpretations of the IUCN categories, it became increasingly evident that a less subjective and more accountable system was needed.

Devising an objective system is a very challenging task, because there is no clear line that separates threatened and non-threatened species. There is in fact a continuum, and we have to choose appropriate points at which to divide one group from another. Discussions of a new approach for assessing extinction risk was a major theme at the symposium, *The Road to Extinction*, held by the SSC in 1984; however, no single approach was agreed upon (Fitter and Fitter 1987). Again, in 1989, the SSC Steering Committee requested the development of a new approach that would provide the conservation community with useful objective information for conservation planning.

Mace and Lande (1991) presented the first outline for a new system in a paper which recommended categorizing species by their probability of extinction over a given period of time. They suggested that numerical thresholds could be set for each category of threat, and made specific proposals appropriate for higher vertebrates. Immediately after the publication of the 1991 version of

the system, it was tested by a number of the specialist groups on many different taxa through a series of Conservation Assessment and Management Planning (CAMP) workshops, organized by the SSC Conservation Breeding Specialist Group (CBSG). Following an extensive review and consultation process, including a major international workshop, Mace *et al.* (1992) proposed a major revision of the 1991 paper, adapting the criteria and their quantitative thresholds for each of the categories of threat to apply to all species. Also, the SSC initiated a process of broad consultation to solicit comments and recommendations from SSC members, other IUCN Commissions, IUCN member organizations and governments, and other experts. This process of consultation led to two more revisions of the system before it was officially adopted by the IUCN Council in November of 1994.

The IUCN Red List categories and criteria are applicable to all taxonomic groups, except micro-organisms. By providing a clear quantitative framework for the categories of threat, the objectivity of the listing process has been increased. Enhancing the objective nature of the system is intended to improve the consistency in its application. This facilitates the comparison of the status of species and subspecies from very different communities and backgrounds. The new system has been applied to every species and subspecies in the *1996 IUCN Red List of Threatened Animals*. For further information on how the new IUCN categories and criteria have been applied to a broad range of taxa, refer to Collar *et al.* 1994 and *Species* 24 and 25. Several groups are now working on guidelines for the application of the Red List categories and criteria to specific groups of taxa.

Summary of the IUCN Categories and Criteria

Every species and subspecies evaluated with the new system is classified into one of the eight categories. Three of the eight categories are known as the categories of threat: Critically Endangered, Endangered, and Vulnerable. Five criteria, denoted by the letters A-E, as well as subcriteria, denoted by numbers and lower case letters define the categories of threat. While this may appear somewhat confusing at first, the following summary should help to outline clearly the exact roles of the categories, criteria and subcriteria. For more detailed information please refer to the Annex at the end of this publication entitled *IUCN Red List Categories*.

The Categories

There are eight well-defined categories (refer to the Annex for full details) that enable the classification of almost every species or subspecies in the world. The eight categories are illustrated in bold in Figure 1.

Extinct means that there is no reasonable doubt that the last individual has died. Extinct in the Wild means that the species has been extirpated from its natural habitat. The definition for Extinct in the Wild (see the Annex at the end of this publication) gives guidance on the circumstances in which it is possible to pronounce a wild species extinct. Critically Endangered, Endangered, Vulnerable (the categories of threat) each have quantitative criteria that broadly reflect different levels of risk of extinction. The details of these criteria are discussed at greater length in a separate section to follow. The Lower Risk category has three subcategories:

- **Conservation dependent:** taxa that do not qualify for the Vulnerable category only because of species-specific or habitat-specific conservation efforts, the cessation of which would result in the taxon qualifying for one of the threatened categories within a period of five years
- **Near threatened:** taxa that are not Conservation Dependent, but almost qualify for one of the Vulnerable criteria

- **Least concern:** taxa that are not in any immediate danger of extinction.

These subcategories are intended to support the monitoring of species' status, and can indicate particularly significant circumstances, such as species close to threatened status and those dependent on continuing conservation actions.

The remaining two categories do not reflect the conservation status of taxa. The Data Deficient category highlights taxa for which information to make a sound conservation assessment is lacking. The category Not Evaluated applies to taxa that have not yet been assessed with the new system.

The Categories in Use

When the categories are applied to an individual species or subspecies, they provide a snapshot in time of the taxon's conservation status or indicate that more information is needed. Comparison of assessments over time will identify trends in the conservation status of a particular taxon.

The categories provide a framework that allows for analysis of the conservation status between widely different higher taxonomic units such as Family Felidae, Order Diptera, or Class Reptilia. Also, comparing the classification of taxonomic groups over time provides informa-

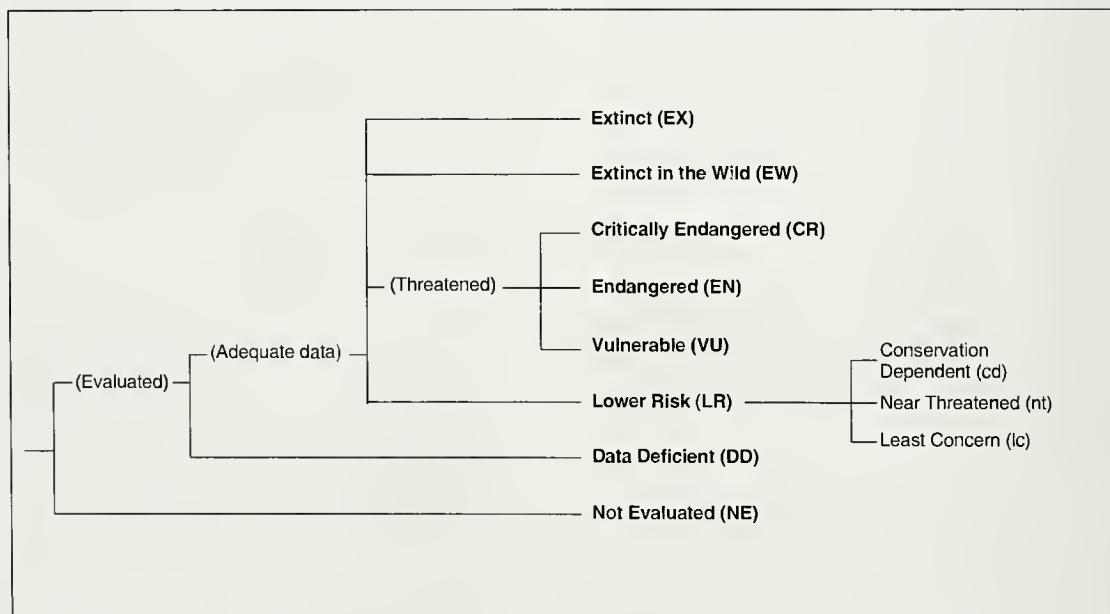

Figure 1. Structure of the Categories.

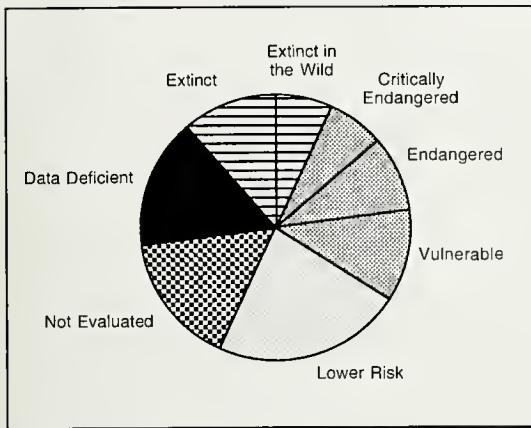

Figure 2. When all species of a higher taxonomic group are placed into one of the eight categories, it provides a useful indication of the current status of, and level of knowledge about that group.

tion on changing patterns and levels of threat. Figure 2 demonstrates how the current status of an entire taxonomic group can be summarized by the IUCN categories.

The Criteria and Subcriteria for the Categories of Threat

The three categories of threat, Critically Endangered, Endangered, and Vulnerable, are all determined by quantitative criteria. For each of the categories of threat there are five criteria (A-E), which are based on variables closely associated with extinction risk. The criteria A-D also have subcriteria that are used to justify the listing of a species under a given category and criteria. The five criteria are:

- Declining Population (past or projected)
- Small Distribution and Decline or Fluctuation
- Small Population Size and Decline
- Very Small Population or Very Restricted Distribution
- Quantitative Analysis (e.g., Population Viability Analysis)

The main purpose of the subcriteria is to provide further information to support the listing of a species in a particular category. However, the subcriteria may also provide insight into threats such as direct exploitation, habitat loss, pollution, and hybridization, or they may describe declines recorded by direct observation or changes in an index of abundance.

Although the criteria are expected to be applicable across broad taxonomic groups to encompass species

with very different life histories, it is not intended that all the criteria be applicable to a given species. Species qualify as Critically Endangered, Endangered, or Vulnerable by meeting any one of the five criteria (A-E) for that category of threat.

Requiring that the criteria and subcriteria are stated for each listing of a taxon in one of the categories of threat provides a more objective, informative, and accountable process. The identification of quantitative criteria when classifying a taxon in one of the categories of threat ensures that taxa are being assessed by a common standard, thus improving consistency of the application of the system among different users. The information given by the categories and criteria provides a general indication of the extinction process of a taxon and may be helpful in setting conservation priorities. The categories, criteria, and subcriteria are made public to explain why each taxon has been placed on the list, and the assessment can then be refined as further information emerges.

Although the criteria for each of the categories of threat are based on quantitative thresholds, inference and projection are permitted so that taxa for which there is very little information can also be assessed. Therefore, the person conducting an assessment is expected to use the best available information, in combination with inference and projection to test a taxon against the criteria. If there is any reasonable concern that a species is threatened with extinction, it should qualify for the criteria of one of the categories of threat.

How to Decipher the Criteria and Subcriteria

Following the scientific and the common name of each threatened taxon in the 1996 IUCN Red List is a category of threat, and if applicable, criteria and subcriteria. The three categories of threat, Critically Endangered, Endangered, and Vulnerable, represent decreasing levels of extinction risk. The quantitative criteria (A-E) help to identify taxa that are appropriate for one of the categories of threat. Finally the subcriteria provide reasons for listing taxa. Figure 3 illustrates how the categories, criteria, and subcriteria are used in the Red List.

The Giant Sea Bass is listed as CR A1bd. This means that the category of threat is Critically Endangered, which is defined as, "a taxon that is facing a very high risk of extinction in the wild in the immediate future." This species qualifies as CR under criterion A. The 1 is part of the subcriteria and indicates that there has been a decline of at least 80% in the number of mature individuals over the past 10 years or three generations (whichever is longer for this species). The rest of the subcriteria

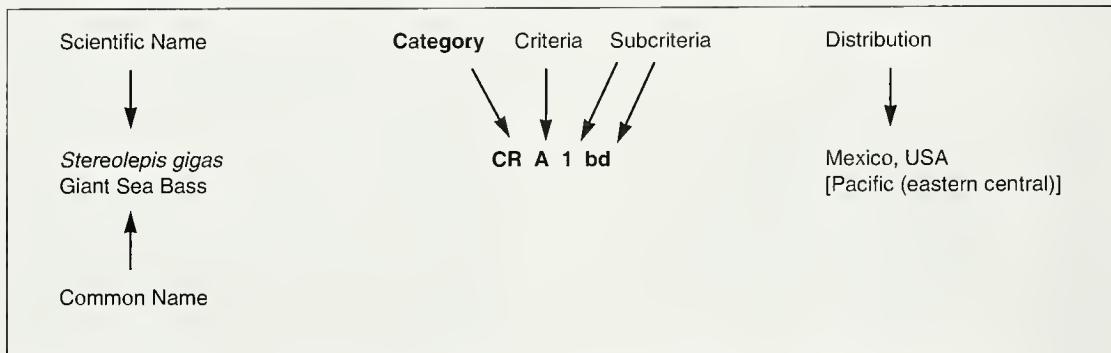

Figure 3. An example of the use of the categories, criteria, and subcriteria in the 1996 IUCN Red List.

listed are b, d, which provide information about how the decline was assessed. In this particular case the subcriteria state that the Giant Sea Bass was listed under the A criterion because of the rapid decline was documented by (b) an index of abundance and (d) exploitation. Using the summary of the IUCN categories and criteria, it is possible to decode the criteria and subcriterion for every taxon listed.

In Table 1 the categories of threat are listed along the top of the page, and the criteria and subcriterion are given in the appropriate columns. First identify the category of threat; then locate which of the five criteria are applicable and identify the subcriterion.

For example, by using Table 1, it is possible to decipher what Endangered: C2a means. First identify the Endangered category in the center at the top of the page. Then follow the Endangered column down to the C criterion which states that the taxa has a small population size and is declining. Identify the quantitative threshold for the Endangered column under the C criterion which is less than 2,500 mature individuals. Then locate the 2a subcriterion which states that the population is experiencing a continual decline and is fragmented with each subpopulation averaging less than or equal to 250 mature individuals.

It should be mentioned that the terms used in the criteria and subcriterion have very specific meanings in this context, or require particular methods to be used for assessing them. These definitions are included in Annex 2 at the end of this publication.

Lessons Learned in Applying the New IUCN Categories and Criteria

While the IUCN categories and criteria had been tested against many different types of species in its development phase, the compilation of the 1996 IUCN Red List

is the first time that the new system has been applied to such a large number of species with very different life histories. Overall, the system was very well received and it appears to have successfully flagged a wide variety of threatened species. In the process of applying the categories and criteria for the 1996 IUCN Red List, hundreds of specialists had the opportunity to assess all aspects of the new system. This has led to a number of constructive suggestions as to how the system could be fine-tuned. The following discussion outlines many of these recommendations, which focus on slight definition clarifications, and also on aspects of the A criterion that may require further examination.

Definitions

1. Definition of Mature Individuals

In the current system, mature individuals are defined as individuals capable of reproduction. This definition has been used to provide an indication of the number of individuals that will be able to replace themselves in the next generation. However, in some long-lived species, individual animals are capable of reproduction, but their young are not attaining maturity. Even though such individuals are breeding, for conservation purposes they should not be considered as mature individuals. This definition should be reworded to emphasize that only individuals capable of producing offspring that reach the age of maturity should be considered as mature individuals.

2. Definition of Generation Time

Generation time is currently defined as the average age of mature individuals in a population. In the new IUCN categories and criteria, generation time determines the window of time during which a species' probability of extinction, or its rate of decline, is being examined. For example, the A criterion is used to list species according

Table 1
Summary of New IUCN Categories and Criteria

| Use any of the A-E criteria | Critically Endangered | Endangered | Vulnerable |
|---|---|---|---|
| A. Declining Population population decline rate at least using either 1. population reduction observed, estimated, inferred, or suspected in the past or 2. population decline projected or suspected in the future based on: a. direct observation b. an index of abundance appropriate for the taxon c. a decline in area of occupancy, extent of occurrence and/or quality of habitat d. actual or potential levels of exploitation e. the effects of introduced taxa, hybridization, pathogens, pollutants, competitors, or parasites | 80% in 10 years or 3 generations | 50% in 10 years or 3 generations | 20% in 10 years or 3 generations |
| B. Small Distribution and Decline or Fluctuation Either extent of occurrence or area of occupancy and 2 of the following 3: 1. either severely fragmented: (isolated subpopulations with a reduced probability of recolonization, if once extinct) or known to exist at a number of locations 2. continuing decline in any of the following: a. extent of occurrence b. area of of occupancy c. area, extent and/or quality of habitat d. number of locations or subpopulations e. number of mature individuals 3. fluctuating in any of the following: a. extent of occurrence b. area of occupancy c. number of locations or subpopulations d. number of mature individuals | < 100 km ² < 10 km ² | < 5,000 km ² < 500 km ² | < 20,000 km ² < 2,000 km ² |
| C. Small Population Size and Decline Number of mature individuals and 1 of the following 2: 1. rapid decline rate 2. continuing decline and either a. fragmented or b. all individuals in a single subpopulation | < 250 25% in 3 years or 1 generation any rate all sub-pops ≤ 50 | < 2,500 20% in 5 years or 2 generations any rate all sub-pops ≤ 250 | < 10,000 10% in 10 years or 3 generations any rate all sub-pops ≤ 1,000 |
| D. Very Small or Restricted Either 1. number of mature individuals or 2. population is susceptible | < 50 (not applicable) | < 250 (not applicable) | < 1,000 area of occupancy <100 km ² or number of locations < 5 |
| E. Quantitative Analysis Indicating the probability of extinction in the wild to be at least | 50% in 10 years or 3 generations | 20% in 20 years or 5 generations | 10% in 100 years |

to specific rates of decline in the past or future for ten years or three generations, whichever is longer. If a species' generation time is 12 years, then rates of decline are examined over the past and future 36 years.

The current definition of generation time does not work well for species that are experiencing heavy exploitation or direct harvesting. This is because when populations are heavily exploited, the larger older individuals are usually the first to be taken, thus reducing the average age of the population, and decreasing the generation time. With a shorter generation time, rates of decline and probabilities of extinction will be examined over a shorter time-frame, making it less likely for the species to qualify under the appropriate category of threat. To avoid this anomaly, the definition should be reworded so that generation time is defined by the average age of parents in the population, prior to exploitation.

3. The Application and Definition of Conservation Dependent

Conservation Dependent is now a subcategory of the Lower Risk category. The subcategory is currently used to highlight species that would qualify for the Vulnerable category if it were not for species-specific or habitat-specific conservation efforts. If this definition were broadened so that Conservation Dependent could be applied to the categories of threat, then the Red List would provide valuable insight into the number of species, at all levels of threat, that are receiving beneficial conservation attention. Conservation Dependent would then be defined as an optional subcriterion used for species that would fall into a higher category of threat or be driven to the point of extinction, were it not for conservation efforts.

Challenges with the A criterion

1. Maximum Generation Time

Generation time is defined by the average age of mature individuals in the population. The A criterion states that a taxon's rate of decline should be examined in the past or future 10 years or three generations. Thus, generation time is often used to determine the window of time during which the decline of a taxon will be measured to determine if it qualifies for one of the categories of threat. Generally, the longer the time period, the more likely it is that a taxon will qualify for one of the categories of threat.

Using three generations to monitor a species' population status standardizes measurement of rates of decline across widely different taxa. A minimum of 10 years has been set because there is little that can be done in terms of conservation planning if a taxon is identified as rapidly

declining at the last minute. Currently, there is no upper limit on the time period during which declines are examined. For example, if the generation time of a species is 50 years, then the A criterion requires that the rates of decline be monitored over the past and future 150 years. Just as it is impractical for conservation purposes to use very short generation times, it is in most cases also impractical to attempt to determine what happened too far back in the past, or what may happen in the distant future. A cap of about 75 years would ensure that measured and predicted declines were being assessed over time-frames where circumstances can be judged with more certainty.

2. Identification of Depleted Taxa

Under the A criterion, a species will not be listed under one of the categories of threat unless there are recorded declines of at least 20% over the past or future 10 years or 3 generations, whichever is longer. Therefore, if a population continues to decline at 15% over that time frame, it will not be listed as threatened.

Species that have experienced a major decline such as 90% over the appropriate time frame will be listed as Critically Endangered. However, if the species then declines less than 20% over 10 years or three generations it will no longer be considered threatened. For precautionary reasons the taxon would remain on the list for five years and then would be removed.

In these two situations it appears that the system is not effectively identifying species that have undergone severe depletion and would intuitively be threatened with extinction. However, the A criterion is one of five criteria that have been developed to assess the conservation status of a species. The B, C, D, and E criteria all highlight species that are threatened due to their restricted distribution or low numbers. Thus, if a taxon is not identified by the A criterion, it should be picked up by one or more of the other criteria once the population or distribution becomes small enough. The problem is that some populations undergo extreme depletion, for example a reduction to 5% of the original population, but are still too widely distributed or have too many mature individuals to qualify for any of the other criteria.

Large populations that are reduced to a small percentage of their former population may persist for many generations. However, it is possible that these populations are much more prone to proximate causes of extinction. If this is the case, then there is no specific criterion that effectively flags the high probability of extinction that these species face.

Unless it can be proven that species that have had major past declines do not have a significantly higher probability of extinction, then one option to address this apparent shortfall in the new system would be to use the

A2 criterion. This criterion flags species that may experience significant declines in the next 10 years or three generations, whichever is longer. However, it would be more effective for conservation purposes to develop criteria that specifically highlight species that have undergone extreme depletion, but do not qualify for the other criterion.

3. Shifting Time Scale for the A criterion

The A criterion assesses the rates of population decline over time. The criterion is divided into two: A1 assesses the rate of decline in the past 10 years or 3 generations, and A2 assesses the predicted rates of decline in the next 10 years or three generations. This rigid division of time-frames may lead to a misrepresentation of a species' conservation status if the decline is occurring at the time of the assessment. For example, if a species has decreased by 10% in the past five years and is projected to decline by another 10% in the next five years, it would not be listed under the current system. Excluding declines that are occurring while the assessment is being made does not make sense when the objective of the criteria is to identify a 20% decline over 10 years or three generations. However, the original intention was that there should be an opportunity to use a shifting time window, which the current wording of the criteria does not make clear. The A1 and A2 subcriteria could possibly be merged, leaving a single A criterion. The past and future time-frames of 10 years or three generations could be maintained, but should be flexible enough to measure declines over any period, providing that the furthest point in time from the present (either past or future) is no greater than 10 years or three generations (whichever is longer).

4. Rates of Decline and Probability of Extinction

The A criterion is based on the assumption that a species is more prone to extinction when numbers of mature individuals show persistent declines. With a 20% decrease in mature individuals the species qualifies for Vulnerable, with a 50% decline, Endangered, and with an 80% decline, Critically Endangered. However, species with high growth rates, high reproductive potential, and early maturity can experience a significant decrease in mature individuals, but may be less prone to extinction than species with low growth and reproductive rates. The categories of threat do not reflect probability of extinction with precision across taxa, and may be particularly imprecise when only the A criterion is used. This issue requires further investigation.

5. Managed Populations and Rates of Decline

When exploiting wild populations, the management strategy is often to reduce the number of mature individuals in order to increase productivity, thus increasing the sustainable harvest levels. For some fish populations, managing for sustainable harvest entails a reduction of more than 50% of mature individuals. Despite the fact that these reductions are intentional, these species are identified as potentially threatened with extinction under the red listing system.

It is very difficult to determine levels of exploitation that are sustainable, and even if accurate harvest levels are determined, history has repeatedly shown that such management schemes are rarely followed. Also, there is still uncertainty as to whether or not a population of highly reproductive fishes, managed at reduced numbers of mature individuals over long periods of time, are significantly more prone to extinction. There could be long-term negative genetic implications resulting from this type of management. Species that are exploited in such a manner might persist for several generations, slowly becoming more susceptible to extinction.

Currently, if the number of mature individuals in a population decreases by 20% over 10 years or three generations in managed populations, then the species is listed as threatened. Once the population is no longer decreasing by 20% over 10 years of three generations (e.g., if the management is now achieving constant population size at high productivity levels), then it is retained on the list for five years and then delisted. Therefore, if the number of mature individuals is reduced by 20% or more as part of a sustainable management scheme, the taxon will initially be listed in a category of threat, but if the management is successful the species will soon be removed from the threatened list.

It is recognized that in the adoption of a completely new system that there will be growing pains and that slight revisions are inevitable. However, we are still learning, and many issues require further examination, which makes it impractical to revise the new system immediately. Only once we are certain that the majority of the glitches have been identified and addressed will the IUCN categories and criteria undergo revision.

Analysis

By Jonathan Baillie

The Status of Globally Threatened Species

Ideally, the IUCN Red List would contain detailed information on the conservation status of every species in the world and identify the region or ecosystem in which each species lives. This information would make it easier to estimate the magnitude of the loss of species diversity and would greatly aid in the identification of areas enduring the greatest biological impoverishment. Conservationists would then have better access to sound information from which to set priorities, and governments and decision makers would be more aware of the implications of their policies and actions on the future of the world's biological resources.

Currently, the conservation status is only known for a small proportion of all animal species, and there is a strong bias toward terrestrial vertebrates and species found in biologically well-studied regions of the world. However, what we do know indicates clearly that there is strong cause for concern.

This edition of the Red List, which includes 5,205 species threatened with extinction, is the most comprehensive list of globally threatened species ever compiled. All known species of birds and mammals have been evaluated, with the result that 25% of mammal species and 11% of bird species are classified as being threatened with extinction. Not all reptile, amphibian, and fish species have been assessed, but of those that have been evaluated, rough estimates of the percent that are threatened are: 20% of reptiles, 25% of amphibians, and 34% of fishes (mostly freshwater).

Relatively few invertebrates (mainly insects, spiders, crustaceans and molluscs) have been assessed making it difficult to estimate the percentage that are threatened. However, among the invertebrate groups that have received the most attention, there are large numbers of threatened species: more than 500 insects, 400 inland water crustaceans, and 900 molluscs.

The information in this book is meant be used in a variety of ways. First, it is hoped that the publication of the extensive lists of threatened species and subspecies will draw attention to the serious situation now faced by animal species worldwide. Second, the detailed information included on which species and higher taxa are most at risk, as well as information on the general nature of the threats, and the geographical distribution of these species, will enable decision makers to address the issue

by supporting appropriate conservation actions. Finally, the data presented will provide a rich source of basic information on which conservation biologists and other scientists can base analyses aimed to understand and thus better address the current trend of biological diversity depletion.

The following general analysis is based on the information presented in the *1996 IUCN Red List of Threatened Animals*. It is hoped that specialists will use the tables and data in this book to explore the issues further.

Biases in the 1996 IUCN Red List

When reading this analysis section of the 1996 IUCN Red List, it is important to recognize some of the biases that exist in the data in order to understand why some higher-taxon groups and regions appear to have more threatened species than others.

The current information on the status of threatened species is heavily biased towards terrestrial vertebrates. Figure 1 indicates the total number of species that have been categorized as threatened for each major vertebrate group (mammals, birds, reptiles, amphibians, and fishes), as well as for a number of invertebrate groups (molluscs, insects, crustaceans, and other invertebrates).

From the number of vertebrates and invertebrates listed as threatened, it may appear that the two groups have received a similar degree of attention. However, more than 95% of all known animals are invertebrates (Hammond 1995). Hence, this group is proportionally under-represented.

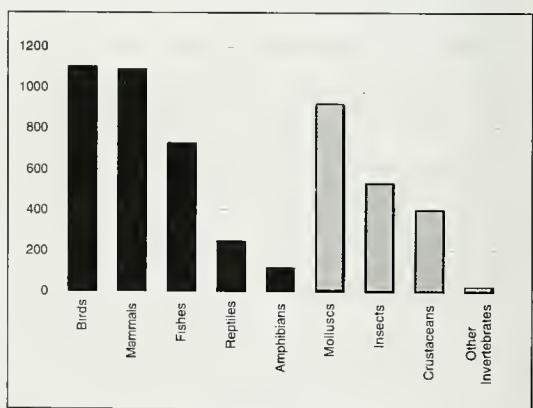

Figure 1. The number of threatened vertebrate versus invertebrate species that have been listed in the 1996 IUCN Red List.

The need for a stronger focus on invertebrate conservation has long been recognized, but information on the status and distribution of the majority of invertebrates simply does not exist (Groombridge 1993). Although the number of invertebrates listed in the last two IUCN Red Lists has sharply increased, any attempt to ensure that they are adequately represented would require large amounts of time and resources. However, it is unlikely that sufficient resources will be made available for invertebrate conservation until the values of the general public and national governments change to recognize the need to protect all forms of life.

The attention of naturalists and conservationists has also long been focused on terrestrial rather than marine environments. Although about two-thirds of the earth's surface is covered by seas, our knowledge of the basic ecology, distribution, and status of most marine species is extremely limited. As a result, marine species are poorly represented in this list. Even among vertebrates, information on marine species is very poor compared to their terrestrial counterparts. Of the terrestrial vertebrates, roughly 48% have been assessed, while only 1.7 % of the marine vertebrates (primarily three classes of fishes) have been evaluated.

Some regions have been more comprehensively assessed than others. Countries such as the United States, Australia, and South Africa, which have been subject to detailed review, may have proportionally more species listed than countries in less well studied regions. Also, specific countries or regions that are the focus of an SSC Specialist Group, or which have produced their own regional or national Red Lists, may also have a relatively greater representation in the *1996 IUCN Red List of Threatened Animals*. Despite these biases, the information in the Red List can be used to draw out some general conclusions.

Which Vertebrate Groups are the Most Threatened?

Birds were the first vertebrate class to be comprehensively assessed. This assessment was based on an earlier version of the new system, but one almost identical to the new IUCN categories and criteria (Collar *et al.* 1994). The results show that 168 (2%) of all bird species are Critically Endangered, 235 (2%) are Endangered, and 704 (7%) are Vulnerable (Figure 2). In total, 11% of the world's avifauna is threatened and another 9% is near-threatened. The fact that 11% of all bird species are threatened was of great concern (Collar *et al.* 1994), and it was feared that other terrestrial life-forms, not yet comprehensively evaluated, might be experiencing similar degrees of threat. The IUCN categories and criteria have

now been applied to all mammals, and the results indicate that the level of threat to biodiversity could be even worse than anticipated. For mammals, 169 species (4%) are Critically Endangered, 315 (7%) are Endangered, and 612 (14%) are Vulnerable (Figure 2). This means that 25% of the total number of mammal species are threatened with extinction. If the Lower Risk subcategories, conservation dependent and near threatened, are taken into consideration, 41% of all mammals are either threatened or close to Vulnerable.

Given the fact that there are more than twice as many bird species as mammal species, it is interesting that the total number of threatened species in each threat category is very similar. Four mammal and three bird species are Extinct in the Wild; 169 mammal and 168 bird species are Critically Endangered. In total there are 1,099 threatened and Extinct in the Wild mammal species and 1,111 threatened and Extinct in the Wild bird species.

Perhaps mammals are an anomaly, and the status of birds is a more accurate indicator of the status of other life-forms. Unfortunately, current information suggests that mammals are better indicators of the level of threat of other taxonomic groups. Since reptiles, amphibians and fishes have not been comprehensively assessed, it is impossible to make definitive statements about their overall conservation status. However, approximately 20% of the reptile, 25% of the amphibian, and 34% of the fish species that have been assessed are threatened with extinction. For summary tables on the status of each taxonomic group refer to Data Table 2, page 50.

It appears that biodiversity is much more threatened, at least at the species level, than was previously realized. It has been widely assumed that approximately 10% of the world's species are globally threatened, following the 'bird model'. But if birds, with their high levels of mobility, are on the average much less threatened than other groups, the use of this model as a reference point should be reconsidered. If mammals are better indicators of the status of other taxonomic groups, then 25% of the world's species could be globally threatened, a sobering statistic.

Which Mammal Orders are the Most Threatened?

Of the 26 orders of mammals, 24 contain threatened species. The six largest orders all have more than 50 threatened species: Rodentia 330, Chiroptera (bats) 231, Insectivora 152, Carnivora (cats, bears, otters etc.) 65, Primates 96, and Artiodactyla (even-toed ungulates) 70. Carnivora, while the fourth largest order, has fewer threatened species in total than Primates and Artiodactyla. This is surprising, because intuitively, one

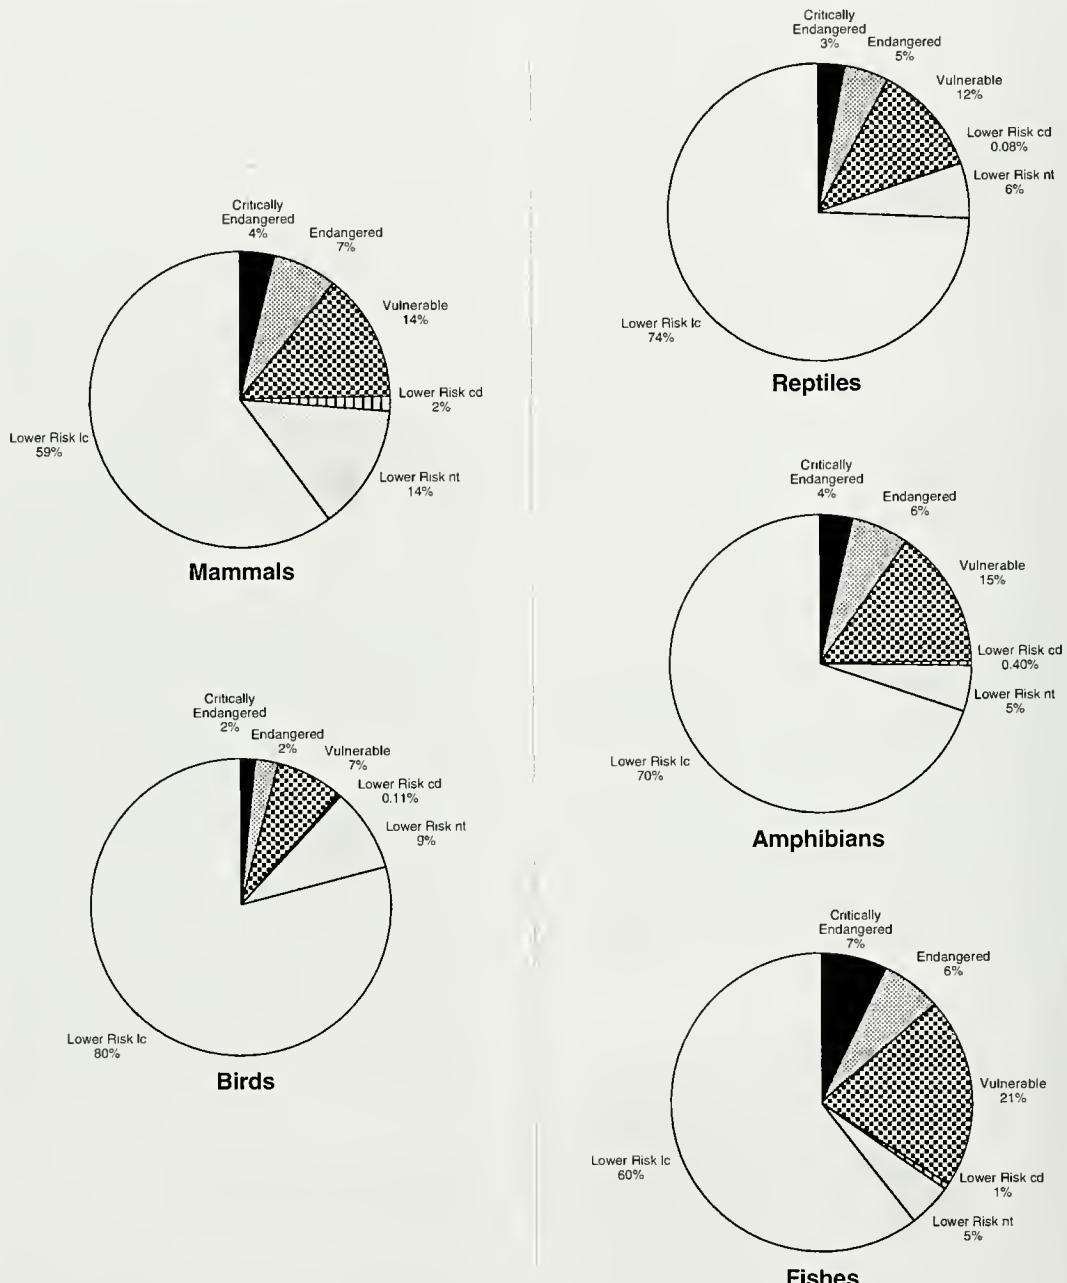

Figure 2. Which vertebrates are the most threatened? The mammal and bird pie charts represent all the known species for which there is enough information to make a sound conservation assessment. The reptile, amphibian, and fish charts represent all assessed species for which there is adequate information to assign a conservation status. The figures used for the number of assessed species are based on the number of species estimated to be assessed in the 1994 IUCN Red List. These estimates for the number of assessed species are 20% of reptiles, 12% of amphibians, and <10% of fishes (Groombridge 1993).

would expect a group of species so high in the trophic scale to have a very large number of threatened species. For the total numbers of threatened mammals in each order see Data Table 1, page 44.

