List of Antarctic Names	1

Foreword

This gazetteer contains 12,710 names approved by the United States Board on Geographic Names and the Secretary of the Interior for features in Antarctica and the area extending northward to the Antarctic Convergence. Included in this geographic area, the Antarctic region, are the off-lying South Shetland Islands, the South Orkney Islands, the South Sandwich Islands, South Georgia, Bouvetøya, Heard Island, and the Balleny Islands. These names have been approved for use by U.S. Government agencies. Their use by the Antarctic specialist and the public is highly recommended for the sake of accuracy and uniformity. This publication, which supersedes previous Board gazetteers or lists for the area, contains names approved as recently as December 1994.

The basic name coverage of this gazetteer corresponds to that of maps at the scale of 1:250,000 or larger for coastal Antarctica, the off-lying islands, and isolated mountains and ranges of the continent. Much of the interior of Antarctica is a featureless ice plateau. That area has been mapped at a smaller scale and is nearly devoid of toponyms. All of the names are for natural features, such as mountains, glaciers, peninsulas, capes, bays, islands, and subglacial entities. The names of scientific stations have not been listed alphabetically, but they may appear in the texts of some decisions. For the names of submarine features, reference should be made to the *Gazetteer of Undersea Features*, 4th edition, U.S. Board on Geographic Names, 1990.

Advisory Committee on Antarctic Names

The Advisory Committee on Antarctic Names is the body of U.S. Government specialists responsible for conducting research on Antarctic names. The Committee, which is advisory to the Board, meets quarterly and recommends names for Board approval. From its inception in 1947 (succeeding the Special Committee on Antarctic Names, 1943–47) the Committee has remained a small working group. Chosen on the basis of their special knowledge, the members represent a cross section of academic and field expertise related to Antarctic investigations. Formal appointment to the Committee is by the Secretary of the Interior.

The members in 1994 were Peter F. Bermel (chair, U.S. Geological Survey), Guy G. Guthridge (National Science Foundation), Jerry L. Mullins (U.S. Geological Survey), Julie Palais (National Science Foundation), Olivia K.

Radford (Library of Congress), Mark P. Rockmore (Defense Mapping Agency), and Alison Wilson (National Archives).

Members of the Advisory Committee on Antarctic Names, 1947 to the present, and the earlier Special Committee on Antarctic Names, 1943–47, are listed below. The members are listed in the order of their appointment. Asterisks identify those who chaired.

- * W. L. G. Joerg, 1943–52
- * Harold E. Saunders, 1943–61
Lawrence Martin, 1943–46
- * Kenneth J. Bertrand, 1946–72
Herman R. Friis, 1957–73
Paul A. Siple, 1958–62
- * Albert P. Crary, 1961–76
- * Henry M. Dater, 1962–74
Morton J. Rubin, 1973–74
Kelsey B. Goodman, 1973–76
- * Walter R. Seelig, 1973–86
- * Alison Wilson, 1975–94
Jerome R. Pilon, 1976–78
William R. MacDonald, 1976–77
- * Peter F. Bermel, 1979–94
Luther W. Wheat, 1979–88
Geza T. Thuronyi, 1987–90
- * Guy G. Guthridge, 1989–
Jerry L. Mullins, 1993–
Julie Palais, 1994–
Olivia K. Radford, 1994–
Mark P. Rockmore, 1994–

The executive secretary of the Board on Geographic Names, Roger L. Payne, sits *ex officio* on the Advisory Committee on Antarctic Names and reports on its work at quarterly meetings of the Board. Richard R. Randall was the executive secretary of the Board from 1973 until his retirement from Federal service in 1993. The executive secretary from 1943 to 1973 was Meredith F. Burrill, who helped develop principles and policies for naming Antarctic features.

Fred G. Alberts, a senior geographer in the Office of Geography, Department of the Interior (later with the Defense Mapping Agency Hydrographic/Topographic Center), served as secretary of the Advisory Committee on Antarctic Names from 1949 to 1980 with concurrent responsibility for carrying out names research. He directed the collection and analysis of names data from historical and

contemporary sources, the preparation of case briefs wherein the toponymic usage for each feature was recorded, and the presentation of the assembled information to the Committee for determination of the name. He was assisted for varying intervals by the following staff geographers listed in sequential order: Gardner D. Blodgett, Virginia S. Taylor, Gordon D. Ashley, and Thomas J. Strenger. Mr. Alberts has continued his association with the Advisory Committee on Antarctic Names as mentor, advisor, and participant in its meetings.

From 1984 to 1993, Mark P. Rockmore, a geographer in the Hydrographic/Topographic Center, Defense Mapping Agency, was assigned staff responsibility for Antarctic names research and database maintenance. These functions and the relevant data and files were transferred to the U.S. Geological Survey in 1993 following their placement in the Defense Mapping Agency since 1967. The transfer consolidated Antarctic names research and mapping functions in one agency.

Jon C. Campbell, a geographer at the U.S. Geological Survey, was appointed secretary of the Advisory Committee on Antarctic Names in 1993, with responsibility for names research for the Committee and database maintenance for the Antarctic file of the Geological Survey's Geographic Names Information System. In collaboration with Mr. Alberts, he served as the project director for the publication of this revised gazetteer.

Acknowledgments

The Advisory Committee on Antarctic Names (ACAN) has benefitted from the close cooperation of the U.S. Geological Survey, particularly the Antarctic mapping specialists who permitted advance use of their cartographic products and ready access to comprehensive aerial photog-

raphy. The Committee appreciates the conscientious efforts of leaders of the U.S. Antarctic Program who have commended for application to Antarctic features the names of individuals whose contributions have been meritorious. The Committee extends its thanks to the several university field parties whose accurate submission of Antarctic name proposals facilitated Committee work and assured use of approved names in ensuing maps and reports.

The free exchange of information and views which the Advisory Committee enjoys with Antarctic names committees in other Antarctic Treaty nations is gratefully acknowledged. Frequently these committees provide unique information concerning discovery and naming. Their cooperation has contributed to agreement on specific names, terminology, and policies bearing on the approval of names. Their assistance has been invaluable in resolving difficult nomenclature problems and reducing the number of conflicting names.

The present volume was compiled in a cooperative project involving three Federal agencies. The U.S. Geological Survey (USGS), which supports the domestic and Antarctic placenames programs of the Board, funded research by Fred G. Alberts, who compiled and edited the present edition as well as the 1981 edition of the gazetteer. The USGS also supplied production coordination and support for this edition through the ACAN secretary, Jon C. Campbell. The Defense Mapping Agency (DMA) supports the foreign and undersea placenames programs of the Board on Geographic Names and, from 1967 to 1993, also maintained records of Antarctic names. Initial compilation of most of the supplementary names in this edition was conducted at DMA by Mark P. Rockmore. The National Science Foundation, which manages the United States Antarctic Program, directed the printing of the present volume; funds for printing were provided by the Defense Mapping Agency.

The Antarctic Geographic Name Problem

The nature of the problem

The geographic nomenclature of Antarctica was long in need of an overall systematic treatment, objective in approach and based upon thorough examination of all of the evidence. The results of such treatment over a period of about three years were first presented in *The Geographical Names of Antarctica*, Special Publication No. 86, Board on Geographic Names, 1947. The continuing program since that publication has resulted in the issuance of several Board gazetteers which have now covered most of the geographic naming in the Antarctic. As research has filled in many of the previous gaps in knowledge, a number of names have been modified and minor amendments have been made in the policies. This revised publication brings together the enlarged body of names officially standardized for use by the United States Government, together with pertinent background information.

The Antarctic continent presents many nomenclature problems. Modern specialized tools were not available to the early explorers primarily responsible for initial activity in Antarctic naming, and the nature of Antarctica put great obstacles in their way. Prior to the advent of modern aerial photography and satellite imagery, the great size of the continent and its relative inaccessibility made it difficult to develop accurate concepts of the whole and the relationship of its parts. It has not been easy for explorers to describe and locate features unmistakably or to identify a feature reported previously by someone else. Many of the natural features in Antarctica are markedly similar in appearance; moreover, the appearance of a given feature may vary with the angle or the time of view. The extraordinary hazards of travel and frequent poor visibility have restricted observation. Practically all of the interior and much of the coast are masked with a cover of snow and ice through which protrude only the upper parts of mountains or mountain ranges. Although many glaciers are perfectly distinct, except perhaps at their sources, the relationship of ice masses to one another is commonly not obvious.

Another contributing difficulty in identification of features has been that the available records of exploration do not always permit exact fixing of positions at present. Chronometer errors in the early days of Antarctic exploration resulted sometimes in considerable errors in reported longitude; looming and mirages may have caused wide errors in latitude; flight positions were not always determined with

the precision necessary to permit full and accurate use of aerial photographs; and many features were named upon being viewed either from such a great distance or from such an angle that their relation to the local topographic detail could not be seen. Superimposition of names on previously named features in Antarctica has been the result of mistaken identity or location of features arising from the foregoing causes, of simultaneous exploration, or of lack of knowledge of previous naming. The records of early sealers and some other visitors to Antarctica have contributed little to the literature on Antarctic nomenclature. Explorers and cartographers of many nations and languages have contributed to the nomenclature of Antarctica, often without recording for posterity an explanation of their naming actions and often without full appreciation of everything that has preceded. In some instances the preceding events could not possibly have been known by explorers, since priority of occurrence was a matter only of weeks or even days. Superimposition of names has also resulted from intentional renaming of features to support, or on the basis of, Antarctic territorial claims.

The kinds of nomenclature problems encountered in Antarctica fall largely in these classes: determination of the facts, circumstances, and, insofar as possible, intent of original and any subsequent naming; the choice between multiple names for a feature; the choice between alternative generic terms such as land or coast; the correction of generic terms for features whose nature was not accurately known at the time of naming, such as a peninsula which turns out to be an island; identification and fixing of location; definitive description; and determination of the appropriateness of names for application to specific features.

Resolution of the problem

The need for a systematic overall treatment of Antarctic names was brought to the attention of the United States Board on Geographic Names by the requirements of the United States Antarctic Service expedition, 1939–41, and by the concomitant preparation in the U.S. Navy Hydrographic Office of a volume of *Sailing Directions for Antarctica*, 1943, and a companion chart of the continent to be used for reference in conjunction with the volume.

The *Sailing Directions* and Chart No. 2562 were prepared under the direction of Commander Robert A.J. English, USN, who was executive secretary of the United States

Antarctic Interdepartmental Executive Committee. Commander English discussed informally many problems of nomenclature with Lawrence Martin of the Library of Congress and W.L.G. Joerg of the National Archives, both of whom had concerned themselves for some time with Antarctic nomenclature. There was also available to Commander English such general information on policy and background as the Board had developed up to that time, but the Board had never developed a definite and comprehensive statement of policy specifically pointed to the problem of Antarctic names.

In preparing the *Sailing Directions* and chart, it became evident that the resolving of name conflicts which had arisen over many years and the examination of new names proposed by the U.S. Antarctic Service expedition would entail considerable specialized research. Many of the names were referred to the Board on Geographic Names for its consideration. However, owing to the volume of the names and the complexities involved, the *Sailing Directions* and chart were published before all of the names could be reviewed. To focus on these names and the general question of Antarctic nomenclature, the Board appointed a Special Committee on Antarctic Names in July 1943. This committee consisted originally of W.L.G. Joerg, Chairman, Harold E. Saunders, and Lawrence Martin. After taking an active part in the initial stages of its work, Martin informally withdrew from the Committee in May 1946, and the other members continued as a committee of two. The Committee met with Meredith F. Burrill, executive secretary of the Board, in January 1944, made a preliminary appraisal of the situation, and considered several key names upon which it made recommendations. These recommendations were approved by the Board and the names promulgated. In the Antarctic, as elsewhere, it is necessary to examine the whole of the nomenclature before the relation of any one name to the general pattern becomes clear, and as the tangled threads of Antarctic naming were gradually unraveled some of these decisions were appropriately revised.

The Committee met at intervals during the early part of 1944 and worked out additional names, but the task assumed progressively increasing size until staff assistance was necessary. In order to make it possible for the Committee to make its contribution to both general and specific problems, the preparatory compilation of evidence on exploration and on specific names was assigned to Elizabeth Fielden in December 1944. She prepared a card record of individuals and ships that had taken part in Antarctic exploration and an annotated card file of names that had been applied or proposed for features in Antarctica. Upon

Fielden's resignation in October 1945, the work was assigned to Florence Lyle.

In March 1946 the Special Committee on Antarctic Names agreed to devote two or three half-days a week to expedite their part of the program. At the same time, Kenneth J. Bertrand was assigned full time to supervise the staff work on Antarctic names and to analyze the naming practices and records of the expeditions from their publications and from discussions with Antarctic explorers. After Bertrand joined the faculty of Catholic University of America in September 1946, he continued his investigations into Antarctic nomenclature and discovery as part of his University research program.

As the work advanced it became apparent that the formulation of a statement of guiding policy was a prerequisite to an objective approach not only to overall problems of nomenclature but also to specific problems of individual names. The need for a statement of principles and policies was urgent, particularly with reference to the names of living persons. Such names had been given by Antarctic explorers, and they appeared on maps under investigation by the Advisory Committee. It has long been the Board's policy, in making decisions on domestic geographic names, not to use the names of living persons, but the application of this policy to Antarctica appeared neither desirable nor possible. However, in the absence of specific positive policy to the contrary, this question had been one of the most serious obstacles to the resolution of the problem of Antarctic placenames.

A statement of policy for Antarctic names was drafted by Meredith F. Burrill and Kenneth J. Bertrand and reviewed by the Special Committee in the spring of 1946. After discussion with several Antarctic explorers and with Commander English, it was further refined. The resulting policy statement was approved in July 1946 and was promulgated by the Board on Geographic Names in *The Geographical Names of Antarctica*, Special Publication No. 86, 1947, which included several hundred placenames that had been decided by then. Since that time the policy has been tested through application to the choice of names in many controversial cases but has been modified only in detail.

In Special Publication No. 86, a small group of nonpersonal Scandinavian and German names was translated into English forms. Experience proved that confusion resulted when comparing maps carrying these revised forms with maps carrying the original foreign names. Also, correlation of the English and foreign names in gazetteers was hindered by the

fact that their alphabetical listings were far removed from one another.

The statement of policy was therefore amended. The section on translation and treatment of the generic term in nonpersonal foreign names has been revised to provide for retention of the specific term in most cases as originally given; retention of the original names if it is well established in international usage; substitution of an English generic for an included foreign generic, or generic plus definite article that is not readily understood (e.g., Rund Bay and Trilling Peaks for "Rundvika" and "Trillingnutane"); addition of an English generic to the foreign name so that the Anglicized form will agree basically with the original name, (e.g., Tvistein Pillars and Vorposten Peak for "Tvistein" and "Vorposten"); acceptance, in rare instances, of well established translated forms (e.g., Cape Well-met, which had become established for the feature originally named "Mötesudden").

Questions of political sovereignty have not entered into the consideration of the name policy or of individual Antarctic names. Inasmuch as the United States recognizes no territorial claims in Antarctica, the Board on Geographic Names is able to consider each name on its merits in relation to the unfolding knowledge of Antarctica. Therefore, the decisions contained herein have no political implication. The names of "lands" and "coasts" have been considered as applying to physical entities without political connotation

and have been described and delimited as such as far as present knowledge of them permits.

The approval of surnames only, instead of full names, involved the question of naming for male and female relatives and friends solely on the basis of relationship or friendship because custom and tradition forbade commemoration of the explorers themselves. It was decided that an orderly and appropriate geographic nomenclature for Antarctica would be achieved best by naming for persons who qualify under the policy.

An act of Congress in July 1947 abolished the former Board and created the present one, responsible conjointly with the Secretary of the Interior for standardization of geographic names. Joerg and Saunders were appointed members of a new Advisory Committee on Antarctic Names that continued without break the work of the former Special Committee. Bertrand was appointed a member of the Committee in October 1947 and, with Board Executive Secretary Meredith F. Burrill, rounded out an effective team. Meeting regularly one-half day or more each week for several years, this group worked over a great quantity of data in considering names known to have been applied to, or proposed for, Antarctic features. Their knowledge, understanding, and judgment in recommending impartial solutions to many difficult nomenclature questions established a level of excellence which was continued by later members of the Advisory Committee.

Policy Covering Antarctic Names

The following statement of policy guides the Advisory Committee on Antarctic Names and the Board on Geographic Names in deciding individual cases. It should be helpful also to those persons proposing names for natural features in the Antarctic.

The problem of geographic nomenclature in Antarctica differs from that of any land area of comparable size. Antarctica has no permanent settlements. Even in the stations continuously occupied for a number of years the personnel are rotated. The continent has been visited and explored by the representatives of many nations, who, by their heroic efforts to broaden man's knowledge of this land of ice and snow, have fully demonstrated the international nature of the world of science. Most major features of Antarctica have been discovered and mapped, but a large number of secondary features continue to be only partially delineated and remain unnamed.

Under the policy here set forth, decisions on Antarctic names are based on priority of application, appropriateness, and the extent to which usage has become established. The nationality of the honoree is not a factor in the consideration of personal names. The grouping of natural features into three orders of magnitude, with corresponding categories of persons according to the type of contribution which they have made, is intended to provide the greatest possible objectivity in determining the appropriateness of a name.

Because Antarctica has no history of permanent settlement, and because the continent has been unveiled through the efforts of explorers, scientists, and others, the Board has found it practical to apply the names of such persons to Antarctic natural features. The requirements for naming features, coupled with the availability of names of deserving people, further justify this practice. It does not, however, preclude the use of other than personal names.

The names of Antarctic buildings, facilities, stations and other installations, not being natural features, do not fall within the purview of the Board. Such names, though not included as main entries in the decision list, are significant in the overall nomenclature and do occur frequently in the text of decisions.

Types of natural features

The kinds of features that have been named in the Antarctic are roughly grouped in three categories. There is considerable latitude for judgment in classifying individual features,

since it is practically impossible to set size limits for "large glaciers," "great mountains," or "large bays."

Features having special significance or prominence in geographic discovery, scientific investigation, or the history of Antarctica may be placed in the next higher category than their size would warrant.