If these same six orders are examined in terms of the proportion of species that are threatened in each, the sequence changes significantly (Data Deficient species have not been included): Primates 45.5%, Insectivora 36%, Artiodactyla 32.7%, Chiroptera 26.2%, Carnivora 25.8%, and Rodentia 16.6%. While these numbers are very alarming, there are many smaller orders that have a much higher proportion of threatened species (Figure 3).

Figure 3 depicts the proportion of each order that is threatened. This approach highlights some of the smaller orders with a high proportion of threatened species. This is important because each order represents a morphologically and genetically unique group. One hundred percent of Proboscidea (two species of elephant), Notoryctemorphia (two species of mole-like marsupial), Sirenia (four extant species of sea cow), and Microbiotheria (one species of opossum-like species) are threatened. In the first two of these orders, all the species are Endangered; and in the last two, all are Vulnerable.

Other small and highly threatened orders are: Perissodactyla (horses, tapirs and rhinos); Macroscelidea (elephant shrews); Monotremata (egg-laying mammals); Hyracoidea (hyraxes); and Dermoptera (flying lemurs). The 18 species of Perissodactyla have the highest percentage of Critically Endangered species (four species; 22%). The situation is even worse when one considers that, in addition, one species is Extinct in the Wild, four are Endangered, three are Vulnerable, one is conservation dependent, and one is near-threatened. In the order of Macroscelidea, three species are Endangered, and four are Vulnerable. There are three species of egg-laying mammals in the order Monotremata. Of these, one is known to be Endangered. Three of the six species of hyraxes and one of the two species of flying lemurs are listed as Vulnerable.

Which Bird Orders are the Most Threatened?

Of the 27 orders of birds, 23 contain threatened species. The following five orders have more than 50 threatened species each: Passeriformes (song birds) 542; Psittaciformes (parrots) 89; Galliformes (pheasants, partridges, etc) 71; Columbiformes (pigeons and doves) 55; and Gruiformes (rails and cranes) 54. While these are all in the top ten largest orders in terms of numbers of species, the correlation between the size of the group and the number of threatened species does not match as well as it does with the larger mammal orders. For example, there

are more species within the Apodiformes (swifts and hummingbirds) than four of the five orders listed above, yet fewer species (35) are listed as threatened. For the total number of threatened birds in each order refer to Data Table 1, page 44.

The five orders of birds that have the highest percentage of threatened species are: Gruiformes (25.6%); Galliformes (25.2%); Psittaciformes (24.7%); Columbiformes (16.7%); and Coraciiformes (kingfishers, bee-eaters, etc.) (11.5%). Among the Passeriformes, only 9.5% of the species are threatened.

Other medium-sized and small orders that should be highlighted include: Procellariiformes (albatrosses and petrels), Podicipediformes (grebes), Apterygiformes (kiwis), and Casuariiformes (cassowaries). Twenty-nine percent of Procellariiformes and 18% of Podicipediformes are threatened. These percentages are not very high in relation to some mammal orders. However, both orders have very high percentages of Critically Endangered species, 10% and 9% respectively.

There are only three species of kiwis, of which all are considered Vulnerable. Of the four species of cassowaries, two are Vulnerable and one is considered Lower Risk near-threatened.

Which Reptiles, Amphibians, Fishes, and Invertebrates are the Most Threatened?

In total, 253 species of reptiles have been assessed as threatened with extinction. Of the six orders of reptiles, three have been completely assessed. These are Crocodylia (crocodiles and alligators), Rhynchocephalia (tuatara), and Testudines (tortoises, turtles, and terrapins). The remaining three orders (snakes, lizards and amphisbaenians) make up the majority of reptiles and are still awaiting comprehensive assessment. However, much insight can be gained by looking at the status of the three groups that have been comprehensively evaluated.

There are two species of tuatara, both of which are found on small islands around New Zealand. These are the last remaining representatives of an order, and one of the species is listed as Vulnerable.

Of the 23 species of crocodilians, ten (43%) are threatened (Figure 5). While this high percentage is alarming, and some species continue to decrease in numbers, the crocodilians are one of the few orders that have experienced an overall improvement in status over the past 20 years due to conservation measures (Messel *et al.* 1992).

Of the known species of tortoises, turtles and terrapins, (not including Data Deficient species) 96 (38%) are threatened, 47 (19%) are near-threatened, and one is con-

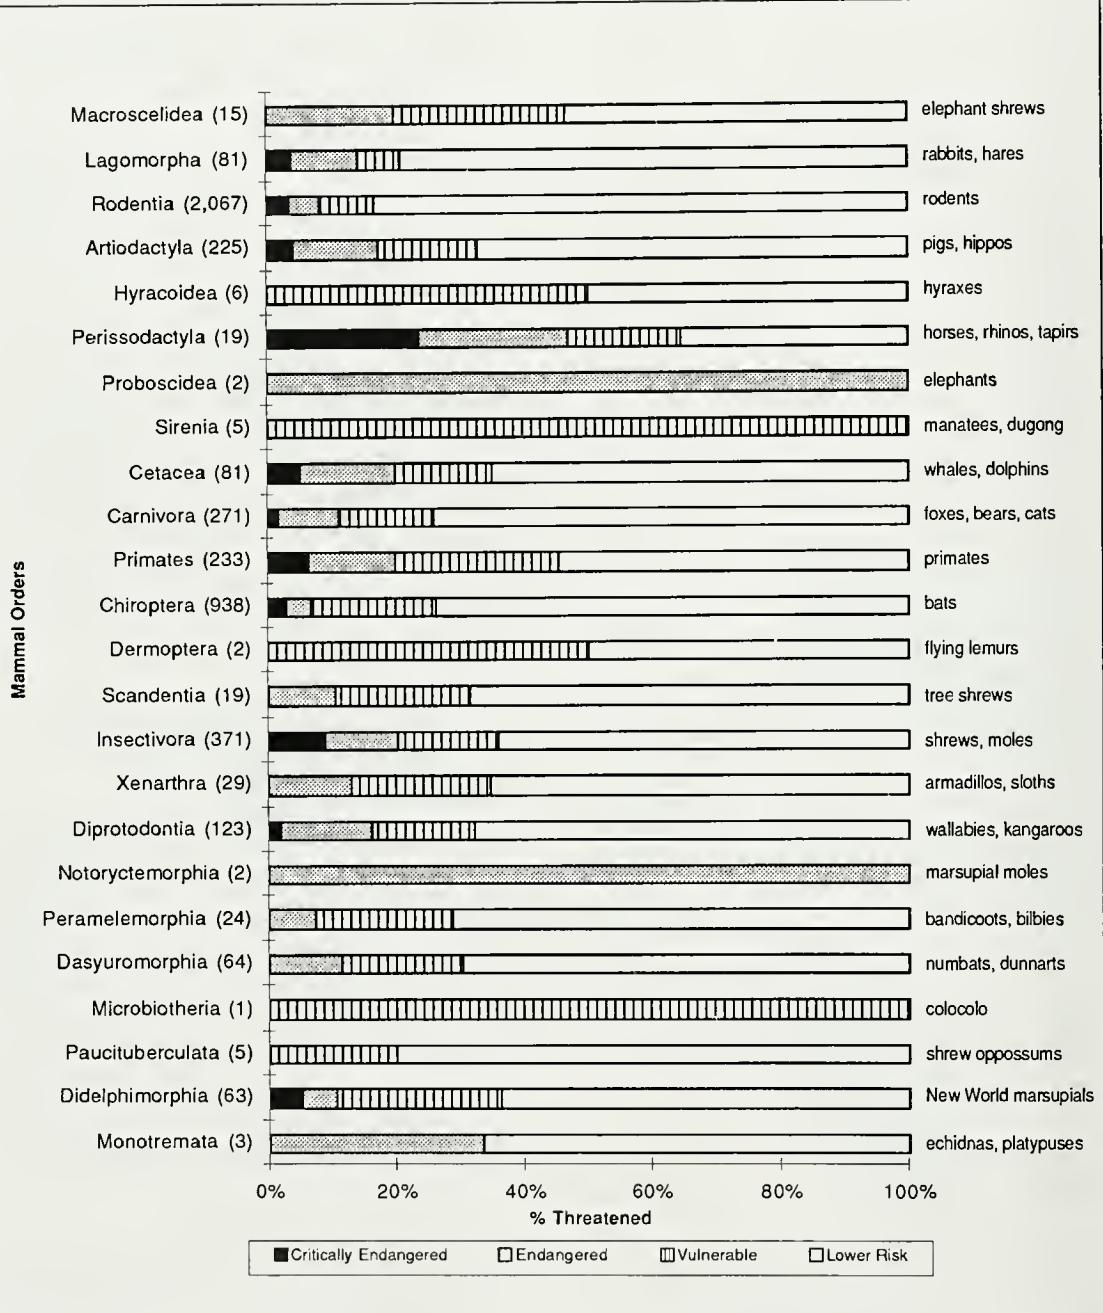

Figure 3. The proportion of each mammal order that is threatened. Orders where no species are threatened have not been listed. These are Pholidota (pangolins) and Tubulidentata (the aardvark). While the Order Pholidota is not listed, four of the seven species are listed as Lower Risk near threatened. Species that are Data Deficient are not included. The total number of species in each order is listed in parentheses. Examples of each order are provided on the right hand side.

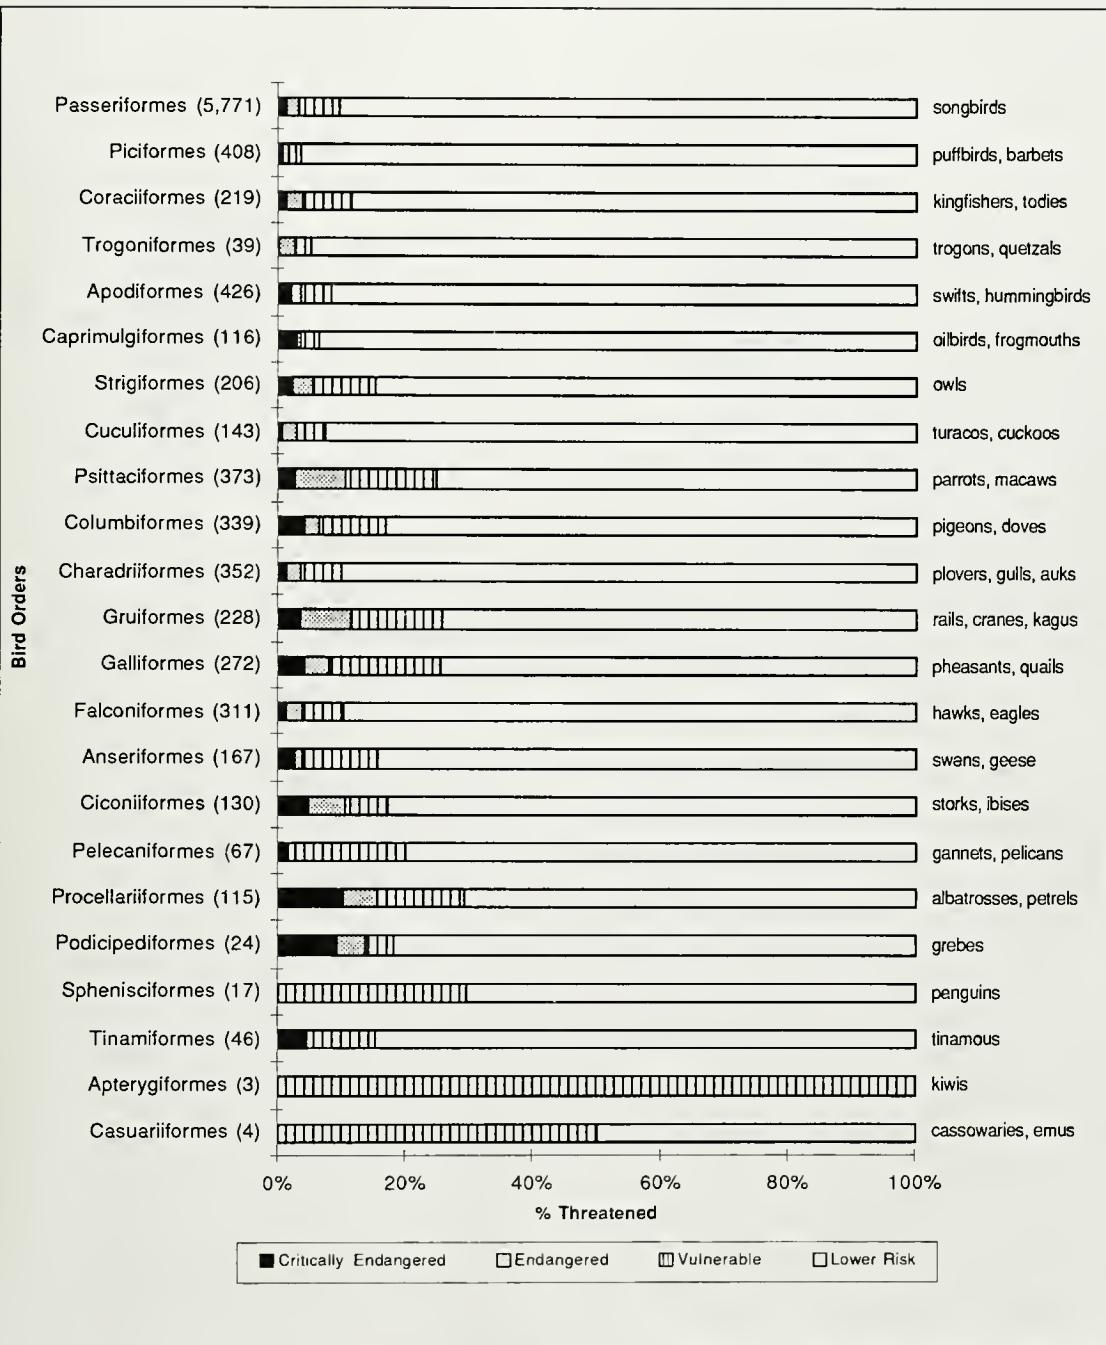

Figure 4. The proportion of each bird order that is threatened. Bird orders with no threatened species have not been listed. These are Struthioniformes (ostriches), Rheiformes (rheas), Gaviiformes (loons), and Coliiformes (mousebirds). The total number of species in each order is listed in parentheses. Examples of each order are provided on the right hand side.

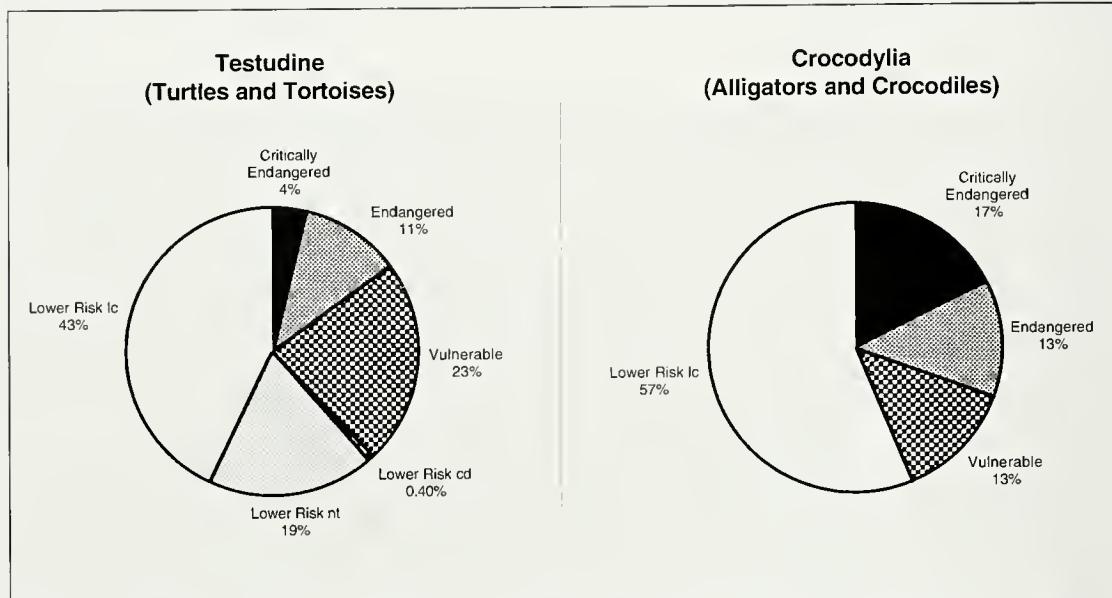

Figure 5. The status of two reptilian orders that have been completely assessed, Testudine (turtles and tortoises) and Crocodylia (alligators and crocodiles). Data Deficient species have not been included. The subcategories Lower Risk conservation dependent and Lower Risk near threatened are not included on the Crocodylia chart, since none of these species fall into these subcategories.

servation dependent (Figure 5). There is, therefore, cause for concern for 57% of these species. The majority of this order is comprised of freshwater turtles, and the high proportion of threatened species within this group corresponds with other freshwater-dependent species such as inland water crustaceans, freshwater fishes, and freshwater molluscs. However, the seven turtle species which have a completely marine existence are all threatened.

While an examination of the three orders of reptiles that have been completely assessed only provides a partial picture of the current status of all reptiles, the high proportion of threatened species in each of these orders (50%, 43% and 38%) indicates that the overall estimate of 20% of reptile species as threatened is probably low for the entire class.

Species from two of the three amphibian orders have been evaluated. Eighty-eight species of Anura (frogs and toads) and 36 species of the order Caudata (salamanders and newts) have been listed as threatened. These numbers are certainly under-estimates as relatively few have been evaluated. No species in the order Apoda (caecilians) has yet been assessed. There has been much debate as to whether or not amphibians are experiencing a high rate of global decline (Wyman 1990; Wake 1991; Pounds and Crump 1994). Given that the percentage of amphibians that are estimated to be threatened (25%) is similar to that of mammals, reptiles, and fishes, immedi-

ate evidence suggests that they are experiencing a similar level of threat to most other orders. Because only a very small proportion of amphibians have been assessed, it is certainly possible that the percentage of threatened species has been significantly underestimated.

Fishes are the largest group of vertebrates in terms of numbers of species, totaling approximately 24,000 described species. Threatened species have been identified in four of the six classes of fishes, including 32 of the 58 orders. The assessments have focused primarily on freshwater species. However, over 100 marine fishes have been added to the 1996 IUCN Red List including sharks, tunas, coral reef fishes, and seahorses. The status of the remaining 14,000 or so marine species is unknown, but given the recent additions to the list, it is clear that they are not as secure as was once believed.

Much more is known about the status of fish species occurring in freshwater environments. Orders for which all species have been assessed include Acipenseriformes (sturgeons and paddlefishes) and Coelacanthiformes (coelacanth). All sturgeon and paddlefish species are threatened or near threatened: 6 are Critically Endangered, 11 are Endangered, 8 Vulnerable, and 2 are near threatened. This is a very small order in which the majority of species are heavily exploited (DeSalle and Birstein 1996). Thus, this high level of threat is unlikely to be indicative of its entire class. The coelacanth, listed as

Vulnerable, is the only living species in its order and class. Orders with particularly high numbers of threatened species are Cypriniformes (minnows, carps, loaches, suckers, etc.) with 191 species listed, and Perciformes (Perch, Cichlids, etc.) with 227. These are primarily threatened due to the introduction of exotics, habitat degradation, and construction of barriers and other obstacles to movement. Many regions still remain to be assessed for the conservation status of their freshwater fish species, but wherever surveys are conducted more threatened fishes are found (Groombridge 1993).

Most animal species are invertebrates, and the overwhelming majority of threatened species is likely to be invertebrates. Very few of these invertebrate populations have been assessed relative to their total numbers, thus it is difficult to infer much about their conservation status. The groups that have received most attention are crustaceans, insects, and molluscs. Within the class Insecta (insects), the orders with over 100 threatened species are Hymenoptera (social insects), Lepidoptera (butterflies and moths), and Odonata (damselflies and dragonflies). The fact that these orders have more known threatened species than the others is probably a reflection of their relative popularity. It is clear that those insect groups that have received minimal attention have many threatened species and further examination will most likely yield similar results.

There are more threatened molluscs (920 total) included in this Red List than any other invertebrate group, but the number that have been assessed only represents a small proportion of the estimated 70,000 documented species (Hammond 1995). The outstanding gap in our knowledge of threatened molluscan taxa is the tropical forest environments, where many small range endemics are most likely declining due to habitat destruction. Two of the classes of molluscs are included in the Red List: Gastropoda and Bivalvia. Of gastropods, a high percent of threatened species are island endemics endangered by habitat destruction and/or the introduction of exotics. These species make up roughly 38% of all threatened molluscs. In the Pacific Islands, a major problem is the continued spread of the predatory snail *Euglandina rosea* and the use of alien flatworms as biological control agents. About 18% of the threatened molluscs are spring-snails from the United States, Australia, and Europe. These snails tend to have very restricted ranges, and are dependent on good water quality and the persistence of springs that are often subject to human utilization (Seddon in prep).

Until the 1996 IUCN Red List only a few marine molluscs were listed as threatened (giant clams), and most were commercially harvested. As a result of incidental harvesting, and habitat decline due to invasive alien plant species, a number of narrow range endemic marine

species have now been added to the list. However, the majority of the threatened bivalves are freshwater species, that are threatened due to the introduction of exotic species, construction of man-made barriers, over-harvesting, pollution, and habitat destruction. The fact that such a high percentage of threatened mollusc species occur on islands and in restricted freshwater environments is consistent with data from other taxonomic groups, which suggest that species occurring in these systems are particularly likely to be threatened.

The number of threatened inland freshwater crustaceans strongly supports the notion that species in freshwater habitats are particularly at risk. The two orders with the greatest number of threatened species are the Decapoda (crayfishes) and the Amphipoda (amphipods) with 168 and 67 threatened species respectively. The crayfishes at risk are virtually all threatened by habitat loss. Most of the threatened amphipods live in extremely restricted and vulnerable environments (caves). Only two species of marine crustaceans are included in the Red List, the coconut crab and the California Bay pea crab. The status of other species of marine crustaceans is unknown.

Where are the Threatened Taxa?

Countries with the Largest Number of Threatened Species

The identification of the countries with the largest number of threatened species enables countries to be informed of their global responsibility to protect and maintain all species for which they are the stewards. Not all countries are the same size or harbor equal numbers of species, thus each country should not be evaluated by the same standard.

This section includes discussion relating to mammals and birds and highlights the countries with the largest numbers of threatened species. In many cases, estimates are given for the following: the total number of species in a region; the percentage of endemic species; and the percentage of a country's species that are threatened. These estimates are based on figures in the World Conservation Monitoring Centre (1994). Taxonomy followed in this source might differ from that used in the Red List. However, it is important to include these estimates of species richness and endemism, as they give perspective to the levels of threat in each country.

Mammals

With 128 threatened species, Indonesia has by far the largest number of threatened species in the world, followed by China and India each with 75 threatened

Table 1
Countries with the Most Species of Threatened (CR, EN, VU) Mammals

| | Number of Threatened Mammals | Total Number of Mammals in Country | Percent Threatened | Total Number of Endemics |
|------------------|------------------------------|------------------------------------|--------------------|--------------------------|
| Indonesia | 128 | 436 | 29% | 201 |
| China | 75 | 394 | 19% | 77 |
| India | 75 | 316 | 24% | 44 |
| Brazil | 71 | 394 | 18% | 96 |
| Mexico | 64 | 450 | 14% | 140 |
| Australia | 58 | 252 | 23% | 198 |
| Papua New Guinea | 57 | 214 | 27% | 57 |
| Philippines | 49 | 153 | 32% | 97 |
| Madagascar | 46 | 105 | 44% | 77 |
| Peru | 46 | 344 | 13% | 45 |
| Kenya | 43 | 359 | 12% | 21 |
| Malaysia | 42 | 286 | 15% | 27 |
| Zaire | 38 | 415 | 9% | 28 |
| Viet Nam | 38 | 213 | 18% | 7 |
| Ethiopia | 35 | 255 | 14% | 31 |
| USA | 35 | 428 | 8% | 101 |
| Colombia | 35 | 359 | 10% | 28 |
| Thailand | 34 | 265 | 13% | 7 |
| South Africa | 33 | 247 | 13% | 27 |
| Tanzania | 33 | 322 | 10% | 14 |

species. These countries all have high numbers of mammal species (Table 1). Indonesia is ranked second in total number of mammal species, China fifth, and India about tenth. These countries also have extremely high human populations. In sum, they account for 43% of the world's population (Rand McNally 1992). While these countries are some of the most species rich in the world, they also have a high proportion of mammals that are threatened with extinction: Indonesia 29%, China 19%, and India 24%. However, not all countries with high total numbers of mammal species have such high proportions of threatened species. Mexico, Zaire, and United States also rank in the top ten countries with the most mammal species, but harbor a significantly lower proportion of threatened mammals: 14%, 9%, and 8% respectively.

After Indonesia, China, and India, the countries with the largest number of threatened mammal species are, in

decreasing order: Brazil, Mexico, Australia, Papua New Guinea, Philippines, Madagascar, and Peru. For more information on the number of threatened species in each country, refer to Data Table 3, page 51.

Australia, the Philippines, and Madagascar all have exceptionally high proportions of mammal species that are endemic. They are also among the countries with the highest percent of mammals that are threatened. Twenty three percent of Australia's mammals are threatened, and 79% of the country's species are endemic; 32% of the Philippine mammals are threatened, and 63% of all their mammals are endemic; 44% of Madagascar's mammals are threatened, and 73% of all the country's mammals are endemic.

As shown in Figure 6, the countries with the most threatened species are not all located in one region. Of the 20 countries with the most threatened mammals, 35% are from Asia, 30% from Africa, and 15% from South

Table 2
Countries with the Most Species of Threatened (CR, EN, VU) Birds

| | Number of Threatened Birds | Total Number of Birds in Country | Percent Threatened | Total Number of Endemics |
|------------------|----------------------------|----------------------------------|--------------------|--------------------------|
| Indonesia | 104 | 1,531 | 7% | 397 |
| Brazil | 103 | 1,635 | 6% | 177 |

| Papua New Guinea | 31 | 708 | 4% | 85 |

America. While 30% of the 20 countries with the most threatened species are in Africa, only Madagascar is listed in the top ten.

Birds

Indonesia, Brazil, and China have the highest numbers of threatened species of birds: 104, 103, and 90 respectively. Indonesia has the fifth highest number of bird species in the world, of which 7% are threatened. It also has the most endemic bird species. Brazil has the third largest number of bird species with 6% of them threatened. Although China has the eighth largest number of bird species, it has the third largest number of threatened species. As is the case with the mammals, the countries with the most threatened species also have extremely high human populations. Of the 20 nations with the most threatened bird species, these three countries have about the average proportion of species at risk of extinction.

However, countries such as Bolivia, Venezuela, and Zaire, not listed on Table 2, also have high numbers of bird species (over 1,000 each), yet these three countries have less than one third of the number of threatened species of the countries listed above, and roughly 2% of each nation's avifauna is threatened.

Other countries that harbor large numbers of threatened bird species are, in decreasing order: the Philippines, India, Colombia, Peru, Ecuador, the United States, and Viet Nam.

Countries listed in Table 2 with a high proportion of endemic birds are Indonesia, the Philippines, Australia, and New Zealand. While the percent of threatened birds in Indonesia and Australia is close to the average of all countries listed in Figure 2, 15% of the avifauna of the Philippines and of New Zealand is at risk of extinction, a remarkably high figure for birds.

Figure 7 clearly demonstrates that the countries with

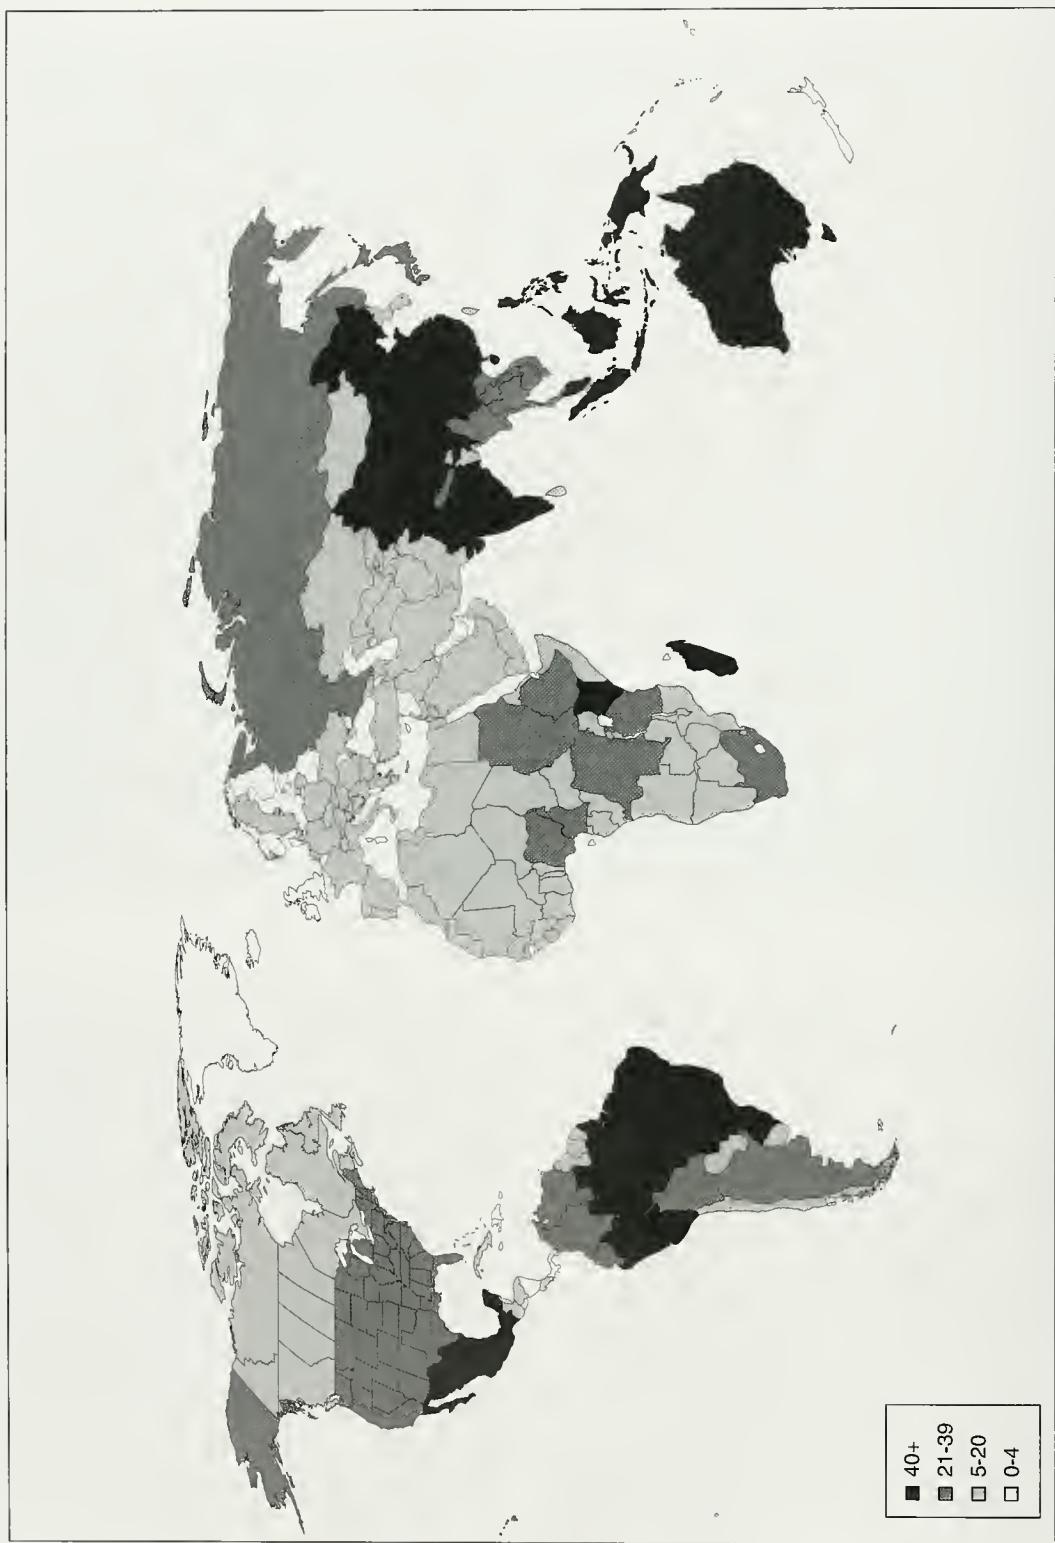

Figure 6. The geopolitical units with the most species of threatened (CR, EN, VU) mammals. This map is meant as a general guide to indicate where the highest number of threatened species are found.

Figure 7. The geopolitical units with the most species of threatened (CR, EN, VU) birds. This map is meant as a general guide to indicate where the highest number of threatened species are found.

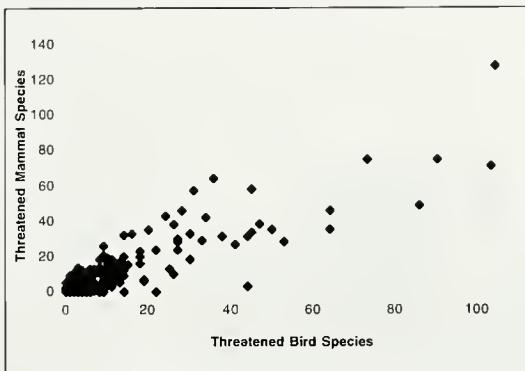

Figure 8. The correlation between threatened bird and mammal species within 230 geopolitical regions ($r = .74$).

the highest number of threatened bird species are located in the New World and Asia. Of the 20 countries with the largest number of threatened avian species 50% are from Asia, 25% South America, and 15% from Oceania. It is of particular note that there is not one African country listed in Table 2.

The Relationship Between Areas of Threat for Birds and Mammals

Many countries with large numbers of threatened birds also have large numbers of threatened mammals. Indonesia, China, Brazil, and India appear in the top five for both classes.

Figure 8 shows a strong relationship between the number of threatened birds and threatened mammals found in 230 different geopolitical units of the world. While there could be many factors influencing this correlation, such as country size and number of species in each geopolitical unit, this correlation indicates that, generally, where there are areas of larger numbers of threatened birds there will also be larger numbers of threatened mammals. This relationship suggests that the two groups may be susceptible to similar types of threat. If such a relationship could be established across all taxa, while remaining constant at different geographic scales, specific indicator groups could credibly be used to set priorities for conservation. The geographic threat patterns of other vertebrate groups is much less clear, as these groups have not been thoroughly assessed.

Reptiles, Amphibians, Fishes, and Invertebrates

The taxonomic groups covered by Figure 9, have not been comprehensively assessed, and thus are suscepti-

ble to regional biases based on information availability. For example, it is not likely that the United States has twice as many threatened invertebrate species as any other country. The reality is that the status of molluscs, crustaceans, and insects is particularly well-known in this country. Although the sequence of countries and the number of threatened species is very incomplete, Figure 9 clearly identifies some countries with large numbers of threatened species in these taxonomic groups. For further information on the number and status of species in each geopolitical region, refer to Data Tables 3 and 4, starting on page 51.

Factors Affecting Threat

The IUCN Red List categories have been designed to identify species that are threatened with extinction by flagging those taxa that are: experiencing significant population declines, restricted in distribution, have very low population numbers, or exhibit any combination of these factors. Also, some species have been listed on the basis of very small distributions (making them susceptible to stochastic events). The majority of species qualify as Critically Endangered, Endangered, or Vulnerable as a result of human-induced threats, though there are often many reasons why a species is listed as threatened.

Habitat reduction, fragmentation, and degradation are unquestionably the most significant threats to the majority of species at risk of extinction (Hanski *et al.* 1995). This is supported by the high percentage of species, in all major taxonomic groups, listed with the criteria/subcriteria combinations that specifically cite habitat loss or degradation as a threat: A1c; A2c; B1+2c; B2c+B3 and any of the B3 subcriteria (a, b, c, d). It is likely that many species listed under Criteria C, D, and E are also threatened due to habitat loss and degradation, but it is not required that specific threats are identified for these criteria. The following figures are based on the proportion of threatened species in each major taxonomic group where habitat loss or degradation is specifically identified as one of the main reasons for the species threatened status: Mammals 75%, Birds 44%, Reptiles 68%, Amphibians 58%, Fishes 55%, Crustaceans 52%, Insects 47%, Bivalves 95%, and Gastropods 50%. While this is undoubtedly an underestimate of the proportion of species that are threatened due to habitat reduction, fragmentation, and degradation, it clearly highlights the importance of maintaining intact ecological systems for the preservation of biodiversity.

The recent human population explosion in conjunction with economic development, has led to large-scale transformation of natural systems into human-dominated landscapes. The growing human population increases

pressure on the world's remaining intact habitats, including the most biodiversity rich regions of the world, such as in tropical forest countries. Habitat reduction, fragmentation, and degradation cause many species to decline in numbers and split once contiguous populations into several subpopulations, each of which has an elevated extinction risk (WCMC 1992; Hanski *et al.* 1995).

The introduction of non-native species often leads to hybridization, competition, predation, disease, parasites, and the alteration of ecological relationships between species, thus threatening entire ecological communities. Although the introduction of exotics is a growing threat in all ecosystems, it is particularly severe in aquatic systems and on oceanic islands, where many species have evolved in relatively small, isolated environments. This is reflected in the high number of island birds and molluscs, and freshwater fishes and molluscs, that have become extinct during the past 400 years, in part, as a result of the introduction of exotics (WCMC 1992).

Exploitation of species is responsible for the severe decline of many of the larger vertebrate and marine fish species in the Red List. The A1d and A2d criterion and subcriteria identify species that have experienced or will undergo rapid declines as a result of actual or potential levels of exploitation. The proportion of threatened species listed under this criterion and subcriteria provide

a general indication of the major taxonomic groups that are experiencing the greatest levels of exploitation. However, it does not necessarily represent the percent of species threatened due to exploitation, because species may be listed under other criteria (B, C, D, and E) that do not specify whether exploitation is a specific threat. As a proportion of the number of threatened species, 13% of mammals, 7% of birds, 31% of reptiles, and 68% of marine fishes were assessed with the A1d or A2d criterion and subcriteria.

The declines, due to exploitation, are the result of harvesting for reasons of commercial value, human subsistence, and sport. Other important human-induced threats include pollution and climate change (this latter factor is believed to be particularly significant for high-altitude amphibian species).

Changes from the IUCN Red List Over the Last Six Years

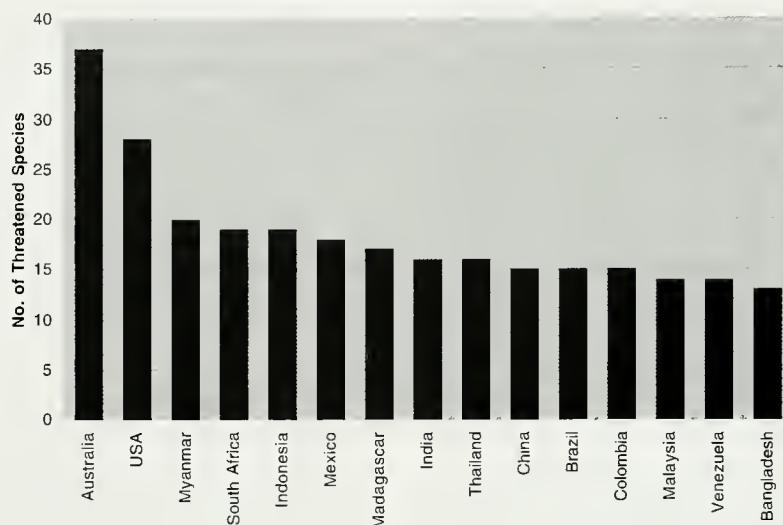

A summary of the number of threatened species recognized in 1990, 1994, and the current 1996 edition of the IUCN Red List, in each major group of animals, is shown in Table 3. Changes in these data reflect changes in the taxonomic extent of assessments, in the systematics and

Table 3
Total Number of Threatened Species

| | 1990 | 1994 | 1996 |
|---------------|--------------|--------------|--------------|
| Mammals | 535 | 741 | 1,096 |
| Birds | 1,026 | 970 | 1,107 |
| Reptiles | 169 | 316 | 253 |
| Amphibians | 57 | 169 | 124 |
| Fishes | 713 | 979 | 734 |
| Invertebrates | 1,977 | 2,754 | 1,891 |
| Total | 4,477 | 5,929 | 5,205 |

Note: The figures for 1990, 1994, and 1996 (this book) are not exactly comparable. The 1990 figures exclude Ex species but include Ex? and include 182 Commercially Threatened (CT) invertebrates. 1994 figures exclude all these but include K (Insufficiently Known) species. The 1996 figures include only species in the new CR, EN, and VU categories.

Countries with the Most Threatened Species of Reptiles

Countries with the Most Threatened Species of Amphibians

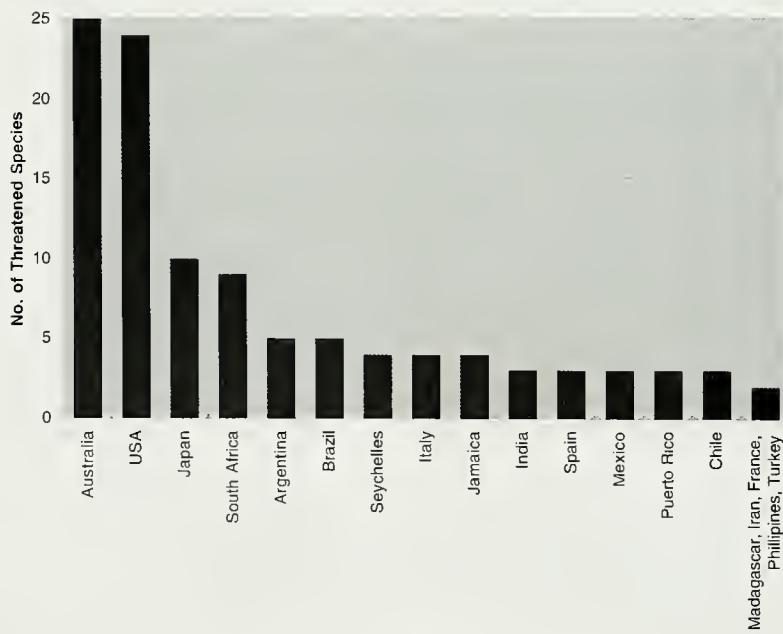

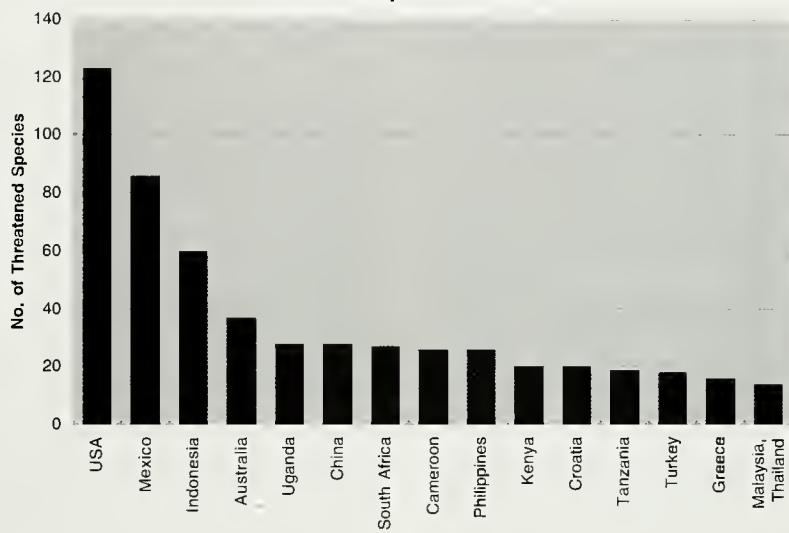

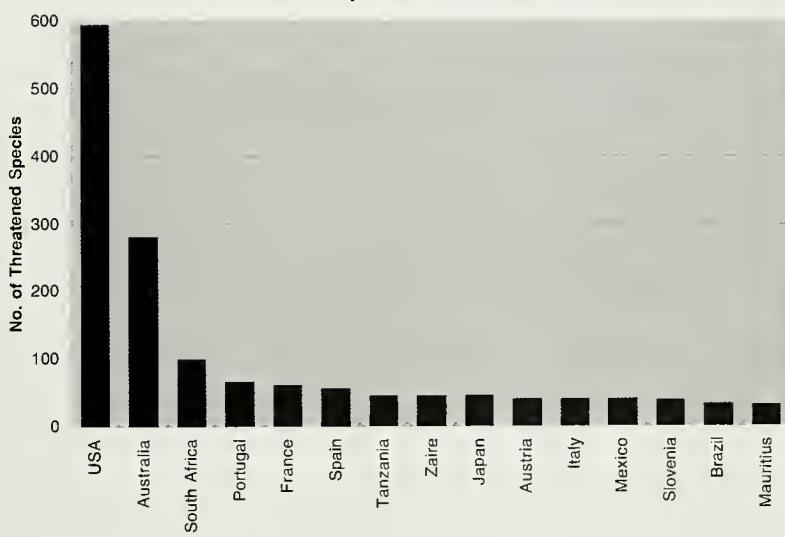

Figure 9. The fifteen countries with the largest number of known threatened reptiles, amphibians, fishes, and invertebrates. In the amphibian and fish graphs, there are several countries with the same number of threatened species. The countries tied for fifteenth place are lumped together for graphical purposes.

Countries with the Most Threatened Species of Fishes

Countries with the Most Threatened Species of Invertebrates

nomenclature of the species listed, in the categories that were included in the summary in the past (see footnote to table), and most notably, the major redesign of the category system used for the 1996 assessments. The summary data derived from recent Red Lists do not yet provide a firm guide to changes in the "on the ground" conservation status of the world fauna, but 1996 will set a baseline for mammals and birds: leaving changes in nomenclature aside, future assessments using the revised system will much more accurately indicate changes in the actual conservation status of these species.

The 1994 figures included species in the old Insufficiently Known (K) category; if assessed, most such species would now appear as Data Deficient (DD), some possibly as Lower Risk (near threatened). The old Indeterminate (I) category was also included in the summary; most of these would also now appear as DD or LR:nt. Around 2,000 K and I species were listed in 1994.

There were 2,114 vertebrates listed as Endangered (E), Vulnerable (V), or Rare (R) in 1994; these categories correspond loosely with the threatened group of categories (CR, EN, and VU) in the new system (a number of former Rare species will not now meet criteria for threatened status); so the 1994 figure may be compared fairly directly with a total of 3,314 threatened vertebrate species in 1996, an increase of 1,200 species. As noted above, all the world's known mammal species have been assessed for 1996, and this group, with 631 more species in the threatened categories (as equated above) in 1996 as compared with 1994, account for a significant part of the increase. The number of birds considered threatened (as above) has increased by around 680, a difference due to use of the new category system and a number of nomenclatural changes. Changes in the reptiles, amphibians, and fishes are far smaller: increases of 39, 5, and 104, respectively. All these differences are of course net differences between totals in 1994 and 1996, and do not reveal the pattern of change between categories, including movement in and out of the threatened group of categories.

Extinction

How Many Species have Recently Become Extinct and Where are they Found?

Extinction is a natural process. It is estimated that 95% of all species that ever existed are now extinct (Sepkoski 1995). However, this process of extinction has occurred over a very long time-scale (3.5 billion years) and despite extinctions, there has been a general trend of increasing species richness (WCMC 1992; May *et al.* 1995).

From the fossil record it is possible to determine the

Table 4
Recorded Number of Extinctions*

| | Extinct | Extinct in the Wild | Total |
|---------------------|------------|------------------------|-------|
| Mammals | 86 | 3 | 89 |
| Birds | 104 | 4 | 108 |
| Reptiles | 20 | 1 | 21 |
| Amphibians | 5 | 0 | 5 |
| Fishes | 81 | 11 | 92 |
| Molluscs | 230 | 9 | 239 |
| Crustaceans | 9 | 1 | 10 |
| Insects | 72 | 1 | 73 |
| Other invertebrates | 4 | 0 | 4 |
| Total | 611 | 30 | |

*Does not include species that went extinct more than 400 years ago.

average life-span of a species. This is thought to be 5-10 million years. If there are 5-10 million extant species, the background extinction rate should be about one species per year (May *et al.* 1995). While the exact number of species that are being lost per day or year is uncertain, it is clear that current extinction rates are very much higher than would be expected. Even the number of documented extinctions over the last 400 years (611) exceeds background estimates. This is alarming, because the number of documented extinctions is without doubt a gross underestimate of the number of species that have been lost over the past 400 years.

This gross underestimate is because most species have not been described, and of the species that have been catalogued, only extinctions of the best-known species have been documented over any length of time (mammals, birds, and molluscs). Also, as stated earlier, the status of the great majority of species remains unknown.

Table 4 shows that 86 documented mammal extinctions (1.8% of the total number of mammals) have occurred over the past 400 years. Roughly, 23% of these extinctions have occurred in Australia and 23% in the West Indies. The greatest number of extinctions has been among the rodents and bats, 46 and 13 species respectively. These orders are also the two largest and have the largest number of threatened species. It is inter-

esting to note that of all the mammal orders, primates have the fourth largest number of threatened species, but no documented extinction yet.

Over the same time period there have been 104 documented bird extinctions (1% of the total number of birds), 20% of which occurred in Mauritius, 18% in the United States (mostly Hawaiian islands), and 14% in New Zealand. Other geopolitical units with large numbers of bird extinctions are Reunion, Australia, and French Polynesia. This list clearly demonstrates that the majority of bird extinctions has taken place on islands. The largest number of extinctions (32) is in the largest order, Passeriformes. Other orders with large numbers of extinct species are Psittaciformes (13), Gruiformes (13), and Columbiformes (10), all of which are in the top five orders with the largest number of threatened species. It is interesting to note that while Galliformes have the third highest number of threatened species, only one is Extinct and one Extinct in the Wild.

Mollusc extinctions have been more thoroughly monitored than any other invertebrate group. However, records of documented extinctions only go back to the mid-19th century (WCMC 1992). Gastropods account for the majority of recent documented mollusc extinctions, most of which are in the order Stylommatophora. An extremely high proportion of the now extinct Stylommatophora were endemic to oceanic islands. All recent recorded bivalve extinctions have occurred in freshwater environments and have been from the order Unionoida. Given that there has been little attempt to document the extinctions of most invertebrate groups for any period of time, one can only guess how large the extinction list would be if these species, which account for more than 95% of all animals, were thoroughly documented and monitored.

Concluding Remarks

The vast number of threatened species listed in this document and the high proportion of threatened species in the two classes that have been comprehensively assessed, indicate that a significant proportion of the world's fauna is threatened with extinction. Eleven percent of all birds and 25% of all mammals are believed to be threatened. If either one of these classes is representative of the proportion of other life forms that are threatened, the future status of biodiversity looks very bleak. While the 5,205 species listed as threatened in this document is alarmingly high, it is important to recognize that less than 10% of the 1.7 million documented species have been evaluated, and that the 1.7 million documented species represent a relatively small proportion of all species believed to exist on this planet. Thus, it is reasonable to believe that the 5,205 threatened species is a small indicator of a much larger global phenomenon of biodiversity loss. Given the current state of knowledge, when future generations look back at the 20th century and try to make sense of the lack of commitment to preserving biodiversity, many reasons may be cited, but ignorance of the magnitude of the issue will not be a valid justification for inaction.

Acknowledgements

I would like to thank Simon Stuart, Georgina Mace, Mariano Gimenez Dixon, Brian Groombridge, Elodie Hudson, and Elizabeth McCance for their helpful comments in the preparation of this analysis.

Application of IUCN Red List Categories on a Regional Scale

by Ulf Gärdenfors

Introduction

The new IUCN Red List Categories (IUCN 1994) were developed primarily for application on the global scale, i.e. for judging the extinction risk of the whole species (or other taxon). Most countries concerned with compiling Red Lists will probably adopt the new categories in one form or another. However, by doing so, some problems may arise when the population of a species within a country (or other considered region) is only a part of a larger population. Furthermore, because the categories only consider extinction risks, there may also be other criteria that, from a national perspective, should be considered in order to develop conservation priorities.

Thus, there is a need to develop guidelines for applying the new categories at national or other regional levels in order to achieve a standardized application. To cope with the issue, IUCN has organized workshops, so far in Gland, Switzerland (March 1995; IUCN 1995) and in Cambridge, England (December 1995; Gärdenfors 1996). The process will continue, resulting in general recommendations from IUCN.

In this paper I will identify some of the conceptual problems that may arise when applying the IUCN Red List categories on a subglobal scale.

Problems at Regional Level

The IUCN (1994) categories of threat are defined by one of five criteria (A-E; see the section entitled The New IUCN Categories and Criteria in this book). The quantitative thresholds of the criteria were set roughly to correspond to each other in reflecting the extinction risk of taxa.

When applying these criteria on a national or other kind of regional level, there are few problems, so long as the population of the species to be assessed is isolated from other conspecific populations, or is endemic. The extinction risk for an isolated population is the same irrespective of whether it constitutes the only population of the species in the world, or if there are other totally isolated conspecific populations. But, if the target population constitutes only a part of a larger population, the quantitative thresholds in criteria A-D (and even E, depending on how the analysis is made) might not accurately reflect the extinction risk. Also, a global extinction

is final, while an extinction from a country may later be followed by a recolonization. While the new system has a clear definition for species that are Extinct (EX) or Extinct in the Wild (EW), it lacks a definition for Regionally Extinct (RE) species. The time frame considered when creating the definition of RE will effect the listings.

The time frame is also important when considering the categories Critically Endangered (CR), Endangered (EN) and Vulnerable (VU) on a regional level. When assessing the prospects for the next 10 years, for example, a species may face an extinction risk in a country of more than 50% (CR). However, if these prospects are assessed over a period of 100 years the extinction risk for the same species might still be 50% (then corresponding to VU), because there are interactions with populations outside the country.

Hypothetical Cases

In Figure 1 the species is represented in the country only by a marginal part of a larger distribution area. The extinction risk within the country may be less than what the criteria A-D(-E) applied on the national part of the population suggest (compared to when applied on a global level), because if the species tends to die out within the country, new individuals from neighboring countries may move in (rescue effect). However, in rare instances, the reverse situation might be the case. If the marginal population is not self-sustaining and depends on regular immigration from the more central parts of the geographic range, the extinction risk within the country could be higher than is suggested by criteria A-D(-E), if something threatens the central population. In both cases, however, the extinction risk depends on the adopted time frame. Over a short time perspective the species may face a high extinction risk, but in a longer perspective there is a good possibility of recolonization and survival.

In the next case (Figure 2), the population in the country is geographically separated from other populations. If there is no flow of individuals between the populations, the new IUCN criteria are applicable, because populations outside the country do not affect the extinction risk within the country. If, on the other hand, there is a source-sink situation with a regular inflow of individuals, we have a similar situation to that shown in Figure 1. Again, the extinction risk depends on the time frame. In the case of an isolated self-sustaining population, the extinction risk may be low over a short time span, but

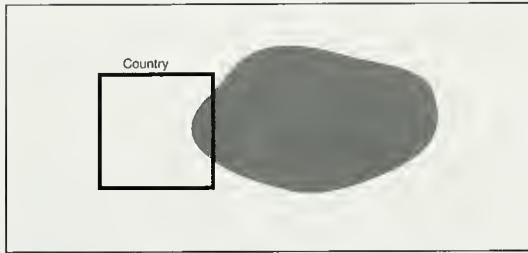

Figure 1.

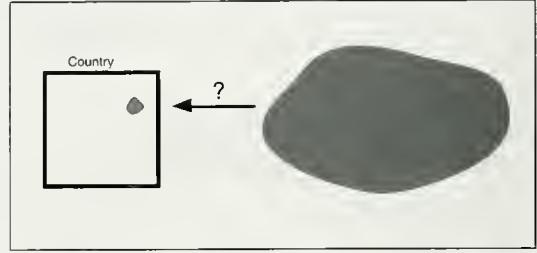

Figure 2.

very high over a longer time span, while the reverse may be the case in the source-sink situation.

Proposals on a Regional Scale

The obstacles to applying the new IUCN Red List criteria on a national level, as presented above, may seem very difficult to address, but I think they can be managed. The majority of threatened species are so because they have small and isolated populations. If they do not have a high dispersal ability, the application of the IUCN criteria is straightforward. The problems will mainly arise among highly mobile organisms, such as birds, larger mammals, certain insects, many marine organisms, and maybe cryptograms with easily dispersed spores. The problems will of course be more pronounced in countries surrounded by other countries than in those surrounded by sea or other barriers preventing dispersal.

Conceptually, one could possibly cope with the impact of neighboring populations by quantifying the flow of individuals (or diaspores) across the borders (IUCN 1995) and include this in a metapopulation model. However, in reality, we often lack such data. If we do have such data and are able to include it into a quantitative analysis, we can use criterion E. Because of the possibility of regional extinction, as well as the problems with the time frame, we must then add a passage to the definition of the E criterion of categories CR-VU. The current definition of CR under criterion E is:

Quantitative analysis showing the probability of extinction in the wild is at least 50% within 10 years or 3 generations, whichever is the longer

At a regional level, this criterion could read:

Quantitative analysis showing the probability of regional extinction, that will persist for at least 100 years from now, is at least 50% within 10 years or 3 generations, whichever is the longer.

In the majority of cases we lack such data and the solution must be to evaluate the population within the coun-

try against the IUCN criteria A-D, starting with the assumption that the national population is the only one in the world. Then, one should check the situation of the species against a list to determine whether or not any factors influence its extinction risk. Such a checklist should include at least the following items:

- Does the national/regional population have any obvious contact with populations outside the borders? What is the distance to the nearest population? Are there any effective barriers preventing dispersal to and from neighboring populations?
- Is the species capable of long-distance dispersal? Is it known to do so?
- How abundant is the species in neighboring regions? Are the populations there stable, increasing or decreasing? Are there any important threats to those populations?
- Are there any known differences in local adaptation between the national and foreign populations, i.e. is it probable that the foreign populations are adapted to survive within the country?
- What is the environmental (including climatological) situation within one's own country/region for the species? Is the national population self-sustaining (has it shown a positive reproduction rate over the years) or is it dependent on immigration for its long-term survival?
- Are environmental conditions in the country such that immigrating specimens are able to establish or has the species disappeared because these prerequisites were not fulfilled?
- If the species becomes extinct in the country, what are the probabilities for recolonization within 100 years?

If an evaluation of these questions indicates that foreign populations affect the extinction risk of the national pop-

ulation in such a way that it is lower or higher than the A-D criteria suggest, the threat category should be adjusted downwards or upwards. Such a movement must be indicated, e.g. by giving the category met by the global criteria within parenthesis. Thus EN (VU) would indicate that the species met the criteria for VU, but was moved upwards (probably a very rare situation) to EN, while EN (CR) indicates that it has been moved downwards (much more likely) from CR.

In the case where there is not enough data for such an evaluation, or the result is uncertain, the species should be placed in the category met by the global criteria.

It is worth noting that a neighboring population more often will affect the national category when the criteria B1, B3 and D are met (no observation of decline) than when criteria A, B2 and C are fulfilled (a decline has been observed). This is because if there is an observed decline, the decline happens in spite of any influence from populations outside the country (though the decline might have been even bigger without such an influence). Once again, the time frame is problematic, since there can be a decline in the country that, later on, can be balanced by immigration.

Other Red List Categories

The three Lower Risk (LR) subcategories, conservation dependent (cd), near threatened (nt) and least concern (lc), can be treated as defined by IUCN (1994) after having taken above mentioned considerations for CR-VU. The categories Data Deficient (DD) and Not Evaluated (NE) can be applied at national level without any adaptations.

As indicated earlier in this paper, it may be necessary to define a new category for species extinct only within a country or another region. An extinction of an endemic species in a country is equal to a global extinction, but when a more widespread species becomes extinct within a country, it still survives in other parts of the world. These two different kinds of extinction deserve to be recognized and distinguished in national Red Lists. This has already been done in some countries, and national extinction has been described by words such as Extirpated or Vanished. However, Vanished may be perceived as too weak a word, and Extirpated has the double disadvantage of alluding to deliberate human-induced eradication (which rarely is the case) and being confused with the category Extinct when abbreviated. The most appropriate term would probably be Regionally Extinct (RE).

Conservation Priority

The IUCN Red List categories do not allow for any considerations other than extinction risks. However, there may also be other criteria that are important when com-

ing to the decision about national conservation measures (Sparrowe and Wight 1975, Nieme 1982, Millsap *et al.* 1990, Daniels *et al.* 1991, Master 1991, Forey *et al.* 1994, Gärdenfors in press). As suggested in the IUCN guidelines (IUCN 1994, p. 8, section 11), and also by Avery *et al.* (1995), two important criteria could be global status and proportion of the global population or range that occurs within the region.

The global scale may not be the most appropriate for comparison with a national scale. A species scattered in fragmented populations over the entire Holarctic region is probably genetically considerably differentiated and the populations in North America and Eastern Europe most probably are not interchangeable. As a general rule, the most appropriate scale would probably be the continental or comparable biogeographic regional scale. The proportion of the international/continental population and probability of recolonization can be given on a scale from 0 to 1 (where the intervals for population percentages depend on the area of the country in relation to the continental area, Figure 3).

In a priority-setting system, many other criteria could be of interest, such as ecological importance, historical importance, taxonomic and genetic importance, importance to people, etc. Most of these, however, turn out to be problematic to apply, either conceptually or in practice (Gärdenfors in press) and are consequently difficult to include in a formalized priority-setting system. However, in cases where any such criterion is obviously important, it could be remarked upon separately.

Taking into consideration the points made above, a national Red List could have an appearance as in Figure 4. It is not obvious how to weigh the individual criteria against each other. Maybe the best solution is to avoid any such a priority weighting, and allow for different weighting when different situations and issues come up.

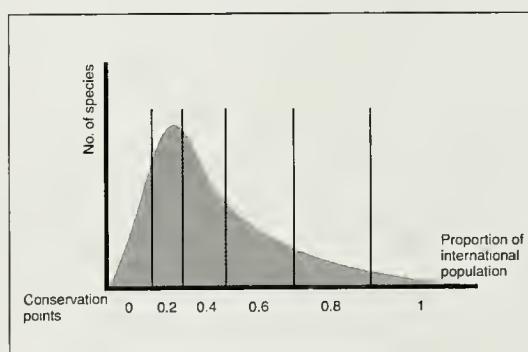

Figure 3.

| Species | National Red List Category | IUCN Criteria | Continental Red List Category | Proportion of Contin. Pop. | Remark |
|------------------------|----------------------------|---------------|-------------------------------|----------------------------|--|
| <i>Aus australis</i> | EN | A2d, B2c + 3d | CR | 0.8 | Formerly distrib. all over the country |
| <i>Bus borealis</i> | nt (VU) | D2 | — | 0 | |
| <i>Cus communis</i> | nt | | — | 0.4 | A key-stone species |
| <i>Dus domesticus</i> | VU | E | — | 0.2? | |
| <i>Eus Ephemericus</i> | RE | | VU | 0 | |
| <i>Fus frugivorus</i> | EN(CR) | A1a, c | nt | 0.2 | Monotypic genus |

Figure 4.

How to Proceed?

In order to develop guidelines for applying the IUCN Red List categories at regional levels it is now necessary to produce and distribute draft guidelines and test them against a wide variety of species in many countries in different parts of the world. It is important that this procedure involves a very wide consultation of national Red List compilers from throughout the world. Hopefully IUCN will be able to adopt and publish a set of official guidelines in the near future.

Applying the New IUCN Threatened Species Categories

by Alison J. Stattersfield

Introduction

BirdLife International (formerly the International Council for Bird Preservation) has had a long history of involvement in the red-listing process, taking responsibility for advising IUCN and its Species Survival Commission on matters relating to the conservation status and needs of birds. BirdLife was among the first to apply the new IUCN threatened species categories in late 1993 and early 1994 (before the criteria were published), and was the first to evaluate a complete class of species.