1. First-order features
 - a. Regions or "lands"
 - b. Coasts
 - c. Seas
 - d. Plateaus
 - e. Extensive mountain ranges
 - f. Major subglacial basins, mountains, or plateaus
 - g. Ice shelves
 - h. Large glaciers
2. Second-order features
 - a. Peninsulas
 - b. Mountain ranges, except the most extensive
 - c. Great or prominent mountains
 - d. Glaciers, except the largest
 - e. Prominent capes
 - f. Islands or ice rises
 - g. Gulfs
 - h. Large bays
 - i. Straits or passages
 - j. Harbors
 - k. Extensive reefs, shoals, or banks
3. Third-order features
 - a. Minor mountains and hills
 - b. Nunataks
 - c. Cliffs
 - d. Rocks
 - e. Minor shore features
 - f. Points
 - g. Capes (except the greater or more prominent ones)
 - h. Glaciers (except the greater or more prominent ones)
 - i. Bays (except the greater or more prominent ones)
 - j. Coves
 - k. Anchorages
 - l. Parts of these features
 - m. Reefs, shoals, and banks of small extent

Application of personal names to features

Personal names generally are applied to natural features as outlined here:

1. First-order features
 - a. Leaders or organizers of expeditions to the Antarctic
 - b. Persons who have made discoveries of outstanding significance in Antarctica, or leaders of parties or captains of ships that have made such discoveries
 - c. Persons who, through their work with Antarctic expeditions, have made outstanding contributions to scientific knowledge or to the techniques of Antarctic exploration
 - d. Persons who have provided the major financial or material support to an expedition, thereby making such an undertaking possible
2. Second-order features
 - a. Persons whose outstanding heroism, skill, spirit, or labor has made a signal contribution to the success of an expedition
 - b. Persons who have made important contributions in the planning, organization, outfitting, or operation of Antarctic expeditions
 - c. Ship captains or leaders of field parties of such expeditions
 - d. Persons whose contributions to the knowledge of the Arctic either have advanced our knowledge of Antarctica or have expanded the possibilities of Antarctic exploration
 - e. Persons who have made outstanding contributions to equipment for polar exploration
 - f. The directors or heads of learned societies that have given significant support or made material contributions to Antarctic exploration
 - g. Persons who by substantial contributions of funds or supplies have made possible an Antarctic expedition
 - h. Persons who have done outstanding work in the utilization of data, identification of specimens, or interpretation of the results of Antarctic exploration
3. Third-order features
 - a. Persons who have assisted in the work of organizing or conducting Antarctic exploration, or who have assisted in analysis of information gathered in the course of such exploration
 - b. Members of expeditions, including ship-based personnel
 - c. Persons whose contributions to knowledge in their respective fields have facilitated the discovery, recognition, identification, or recording of Antarctic phenomena
 - d. Teachers or administrators in institutions of higher learning who have contributed to the training of polar explorers
 - e. Persons who have made material contributions in any form to Antarctic expeditions, and who have by their

words or actions demonstrated an interest in further scientific research rather than in seeking commercial exploitation of such contributions.

Application of nonpersonal names

Names in the following categories may be applied to a feature in any order of magnitude with which there is association. Examples of nonpersonal names are:

1. Names that commemorate events (e.g., Charcot's Deliverance Point and Nordenskjöld's Hope Bay)
2. Names of ships from which discoveries have been made (e.g., Cape Grönland and Cape Norvegia)
3. Names of organizations that have sponsored, supported, or given scientific or financial assistance to Antarctic expeditions (e.g., Royal Society Range, Admiralty Mountains, Banzare Coast) or names of institutions of higher learning that have contributed to the training of polar explorers
4. Names peculiarly descriptive of the feature (e.g., Deception Island, Mount Tricorn, or Three Slice Nunatak); descriptive names not unique or particularly appropriate and for which there are likely to be duplicates are undesirable
5. Any other nonpersonal name that because of its acknowledged importance occupies a major role in Antarctic exploration or history (e.g., Mount Glossopterus).

Criteria of appropriateness

1. Newly proposed names will be considered for first, second, or third-order features in the light of their appropriateness, as evidenced by the following factors arranged in order of weight:
 - a. Chronological priority of discovery, naming, or other relevant action
 - b. Actual association of the person, ship, or organization, event, etc., with the feature
 - c. Association of the person, ship, organization, event, etc., with other polar exploration
 - d. Contribution of the person to the knowledge of Antarctica
 - e. Contribution of the person to relevant fields of knowledge
 - f. Extent to which financial or material contributions have contributed to the success of an expedition or to the collection of valuable scientific data
 - g. Previous recognition through an Antarctic geographic name
 - (1) In future naming, it is advisable to apply the name of one person to only one Antarctic feature.

- (2) To avoid confusion, the names of persons having the same surname should be applied to no more than one feature of a kind.
- h. The possibility of ambiguity or confusion with names already in use
 - (1) The duplication of names in use is undesirable.
 - (2) Since descriptive names are often ambiguous and easily duplicated, they should be avoided, unless a descriptive name is peculiarly appropriate.
 - (3) The duplication in Antarctica of names well known in other parts of the world is undesirable, even though qualified by adjectives such as "new," "south," and "little."
- 2. Names already in use will be considered in the light of:
 - a. Appropriateness, as outlined above
 - b. Wideness of acceptance, as evidenced by extended use on maps and in literature. Usage considered sufficiently fixed and/or unanimous may be accepted as valid grounds for approval of a name that otherwise would not qualify.

Fields of knowledge pertinent to Antarctica

The following is a list of fields of knowledge in which outstanding contributions may be considered justification for commemoration in an Antarctic placename. It is to be considered neither exclusive nor exhaustive, and no order of priority is intended.

1. Navigation and astronomy
2. Oceanography and hydrography
3. Surveying, photogrammetry, and cartography
4. Meteorology and climatology
5. Geodesy and geophysics
6. Glaciology and ice physics
7. Radio, radar, and allied fields
8. Geology, volcanology, and seismology
9. Geography
10. Botany and its subdivisions
11. Zoology and its subdivisions
12. Engineering research and applications

Recommended language and form

In keeping with long-established policies based upon trends in the normal evolution of geographic names, considerations will be given to brevity, simplicity, and unambiguity in selecting the form of names derived by these procedures:

1. The application of full names and/or titles of persons is not considered appropriate. Titles will be translated where their use is required.
2. The names of organizations, ships, and other nonpersonal names, when unduly long and cumbersome, will ordinarily be used in some shortened though intelligible form.
3. English generics are preferred. Complete translation of names will generally be avoided, but well established translated forms may be accepted.
4. An English generic may be added, or may be substituted for an included generic term, in the case of nonpersonal, non-English, single-word names that include a generic or a definite article, or both.
5. Board-approved romanization systems are used for transliteration from nonroman alphabets.

Inappropriate names

Names in the following categories will not be considered, unless otherwise appropriate according to the principles stated herein, or unless such names are widely and firmly established as of the date of approval of these principles.

1. Names suggested because of relationship or friendship.
2. Names of contributors of funds, equipment, and supplies, who by the nature and tone of their advertising have endeavored to capitalize or to gain some commercial advantage as a result of their donations. This would not include advantages resulting from testing of donated equipment under Antarctic conditions; in cases of doubt, the decision shall be in favor of the individual whose name has been proposed.
3. The names of products, sled dogs, or pets will ordinarily not be considered appropriate for application to natural features.

Application of Policy in Decisions

In applying the principles outlined in the preceding pages, the Advisory Committee on Antarctic Names has attempted to disturb previous naming as little as possible while recognizing the most appropriate associations of names and features. In general, established names have been retained. Even when this resulted in two similar names for features in the same category, as two mountains or two bays, the names have been kept if particularly appropriate or without alternatives. To avoid confusion, however, the Committee has altered one of a pair of identical names when the features are close to each other.

Verification of old names

In the initial years of study culminating in *The Geographical Names of Antarctica*, Special Publication No. 86, 1947, the Committee was concerned with sorting out the names already bestowed and did little original naming. In some instances, after deciding between conflicting names for the same feature, the Committee applied the rejected name to another feature for which it was appropriate. For example, after rejecting the name "Bjerkø Head" in favor of Cape Darnley, the peninsula bordering the cape was named Bjerkø Peninsula. Some new names were supplied for prominent features to which reference was necessary for purposes of the Committee's study, such as Bingham Glacier and Trail Inlet. Other new names were applied to commemorate members of expeditions or those who played a prominent part in furthering Antarctic expeditions or exploration, but whose names by some chance had not been selected for application to Antarctic features. These early instances of naming by the Committee, however, were few compared to the number of names considered.

In a number of cases it has not been possible, with data collected from all available sources, to find or to identify features previously discovered and named by Antarctic explorers. In most cases these are either minor features or are not required for general reference. Where the data at hand have been insufficient to identify features discovered by earlier explorers, and if explorers have been unable to find features previously reported, the Committee has generally deferred any recommendation to assign or to fix the specific or generic parts of names, the positions, or the types of features.

Cases in point are Favé Island and Prensa Islands, in the northern portion of the Graham Coast. Neither Favé Island,

which apparently lies somewhere among many small, ice-capped islands in the western portion of the Wilhelm Archipelago, nor Prensa Islands, in the northern portion of the archipelago, can be located with certainty on the rather definitive maps now available. Names should be assigned as originally intended if that becomes possible. If not, some of the names might be assigned to features which will serve as distinctive landmarks to future explorers and travelers approaching this area. Such names have therefore been placed on file for future consideration after further definitive exploration.

For hundreds of years the terms "land" and "coast" have been applied unsystematically in Antarctica. In 1947 the Committee developed definitions of these terms which have since been applied in decisions on Antarctic names. The term "land" refers to a major physical (geographical) subdivision of the continent. It implies a concept of area, as opposed to linear extent, gained either through observation over a great extent or through recognition of areal unity. A "land" may include "coasts" that may be differentiated and separately named on its seaward margin, and it may include fairly extensive features such as peninsulas or plateaus.

The term "coast" refers to a zone or strip on the seaward margin of the continent, possessing a recognized degree of unity resulting from physiographic homogeneity, from marked breaks in the configuration of the coastline, or from the history of its exploration. A "coast" is usually of indeterminate depth. It includes the small islands immediately offshore and marine features of the transition zone. A "coast" that presents recognized physical unity has been delimited by physical features. In the delimitation of each coast, due account has been taken of the history of its exploration, and when physical unity was lacking or not known, a "coast" was delimited on the basis of exploration history alone, subject to later modification when more physiographic data became available.

The name Mac. Robertson Land illustrates the procedures followed. Early Board gazetteers designated the area as "Mac-Robertson Coast" because it was seen mostly from the sea and from short flights over the coast without deep penetration inland. The delimiting breaks in the shoreline at Cape Darnley and William Scoresby Bay corresponded with its 1930 exploration by Mawson, but, while Mawson had used the terminology "land," almost nothing was known of the interior. The Advisory Committee amended its termi-

nology to Mac. Robertson Land in 1966, but did so only after exploration of the hinterland, including the extensive Prince Charles Mountains, added a dimension of breadth. In analogy to Mac. Robertson Land, the Lars Christensen Coast has been delimited to include the section of littoral discovered by Norwegians. The delimitation is somewhat more restricted than is suggested in early Norwegian charts, but it coincides with landmarks along the coast and does justice to the facts of exploration.

The Committee had assumed that once a continuous series of capes and points were named around Antarctica, reference to coast names would diminish. Coast names survive, however, and continue to be useful as units for organizing nautical or other information in volumes such as sailing directions.

Application of new names

The first appreciable number of new names applied by the Committee was to features in the coastal area of Wilkes Land in 1955. The Committee and its staff had prepared five reconnaissance maps of the coast between 86°E and 144°E from aerial photography obtained by U.S. Navy Operation Highjump, 1946–47, and names were needed for a few hundred features that were first delineated on the new maps. The names applied honored members of the U.S. Exploring Expedition, 1838–42 (Lt. Charles Wilkes, USN), which discovered portions of the coast, and members of Operation Highjump. Other names were drawn from U.S. Navy Operation Windmill, 1947–48, which obtained astronomical control data for the area.

In the years following the International Geophysical Year, 1957–58, the United States began a systematic mapping

program in Antarctica, and the Advisory Committee was obliged for the first time to originate names in large numbers to meet the requirements of sustained map production by the U.S. Geological Survey. The names, selected according to policy, were primarily those of research and support personnel who had contributed to the success of the U.S. Antarctic Research Program. In this connection the Committee has reviewed item 1b under “Criteria of Appropriateness” in the Policy Covering Antarctic Names and has relaxed somewhat the requirement for direct association between a feature and the person for whom it is named. This shift was made in the interest of fairness in order to include the names of persons who have worked at isolated outposts such as the Plateau, Byrd, or South Pole Stations where few nameable features exist.

In the application of personal names the approval of surnames only, instead of full names, has been reaffirmed. Moreover, the Committee has shortened a number of toponyms that it originated which included a given name and a surname. While upholding the general preference for surnames, the Committee has recommended the approval of a given name in unusual situations.

Name proposal form

The investigative effort required for the approval of a new name can be reduced if the proposal is accompanied by full information on the name, the reasons for its choice, and a definitive identification of the feature. An Antarctic name proposal form has been developed which elicits the information needed by the Advisory Committee in making its recommendation. The form appears on the facing page and may be freely copied. Additional copies can be obtained from the U.S. Board on Geographic Names.

Antarctic Mapping

Before the International Geophysical Year, 1957–58, Antarctic map coverage consisted of a few continental maps with incomplete coastlines and virtually no interior detail. Small scale aeronautical charts covering the continent included mapping from the few earlier expeditions to the interior, but the detail was sparse and sometimes of questionable accuracy.

A program for Antarctic mapping was not included in the activities recommended by the Comité Spécial de l'Année Géophysique Internationale. U.S. mapping operations during the 1957–58 period were limited to surveys near scientific stations, on traverses as a supplement to scientific observations, or from ships near the coast. Following the International Geophysical Year, the United States established a long range Antarctic research program. In 1960, funds, aircraft, and personnel were committed to conduct topographic mapping in support of this research. Since the initiation of the program, numerous developments in sophisticated equipment and mapping techniques have become available for use in Antarctica.

Initially, Antarctic ground control surveys were based on solar observations. These early surveys served as a basis for better maps when coupled with aerial photography. Electronic distance measuring equipment capable of measuring 50 kilometers within 25 centimeters was first used in Antarctica during the early 1960's. This equipment was soon used on traverses supported by gas turbine helicopters capable of landing on mountains in excess of 4,000 meters above sea level, making it possible to establish control points more rapidly and to facilitate mapping of much larger areas. A subsequent development in control activities was the use of positioning devices capable of a high order of accuracy obtained by measuring the doppler effect of signals received from geodetic satellites. This equipment came into wide use during the 1970's and has been employed, for example, to determine within 1 meter the movement of the ice sheet at the South Pole. It has also permitted the establishment of geodetic control in Antarctica on the World Geodetic System, whereas previous surveys were on local datums. The satellite based Global Positioning System (GPS) has significantly advanced the accuracy of Antarctic positioning and mapping.

Although the development of accurate mapping control has been important to post-IGY mapping, perhaps even more important has been the systematic acquisition of high quality aerial photographs along planned flight lines using cameras with cartographic lenses. The trimetrogon array of

three cameras developed for reconnaissance mapping during World War II was used on most flights over Antarctica because the characteristics of this system require a minimum of ground control points and permit a wider spacing of flight lines. Hundreds of thousands of square miles of Antarctica were photographed by U.S. Navy airplanes especially configured to accept aerial cameras and flown along lines planned by experts from the U.S. Geological Survey. P-2V Neptune airplanes, used during the early 1960's, were replaced during the latter part of the decade with a photoconfigured LC-130 Hercules. During the 1970's, as the range and navigational accuracy of the airplanes improved and satellites provided weather information over project areas, successful photographic missions became predictable rather than occasional. Technical specifications were developed for use by U.S. Navy photographic crews, and the resultant photography was inspected immediately to assure the high quality required for accurate photogrammetric compilation of maps. More recently a precision camera in the LC-130 aircraft has been used to acquire high resolution vertical photography.

The advent of earth satellites has enabled further expansion and improvement of the accuracy of Antarctic mapping. Landsat (previously known as ERTS, Earth Resources Technology Satellite) imagery has identified Antarctic geographic features. Recent Landsat imagery, greatly improved, is being exploited. These data have been useful in studying coastal ice formations and glacial ice tongues, and are a significant source of information for certain types of studies. Future satellites will have a variety of sensors with even better resolution.

From the beginning of the United States Antarctic Research Program in 1959 at the close of the International Geophysical Year, the U.S. Geological Survey has mapped over 1,450,000 square kilometers of the continent that was previously unmapped. The U.S. Geological Survey has largely focused its mapping projects in West Antarctica and the Transantarctic Mountains to support the requirements of the United States Antarctic Research Program. Nearly 100 reconnaissance series maps have been published at the basic scale of 1:250,000. Maps of the McMurdo Dry Valleys, an area of particular scientific interest, have been published at 1:50,000-scale. Other map series include 1:500,000-scale sketch maps, generally prepared in advance of the more detailed 1:250,000-scale series. These maps are also the basis for air navigation charts prepared by the Defense Mapping Agency for ship and aircraft operations and for smaller-scale maps.

Maps and Gazetteers

Sources of U.S. Antarctic maps and charts

For aeronautical and hydrographic charts:

NOAA Distribution Division
National Ocean Service
Riverdale, Maryland 20737-1199
Telephone 301-436-6990

For topographic and geologic maps, aerial photography and satellite imagery:

U.S. Geological Survey
Box 25286
Federal Center, Building 41
Denver, Colorado 80225
Telephone 800-USA-MAPS, 800-872-6277

For a continental map (1:5,000,000 scale):

Smithsonian Oceanographic Sorting Center
Washington, D.C. 20560
Telephone 301-238-3797

Other maps

Most nations that operate in Antarctica have produced maps. A comprehensive catalog of maps and charts issued by the United States and other member nations of the Scientific Committee on Antarctic Research (SCAR) has been published:

Antarctica: A Catalog of Antarctic Maps and Charts, 5th edition, Canberra, Australian Surveying and Land Information Group, 1988.

Map collections

U.S. Government organizations with principal collections of Antarctic maps are listed below. Visiting scholars are welcome.

Library of Congress
Geography and Map Reading Room

User's Guide

Approved names

This gazetteer lists Antarctic geographic names approved for use by United States Government agencies according to the authority of the U.S. Board on Geographic Names. The approved names appear as main entries in **boldface** type, together with the geographic coordinates that locate the feature. The approved name is followed by a description of the feature and, if known, facts concerning the discovery, mapping, and naming of the feature, the meaning of a toponym or identification of the honoree, the bestower of the name, and the basis for naming. Additional information is included for some names.

The geographic coordinates are generally given to the nearest minute and are for finding purposes only. The coordinates locate the summits of peaks and hills, the extremities of capes and points, the mouths or lower ends of glaciers and meltwater streams, and the centers or midpoints of other features. Heights are provided in meters above sea level and generally are rounded to the nearest 5 meters (1 meter = 3.28 feet). Distances are given in **nautical** miles (1 nautical mile = 1.15 statute mile or 1.85 kilometer).

Variant names

Names following the word "Not" in a main entry are forms which are not recommended for use by United States Government agencies. These unofficial forms, called variant names, include misspellings and incorrect applications, but also include linguistically correct forms of geographic names from foreign languages, such as "Hval Bukta" for Bay of Whales. Each variant name is also listed in a cross-reference entry in *italic* type (i.e. a "see" reference). A variant name may not be listed if it differs only in a foreign generic term, e.g., "Beardmore Gletscher" for Beardmore Glacier, or differs from the approved form only in capitalization, spacing, hyphenation, diacritical marks, or a plural generic. The designation of a geographic name as a variant or as an approved name is not intended to be either implicitly disparaging or prescriptive for other nations.