Bird data for the Red Lists have come from the international Red Data Books, which have been a keystone of BirdLife's research work. This program started with Vincent (1966-1971), was updated by King (1978-1979), then followed by regional treatments of Africa (Collar and Stuart 1985) and the Americas (Collar *et al.* 1992) (all using the old IUCN categories), and work is currently under way to assess candidates for Asia (using the new categories). Annotated global checklists, where data sources are referenced (*Birds to Watch*), have also been published (Collar and Andrew 1988, Collar *et al.* 1994; using old and new categories respectively) to keep the summary information and category allocation up-to-date, and to compensate for the time-lag caused by the detailed work necessary to produce an exhaustively researched Red Data Book.

The old IUCN system for identifying threatened species gave broad definitions for five threatened categories, of which only two directly indicated the likelihood of extinction. The new system (used to list all species in this Red List) is characterized by quantitative or clearly defined criteria, subcriteria and qualifiers, based around an evaluation of probabilities of extinction within specified time-frames. Species may qualify for one of three threatened categories depending on whether their abundance and/or range sizes, or rates of decrease in these, meet explicit numerical thresholds (see, for example, Mace 1993, Mace and Stuart 1994).

The aims of this essay are threefold. First, to draw on the experience of BirdLife's research to discuss some of the particular difficulties which were experienced in applying the new IUCN threatened species categories to birds and to outline some potential solutions. Second, to use the BirdLife data to interpret the changes between successive Red Lists using the old and new categories. And third, to suggest how the red-listing process, using the new categories, can help conservation.

Some Problems and Solutions

One of the specific aims of the revision of the categories is to improve objectivity by providing clear guidance on how to evaluate different factors which affect the risk of extinction. For the majority of species—birds being no exception—numerical data concerning population numbers or rates of decline are lacking, or, at best, available on a site basis only (and thereby relevant to part of any population only). The preamble to the new categories therefore emphasizes the importance of attempting to classify poorly known taxa by estimating and extrapolating the current or potential threats into the future, and by allocating them a threat status by applying the precautionary principle.

Using inference in a consistent fashion, however, proved to be one of our greatest difficulties in producing the revised list for birds, for, despite the intentions of the new system, there is little guidance to help standardize this process. Indeed we found that there was considerable scope for variation in categorization of some species (using the same data) even between three people (my coauthors and I). Given that birds are the most comprehensively studied of all the classes of animals or plants, it is likely that inconsistencies arising from the use of inference will be far greater for those assessing less well known groups with fewer numerical clues, and in circumstances where more people contribute to the evaluation process.

Another dilemma we faced was the availability and quality of other data which could have helped us make well informed inferences. Despite access to many published sources of information and expertise from BirdLife's extensive network of contacts, we found that our information on, for example, habitat loss and degradation was poor in some parts of the world. While evaluators can reasonably be expected to assemble all the appropriate species-specific material (on distribution, population, ecology etc.), they may not have access to general data concerning a species's environment (e.g. logging activities or other land-use changes past, present, and planned). We recognized that some of our assessments might be seriously affected by ignorance of such key pieces of information (see Figure 1).

Other areas of difficulty, more fully discussed in Collar *et al.* (1994), included: the indistinct division between the near threatened and least concern categories; the appropriate use of the (non-threatened) conservation dependent category where information on important extrinsic factors such as the effectiveness of certain protected areas is needed; thresholds for the Critically Endangered category which could be (perhaps too) readily met by species with naturally small ranges as a result of any evidence indicating loss of habitat, however

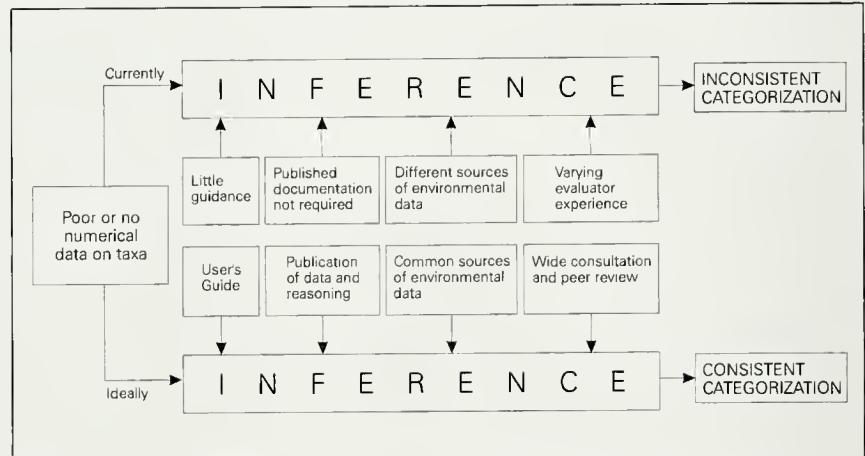

Figure 1. Some problems and solutions in applying the new IUCN threatened species categories.

slight; an apparent inequity between species with small stable populations (= not threatened) versus those with much larger ones in the same area but with declining ones elsewhere (= threatened); and the definition of location which is crucial to the interpretation of the range-size criteria (see also, for example, Baillie *et al.* 1995, Hallingbäck *et al.* 1995 for difficulties encountered in applying the categories to different faunal groups).

Many of the above problems could be diminished by more detailed guidance in the use of the criteria (and a "Users' Guide" is being prepared). This should be easier to formulate now, with many real examples, owing to the extensive collective experience of applying the categories for this Red List.

Further guidance will not, however, eliminate all the uncertainties associated with the use of inference. It is therefore vital that, where data are poor, the reasoning used to trigger certain criteria should be made as explicit as possible. Although the new system requires the inclusion of coding to indicate which criteria are judged to be met (rather than the category code alone), such notation could be misleading because there is no indication of levels of uncertainty. It is possible, because a species is classified as threatened using a system which is recognized as being more objective, to assume without question that the species meets the criteria (and has, for example, a population of less than 10,000 mature individuals) when, in fact, the original evaluation involved a highly precautionary inference derived from very slight evidence. Guesswork may therefore become fact, and judgements may not be re-evaluated from first principles in subsequent exercises. The only real solution, therefore, is to publish the species-specific and background data in detail, for example in Red Data Books, Action Plans,

standard forms which ensure that all relevant details are logged, or interactive user-friendly computer programs with a comprehensive help system specially designed for this purpose. At the very least the mammal, reptile, fish and other equivalents of *Birds to Watch* (summarizing distribution, habitat requirements, abundance, trends and threats) should be produced as the documentary basis of future Red Lists.

Publication of data will have several benefits: critical inferences will be indicated and might generate more appropriately orientated fieldwork and important new information; details of the assessment will be available for more efficient and improved re-evaluation; and the documentation will allow for wide consultation and independent peer review, to aid consistency between treatment of poorly known species in different taxonomic groups and regions of the world. In addition, the environmental knowledge which has influenced judgements will be disclosed and rendered accessible to other assessors of species with similar ranges and problems. However, it is not efficient for different evaluators repeatedly to find the same environmental information, nor are they necessarily the best people to interpret it. An invaluable supplement to the forthcoming Users' Guide, therefore, would be a common source of appropriate background data compiled and up-dated by relevant experts (see Figure 1).

Changes and Their Interpretation

Given the apparently major change in the categories and their criteria, one might expect big changes in the overall numbers and types of species listed as threatened. For

birds, there has been an increase from 1,030 (Collar and Andrew 1988) to 1,111 (Collar *et al.* 1994). Although the net change is a relatively small one—an additional 81 species in total (= 8% increase)—more considerable flux is masked: 295 species were upgraded to threatened status (29%) and 214 species downgraded (21%). However, these changes may be attributed to four factors—the currently volatile nature of ornithological taxonomy (+81, -12), the inevitable improvement in knowledge (+157, -139), genuine changes in status (+14, -2) and changes in the criteria (+43, -61). If we assume that the first three factors are independent of the system used (accounting for 85% and 71% of the upgrades and downgrades respectively), it appears that the new categories have not radically altered the end result. It might be possible, therefore, to conclude that the old IUCN system for the classification of threatened species was adequate after all. However, as the use of inference is a key factor in the appropriate application of the new categories, the potential for misuse under the old system (where there were broad definitions only for guidance) was many times greater.

An interpretation of the changes between successive Red Lists, combined with the probabilities of extinction implicit in the new categories, allows us to make predictions of the rates of species' extinctions. Such projections have been common in both the scientific and popular literature, and have caused much debate over the reality of the so-called impending extinction spasm (see, e.g. Myers 1987). We calculate that it would take between 800 and 2,800 years for half the world's birds (4,850 species) to go extinct (Crosby *et al.* 1994). This is based on our categorization in Collar *et al.* (1994) and a dynamic projection that takes into account the likely changes in knowledge over the next 100 years and a rate of change of status equivalent to the one which we had perceived during the period 1988–1994 or worse. Under "normal" conditions, using mean survival times as illustrated from the fossil record, one would expect the natural time to extinction for half the world's birds to be around 500,000 years. While we recognize that our models (which happen to be more optimistic than others based on older data and different methodologies, e.g. Smith *et al.* 1993) are not necessarily realistic, they clearly draw attention to a crisis of considerable magnitude, directly attributable to the destructive activities of man.

Using Red Lists

Red Lists are not an end in themselves. They provide information about the status of species, giving no indication of the conservation action which must be taken to save them from extinction.

The new guidelines state that the category of threat is

not necessarily sufficient to determine priority ranking for conservation, and that a system for such assessments would include numerous other factors such as costs, logistics, and chances of success. Although these may be addressed in Action Plans, the increasing number of threatened species joining the Red Lists means that, for most (uncharismatic) species, the only real prospect for saving them is by site protection. Thus geographical areas of overlap between the thousands of threatened species included in this Red List (by country, area, and ideally site) would represent a new and vitally important basis for assigning the biological priorities for conservation action, and help to focus resources appropriately where choices have to be made (see Collar 1994).

As a result of its Red Data Book research, BirdLife has already identified key forests for threatened Afro-tropical birds (Collar and Stuart 1988) and key sites for threatened Neotropical birds (Wege and Long 1995). These studies show that many threatened species occur together in similar places and that site-based priorities can therefore be developed effectively through threatened species analysis. BirdLife's original Biodiversity Project extended this geographical approach by delimiting so-called Endemic Bird Areas (EBAs), covering the breeding ranges of all land bird species with restricted ranges (including three-quarters of threatened species). The approach also demonstrated the importance of most of these areas for other endemic wildlife groups (ICBP 1992, Stattersfield *et al.* in prep.).

Current research at BirdLife focuses on Important Bird Areas (IBAs), which are selected on the basis of globally agreed criteria dealing with threatened species populations, importance for congregatory species, or representation of EBAs or larger biomes. The IBA initiative aims to cover the most important sites which will conserve all bird species for which a site-based approach is appropriate. IBAs have been identified for Europe (Grimmett and Jones 1989) and the Middle East (Evans 1994), and there is now a commitment to identify the majority of the world's IBAs by the year 2000. Despite the fact that evidence for congruence exists, such an approach could be adopted by colleagues working on other groups, and help to polarize attention on key sites for all plant and animal "sympatric" species.

Conclusions

1. Where numerical species data are lacking, varying experience and interpretation of the new IUCN criteria coupled with ignorance of key environmental information, will result in inconsistent categorization of species' status by different evaluators.
2. Consistency in categorization could be enhanced by

- a variety of measures including more detailed guidance in the use of the criteria, publication and referencing of key data, provision of sharing common sources of environmental information, greater consultation and independent peer review.
3. Although differences between the bird Red Lists using the old and new criteria are relatively small, the new system establishes a framework which reduces subjectivity and renders red-listing more accountable.
 4. Conservation efforts can be aided and influenced by a reinterpretation of the species data collated for Red Lists to identify key sites, especially those which would protect large numbers of sympatric threatened species.
 5. Changes between successive Red Lists could provide a useful measure of progress in the conservation of the world's biodiversity.

List 1

Threatened Species

Class MAMMALIA

Order MONOTREMATA

Family TACHYGLOSSIDAE

Zaglossus bruijni

Long-beaked Echidna

EN¹³ A1c

Indonesia, Papua New Guinea

Order DIDELOPHIMORPHIA

Family DIDELOPHIDAE

Caluromys derbianus

VU¹²¹ A1c

Belize, Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Mexico, Nicaragua, Panama

Caluromysiops irrupta

VU¹²¹ B1+2c

Brazil, Peru

Glironia venusta

VU¹²¹ B1+2c

Bolivia, Brazil, Ecuador, Peru

Gracilinanus aceramarcae

CR¹²¹ B1+2c

Bolivia

Gracilinanus dryas

VU¹²¹ B1+2c

Venezuela

Gracilinanus emiliae

VU¹²¹ B1+2c

Brazil

Lestodelphys halli

VU¹²¹ B1+2c

Argentina

Marmosa andersoni

CR¹²¹ B1+2c

Peru

Marmosa xerophila

EN¹²¹ B1+2c

Colombia, Venezuela

Marmosops cracens

EN¹²¹ B1+2c

Venezuela

Marmosops dorothea

VU¹²¹ B1+2c

Bolivia

Marmosops handleyi

CR¹²¹ B1+2c

Colombia

Monodelphis emiliae

VU¹²¹ A1c

Brazil, Peru

Monodelphis kunsi

EN¹²¹ A1c

Bolivia, Brazil

Monodelphis maraxina

VU¹²¹ A1c

Brazil

Monodelphis osgoodi

VU¹²¹ A1c

Bolivia, Peru

Monodelphis rubida

VU¹²¹ A1c

Brazil

Monodelphis scalops

VU¹²¹ A1c

Brazil

Monodelphis sorex

VU¹²¹ A1c

Argentina, Brazil, Paraguay

Monodelphis theresa

VU¹²¹ A1c

Brazil, Peru

Monodelphis unistriata

VU¹²¹ A1c

Brazil

Order PAUCITUBERCULATA

Family CAENOLESTIDAE

Rhyncholestes raphanurus

VU¹²¹ A1c

Chile

Order MICROBIOTHERIA

Family MICROBIOTHERIIDAE

Dromiciops gliroides

VU¹²¹ A1c

Argentina, Chile

Order DASYUROMORPHIA

Family MYRMECOBIIDAE

Myrmecobius fasciatus

Numbat

VU¹³ A1a, D2

Australia

Family DASYURIDAE

Dasycercus byrnei

Kowari

VU¹³ C2a

Australia

Dasycercus cristicauda

Mulgara

VU¹³ C2a

Australia

Dasycercus hillieri

Mulgara

EN¹³ B1+2d+3bc

Australia

Dasyurus albopunctatus

New Guinea Quoll

VU¹³ A1a

Indonesia, Papua New Guinea

Dasyurus geoffroii

Chuditch

VU¹³ C1

Australia

Dasyurus maculatus

Spotted-tailed Quoll

VU¹³ C1+2a

Australia

Dasyurus spartacus

Bronze Quoll

VU¹³ A1c

Papua New Guinea

Parantechinus apicalis

Dibbler

EN¹³ B1+2ce

Australia

Phascogale calura

Red-tailed Phascogale

EN¹³ B1+2bd

Australia

Planigale novaeguineae

Papuan Planigale

VU¹³ D2

Papua New Guinea

Pseudantechinus mimulus

Carpentarian Antechinus

VU¹³ D2

Australia

Sminthopsis aitkeni

Kangaroo Island Dunnart

EN¹³ B1+2d

Australia

Threatened Species

Sminthopsis butleri
Carpentarian Dunnart
VU¹³ D2
Australia

Sminthopsis douglasi
Julia Creek Dunnart
EN¹³ B1+2bd+3d
Australia

Sminthopsis psammophila
Sandhill Dunnart
EN¹³ B1+2ab+3ab
Australia

Order PERAMELEMORPHIA

Family PERAMELIIDAE

Isoodon auratus
Golden Bandicoot
VU¹³ B1+2e
Australia

Macrotis lagotis
Bilby
VU¹³ C2a
Australia

Perameles bougainville
Western Barred Bandicoot
EN¹³ B1+3a
Australia

Perameles gunnii
Eastern Barred Bandicoot
VU¹³ A1b
Australia

Order NOTORYCTEMORPHIA

Family NOTORYCTIDAE

Notoryctes caurinus
Northern Marsupial Mole
EN¹³ A1c+2c
Australia

Notoryctes typhlops
Southern Marsupial Mole
EN¹³ A1c+2c
Australia

Order DIPROTODONTIA

Family VOMBATIDAE

Lasiorhinus krefftii
Northern Hairy-nosed Wombat
CR¹³ B1+2c, D1
Australia

Family PHALANGERIDAE

Phalanger matanim
Telefomin Cuscus
EN¹³ B1+2e
Papua New Guinea

Phalanger rothschildi
Obi Cuscus
VU¹³ D2
Indonesia

Phalanger vestitus
Stein's Cuscus
VU¹³ A1a, B1+2a
Indonesia, Papua New Guinea

Spilocucus rufoniger
Black-spotted Cuscus
EN¹³ A1d
Indonesia, Papua New Guinea

Family POTOROIDAE

Bettongia lesueur
Boodie
VU¹³ D2
Australia

Bettongia tropica
Northern Bettong
EN¹³ B1+2c
Australia

Potorous gilbertii
Gilbert's Potoroo
CR¹³ C2b, D1
Australia

Potorous longipes
Long-footed Potoroo
EN¹³ B1+2c, C2a
Australia

Family MACROPODIDAE

Dendrolagus dorianus
Doria's Tree-kangaroo
VU¹³ A1a
Indonesia, Papua New Guinea

Dendrolagus goodfellowi
Goodfellow's Tree-kangaroo
EN¹³ A1a
Papua New Guinea

Dendrolagus matschiei
Huon Tree-kangaroo
EN¹³ A1ac
Papua New Guinea

Dendrolagus mbaiso
Dingiso
VU¹³ A1d
Indonesia

Dendrolagus scottae
Scott's Tree-kangaroo
EN¹³ A1a, B1+2a
Papua New Guinea

Dorcopsis atrata
Black Dorcopsis
EN¹³ B1+2c
Papua New Guinea

Dorcopsulus macleayi
Macleay's Dorcopsis
VU¹³ D2
Papua New Guinea

Lagorchestes hirsutus
Rufous Hare-wallaby
VU¹³ D2
Australia

Lagostrophus fasciatus
Banded Hare-wallaby
VU¹³ D2
Australia

Onychogalea fraenata
Bridled Nailtail Wallaby
EN¹³ A1a, C1+2b
Australia

Petrogale penicillata
Brush-tailed Rock-wallaby
VU¹³ C2a
Australia

Petrogale persephone
Prosperine Rock-wallaby
EN¹³ B1+2a
Australia

Setonix brachyurus
Quokka
VU¹³ A1bce, C1
Australia

Thylagale brownii
New Guinea Pademelon
VU¹³ A1a
Indonesia, Papua New Guinea

Thylagale brunii
Dusky Pademelon
VU¹³ A1a
Indonesia, Papua New Guinea

Thylagale calabyi
Calaby's Pademelon
EN¹³ A1a, B1+2a
Papua New Guinea

Family BURRAMYIDAE

Burramys parvus
Mountain Pygmy-possum
EN¹³ B1+2abcde
Australia

Family PSEUDOCHEIRIDAE

Pseudocheirus occidentalis
Western Ringtail
VU¹³ C2a
Australia

Pseudochirops albertysi
D'Albertis Ringtail
VU¹³ A1c, D2
Indonesia, Papua New Guinea

| | | |

Algeria (ex?), Angola, Benin (ex?), Botswana, Burkina Faso (ex?), Burundi (ex?), Cameroon, Central African Republic, Chad, Congo (ex?), Côte d'Ivoire (ex?), Eritrea (ex?), Ethiopia, Gabon (ex?), Gambia (ex?), Ghana (ex?), Guinea (ex?), Kenya, Malawi, Mali (ex?), Mozambique, Namibia, Niger (ex?), Nigeria (ex?), Rwanda (ex), Senegal, Sierra Leone (ex?), Somalia, South Africa, Sudan, Swaziland (ex?), Tanzania, Togo (ex?), Uganda (ex?), Zaire (ex?), Zambia, Zimbabwe

Speothos venaticus

Bush Dog

VU³⁶ C2a

Argentina, Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Panama, Paraguay, Peru, Suriname, Venezuela

Family FELIDAE

Acinonyx jubatus

Cheetah

VU⁴⁰ A1d+2d, C1

Afghanistan (ex), Algeria, Angola, Benin, Botswana, Burkina Faso, Cameroon, Central African Republic, Chad, Egypt (ex?), Ethiopia, India (ex), Iran, Jordan (ex), Kenya, Libya, Malawi, Mali, Mauritania, Morocco, Mozambique, Namibia, Niger, Nigeria, Pakistan (ex), Saudi Arabia (ex), Senegal (ex?), Somalia, South Africa, Sudan, Swaziland, Tanzania, Togo, Uganda, Western Sahara (ex?), Zaire, Zambia, Zimbabwe

Catopuma badia

Bay Cat

VU⁴⁰ C2a

Indonesia, Malaysia

Lynx pardinus

Iberian Lynx

EN⁴⁰ C1

Portugal, Spain

Neofelis nebulosa

Clouded Leopard

VU⁴⁰ A1cd

Bangladesh (ex?), Bhutan, Brunei, Cambodia?, China, India, Indonesia, Laos, Malaysia, Myanmar, Nepal, Taiwan (ex?), Thailand, Viet Nam

Oncifelis guigna

Kodkod

VU⁴⁰ C2a

Argentina, Chile

Oreailurus jacobita

Andean Cat

VU⁴⁰ C2a

Argentina, Bolivia, Chile, Peru

Panthera leo

Lion

VU⁴⁰ A1cd

Angola, Benin, Botswana, Burkina Faso, Burundi, Cameroon, Central African Republic, Chad, Congo, Côte d'Ivoire, Ethiopia, Gabon, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Malawi, Mali, Mauritania (ex?), Mozambique, Namibia, Niger, Nigeria, Rwanda, Senegal, Somalia, South Africa, Sudan, Swaziland, Tanzania, Togo, Uganda, Zaire, Zambia, Zimbabwe

Panthera tigris

Tiger

EN⁴⁰ A2cd

Bangladesh, Bhutan, Cambodia, China, India, Indonesia, Laos, Malaysia, Myanmar, Nepal, North Korea (ex?), Russia, Thailand, Viet Nam

Prionailurus planiceps

Flat-headed Cat

VU⁴⁰ A2c

Brunei, Indonesia, Malaysia, Myanmar?, Thailand

Uncia uncia

Snow Leopard

EN⁴⁰ C2a

Afghanistan, Bhutan, China, India, Kazakhstan, Kyrgyzstan, Mongolia, Nepal, Pakistan, Russia, Tajikistan, Uzbekistan

Family HERPESTIDAE

Bdeogale jacksoni

Jackson's Mongoose

VU¹¹⁷ B1+2c

Kenya, Uganda

Galictis fasciata

Broad-striped Mongoose

VU¹¹⁷ A1cd+2cd

Madagascar

Galidictis grandidieri
Giant-striped Mongoose
EN¹¹⁷ B1+3b
Madagascar

Liberictis kuhni
Liberian Mongoose
EN¹¹⁷ B1+2c
Côte d'Ivoire, Guinea, Liberia

Mungotictis decemlineata
Narrow-striped Mongoose
VU¹¹⁷ B1+2c
Madagascar

Salanoia concolor
Brown-tailed Mongoose
VU¹¹⁷ B1+2c
Madagascar

Family MUSTELIDAE

Gulo gulo
Wolverine
VU¹¹⁷ A2c
Canada, Estonia, Finland, Mongolia,
Norway, Russia, Sweden, USA

Lutra felina
Marine Otter
EN¹²⁷ A1cd
Argentina, Chile, Peru

Lutra perspicillata
Smooth-coated Otter
VU¹²⁷ A2cd
Bangladesh, Bhutan, Cambodia,
China, India, Indonesia, Iraq, Laos,
Malaysia, Myanmar, Nepal,
Pakistan, Thailand, Viet Nam

Lutra provocax
Southern River Otter
VU¹²⁷ A2cd
Argentina, Chile

Lutra sumatrana
Hairy-nosed Otter
VU¹²⁷ A2cd
Brunei, Cambodia, Indonesia, Laos?,
Malaysia, Singapore, Thailand,
Viet Nam

Martes gwatkinsii
Nilgiri Marten
VU¹¹⁷ B1+2c
India

Melogale everetti
Kinabalu Ferret-badger
VU¹¹⁷ B1+2c
Malaysia

Mustela felipei
Colombian Weasel
EN¹¹⁷ B1+2ce
Colombia, Ecuador

Mustela lutreola
European Mink
EN¹¹⁷ A1ace
Belarus, Estonia, Finland (ex?),
France, Georgia, Latvia, Lithuania
(ex), Poland (ex?), Romania, Russia,
Spain

Mustela lutreolina
Indonesian Mountain Weasel
EN¹¹⁷ B1+2c
Indonesia

Mustela strigidorsa
Back-striped Weasel
VU¹¹⁷ C2a
Bhutan, China, India, Laos,
Myanmar, Thailand, Viet Nam

Mydaus marchei
Palawan Stink Badger
VU¹¹⁷ B1+2c
Philippines

Pteronura brasiliensis
Giant Otter
VU¹²⁷ A2cd
Argentina, Bolivia, Brazil,
Colombia, Ecuador, French Guiana,
Guyana, Paraguay, Peru, Suriname,
Uruguay (ex?), Venezuela

Family OTARIIDAE

Arctocephalus galapagoensis
Galápagos Fur Seal
VU¹⁵³ A2d
Ecuador (Galápagos Is)
[Pacific (southeast)]

Arctocephalus philippii
Juan Fernandez Fur Seal
VU¹⁵³ D2
Chile (Juan Fernandez Is)
[Pacific (southeast)]

Arctocephalus townsendi
Guadalupe Fur Seal
VU¹⁵³ D2
Mexico, USA
[Pacific (eastern central)]

Callorhinus ursinus
Northern Fur Seal
VU¹⁵³ A1b
Canada, Japan, Russia, USA
[Pacific (eastern central, northeast,
northwest)]

Eumetopias jubatus
Steller's Sea Lion
EN¹⁵³ A1b
Canada, Japan?, Russia, USA
[Pacific (eastern central, northeast,
northwest)]

Phocarctos hookeri
Hooker's Sea Lion
VU¹⁵³ D2
New Zealand (Auckland Is)
[Pacific (southwest)]

Family PHOCIDAE

Monachus monachus
Mediterranean Monk Seal
CR¹⁵³ C2a
Albania, Algeria, Bulgaria, Cyprus
(ex?), Greece, Italy, Lebanon (ex?),
Libya, Mauritania, Morocco,
Portugal (Desertas Is, Madeira),
Spain (Canary Is (ex?), Chafarinas
Is), Syria (ex?), Tunisia, Turkey,
Western Sahara, Yugoslavia
[Atlantic (eastern central),
Mediterranean and Black Sea]

Monachus schauinslandi
Hawaiian Monk Seal
EN¹⁵³ C2a
USA (Hawaiian Is)
[Pacific (eastern central, northwest)]

Phoca caspica
Caspian Seal
VU¹⁵³ B1+2e
Azerbaijan, Iran, Kazakhstan,
Russia, Turkmenistan

Family PROCYONIDAE

Bassaricyon lasius
EN¹¹⁷ D1
Costa Rica

Bassaricyon pouli
EN¹¹⁷ D1
Panama

Nasua nelsoni
Cozumel Island Coati
EN¹¹⁷ D1
Mexico

Procyon insularis

Mexico

Family URSIDAE

Ailuropoda melanoleuca
Giant Panda
EN¹⁷ B1+2c, C2a
China

Ailurus fulgens

Lesser Panda

EN¹¹⁷ C2a

Bhutan, China, India, Laos,
Myanmar, Nepal

Melursus ursinus

Sloth Bear

VU¹⁷ A2cd, C1+2a

Bangladesh, Bhutan?, India, Nepal,
Sri Lanka

Tremarctos ornatus

Spectacled Bear

VU¹⁷ A2bc

Bolivia, Colombia, Ecuador,
Panama?, Peru, Venezuela

Ursus thibetanus

Asiatic Black Bear

VU¹⁷ A1cd

Afghanistan, Bangladesh, Bhutan,
Cambodia, China, India, Iran, Japan,
Laos, Malaysia?, Mongolia,
Myanmar, Nepal, North Korea,
Pakistan, Russia, South Korea,
Taiwan, Thailand, Viet Nam

Family VIVERRIDAE

Chrotogale owstoni

OWston's Palm Civet

VU¹¹⁷ A1cd

China, Laos, Viet Nam

Cryptoprocta ferox

Fossa

VU¹¹⁷ B1+2e

Madagascar

Cynogale bennettii

Otter-civet

EN¹¹⁷ A1ce, C2a

Brunei, Indonesia, Malaysia,
Singapore?, Thailand, Viet Nam

Diplogale hosei

Hose's Palm Civet

VU¹¹⁷ B1+2c

Malaysia

Eupleres goudotii

Falanouc

EN¹¹⁷ B1+2c

Madagascar

Fossa fossa

Malagasy Civet

Salamandra lanzai
Large Alpine Salamander
VU ⚫ C2a
Italy

The following four Classes include fishes. Most species listed are non-marine. The marine fish listings below represent the first attempt to interpret the conservation status of marine fishes according to the new IUCN Red List criteria. These criteria require further evaluation in order to assess how well they reflect extinction risk in marine fishes.

Class CEPHALASPIDOMORPHI

Order PETROMYZONTIFORMES

Family PETROMYZONTIDAE

Eudontomyzon hellenicus
Greek Brook Lamprey
VU ⚫ A2ce, B1+2c
Greece

Lethenteron zanandreai
Lombardy Brook Lamprey
EN ⚫ B1+2c
Croatia?, Italy, Slovenia

Mordacia praecox
Non-parasitic Lamprey
VU ⚫ D2
Australia

Class ELASMOBRANCHII

Order HEXANCHIFORMES

Family HEXANCHIDAE

Hexanchus griseus
Bluntnose Sixgill Shark
VU ⚫ A1d+2d
[Atlantic (eastern central, northeast, northwest, southeast, southwest, western central), Indian Ocean (eastern, western), Mediterranean and Black Sea, Pacific (eastern central, northeast, northwest, southeast, southwest)]

Order LAMNIFORMES

Family ODONTASPIDIDAE

Carcharias taurus
Sand tiger Shark

Family PHOCOENIDAE

*Phocoenoides dalli*⁴¹

Dall's Porpoise
Canada, Japan, Mexico, North
Korea, Russia, South Korea, USA
[Pacific (eastern central, northeast,
northwest)]

Family ZIPHIIDAE

Berardius arnuxii⁴¹

Arnoux's Beaked Whale
[Atlantic (Antarctic, southeast, southwest), Indian Ocean (Antarctic, eastern central, western central), Pacific (Antarctic, southeast, southwest)]

Berardius bairdii⁴¹

Baird's Beaked Whale
[Pacific (eastern central, northeast, northwest)]

Hyperoodon ampullatus⁴¹

Northern Bottlenose Whale
[Atlantic (northeast, northwest)]

Hyperoodon planifrons⁴¹

Southern Bottlenose Whale
[Atlantic (Antarctic, southeast, southwest), Indian Ocean (Antarctic, eastern, western), Pacific (Antarctic, southeast, southwest)]

Order PERISSODACTYLA

Family RHINOCEROTIDAE

Ceratotherium simum³

White Rhinoceros
Botswana [re-int], Côte d'Ivoire, Kenya, Mozambique (ex?), Namibia, South Africa, Sudan (ex?), Swaziland, Zaire, Zambia (ex?), Zimbabwe

Order ARTIODACTYLA

Family CAMELIDAE

Vicugna vicugna¹⁶⁴

Vicuña
Argentina, Bolivia, Chile, Peru

Family GIRAFFIDAE

Giraffa camelopardalis⁹

Giraffe

Angola, Botswana, Cameroon, Central African Republic, Chad, Eritrea, Ethiopia, Kenya, Mali (ex?), Mauritania (ex), Mozambique (ex?), Namibia, Niger, Nigeria, Rwanda [int], Senegal (ex), Somalia, South Africa, Sudan, Swaziland, Tanzania, Uganda, Zaire, Zambia, Zimbabwe

Family BOVIDAE

Aepyceros melampus⁹

Impala

Angola, Botswana, Kenya, Malawi, Mozambique, Namibia, Rwanda, South Africa, Swaziland, Tanzania, Uganda, Zaire, Zambia, Zimbabwe

Alcelaphus buselaphus⁹

Common Hartebeest

Algeria (ex), Angola, Benin, Botswana, Burkina Faso, Cameroons, Central African Republic, Chad, Côte d'Ivoire, Egypt (ex), Ethiopia, Gambia (ex?), Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho (ex), Mali, Morocco (ex), Namibia, Niger, Nigeria, Senegal, Somalia (ex), South Africa, Sudan, Swaziland, Tanzania, Togo, Tunisia (ex), Uganda, Zaire, Zimbabwe

Alcelaphus lichtensteini⁹

Lichtenstein's Hartebeest

Angola, Burundi (ex), Malawi, Mozambique, South Africa, Tanzania, Zaire, Zambia, Zimbabwe [int]

Antidorcas marsupialis⁹

Springbok

Angola, Botswana, Lesotho (ex), Namibia, South Africa, Swaziland?

Bison bison²²

American Bison
Canada, USA

Boselaphus tragocamelus⁹

Nilgai

Bangladesh (ex), India, Nepal, Pakistan, USA [int]

Capricornis crispus³⁷

Japanese Serow
Japan

Cephalophus harveyi⁹

Harvey's Red Duiker

Ethiopia, Kenya, Somalia, Tanzania

Cephalophus natalensis⁹

Natal Red Duiker

Malawi, Mozambique, South Africa, Swaziland, Tanzania, Zambia, Zimbabwe?

Cephalophus rufilatus⁹

Red-flanked Duiker

Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Côte d'Ivoire, Gambia, Ghana, Guinea, Guinea-Bissau, Mali, Niger, Nigeria, Senegal, Sierra Leone, Sudan, Togo, Uganda (ex?), Zaire

Connochaetes gnou⁹

Black Wildebeest

Lesotho, Namibia [int], South Africa, Swaziland

Connochaetes taurinus⁹

Blue & White-bearded Wildebeest

Angola, Botswana, Kenya, Malawi (ex), Mozambique, Namibia, South Africa, Swaziland, Tanzania, Zambia, Zimbabwe

Damaliscus dorcus⁹

Bontebok

Botswana [int], Lesotho, Namibia [int], South Africa, Swaziland, Zimbabwe [int]

Damaliscus lunatus⁹

Topi

Angola, Benin, Botswana, Burkina Faso, Burundi (ex), Cameroon, Central African Republic, Chad, Ethiopia, Gambia (ex), Guinea (ex?), Guinea-Bissau (ex), Kenya, Mali (ex), Mauritania (ex), Mozambique (ex), Namibia, Niger, Nigeria, Rwanda, Senegal (ex), Somalia, South Africa, Sudan, Swaziland (ex), Tanzania, Togo (ex?), Uganda, Zaire, Zambia, Zimbabwe

Gazella bennetti⁹

Chinkara

Afghanistan?, India, Iran, Pakistan

Gazella gazella⁹

Mountain Gazelle

Egypt (ex), Iran [int], Israel, Jordan, Lebanon (ex), Oman, Saudi Arabia, Syria?, United Arab Emirates, Yemen

Gazella granti⁹

Grant's Gazelle

Ethiopia, Kenya, Somalia, Sudan, Tanzania, Uganda

Gazella thomsonii⁹

Thomson's Gazelle

Ethiopia, Kenya, Sudan, Tanzania

Hippotragus equinus⁹

Roan Antelope

Angola, Benin, Botswana, Burkina Faso, Burundi (ex), Cameroon, Central African Republic, Chad, Côte d'Ivoire, Ethiopia, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Malawi, Mali, Mauritania, Mozambique, Namibia, Niger, Nigeria, Rwanda, Senegal, Swaziland, Tanzania, Togo, Uganda, Zaire, Zambia, Zimbabwe

Hippotragus niger⁹

Sable Antelope

Angola, Botswana, Kenya, Malawi, Mozambique, Namibia, South Africa, Swaziland [int], Tanzania, Zaire, Zambia, Zimbabwe

Kobus ellipsiprymnus⁹

Waterbuck

Angola, Benin, Botswana, Burkina Faso, Burundi, Cameroon, Central African Republic, Chad, Congo, Côte d'Ivoire, Ethiopia, Gabon, Gambia (ex?), Ghana, Guinea, Guinea-Bissau, Kenya, Malawi, Mali, Mozambique, Namibia, Niger, Nigeria, Rwanda, Senegal, Sierra

Tadarida espiritosantensis ⁴²

Brazil

Tadarida fulminans ⁴²

Kenya, Madagascar, Malawi, Rwanda, South Africa, Tanzania, Zaire, Zambia, Zimbabwe

Tadarida ventralis ⁴²

Ethiopia, Kenya, Malawi, Mozambique, South Africa, Sudan, Tanzania, Zaire

Order PRIMATES

Family CHEIROGALEIDAE

Phaner furcifer ¹⁵

Fork-marked Lemur
Madagascar

Family LORIDAE

Arctocebus aureus ¹⁴³

Golden Potto
Cameroon, Central African Republic?, Congo, Equatorial Guinea, Gabon, Zaire?

Arctocebus calabarensis ¹⁴³

Angwantibo
Cameroon, Nigeria

Family GALAGONIDAE

Euoticus elegantulus ¹⁴³

Western Needle-clawed Galago
Angola?, Cameroon, Central African Republic, Congo, Equatorial Guinea, Gabon, Zaire

Euoticus pallidus ¹⁴³

Northern Needle-clawed
Cameroon, Equatorial Guinea, Nigeria

Galago alleni ¹⁴³

Allen's Galago
Angola?, Cameroon, Central African Republic, Congo, Equatorial Guinea, Gabon, Nigeria

Galago gallarum ¹⁴³

Somali Galago
Ethiopia?, Kenya, Somalia

Galago matschiei ¹⁴³

Lesser Needle-clawed Galago
Burundi?, Rwanda?, Uganda, Zaire

Galago zanzibaricus ¹⁴³

Zanzibar Galago
Kenya, Malawi, Mozambique, Somalia, Tanzania, Zimbabwe

Otolemur garnettii ¹⁴³

Small-eared Greater Galago
Kenya, Somalia, Tanzania

Family CERCOPITHECIDAE

*Allenopithecus nigroviridis*¹⁴³

Allen's Swamp Monkey
Cameroon, Congo, Zaire

*Cercocebus atys*¹⁴³

Sooty Mangabey
Côte d'Ivoire, Ghana, Guinea,
Guinea-Bissau, Liberia, Senegal,
Sierra Leone

*Cercocebus galeritus*¹⁴³

Crested Mangabey
Cameroon, Central African Republic,
Congo, Equatorial Guinea, Gabon,
Kenya, Tanzania, Zaire

*Cercocebus torquatus*¹⁴³

Red-capped Mangabey
Cameroon, Congo, Côte d'Ivoire,
Equatorial Guinea, Gabon, Ghana,
Guinea, Liberia, Nigeria, Senegal,
Sierra Leone

*Cercopithecus hamlyni*¹⁴³

Owl-faced Monkey
Rwanda, Uganda?, Zaire

*Cercopithecus lhoesti*¹⁴³

L'Hoest's Monkey
Burundi, Rwanda, Uganda, Zaire

*Colobus polykomos*¹⁴³

Western Black-and-white Colobus
Côte d'Ivoire, Gambia, Guinea,
Guinea-Bissau, Liberia, Senegal?,
Sierra Leone

*Lophocebus aterrimus*¹⁴³

Black Mangabey
Angola, Zaire

*Macaca fascicularis*¹⁴³

Crab-eating Macaque
Brunei?, Cambodia, India (Andaman & Nicobar Is), Indonesia, Laos, Malaysia, Myanmar, Philippines, Thailand, Viet Nam

*Macaca hecki*¹⁴³

Heck's Macaque
Indonesia

*Macaca mulatta*¹⁴³

Rhesus Macaque
Afghanistan, Bangladesh, Bhutan, China, India, Laos, Myanmar, Nepal, Pakistan, USA [int], Viet Nam

*Macaca sinica*¹⁴³

Toque Macaque
Sri Lanka

*Macaca tonkeana*¹⁴³

Tonkean Macaque
Indonesia

*Mandrillus sphinx*¹⁴³

Mandrill
Cameroon, Congo, Equatorial Guinea, Gabon

Papio hamadryas¹⁴³

Hamadryas Baboon
Djibouti, Egypt (ex), Eritrea,
Ethiopia, Saudi Arabia, Somalia,
Sudan, Yemen

Papio papio¹⁴³

Guinea Baboon
Gambia, Guinea, Guinea-Bissau?,
Mali, Mauritania, Senegal, Sierra
Leone

Presbytis femoralis¹⁴³

Indonesia, Malaysia, Thailand

Presbytis thomasi¹⁴³

Indonesia

Procolobus badius¹⁴³

Red Colobus
Burundi, Cameroon, Central African Republic, Congo, Côte d'Ivoire, Equatorial Guinea, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Liberia, Nigeria, Senegal, Sierra Leone, Tanzania, Uganda, Zaire

Procolobus verus¹⁴³

Olive Colobus
Benin?, Côte d'Ivoire, Ghana,
Guinea, Liberia, Nigeria, Sierra
Leone, Togo (ex?)

Semnopithecus entellus¹⁴³

Bangladesh, Bhutan, China, India,
Nepal, Pakistan, Sri Lanka

Theropithecus gelada¹⁴³

Gelada Baboon
Ethiopia

Trachypithecus cristatus¹⁴³

Brunei?, Cambodia, India, Indonesia,
Laos, Malaysia, Myanmar,
Singapore?, Thailand, Viet Nam

Family HYLOBATIDAE

Hylobates agilis¹⁴³

Indonesia, Malaysia, Thailand

Hylobates lar¹⁴³

China, Indonesia, Malaysia,
Myanmar, Thailand

Hylobates muelleri¹⁴³

Brunei, Indonesia, Malaysia

Hylobates syndactylus¹⁴³

Indonesia, Malaysia

Order CARNIVORA

Family CANIDAE

Crysacyon brachyurus³⁶

Maned Wolf
Argentina, Bolivia, Brazil, Paraguay,
Peru, Uruguay?

Family FELIDAE

Catopuma temmincki⁴⁰

Asian Golden Cat

Bangladesh, Bhutan, Cambodia,
China, India, Indonesia, Laos,
Malaysia, Myanmar, Nepal,
Thailand, Viet Nam

Leopardus tigrinus⁴⁰

Little Spotted Cat

Argentina, Bolivia?, Brazil,
Colombia, Costa Rica, Ecuador,
French Guiana, Guyana, Nicaragua?,
Paraguay?, Suriname, Venezuela

Panthera onca⁴⁰

Jaguar

Argentina, Belize, Bolivia, Brazil,
Colombia, Costa Rica, Ecuador,
French Guiana, Guatemala, Guyana,
Honduras, Mexico, Nicaragua,
Panama, Paraguay, Peru, Suriname,
Venezuela

Prionailurus viverrinus⁴⁰

Fishing Cat

Bangladesh, Bhutan, Brunei,
Cambodia, China, India, Indonesia,
Laos, Malaysia, Myanmar, Nepal,
Pakistan (ex?), Sri Lanka, Thailand,
Viet Nam

Family MUSTELIDAE

Aonyx cinerea¹²⁷

Oriental Small-clawed Otter
Bangladesh, Bhutan, Brunei,
Cambodia, China, India, Indonesia,
Laos, Malaysia, Myanmar, Nepal,
Philippines, Singapore, Thailand,
Viet Nam

Aonyx congica¹²⁷

Burundi?, Cameroon, Central
African Republic, Congo, Gabon,
Niger?, Rwanda, Uganda, Zaire

Family PHOCIDAE

Phoca sibirica¹⁵³

Baikal Seal

Russia
[L. Baikal]

Family PROCYONIDAE

Bassaricyon beddardi¹¹⁷

Guyana, Venezuela?

Bassaricyon gabbii¹¹⁷

Colombia, Costa Rica, Ecuador,
Nicaragua, Panama

Bassariscus sumichrasti¹¹⁷

Belize, Costa Rica, El Salvador,
Guatemala, Honduras?, Mexico,
Nicaragua, Panama

**Order CETACEA****Family BALAENOPTERIDAE***Balaenoptera acutorostrata*⁴¹

Minke Whale

[Arctic Sea, Atlantic (eastern central, northeast, northwest, western central), Mediterranean and Black Seal]

Order PERISSODACTYLA**Family TAPIRIDAE***Tapirus terrestris*¹⁷¹

Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, French Guiana, Guyana, Paraguay, Peru, Suriname, Venezuela

Order ARTIODACTYLA**Family SUIDAE***Sus philippensis*¹³⁵

Philippine Warty Pig
Philippines

Family TRAGULIDAE*Hyemoschus aquaticus*⁵⁹

Cameroon, Central African Republic, Congo, Côte d'Ivoire, Equatorial Guinea, Gabon, Ghana, Guinea?, Liberia, Nigeria, Sierra Leone, Uganda, Zaire

Family MOSCHIDAE*Moschus berezovskii*⁵⁹

Forest Musk Deer
China, Myanmar, Viet Nam

*Moschus chrysogaster*⁵⁹

Afghanistan, China, India, Nepal, Pakistan

*Moschus fuscus*⁵⁹

Black Musk Deer
Bhutan, China, India, Myanmar, Nepal

Family CERVIDAE*Hydropotes inermis*⁵⁹

Chinese Water Deer
China

*Mazama rufina*⁵⁹

Little Red Brocket Deer
Ecuador, Venezuela

*Ozotoceros bezoarticus*⁵⁹

Pampas Deer
Argentina, Bolivia, Brazil, Paraguay, Uruguay

*Pudu mephistophiles*⁵⁹

Northern Pudu
Colombia, Ecuador, Peru

Family BOVIDAE*Capra pyrenaica*³⁷

Spanish Ibex
Portugal (ex), Spain

*Cephalophus callipygus*⁹

Peters' Duiker
Cameroon, Central African Republic, Congo, Equatorial Guinea, Gabon

*Cephalophus dorsalis*⁹

Bay Duiker
Angola, Benin?, Cameroon, Central African Republic, Congo, Côte d'Ivoire, Equatorial Guinea, Gabon, Ghana, Guinea, Guinea-Bissau, Liberia, Nigeria, Sierra Leone, Togo, Uganda (ex), Zaire

*Cephalophus leucogaster*⁹

White-bellied Duiker
Cameroon, Central African Republic, Congo, Equatorial Guinea, Gabon, Uganda (ex), Zaire

*Cephalophus maxwellii*⁹

Maxwell's Duiker
Benin, Burkina Faso, Côte d'Ivoire, Gambia, Ghana, Guinea, Guinea-Bissau, Liberia, Nigeria, Senegal, Sierra Leone, Togo

*Cephalophus niger*⁹

Black Duiker
Benin?, Côte d'Ivoire, Ghana, Guinea, Liberia, Nigeria, Sierra Leone, Togo

*Cephalophus nigrifrons*⁹

Black-fronted Duiker
Angola, Burundi, Cameroon, Central African Republic, Congo, Equatorial Guinea?, Gabon, Kenya, Rwanda, Uganda, Zaire

*Cephalophus ogilbyi*⁹

Ogilby's Duiker
Cameroon, Congo?, Côte d'Ivoire, Equatorial Guinea, Gabon, Ghana, Guinea?, Liberia, Nigeria, Sierra Leone

*Cephalophus silvicultor*⁹

Yellow-backed Duiker
Angola, Benin, Burkina Faso, Burundi (ex?), Cameroon, Central African Republic, Chad, Congo, Côte d'Ivoire, Equatorial Guinea, Guinea-Bissau, Kenya, Liberia, Nigeria, Rwanda (ex?), Senegal, Sierra Leone, Sudan, Togo, Uganda, Zaire, Zambia

*Cephalophus weynsi*⁹

Weyn's Duiker
Burundi, Kenya, Rwanda, Sudan, Tanzania, Uganda, Zaire

*Gazella dorcas*⁹

Dorcass Gazelle

Algeria, Burkina Faso, Chad, Djibouti, Egypt, Eritrea, Ethiopia, Israel, Libya, Mali, Mauritania, Morocco, Niger, Nigeria?, Senegal (ex), Somalia, Sudan, Tunisia, Western Sahara

*Gazella subgutturosa*⁹

Goitered Gazelle
Afghanistan, Armenia (ex), Azerbaijan, Bahrain, China, Georgia(ex), Iran, Iraq, Jordan, Kazakhstan, Kuwait, Kyrgyzstan, Mongolia, Oman, Pakistan, Saudi Arabia, Syria (ex), Tajikistan, Turkey, United Arab Emirates, Uzbekistan, Yemen

*Kobus megaceros*⁹

Nile Lechwe
Ethiopia, Sudan

*Naemorhedus goral*³⁷

Himalayan Goral
Bhutan, India, Nepal, Pakistan

*Neotragus batesi*⁹

Bates' Pygmy Antelope
Cameroon, Central African Republic, Congo, Equatorial Guinea, Gabon, Nigeria, Uganda, Zaire

*Neotragus pygmaeus*⁹

Royal Antelope
Côte d'Ivoire, Ghana, Guinea, Liberia, Sierra Leone

*Okapia johnstoni*⁹

Okapi
Uganda?, Zaire

*Procapra gutturosa*⁹

Mongolian Gazelle
China, Mongolia, Russia

*Procapra picticaudata*⁹

Tibetan Gazelle
Bhutan?, China, India

*Pseudois nayaur*³⁷

Blue Sheep
China, India, Pakistan, Tajikistan

*Taurotragus derbianus*⁹

Giant Eland
Cameroon, Central African Republic, Chad (ex?), Côte d'Ivoire (ex), Gambia (ex), Ghana (ex), Guinea-Bissau, Mali (ex), Nigeria (ex), Senegal, Sudan, Togo (ex), Uganda (ex?), Zaire

*Tragelaphus eurycerus*⁹

Bongo
Benin (ex?), Cameroon, Central African Republic, Congo, Côte d'Ivoire, Gabon, Ghana, Guinea, Kenya, Liberia, Sierra Leone, Sudan, Togo (ex?), Uganda (ex), Zaire

*Tragelaphus spekii*⁹

Sitatunga

Angola, Benin, Botswana, Burundi, Cameroon, Central African Republic, Chad, Congo, Côte d'Ivoire?, Equatorial Guinea, Gabon, Gambia, Ghana (ex?), Guinea, Guinea-Bissau, Kenya, Mozambique, Namibia, Niger (ex), Nigeria, Rwanda, Senegal, Sierra Leone (ex?), Sudan, Tanzania, Togo (ex?), Uganda, Zaire, Zambia, Zimbabwe

Order PHOLIDOTA

Family MANIDAE

Manis crassicaudata ¹³⁰

Indian Pangolin
Bangladesh, China, India, Pakistan, Sri Lanka

Manis javanica ¹³⁰

Malayan Pangolin
Bangladesh?, Brunei, Cambodia, China?, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore (ex?), Thailand, Viet Nam

Manis pentadactyla ¹³⁰

Chinese Pangolin
Bangladesh?, Cambodia, China, Hong Kong, India, Laos, Myanmar, Nepal, Taiwan, Thailand, Viet Nam

Manis temminckii ¹³⁰

Temminck's Ground Pangolin
Angola, Botswana, Central African Republic, Chad, Ethiopia, Kenya, Malawi, Mozambique, Namibia, Rwanda, Somalia, South Africa, Sudan, Tanzania, Uganda, Zaire, Zambia, Zimbabwe

Order RODENTIA

Family SCIURIDAE

Aeretes melanopterus ¹⁵

China

Belomys pearsonii ¹⁵

Bhutan, China, India, Laos, Myanmar, Nepal, Taiwan, Thailand, Viet Nam

Eoglaucomys fimbriatus ¹⁵

India, Pakistan

Epixerus ebii ¹⁵

Côte d'Ivoire, Ghana, Liberia, Sierra Leone

Epixerus wilsoni ¹⁵

Cameroon, Equatorial Guinea, Gabon

Funisciurus isabella ¹⁵

Cameroon, Central African Republic, Congo

Hylopetes baberi ¹⁵

Afghanistan

Hylopetes bartelsi ¹⁵

Indonesia

Hylopetes nigripes ¹⁵

Philippines

Lariscus niobe ¹⁵

Indonesia

Lariscus obscurus ¹⁵

Indonesia

Marmota caudata ¹⁵

Armenia, Azerbaijan, China, India, Kyrgyzstan, Pakistan, Tajikistan

Paraxerus alexandri ¹⁵

Uganda, Zaire

Petaurista magnificus ¹⁵

Bhutan, China, India, Nepal

Petaurista nobilis ¹⁵

Bhutan, India, Nepal

Petromys lugens ¹⁵

Indonesia

Prosciurillus weberi ¹⁵

Indonesia

Pteromys volans ⁸

Russian Flying Squirrel

China, Finland, Japan, Mongolia, North Korea, Russia, South Korea

Pteromyscus pulverulentus ¹⁵

Brunei, Indonesia, Malaysia, Thailand

Sciurus anomalus ⁸

Persian Squirrel

Armenia, Azerbaijan, Georgia, Greece, Iran, Iraq, Israel, Lebanon, Syria, Turkey

Sciurus arizonensis ¹⁵

Mexico, USA

Sciurus richmondi ¹⁵

Nicaragua

Sciurus sanborni ¹⁵

Peru

Sciurus vulgaris ⁸

Red Squirrel

Austria, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Czech Republic, Denmark, Finland, France, Germany, Hungary, Ireland, Italy, Japan, Macedonia, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, United Kingdom, Yugoslavia

Spermophilus madrensis ¹⁵

Mexico

Spermophilus major ¹⁵

Russia

Spermophilus perotensis ¹⁵

Mexico

Sundasciurus brookei ¹⁵

Indonesia, Malaysia

Sundasciurus moellendorffii ⁸⁶

Philippines

Sundasciurus steerii ⁸⁶

Philippines

Syntheosciurus brochus ¹⁵

Mountain Squirrel

Costa Rica, Panama

Family CASTORIDAE

Castor fiber ⁷⁵

Eurasian Beaver

Austria, Belarus, China, Czech Republic, Estonia, Finland, France, Germany, Hungary, Latvia, Lithuania, Moldova?, Mongolia, Netherlands, Norway, Poland, Russia, Slovakia, Sweden, Switzerland, Ukraine

Family GEOMYIDAE

Orthogeomys cherriei ¹⁵

Costa Rica

Pappogeomys fumosus ¹⁵

Mexico

Pappogeomys tylorhinus ¹⁵

Mexico

Pappogeomys zinseri ¹⁵

Mexico

Thomomys umbrinus ¹⁵

Mexico, USA

Family HETEROMYIDAE

Dipodomys nitratoides ⁸²

San Joaquin Kangaroo Rat
USA

Dipodomys phillipsii ¹⁵

Mexico

Heteromys goldmani ¹⁵

Mexico

Heteromys oresterus ¹⁵

Costa Rica

Liomys adspersus ¹⁵

Panama

Liomys spectabilis ¹⁵

Mexico

Perognathus alticola ⁸²

White-eared Pocket Mouse
USA

Perognathus amplus ¹⁵

Mexico, USA

Family DIPODIDAE

Allactaga bullata ¹⁵

China, Mongolia

| | | |

Family FALCONIDAE

- Falco chicquera*²¹
Red-necked Falcon
Bangladesh, India, Nepal, Pakistan
- Falco deiroleucus*²¹
Orange-breasted Falcon
Argentina, Bolivia, Brazil,
Colombia, Costa Rica, Ecuador,
Guatemala, Guyana, Honduras,
Mexico, Nicaragua, Panama,
Paraguay, Peru, Suriname, Trinidad
and Tobago, Venezuela
- Falco novaeseelandiae*²¹
New Zealand Falcon
New Zealand
- Microhierax latifrons*²¹
White-fronted Falconet
Malaysia
- Microhierax melanoleucus*²¹
Pied Falconet
Bangladesh, China, India, Laos,
Viet Nam
- Phalcoboenus australis*²¹
Striated Caracara
Argentina, Chile, Falkland Islands
- Polihiex insignis*²¹
White-rumped Falcon
Cambodia, Laos, Myanmar,
Thailand, Viet Nam

Order GALLIFORMES

Family MEGAPODIIDAE

- Megapodius bernsteinii*²¹
Sula Scrubfowl
Indonesia
- Megapodius cumingii*²¹
Tabon Scrubfowl
Indonesia, Malaysia, Philippines

Family CRACIDAE

- Aburria aburri*²¹
Wattled Guan
Colombia, Ecuador, Peru, Venezuela
- Chamaepetes unicolor*²¹
Black Guan
Costa Rica, Panama
- Penelope jacucaca*²¹
White-browed Guan
Brazil
- Penelope pileata*²¹
White-crested Guan
Brazil

Family PHASIANIDAE

- Agriocharis ocellata*²¹
Ocellated Turkey
Belize, Guatemala, Mexico

*Alectoris magna*²¹

Rusty-necklaced Partridge
China

*Anurophasis monorthonyx*²¹

Snow Mountain Quail
Indonesia

*Arborophila atrogularis*²¹

White-cheeked Partridge
Bangladesh, China, India, Myanmar

*Arborophila crudigularis*²¹

Taiwan Partridge
Taiwan

*Bonasa sewerzowi*²¹

Chinese Grouse
China

*Chrysolophus amherstiae*²¹

Lady Amherst's Pheasant
China, Myanmar

*Chrysolophus pictus*²¹

Golden Pheasant
China

*Crossoptilon auritum*²¹

Blue Eared-pheasant
China

*Cyrtonyx ocellatus*²¹

Ocellated Quail
Guatemala, Honduras, Mexico,
Nicaragua

*Dendragapus falcipennis*²¹

Siberian Grouse
China, Russia

*Dendrocytus macroura*²¹

Long-tailed Wood-partridge
Mexico

*Gallus sonneratii*²¹

Grey Junglefowl
India

*Lophura swinhoii*²¹

Swinhoe's Pheasant
Taiwan

*Melanoperdix nigra*²¹

Black Partridge
Indonesia, Malaysia

*Odontophorus atrifrons*²¹

Black-fronted Wood-quail
Colombia, Venezuela

*Odontophorus columbianus*²¹

Venezuelan Wood-quail
Venezuela

*Odontophorus dialeucus*²¹

Tacarcuna Wood-quail
Panama

*Odontophorus hyperythrus*²¹

Chestnut Wood-quail
Colombia

*Odontophorus leucocephalus*²¹

Black-breasted Wood-quail
Costa Rica, Panama

*Odontophorus melanotus*²¹

Dark-backed Wood-quail
Colombia, Ecuador

*Polypelectron chalcurum*²¹

Bronze-tailed Peacock-pheasant
Indonesia

*Syrmaticus mikado*²¹

Mikado Pheasant
Taiwan

*Syrmaticus soemmerringii*²¹

Copper Pheasant
Japan

*Tetrao mlokosiewiczi*²¹

Caucasian Grouse
Armenia, Azerbaijan, Georgia, Iran,
Russia, Turkey

*Tetraophasis obscurus*²¹

Chestnut-throated Partridge
China

*Tetraophasis szchenyii*²¹

Buff-throated Partridge
China, India

*Tragopan satra*²¹

Satyr Tragopan
Bhutan, China, India, Nepal

*Tragopan temminckii*²¹

Temminck's Tragopan
China, India, Myanmar, Viet Nam

Order GRUIFORMES

Family TURNICIDAE

*Turnix ocellata*²¹

Spotted Buttonquail
Philippines

Family GRUIDAE

*Grus antigone*²¹

Sarus Crane
Australia, Brunei, Cambodia, India,
Laos, Nepal, Philippines (ex?),
Thailand (ex?), Viet Nam

Family RALLIDAE

*Gallirallus australis*²¹

Weka
New Zealand

*Gallirallus roviana*²¹

Roviana Rail
Solomon Islands

*Laterallus spilonotus*²¹

Galápagos Rail
Ecuador

*Microptila schomburgkii*²¹

Ocellated Crake
Bolivia, Brazil, Colombia, French
Guiana, Guyana, Peru, Suriname,
Venezuela

Neocrex columbianus ²¹

Colombian Crake
Colombia, Ecuador, Panama

Porzana paykullii ²¹

Band-bellied Crake
China, Russia. * China, Indonesia,
Malaysia, Philippines, South Korea,
Thailand, Viet Nam

Rougetius rougetii ²¹

Rouget's Rail
Eritrea, Ethiopia

Family OTIDIDAE

Eupodotis caerulescens ²¹

Blue Bustard
Lesotho, South Africa

Eupodotis humilis ²¹

Little Brown Bustard
Ethiopia, Somalia

Neotis nuba ²¹

Nubian Bustard
Chad, Mali, Mauritania, Niger, Sudan

Tetrax tetrax ²¹

Little Bustard
Albania?, Algeria, Bulgaria (ex),
China, Czech Republic (ex), France,
Greece (ex), Iran, Iraq?, Italy,
Kazakhstan, Kyrgyzstan, Morocco,
Portugal, Russia, Spain, Turkey,
Ukraine, Uzbekistan. * Azerbaijan?,
Egypt, Georgia, Israel, Libya,
Pakistan, Romania, Tajikistan,
Tunisia, Turkmenistan, Yugoslavia

Order CHARADRIIFORMES

Family HAEMATOPODIDAE

Haematopus moquini ²¹

African Oystercatcher
Namibia, South Africa

Family GLAREOLIDAE

Glareola nordmanni ²¹

Black-winged Pratincole
Armenia, Belarus, Hungary, Iraq,
Kazakhstan, Moldova, Romania,
Russia, Syria, Ukraine. * Angola,
Botswana, Burundi, Cameroon,
Chad, Cyprus, Egypt, Ethiopia, Iran,
Israel, Mali, Mauritania, Namibia,
Nigeria, Rwanda, Saudi Arabia,
South Africa, Sudan, Turkey,
Uganda, Zaire, Zambia

Family CHARADRIIDAE

Charadrius javanicus ²¹

Javan Plover
Indonesia

Charadrius peronii ²¹

Malaysian Plover
Brunei, Indonesia, Malaysia,
Philippines, Thailand, Viet Nam

Charadrius placidus ²¹

Long-billed Plover
China, Japan, North Korea, Russia. *
China, India, Japan, Laos, Malaysia,
Myanmar, North Korea, South Korea

Phegornis mitchellii ²¹

Diamed Sandpiper-plover
Argentina, Bolivia, Chile, Peru

Pluvianellus socialis ²¹

Magellanic Plover
Argentina, Chile

Vanellus cinereus ²¹

Grey-headed Lapwing
China, Japan, Mongolia. *
Bangladesh, Cambodia, China, India,
Laos, Myanmar, Nepal, Philippines,
Taiwan, Thailand, Viet Nam

Family SCOLOPACIDAE

Coenocorypha aucklandica ²¹

New Zealand Snipe
New Zealand (Auckland Is, Chatham
Is)

Gallinago hardwickii ²¹

Latham's Snipe
Japan. * Australia, China, Indonesia,
Papua New Guinea, Taiwan

Gallinago imperialis ²¹

Imperial Snipe
Colombia, Ecuador, Peru

Gallinago media ²¹

Great Snipe
Belarus, Denmark (ex), Estonia,
Finland, Germany (ex), Latvia,
Lithuania, Netherlands (ex), Norway,
Poland, Russia, Sweden, Ukraine. *
Angola, Burkina Faso, Burundi,
Cameroon, Chad, Congo, Côte
d'Ivoire, Cyprus, Egypt, Ethiopia,
Gabon, Ghana, India, Iran, Kenya,
Liberia, Malawi, Mali, Mauritania,
Mozambique, Namibia, Nigeria,
Rwanda, Saudi Arabia, Sierra Leone,
South Africa, Sudan, Tanzania,
Togo, Turkey, Uganda, Yemen,
Zaire, Zambia, Zimbabwe

Gallinago stricklandii ²¹

Fuegian Snipe
Argentina, Chile, Falkland Islands

Limnodromus semipalmatus ²¹

Asian Dowitcher
China, Mongolia, Russia. *
Australia, Bangladesh, Brunei,
Cambodia, Hong Kong, India,
Indonesia, Japan, Malaysia,
Myanmar, Philippines, Singapore,
Thailand, Viet Nam

Limosa haemastica ²¹

Hudsonian Godwit
Canada, USA. * Argentina,
Barbados, Bolivia, Brazil, Chile,
Falkland Islands, Mexico, Paraguay,
Peru, Uruguay, Venezuela

Numenius madagascariensis ²¹

Far Eastern Curlew

China, Mongolia, Russia. *
Australia, Brunei, China, Federated
States of Micronesia, Fiji, Hong
Kong, Indonesia, Japan, Malaysia,
New Zealand, North Korea, Palau,
Papua New Guinea, Philippines,
South Korea, Taiwan, Thailand,
Western Samoa

Scolopax celebensis ²¹

Sulawesi Woodcock
Indonesia

Family LARIDAE

Larus heermanni ²¹

Heermann's Gull
Mexico, USA

Larus pacificus ²¹

Pacific Gull
Australia

Larus relictus ²¹

Relict Gull
China, Kazakhstan, Mongolia,
Russia. * South Korea, Viet Nam

Sterna balaenarum ²¹

Damara Tern
Angola?, Namibia, South Africa. *
Angola, Cameroon, Congo, Gabon,
Ghana, Nigeria, Togo, Zaire?