Word order for entries

Entries for approved names and for variant cross-references are arranged alphabetically with the specific part first, for example "Cape Byrd" is listed as Byrd, Cape; "Mount

Byrd" as Byrd, Mount; but "Byrd Glacier" as Byrd Glacier. Variant names listed after the word "Not" within a main entry appear in natural word order.

Alphabetic order

The alphabetization rules of the U.S. Board on Geographic Names are followed throughout this work. Both official and variant name entries are alphabetized letter-by-letter throughout the name to the first comma (if present), disregarding spaces, hyphens, diacritical marks, and periods (the latter in names with abbreviations which should not be expanded).

Alphabetization examples:

Sails, Bay of
Saint Johns Range
Siple, Mount
Siple Coast
Siple Island
Snow Peak
Snowplume Peak
Sør Rondane Mountains
Start, The: see Start Point
Start Point
St. Louis, Mount
Strom Glacier
Swan, Mount
Swan Glacier: see Swann Glacier
Swann Glacier
Swan Point

Diacritical marks

Diacritical marks in certain Antarctic names reflect the multinational origin of the nomenclature. They include the acute accent (´), the grave accent (`), the circumflex (ˆ), the dieresis (¨), and the macron (¯), all of which are over vowels. Others are the cedilla (ç), the circle above (â), and the tilde (ñ). The apostrophe (´) indicates contraction in names of French origin and represents the Russian letter soft sign (б) in transliterations of Russian names. The special letters slashed o (ø) and the a-e ligature (æ) are also present; the latter has been rendered as "ae" in this gazetteer. The diacritical marks should be used with both capital and lowercase letters.

A

A, Dome: see Argus, Dome 81°00'S, 77°00'E

Aagaard Glacier 66°46'S, 64°31'W

Glacier 8 mi long, which lies close E of Gould Glacier and flows in a southerly direction into Mill Inlet, on the E coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE during December 1947. Named by the FIDS for Bjarne Aagaard, Norwegian authority on Antarctic whaling and exploration. Not: Glaciär Alderete.

Aagaard Islands 65°51'S, 53°40'E

Group of small islands lying close W of Proclamation Island and Cape Batterbee. Discovered in January 1930 by BANZARE under Mawson and named for Bjarne Aagaard. Not: Bjarne Aagaard Islands, Ostrova B'yarne-Ogor.

Aagot Gr: see Expedition Rock 60°42'S, 44°44'W

Aaron, Mount 74°31'S, 64°53'W

Mountain in the NW part of the Latady Mountains in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for W.T. Aaron, electrician with the South Pole Station winter party in 1963.

Aaron Glacier 85°08'S, 90°40'W

Glacier 4 mi long, drains E from Ford Massif between Janulis Spur and Gray Spur, in the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party, 1960–61. Named for John M. Aaron, USGS geologist and member of the 1960–61 and 1961–62 field parties to the Thiel Mountains.

Abbey Nunatak 85°37'S, 134°43'W

A nunatak 2 mi SE of Penrod Nunatak, lying at the W side of Reedy Glacier just N of the mouth of Kansas Glacier. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Gordon Abbey, radioman with the Byrd Station winter party, 1957.

Abbot Ice Shelf 72°45'S, 96°00'W

An ice shelf 250 mi long and 40 mi wide, bordering Eights Coast from Cape Waite to Phrogner Point. Thurston Island lies along the N edge of the W half of this ice shelf; other sizable islands (Sherman, Carpenter, Dustin, Johnson, McNamara, Farwell and Dendtler) lie partly or wholly within it. The ice shelf was sighted by members of USAS in flights from the ship *Bear*, in February 1940, and its W portion was delineated from air photos taken by USN OpHjp, 1946–47. The full extent was mapped by USGS from USN air photos of 1966. Named by US-ACAN for R. Admiral J. Lloyd Abbot, Jr., Commanding Officer, U.S. Naval Support Force, Antarctica, February 1967 to June 1969.

Abbotsmith Glacier 53°06'S, 73°24'E

A well-defined glacier, 3 mi long, descending from the ice-covered W slopes of Big Ben to the W side of Heard Island between Walsh and Henderson Bluffs. Surveyed in 1948 by the ANARE who named it for John Abbotsmith, engineer with the party.

Abbott, Mount 74°42'S, 163°50'E

A mountain 1,020 m, which stands 3 mi NE of Cape Canwe and is the highest point in the Northern Foothills, in Victoria Land. Mapped by the Northern Party of the BrAE, 1910–13, and named for Petty Officer George P. Abbott, RN, a member of the expedition.

Abbott Island 64°06'S, 62°08'W

Island lying 1 mi W of Davis Island in the S part of Bouquet Bay, off the NE side of Brabant Island in the Palmer Archipelago. Roughly charted by the FrAE under Charcot, 1903–05. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for Maude Abbott (1869–40), American authority on congenital heart disease. Her classification of this subject is the basis of modern investigation and treatment.

Abbott Peak 77°26'S, 167°00'E

Pyramidal peak on Ross Island, on the N side of Mount Erebus, between it and Mount Bird. Charted by the BrAE under Scott, 1910–13, and named for Petty Officer George P. Abbott, RN, a member of the expedition. Not: Abbotts Peak, Demetri's Peak, Dimitri Peak.

Abbotts Peak: see Abbott Peak 77°26'S, 167°00'E

Abbs, Mount 70°35'S, 66°38'E

The most prominent peak (2,135 m) in the central part of Aramis Range, Prince Charles Mountains, situated just W of Thomson Massif. Discovered by ANARE southern party led by W.G. Bewsher in December 1956. Named by ANCA for Gordon Abbs, radio operator at Mawson Station in 1956.

A. Beck, Mount: see Beck Peak 86°05'S, 158°58'W

Abele Nunatak 76°18'S, 143°15'W

A nunatak lying 2 mi E of Hutcheson Nunataks at the head of Balchen Glacier, in Marie Byrd Land. Mapped from surveys by the USGS and U.S. Navy air photos (1959–65). Named by US-ACAN for C.A. Abele, Jr., a member of the ByrdAE (1933–35).

Abele Spur 83°13'S, 51°05'W

A rock spur that descends W from Mount Lechner toward Herring Nunataks in the Forrestal Range, Pensacola Mountains. Named by US-ACAN at the suggestion of Arthur B. Ford for Gunars Abele, civil engineer on the 1973–74 USARP-CRREL survey in this area.

Abel Nunatak 63°33'S, 57°41'W

The easternmost of two isolated nunataks on the S side of Broad Valley, Trinity Peninsula. The name arose at the time of the FIDS geological survey in 1960–61 and is in association with nearby Cain Nunatak.

Abendroth Peak 71°05'S, 62°00'W

A peak 4 mi NE of Stockton Peak on the divide between the Murrish and Gain Glaciers in Palmer Land. Named by US-ACAN for Ernst K. Abendroth, USARP biologist at Palmer Station in 1968.

Abernethy Flats 63°52'S, 57°54'W

A gravel plain cut by braided streams at the head of Brandy Bay, James Ross Island. Named by UK-APC in 1983 after Thomas Abernethy, gunner on HMS *Erebus* (Capt. James C. Ross) during exploration of these waters in 1842–43.

Ablación, Punta: see Ablation Point 70°48'S, 68°22'W

Ablation Bay: see Ablation Valley 70°48'S, 68°30'W

Ablation Lake 70°49'S, 68°26'W

A pro-glacial tidal lake in Ablation Valley, Alexander Island, with stratified saline and fresh water and depths exceeding 117 meters. The feature is dammed in the upper portion by ice that pushes into the lake from the adjacent George VI Ice Shelf. Named after the valley following BAS limnological research from 1973.

Ablation Point 70°48'S, 68°22'W

The E extremity of a hook-shaped rock ridge marking the N side of the entrance to Ablation Valley on the E coast of Alexander Island. First photographed from the air on Nov. 23, 1935, by Lincoln Ellsworth and mapped from these photos by W.L.G. Joerg. Roughly surveyed in 1936 by the BGLE and resurveyed in 1949 by the FIDS. Named by FIDS for nearby Ablation Valley. Not: Punta Ablación.

Ablation Valley 70°48'S, 68°30'W

Mainly ice-free valley on the E coast of Alexander Island, 2 mi long, which is entered immediately S of Ablation Point and opens on George VI Sound. First photographed from the air on Nov. 23, 1935, by Lincoln Ellsworth and mapped from these photos by W.L.G. Joerg. First visited and surveyed in 1936 by the BGLE, and so named by them because of the relatively small amounts of snow and ice found there. Not: Ablation Bay.

Abolina, Skala: see Abolin Rock 71°50'S, 11°16'E

Abolin Rock 71°50'S, 11°16'E

Large rock outcrop lying 1 mi W of the N end of Vindegga Spur in the Liebknecht Range, Humboldt Mountains, in Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Soviet botanist R.I. Abolin. Not: Skala Abolina.

Abrahamsen, Point 54°03'S, 37°08'W

Point which separates Lighthouse Bay and Prince Olav Harbor, the two western arms of Cook Bay, on the N coast of South Georgia. Charted by DI personnel in 1929 and probably named for Captain Abrahamsen, manager of the whaling station at Prince Olav Harbor at that time.

Abrams, Mount 75°22'S, 72°27'W

A mountain 2.5 mi E of Mount Brice, in the Behrendt Mountains, Ellsworth Land. Discovered and photographed from the air by the RARE, 1947–48, under Finn Ronne. Named by Ronne for Talbert Abrams, a noted photogrammetric engineer and instrument manufacturer, who was a supporter of RARE.

Abrigo, Islas: see Shelter Islands 65°15'S, 64°17'W

Abrigo, Punta: see Shelter Point 54°04'S, 37°01'W

Abrupt Island 67°00'S, 57°46'E

Island 0.5 mi across, lying 1.5 mi E of Lang Island, close E of the Øygarden Group and Edward VIII Bay. Mapped by Norwegian

cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37, and called Brattøy (abrupt island). The Norwegian name was translated by ANCA following a 1954 ANARE survey of the area. Not: Brattøy.

Abrupt Point 66°54'S, 56°42'E

Rocky point 3 mi SW of Patricia Islands, on the W side of Edward VIII Bay. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37, and named Brattodden (the abrupt point). The Norwegian name was translated by ANCA following a 1954 ANARE survey of the area. Not: Brattodden.

Absalom, Mount 80°24'S, 25°24'W

Southernmost and highest (1,640 m) mountain of the Herbert Mountains, in the central part of the Shackleton Range. First mapped in 1957 by the CTAE and named for Henry W.L. Absalom, member of the Scientific Committee on the CTAE, 1955–58.

Abus Valley 79°53'S, 155°05'E

An ice-free valley 3 mi SE of Turnstile Ridge at the N end of Britannia Range. Named in association with Britannia by a University of Waikato (N.Z.) geological party, 1978–79, led by M.J. Selby. Abus is a historical place name formerly used in Roman Britain.

Academy Glacier 84°15'S, 61°00'W

A major glacier in the Pensacola Mountains, draining northward between the Patuxent and Neptune Ranges to enter Foundation Ice Stream. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for the National Academy of Sciences which has played an important role in the planning of the U.S. program for Antarctica.

Acantilado, Islote: see Cliff Island 66°00'S, 65°39'W

Acarospora Peak 86°21'S, 148°28'W

A peak 1 mi NE of, and only slightly below the elevation of Mount Czegka, located at the SW end of Watson Escarpment. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by NZ-APC on suggestion of NZGSAE Scott Glacier Party, 1969–70, because the lichen *Acarospora emergens* Dodge was found on the peak.

Access Point 64°50'S, 63°47'W

Rocky point immediately SE of Biscoe Point and 2 mi NW of Cape Lancaster on the S side of Anvers Island, in the Palmer Archipelago. First charted by the FrAE under Charcot, 1903–05. Surveyed in 1955 by the FIDS and so named because there is a landing place for boats on the NW tip of the point which provides access to the inland parts of the island.

Achaean Range 64°30'S, 63°38'W

Range of mountains rising to 1,370 m in the central part of Anvers Island in the Palmer Archipelago. It is bounded on the E by Iliad Glacier and Trojan Range and on the W by Marr Ice Piedmont, and extends NW from Mount Agamemnon for 6 mi, curving NE for a further 12 mi to Mount Nestor. Surveyed by the FIDS in 1955 and named by the UK-APC for the Achaeans, one of the opposing forces of the Trojan War in Homer's *Iliad*.

Achala, Mount 62°55'S, 60°42'W

Peak rising to 680 m at the N end of Telefon Ridge, Deception Island, in the South Shetland Islands. Named by the Argentine Antarctic Expedition in 1956 after a mountain in Argentina.

Achernar, Mount 84°12'S, 160°56'E

A peak forming the NE end of MacAlpine Hills, on the S side of Law Glacier. Named by the NZGSAE (1961–62) after the star Achernar used in fixing the survey baseline.

Achernar Island 66°58'S, 57°12'E

Island 1.5 mi long, lying 1 mi W of Shaula Island in the Øygarden Group. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37, and named Utøy (the outer island). The group was first visited by an ANARE party in 1954; the island was renamed by ANCA after the star Achernar, which was used for an astrofix in the vicinity. Not: Utøy.

Achilles, Mount 64°29'S, 63°35'W

Snow-covered, steep-sided mountain, 1,280 m, which rises 4 mi SW of Mount Nestor in the Achaean Range of central Anvers Island, in the Palmer Archipelago. Surveyed by the FIDS in 1955 and named by the UK-APC for Achilles, the central figure in Homer's *Iliad*.

Achilles, Mount 71°53'S, 168°08'E

A prominent pyramidal mountain (2,880 m) rising from the divide between Fitch Glacier and Man-o-War Glacier in the Admiralty Mountains. Named by NZGSAE, 1957–58, after the former New Zealand cruiser HMNZS *Achilles*.

Achilles Heel 64°30'S, 63°38'W

Snow-covered hill, 915 m, in the center of the col between Mount Helen and Mount Achilles in the Achaean Range of Anvers Island, in the Palmer Archipelago. Surveyed by the FIDS in 1955 and so named by the UK-APC because of its position in relation to Mount Achilles.

Aciar, Mount 64°24'S, 62°33'W

A mountain rising to 1,300 m between the heads of Rush Glacier and Jenner Glacier in the Solvay Mountains, Brabant Island, Palmer Archipelago. The name "Monte Primer Teniente Aciar" appears on a 1957 Argentine hydrographic chart. Not: Monte E, Monte Ferrer, Monte Primer Teniente Aciar, Mount Ehrlich.

Ackerman Nunatak 82°41'S, 47°45'W

An isolated nunatak, 655 m, standing 6.5 mi SSE of Butler Rocks in northern Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Thomas A. Ackerman, aerographer, Ellsworth Station winter party, 1957.

Ackerman Ridge 86°34'S, 147°30'W

A prominent rock ridge forming the NW extremity of the La Gorce Mountains of the Queen Maud Mountains. Discovered and roughly mapped in December 1934 by the ByrdAE geological party under Quin Blackburn. Named by US-ACAN for Lt. Ronnie J. Ackerman, navigator of USN Squadron VX-6 during Operation Deep Freeze 1965 and 1966.

Ackroyd Point 70°46'S, 166°47'E

A point situated just E of O'Hara Glacier along the S side of the inner portion of Yule Bay, on the N coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Lt. Frederick W. Ackroyd, MC, USN, Medical Officer with the winter party at the Naval Air Facility at McMurdo Sound, 1958.

Acorn Rock 54°00'S, 38°14'W

A rock rising 20 m above sea level, 0.35 mi NW of Main Island in the Willis Islands, South Georgia. The descriptive name was applied during the survey from HMS *Owen* in 1960–61.

Acre, Punta: see Acrid Point 56°17'S, 27°36'W

Acrid Point 56°17'S, 27°36'W

A low-lying point between Stench Point and Pacific Point on the NW side of Zavodovski Island, South Sandwich Islands. The name, applied by UK-APC in 1971, refers to the acrid volcanic fumes emitted on the W side of the island. Not: Punta Acre.

Activa, Punta: see Fume Point 56°20'S, 27°33'W

Active Reef 63°23'S, 55°52'W

Isolated reef lying in the Firth of Tay, just off the N coast of Dundee Island. Discovered and named by Thomas Robertson, master of the *Active*, one of the ships of the Dundee whaling expedition of 1892–93. The *Active* ran onto this reef during a gale on Jan. 10, 1893 and lay there for 6 hours before she could be gotten off.

Active Sound 63°25'S, 56°10'W

Sound, averaging 2 mi wide, extending in an ENE direction from Antarctic Sound and joining the Firth of Tay with which it separates Joinville and Dundee Islands. Discovered in 1892–93 by Capt. Thomas Robertson of the Dundee whaling expedition. Robertson named the feature after his ship, the *Active*, first vessel to navigate the sound.

Acton, Mount 70°58'S, 63°42'W

The high, dominant peak of the west ridge of the Welch Mountains in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Cdr. William Acton, USN, Operations Officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, 1967–68, and Executive Officer, 1968–69.

Acuña, Islote: see Acuña Rocks 63°18'S, 57°56'W

Acuña Island 60°46'S, 44°37'W

Small island which lies 0.2 mi S of Point Rae, off the S coast of Laurie Island in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it after Hugo A. Acuña, pioneer Argentine meteorologist at the South Orkney station during 1904. Not: Delta Island.

Acuña Rocks 63°18'S, 57°56'W

Two rocks lying 0.4 mi W of Largo Island in the Duroch Islands, Trinity Peninsula. Named by the Chilean Antarctic Expedition, 1947–48, after Sub-Teniente Acuña, a member of the expedition. Not: Islote Acuña.

Adam, Mount 71°47'S, 168°37'E

Mountain (4,010 m) situated 2.5 mi WNW of Mount Minto in the Admiralty Mountains. Discovered in Jan. 1841 by Capt. James Clark Ross, RN, who named this feature for V. Admiral Sir Charles Adam, a senior naval lord of the Admiralty.

Adams, Cape 75°04'S, 62°20'W

Abrupt rock scarp marking the S tip of Bowman Peninsula and forming the N side of the entrance to Gardner Inlet, on the E coast of Palmer Land. Discovered by the RARE, 1947–48, under Ronne, and named by him for Lt. Charles J. Adams of the then USAAF, pilot with the expedition. Not: Cape Charles J. Adams.

Adams, Mount: see Adams Mountains 84°30'S, 166°20'E

Adams Bluff 82°09'S, 159°55'E

A bluff standing 5 mi N of Peters Peak in the Holyoake Range of the Churchill Mountains. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Paul L. Adams, USARP meteorologist at Byrd Station, 1961–62, 1962–63, and at McMurdo Station, 1963–64, 1964–65.

Adams Fjord 66°50'S, 50°30'E

A fjord about 13 mi long in the NE part of Amundsen Bay, just S of Mount Riiser-Larsen. Photographed and mapped from ANARE aircraft during 1956. An ANARE party led by Phillip Law entered the fjord by motor launch from the *Thala Dan* on Feb. 14, 1958 and made a landing at the foot of Mount Riiser-Larsen. Named by ANCA for Ian L. Adams, Officer-in-Charge at Mawson Station in 1958. Not: Bukhta Semerka, Bukhta Semyorka, Seven Bay.

Adams Glacier 66°50'S, 109°40'E

A broad channel glacier, over 20 mi long, debouching into the head of Vincennes Bay, just E of Hatch Islands. First mapped (1955) by G.D. Blodgett from aerial photographs taken by USN Operation Highjump (1947). Named by US-ACAN for John Quincy Adams, sixth President of the United States. Adams was instrumental while later serving as U.S. representative from Massachusetts in gaining congressional authorization of the USEE (1838–42) under Lt. Charles Wilkes, and perpetuating the compilation and publication of the large number of scientific reports based on the work of this expedition. Not: John Quincy Adams Glacier.

Adams Glacier 78°07'S, 163°38'E

A small glacier immediately S of Miers Glacier in Victoria Land. The heads of these two glaciers are separated by a low ridge, and the E end of this ridge is almost completely surrounded by the snouts of the two glaciers, which nearly meet in the bottom of the valley, about 1 mi above Lake Miers, into which they drain. Named by the N.Z. Northern Survey Party of the CTAE (1956–58) after Lt. (later Sir) Jameson B. Adams, second in command of the shore party of the BrAE (1907–09), who was one of the men to accompany Shackleton to within 97 mi of the South Pole.

Adams Island 66°33'S, 92°35'E

Small rocky coastal island embedded in thick bay ice most of the year, lying at the W side of McDonald Bay, about 11 mi W of Mabus Point. Discovered by the Western Base Party of the AAE, 1911–14, under Mawson, and named by him for the boatswain of the expedition ship *Aurora*.

Adams Mountains 84°30'S, 166°20'E

A small but well defined group of mountains in Queen Alexandra Range, bounded by the Beardmore, Berwick, Moody and Bingley Glaciers. Discovered by BrAE (1907–09) and named Adams Mountains for Lt. Jameson B. Adams, second in command of the expedition. The BrAE (1910–13) restricted the name to "Mount Adams" for a high peak in the group, but the original name and application are considered more apt and have been approved. Not: Mount Adams.

Adams Nunatak 71°44'S, 68°34'W

A nunatak on the S side of Neptune Glacier, 6 mi W of Cannonball Cliffs, in eastern Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation

with U.S. Geological Survey. Named by UK-APC in association with Neptune Glacier after John C. Adams (1819–92), the Cambridge mathematician who deduced the existence of the planet Neptune.

Adamson, Mount 73°55'S, 163°00'E

A peak (3,400 m) rising 6.5 mi ENE of Mount Hewson in the Deep Freeze Range, Victoria Land. Named by the northern party of NZGSAE, 1965–66, for R. Adamson, geologist with this party.

Adams Peak 81°38'S, 160°04'E

Peak, 1,540 m, on the E side of Starshot Glacier, rising 2 mi S of Heale Peak in Surveyors Range. Named by the NZGSAE (1960–61) for C.W. Adams, one of the early New Zealand surveyors, who in 1883 established the Mount Cook (Wellington) latitude which became the fundamental position for all N.Z. surveys up to 1949.

Adams Ridge 71°00'S, 162°23'E

A sharp-crested rock ridge, 4 mi long and rising to 800 m, forming a part of the W margin of Bowers Mountains just S of where Sheehan Glacier enters Rennick Glacier. Named by NZ-APC in 1983 after Chris Adams, New Zealand geologist who worked in northern Victoria Land, 1981–82.

Adams Rocks 76°14'S, 145°39'W

Two large rock outcrops that overlook the inner part of Block Bay from northward, located 7 mi W of Mount June, Phillips Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939–41) and by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for James G. Adams, builder, USN, of the Byrd Station party, 1967.

Adare, Cape 71°17'S, 170°14'E

A prominent cape of black basalt which is in visual contrast to the rest of the snow-covered coast, forming the N tip of Adare Peninsula. The cape marks the NE extremity of Victoria Land and the W side of the entrance to the Ross Sea. Discovered in Jan. 1841 by Capt. James Ross, RN, who named it for his friend Viscount Adare, M.P. for Glamorganshire.

Adare Peninsula 71°40'S, 170°30'E

A high ice-covered peninsula, 40 mi long, in the NE part of Victoria Land, extending S from Cape Adare to Cape Roget. Named by the NZ-APC for Cape Adare. Not: Cape Adare Peninsula.

Adare Saddle 71°44'S, 170°12'E

A saddle at about 900 m, situated at the junction of Adare Peninsula and the Admiralty Mountains, and at the junction of Newnes Glacier and Moubray Glacier which fall steeply from it. Named by the NZGSAE, 1957–58, in association with Adare Peninsula and Cape Adare.

Adelaida, Isla: see Adelaide Island 67°15'S, 68°30'W

Adelaide Anchorage 67°47'S, 68°57'W

An area of safe anchorage lying W of Avian Island, off the S end of Adelaide Island. It is the anchorage normally used by ships visiting Adelaide station. Charted by members of the RRS *John Biscoe* and the RN Hydrographic Survey Unit in January-March 1962.

Adelaide Island 67°15'S, 68°30'W

Large, mainly ice-covered island, 75 mi long and 20 mi wide, lying at the N side of Marguerite Bay off the W coast of Antarctic Peninsula. Discovered in 1832 by a British expedition under Biscoe, and named by him for Queen Adelaide of England. First surveyed by the FrAE, 1908–10, under Charcot. Not: Isla Adelaida, Isla Belgrano.

Adélie, Terre: see Adélie Coast 67°00'S, 139°00'E

Adélie Coast 67°00'S, 139°00'E

That portion of the coast of Wilkes Land lying between Pourquoi Pas Point, in 136°11'E, and Point Alden, in 142°02'E. Discovered in January 1840 by Capt. Jules Dumont d'Urville and named by him for his wife. Not: Adélie Land, Terre Adélie.

Adélie Land: see Adélie Coast 67°00'S, 139°00'E

Ader, Mount 64°10'S, 60°29'W

Mountain along the N side of Breguet Glacier and just SE of Mount Cornu, in northern Graham Land. Shown on an Argentine government chart in 1957. Named by the UK-APC in 1960 for Clement Ader (1841–1925), French pioneer aeronaut, probably the first man to leave the ground in a heavier-than-air machine solely as the result of an engine contained in it, on Oct. 9, 1890.

Adie Inlet 66°25'S, 62°20'W

Ice-filled inlet, 25 mi long in a NW-SE direction, lying E of Churchill Peninsula along the E coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE during 1947. Named by the FIDS for R.J. Adie, South African geologist with FIDS, 1947–49.

Adiós, Punta del: see Farewell Point 54°00'S, 38°01'W

Adit Nunatak 65°54'S, 62°48'W

A nunatak 3 mi WNW of Mount Alibi on the N side of Leppard Glacier, in Graham Land. Surveyed by FIDS in 1955. Named adit (an entrance) by UK-APC, because at the time (1957), it marked the approach to an unsurveyed inland area between Leppard and Flask Glaciers.

A. Ditte, Mount: see Ditte, Mount 67°43'S, 68°37'W

Adkins, Mount 73°03'S, 62°02'W

Mountain surmounting the N flank of Mosby Glacier just W of the mouth of Fenton Glacier in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Thomas Adkins, cook with the Palmer Station winter party in 1965.

Admiralen Peak 62°06'S, 58°30'W

Peak, 305 m, lying 0.7 mi SSW of Crépin Point at the W side of Admiralty Bay on King George Island, in the South Shetland Islands. In 1908–10 the FrAE under Charcot applied the name "Le Poing" to a feature in this area. It is not clear, however, which of four summits the name refers to and the name has been rejected. This peak was named by the UK-APC in 1960 for the *Admiralen*, the first modern floating factory ship, which first operated in Admiralty Bay in January 1906. Not: Admiration Peak, Cerro Le Poing, Pico Puño.

Admiralitäts Gebirge: see Admiralty Mountains 71°45'S, 168°30'E

Admiralty Bay 62°10'S, 58°25'W

Irregular bay, 5 mi wide at its entrance between Demay Point and Martins Head, indenting the S coast of King George Island for 10 mi in the South Shetland Islands. The name appears on a map of 1822 by Capt. George Powell, a British sealer, and is now established in international usage. Not: Bahía Lasserre, Baie de l'Amirauté.

Admiralty Inlet: see Admiralty Sound 64°20'S, 57°10'W

Admiralty Mountains 71°45'S, 168°30'E

A large group of high mountains and individually named ranges and ridges in NE Victoria Land which are bounded by the sea, and by the Dennistoun, Ebbe, and Tucker Glaciers. Discovered in Jan. 1841 by Capt. James Ross, RN, and named by him for the Lords Commissioners of the Admiralty under whose orders he served. Not: Admiralitäts Gebirge, Admiralty Range.

Admiralty Peak 54°13'S, 36°50'W

Peak, 945 m, lying E of Wilckens Peaks in the central part of South Georgia. Charted by DI in 1926–30 and named after the Board of Admiralty.

Admiralty Range: see Admiralty Mountains 71°45'S, 168°30'E

Admiralty Sound 64°20'S, 57°10'W

A sound which extends in a NE-SW direction and separates Seymour and Snow Hill Islands from James Ross Island, off the NE end of Antarctic Peninsula. The broad NE part of the sound was named Admiralty Inlet by the British expedition under Ross, who discovered it on Jan. 6, 1843. The feature was determined to be a sound rather than a bay in 1902 by the SwedAE under Nordenskjöld. Not: Admiralty Inlet, Détroit de l'Amirauté, Estrecho Bouchard, Paso Almirantazgo.

Admiration Peak: see Admiralen Peak 62°06'S, 58°30'W

Adolph Islands 66°19'S, 67°11'W

A group of small islands and rocks off NW Watkins Island, in the Biscoe Islands. Mapped from air photos by FIDASE (1956–57). Named by UK-APC for Edward F. Adolph, an American physiologist who has specialized in the reactions of the human body to cold; Professor of Physiology, University of Rochester, NY, 1948–60.

Adolph Ochs Glacier: see Ochs Glacier 76°30'S, 145°35'W

Adriasola, Cape 67°39'S, 69°11'W

Distinctive ice-cliffed cape at the SW end of Adelaide Island, 10 mi NW of Avian Island. Discovered by the FrAE, 1908–10, and named by Charcot for an acquaintance in Punta Arenas.

Advent Island: see Bauprés Rocks 64°54'S, 63°37'W

Adventure Bay: see Undine Harbor 54°02'S, 37°58'W

Adventure Harbour: see Undine Harbor 54°02'S, 37°58'W

Adventure Point 54°06'S, 37°09'W

Point lying N of Brighton Beach on the W side of Possession Bay, South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Adventure Subglacial Trench 74°00'S, 132°00'E

A subglacial trench of interior Wilkes Land, running N-S and joined by Vincennes Subglacial Basin to Aurora Subglacial Basin to the west. The feature was delineated by the SPRI-NSF-TUD airborne radio echo sounding program, 1967–79, and named after HMS *Adventure* (Cdr. Tobias Furneaux, RN), one of the two ships of the British expedition, 1772–75 (Capt. James Cook, RN).

Aeolus, Mount 77°29'S, 161°16'E

Prominent peak, over 2,000 m, between Mounts Boreas and Hercules in the Olympus Range of Victoria Land. Named by the VUWAE (1958–59) for the Greek god of the winds.

Aeolus Ridge 71°18'S, 68°34'W

A ridge trending NE-SW and rising to c. 1,300 m at the southern end of Planet Heights in eastern Alexander Island. Named in 1987 by the UK-APC after Aeolus, the Greek god of wind, in reference to prevailing weather encountered here by BAS parties.

Aerodromnaya Hill 70°47'S, 11°38'E

An isolated rock hill standing 1 mi S of the Schirmacher Hills in Queen Maud Land. The hill was discovered and first roughly mapped from air photos by the GerAE, 1938–39. It was named Gora Aerodromnaya (airdrome hill) by the SovAE, 1961, because a landing strip was established in the vicinity in connection with nearby Novolazerevskaya Station.

Aeronaut Glacier 73°16'S, 163°36'E

A glacier of low gradient, about 25 mi long, draining NE from Gair Mesa into the upper part of Aviator Glacier near Navigator Nunatak, in Victoria Land. Named by the northern party of NZGSAE, 1962–63, to commemorate the air support provided by U.S. Navy Squadron VX-6, and in association with Aviator Glacier.

Aeronáutica Argentina, Cerro: see Shelby, Mount 68°09'S, 65°50'W

Aetna Insel: see Etna Island 63°05'S, 55°09'W

Afflick, Mount 70°46'S, 66°11'E

A ridgelike mountain about 3 mi W of Mount Bunt in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named by ANCA for G.M. Afflick, weather observer at Mawson Station in 1965.

Afuera Islands 64°20'S, 61°36'W

Group of three small islands lying N of Challenger Island and just outside the S entrance point to Hughes Bay, off the W coast of Graham Land. First charted by the FrAE, 1908–10, under Charcot. The name, which appears on an Argentine government chart of 1957, is probably descriptive of the islands' location; "Afuera" means outer or outside. Not: Dodge Rocks, Penguin Island.

Agamemnon, Mount 64°38'S, 63°31'W

Snow-covered mountain, 2,575 m, marking the S limit of the Achaean Range in the central part of Anvers Island, in the Palmer Archipelago. It is part of the Mount Français massif but has a separate summit 1.5 mi W of the main peak of Mount Français. It was surveyed by the FIDS in 1944, and again in 1955. Named by the UK-APC for Agamemnon, Commander in Chief of the Achaean forces at Troy in Homer's *Iliad*.

Agassiz, Cape 68°29'S, 62°56'W

The E tip of Hollick-Kenyon Peninsula, a narrow ice-drowned spur extending E from the main mountain axis of Antarctic Peninsula between Mobiloil and Revelle Inlets. The cape is the E end of a line from Cape Jeremy dividing Graham and Palmer Lands. Discovered in December 1940 by the USAS who named it for W.L.G. Joerg, a geographer and polar specialist. At his request it was named by the US-SCAN for Louis Agassiz, an internationally famous American naturalist and geologist of Swiss origin, who first propounded the theory of continental glaciation (*Études sur les Glaciers*, Neuchâtel, 1840). Not: Cape Joerg.

Agate Peak 72°56'S, 163°47'E

A peak at the SE end of Intention Nunataks, at the SW margin of Evans Névé. So named by the NZ-APC because agate and other semi-precious stones were found here by the Southern Party of NZGSAE, 1966–67.

A. Gaudry, Sommet: see Gaudry, Mount 67°32'S, 68°37'W

Agnese, Punta: see Davey Point 61°58'S, 58°34'W

Aggradable, Caleta: see Cobblers Cove 54°16'S, 36°18'W

Aguado, Punta: see Nattriss Point 57°48'S, 26°22'W

Aguda Point 65°02'S, 63°41'W

Point forming the E side of the entrance to Hidden Bay, on the W coast of Graham Land. First charted by the BelgAE under Gerlache, 1897–99. The name appears on an Argentine government chart of 1957 and is probably descriptive; "aguda" is Spanish for sharp or sharp pointed. Not: Eclipse Point, Punta Larga, Punta Natho.

Agudo, Cerro: see Buddington Peak 62°12'S, 58°49'W

Agudo, Pico: see Sharp Peak 66°02'S, 65°18'W

Agudo, Pico: see Sharp Peak 62°32'S, 60°04'W

Águila, Caleta: see Eagle Cove 63°24'S, 57°00'W

Águila, Isla: see Eagle Island 63°40'S, 57°29'W

Aguirre Cerda, Canal: see Aguirre Passage 64°49'S, 62°51'W

Aguirre Channel: see Aguirre Passage 64°49'S, 62°51'W

Aguirre Passage 64°49'S, 62°51'W

A marine channel between Lemaire Island and Danco Coast, permitting northern access to Paradise Harbor. The feature was navigated by the ship *Belgica* (BelgAE, 1897–99) and was known to Norwegian whalers in the area from 1913. Chilean Antarctic Expeditions operated a science station on Waterboat Point (q.v.) at Aguirre Passage from 1951–73. Named by the Chilean Antarctic Expedition, 1950–51, after Don Pedro Aguirre Cerda (1879–1941), President of Chile, 1938–41. Not: Aguirre Channel, Canal Aguirre Cerda, Pasaje Marinero.

Aguirre Romero, Cabo: see Lively Point 65°52'S, 66°11'W

Aguja, Pico: see Needle Peak 62°44'S, 60°11'W

Aguja, Roca de la: see Pinnacle Rock 61°06'S, 54°47'W

Aguja del Astrolabio, Islote: see Astrolabe Needle 64°08'S, 62°36'W

Aguja del Astrolabio, Monolito: see Astrolabe Needle 64°08'S, 62°36'W

Aguja Ternyck, Monte: see Ternyck Needle 62°05'S, 58°16'W

Agurto, Islote: see Agurto Rock 63°18'S, 57°54'W

Agurto Rock 63°18'S, 57°54'W

A rock lying just NW of Silvia Rock in the Duroch Islands, Trinity Peninsula. The name appears on a Chilean government chart of 1959. Not: Isla Elena, Isla Elena Cerda de Bulnes, Islote Agurto.

Agustín, Rocas: see Austin Rocks 63°26'S, 61°04'W

Ahab, Mount 65°26'S, 62°11'W

A conspicuous mountain (925 m) that rises between the lower ends of Mapple and Melville Glaciers on the E coast of Graham Land. The mountain was roughly surveyed in 1947 by FIDS and was resurveyed in 1955. The name was repositioned following a survey by BAS in 1962. Named by UK-APC after Captain Ahab of the whaler *Pequod*, the central character in Herman Melville's *Moby Dick*.

Ahern Glacier 81°47'S, 159°10'E

A small tributary glacier flowing E from the Churchill Mountains between Mount Lindley and Mount Hoskins to enter Starshot Glacier. Named by the Holyoake, Cobham, and Queen Elizabeth Ranges Party of the NZGSAE (1964–65) for B. Ahern, a member of the party.

Ahlmann Glacier 67°52'S, 65°45'W

Southernmost of two glaciers flowing E into Seligman Inlet, on the E coast of Graham Land. The glacier was photographed from the air in 1940 by the USAS. Charted in 1947 by the FIDS, who named it for Prof. Hans Wilhelmsson Ahlmann, a Swedish glaciologist and geographer.