Sterna elegans ²¹

Elegant Tern
Mexico, USA

Family ALCIDAE

Brachyramphus marmoratus ²¹

Marbled Murrelet
Canada, Russia, USA

Synthliboramphus craveri ²¹

Craveri's Murrelet
Mexico, USA

Synthliboramphus hypoleucus ²¹

Xantus's Murrelet
Canada, Mexico, USA

Order COLUMBIFORMES

Family COLUMBIDAE

Caloenas nicobarica ²¹

Nicobar Pigeon
Cambodia, India (Andaman &
Nicobar Is), Indonesia, Malaysia,
Myanmar, Palau, Papua New

Family COTINGIDAE

*Ampeliooides tschudii*²¹Scaled Fruiteater
Bolivia, Colombia, Ecuador, Peru,
Venezuela*Carpodectes hopkei*²¹Black-tipped Cotinga
Colombia, Ecuador, Panama*Carpornis cucullatus*²¹Hooded Berryeater
Brazil*Conioptilon mcilhennyi*²¹Black-faced Cotinga
Peru*Pachyramphus spodiurus*²¹Slaty Becard
Ecuador, Peru*Phibalura flavirostris*²¹Swallow-tailed Cotinga
Argentina, Bolivia, Brazil*Pipreola chlorolepidota*²¹Fiery-throated Fruiteater
Colombia, Ecuador, Peru*Pipreola frontalis*²¹Scarlet-breasted Fruiteater
Bolivia, Colombia, Ecuador, Peru*Pipreola lubomirskii*²¹Black-chested Fruiteater
Colombia, Ecuador, Peru*Porphyrolaema porphyrolaema*²¹Purple-throated Cotinga
Brazil, Colombia, Ecuador, Peru*Procnias nudicollis*²¹Bare-throated Bellbird
Argentina, Brazil, Paraguay*Tijuca atrata*²¹Black-and-gold Cotinga
Brazil

Family PIPRIDAE

*Chloropipo flavicapilla*²¹Yellow-headed Manakin
Colombia*Pipra iris*²¹Opal-crowned Manakin
Brazil*Piprites griseiceps*²¹Grey-headed Piprites
Costa Rica, Guatemala, Honduras,
Nicaragua

Family TYRANNIDAE

*Alectrurus tricolor*²¹Cock-tailed Tyrant
Argentina, Bolivia, Brazil, Paraguay*Aphanotriccus audax*²¹Black-billed Flycatcher
Colombia, Panama*Aphanotriccus capitalis*²¹Tawny-chested Flycatcher
Costa Rica, Nicaragua*Contopus ochraceus*²¹Ochraceous Pewee
Costa Rica, Panama*Culicivora caudacuta*²¹Sharp-tailed Grass-tyrant
Argentina, Bolivia, Brazil, Paraguay*Hemitriccus aenigma*²¹Zimmer's Tody-tyrant
Brazil*Hemitriccus cinnamomeipectus*²¹Cinnamon-breasted Tody-tyrant
Peru*Hemitriccus josephinae*²¹Boat-billed Tody-tyrant
Brazil, Guyana, Suriname*Hemitriccus nidipendulus*²¹Hangnест Tody-tyrant
Brazil*Hemitriccus orbitatus*²¹Eye-ringed Tody-tyrant
Brazil*Hemitriccus rufipectus*²¹Buff-throated Tody-tyrant
Bolivia, Peru*Knipolegus hudsoni*²¹Hudson's Black-tyrant
Argentina, Bolivia, Paraguay*Muscicipra vetula*²¹Shear-tailed Grey Tyrant
Argentina, Brazil, Paraguay*Myiophobus lintoni*²¹Orange-banded Flycatcher
Ecuador, Peru*Myiornis albiventris*²¹White-bellied Pygmy-tyrant
Bolivia, Peru*Myiotheretes fuscorufus*²¹Rufous-bellied Bush-tyrant
Bolivia, Peru*Ochthoeca piurae*²¹Piura Chat-tyrant
Peru*Ochthoeca salvini*²¹Tumbes Tyrant
Peru*Phyllosmyias griseocapilla*²¹Grey-capped Tyrannulet
Brazil*Phyllosmyias reiseri*²¹Reiser's Tyrannulet
Brazil, Paraguay*Phylloscartes difficilis*²¹Serra do Mar Tyrannulet
Brazil*Phylloscartes eximus*²¹Southern Bristle-tyrant
Argentina, Brazil, Paraguay*Phylloscartes oustaleti*²¹Oustalet's Tyrannulet
Brazil*Phylloscartes sylviolus*²¹Bay-ringed Tyrannulet
Argentina, Brazil, Paraguay*Phylloscartes venezuelanus*²¹Venezuelan Bristle-tyrant
Venezuela*Poecilotriccus albifacies*²¹White-cheeked Tody-tyrant
Peru*Polystictus pectoralis*²¹

Bearded Tachuri

Argentina, Bolivia, Brazil,
Colombia, Guyana, Paraguay,
Suriname, Uruguay, Venezuela*Polystictus superciliaris*²¹Grey-backed Tachuri
Brazil*Todirostrum viridanum*²¹Maracaibo Tody-flycatcher
Venezuela*Xenotriccus callizonus*²¹Belted Flycatcher
Guatemala, Mexico*Xenotriccus mexicanus*²¹Pileated Flycatcher
Mexico*Zolmis salinarum*²¹Salinas Monjita
Argentina

Family PITTIIDAE

*Pitta baudii*²¹Blue-headed Pitta
Brunei, Indonesia, Malaysia*Pitta caerulea*²¹Giant Pitta
Indonesia, Malaysia, Myanmar,
Thailand*Pitta dohertyi*²¹Sula Pitta
Indonesia*Pitta elliotii*²¹Bar-bellied Pitta
Cambodia, Laos, Thailand, Viet Nam*Pitta megarhyncha*²¹Mangrove Pitta
Bangladesh, Indonesia, Malaysia,
Myanmar, Thailand*Pitta nipalensis*²¹Blue-naped Pitta
Bangladesh, Bhutan, China, India,
Laos, Myanmar, Nepal, Viet Nam

| | | <i>Bradypodion nemorale</i> ¹⁸⁵ Zululand Dwarf Chameleon South Africa |

Bradyopidion thamnobates ¹⁸⁵
Natal Midland Dwarf Chamaeleon
South Africa

Family CORDYLIDAE

Cordylus lawrencei ¹⁸⁵
Lawrence's Girdled Lizard
South Africa

Gerrhosaurus typicus ¹⁸⁵

Namaqua Plated Lizard
South Africa

Platysaurus relictus ¹⁸⁵

Soutpansberg Flat Lizard
South Africa

Pseudocordylus langi ¹⁸⁵

Lang's Crag Lizard
Lesotho, South Africa

Pseudocordylus spinosus ¹⁸⁵

Spiny Crag Lizard
South Africa

Family GEKKONIDAE

Afroedura hawequensis ¹⁸⁵
Hawequa Flat Gecko
South Africa

Homopholis mulleri ¹⁸⁵

Müller's Velvet Gecko
South Africa

Hoplodactylus kahutarae ¹⁴

Black-eyed Gecko
New Zealand

Hoplodactylus rakiurae ¹⁴

Harlequin Gecko
New Zealand

Phelsuma ocellata ¹⁸⁵

Namaqua Day Gecko
Namibia, South Africa

Phyllodactylus microlepidotus ¹⁸⁵

Small-scaled Leaf-toed Gecko
South Africa

Underwoodisaurus sphyurus ¹⁴

Australia

Family LACERTIDAE

Lacerta rupicola ¹⁸⁵
Soutpansberg Rock Lizard
South Africa

Lacerta schreiberi ⁶⁵

Portugal, Spain

Family PYGOPODIDAE

Aprasia pseudopulchella ¹⁴
Flinders Ranges Worm-lizard
Australia

Family SCINCIDAE

Coeranoscincus reticulatus ¹⁴
Three-toed Snake-tooth Skink
Australia

Eumece s kishinouyei ¹⁸⁵
Kishinoue's Giant Skink
Japan (Nansei-shoto)

Oligosoma fallai ¹⁴
Falla's Skink
New Zealand

Oligosoma infrapunctatum ¹⁴
Speckled Skink
New Zealand

Scelotes gronovii ¹⁸⁵
Gronovi's Dwarf Burrowing Skink
South Africa

Order SERPENTES

Family BOIDAE

Epicrates angulifer ⁵⁸
Cuban Boa
Cuba

Epicrates inornatus ¹⁷⁴

Puerto Rican Boa
Puerto Rico

Python molurus ¹⁸⁵

Indian Python
Bangladesh, Cambodia, China, Hong Kong, India, Indonesia, Laos, Myanmar, Nepal, Pakistan, Sri Lanka, Thailand, Viet Nam

Family COLUBRIDAE

Homoroselaps dorsalis ¹⁸⁵
Striped Harlequin Snake
South Africa, Swaziland

Lamprophis fuscus ¹⁸⁵

Yellow-bellied House Snake
South Africa

Lamprophis swazicus ¹⁸⁵

Swazi Rock Snake
South Africa, Swaziland

Opheodrys herminiae ¹⁸⁵

Sakashima Green Snake
Japan (Nansei-shoto)

Family ELAPIDAE

Elapognathus minor ¹⁴
Short-nosed Snake
Australia

Simoselaps calonotus ¹⁴
Black-striped Snake
Australia

Order TESTUDINES

Family CHELIDAE

Acanthochelys macrocephala ¹⁷⁶
Pantanal Swamp Turtle
Argentina, Bolivia, Brazil, Paraguay

Acanthochelys radiolata ¹⁷⁶
Brazilian Radiolated Swamp Turtle
Brazil

Acanthochelys spixii ¹⁷⁶

Spiny-neck Turtle
Argentina, Brazil, Paraguay?, Uruguay

Chelodina oblonga ¹⁷⁶

Narrow-breasted Snake-necked Turtle
Australia

Phrynops rufipes ¹⁷⁶

Red Side-necked Turtle
Brazil, Colombia, Peru?

Phrynops vanderhaegei ¹⁷⁶

Vanderhaege's Toad-headed Turtle
Argentina, Bolivia?, Brazil, Paraguay, Uruguay?

Family EMYDIDAE

Cuora amboinensis ¹⁷⁶

South Asian Box Turtle
Bangladesh, Brunei, Cambodia?, India, Indonesia, Malaysia, Myanmar, Philippines, Thailand, Viet Nam

Cuora galbinifrons ¹⁷⁶

Indochinese Box Turtle
China, Viet Nam

Emydoidea blandingii ¹⁷⁶

Blanding's Turtle
Canada, USA

Emys orbicularis ¹⁷⁶

European Pond Turtle
Albania, Algeria, Armenia, Austria, Azerbaijan, Belarus, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus?, Czech Republic, France, Georgia, Germany, Greece, Hungary, Iran, Kazakhstan, Latvia, Liechtenstein?, Lithuania, Macedonia, Moldova, Monaco?, Morocco, Netherlands, Poland, Portugal, Romania, Russia, Slovakia, Slovenia, Spain, Switzerland, Tunisia, Turkey, Turkmenistan, Ukraine, Yugoslavia

Geoclemys hamiltonii ¹⁷⁶

Spotted Pond Turtle
Bangladesh, India, Nepal?, Pakistan

Graptemys barbouri ¹⁷⁶

Barbour's Map Turtle
USA

*Graptemys ernsti*¹⁷⁶
Escambia Map Turtle
USA

*Graptemys gibbonsi*¹⁷⁶
Pascagoula Map Turtle
USA

*Graptemys nigrinoda*¹⁷⁶
Black-knobbed Map Turtle
USA
[R. Tombigbee-Black
Warrior-Alabama]

*Graptemys versa*¹⁷⁶
Texas Map Turtle
USA
[R. Colorado]

*Hardella thurjii*¹⁷⁶
Crowned River Turtle
Bangladesh, India?, Nepal, Pakistan

*Heosemys grandis*¹⁷⁶
Giant Asian Pond Turtle
Cambodia, Malaysia, Myanmar,
Thailand, Viet Nam

*Kachuga dhongoka*¹⁷⁶
Three-striped Roof Turtle
Bangladesh, India, Nepal

*Malaclemys terrapin*¹⁷⁶
Diamondback Terrapin
USA

*Morenia ocellata*¹⁷⁶
Burmese Eyed Turtle
Myanmar

*Morenia petersi*¹⁷⁶
Indian Eyed Turtle
Bangladesh, India, Nepal?

*Ocadia sinensis*¹⁷⁶
Chinese Stripe-necked Turtle
China, Laos?, Taiwan, Viet Nam

*Orlitia borneensis*¹⁷⁶
Malaysian Giant Turtle
Indonesia, Malaysia

*Pseudemys gorzugi*¹⁷⁶
Rio Grande Cooter
Mexico, USA

*Pseudemys rubriventris*¹⁷⁶
American Red-bellied Turtle
USA

*Rhinoclemmys annulata*¹⁷⁶
Brown Wood Turtle
Colombia, Costa Rica, Ecuador,
Honduras, Nicaragua, Panama

*Rhinoclemmys funerea*¹⁷⁶
Black Wood Turtle
Costa Rica, Honduras, Nicaragua,
Panama

*Rhinoclemmys nasuta*¹⁷⁶
Large-nosed Wood Turtle
Colombia, Ecuador

*Terrapene carolina*¹⁷⁶
Common Box Turtle
Mexico, USA

*Terrapene ornata*¹⁷⁶
Ornate Box Turtle
Mexico, USA

*Trachemys scripta*¹⁷⁶
Common Slider
Belize, Colombia, Costa Rica,
El Salvador, France [int], Germany
[int], Guadeloupe [int], Guatemala,
Honduras, Israel [int], Mexico,
Netherlands [int], Nicaragua,
Panama, South Africa [int], USA,
Venezuela

*Trachemys stejnegeri*¹⁷⁶
Central Antillean Slider
Bahamas, Dominican Republic,
Haiti, Puerto Rico

Family KINOSTERNIDAE

*Claudius angustatus*¹⁷⁶
Narrow-bridged Musk Turtle
Belize, Guatemala, Mexico

*Kinosternon acutum*¹⁷⁶
Tabasco Mud Turtle
Belize, Guatemala, Mexico

*Kinosternon creaseri*¹⁷⁶
Creaser's Mud Turtle
Mexico

*Kinosternon oaxacae*¹⁷⁶
Oaxaca Mud Turtle
Mexico

*Staurotypus salvinii*¹⁷⁶
Giant Musk Turtle
El Salvador, Guatemala, Mexico

*Staurotypus triporcatus*¹⁷⁶
Mexican Musk Turtle
Belize, Guatemala, Honduras,
Mexico

Family TESTUDINIDAE

*Homopus signatus*³⁰
Speckled Cape Tortoise
Namibia?, South Africa

*Kinixys natalensis*¹⁷⁶
Natal Hinge-back Tortoise
Mozambique, South Africa,
Swaziland

*Testudo hermanni*¹⁷⁶
Albania, Austria, Bulgaria, France,
Greece, Italy, Macedonia, Malta
[int], Romania, Slovenia, Spain [int]
(Balearic Is), Turkey, Yugoslavia

Family TRIONYCHIDAE

*Aspideretes leithii*¹⁷⁶
Leith's Softshell Turtle
India

*Cyclanorbis elegans*¹⁷⁶
Nubian Flapshell Turtle
Benin?, Chad, Ethiopia?, Ghana,
Nigeria, Sudan, Togo

*Cyclanorbis senegalensis*¹⁷⁶
Senegal Flapshell Turtle
Benin, Burkina Faso, Cameroon?,
Chad, Côte d'Ivoire, Ethiopia?,
Gambia, Ghana, Guinea-Bissau,
Mali, Mauritania?, Nigeria, Senegal,
Sudan, Togo

*Cycloderma frenatum*¹⁷⁶
Zambezi Flapshell Turtle
Malawi, Mozambique, Tanzania,
Zimbabwe

*Palea steindachneri*¹⁷⁶
Wattle-necked Softshell Turtle
China, Mauritius [int], USA [int]
(Hawaiian Is), Viet Nam

Class AMPHIBIA

Order ANURA

Family BUFONIDAE

*Bufo retiformis*⁷⁵
Sonoran Green Toad
Mexico, USA

*Capensibufo rosei*¹⁸⁵
Cape Mountain Toad
South Africa

Family HYLIDAE

*Hyla andersonii*⁷⁵
Pine Barrens Tree Frog
USA

Family HYLAROIDAE

*Hyla arborea*⁶⁵
European Tree Frog
Albania, Armenia, Austria,
Azerbaijan, Belarus, Belgium,
Bosnia and Herzegovina, Bulgaria,
Croatia, Czech Republic, Denmark,
France, Georgia, Germany, Greece,
Hungary, Iran, Italy, Liechtenstein,
Lithuania, Luxembourg, Moldova,
Netherlands, Poland, Portugal,
Romania, Russia, Slovakia, Slovenia,
Spain, Sweden, Switzerland, Turkey,
Ukraine, United Kingdom? [int],
Yugoslavia

Family LITORIIDAE

*Litoria aurea*¹⁴
Green and Golden Bell Frog
Australia

*Litoria brevipalmata*¹⁴
Green-thighed Frog
Australia

Family LEIOPELMATIDAE

*Leiopelma archeyi*¹⁴
Archey's Frog
New Zealand

Family MYOBATRACHIDAE

*Adelotus brevis*¹⁴
Tusked Frog
Australia

*Heleioporus albopunctatus*¹⁴
Western Spotted Frog
Australia

*Lechriodus fletcheri*¹⁴
Fletcher's Frog
Australia

*Mixophyes fasciolatus*¹⁴
Great Barred Frog
Australia

*Pseudophryne australis*¹⁴
Red-crowned Toadlet
Australia

*Pseudophryne bibronii*¹⁴
Bibron's Toadlet
Australia

Family RANIDAE

*Anhydrophryne rattrayi*¹⁸⁵
Hogsback Frog
South Africa

*Cacosternum capense*¹⁸⁵
Cape Caco
South Africa

*Rana dracomontana*¹⁸⁵
Drakensberg Frog
Lesotho, South Africa?

*Rana latastei*⁶⁵
Italian Agile Frog
Croatia, Italy, Slovenia, Switzerland

Order CAUDATA

Family PLETHODONTIDAE

*Aneides aeneus*¹⁸⁵
Green Salamander
USA

*Plethodon caddoensis*¹⁸⁵
USA

*Plethodon fourchensis*¹⁸⁵
USA

*Plethodon ouachitae*¹⁸⁵
USA

*Speleomantes genei*⁶⁵
Sardinian or Brown Cave Salamander
Italy

*Speleomantes imperialis*⁶⁵

Italy

*Speleomantes supramontes*⁶⁵

Italy

Family SALAMANDRIDAE

*Mertensiella caucasica*⁶⁵
Caucasian Salamander
Georgia, Turkey

Class

CEPHALASPIDOMORPHI

Order

PETROMYZONTIFORMES

Family PETROMYZONTIDAE

*Eudontomyzon danfordi*¹⁸⁵

Carpathian Brook Lamprey
Austria?, Bosnia and Herzegovina?,
Bulgaria, Croatia?, Czech Republic?,
Hungary, Moldova?, Romania,
Slovakia, Ukraine?, Yugoslavia
[R. Danube]

*Eudontomyzon vladykovi*¹⁸⁵

Vladykov's Lamprey
Austria?, Bulgaria?, Romania,
Yugoslavia

*Lampetra fluviatilis*¹⁸⁵

River Lamprey
Albania, Austria, Belgium, Czech
Republic (ex?), Denmark, Estonia,
Finland, France, Germany, Ireland,
Italy, Latvia, Lithuania,
Luxembourg?, Netherlands, Norway,
Poland, Portugal, Russia, Slovakia
(ex?), Spain (ex?), Sweden,

USA
[R. Ohio]

Etheostoma osburni ⁷⁵
Finescale Saddled Darter
USA
[R. New]

Etheostoma rubrum ⁷⁵
Bayou Darter
USA
[R. Bayou Pierre and tributaries]

Percina macrocephala ⁷⁵
Longhead Darter
USA
[R. Ohio]

Percina nasuta ⁷⁵
Longnose Darter
USA

Percina uranidea ⁷⁵
Stargazing Darter
USA

Family ELEOTRIDAE

Butis butis ¹⁵⁸
Duckbill Sleeper
Mozambique, South Africa

Eleotris melanosoma ¹⁵⁸
Broadhead Sleeper
Mozambique, South Africa

Hypseleotris dayi ¹⁵⁸
Golden Sleeper
South Africa

Hypseleotris ejuncida ¹⁷⁹
Slender Gudgeon
Australia

Hypseleotris kimberleyensis ¹⁷⁹
Barnett River Gudgeon
Australia

Hypseleotris regalis ¹⁷⁹
Prince Regent Gudgeon
Australia

Kimberleyeleotris hutchinsi ¹⁷⁹
Mitchell Gudgeon
Australia

Kimberleyeleotris notata ¹⁷⁹
Drysdale Gudgeon
Australia

Family GOBIIDAE

Croilia mossambica ¹⁵⁸
Naked Goby
Mozambique, South Africa

Glossogobius biocellatus ¹⁵⁸
Sleepy Goby
Mozambique, South Africa, Tanzania

Oligolepis keiensis ¹⁵⁸
Kei Goby
Mozambique, South Africa

Padogobius martensii ¹⁸⁵
Croatia, Italy, Slovenia, Switzerland

Papillogobius melanobranchus ¹⁵⁸
Blackthroat Goby
Mozambique, South Africa

Papillogobius reichei ¹⁵⁸
Tropical Sand Goby
Mozambique, South Africa, Tanzania

Priolepis robinsi ¹
[Atlantic (western central)]

Redigobius bikolanus ¹⁵⁸
Bigmouth Goby
Mozambique, South Africa

Redigobius dewaali ¹⁵⁸
Checked Goby
Mozambique, South Africa

Sicydium stimpsoni ¹⁸⁵
Oopu Nopili
USA (Hawaiian Is)

Silhouettea sibayi ¹⁵⁸
Sibayi Goby
Mozambique, South Africa

Taenioides jacksoni ¹⁵⁸
Bearded Eelgoby
South Africa

Class ECHINOIDEA

Order ECHINOIDA

Family ECHINIDAE

Echinus esculentus ¹⁸⁵
European Edible Sea Urchin
Belgium, Denmark, France, Ireland,
Netherlands, Norway, Portugal,
Spain, Sweden, United Kingdom
[Atlantic (northeast)]

Class ARACHNIDA

Order ARANEAE

Family THERAPHOSIDAE

Euathlus smithi ¹⁸⁵
Red-kneed Tarantula
Mexico

Class CRUSTACEA

Order ANOSTRACA

Family LINDERIELLIDAE

Linderiella occidentalis ⁹⁵
California Linderiella
USA

Class INSECTA

Order COLEOPTERA

Family CARABIDAE

Carabus intricatus ¹⁸⁵

Blue Ground Beetle
Albania, Belgium, Bulgaria, Czech
Republic, Denmark, France,
Germany, Greece, Hungary, Italy,
Netherlands, Poland, Romania,
Slovakia?, Sweden, Switzerland,
United Kingdom, Yugoslavia

Family CICINDELIDAE

Cicindela marginipennis ⁷⁵
Cobblestone Tiger Beetle
USA

Family LUCANIDAE

Colophon izardi ¹⁸

South Africa

Order HOMOPTERA

Family CICADIDAE

Magicicada cassini ¹⁸⁵

Cassini Periodical Cicada
USA

Magicicada septendecim ¹⁸⁵

Decim Periodical Cicada
Canada, USA

Magicicada septendecula ¹⁸⁵

Decula Periodical Cicada
USA

Order HYMENOPTERA

Family FORMICIDAE

Formica aquilonia ¹⁶³

European Red Wood Ant

Austria, Belarus, Bulgaria, Finland, France, Germany, Italy, Latvia, Norway, Russia, Sweden, Switzerland, United Kingdom, Yugoslavia

Formica lugubris ¹⁶³

European Red Wood Ant

Austria, Bulgaria, Finland, France, Germany, Hungary, Ireland, Italy, Norway, Romania, Russia, Slovakia, Spain, Sweden, Switzerland, United Kingdom, Yugoslavia

Formica polycrena ¹⁶³

European Red Wood Ant

Austria, Belgium, Bulgaria, Czech Republic, Finland, France, Germany, Hungary, Italy, Latvia, Lithuania, Netherlands, Norway, Poland, Romania, Russia, Slovakia, Spain, Sweden, Switzerland, Ukraine, Yugoslavia

Formica pratensis/nigricans ¹⁶³

European Red Wood Ant

Austria, Belgium, Bulgaria, Czech Republic, Estonia, Finland, France, Georgia, Germany, Hungary, Italy, Latvia, Lithuania, Luxembourg, Moldova, Netherlands, Norway, Poland, Romania, Russia, Slovakia, Spain, Sweden, Switzerland, Turkey, Ukraine, United Kingdom, Yugoslavia

Formica rufa ¹⁶³

European Red Wood Ant

Austria, Belarus, Belgium, Bulgaria, Czech Republic, Denmark, Estonia, Finland, France, Germany, Hungary, Italy, Latvia, Lithuania,

Luxembourg, Moldova, Netherlands, Norway, Poland, Romania, Russia, Slovakia, Spain, Sweden, Switzerland, Turkey, Ukraine, United Kingdom, Yugoslavia

Formica uralensis ¹⁶³

European Red Wood Ant

Belarus, Denmark, Estonia, Finland, France, Germany, Kazakhstan, Latvia, Lithuania, Norway, Poland, Russia, Sweden, Switzerland, Ukraine

Family SPHECIDAE

Tachysphex pechumani ¹⁰²

Antennal-waving Wasp
USA

Order LEPIDOPTERA

Family HESPERIIDAE

Panoquina errans ¹⁸⁵

Wandering Skipper
Mexico, USA

Family LYCAENIDAE

Chrysoritis oreas ⁷⁵

Drakensburg Copper
South Africa

Iolaus aphnaeoides ⁷⁵

South Africa

Lepidochrysops bacchus ⁷⁵

Wineland Blue
South Africa

Lycaena dispar ⁷⁵

Large Copper

Armenia?, Austria, Azerbaijan?, Belarus?, Belgium, Bulgaria, Czech Republic, Estonia, Finland?, France, Georgia?, Germany, Greece, Hungary, Italy, Kazakhstan?, Latvia?, Lithuania, Luxembourg, Moldova?, Mongolia?, Netherlands, Poland, Romania, Russia, Slovakia, Switzerland, Turkey?, Ukraine, Yugoslavia

Maculinea alcon ⁷⁵

Alcon Large Blue

Albania?, Austria, Belarus?, Belgium, Bulgaria?, Czech Republic?, Denmark, France, Germany, Greece, Hungary, Italy, Kazakhstan?, Lithuania, Moldova?, Netherlands, Poland?, Romania, Russia, Slovakia?, Spain, Sweden, Switzerland, Turkey, Ukraine, Yugoslavia

Maculinea arion ⁷⁵

Large Blue

Albania?, Armenia?, Austria, Azerbaijan?, Belarus?, Bulgaria, China, Czech Republic, Denmark, Estonia?, Finland, France, Georgia?, Germany, Greece, Hungary?, Iran?, Italy, Japan?, Kazakhstan?, Latvia?, Lithuania?, Moldova?, Poland, Romania?, Russia, Slovakia, Spain, Sweden, Switzerland, Turkey, Ukraine, United Kingdom [re-int], Yugoslavia

Maculinea arionides ¹⁸⁵

Greater Large Blue
China, Japan, Russia

Maculinea nausithous ¹⁸⁵

Dusky Large Blue

Armenia?, Austria, Azerbaijan?, Belarus?, Bulgaria, Czech Republic?, France, Georgia, Germany, Hungary, Kazakhstan?, Moldova?, Poland, Romania?, Russia, Spain, Switzerland, Ukraine, Yugoslavia

Maculinea teleius ¹⁸⁵

Scarce Large Blue

Austria, Belgium, Czech Republic?, France, Georgia?, Germany, Hungary, Italy, Japan, Kazakhstan?, Mongolia?, Poland, Russia, Spain?, Switzerland, Ukraine, Yugoslavia

Poecilmitis aureus ⁷⁵

South Africa

Thestor brachycerus ⁷⁵

South Africa

Family NYMPHALIDAE

Anetia briarea ¹⁰⁵

Lesser False Fritillary
Cuba, Dominican Republic, Haiti

Anetia cubana ¹⁰⁵

Salvin's Anetia
Cuba

Anetia jaegeri ¹⁰⁵

Jaeger's Anetia
Dominican Republic, Haiti, Jamaica

Anetia pantheratus ¹⁰⁵

False Fritillary
Cuba, Dominican Republic, Haiti

Danaus cleophile ¹⁰⁵

Jamaican Monarch
Dominican Republic, Haiti, Jamaica

Euploea blossomae ¹⁰⁵

Schaus' Crow
Philippines

Euploea gamelia ¹⁰⁵

Javan Crow
Indonesia

Euploea martinii ¹⁰⁵
Sumatran Crow
Indonesia

Euploea swainson ¹⁰⁵
Swainson's Crow
Indonesia, Philippines

Euploea tobleri ¹⁰⁵
Tobler's Crow
Philippines

Idea iasonia ¹⁰⁵
Ceylon Tree-nymph
Sri Lanka

Idea malabarica ¹⁰⁵
Malabar Tree-Nymph
India

Parantica albata ¹⁰⁵
Zinken's Tiger
Indonesia

Parantica nilgiriensis ¹⁰⁵
Nilgiri Tiger
India

Parantica pseudomelanous ¹⁰⁵
Javan Tiger
Indonesia

Parantica taprobana ¹⁰⁵
Ceylon Tiger
Sri Lanka

Parantica tityoides ¹⁰⁵
Sumatran Chocolate Tiger
Indonesia

Protoploea apatela ¹⁰⁵
Indonesia, Papua New Guinea

Family PAPILIONIDAE

Archon apollinaris ⁷⁵
Armenia, Bulgaria, Greece, Iran,
Iraq, Israel, Jordan, Lebanon,
Romania, Syria, Turkey,
Turkmenistan

Baronia brevicornis ⁷⁵
Short-horned Baronia
Mexico

Graphium mendana ⁷⁵
Papua New Guinea, Solomon Islands

Luehdorfia japonica ⁷⁵
Japanese Luehdorfia
Japan

Ornithoptera chimaera ⁷⁵
Chimaera Birdwing
Indonesia, Papua New Guinea

Papilio benguetanus ⁷⁵
Philippines

Papilio grosesmithi ⁷⁵
Madagascar

Papilio himeros ⁷⁵
Argentina, Brazil

Papilio manlius ⁷⁵
Mauritius

Papilio maraho ⁷⁵
Taiwan

Papilio sjostedti ⁷⁵
Kilimanjaro Swallowtail
Tanzania

Parides burchellanus ⁷⁵
Brazil

Teinopalpus imperialis ⁷⁵
Kaiser-J-Hind
Bhutan, China, India, Myanmar,
Nepal

Troides andromache ⁷⁵
Indonesia?, Malaysia

Family SATYRIDAE

Coenonympha oedippus ¹⁸⁵
False Ringlet
Austria, Belgium, France, Germany,
Hungary, Italy, Japan, Kazakhstan?,
Liechtenstein, Mongolia?, Poland,
Russia, Slovakia, Spain, Switzerland,
Ukraine

Erebia christi ¹⁸⁵
Raetzer's Ringlet
Italy, Switzerland

Order MANTODEA

Family MANTIDAE

Apteromantis aptera ¹⁸⁵
Spain

Order ODONATA

Family AESHNIDAE

Aeshna viridis ¹²³
Austria, Czech Republic?, Denmark,
Estonia?, Finland, Germany,
Hungary, Latvia?, Lithuania?,
Netherlands, Poland, Russia,
Slovakia?, Sweden, Yugoslavia?

Family CALOPTERYGIDAE

Calopteryx angustipennis ¹²³
USA

Family COENAGRIONIDAE

Megalagrion nigrohamatum ¹²³
Nigrohamatum Damselfly
USA (Hawaiian Is)

Family CORDULIIDAE

Antipodochlora braueri ¹²³
New Zealand

Macromia margarita ¹²³
USA

Somatochlora calverti ¹²³
Calverts' Emerald
USA

Somatochlora incurvata ¹²³
Canada, USA

Somatochlora ozarkensis ¹²³
USA

Family GOMPHIDAE

Gomphurus modestus ¹²³
Gulf Clubtail
USA

Gomphus diminutus ¹²³
Diminutive Clubtail
USA

Gomphus hodgesi ¹²³
Hodges' Clubtail
USA

Hylogomphus geminatus ¹²³
Twin-striped Clubtail
USA

Hylogomphus parvidens ¹²³
USA

Ophiogomphus anomalus ¹²³
Canada, USA

Ophiogomphus incurvatus ¹²³
USA

Family SYNLESTIDAE

Chlorolestes draconicus ¹²³
South Africa

Ecchlorolestes nylephtha ¹²³
South Africa

Class MEROSTOMATA

Order XIPHOSURA

Family LIMULIDAE

Limulus polyphemus ¹⁸⁵
Horseshoe Crab
Canada, Mexico, USA

Class ONYCHOPHORA

Order ONYCHOPHORA

Family PERIPATIDAE

Plicatoperipatus jamaicensis ¹²²
Jamaica

Class HIRUDINEA

Order ARHYNCHOBELLAE

Family HIRUDINIDAE

Hirudo medicinalis ¹⁸⁵
Medicinal Leech
Albania, Armenia, Austria,
Azerbaijan?, Belarus?, Belgium,
Bulgaria, Czech Republic?,
Denmark, Estonia?, Finland, France,

Hylobates leucogenys¹⁴³
China, Laos, Viet Nam

Order CARNIVORA

Family CANIDAE

Dusicyon microtis³⁶
Small-eared Zorro
Brazil, Colombia, Ecuador, Peru,
Venezuela

Dusicyon sechurae³⁶

Sechuran Zorro
Ecuador, Peru

Dusicyon vetulus³⁶

Hoary Zorro
Brazil

Fennecus zerda³⁶

Fennec Fox
Algeria, Chad, Egypt, Libya, Mali,
Mauritania, Morocco, Niger, Saudi
Arabia?, Sudan, Tunisia?