Ahlmann Ridge 71°50'S, 2°25'W

A broad, mainly ice-covered ridge, about 70 mi long, surmounted by scattered, low peaks. It rises between Schytt and Jutulstraumen Glaciers and extends from Borg Massif northward to Fimbul Ice Shelf in Queen Maud Land. The area was first photographed from aircraft of the GerAE (1938–39) and peaks in this vicinity were roughly plotted. The Stein Nunataks and Witte Peaks, named by the GerAE, appear to coincide with the NE part of the Ahlmann Ridge. The feature was mapped in detail from surveys and air photos by the NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59). Named for Hans Wilhelmsson Ahlmann, chairman of the Swedish committee for the NBSAE. Not: Ahlmannryggen.

Ahlmannryggen: see Ahlmann Ridge 71°50'S, 2°25'W

Ahlstad Hills 71°50'S, 5°30'E

A group of rock hills just E of Cumulus Mountain in the Mühlig-Hofmann Mountains of Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956–60), who gave it the name Ahlsthottane. Not: Ahlsthottane.

Ahlsthottane: see Ahlstad Hills 71°50'S, 5°30'E

Ahmadjian Peak 83°41'S, 168°42'E

A prominent ice-covered peak, 2,910 m, standing 4.5 mi SW of Mount Fox in Queen Alexandra Range. Named by US-ACAN for

Vernon Ahmadjian, USARP biologist at McMurdo Station, 1963–64.

Ahrnsbrak Glacier 79°48'S, 82°18'W

A glacier in the Enterprise Hills of the Heritage Range, flowing N between Sutton Peak and Shoemaker Peak to the confluent ice at the lower end of Union Glacier. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for William F. Ahrnsbrak, USARP glaciologist at Palmer Station in 1965.

Aidwich, Mount: see Aldrich, Mount 80°07'S, 158°13'E

Aiken Creek 77°36'S, 163°17'E

A glacial meltwater stream in Taylor Valley, Victoria Land, which flows N from the unnamed glacier W of Wales Glacier to Many Glaciers Pond, then W to Lake Fryxell. The feature is 4 mi long and receives some tributary flow from Wales Glacier. The name was suggested by hydrologist Diane McKnight, leader of the USGS team which made extensive studies of the hydrology and geochemistry of streams and ponds in the Lake Fryxell basin, 1987–94. Named after USGS hydrologist George R. Aiken, a member of the field team in three summer seasons, 1987–91, who assisted in establishing stream gaging stations on the streams flowing into Lake Fryxell in the 1990–91 season.

Ailsa Craig 60°47'S, 44°37'W

Precipitous island 1 mi S of Point Rae, off the S coast of Laurie Island in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for the island in the Firth of Clyde in Scotland. Not: Ailsa Craig Islet.

Ailsa Craig Islet: see Ailsa Craig 60°47'S, 44°37'W

Aim Rocks 62°42'S, 61°15'W

Rocks lying E of Cape Timblón in the middle of Morton Strait, in the South Shetland Islands. The name, given by the UK-APC in 1961, is descriptive; these rocks in line are a guide for safe passage through the southern entrance of Morton Strait.

Ainsworth Bay 67°48'S, 146°37'E

An ice-filled recession of the coastline, 5 mi wide, between Capes Bage and Webb. Discovered by the AAE (1911–14) under Douglas Mawson, and named by him for G.F. Ainsworth, a member of the expedition who served as leader and meteorologist with the AAE party on Macquarie Island during 1911–13.

Airdevronsix Icefalls 77°31'S, 160°22'E

A line of icefalls at the head of Wright Upper Glacier, in Victoria Land. Named by USN OpDFrz (1956–57) for U.S. Navy Air Development Squadron Six, which had been formed to provide air support for the Deep Freeze operations and which had also carried out many important Antarctic exploratory flights.

Airdrop Peak 83°45'S, 172°45'E

A twin-peaked mountain (890 m) at the N end of Commonwealth Range. It is the first prominent feature in Ebony Ridge when approached from the northwest. When N.Z. surveyors were making observations from the higher of the two peaks on Dec. 11, 1959, an R4D aircraft of U.S. Navy Squadron VX-6 flew overhead to drop a spare radio to the expedition whose original one had broken down. So named because of this incident by the N.Z. Alpine Club Antarctic Expedition, 1959–60.

Airy Glacier 69°13'S, 66°20'W

A glacier 20 mi long and 6 mi wide, flowing W to the NE portion of Forster Ice Piedmont, near the W coast of the Antarctic Peninsula. First roughly surveyed by BGLE, 1936–37; photographed from the air by RARE, 1947; and surveyed by FIDS, 1958. Named by UK-APC for Sir George Biddell Airy, British Astronomer Royal (1835–81), who in 1839 introduced a method of correcting magnetic compasses for deviation.

Aitcho Islands 62°24'S, 59°47'W

Group of small islands lying between Table Island and Dee Island in the N entrance to English Strait, South Shetland Islands. Charted and named in 1935 by DI after the Admiralty Hydrographic Office. Other features in this vicinity were named after members of the Hydrographic Office staff.

Aitken Cove 60°45'S, 44°32'W

Cove which lies immediately NE of Cape Whitson, along the S coast of Laurie Island in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for A.N.G. Aitken, solicitor to the expedition.

Aitkenhead Glacier 63°57'S, 58°44'W

Glacier about 10 mi long, flowing ESE from the Detroit Plateau, Graham Land, to Prince Gustav Channel close N of Alectoria Island. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Neil Aitkenhead, FIDS geologist at Hope Bay (1959–60).

Aitken Nunatak 85°42'S, 173°49'E

A small rock nunatak, 2,785 m, standing 3 mi SW of Mount Bumstead in the Grosvenor Mountains. Named by US-ACAN for William M. Aitken, USARP aurora scientist at South Pole Station, 1962.

Ajax, Mount 71°48'S, 168°27'E

A mountain (3,770 m) rising 1 mi WSW of Mount Royalist in the Admiralty Mountains. Named by the NZGSAE, 1957–58, after HMNZS *Ajax*. The mountain is one of several in this area named for New Zealand ships.

Ajax Icefall 62°04'S, 58°23'W

Icefall between Stenhouse Bluff and Ullmann Spur at the head of Visca Anchorage, King George Island, in the South Shetland Islands. Charted by the FrAE under Charcot in 1908–10. Named by the UK-APC in 1960 for HMS *Ajax*, which assisted in the search for a boat crew from the *Discovery II*, missing on King George Island in January 1937.

Akar Peaks: see *Aker Peaks* 66°37'S, 55°13'E

Akarui, Cape 68°29'S, 41°23'E

A rocky cape 11 mi NE of Cape Omega on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, and named Akarui-misaki (bright cape). Not: Cape Miho.

Akebono Glacier 68°07'S, 42°53'E

Glacier flowing to the coast between Cape Hinode and Akebono Rock in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, who applied the name.

Akebono Rock 68°04'S, 42°55'E

A substantial area of exposed rock just E of the mouth of Akebono Glacier on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, who also gave the name.

Åkerlundh Nunatak 65°04'S, 60°10'W

Nunatak which lies 2 mi NW of Donald Nunatak between Bruce and Murdoch Nunataks in the Seal Nunataks group, off the E coast of Antarctic Peninsula. Charted in 1947 by the FIDS, who named it for Gustaf Åkerlundh, a member of the SwedAE, 1901–04.

Aker Peaks 66°37'S, 55°13'E

A series of mainly snow-covered peaks, the highest 1,800 m, extending 9 mi in a NW-SE direction. They rise 4 mi W of Nicholas Range and 30 mi WNW of Edward VIII Bay. Discovered on Jan. 14, 1931 by a Norwegian whaling expedition under O. Borchgrevink, who named them after the farm of Director Svend Foyn Brunn of the Antarctic Whaling Co. at Tønsberg. Not: Akar Peaks, Aker Range.

Aker Range: see *Aker Peaks* 66°37'S, 55°13'E

Akkuratnaya Cove 70°45'S, 11°48'E

A small cove 3 mi ESE of Nadezhdy Island, indenting the N side of the Schirmacher Hills, Queen Maud Land. First photographed from the air by the GerAE, 1938–39. Mapped by the SovAE in 1961 and named Bukhta Akkuratnaya (accurate cove).

Alamein Range 72°05'S, 163°30'E

A range lying W of Canham Glacier, in the Freyberg Mountains. Named in association with Lord Bernard Freyberg and the Second New Zealand Expeditionary Force by the Northern Party of NZGSAE, 1963–64.

Alamode Island 68°43'S, 67°32'W

Largest and southeasternmost of the Terra Firma Islands, with steep rocky cliffs surmounted by a rock and snow cone rising to 320 m, lying in Marguerite Bay off the W coast of Graham Land. First visited and surveyed by the BGLE under Rymill in 1936. So named by the FIDS, following a 1948 resurvey, for its resemblance to some form of confection served with ice cream on it. Not: Terra Firma Island.

A. Lancaster, Kap: see Lancaster, Cape 64°51'S, 63°44'W

Alan Peak 72°39'S, 0°11'E

A peak at the W side of the mouth of Reece Valley, in the S part of the Sverdrup Mountains in Queen Maud Land. Plotted from air photos by the GerAE (1938–39). Remapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59). Named for Alan Reece, geologist with the NBSAE (1949–52) and earlier with the FIDS. Not: Alanpiggen.

Alanpiggen: see Alan Peak 72°39'S, 0°11'E

Alan Thomson, Mount: see Allan Thomson, Mount 76°57'S, 161°43'E

Alasheev Bight: see Alasheyev Bight 67°30'S, 45°40'E

Alasheyev Bight 67°30'S, 45°40'E

A bight in the western part of the coast of Enderby Land. Photographed from the air by ANARE in 1956. Plotted in 1957 by

the Soviet expedition and named for D.A. Alasheyev, Russian hydrographer. Not: Alasheev Bight, Alasheyev's Bay.

Alasheyev's Bay: see Alasheyev Bight 67°30'S, 45°40'E

Alaska Canyon 86°00'S, 136°33'W

Deeply incised canyon in the N face of Michigan Plateau. Mapped by USGS from ground surveys and USN air photos, 1960–63. Named by US-ACAN for the University of Alaska, which sent researchers to Antarctica.

Alatna Valley 76°53'S, 161°10'E

An ice-free valley lying 4 mi N of Mount Gran and trending ENE for about 10 mi along the SE side of the Convoy Range. Parker Calkin, U.S. geologist, made stratigraphic studies in the valley during the 1960–61 season. Named by US-ACAN in 1963 for the USNS *Alatna* which participated in Operation Deep Freeze 1958–59 and 1959–60, and in keeping with other ship names in the Convoy Range.

Albanus Glacier 85°52'S, 151°00'W

A glacier, 25 mi long, flowing W along the S side of Tapley Mountains to enter Scott Glacier just N of Mount Zanuck, in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for Albanus Phillips, Jr., manufacturer of Cambridge, MD, a patron of the ByrdAE of 1928–30 and 1933–35. Not: Phillips Glacier.

Albanus Phillips Mountains: see Phillips Mountains 76°16'S, 145°00'W

Al'batros, Ostrov: see Diomedea Island 62°12'S, 58°57'W

Al'batros, Ozero: see Petrel Lake 62°13'S, 58°58'W

Albatros Insel: see Albatross Island 54°01'S, 37°20'W

Albatross Crest 54°30'S, 37°02'W

A tussock-covered ridge in the eastern arm of Annenkov Island, South Georgia. Named by the UK-APC after the Wandering Albatross (*Diomedea exulans*) which nests here.

Albatross Island 54°01'S, 37°20'W

Island 2 mi SE of Cape Buller, lying in the Bay of Isles, South Georgia. Charted in 1912–13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*, who gave this name because he observed albatrosses there. Not: Albatros Insel.

Albatross Island: see Diomedea Island 62°12'S, 58°57'W

Alberich Glacier 77°36'S, 161°36'E

A small glacier that drains west from Junction Knob toward the east flank of Sykes Glacier, in the Asgard Range, Victoria Land. It is one in a group of features in the range named by NZ-APC mainly from Norse mythology. In German legend, Alberich is the all-powerful king of the dwarfs and chief of the Nibelungen.

Albert de Monaco, Cape: see Monaco, Cape 64°43'S, 64°18'W

Alberti, Isla: see Epsilon Island 64°19'S, 63°00'W

Albert Lancaster, Cap: see Lancaster, Cape 64°51'S, 63°44'W

Albert Markham, Mount 80°23'S, 158°14'E

A striking flat-topped mountain, 3,205 m, standing midway between Mount Nares and Pyramid Mountain in the Churchill Mountains. Discovered by the BrNAE (1901–04) and named for Admiral Sir Albert Markham, a member of the Ship Committee for the expedition.

Alberto, Isla: see Sinclair Island 64°55'S, 63°53'W

Alberto Obrecht, Punta: see Obrecht Pyramid 68°09'S, 65°32'W

Alberts, Mount 73°02'S, 167°52'E

A pointed, almost completely snow-covered mountain (2,320 m) situated 11 mi E of Mount Phillips on the E margin of Malta Plateau, Victoria Land. The mountain stands immediately S of the terminus of Line Glacier and overlooks the W margin of Ross Sea. Named by the New Zealand Geographic Board in 1966 after Fred G. Alberts, Geographer, U.S. Department of the Interior (later with the Defense Mapping Agency Topographic Center), who served as Secretary to the Advisory Committee on Antarctic Names, U.S. Board on Geographic Names, 1949–80, and was compiler and editor of this Gazetteer.

Alberts Glacier 66°52'S, 64°53'W

A heavily crevassed glacier c. 8 mi long, flowing E from Avery Plateau, Graham Land, and entering Mill Inlet between Balch Glacier and Southard Promontory. The glacier was photographed from the air by the U.S. Navy in 1968. It was delineated from these photographs by DOS, 1980, and positioned from surveys by FIDS, 1947–57. In association with the names of Antarctic historians in the area, named by UK-APC after Fred G. Alberts, American toponymist; Secretary, US-ACAN, 1949–80.

Albion, Mount 70°17'S, 65°39'E

Mountain 2 mi SSE of Mount O'Shea in the S part of the Athos Range, Prince Charles Mountains. Discovered by an ANARE southern party led by W.G. Bewsher (1956–57) and named for Patrick Albion, radio operator at Mawson Station in 1956.

Albone Glacier 64°13'S, 59°42'W

A deeply entrenched narrow glacier on the E side of Wolseley Buttress flowing southward from Detroit Plateau, Graham Land. Mapped by FIDS from surveys (1960–61). Named by UK-APC for Dan Albone, English designer of the Ivel tractor, the first successful tractor with an internal combustion engine.

Albornoz, Punta: see Deacon, Cape 73°14'S, 59°50'W

Al'bov Rocks 66°28'S, 126°45'E

A cluster of rock outcrops close S of Cape Spieden on the W side of Porpoise Bay. Charted by the SovAE (1958) and named for Nikolay M. Al'bov (1806–99), Russian botanical geographer, explorer of Tierra del Fuego.

Albrecht Penck Glacier 76°40'S, 162°20'E

A glacier between the Fry Glacier and Evans Piedmont Glacier, draining NE toward Tripp Bay on the coast of Victoria Land. First charted by the BrAE (1907–09) which named this feature for Albrecht Penck, Director of the Institute of Oceanography and of the Geographical Institute in Berlin. Not: Penck Glacier.

Albright, Mount 82°49'S, 155°06'E

Mountain surmounting the S end of the Endurance Cliffs in the Geologists Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for John C. Albright, USARP geologist on the South Pole-Queen Maud Land Traverse, 1964–65.

Alcock Island 64°14'S, 61°08'W

Island lying W of Charles Point in Hughes Bay, off the W coast of Graham Land. The name Penguin Island was used for the feature by whalers operating in the area in 1922. Since this name has not been used on published maps and is a duplication of an earlier name, it has been rejected and a new name substituted. Alcock Island is for Sir John W. Alcock (1892–1919), who, with Sir A. Whitten-Brown, made the first nonstop trans-Atlantic flight on June 14–15, 1919. Not: Isla Barros, Isla Telegrafista Arriagada, Islote Arriagada.

Alcyone Cone 72°42'S, 165°33'E

An extinct volcanic cone near the center of The Pleiades, at the W side of the head of Mariner Glacier in Victoria Land. Named by a VUWAE field party to Evans Névé, 1971–72, after Alcyone, the brightest star in the Pleiades constellation. Not: Aleyone Cone.

Aldaz, Mount 76°03'S, 124°25'W

A projecting-type mountain (2,520 m) that barely protrudes from the ice-covered Usas Escarpment, 22 mi ESE of Mount Galla, in Marie Byrd Land. The mountain is mostly ice covered, but has notable rock outcropping along its northern spur. Surveyed by USGS on the Executive Committee Range Traverse of 1959. Named by US-ACAN for Luis Aldaz, Meteorologist and Scientific Leader at Byrd Station, 1960.

Aldea, Islas: see Büdel Islands 65°47'S, 65°38'W

Aldea Island 69°13'S, 68°30'W

The central of the three Bugge Islands (q.v.), off Wordie Ice Shelf, Fallières Coast, Antarctic Peninsula. The island was named "Isla Aldea" by the Chilean Antarctic Expedition, 1947, probably after Sargento Juan de Dios Aldea, of the Chilean Navy, one of the heroes of the naval battle of Iquique, May 21, 1879. Not: Isla Sargento Aldea.

Aldebaran Rock 70°50'S, 66°41'W

A particularly conspicuous nunatak of bright red rock, located near the head of Bertram Glacier and 5 mi NE of Pegasus Mountains in western Palmer Land. Named by UK-APC after Aldebaran, the brightest star in the constellation of Taurus.

Alden, Point 66°48'S, 142°02'E

An ice-covered point with rock exposures along the seaward side. The point marks the W side of the entrance to Commonwealth Bay and the division between Adélie Coast and George V Coast. Discovered on Jan. 30, 1840 by the USEE under Lt. Charles Wilkes, and named by him for Lt. James Alden of the expedition's flagship *Vincennes*.

Alderdice Peak 68°12'S, 49°35'E

A peak 6 mi SE of Mount Underwood in the eastern part of the Nye Mountains. Plotted from air photos taken by an ANARE aircraft in 1959. Named by ANCA for W. Alderdice, weather observer at Wilkes Station, 1959.

Alderete, Glaciar: see Aagaard Glacier 66°46'S, 64°31'W

Aldrich, Mount 80°07'S, 158°13'E

A massive, somewhat flat-topped mountain standing at the E side of Ragotzkie Glacier in Britannia Range. Discovered by the BrNAE (1901–04) and named for Admiral Pelham Aldrich, who gave assistance to Scott in preparing the expedition. Not: Mount Aidwich, Mount Aldwich.

Aldridge Peak 72°27'S, 167°24'E

A peak (2,290 m) on the ridge between Hearfield and Trafalgar Glaciers in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for James A. Aldridge, aviation machinist's mate with USN Squadron VX-6 at McMurdo Station, 1967.

Aldwich, Mount: see Aldrich, Mount 80°07'S, 158°13'E

Alectoria Island 63°59'S, 58°37'W

A low, nearly ice-free island less than 1 mi long. It lies in Prince Gustav Channel, about 0.5 mi off the terminus of Aitkenhead Glacier, Trinity Peninsula. Surveyed in 1945 by the FIDS, who named it after the lichen *Alectoria* which was predominant on the island at the time.

Alejandra, Cabo: see Alexandra, Cape 54°00'S, 38°00'W

Alejandro I, Isla: see Alexander Island 71°00'S, 70°00'W

Aleksandra Smirnova, Pik: see Smirnov Peak 71°43'S, 10°38'E

Alekseyev, Mount 67°28'S, 50°40'E

A mountain standing 6 mi NE of McNaughton Ridges in the Scott Mountains of Enderby Land. Named by the SovAE, 1961–62, for A.D. Alekseyev, Soviet polar pilot.

Alencar Peak 65°24'S, 63°53'W

Peak, 1,555 m, at the head of Lind Glacier, standing 6 mi E of Cape Pérez on the W side of Graham Land. Discovered by the FrAE, 1908–10, under Charcot and named by him for Admiral Alexandrino de Alencar, then Minister of Marine of Brazil. Not: Mount De Alencar, Sommet De Alencar.

Alerta, Roca: see Alert Rock 54°15'S, 36°22'W

Alert Channel 54°10'S, 36°42'W

A small channel between Whaler Channel and Bar Rocks, and leading to the head of Husvik Harbor in Stromness Bay, South Georgia. Charted by DI personnel in 1928 and named after *Alert*, the motorboat used by the DI survey party.

Alert Cove 54°11'S, 36°42'W

Small cove lying S of Kanin Point in Husvik Harbor, Stromness Bay, on the N coast of South Georgia. Charted by DI personnel in 1928 and is named after *Alert*, the motorboat used by the DI survey party.

Alert Point 54°05'S, 37°09'W

Point lying at the N side of the mouth of Purvis Glacier, Possession Bay, on the N coast of South Georgia. Charted by DI in 1928–29 and named after the DI survey motorboat *Alert*.

Alert Rock 54°15'S, 36°22'W

Submerged rock marked by breakers, lying 1.5 mi ESE of Barff Point, which marks the E side of the entrance to Cumberland Bay, South Georgia. Charted in 1929 by DI personnel, who named it

after the *Alert*, a small motor launch used during the survey. Not: Roca Alerta.

Alexander, Cape 66°44'S, 62°37'W

Cape which forms the S end of Churchill Peninsula and the E side of the entrance to Cabinet Inlet, on the E coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE in December 1947. Named by the FIDS for Rt. Hon. Albert V. Alexander, M.P., First Lord of the Admiralty. Not: Cape Foyn.

Alexander, Cape: see Alexander, Mount 63°18'S, 55°48'W

Alexander, Mount 63°18'S, 55°48'W

Mountain with several summits, the highest 595 m, forming the rocky peninsula separating Gibson and Haddon Bays, on the S side of Joinville Island. The cliff marking the extremity of the peninsula was discovered and named Cape Alexander on Jan. 8, 1893 by Thomas Robertson, master of the ship *Active*, one of the Dundee whalers. The name was amended to Mount Alexander by the UK-APC in 1956 following a survey by the FIDS in 1953–54, the mountain summits of the peninsula being considered more suitable to name. Not: Cape Alexander.

Alexander Hill 77°17'S, 166°25'E

Hill, 220 m, with a prominent seaward cliff face, lying S of Harrison Stream and Cinder Hill on the lower ice-free W slopes of Mount Bird, Ross Island. Mapped by the NZGSAE, 1958–59, and named by the NZ-APC for B.N. Alexander, a surveyor with the expedition.

Alexander Humboldt Mountains: see Humboldt Mountains 71°45'S, 11°30'E

Alexander I Island: see Alexander Island 71°00'S, 70°00'W

Alexander I Land: see Alexander Island 71°00'S, 70°00'W

Alexander Island 71°00'S, 70°00'W

Large island lying W of the base of Antarctic Peninsula, from which it is separated by Marguerite Bay and George VI Sound. It is about 240 mi long in a N-S direction, 50 mi wide in the N, and 150 mi wide in the south. Discovered in 1821 by a Russian expedition under Bellingshausen, who named it Alexander I Land for the reigning Tsar. Its insular nature was proven in December 1940, by a sledge party under Finn Ronne of the USAS. Not: Alexander I Island, Alexander I Land, Alexander Land, Alexander The First Island, Isla Alejandro I.

Alexander Land: see Alexander Island 71°00'S, 70°00'W

Alexander McKay Cliffs: see McKay Cliffs 82°19'S, 156°00'E

Alexander Nunatak: see Alexander Nunataks 66°30'S, 110°39'E

Alexander Nunataks 66°30'S, 110°39'E

Two coastal nunataks at the S limit of the Windmill Islands, standing on the shore of Penney Bay 0.4 mi E of the base of Browning Peninsula. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Photographer's Mate H.N. Alexander, member of one of the two USN OpWml photographic units which obtained air and ground photos of the area in January 1948. Not: Alexander Nunatak.

Alexander Peak 77°28'S, 146°48'W

A peak in the N end of the Haines Mountains, in the Ford Ranges, Marie Byrd Land. Probably first seen on aerial flights from Little America base by the ByrdAE (1928–30). Named by US-ACAN for C.D. Alexander, a member of the ByrdAE (1933–35).

Alexander The First Island: see Alexander Island 71°00'S, 70°00'W

Alexander v. Humboldt-Gebirge: see Humboldt Mountains 71°45'S, 11°30'E

Alexander Wetmore Glacier: see Wetmore Glacier 74°38'S, 63°35'W

Alexandra, Cape 54°00'S, 38°00'W

Cape which forms the NW extremity of South Georgia. It was named Cape North in 1775 by a British expedition under Cook, but this name has since become established for a cape 10 mi ENE which forms the northernmost point of South Georgia. The name Cape Alexandra dates back to about 1912 and commemorates Queen Alexandra (1844–1925), Consort of King Edward VII of England. Not: Cabo Alejandra, Cabo Teniente Modolo, Cape North.

Alexandra, Cape 67°45'S, 68°36'W

Cape forming the SE extremity of Adelaide Island. Discovered in 1909 by the FrAE under Charcot, and named by him for Alexandra, then Queen of England. Not: Punta Yervas Buena.

Alexandra Mountains 77°25'S, 153°30'W

A group of low, separated mountains in the N portion of Edward VII Peninsula, just SW of Sulzberger Bay in Marie Byrd Land. Discovered in January-February 1902 by the BrNAE during an exploratory cruise of the *Discovery* along the Ross Ice Shelf. Named for Alexandra, then Queen of England. Not: Alexandria Mountains.

Alexandra Mountains: see Queen Alexandra Range 84°00'S, 168°00'E

Alexandra Range: see Queen Alexandra Range 84°00'S, 168°00'E

Alexandria Mountains: see Alexandra Mountains 77°25'S, 153°30'W

Alexis Carrel, Ile: see Carrel Island 66°40'S, 140°01'E

Aleyone Cone: see Alcyone Cone 72°42'S, 165°33'E

Alf, Mount 77°55'S, 86°07'W

Mountain rising over 3,200 m between Mount Sharp and Mount Dalrymple in the N part of the Sentinel Range. Mapped by the Marie Byrd Land Traverse party, 1957–58. Named by the US-ACAN for Edward A. Alf, meteorologist, member of the 1957 wintering party at Byrd Station.

Alfa, Isla: see Alpha Island 64°19'S, 63°00'W

Alfaro, Punta: see Hospital Point 62°32'S, 59°47'W

Alferez Maveroff, Isla: see Pickwick Island 65°29'S, 65°38'W

Alfiler, Punta: see Renier Point 62°37'S, 59°48'W

Alfons Island: see Kolven Island 67°33'S, 61°29'E

Alford, Mount 71°55'S, 161°37'E

A flat-topped, ice-free mountain (1,480 m) at the S side of Boggs Valley in the Helliwell Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Montague Alford, USARP geologist at McMurdo Station, 1967–68.

Alfred, Mount 70°18'S, 69°14'W

Ice-capped mountain, more than 2,000 m, 5.5 mi inland from George VI Sound and 8 mi S of Mount Athelstan in the Douglas Range of Alexander Island. First photographed from the air on Nov. 23, 1935, by Lincoln Ellsworth and mapped from these photos by W.L.G. Joerg. Its E face was roughly surveyed in 1936 by the BGLE and resurveyed in 1948 and 1949 by the FIDS, who named it for Alfred, Saxon king of England, 871–899. The W face of the mountain was mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960.

Alga, Bahía: see Kelp Bay 54°27'S, 36°07'W

Algae Inlet: see Algae Lake 66°18'S, 100°48'E

Algae Lake 66°18'S, 100°48'E

Narrow, winding lake, 9 mi long and from 0.2 to 1 mi wide, extending in an E-W direction in the ice-free Bunge Hills. First mapped from air photos taken by USN OpHjp, 1946–47, and named Algae Inlet by the US-ACAN because of the algae reported by OpHjp personnel, which cause varying tints to the meltwater ponds overlying the Bunge Hills and to the saline inlets and channels in the Highjump Archipelago area close to the north. Subsequent Soviet expeditions (1956–57) found this “inlet” to be a lake. Not: Algae Inlet, Ozero Figurnoye.

Algal Lake 77°38'S, 166°25'E

A small, roughly circular meltwater lake about midway between Skua Lake and Island Lake on Cape Evans, Ross Island. Named by USARP biologists David T. Mason, Charles R. Goldman and Brian J.B. Wood, Jr., who studied the lake in the 1961–62 and 1962–63 seasons. The name derives from the striking mat of blue-green algal remains around the leeward edge of the lake.

Algie Glacier 82°08'S, 162°05'E

Glacier about 25 mi long, flowing SE into Nimrod Glacier just W of Nash Range. Named by the N.Z. Ross Sea Committee for the Hon. R.M. Algie who, as Minister in Charge of Scientific and Industrial Research, gave his strong support to the N.Z. party of the CTAE, 1956–58.

Alibi, Mount 65°55'S, 62°40'W

A conspicuous mountain 3 mi ESE of Adit Nunatak on the N side of Leppard Glacier, in Graham Land. The mountain was discovered and photographed from the air by Sir Hubert Wilkins on Dec. 20, 1928, and named “Mount Napier Birks.” The feature was not reidentified by the FIDS in its 1947 survey of the area, and the UK-APC subsequently gave the name Mount Birks (q.v.) to a mountain 40 mi northeastward. Following a FIDS survey in 1955, the mountain named by Wilkins was definitely identified as the feature now described. Because of past confusion as to its identity, the UK-APC has renamed it Mount Alibi; “Alibi” meaning “proof of presence elsewhere.” Not: Mount Napier Birks.

Alice, Isla: see Lecointe Island 64°16'S, 62°03'W

Alice Creek 64°50'S, 63°29'W

Cove forming the southernmost portion of Port Lockroy, Wiencke Island, in the Palmer Archipelago. Discovered by the FrAE, 1903–05, under Charcot, and named by him for the wife of Édouard Lockroy, Vice President of the French Chamber of Deputies who assisted Charcot in obtaining government support for the expedition. Not: Caleta Alicia.

Alice Gade, Mount 85°45'S, 163°40'W

A mainly ice-covered mountain over 3,400 m, marking the northeast extremity of the Rawson Plateau in the Queen Maud Mountains. Discovered in November 1911 by Capt. Roald Amundsen, and named by him for one of the daughters of the Norwegian minister to Brazil, a strong supporter of Amundsen.

Alice Glacier 83°58'S, 170°00'E

A tributary glacier, 13 mi long, flowing E from the Queen Alexandra Range to enter Beardmore Glacier at Sirohi Point. Discovered by BrAE (1907–09) and named for the mother of Dr. E.S. Marshall, a member of Shackleton's South Polar Party.

Alice Wedel-Jarlsberg, Mount: see Wedel-Jarlsberg, Mount 85°39'S, 165°08'W

Alicia, Caleta: see Alice Creek 64°50'S, 63°29'W

A. Lindström, Mount: see Lindström Peak 86°18'S, 160°10'W

Allaire Peak 84°53'S, 170°54'W

A rock peak (1,900 m) standing 3 mi NW of Mount Hall, between Gough and Le Couteur Glaciers in the Prince Olav Mountains. Named by US-ACAN for Capt. C.J. Allaire, USA, on the Staff of the Commander, U.S. Naval Support Force, Antarctica, during USN OpDFrz 1963.

Allan, Mount 69°59'S, 67°45'W

The largest massif (1,600 m) in the Traverse Mountains (q.v.), isolated to the N and S by low passes, on the Rymill Coast, Palmer Land. Named in 1977 by the UK-APC after Thomas J. Allan (1940–66), BAS radio operator at Stonington Island, 1965–66, who lost his life while sledging with J.F. Noel near Tragic Corner, Fallières Coast, in May 1966.

Allan Hills 76°43'S, 159°40'E

A group of hills, mainly ice free and about 12 mi long, lying just NW of Coombs Hills near the heads of Mawson and Mackay Glaciers. Mapped by the N.Z. party (1957–58) of the CTAE and named for Prof. R.S. Allan of the University of Canterbury, New Zealand. Not: Allan Nunatak.

Allan McDonald Glacier: see McDonald Ice Rumples 75°28'S, 26°18'W

Allan Nunatak: see Allan Hills 76°43'S, 159°40'E

Allan Thomson, Mount 76°57'S, 161°43'E

Conspicuous mountain surmounted by a dark peak over 1,400 m which stands at the N side of Mackay Glacier, about 3 mi W of the mouth of Cleveland Glacier in Victoria Land. Charted and named by the BrAE (1910–13) for J. Allan Thomson, British geologist who assisted in writing the scientific reports of the BrAE, 1907–09. Not: Mount Alan Thomson.

Allardyce Harbor: see Rosita Harbor 54°01'S, 37°27'W

Allardyce Range 54°25'S, 36°33'W

Mountain range attaining a maximum elevation of 2,935 m in Mount Paget, rising S of Cumberland Bay and dominating the central part of South Georgia. Although not shown on the charts of South Georgia by Cook in 1775 or Bellingshausen in 1819, peaks of this range were doubtless seen by those explorers. Named in about 1915, for Sir William L. Allardyce, Gov. of the Falkland Islands, 1904–14. Not: Cadena San Telmo.

All Black Peak 71°48'S, 163°57'E

The main peak in Crown Hills at the SE end of Lanterman Range, rising to 2,025 m on the E side of the head of Johnstone Glacier in the Bowers Mountains. Descriptively named by the NZ-APC in 1983 on the suggestion of geologist M.G. Laird.

All-Blacks Nunataks 81°29'S, 155°45'E

A group of conspicuous nunataks lying midway between Wallabies Nunataks and Wilhoite Nunataks at the SE margin of the Byrd Névé. Named by the NZGSAE (1960–61) for the well known New Zealand rugby team.

Allegheny Mountains 77°15'S, 143°18'W

A small group of mountains 10 mi W of the Clark Mountains in the Ford Ranges of Marie Byrd Land. Discovered on aerial flights made in 1934 by the ByrdAE, and mapped from aerial flights and ground surveys made by the USAS (1939–41). Named by the USAS for Allegheny College, Meadville, PA, alma mater of Paul Siple, leader of the USAS West Base.

Allegro Valley 71°18'S, 160°10'E

A steep-sided, glacier-filled valley indenting the E side of Daniels Range just N of White Spur, in the Usarp Mountains. The northern party of the NZGSAE, 1963–64, experienced fine weather here after several days of unpleasant travel; therefore, members named it after Milton's poem "L'Allegro" in antithesis with Penseroso Bluff, 14 mi to the north.

Allemand Peak 78°24'S, 158°36'E

Peak lying 1.5 miles S of Moody Peak in the N part of the Boomerang Range. Named by US-ACAN in 1964 for Lawrence J. Allemand, construction driver at Little America V in 1958.

Allen, Cape 83°33'S, 171°00'E

A bare rock point located 3 mi SW of Mount Hope, near the mouth of Beardmore Glacier. The point forms the W side of the S approach to The Gateway. Discovered by the BrAE (1907–09) and named for Sir Robert Allen of the Franklin Relief Expedition to the Arctic.

Allen, Monte: see Oceanite, Mount 58°29'S, 26°15'W

Allen, Mount 77°24'S, 162°32'E

Peak, 1,400 m, standing between Clark Glacier and the head of Greenwood Valley in Victoria Land. Charted by the VUWAE, 1959–60, and named for A.D. Allen, one of the party's geologists.

Allen, Mount 78°43'S, 84°56'W

Mountain (3,430 m) located 5 mi SE of Mount Craddock in the Sentinel Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Lt. Forrest M. Allen, USNR, co-pilot on reconnaissance flights from Byrd Station, 1957–58.

Allen Bay 54°11'S, 36°32'W

Semi-circular bay 0.5 mi wide, lying 1 mi WNW of Larsen Point in the N part of Cumberland West Bay, South Georgia. Charted in 1926 by DI personnel on the *Discovery* and named by them, probably for H.T. Allen, member of the Discovery Committee at that time.

Allen Knoll 63°40'S, 58°35'W

A steep-sided snow dome rising from a flat snowfield 2 mi NW of the head of Russell West Glacier, Trinity Peninsula. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Keith Allen, FIDS radio operator at Hope Bay in 1959 and 1960.

Allen Peak 77°34'S, 86°51'W

Peak, 1,880 m, standing 5 mi W of Mount Wyatt Earp and forming the N extremity of the main ridge of the Sentinel Range. Discovered by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN after Robert J. Allen, USGS cartographer and Antarctic specialist, 1950–79; consultant to USGS Branch of International Activities from 1980; a member of the Branch of Special Maps who helped prepare the 1962 map of this range.

Allen Point 58°29'S, 26°15'W

The SE point of Montagu Island, in the South Sandwich Islands. Montagu Island was discovered in 1775 by a British expedition under Cook, but the point was first mapped by Bellingshausen in 1819–20. The point was surveyed in 1930 by DI personnel on the *Discovery II* and named for H.T. Allen, member of the Discovery Committee.

Allen Young, Mount 83°27'S, 166°52'E

A prominent pyramidal mountain, 2,755 m, standing just S of Fegley Glacier and W of Lennox-King Glacier in the Holland Range. Discovered by the BrAE (1907–09) and named for Sir Allen Young, polar explorer who led the successful search for Benjamin Leigh Smith in the Arctic in 1882.

Alley Spur 82°32'S, 51°47'W

A rock spur on N side of Dufek Massif, just S of Sapp Rocks, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Capt. Dalton E. Alley, USAF, navigator, a member of the Electronic Test Unit in the Pensacola Mountains, 1957–58.

Alligator Island 66°34'S, 97°40'E

Steep, rocky island 0.5 mi long, lying in the Bay of Winds 4 mi W of Jones Rocks. Discovered by the Western Base Party of the AAE under Mawson, 1911–14, who so named it because of its shape. Not: Alligator Nunatak, Skala Alligeytor.