Vulpes bengalensis³⁶

Bengal Fox
India, Nepal, Pakistan

Vulpes cana³⁶

Blanford's Fox
Afghanistan, Egypt, Iran, Israel,
Jordan, Oman, Pakistan, Saudi
Arabia, Turkmenistan, United Arab
Emirates, Uzbekistan, Yemen?

Vulpes corsac³⁶

Corsac Fox
Afghanistan, China, India, Iran?,
Kazakhstan, Kyrgyzstan?, Mongolia,
Pakistan?, Russia?, Turkmenistan?,
Uzbekistan?

Vulpes pallida³⁶

Pale Fox
Benin?, Burkina Faso?, Cameroon?,
Chad, Eritrea, Ethiopia, Libya, Mali,
Mauritania, Niger, Nigeria, Senegal,
Sudan

Vulpes rueppelli³⁶

Ruppell's Fox
Afghanistan, Algeria, Chad, Egypt,
Iran, Iraq, Israel, Jordan, Libya,
Mali, Mauritania, Morocco, Niger,
Saudi Arabia, Sudan, Tunisia?

Family FELIDAE

Felis bieti⁴⁰

Chinese Desert Cat
China

Pardofelis marmorata⁴⁰

Marbled Cat
Bhutan, Cambodia, China, India,
Indonesia, Laos, Malaysia,
Myanmar, Nepal, Thailand, Viet Nam

Prionailurus rubiginosus⁴⁰

Rusty-spotted Cat
India, Sri Lanka

Family MUSTELIDAE

Mustela africana¹¹⁷

Tropical Weasel
Brazil, Colombia?, Ecuador, Peru

Family PROCYONIDAE

Nasuella olivacea¹¹⁷

Colombia, Ecuador, Venezuela

Family URSIDAE

Helarctos malayanus¹⁷

Sun Bear
Brunei, Cambodia, China, India,
Indonesia, Laos, Malaysia,
Myanmar, Thailand, Viet Nam

Family VIVERRIDAE

Genetta abyssinica¹¹⁷

Abyssinian Genet
Djibouti, Ethiopia, Somalia

Genetta johnstoni¹¹⁷

Johnston's Genet
Côte d'Ivoire, Guinea, Liberia

Mungos gambianus¹¹⁷

Garoupa Mongoose
Côte d'Ivoire, Gambia, Ghana,
Niger, Nigeria, Senegal, Sierra
Leone, Togo

Osbornictis piscivora¹¹⁷

Zaire

Order CETACEA

Family BALAENOPTERIDAE

Balaenoptera edeni⁴¹

Bryde's Whale
[Atlantic (eastern central, northwest,
southeast, southwest, western
central), Indian Ocean (eastern,
western), Pacific (eastern central,
northeast, southeast, southwest,
western central)]

Family DELPHINIDAE

Cephalorhynchus commersonii⁴¹

Commerson's Dolphin
Argentina, Chile, Falkland Islands,
French Southern and Antarctic
Territories (Kerguelen Is), New
Zealand (Auckland Is, Campbell Id),
Peru, South Africa
[Atlantic (southeast, southwest),
Pacific (southeast, southwest)]

Cephalorhynchus eutropis⁴¹

Black Dolphin
Chile
[Pacific (southeast)]

Cephalorhynchus heavisidii⁴¹

Heaviside's Dolphin
Angola?, Namibia, South Africa
[Atlantic (southeast)]

Feresa attenuata⁴¹

Pygmy Killer Whale
[Atlantic (eastern central, southeast,
southwest, western central), Indian
Ocean (eastern, western),
Mediterranean and Black Sea,
Pacific (eastern central, northwest,
southeast, southwest, western
central)]

Grampus griseus⁴¹

Risso's Dolphin
[Atlantic (eastern central, northeast,
northwest, southeast, southwest,
western central), Indian Ocean
(eastern, western), Pacific (eastern
central, northeast, northwest,
southeast, southwest, western
central)]

Lagenodelphis hosei⁴¹

Fraser's Dolphin
[Atlantic (eastern central, southeast,
southwest, western central), Indian
Ocean (eastern, western), Pacific
(eastern central, northwest, southeast,
western central)]

Lagenorhynchus australis⁴¹

Peale's Dolphin
Argentina, Chile, Falkland Islands
[Atlantic (southwest), Pacific
(southeast)]

Lagenorhynchus obscurus⁴¹

Dusky Dolphin
Argentina, Chile, Falkland Islands,
French Southern and Antarctic
Territories (Kerguelen Is), New
Zealand (Auckland Is, Campbell Id),
Peru, South Africa
[Atlantic (southeast, southwest),
Pacific (southeast, southwest)]

Lissodelphis peronii⁴¹

Southern Right Whale Dolphin
[Atlantic (Antarctic, southeast,
southwest), Indian Ocean (Antarctic,
eastern, western), Pacific (Antarctic,
southeast, southwest)]

Orcaella brevirostris⁴¹

Irrawaddy Dolphin
Australia, Bangladesh, Brunei?,
Cambodia, India, Indonesia, Laos?,
Malaysia, Myanmar, Papua New
Guinea, Philippines?, Singapore?,
Thailand, Viet Nam
[Indian Ocean (eastern), Pacific
(western central)]
[R. Brahmaputra, R. Ganges, R.
Irrawaddy]

*Sotalia fluviatilis*⁴¹

Tucuxi

Bolivia?, Brazil, Colombia, Ecuador, French Guiana, Guyana, Panama, Peru, Suriname, Trinidad and Tobago, Venezuela
[Atlantic (southwest, western central)]
[R. Amazon]

*Sousa chinensis*⁴¹

Indo-Pacific Hump-backed Dolphin
Australia, Bahrain, Bangladesh, Brunei, Cambodia, China, Djibouti, Egypt, Ethiopia, Hong Kong, India, Indonesia, Iran, Iraq, Israel, Kenya, Kuwait, Madagascar, Malaysia, Mozambique, Myanmar, Oman, Pakistan, Papua New Guinea, Philippines, Qatar, Saudi Arabia, Somalia, South Africa, Sri Lanka, Sudan, Taiwan, Tanzania, Thailand, United Arab Emirates, Viet Nam, Yemen
[Atlantic (southeast), Indian Ocean (eastern, western), Pacific (northwest, southwest, western central)]

*Sousa teuszii*⁴¹

Atlantic Hump-backed Dolphin
Angola?, Benin, Cameroon, Congo?, Côte d'Ivoire, Equatorial Guinea?, Gabon?, Gambia, Ghana, Guinea, Guinea-Bissau, Liberia, Mauritania, Nigeria, Senegal, Sierra Leone, Togo, Zaire?
[Atlantic (eastern central, southeast)]

*Stenella clymene*⁴¹

Clymene Dolphin
[Atlantic (eastern central, northwest, southeast, southwest, western central)]

*Stenella frontalis*⁴¹

Atlantic Spotted Dolphin
[Atlantic (eastern central, northeast, northwest, southeast, southwest, western central)]

*Steno bredanensis*⁴¹

Rough-toothed Dolphin
[Atlantic (eastern central, northeast, southeast, southwest, western central), Indian Ocean (eastern, western), Mediterranean and Black Sea, Pacific (eastern central, northeast, northwest, southeast, southwest, western central)]

*Tursiops truncatus*⁴¹

Bottlenose Dolphin
[Atlantic (eastern central, northeast, northwest, southeast, southwest, western central), Indian Ocean (eastern, western), Mediterranean

and Black Sea, Pacific (eastern central, northeast, northwest, southeast, southwest, western central)]

Family MONODONTIDAE

*Monodon monoceros*⁴¹

Narwhal
Canada, Greenland, Iceland?, Norway, Russia, USA
[Arctic Sea, Atlantic (northeast, northwest)]

Family PHOCOENIDAE

*Australophocaena dioptrica*⁴¹

Spectacled Porpoise
Argentina, Australia, Chile, Falkland Islands, French Southern and Antarctic Territories (Kerguelen Is), New Zealand (Auckland Is), Uruguay [Atlantic (Antarctic, southwest), Indian Ocean (Antarctic, eastern), Pacific (southeast, southwest)]

*Neophocaena phocaenoides*⁴¹

Finless Porpoise
Bahrain, Bangladesh, Brunei?, Cambodia, China, Hong Kong?, India, Indonesia, Iran, Iraq, Japan, Kuwait, Malaysia, Myanmar, North Korea, Oman, Pakistan, Philippines, Qatar, Saudi Arabia, Singapore?, South Africa?, South Korea, Sri Lanka, Taiwan, Thailand, United Arab Emirates, Viet Nam
[Indian Ocean (eastern, western), Pacific (northwest, western central)]
[freshwater Indo-Pacific]

*Phocoena spinipinnis*⁴¹

Burmeister's Porpoise
Argentina, Brazil, Chile, Peru, Uruguay
[Atlantic (southwest), Pacific (southeast)]

Family PLATANISTIDAE

*Pontoporia blainvilliei*⁴¹

La Plata River Dolphin
Argentina, Brazil, Uruguay
[Atlantic (southwest)]
[La Plata estuary and adjacent rivers]

Family ZIPHIIDAE

*Mesoplodon bidens*⁴¹

Sowerby's Beaked Whale
[Atlantic (eastern central, northeast, northwest)]

*Mesoplodon bowdoini*⁴¹

Andrews' Beaked Whale
[Indian Ocean (eastern), Pacific (southwest)]

*Mesoplodon carlhubbsi*⁴¹

Hubbs' Beaked Whale
[Pacific (eastern central, northeast, northwest)]

*Mesoplodon densirostris*⁴¹

Blainville's Beaked Whale
[Atlantic (eastern central, northeast, northwest, southeast, southwest, western central), Indian Ocean (eastern, western), Mediterranean and Black Sea, Pacific (eastern central, northwest, southeast, southwest, western central)]

*Mesoplodon europaeus*⁴¹

Gervais' Beaked Whale
[Atlantic (northwest, western central)]

*Mesoplodon ginkgodens*⁴¹

Ginkgo-toothed Beaked Whale
[Indian Ocean (eastern, western), Pacific (eastern central, northwest, southwest, western central)]

*Mesoplodon grayi*⁴¹

Gray's Beaked Whale
[Atlantic (Antarctic, southeast, southwest), Indian Ocean (Antarctic, eastern, western), Pacific (southeast, southwest)]

*Mesoplodon hectori*⁴¹

Hector's Beaked Whale
[Atlantic (southeast, southwest), Indian Ocean (eastern), Pacific (eastern central, southeast, southwest)]

*Mesoplodon layardii*⁴¹

Strap-toothed Whale
[Atlantic (Antarctic, southeast, southwest), Indian Ocean (Antarctic, eastern, western), Pacific (southeast, southwest)]

*Mesoplodon mirus*⁴¹

True's Beaked Whale
[Atlantic (northeast, northwest, southeast, western central), Indian Ocean (eastern)]

*Mesoplodon pacificus*⁴¹

Indo-Pacific Beaked Whale
Australia, Somalia
[Indian Ocean (western), Pacific (western central)]

*Mesoplodon peruvianus*⁴¹

Lesser Beaked Whale
[Pacific (southeast)]

*Mesoplodon stejnegeri*⁴¹

Stejneger's Beaked Whale
[Pacific (eastern central, northeast, northwest)]

Family HYNOBIIDAE***Hynobius stejnegeri* ¹⁸⁵**

Amber-coloured Salamander

Japan

Family PLETHODONTIDAE***Plethodon larselli* ⁷⁵**

Larch Mountain Salamander

USA

***Typhlotriton spelaeus* ⁷⁵**

Grotto Salamander

USA

Family SALAMANDRIDAE***Neurergus crocatus* ⁶⁵**

Turkey

***Neurergus strauchi* ⁶⁵**

Turkey

***Triturus dobrogicus* ⁶⁵**

Austria, Bosnia and Herzegovina?, Bulgaria, Czech Republic, Hungary, Romania, Russia?, Ukraine?, Yugoslavia

Class**CEPHALASPIDOMORPHI****Order****PETROMYZONTIFORMES****Family PETROMYZONTIDAE*****Eudontomyzon mariae* ¹⁸⁵**

Ukrainian Brook Lamprey

Austria, Belarus?, Bulgaria, Czech Republic, Georgia?, Hungary, Moldova?, Poland, Romania, Russia, Slovakia, Turkey?, Ukraine, Yugoslavia

***Lampetra macrostoma* ¹⁸⁵**

Lake Lamprey

Canada

***Mordacia lapicida* ¹⁸⁵**

Chile

Class ELASMOBRANCHII**Order ORECTOLOBIFORMES****Family RHINCODONTIDAE*****Rhincodon typus* ⁶⁸**

Whale Shark

[Atlantic (eastern central, southeast, southwest, western central), Indian Ocean (eastern, western), Pacific (eastern central, northwest, southeast, southwest, western central)]

Order RAJIFORMES**Family RAJIDAE*****Bathyraja abyssicola* ⁵¹**

Deepsea Skate

[Pacific (northeast, northwest)]

Class ACTINOPTERYGII**Order OSTEOGLOSSIFORMES****Family OSTEOGLOSSIDAE***Arapaima gigas*¹⁸⁵Pirarucu
Brazil, Guyana, Peru**Order CLUPEIFORMES****Family CLUPEIDAE***Alosa alosa*¹⁸⁵

Allis Shad

Algeria, Belgium, Denmark, France, Germany, Ireland, Italy?, Morocco, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland (ex), United Kingdom

*Alosa fallax*¹⁸⁵

Twaite Shad

Albania, Algeria, Belgium, Croatia, Cyprus?, Denmark, Estonia, Finland, France, Germany, Gibraltar?, Greece, Ireland, Israel?, Italy, Latvia, Lebanon?, Lithuania, Malta?, Morocco, Netherlands, Norway, Poland, Portugal, Russia, Spain, Sweden, Switzerland, Syria?, Tunisia, Turkey, United Kingdom, Yugoslavia

*Alosa maeotica*¹⁸⁵

Bulgaria, Georgia, Moldova?, Romania, Russia, Turkey, Ukraine

*Alosa pontica*¹⁸⁵

Azerbaijan, Bulgaria, Croatia, Georgia, Hungary, Iran?, Kazakhstan?, Moldova, Romania, Russia, Slovenia?, Turkey, Turkmenistan, Ukraine, Yugoslavia

*Clupeoides papuensis*⁵Toothed River Herring
Indonesia, Papua New Guinea*Clupeonella abrau*¹⁸⁵

Russia, Turkey

*Clupeonella cultriventris*¹⁸⁵

Azerbaijan?, Bulgaria, Georgia, Iran?, Kazakhstan?, Moldova, Romania, Russia, Turkey, Turkmenistan?, Ukraine

Family ENGRAULIDAE*Thryssa scratchleyi*¹⁷⁹Freshwater Anchovy
Australia**Order CYPRINIFORMES****Family CYPRINIDAE***Aaptosyax grypus*¹⁰¹

Laos, Thailand

*Acanthorutilus meandricus*¹⁸⁵

Turkey

*Alburnus heckeli*¹⁸⁵

Turkey

*Aspius aspius*¹⁸⁵

Asp

Afghanistan, Armenia, Austria, Belarus, Bosnia and Herzegovina, Bulgaria, Croatia, Czech Republic, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Italy, Kazakhstan, Latvia, Lithuania, Macedonia?, Moldova, Poland, Romania, Slovakia, Slovenia?, Sweden, Turkey, Turkmenistan, Ukraine, Uzbekistan?, Yugoslavia

Albania?, Greece

*Barbus cyclolepis*¹⁸⁵

Armenia?, Azerbaijan?, Georgia?, Greece, Iran?, Russia?, Turkey?, Ukraine?

*Barbus graceus*¹⁸⁵

Albania, Greece

*Barbus peloponnesius*¹⁸⁵

Albania?, Greece, Macedonia?

*Capoeta antalyensis*¹⁸⁵

Turkey

*Chalcalburnus chalcoides*¹⁸⁵

Danube Bleak

Austria, Bosnia and Herzegovina?, Bulgaria, Croatia, Germany, Hungary, Italy, Romania, Yugoslavia [R. Danube]

*Chalcalburnus tarichi*¹⁸⁵

Turkey

[L. Van]

*Chondrostoma kneri*¹⁸⁵

Dalmation Nase

Bosnia and Herzegovina?, Croatia

*Chondrostoma phoxinus*¹⁸⁵

Minnow-Nase

Bosnia and Herzegovina?, Croatia

*Cyprinus carpio*¹⁸⁵

Wild Common Carp

Austria, Bulgaria, Croatia, Hungary, Kazakhstan, Mongolia?, Romania, Russia, Slovakia, Slovenia, Turkmenistan?, Ukraine, Uzbekistan, Yugoslavia

*Danio aequipinnulus*¹³⁴

Sri Lanka

*Garra philippi*¹³⁴

Philipps' Garra

Sri Lanka

*Gobio albipinnatus*¹⁸⁵

White-finned Gudgeon

Austria, Bosnia and Herzegovina?, Bulgaria, Croatia, Czech Republic?,

Hungary, Moldova, Romania, Russia, Slovakia?, Ukraine, Yugoslavia

*Gobio kessleri*¹⁸⁵

Kessler's Gudgeon

Austria, Bulgaria, Croatia, Czech Republic, Hungary, Moldova, Poland?, Romania, Slovakia, Slovenia, Ukraine, Yugoslavia

*Gobia uranoscopus*¹⁸⁵

Danube Gudgeon

Austria, Bulgaria, Croatia, Czech Republic, Germany, Hungary, Italy?, Romania, Slovakia, Slovenia, Ukraine, Yugoslavia [R. Danube]

*Hemitremia flammea*⁷⁵

Flame Chub

USA

*Leucaspis irideus*¹⁸⁵

Turkey

*Leuciscus borysthenicus*¹⁸⁵

Black Sea Chub

Bulgaria, Georgia, Greece?, Moldova, Romania, Russia, Turkey, Ukraine

*Leuciscus cephaloides*¹⁸⁵

Turkey

*Notropis hubbsi*⁷⁵

Bluehead Shiner

USA

*Notropis jemezianus*⁷⁵

Rio Grande Shiner

Mexico, USA

*Notropis oxyrhynchus*⁷⁵

Sharpnose Shiner

USA

*Notropis semperasper*⁷⁵

Roughhead Shiner

USA

*Notropis welaka*⁷⁵

Bluenose Shiner

USA

*Pachychilan macedonicus*¹⁸⁵

Greece

*Paraphoxinus adspersus*¹⁸⁵

Croatia

*Paraphoxinus epiroticus*¹⁸⁵

Albania, Greece, Macedonia

*Paraphoxinus minutus*¹⁸⁵

Albania

*Paraphoxinus pstrassi*¹⁸⁵

List 7

Taxa removed from the 1996 Red List

Part 1 : Taxa listed in 1994, now Lower Risk : least concern

| | | |
|--|--|---|
| Class MAMMALIA | Order CHIROPTERA | Family CEBIDAE |
| Order DIPROTODONTIA | Family PTEROPODIDAE | <i>Alouatta palliata aequatorialis</i> South Pacific Blackish Howling Monkey |
| Family PHALANGERIDAE | <i>Pteropus anetianus</i> White Flying-fox | <i>Alouatta pigra</i> Guatemalan Howler |
| <i>Phalanger lullulae</i> Woodlark Island Cuscus | Order PRIMATES | <i>Ateles geoffroyi</i> Geoffroy's Spider Monkey |
| <i>Spilocuscus kraemerii</i> Admiralty Cuscus | Family LEMURIDAE | <i>Ateles paniscus</i> Black Spider Monkey |
| Family MACROPODIDAE | <i>Eulemur fulvus albifrons</i> White-fronted Lemur | <i>Cacajao melanocephalus</i> Black Uakari |
| <i>Petrogale lateralis</i> Black-footed Rock-wallaby | <i>Eulemur fulvus fulvus</i> Brown Lemur | <i>Callicebus torquatus lucifer</i> Widow Monkey |
| Order INSECTIVORA | <i>Eulemur fulvus rufus</i> Red-fronted Lemur | <i>Chiropotes albinasus</i> White-nosed Bearded Saki |
| Family TENRECIDAE | <i>Hapalemur griseus griseus</i> Grey Gentle Lemur | <i>Lagothrix lagotricha</i> Common Woolly Monkey |
| <i>Geogale aurita</i> Large-eared Tenrec | Family MEGALADAPIDAE | <i>Pithecia aequatorialis</i> Equatorial Saki |
| <i>Microgale brevicaudata</i> Short-tailed Shrew-tenrec | <i>Lepilemur edwardsi</i> Milne-Edwards' Sportive Lemur | Order CARNIVORA |
| <i>Microgale longicaudata</i> Lesser Long-tailed Shrew-tenrec | <i>Lepilemur leucopus</i> White-footed Sportive Lemur | Family CANIDAE |
| Family CHRYSOCHLORIDAE | <i>Lepilemur microdon</i> Light-necked Sportive Lemur | <i>Canis lupus</i> Grey Wolf |
| <i>Amblysomus iris</i> Zulu Golden Mole | <i>Lepilemur mustelinus</i> Greater Sportive Lemur | <i>Dusicyon griseus</i> Grey Zorro |
| <i>Calcochloris obtusirostris</i> Yellow Golden Mole | <i>Lepilemur ruficaudatus</i> Red-tailed Sportive Lemur | Family FELIDAE |
| Family ERINACEIDAE | Family INDRIDAE | <i>Felis margarita</i> Sand Cat |
| <i>Atelerix frontalis</i> South African Hedgehog | <i>Avahi laniger</i> Woolly Lemur | <i>Leopardus wiedii</i> Margay |
| Family SORICIDAE | Family GALAGONIDAE | <i>Oncifelis colocolo</i> Pampas Cat |
| <i>Crocidura crenata</i> | <i>Galagooides thomasi</i> Thomas's Dwarf Galago | <i>Otocolobus manul</i> Pallas's Cat |
| <i>Crocidura grassei</i> | Family CALLITRICHIDAE | <i>Profelis aurata</i> African Golden Cat |
| <i>Crocidura lanosa</i> | <i>Callithrix intermedia</i> Aripuanã Marmoset | Family HYAENIDAE |
| <i>Crocidura manengubae</i> | <i>Callithrix kuhli</i> Wied's Marmoset | <i>Hyaena brunnea</i> Brown Hyena |
| <i>Crocidura maquassiensis</i> Makwassie Musk Shrew | <i>Saguinus fuscicollis leucogenys</i> Andean Saddle-back Tamarin | |
| <i>Crocidura nimbae</i> | <i>Saguinus tripartitus</i> Golden-mantled Saddle-back Tamarin | |
| <i>Paracrocidura maxima</i> | | |
| <i>Sylvilorex ollula</i> | | |
| <i>Sylvilorex vulcanorum</i> | | |

Family OTARIIDAE

Neophoca cinerea
Australian Sea Lion

Family PHOCIDAE

Phoca vitulina stejnegeri
Western Pacific Harbour Seal

Order CETACEA

Family NEOBALAENIDAE
Caperea marginata
Pygmy Right Whale

Family DELPHINIDAE

Delphinus delphis
Common Dolphin
Globicephala melas
Long-finned Pilot Whale
Lagenorhynchus acutus
Atlantic White-sided Dolphin
Lagenorhynchus albirostris
White-beaked Dolphin
Lagenorhynchus cruciger
Hourglass Dolphin
Lagenorhynchus obliquidens
Pacific White-sided Dolphin
Lissodelphis borealis
Northern Right Whale Dolphin
Peponocephala electra
Melon-headed Whale
Pseudorca crassidens
False Killer Whale

Family PHYSETERIDAE

Kogia breviceps
Pygmy Sperm Whale
Kogia simus
Dwarf Sperm Whale

Order PERISSODACTYLA

Family EQUIDAE
Equus kiang holdereri
Eastern Kiang

Order ARTIODACTYLA

Family BOVIDAE
Rupicapra rupicapra balcanica
Balkan Chamois

Order RODENTIA

Family SCIURIDAE
Pteromys momonga
Small Japanese Flying-squirrel

Family GEOMYIDAE

Thomomys umbrinus emotus
Southern Pocket Gopher

Family HETEROMYIDAE

Perognathus inornatus
psammophilus
Salinas Pocket Mouse

Family DIPODIDAE

Zapus hudsonius luteus
Meadow Jumping Mouse

Family MURIDAE

Aethomys silindensis
Selinda Veld Rat
Batomys granti
Luzon Forest Rat
Delanymys brooksi
Delany's Mouse
Eliurus minor
Gerbillus acticola
Gerbillus muriculus
Gerbillus rosalinda
Heimyscus fumosus
Hylomyscus baeri
Hylomyscus parvus
Malacomys verschurenii
Microtus breweri
Beach Vole

Peromyscus polionotus niveiventris
Southeastern Beach Mouse

Sigmodon arizonae plenus
Colorado River Cotton Rat

Thamnomys venustus

Wilfredomys oenax
Zelotomys woosnami

Order LAGOMORPHA

Family OCHOTONIDAE
Ochotona alpina nitida
Ochotona nubrica
Nubra Pika

Family LEPORIDAE

Lepus othus
Alaskan Hare

Class AVES

Order FALCONIFORMES

Family ACCIPITRIDAE
Milvus milvus
Red Kite

Family FALCONIDAE

Micrastur buckleyi
Buckley's Forest-Falcon

Order GRUIFORMES

Family OTIDIDAE
Chlamydota undulata
Houbara Bustard

Order PSITTACIFORMES

Family PSITTACIDAE
Pezoporus wallicus
Ground Parrot

Order PASSERIFORMES

Family TYRANNIDAE
Todirostrum senex
Buff-cheeked Tody-Flycatcher

Family CAMPEPHAGIDAE

Coracina schistacea
Slaty Cuckooshrike
Coracina sula
Sula Cicadabird

Family MUSCICAPIDAE

Amytornis goyderi
Eyrean Grasswren
Zoothera kibalensis
Kibale Ground-Thrush

Family NECTARINIIDAE

Nectarinia buettikoferi
Apricot-breasted Sunbird
Nectarinia prigoginei
Prigogine's Double-collared Sunbird

Family ZOSTEROPIDAE

Zosterops sanctaecrucis
Nendo White-eye

Class REPTILIA

Order CROCODYLIA

Family CROCODYLIIDAE
Crocodylus porosus
Estuarine Crocodile

| | | |
|--|--|---|
| Order RHYNCHOCEPHALIA | Class AMPHIBIA | Order ATHERINIFORMES |
| Family SPHENODONTIDAE | Order ANURA | Family ATHERINIDAE |
| <i>Sphenodon punctatus</i> Cook Strait Tuatara | Family HYLIDAE | <i>Chilatherina axelrodi</i> Axelrod's Rainbowfish |
| Order SAURIA | <i>Litoria castanea</i> Yellow-spotted Tree Frog | <i>Craterocephalus kailolae</i> Kailola's Hardyhead |
| Family GEKKONIDAE | <i>Litoria dentata</i> Bleating Tree Frog | <i>Glossolepis maculatus</i> Spotted Rainbowfish |
| <i>Hoplodactylus chrysosireticus</i> Gold-striped Gecko | <i>Litoria lesueuri</i> Lesueur's Frog | <i>Melanotaenia catherinae</i> Waigeo Rainbowfish |
| <i>Hoplodactylus duvaucelii</i> Duvaucel's Gecko | <i>Litoria verreauxii</i> Whistling Tree Frog | <i>Melanotaenia iris</i> Strickland Rainbowfish |
| <i>Naultinus rufus</i> Rough Gecko | Family HYPEROLIIDAE | <i>Melanotaenia maylandi</i> Mayland's Rainbowfish |
| Family LACERTIDAE | <i>Afrixalus aureus</i> Golden Dwarf Reed Frog | <i>Melanotaenia misoolensis</i> Misool Rainbowfish |
| <i>Archaeolacerta monticola</i> Iberian Rock Lizard | Family LEIOPELMATIDAE | <i>Melanotaenia papuae</i> Papuan Rainbowfish |
| <i>Lacerta australis</i> Southern Rock Lizard | <i>Leiopelma hochstetteri</i> Hochstetter's Frog | <i>Pseudomugil conniae</i> Popondetta Blue-Eye |
| Family SCINCIDAE | Family LEPTODACTYLIDAE | <i>Pseudomugil furcatus</i> Forktail Blue-Eye |
| <i>Cyclodina oliveri</i> Marbled Skink | <i>Paratelmatobius gaigeae</i> | <i>Pseudomugil majusculus</i> Cape Blue-Eye |
| <i>Oligosoma notosaurus</i> Southern Skink | Family RANIDAE | <i>Rheocles alaotrensis</i> Katrana |
| Family VARANIDAE | <i>Rana vertebralis</i> Water Frog | <i>Telmatherina boniti</i> |
| <i>Varanus flavescens</i> Yellow Monitor | Class ACTINOPTERYGII | Order CYPRINODONTIFORMES |
| Order SERPENTES | | Family APLOCHEILIDAE |
| Family VIPERIDAE | | <i>Pachypanchax malonotus</i> |
| <i>Vipera raddei</i> Armenian Viper | | <i>Rivulus marmoratus</i> |
| | | <i>Rivulus</i> |
| Order TESTUDINES | Family CATOSTOMIDAE | Family CYPRINODONTIDAE |
| Family CHELIIDAE | <i>Moxostoma atripinne</i> Blackfin Sucker | <i>Aphanus chantrei</i> Dislisazancik Baligi |
| <i>Emydura signata</i> Brisbane Short-necked Turtle | | <i>Cyprinodon atrorus</i> Perrito del Bolson |
| Family EMYDIDAE | | <i>Cyprinodon bifasciatus</i> Perrito de Cuatro Cienegas |
| <i>Mauremys annamensis</i> Annam Leaf Turtle | Order SILURIFORMES | <i>Cyprinodon nazas</i> Cachorrito del Aguanaval |
| | Family MOCHOKIDAE | <i>Fundulus lima</i> Killifish |
| | <i>Chiloglanis swierstrai</i> Lowveld Suckermouth | |
| Family TESTUDINIDAE | Order SALMONIFORMES | Order BELONIFORMES |
| <i>Gopherus berlandieri</i> Texas Tortoise | Family SALMONIDAE | Family HEMIRAMPHIDAE |
| <i>Testudo marginata</i> Marginated Tortoise | <i>Coregonus artedii</i> Cisco | <i>Zenarchopterus robertsi</i> Robert's River Garfish |

Order SCORPAENIFORMES

Family COTTIDAE

Myaxocephalus quadricornis
Fourhorn Sculpin

Order PERCIFORMES

Family AMBASSIDAE

Ambassis elongatus
Yellow-Fin Perchlet

Family TERAPONTIDAE

Pingalla giberti
Gilberts Grunter

Family KUHLIIDAE

Kuhlia marginata
Spotted Flagtail

Family TOXOTIDAE

Toxotes oligolepis
Big Scale Archerfish

Family CICHLIDAE

Paratilapia polleni
Marakely

Family MUGILIDAE

Myxus capensis
Freshwater Mullet

Family ELEOTRIDAE

Hypseleotris aurea

Golden Gudgeon

Mogurnda lineata

Kokoda Mogurnda

Mogurnda orientalis

Eastern Mogurnda

Ratsirakia legendrei

Class CRUSTACEA

Order ANOSTRACA

Family BRANCHINECTIDAE

Branchinecta gigas
Giant Fairy Shrimp

Order ISOPODA

Family SPHAEROMATIDAE

Thermosphaeroma subequalum

Class INSECTA

Order LEPIDOPTERA

Family NYMPHALIDAE

Euploea configurata
Sulawesi Striped Blue Crow

Euploea dentiplaga

Seram Crow

Euploea doretta

Pagenstecher's Crow

Euploea eboraci

Bismark Crow

Euploea eupator

Sulawesi Pied Crow

Euploea latifasciata

Weymer's Crow

Ideopsis klassika

Seram Small Tree-Nymph

Parantica crowleyi

Crowley's Tiger

Parantica kirbyi

Kirby's Tiger

Parantica menadensis

Manado Yellow Tiger

Parantica pumila

Least Tiger

Parantica rotundata

Fat Tiger

Parantica weiskei

Weiske's Tiger

Tirumala gautama

Scarce Blue Tiger

Family PAPILIONIDAE

Bhutanitis thaidina

Chinese Three-tailed Swallowtail

Ornithoptera paradisea

Paradise Birdwing

Papilio acheron

Papilio toboroi

Papilio weymeri

Order ODONATA

Family GOMPHIDAE

Erpetogomphus lampropeltis

Ophiogomphus cecilia

Family LIBELLULIDAE

Leucorrhinia albifrons

Leucorrhinia caudalis

Class BIVALVIA

Order VENEROIDA

Family TRIDACNIDAE

Tridacna crocea

Crocus Clam

Class GASTROPODA

Order MESOGASTROPODA

Family CYCLOPHORIDAE

Craspedoma costata

Family HYDROBIIDAE

Bythinella reyniesii

Bythiospeum bressanum

Bythiospeum diaphanum

Graziana lacheineri

Graziana pupula

Moitessieria rolandiana

Moitessieria simoniana

Family POMATIASIDAE

Pomatias raricosta

Order STYLOMMATOPHORA

Family ARIONIDAE

Geomalacus maculosus

Family BULIMULIDAE

Napaeus pygmaeus

Family CAMAENIDAE

Amplirhagada elevata

Prymnobiareus nimmerlinus

Setobaudinia colligii

Torresitrachia crawfordi

| | | Order STRIGIFORMES |
| | | Family STRIGIDAE |
| | | <i>Otus magicus albiventris</i> |
| | | Flores Scops-Owl |

Otus spilocephalus stresemanni
Sumatran Scops-Owl

Order CORACIFORMES

Family ALCEDINIDAE

Todirhamphus cinnamominus miyakoensis
Ryukyu Kingfisher

Order PASSERIFORMES

Family COTINGIDAE

Laniisoma elegans elegans
Shrike-like Cotinga

Class REPTILIA

Order SAURIA

Family ANIELLIDAE

Anniella pulchra nigra
Black Legless Lizard

Family IGUANIDAE

Phrynosoma coronatum blainvilliei
San Diego Horned Lizard

Family LACERTIDAE

Podarcis filfolensis filfolensis
Filfola Lizard

Family SCINCIDAE

Eulamprus tympanum ssp.
Dreeite Water Skink

Gongylomorphus bojerii fontenayi
Macabe Forest Skink

Family VARANIDAE

Varanus griseus caspius
Central Asian Desert Monitor

Order SERPENTES

Family BOIDAE

Charina bottae umbratica
Rubber Boa

Epicrates striatus fosteri
Bahamas Boa

Family COLUBRIDAE

Drymarchon corais couperi
Eastern Indigo Snake

Masticophis flagellum ruddocki
San Joaquin Coachwhip

Masticophis lateralis euryxanthus
Almeda Striped Racer

Nerodia fasciata taeniata

Atlantic Saltmarsh Snake

Nerodia harteri paucimaculata

Concho Water Snake

Nerodia sipedon insularum

Lake Erie Water Snake

Thamnophis sirtalis tetrataenia

San Francisco Garter Snake

Family VIPERIDAE

Crotalus willardi obscurus

New Mexican Ridge-nosed Rattlesnake

Vipera ammodytes transcaucasiana
Transcaucasian Long-nosed Viper

Order TESTUDINES

Family EMYDIDAE

Trachemys scripta callirostris
Colombian Slider

Trachemys stejnegeri malonei
Inagua Island Turtle

Trachemys terrapen felis
Cat Island Freshwater Turtle

Family TESTUDINIDAE

Testudo graeca graeca
Spur-thighed Tortoise

Testudo hermanni boettgeri
Eastern Hermann's Tortoise

Class AMPHIBIA

Order ANURA

Family DISCOGLOSSIDAE

Discoglossus jeanneae

Family HYLIDAE

Pseudacris streckeri illinoensis
Illinois Chorus Frog

Order CAUDATA

Family AMBYSTOMATIDAE

Ambystoma dumerilii dumerilii
Lake Patzcuaro Salamander

Ambystoma macrodactylum croceum
Santa Cruz Long-toed Salamander

Class

CEPHALASPIDOMORPHI

Order

PETROMYZONTIFORMES

Family PETROMYZONTIDAE

Lampetra tridentata ssp.