Alligator Nunatak: see Alligator Island 66°34'S, 97°40'E

Alligator Peak 78°28'S, 158°45'E

A prominent conical rock peak at the head of Alligator Ridge in the Boomerang Range. Named for its proximity to Alligator Ridge by the 1957–58 N.Z. party of the CTAE, 1956–58.

Alligator Ridge 78°27'S, 158°48'E

A spectacular serrated rock ridge, extending NE for 2 mi from Alligator Peak in the Boomerang Range into Skelton Névé. Mapped and named for its shape by the 1957–58 N.Z. party of the CTAE, 1956–58.

Alligeytor, Skala: see Alligator Island 66°34'S, 97°40'E

Allipen, Punta: see Shmidt Point 66°55'S, 67°02'W

Allison, Mount 72°31'S, 162°22'E

A mountain 3 mi NE of Mount Stuart, in the Monument Nunataks. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Richard G. Allison, biologist at McMurdo Station, summers 1965–66 and 1967–68.

Allison Bay 67°30'S, 61°17'E

Small bay just W of Utstikkar Glacier on the coast of Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Isvika (the ice bay). Renamed by ANCA for Dr. Robert Allison, medical officer at Mawson station in 1955. Not: Isvika.

Allison Glacier 78°16'S, 161°55'E

Glacier with its head just N of Mount Huggins, descending from the W slopes of Royal Society Range into Skelton Glacier. Named by US-ACAN in 1963 for Lt. Cdr. John K. Allison, USN, officer in charge of the wintering-over detachment of Navy Squadron VX-6 at McMurdo Station, 1959.

Allison Islands 66°21'S, 110°29'E

A small chain of islands lying in the N side of the entrance to Sparkes Bay in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for William L. Allison, ionospheric scientist and member of the Wilkes Station party of 1958.

Allison Peninsula 73°10'S, 85°50'W

A narrow ice-covered peninsula which extends into the Belling-shausen Sea from Ellsworth Land. It forms the E margin of the Venable Ice Shelf. Mapped by USGS from surveys and U.S. Navy air photos, 1961–66. Named by US-ACAN for Cdr. Paul Allison, USN, Plans Officer, U.S. Naval Support Force, Antarctica, 1967 and 1968.

Allison Ridge 70°45'S, 66°19'E

A rock ridge, partly snow covered, about 0.5 mi W of Mount Bunt in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named by ANCA for D. Allison, electrical engineer at Mawson Station in 1965.

All Johannesens Point: see Johannesen Point 54°01'S, 38°14'W

Allo, Mount 63°58'S, 61°48'W

Conspicuous conical, snow-covered peak, 285 m, which rises from Neyt Point at the NE end of Liège Island, in the Palmer Archipelago. Discovered by the BelgAE, 1897–99, and named after M. Allo, Director Général de la Marine at Anvers (Antwerp).

Allowitz Peak 71°08'S, 167°39'E

A peak (1,240 m) rising immediately W of Mount Troubridge in Hedgpath Heights of the Anare Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Ronald D. Allowitz, USARP biologist at Hallett Station, 1962–63.

Allport, Mount 68°01'S, 56°27'E

A snow-free peak just W of Leslie Peak and about 5 mi S of Mount Cook of the Leckie Range. Plotted from ANARE air photos. Named by ANCA for B. Allport, radio officer at Mawson Station

in 1964, a member of one of the survey parties which carried out a tellurometer traverse passing through the Leckie Range in 1965.

Allsup, Mount 84°01'S, 159°36'E

A rock peak, 2,580 m, marking the SW limits of the Canopy Cliffs, at the S end of Queen Elizabeth Range. Named by US-ACAN for Clifford C. Allsup, Aviation Machinist's Mate, USN, who was injured during OpDFrz II, 1956–57.

Alma McCoy, Mount: see McCoy, Mount 75°52'S, 141°10'W

Almena, Promontorio: see Turret, The 60°40'S, 45°09'W

Almendra, Punta: see Almond Point 63°53'S, 59°30'W

Almirantazgo, Paso: see Admiralty Sound 64°20'S, 57°10'W

Almirante Fliess, Caleta: see Fliess Bay 63°12'S, 55°10'W

Almizclero, Istmo: see Muskeg Gap 64°23'S, 59°39'W

Almonacid, Punta: see Flagon Point 72°14'S, 60°41'W

Almond, The 78°19'S, 163°27'E

A bare, almond-shaped ridge of granite which separates the two coalescing channels of Pyramid Trough, located just W of The Pyramid on the W side of Koettlitz Glacier. Given this descriptive name by the New Zealand VUWAE, 1960–61.

Almond Point 63°53'S, 59°30'W

A rocky point between Whitecloud Glacier and McNeile Glacier at the head of Charcot Bay, Trinity Peninsula. Charted in 1948 by the FIDS who applied the name because of the distinctive shape of the point. Not: Punta Almendra.

Alpha Bluff 78°52'S, 162°29'E

A high bluff on the W side of Shults Peninsula, at the E side of Skelton Glacier. Surveyed and named in 1957 by the N.Z. party of the CTAE (1956–58). Named after the first letter of the Greek alphabet because it is the most southerly of all bluffs on the Skelton Glacier.

Alpha Island 64°19'S, 63°00'W

Small island lying between Epsilon Island and Delta Island in the Melchior Islands, Palmer Archipelago. Charted by DI in 1927 and named after the first letter of the Greek alphabet, in association with the names of other islands in this group. The island was surveyed by Argentine expeditions in 1942, 1943 and 1948. Not: Isla Alfa, Isla Huidobro.

Alphard Island 66°58'S, 57°25'E

Island 2.5 mi long and rising to 150 m, lying N of Shaula Island in the Øygarden Group. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37, and called Meöya (The Middle Island). First visited by an ANARE party led by R. Dovers in 1954; the island was renamed by ANCA after the star Alphard, which was used for an astrofix in the vicinity. Not: Meöya.

Alpheratz, Mount 70°59'S, 66°58'W

A prominent peak on the SE ridge of Pegasus Mountains, about 10 mi ENE of Gurney Point on the W coast of Palmer Land. Named by UK-APC after the star Alpheratz in the Great Square of Pegasus.

Alsford Bay 54°17'S, 36°16'W

Small bay between Briggs Point and Cape George on the N coast of South Georgia. Charted by DI in 1928–30 and named after Stoker W.B. Alsford, RN, of *Discovery*, 1925–27; a member of the survey party.

Alta, Punta: see Edinburgh Hill 62°33'S, 60°01'W

Alta, Roca: see High Rock 53°58'S, 37°29'W

Altar, The 71°39'S, 11°22'E

A flat-topped rock summit (2,200 m) at the head of Grautskåla Cirque, immediately W of Altarduken Glacier, in the Humboldt Mountains of Queen Maud Land. Discovered and given the descriptive name Altar by the GerAE under Ritscher, 1938–39. Not: Altaret.

Altarduken Glacier 71°39'S, 11°26'E

Small glacier just E of The Altar at the head of Grautskåla Cirque, in the Humboldt Mountains of Queen Maud Land. Discovered and mapped from air photos by the GerAE, 1938–39. Remapped by Norway from air photos and surveys by the NorAE, 1956–60, and named Altarduken (the altar cloth) in association with The Altar.

Altaret: see Altar, The 71°39'S, 11°22'E

Altar Mountain 77°54'S, 160°51'E

Prominent mountain over 2,000 m high, standing at the S end of Arena Valley in Victoria Land. Indicated but not named on Ferrar's 1907 map. So named by the NZGSAE (1958–59) because of its stepped profile and flat top, similar to pyramids of the Aztec and Mayan civilizations.

Altar Peak 86°04'S, 150°23'W

A peak (1,780 m) located 1 mi ESE of Mount Harkness in the Gothic Mountains, Queen Maud Mountains. The feature was first visited in December 1934 by the ByrdAE geological party under Quin Blackburn. The descriptive name was suggested by Edmund Stump, leader of a USARP-Arizona State University geological party which studied this peak, 1987–88.

Alt Glacier 71°06'S, 162°31'E

A glacier, 4 mi long, flowing WSW from the Explorers Range of the Bowers Mountains to enter Rennick Glacier just N of Mount Soza. Mapped by the USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Jean Alt, French observer, a weather central meteorologist at Little America V, winter party 1958. Not: Art Glacier.

Alvarado, Cabo: see Shirreff, Cape 62°27'S, 60°47'W

Alvarez Glacier 70°53'S, 162°20'E

A tributary glacier in the Explorers Range, Bowers Mountains, flowing from the SW side of Stanwix Peak into Rennick Glacier, to the N of Sheehan Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Lt. Cdr. José A. Alvarez, Argentine Navy, an IGY Weather Central meteorologist at Little America V in 1957.

Alvaro Cove 64°51'S, 63°01'W

A cove on the N side of Bryde Island, Danco Coast, Graham Land. The feature was surveyed by the Argentine Antarctic Expedition, 1950–51, and named after a staff officer with the relief ship of the expedition.

Alzogaray, Islas: see Theta Islands 64°19'S, 63°01'W

Amanda Bay: see Hovde Cove 69°15'S, 76°50'E

Amarillo, Pico: see Bolinder Bluff 61°56'S, 57°58'W

Amarillo, Pico: see Brimstone Peak 61°55'S, 57°45'W

Amarra, Islote: see Anchorage Island 67°36'S, 68°13'W

Ambalada Peak 75°57'S, 158°23'E

A rock peak, 2,160 m, standing 2 mi SE of Griffin Nunatak in the Prince Albert Mountains, Victoria Land. Mapped by USGS from surveys and USN air photos, 1956–62. Named by US-ACAN for Cesar N. Ambalada, electrician with the South Pole Station winter party, 1966.

Amberes, Isla: see Anvers Island 64°33'S, 63°35'W

Ambergris Glacier 65°43'S, 62°37'W

A glacier flowing SSE into Flask Glacier, just W of Fluke Ridge on the E coast of Graham Land. One of several names in the area that reflect a whaling theme. Named in 1987 by the UK-APC from the substance secreted by the sperm whale and used in perfumery.

Ambrose Rocks 65°16'S, 64°22'W

A small cluster of rocks situated SW of the southern Argentine Islands and 1 mi NW of Gaunt Rocks, off the W coast of Graham Land. Named by UK-APC for David A. Ambrose, survey asst. of the Hydrographic Survey Unit from HMS *Endurance* working in this area in February 1969.

Ambush Bay 63°10'S, 55°26'W

Bay 3.5 mi wide indenting the N coast of Joinville Island immediately E of King Point. Surveyed by the FIDS in 1953. The name arose because the bay is a trap for the unwary if its shallow and foul nature is not known. Not: Bahía Carminatti.

Ameghino, Península: see Churchill Peninsula 66°30'S, 62°45'W

Ameghino Gully 64°28'S, 58°38'W

A gully running E-W through the outcrops on the W side of Longing Peninsula, Nordenskjöld Coast. The name derives from "Refugio Ameghino," the Argentine refuge situated on the SW side of Longing Gap and named in turn after Florentino Ameghino (1854–1911), Argentine geologist and anthropologist; Director, Museum of Natural History, Buenos Aires, 1902–11. Named by the UK-APC in 1990.

Amenkov Island: see Annenkov Island 54°29'S, 37°05'W

American Geographical Society Bay: see Gardner Inlet 74°58'S, 62°52'W

American Highland 72°30'S, 78°00'E

That portion of Antarctica back of the Ingrid Christensen Coast and eastward of Lambert Glacier, consisting of an upland snow surface (2,800 m) except for a group of nunataks (Grove Mountains) near 75°E. The area was discovered and named by Lincoln Ellsworth on January 11, 1939, in an aerial flight from his ship, the *Wyatt Earp*. The area was photographed by USN Operation Highjump (1946–47) and by ANARE (1956 and 1957), the latter group making a landing to obtain an astrofix at Grove Mountains, 1958.

Amery Ice Shelf 69°45'S, 71°00'E

A broad ice shelf at the head of Prydz Bay between the Lars Christensen Coast and Ingrid Christensen Coast. The name "Cape Amery" was applied to a coastal angle mapped on Feb. 11, 1931 by the BANZARE under Douglas Mawson. He named it for William B. Amery, who represented the United Kingdom government in Australia (1925–28). The US-ACAN interpreted this feature to be a portion of an ice shelf and, in 1947, applied the name Amery to the whole shelf.

Amery Peaks 70°36'S, 67°25'E

A group of peaks which extend for about 18 mi along the SE side of Nemesis Glacier, in eastern Aramis Range, Prince Charles Mountains. Discovered by the ANARE southern party of 1956–57 and so named because of their proximity to the Amery Ice Shelf.

Ames Glacier: see Boyd Glacier 77°14'S, 145°25'W

Ames Range 75°42'S, 132°20'W

Range of snow-covered, flat-topped, steep-sided mountains, extending in a N-S direction for 20 mi and forming a right angle with the E end of the Flood Range in Marie Byrd Land. Discovered by the USAS (1939–41) and named by R. Admiral Richard E. Byrd for his father-in-law, Joseph Ames. Not: Joseph Ames Range.

Amherst, Mount 86°32'S, 153°06'W

A peak rising to 2,400 m between Holdsworth Glacier and Scott Glacier, 3 mi NNE of McNally Peak, in the Queen Maud Mountains. Mapped by USGS from surveys and USN aerial photographs, 1960–64. The geology of the peak was studied in the 1978–79 season by a USARP-Arizona State University field party. Named by US-ACAN after Amherst College, Amherst, MA, alma mater of Michael F. Sheridan, a member of the field party.

Amiot, Arrecifes: see Amiot Islands 67°36'S, 69°38'W

Amiot Islands 67°36'S, 69°38'W

Two groups of islands and rocks, Ward Islands and Cumbers Reef, respectively, lying 9 mi W of Cape Adriasola, Adelaide Island. Discovered by the FrAE, 1908–10, and named by Charcot for A. Amiot, engineering director of the French Montevideo Co., Montevideo, Uruguay, which made repairs on the ship *Pourquoi-Pas?*. Accurately charted by the British Royal Navy Hydrographic Survey Unit in 1963. Not: Arrecifes Amiot.

Amirauté, Baie de l': see Admiralty Bay 62°10'S, 58°25'W

Amirauté, Déroit de l': see Admiralty Sound 64°20'S, 57°10'W

Amos Glacier 77°49'S, 163°39'E

A glacier, 3 mi long, flowing SE from Bettle Peak to a juncture with the Blue Glacier SE of Hannon Hill, in Victoria Land. Named in 1992 by US-ACAN after Larry Leon Amos, civil engineer, USGS; member of the USGS two man astronomic surveying team to South Pole Station and Byrd Station in the 1969–70 field season. Among other work, the team established the position of the Geographic South Pole (previously done 1956) and established a tie to the Byrd Ice Strain net which had been under study for several years.

Amos Lake 60°42'S, 45°39'W

A small lake S of Thulla Point on Signy Island, in the South Orkney Islands. Named by UK-APC after Stephen C. Amos, BAS limnologist on Signy Island, 1972–73.

Amphibole Peak 84°44'S, 173°26'W

The highest peak in the Gabbro Hills (1,660 m), standing 4 mi N of Mount Llano, in the Queen Maud Mountains. So named by the Southern Party of NZGSAE (1963–64) because minerals of the Amphibole group were found on the peak.

Amphibolite Point 60°41'S, 45°21'W

Conspicuous, pyramidal point 1.5 mi NW of Saunders Point on the S coast of Coronation Island, in the South Orkney Islands. Named by the FIDS following their survey of 1948–49. There is a large amount of amphibolite on this point. Not: Punta Anfibolita.

Amphitheatre, The 68°06'S, 66°34'W

Large bowl-shaped depression, 0.75 mi in diameter, at the S side of the head of Northeast Glacier on Graham Land. The feature lies adjacent to former bases of the BGLE, 1934–37, and the USAS, 1939–41, and was charted by USAS sledging parties which crossed Graham Land via Northeast Glacier and Bills Gulch. Named by the FIDS following its survey in 1946.

Amphitheatre, The 78°18'S, 163°03'E

A great cirque, now occupied only by névé, carved on the N side of Mount Dromedary, whose walls rise sheer about 1,700 m from the floor of Roaring Valley on the E side of Royal Society Range. So named by the New Zealand VUWAE, 1960–61, because of the feature's enormous size and near-perfect shape.

Amphitheatre Lake 68°06'S, 48°45'E

A smooth-surfaced meltwater lake 1.5 mi long in the W part of Amphitheatre Peaks, Nye Mountains. The lake is almost completely enclosed by rock and ice cliffs, forming an amphitheatre, with an outlet into Rayner Glacier at the W end. Photographed in 1956 from ANARE aircraft and visited by an ANARE airborne field party in 1958. The descriptive name was applied by ANCA.

Amphitheatre Peaks 68°06'S, 48°52'E

A group of peaks surrounding and extending to the E of Amphitheatre Lake, in the NW part of Nye Mountains. Photographed in 1956 from ANARE aircraft and visited in Nov. 1958 by an ANARE airborne field party. Named by ANCA in association with Amphitheatre Lake.

Ample Bay 54°03'S, 37°23'W

Bay 1.8 mi wide, marked by Grace Glacier at its head, situated 2 mi E of Sunset Fjord in the SW part of the Bay of Isles, South Georgia. A sketch of this bay was made in 1912–13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*. Charted and named descriptively by DI in 1929–30. Not: Bahía Amplia, Ensenada Grande.

Amplia, Bahía: see Ample Bay 54°03'S, 37°23'W

Amundsen, Mount 67°14'S, 100°45'E

A nunatak lying E of Denman Glacier, about 11 mi NE of Mount Sandow. Discovered by the Western Base Party of the AAE (1911–14) under Mawson. Named by Mawson for Roald Amundsen, Norwegian polar explorer and the first to attain the South Pole.

Amundsen Bay 66°55'S, 50°00'E

Long embayment 24 mi wide, close W of the Tula Mountains in Enderby Land. The bay was seen as a large pack-filled recession in the coastline by Sir Douglas Mawson on Jan. 14, 1930. Seen by Capt. Hjalmar Riiser-Larsen in charge of a Norwegian expedition during an airplane flight on January 15 and subsequently mapped nearer its true position by the Norwegians. The bay was mapped in detail by an ANARE party landed by aircraft in 1956 and another landed by launch from *Thala Dan* in February 1958. Named by Mawson after Roald Amundsen, Norwegian explorer who was first to reach the South Pole. Not: Ice Bay, Isfjorden.

Amundsen Coast 85°30'S, 162°00'W

That portion of the coast to the S of the Ross Ice Shelf lying between Morris Peak on the E side of Liv Glacier and the W side of the Scott Glacier. Named by NZ-APC in 1961 for Capt. Roald Amundsen, the Norwegian explorer who led his own expedition in 1910–12 to the Antarctic. Setting up a base at Framheim at the edge of the Ross Ice Shelf, he sledged southward across the shelf and discovered a route up the Axel Heiberg Glacier along this coast to reach the polar plateau. He was the first to reach the South Pole, December 14, 1911.