Pacific Lamprey

Class ACTINOPTERYGII

Order CYPRINIFORMES

Family CYPRINIDAE

Cyprinella sp.

Sardinita Nazas

Dionda episcopa ssp.

Roundnose Minnow

Gila bicolor ssp.

Tui Chub

Gila robusta ssp.

Roundtail Chub

Lepidomeda mollispinis ssp.

Virgin Spinedace

Pseudorasbora pumila ssp.
Ushimotsugo

Rhinichthys cataractae ssp.
Longnose Dace

Rhinichthys osculus ssp.
Speckled Dace

Family CATOSTOMIDAE

Catostomus sp.

Salish Sucker

Catostomus catostomus lacustris
Jasper Longnose Sucker

Catostomus clarki intermedius
White River Sucker

Catostomus dicobolus yarrowi
Zuni Bluehead Sucker

Catostomus occidentalis lacusanserinus
Goose Lake Sucker

Catostomus rimiculus ssp.
Jenny Creek Sucker

Chasmistes liorus liorus
June Sucker

Chasmistes liorus mictus
June Sucker

Moxostoma sp.
Bighead Redhorse

Order COLEOPTERA

Family ANOBIIDAE

Holcobiuss pikoensis
Piko Anobiid Beetle

Family ANTHICIDAE

Anthicus antiochensis
Antioch Dunes Beetle

Family CARABIDAE

Agonum belleri
Beller's Ground Beetle

Aplothorax burchelli

Mormolyce phyllodes
Ghost Walker Beetle

Rhadine persephone
Tooth Cave Ground Beetle

Sphaeroderus schaumi shenandoah
Schaum's Blue Ridge Ground Beetle

Family CERAMBYCIDAE

Aeschrithmysus dubautianus

Aeschrithmysus svezeyi

Aeschrithmysus terryi

Crossidius mojavensis mojavensis
Mojave Rabbitbrush Longhorn Beetle

Desmocerus californicus dimorphus
Valley Elderberry Longhorn Beetle

Dryobius sexnotatus
Six-banded Longhorn Beetle

Necydalis rudei
Rude's Longhorn Beetle

Nesithmysus bridwelli

Nesithmysus frobesi

Nesithmysus haasi

Nesithmysus svezeyi

Family CHRYSOMELIDAE

Donacia idola

Bog Idol Leaf Beetle

Family CICINDELIDAE

Cicindela arenicola

Idaho Dunes Tiger Beetle

Cicindela cazieri

Cazier's Tiger Beetle

Cicindela chlorocephala smythi
Smyth's Tiger Beetle

Cicindela dorsalis dorsalis
North-eastern Beach Tiger Beetle

Cicindela late signata oblivious
Oblivious Tiger Beetle

Cicindela limbata albissima
Coral Pink Dunes Tiger Beetle

Cicindela marginata

Tiger Beetle

Cicindela nevadica olmosa

Los Olmos Tiger Beetle

Cicindela nigrocoerulea subtropica

Subtropical Blue-Black Tiger Beetle

Cicindela obsoleta neojuvenalis

Neojuvenile Tiger Beetle

Cicindela tranquebarica viridissima

Greenest Tiger Beetle

Family CURCULIONIDAE

Anagotus fairburni

Flax Weevil

Anagotus stephenensis

Stephen's Island Weevil

Anagotus turbotti

Turbott's Weevil

Deinocossonus nesiotes

Oahu Nesiotes Weevil

Dysticheus rotundicollis

Antioch Dune Weevil

Key to Source Codes

The superscript numbers printed next to the status category (or next to the species name in the case of Lists 2, 3 and 5, which each contain species in a single category) refer to the person or group responsible for the final category designation. The sources are listed below. Most assessments have been made by members or associates of an IUCN/SSC Specialist Group (the identity of which will usually be clear from the taxonomic context). The list cites one individual in cases where the assessment has explicitly been carried out largely or entirely by one person (rarely up to three persons are named), or cites the Specialist Group title where the assessment has explicitly been a group activity. The personnel involved in that group can be determined from the current Membership Directory.

In many cases, while not being responsible for the status category assessment, other individuals or organizations have contributed key information on status, trends, taxonomy or distribution. We have attempted to specify all of these in the acknowledgements section. Much taxonomic and distribution information has been derived from the WCMC animals database, to which many sources have contributed over many years.

Annex 2

The IUCN Red List Categories

Preamble

The following points present important information on the use and interpretation of the categories (= Critically Endangered, Endangered, etc.), criteria (= A to E), and sub-criteria (= a, b etc., i, ii etc.):

1. Taxonomic Level and Scope of the Categorization Process

The criteria can be applied to any taxonomic unit at or below the species level. The term “taxon” in the following notes, definitions and criteria is used for convenience, and may represent species or lower taxonomic levels, including forms that are not yet formally described. There is a sufficient range among the different criteria to enable the appropriate listing of taxa from the complete taxonomic spectrum, with the exception of micro-organisms. The criteria may also be applied within any specified geographical or political area although in such cases special notice should be taken of point 11 below. In presenting the results of applying the criteria, the taxonomic unit and area under consideration should be made explicit. The categorization process should only be applied to wild populations inside their natural range, and to populations resulting from benign introductions (defined in the draft IUCN Guidelines for Reintroductions as “..an attempt to establish a species, for the purpose of conservation, outside its recorded distribution, but within an appropriate habitat and eco-geographical area”).

2. Nature of the Categories

All taxa listed as Critically Endangered qualify for Vulnerable and Endangered, and all listed as Endangered qualify for Vulnerable. Together these categories are described as “threatened”. The threatened species categories form a part of the overall scheme. It will be possible to place all taxa into one of the categories (see Figure 1).

3. Role of the Different Criteria

For listing as Critically Endangered, Endangered or Vulnerable there is a range of quantitative criteria; meeting any one of these criteria qualifies a taxon for listing at that level of threat. Each species should be evaluated against all the criteria. The different criteria (A-E) are

derived from a wide review aimed at detecting risk factors across the broad range of organisms and the diverse life histories they exhibit. Even though some criteria will be inappropriate for certain taxa(some taxa will never qualify under these however close to extinction they come), there should be criteria appropriate for assessing threat levels for any taxon (other than micro-organisms). The relevant factor is whether any one criterion is met, not whether all are appropriate or all are met. Because it will never be clear which criteria are appropriate for a particular species in advance, each species should be evaluated against all the criteria, and any criterion met should be listed.

4. Derivation of Quantitative Criteria

The quantitative values presented in the various criteria associated with threatened categories were developed through wide consultation and they are set at what are generally judged to be appropriate levels, even if no formal justification for these values exists. The levels for different criteria within categories were set independently but against a common standard. Some broad consistency between them was sought. However, a given taxon should not be expected to meet all criteria (A-E) in a category; meeting any one criterion is sufficient for listing.

5. Implications of Listing

Listing in the categories of Not Evaluated and Data Deficient indicates that no assessment of extinction risk has been made, though for different reasons. Until such time as an assessment is made, species listed in these categories should not be treated as if they were non-threatened, and it may be appropriate (especially for Data Deficient forms) to give them the same degree of protection as threatened taxa, at least until their status can be evaluated.

Extinction is assumed here to be a chance process. Thus, a listing in a higher extinction risk category implies a higher expectation of extinction, and over the time-frames specified more taxa listed in a higher category are expected to go extinct than in a lower one (without effective conservation action). However, the persistence of some taxa in high risk categories does not necessarily mean their initial assessment was inaccurate.

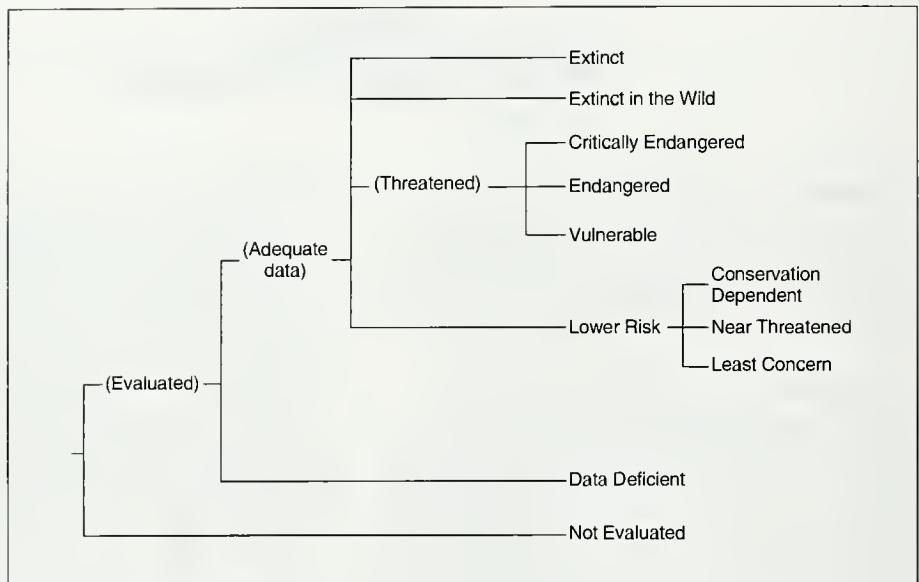

Figure 1. Structure of the Categories.

6. Data Quality and the Importance of Inference and Projection

The criteria are clearly quantitative in nature. However, the absence of high quality data should not deter attempts at applying the criteria, as methods involving estimation, inference and projection are emphasized to be acceptable throughout. Inference and projection may be based on extrapolation of current or potential threats into the future (including their rate of change), or of factors related to population abundance or distribution (including dependence on other taxa), so long as these can reasonably be supported. Suspected or inferred patterns in either the recent past, present or near future can be based on any of a series of related factors, and these factors should be specified.

Taxa at risk from threats posed by future events of low probability but with severe consequences (catastrophes) should be identified by the criteria (e.g. small distributions, few locations). Some threats need to be identified particularly early, and appropriate actions taken, because their effects are irreversible, or nearly so (pathogens, invasive organisms, hybridization).

7. Uncertainty

The criteria should be applied on the basis of the available evidence on taxon numbers, trend and distribution, making due allowance for statistical and other uncertainties.

Given that data are rarely available for the whole range or population of a taxon, it may often be appropriate to use the information that is available to make intelligent inferences about the overall status of the taxon in question. In cases where a wide variation in estimates is found, it is legitimate to apply the precautionary principle and use the estimate (providing it is credible) that leads to listing in the category of highest risk.

Where data are insufficient to assign a category (including Lower Risk), the category of “Data Deficient” may be assigned. However, it is important to recognize that this category indicates that data are inadequate to determine the degree of threat faced by a taxon, not necessarily that the taxon is poorly known. In cases where there are evident threats to a taxon through, for example, deterioration of its only known habitat, it is important to attempt threatened listing, even though there may be little direct information on the biological status of the taxon itself. The category “Data Deficient” is not a threatened category, although it indicates a need to obtain more information on a taxon to determine the appropriate listing.

8. Conservation Actions in the Listing Process

The criteria for the threatened categories are to be applied to a taxon whatever the level of conservation action affecting it. In cases where it is only conservation action that prevents the taxon from meeting the threatened cri-

teria, the designation of “conservation dependent” is appropriate. It is important to emphasize here that a taxon require conservation action even if it is not listed as threatened.

9. Documentation

All taxon lists including categorization resulting from these criteria should state the criteria and sub-criteria that were met. No listing can be accepted as valid unless at least one criterion is given. If more than one criterion or sub-criterion was met, then each should be listed. However, failure to mention a criterion should not necessarily imply that it was not met. Therefore, if a re-evaluation indicates that the documented criterion is no longer met, this should not result in automatic down-listing. Instead, the taxon should be re-evaluated with respect to all criteria to indicate its status. The factors responsible for triggering the criteria, especially where inference and projection are used, should at least be logged by the evaluator, even if they cannot be included in published lists.

10. Threats and Priorities

The category of threat is not necessarily sufficient to determine priorities for conservation action. The category of threat simply provides an assessment of the likelihood of extinction under current circumstances, whereas a system for assessing priorities for action will include numerous other factors concerning conservation action such as costs, logistics, chances of success, and even perhaps the taxonomic distinctiveness of the subject.

11. Use at Regional Level

The criteria are most appropriately applied to whole taxa at a global scale, rather than to those units defined by regional or national boundaries. Regionally or nationally based threat categories, which are aimed at including taxa that are threatened at regional or national levels (but not necessarily throughout their global ranges), are best used with two key pieces of information: the global status category for the taxon, and the proportion of the global population or range that occurs within the region or nation. However, if applied at regional or national level it must be recognized that a global category of threat may not be the same as a regional or national category for a particular taxon. For example, taxa classified as Vulnerable on the basis of their global declines in numbers or range might be Lower Risk within a particular region where their populations are stable. Conversely, taxa classified as Lower Risk globally might be Critically Endangered within a particular region where numbers are very small or declining, perhaps only

because they are at the margins of their global range. IUCN is still in the process of developing guidelines for the use of national red list categories.

12. Re-evaluation

Evaluation of taxa against the criteria should be carried out at appropriate intervals. This is especially important for taxa listed under near threatened, or conservation dependent, and for threatened species whose status is known or suspected to be deteriorating.

13. Transfer between Categories

There are rules to govern the movement of taxa between categories. These are as follows: (A) A taxon may be moved from a category of higher threat to a category of lower threat if none of the criteria of the higher category has been met for 5 years or more. (B) If the original classification is found to have been erroneous, the taxon may be transferred to the appropriate category or removed from the threatened categories altogether, without delay (but see Section 9). (C) Transfer from categories of lower to higher risk should be made without delay.

14. Problems of Scale

Classification based on the sizes of geographic ranges or the patterns of habitat occupancy is complicated by problems of spatial scale. The finer the scale at which the distributions or habitats of taxa are mapped, the smaller will be the area that they are found to occupy. Mapping at finer scales reveals more areas in which the taxon is unrecorded. It is impossible to provide any strict but general rules for mapping taxa or habitats; the most appropriate scale will depend on the taxa in question, and the origin and comprehensiveness of the distributional data. However, the thresholds for some criteria (e.g. Critically Endangered) necessitate mapping at a fine scale.

Definitions

1. Population

Population is defined as the total number of individuals of the taxon. For functional reasons, primarily owing to differences between life-forms, population numbers are expressed as numbers of mature individuals only. In the case of taxa obligately dependent on other taxa for all or part of their life cycles, biologically appropriate values for the host taxon should be used.

2. Subpopulations

Subpopulations are defined as geographically or otherwise distinct groups in the population between which

there is little exchange (typically one successful migrant individual or gamete per year or less).

3. Mature Individuals

The number of mature individuals is defined as the number of individuals known, estimated or inferred to be capable of reproduction. When estimating this quantity the following points should be borne in mind:

- Where the population is characterized by natural fluctuations the minimum number should be used.
- This measure is intended to count individuals capable of reproduction and should therefore exclude individuals that are environmentally, behaviorally or otherwise reproductively suppressed in the wild.
- In the case of populations with biased adult or breeding sex ratios it is appropriate to use lower estimates for the number of mature individuals which take this into account (e.g. the estimated effective population size).
- Reproducing units within a clone should be counted as individuals, except where such units are unable to survive alone (e.g. corals).
- In the case of taxa that naturally lose all or a subset of mature individuals at some point in their life cycle, the estimate should be made at the appropriate time, when mature individuals are available for breeding.

4. Generation

Generation may be measured as the average age of parents in the population. This is greater than the age at first breeding, except in taxa where individuals breed only once.

5. Continuing Decline

A continuing decline is a recent, current or projected future decline whose causes are not known or not adequately controlled and so is liable to continue unless remedial measures are taken. Natural fluctuations will not normally count as a continuing decline, but an observed decline should not be considered to be part of a natural fluctuation unless there is evidence for this.

6. Reduction

A reduction (criterion A) is a decline in the number of mature individuals of at least the amount (%) stated over the time period (years) specified, although the decline need not still be continuing. A reduction should not be

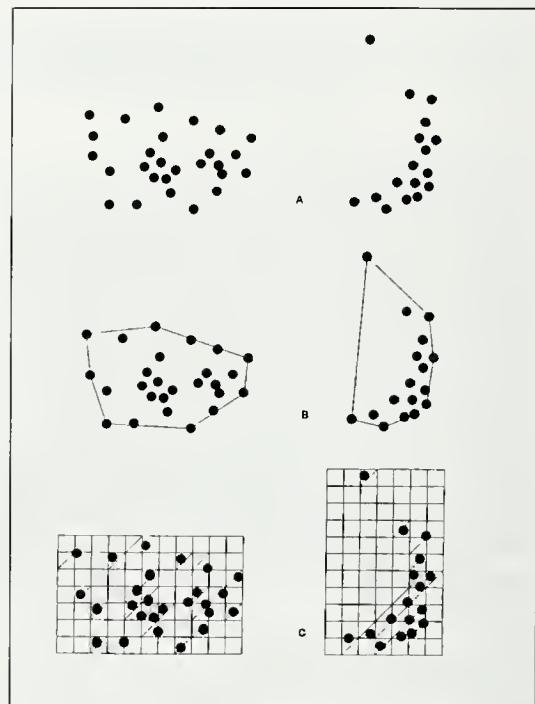

Figure 2. Two examples of the distinction between extent of occurrence and area of occupancy. (a) is the spatial distribution of known, inferred or projected sites of occurrence. (b) shows one possible boundary to the extent of occurrence, which is the measured area within this boundary. (c) shows one measure of area of occupancy which can be measured by the sum of the occupied grid squares.

interpreted as part of a natural fluctuation unless there is good evidence for this. Downward trends that are part of natural fluctuations will not normally count as a reduction.

7. Extreme Fluctuations

Extreme fluctuations occur in a number of taxa where population size or distribution area varies widely, rapidly and frequently, typically with a variation greater than one order of magnitude (i.e., a tenfold increase or decrease).

8. Severely Fragmented

Severely fragmented refers to the situation where increased extinction risks to the taxon result from the fact that most individuals within a taxon are found in small and relatively isolated subpopulations. These small subpopulations may go extinct, with a reduced probability of recolonization.

9. Extent of Occurrence

Extent of occurrence is defined as the area contained within the shortest continuous imaginary boundary which can be drawn to encompass all the known, inferred or projected sites of present occurrence of a taxon, excluding cases of vagrancy. This measure may exclude discontinuities or disjunctions within the overall distributions of taxa (e.g., large areas of obviously unsuitable habitat) (but see “area of occupancy”). Extent of occurrence can often be measured by a minimum convex polygon (the smallest polygon in which no internal angle exceeds 180 degrees and which contains all the sites of occurrence).

10. Area of Occupancy

Area of occupancy is defined as the area within its “extent of occurrence” (see definition) which is occupied by a taxon, excluding cases of vagrancy. The measure reflects the fact that a taxon will not usually occur throughout the area of its extent of occurrence, which may, for example, contain unsuitable habitats. The area of occupancy is the smallest area essential at any stage to the survival of existing populations of a taxon (e.g. colonial nesting sites, feeding sites for migratory taxa). The size of the area of occupancy will be a function of the scale at which it is measured, and should be at a scale appropriate to relevant biological aspects of the taxon. The criteria include values in km², and thus to avoid errors in classification, the area of occupancy should be measured on grid squares (or equivalents) which are sufficiently small (see Figure 2).

11. Location

Location defines a geographically or ecologically distinct area in which a single event (e.g. pollution) will soon affect all individuals of the taxon present. A location usually, but not always, contains all or part of a subpopulation of the taxon, and is typically a small proportion of the taxon’s total distribution.

12. Quantitative Analysis

A quantitative analysis is defined here as the technique of population viability analysis (PVA), or any other quantitative form of analysis, which estimates the extinction probability of a taxon or population based on the known life history and specified management or non-management options. In presenting the results of quantitative analyses the structural equations and the data should be explicit.

The Categories

Note: As in previous IUCN categories, the abbreviation of each category (in parenthesis) follows the English denominations when translated into other languages.

Extinct (EX)

A taxon is Extinct when there is no reasonable doubt that the last individual has died.

Extinct in the Wild (EW)

A taxon is Extinct in the wild when it is known only to survive in cultivation, in captivity or as a naturalized population (or populations) well outside the past range. A taxon is presumed extinct in the wild when exhaustive surveys in known and/or expected habitat, at appropriate times (diurnal, seasonal, annual), throughout its historic range have failed to record an individual. Surveys should be over a time frame appropriate to the taxon’s life cycle and life form.

Critically Endangered (CR)

A taxon is Critically Endangered when it is facing an extremely high risk of extinction in the wild in the immediate future, as defined by any of the criteria (A to E) on pages 15, 16 and 17.

Endangered (EN)

A taxon is Endangered when it is not Critically Endangered but is facing a very high risk of extinction in the wild in the near future, as defined by any of the criteria (A to E) on pages 17 and 18.

Vulnerable (VU)

A taxon is Vulnerable when it is not Critically Endangered or Endangered but is facing a high risk of extinction in the wild in the medium-term future, as defined by any of the criteria (A to D) on pages 19, 20 and 21.

Lower Risk (LR)

A taxon is Lower Risk when it has been evaluated, does not satisfy the criteria for any of the categories Critically Endangered, Endangered or Vulnerable. Taxa included in the Lower Risk category can be separated into three subcategories:

1. **Conservation dependent (cd).** Taxa which are the focus of a continuing taxon-specific or habitat-specific conservation program targeted towards the

- taxon in question, the cessation of which would result in the taxon qualifying for one of the threatened categories above within a period of five years.
2. **Near threatened (nt).** Taxa which do not qualify for conservation dependent, but which are close to qualifying for Vulnerable.
 3. **Least concern (lc).** Taxa which do not qualify for conservation dependent or near threatened.

Data Deficient (DD)

A taxon is Data Deficient when there is inadequate information to make a direct, or indirect, assessment of its risk of extinction based on its distribution and/or population status. A taxon in this category may be well studied, and its biology well known, but appropriate data on abundance and/or distribution is lacking. Data Deficient is therefore not a category of threat or Lower Risk. Listing of taxa in this category indicates that more information is required and acknowledges the possibility that future research will show that threatened classification is appropriate. It is important to make positive use of whatever data are available. In many cases great care should be exercised in choosing between DD and threatened status. If the range of a taxon is suspected to be relatively circumscribed, if a considerable period of time has elapsed since the last record of the taxon, threatened status may well be justified.

Not Evaluated (NE)

A taxon is Not Evaluated when it has not yet been assessed against the criteria.

The Criteria for Critically Endangered, Endangered and Vulnerable

Critically Endangered (CR)

A taxon is Critically Endangered when it is facing an extremely high risk of extinction in the wild in the immediate future, as defined by any of the following criteria (A to E):

A. Population reduction in the form of either of the following:

1. An observed, estimated, inferred or suspected reduction of at least 80% over the last 10 years or three generations, whichever is the longer, based on (and specifying) any of the following:

- (a) direct observation
- (b) an index of abundance appropriate for the taxon
- (c) a decline in area of occupancy, extent of occurrence and/or quality of habitat
- (d) actual or potential levels of exploitation
- (e) the effects of introduced taxa, hybridization, pathogens, pollutants, competitors or parasites.

2. A reduction of at least 80%, projected or suspected to be met within the next ten years or three generations, whichever is the longer, based on (and specifying) any of (b), (c), (d) or (e) above.

B. Extent of occurrence estimated to be less than 100 km² or area of occupancy estimated to be less than 10 km², and estimates indicating any two of the following:

1. Severely fragmented or known to exist at only a single location.
2. Continuing decline, observed, inferred or projected, in any of the following:
 - (a) extent of occurrence
 - (b) area of occupancy
 - (c) area, extent and/or quality of habitat
 - (d) number of locations or subpopulations
 - (e) number of mature individuals.
3. Extreme fluctuations in any of the following:
 - (a) extent of occurrence
 - (b) area of occupancy
 - (c) number of locations or subpopulations
 - (d) number of mature individuals.

C. Population estimated to number less than 250 mature individuals and either:

1. An estimated continuing decline of at least 25% within 3 years or one generation, whichever is longer or
2. A continuing decline, observed, projected, or inferred, in numbers of mature individuals and population structure in the form of either:
 - (a) severely fragmented (i.e. no subpopulation estimated to contain more than 50 mature individuals)
 - (b) all individuals are in a single subpopulation.

D. Population estimated to number less than 50 mature individuals.

E. Quantitative analysis showing the probability of extinction in the wild is at least 50% within 10 years or 3 generations, whichever is the longer.

Endangered (EN)

A taxon is Endangered when it is not Critically Endangered but is facing a very high risk of extinction in the wild in the near future, as defined by any of the following criteria (A to E):

A. Population reduction in the form of either of the following:

1. An observed, estimated, inferred or suspected reduction of at least 50% over the last 10 years or three generations, whichever is the longer, based on (and specifying) any of the following:
 - (a) direct observation
 - (b) an index of abundance appropriate for the taxon
 - (c) a decline in area of occupancy, extent of occurrence and/or quality of habitat
 - (d) actual or potential levels of exploitation
 - (e) the effects of introduced taxa, hybridization, pathogens, pollutants, competitors or parasites.
2. A reduction of at least 50%, projected or suspected to be met within the next ten years or three generations, whichever is the longer, based on (and specifying) any of (b), (c), (d) or (e) above.

B. Extent of occurrence estimated to be less than 5000 km² or area of occupancy estimated to be less than 500 km², and estimates indicating any two of the following:

1. Severely fragmented or known to exist at no more than five locations.
2. Continuing decline, inferred, observed or projected, in any of the following:
 - (a) extent of occurrence
 - (b) area of occupancy
 - (c) area, extent and/or quality of habitat
 - (d) number of locations or subpopulations
 - (e) number of mature individuals.

3. Extreme fluctuations in any of the following:

- (a) extent of occurrence
- (b) area of occupancy
- (c) number of locations or subpopulations
- (d) number of mature individuals.

C. Population estimated to number less than 2,500 mature individuals and either:

1. An estimated continuing decline of at least 20% within 5 years or 2 generations, whichever is longer, or
2. A continuing decline, observed, projected, or inferred, in numbers of mature individuals and population structure in the form of either:
 - (a) severely fragmented (i.e. no subpopulation estimated to contain more than 250 mature individuals)
 - (b) all individuals are in a single subpopulation.

D. Population estimated to number less than 250 mature individuals.

E. Quantitative analysis showing the probability of extinction in the wild is at least 20% within 20 years or 5 generations, whichever is the longer.

Vulnerable (VU)

A taxon is Vulnerable when it is not Critically Endangered or Endangered but is facing a high risk of extinction in the wild in the medium-term future, as defined by any of the following criteria (A to E):

A. Population reduction in the form of either of the following:

1. An observed, estimated, inferred or suspected reduction of at least 20% over the last 10 years or three generations, whichever is the longer, based on (and specifying) any of the following:
 - (a) direct observation
 - (b) an index of abundance appropriate for the taxon
 - (c) a decline in area of occupancy, extent of occurrence and/or quality of habitat
 - (d) actual or potential levels of exploitation
 - (e) the effects of introduced taxa, hybridization, pathogens, pollutants, competitors or parasites.

2. A reduction of at least 20%, projected or suspected to be met within the next ten years or three generations, whichever is the longer, based on (and specifying) any of (b), (c), (d) or (e) above.

B. Extent of occurrence estimated to be less than 20,000 km² or area of occupancy estimated to be less than 2,000 km², and estimates indicating any two of the following:

1. Severely fragmented or known to exist at no more than ten locations.
2. Continuing decline, inferred, observed or projected, in any of the following:
 - (a) extent of occurrence
 - (b) area of occupancy
 - (c) area, extent and/or quality of habitat
 - (d) number of locations or subpopulations
 - (e) number of mature individuals.
3. Extreme fluctuations in any of the following:
 - (a) extent of occurrence
 - (b) area of occupancy
 - (c) number of locations or subpopulations
 - (d) number of mature individuals.

C. Population estimated to number less than 10,000 mature individuals and either:

1. An estimated continuing decline of at least 10% within 10 years or 3 generations, whichever is longer, or

2. A continuing decline, observed, projected, or inferred, in numbers of mature individuals and population structure in the form of either

- (a) severely fragmented (i.e. no subpopulation estimated to contain more than 1,000 mature individuals)
- (b) all individuals are in a single subpopulation.

D. Population very small or restricted in the form of either of the following:

1. Population estimated to number less than 1,000 mature individuals.
2. Population is characterized by an acute restriction in its area of occupancy (typically less than 100 km²) or in the number of locations (typically less than 5). Such a taxon would thus be prone to the effects of human activities (or stochastic events whose impact is increased by human activities) within a very short period of time in an unforeseeable future, and is thus capable of becoming Critically Endangered or even Extinct in a very short period.

E. Quantitative analysis showing the probability of extinction in the wild is at least 10% within 100 years.

IUCN/Species Survival Commission

The Species Survival Commission (SSC) is one of six volunteer commissions of IUCN - The World Conservation Union, a union of sovereign state government agencies and non governmental organizations. IUCN has three basic conservation objectives: to secure the conservation of nature, and especially of biological diversity, as an essential foundation of the future; to ensure that where the earth's natural resources are used this is done in a wise, equitable, and sustainable way; and to guide the development of humankind towards ways of life that are both of good quality and in enduring harmony with other components of the biosphere.

The SSC's mission is to conserve biological diversity by developing and executing programs to study, save, restore, and manage wary species and their habitat. A volunteer network comprised of nearly 7 000 scientists, field researchers, government officials, and conservation leaders from 179 countries, the SSC membership is an unmatched source of information about biological diversity and its conservation. At such, SSC members provide technical and scientific counsel for conservation projects throughout the world and serve as resources to government, international conventions, and conservation organizations.

The Red Data Book concept was originated by a former SSC Chair, Sir Peter Scott, in the mid 1960s. Red Data Books are catalogues of information on species threatened with extinction and they aim to focus attention to the plight of the earth's vanishing wildlife. The concept has been outstandingly successful and, three decades later, many national, regional and global Red Data Books have been published. Many more countries are in the process of compiling their own lists of threatened species.

The demand for a simple, international list that categorizes the status of globally threatened taxa is growing, partly as a result of the increasing number of international conventions. It was to meet this need that the first IUCN Red List of Threatened Animals was published in 1986. Further editions were published in 1988, 1990, and 1994.

late in 1994, IUCN adopted a new system of categories of threat, the 1996 *IUCN Red List of Threatened Animals*, for its application. An objective set of criteria is used to determine species status as well as the factors that are threatening them. The process of developing, testing, and validating the new system has involved nearly 1 000 IUCN members, so far and is continuing. Due to its transparent nature, it is easy to re-evaluate the status of a species in light of new information, and in this way, the Red List should be viewed as a living document.

Although the length of the Red List is sobering, the information it presents is of fundamental value to scientists, managers, and decision makers responsible for the health and well-being of our environment.