Amundsen Glacier 85°35'S, 159°00'W

A major glacier, about 4 to 6 mi wide and 80 mi long, originating on the polar plateau where it drains the area to the S and W of the Nilsen Plateau, and descending through the Queen Maud Mountains to enter the Ross Ice Shelf just W of MacDonald Nunataks. Discovered by R. Admiral Byrd on the South Pole flight in November 1929. The name was proposed for Roald Amundsen by Laurence Gould, leader of the ByrdAE geological party which sledged past the mouth of the glacier in December 1929.

Amundsen Icefall 85°28'S, 166°42'W

A steep and turbulent icefall where the Axel Heiberg Glacier descends from the polar plateau between Mount Fridtjof Nansen and Mount Don Pedro Christophersen, in the Queen Maud Mountains. Named by the Southern Party of the NZGSAE (1961–62) for Capt. Roald Amundsen, who ascended Axel Heiberg Glacier enroute to the South Pole in 1911.

Amundsen Sea 73°00'S, 112°00'W

The marginal sea off the coast of Marie Byrd Land between Cape Dart, Siple Island, on the west and Cape Flying Fish, Thurston Island, on the east. Named by the Norwegian expedition of 1928–29, under Capt. Nils Larsen, while exploring this area in February, 1929. Named for Capt. Roald Amundsen, famous Norwegian explorer who was first to reach the South Pole. The sea has been defined with greater precision through discoveries of the U.S. Antarctic Service (1939–41), USN Operation Highjump (1946–47) and U.S. exploration in the post-IGY years. Not: Franklin D. Roosevelt Sea, Roald Amundsen Sea, Roosevelt Sea.

Amurskiye, Gory: see Rimekalvane Nunataks 72°03'S, 13°38'E

Amy Guest Island: see Guest Peninsula 76°18'S, 148°00'W

Ana, Cabo: see Anna, Cape 64°35'S, 62°26'W

Anagram Islands 65°12'S, 64°20'W

Group of small islands and rocks lying between Roca Islands and Argentine Islands, in the Wilhelm Archipelago. The area was charted by the BelgAE under Gerlache, 1897–99, the FrAE under

Charcot, 1903–05 and 1908–10, and the BGLE under Rymill, 1934–37, and the names Argentine, Roca and Cruls variously applied to the four island groups on the S side of French Passage. The islands were mapped in detail by the FIDS from photos taken from the helicopter of HMS *Protector* and from information obtained by the British Naval Hydrographic Survey Unit in 1958 and the three names positioned as originally given by the Belgian and French expeditions. The remaining island group was named Anagram Islands by the UK-APC in 1959, anagram meaning a transposition of parts. Not: Isloles Roca.

Anakiwa, Mount 73°00'S, 165°43'E

A small mountain (2,640 m) situated 3 mi N of Mount Supernal in the Mountaineer Range, Victoria Land. Named by the northern party of NZGSAE, 1966–67, after the Cobham Outward Bound School, Anakiwa, New Zealand.

Analogue, Mount 85°49'S, 138°05'W

A prominent mountain along the Watson Escarpment, rising to 3,170 m and forming the highest point of the ridge that runs N from Phleger Dome, Stanford Plateau. The feature was visited in 1977–78 by a USARP-Arizona State University geological party, led by Edmund Stump, and named after Mount Analogue, a mythical mountain obscured by clouds, as described in the unfinished novel of the same name by René Dumal. This mountain was obscured by clouds during much of the visit by the USARP party.

Anare Mountains 70°55'S, 166°00'E

A large group of mainly snow-covered peaks and ridges along the N coast of Victoria Land. The group is bounded on the N and E by the Pacific Ocean, on the W by Lillie Glacier, and on the S by Ebbe Glacier and Dennistoun Glacier. Mountains in this area were first sighted by Capt. James Clark Ross in 1841. They were photographed during USN Operation Highjump, 1946–47, and were surveyed by USGS helicopter teams, 1962–63. Named by the northern party of the NZGSAE, 1963–64, for the Australian National Antarctic Research Expedition (ANARE), 1962, under Phillip Law, which performed survey work along the coast.

Anare Nunataks 69°58'S, 64°37'E

A group of mainly snow-covered ridges with exposed rock summits rising to 2,035 m, standing 16 mi S of Stinear Nunataks in Mac. Robertson Land. First visited in November 1955 by an ANARE party led by J.M. Béchervaise. The name is the initials of Australian National Antarctic Research Expeditions.

Anare Pass 71°13'S, 166°37'E

A broad ice-covered pass at 1,200 m above sea level. The pass is the highest point on the glaciers that delimit the south side of Anare Mountains, separating the latter from the Admiralty and Concord Mountains to the south. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN in association with Anare Mountains.

Anca de Leon, Cabo: see Lions Rump 62°08'S, 58°07'W

Ancestor Pass: see Celebration Pass 83°59'S, 172°30'E

Anchorage Bay 54°07'S, 36°49'W

Small bay in the W side of Fortuna Bay, 2 mi S of Cape Best, along the N coast of South Georgia. Charted in 1929–30 by DI personnel and so named by them because it affords good anchorage. Not: Bahía del Ancladera.

Anchorage Island 67°36'S, 68°13'W

Island lying 0.7 mi SE of Lagoon Island in the Léonie Islands, off the SE coast of Adelaide Island. Discovered by the FrAE, 1908–10. Named by the BGLE under Rymill, who visited the island in February 1936. Not: Isote Amarra.

Anchorage Patch 68°34'S, 77°55'E

A small, isolated shoal, the least depth of water over it being 6 fathoms, lying within Davis Anchorage, about 0.5 mi NW of Torekler Rocks. The shoal was positioned by D'.T. Gale, ANARE surveyor aboard the *Thala Dan* in 1961.

Anchor Crag 69°12'S, 66°12'W

A rocky crag on the N side of Airy Glacier, 4 mi NNE of Mount Gilbert, in the central part of Antarctic Peninsula. Photographed from the air by RARE on Nov. 27, 1947, and surveyed by FIDS, Nov. 4, 1958. The UK-APC name is descriptive of a snow patch lodged on the face of the rock which, in 1958, closely resembled a ship's anchor.

Anchor Peak: see Archer Peak 71°52'S, 171°10'E

Anckorn Nunataks 70°14'S, 63°12'W

A group of nunataks and snow-covered hills, 15 mi long, between Mount Bailey and Mount Samsel in the E part of Palmer Land. Named by UK-APC after J.F. Anckorn, BAS geologist who worked in the vicinity of this feature.

Ancla, Mount 64°49'S, 63°41'W

Mountain, 815 m, which is snow covered except for a rock ridge on its S side, standing 2 mi N of Cape Lancaster, Anvers Island, in the Palmer Archipelago. The mountain was surveyed by the FIDS in 1944 and 1955. The name Monte Ancla (anchor mountain) first appears on an Argentine government chart of 1950. Not: Mount Hindson.

Ancladera, Bahía del: see Anchorage Bay 54°07'S, 36°49'W

Andersen, Puerto: see Andersen Harbor 64°19'S, 62°56'W

Andersen Escarpment 85°08'S, 91°37'W

A steep rock and snow escarpment located S of Reed Ridge on the W side of the Ford Massif, Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party, 1960–61. Named for Bjorn G. Andersen, Norwegian professor of geology and glaciology at the University of Oslo, who was a member of the 1960–61 and 1961–62 USGS field parties to the Thiel Mountains.

Andersen Harbor 64°19'S, 62°56'W

Small bay in the Melchior Islands, Palmer Archipelago, formed by the concave W side of Eta Island and the N end of Omega Island. Charted by DI in 1927 and probably named after Kapt. Ola Andersen of the factory ship *Svend Foyn*, following the usage of Norwegian whalers that had operated in the area. The harbor was surveyed by Argentine expeditions in 1942, 1943 and 1948. Not: Puerto Andersen.

Andersen Island 67°26'S, 63°22'E

Island 4 mi W of Thorgaut Island in the Robinson Group. Mapped by BANZARE under Mawson in February 1931; this area was also charted from the whale catcher *Thorgaut* about the same time. Named by Mawson for Capt. Lars Andersen of the whale catcher *Falk*, who had assisted the *Discovery* with coal. Not: Lars Andersen Island.

Andersnuten: see Anders Peak 71°45'S, 9°01'E

Anderson, Cape 60°46'S, 44°35'W

Cape which marks the E side of the entrance to Mill Cove on the S coast of Laurie Island, in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for his secretary, Nan Anderson. Not: Cape Nan Anderson.

Anderson, Mount 78°09'S, 86°13'W

Mountain (4,255 m) located 2 mi S of Mount Bentley in the main ridge of the Sentinel Range, Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party, 1957–58, under C.R. Bentley, and named for Vernon H. Anderson, glaciologist at Byrd Station, 1957, a member of the party.

Anderson Dome 73°30'S, 93°54'W

A prominent ice-covered dome mountain (1,475 m) rising on the E side of Gopher Glacier, 4 mi E of similar-appearing Bonnabeau Dome, in the Jones Mountains. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61, and named by them for Joe M. Anderson, USGS topographic engineer with the party.

Anderson Glacier 66°24'S, 63°55'W

Heavily crevassed glacier, 12 mi long, flowing SE into Cabinet Inlet between Cape Casey and Balder Point, on the E coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE in December 1947. Named by the FIDS for Sir John Anderson, M.P., Lord President of the Council and member of the British War Cabinet (World War II).

Anderson Heights 84°49'S, 178°15'W

A roughly rectangular snow-covered tableland, 7 mi long and 6 mi wide, with an elevation somewhat over 2,400 m, located between Mount Bennett and Mount Butters in the E part of the Bush Mountains. Discovered and photographed by USN OpHjp (1946–47) on the flights of Feb. 16, 1947, and named by US-ACAN for Lt. George H. Anderson, USN, pilot of Flight 8 of that date from Little America to the South Pole and return.

Anderson Hills 84°30'S, 64°00'W

An irregular group of hills, ridges and peaks between Mackin Table and the Thomas Hills in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN at the suggestion of Capt. Finn Ronne, USNR, leader at Ellsworth Station, 1957. As Deputy Secretary of Defense, 1954–55, Robert Anderson had responsibilities for U.S. operations in Antarctica.

Anderson Icefalls 71°21'S, 169°00'E

Icefalls at the lower end of Pitkevitch Glacier terminating in a cliff face 30 m high, located just SE of Atkinson Cliffs along the N coast of Victoria Land. Charted in 1911 by Cdr. Victor L.A. Campbell's Northern Party of the BrAE, 1910–13. Named by the BrAE probably for Mr. Anderson of the firm, John Anderson and Sons, Engineers, who owned Lyttelton Foundry, and took great interest in the expedition.

Anderson Knoll 77°54'S, 163°26'E

The southernmost nunatak in Granite Knolls, 1 mi S of the main massif and marginal to Blue Glacier, in Victoria Land. Named by US-ACAN after Klaus G. Anderson (d. 1991), civil engineering technician, USGS, 1960–90; member of the USGS field team which established geodetic control in the Hudson Mountains,

Jones Mountains, Thurston Island and Farwell Island areas of Walgreen Coast and Eights Coast during the 1968–69 season.

Anderson Massif 79°10'S, 84°45'W

A prominent ice-covered massif about 10 mi across and rising to 2,190 m, located at the juncture of Splettstoesser and Minnesota Glaciers in the Heritage Range, Ellsworth Mountains. Named by US-ACAN for John J. Anderson, geologist, field leader of the University of Minnesota Ellsworth Mountains Party, 1961–62.

Anderson Nunataks 75°06'S, 68°18'W

A group of nunataks forming the NE end of Sweeney Mountains, in Ellsworth Land. Discovered and photographed from the air by the RARE, 1947–48. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Richard E. Anderson, aviation electronics technician on R4D flights in 1961, including a Nov. 4, 1961 reconnaissance flight from Byrd Station to the Eights Coast. Not: Shimizu Nunatak.

Anderson Peninsula 69°48'S, 160°13'E

Low ice-covered peninsula, 7 mi long, terminating in Belousov Point. The feature lies between Gillett Ice Shelf and Suvorov Glacier on the coastal margin of the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Lt. (later Capt.) Richard E. Anderson, CEC, USN, base public works officer at McMurdo Sound during Operation Deep Freeze I and II. He wintered over in the McMurdo area during the latter operation, 1957.

Anderson Pyramid 70°46'S, 159°56'E

A distinctive pyramidal peak, the southernmost member of the Bigler Nunataks, in the Usarp Mountains. Named by US-ACAN for Staff Sgt. Robert J. Anderson, USA, non-commissioned officer in charge of the enlisted detachment of the helicopter group supporting the USGS survey Topo East-West, 1962–63, which included the survey of this feature.

Anderson Ridge 85°47'S, 155°24'W

A ridge 2 mi long, rising above the middle of the head of Koerwitz Glacier in the Queen Maud Mountains. Mapped by USGS from ground surveys and USN air photos, 1960–64. Named by US-ACAN for Arthur J. Anderson, meteorologist with the South Pole Station winter party, 1960.

Anderson Summit 85°03'S, 90°53'W

The highest peak (2,810 m) in the Thiel Mountains, on top of the Ford Massif and directly SE of Walker Ridge. It is snow covered except for bare rock at the top. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party, 1960–61. The peak was climbed by Ford in 1961. Named for Charles A. Anderson, then chief geologist of the U.S. Geological Survey.

Anders Peak 71°45'S, 9°01'E

Peak, 2,135 m, rising 1 mi S of Gruvletindane Crags of the Holtedahl Peaks, in the Orvin Mountains, Queen Maud Land. Mapped by Norwegian cartographers from air photos and surveys by the NorAE, 1956–60, and named for Anders Vinten-Johansen, medical officer with NorAE, 1957–58. Not: Andersnuten.

Andersson Island 63°35'S, 56°35'W

Island 7 mi long and 4 mi wide, lying 0.5 mi S of Jonassen Island at the W side of the S entrance to Antarctic Sound, off the NE tip of Antarctic Peninsula. This island was named Uruguay Island by

the SwedAE, 1901–04, under Nordenskjöld, after the Argentine ship *Uruguay* which participated in the rescue of the ship-wrecked SwedAE in 1903. In 1904, the FrAE under Charcot, apparently unaware of the Swedish naming, gave the name Uruguay to an island off the W coast of Antarctic Peninsula. Since it is confusing to have two islands in close proximity identically named, and because Charcot's Uruguay Island has appeared more widely on maps and in reports, the US-ACAN accepts the decision of the UK-APC that the name given this island by Nordenskjöld be altered. The new name commemorates J. Gunnar Andersson, who was second-in-command of Nordenskjöld's expedition. Not: Uruguay Island.

Andersson Nunatak 63°22'S, 57°00'W

Nunatak 1 mi W of Sheppard Point, standing above the coastal ice cliffs on the N shore of Hope Bay, at the NE end of Antarctic Peninsula. Discovered by J. Gunnar Andersson's party of the SwedAE which wintered at Hope Bay in 1903. Named for Andersson by the FIDS following their survey of the area in 1945.

Andersson Peak 64°52'S, 61°02'W

Ice-capped peak, 1,230 m, with rocky exposures on its E side, lying 9 mi N of Cape Fairweather on the E coast of Graham Land. Charted in 1947 by the FIDS, and named by them for Karl Andreas Andersson, zoologist with the SwedAE, who explored along this coast in 1902.

Andersson Ridge 74°43'S, 162°37'E

A ridge, 4 mi long, in southern Eisenhower Range, forming the N wall of Reeves Glacier between the mouths of Anderton and Carnein Glaciers, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for Lars E. Andersson, cosmic radiation scientist, South Pole Station winter party of 1966.

Anderton Glacier 74°41'S, 162°22'E

A tributary glacier, 7 mi long, descending the S slopes of Eisenhower Range to enter Reeves Glacier between Mount Matz and Andersson Ridge, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for Peter W. Anderton, glaciologist at McMurdo Station, summer 1965–66.

Andes, Mount 85°53'S, 146°46'W

Peak, 2,525 m, in the SE part of the Tapley Mountains. Mapped by USGS from ground surveys and USN air photos, 1960–63. Named by US-ACAN for Lt. Cdr. Paul G. Andes, USN, pilot at McMurdo Station, 1962–63 and 1963–64.

Andøya: see Oldham Island 67°32'S, 61°42'E

Andrada, Cabo: see Rip Point 62°15'S, 58°59'W

Andreaea Plateau 60°41'S, 45°37'W

A small plateau with an average elevation of 180 m, located SW of Robin Peak, Signy Island, in the South Orkney Islands. The feature is notable for the largest known stand in the Antarctic of the black-brown moss *Andreaea spp.*

Andreas, Cape 64°00'S, 60°43'W

A cape marking the E side of the entrance to Curtiss Bay, on the W coast of Graham Land. Discovered by the SwedAE (1901–04) and named for Karl Andreas Andersson, zoologist of the expedition. Not: Cape Karl Andreas.

Andreassen Point 63°54'S, 57°46'W

A low ice-free point in northern James Ross Island, fronting on Herbert Sound, 8 mi S of Cape Lachman. Probably first seen by Nordenskjöld in 1903. Surveyed by FIDS in 1945. Named by UK-APC for F.L. Andreassen, first mate on the *Antarctic*, the ship of the SwedAE, 1901–04.

Andrée, Mount 53°02'S, 73°22'E

Ice-free hill, 140 m, surmounting the small headland between Cave and West Bays on the W side of Heard Island. First charted and named by Edgar Aubert de la Rue, French geologist aboard the whale catcher *Kildalkey*, who with his wife Andrée undertook geological investigations along the N and W sides of the island in January 1929. The feature was determined to form part of a dissected volcanic crater by the BANZARE, under Mawson, which visited the area in November 1929 and applied the name Cave Bay Hill. The approved name, a shortened form of Mont Andrée de la Rue, was recommended by ANCA in 1954. Not: Cave Bay Hill, Mont Andrée de la Rue.

Andrée de la Rue, Mont: see Andrée, Mount 53°02'S, 73°22'E

Andrée Island 64°31'S, 61°31'W

Island lying in Recess Cove, Charlotte Bay, off the W coast of Graham Land. Mapped by the FIDS from air photos taken by Hunting Aerosurveys Ltd. in 1956–57. Named by the UK-APC in 1960 for Salomon A. Andrée (1854–97), Swedish engineer who attempted to fly over the North Pole by balloon in 1897, perishing in the attempt.

Andresen Island 66°53'S, 66°40'W

Island 2 mi long and rising over 610 m, lying in the middle of the entrance to Lallemand Fjord, off the W coast of Graham Land. Discovered by the FrAE, 1908–10, under Charcot, and named by him for the manager of the Magellan Whaling Co. at the company's Deception Island base, who provided coal for the expedition. Not: Isla Curanilahue.

Andrew Glacier 63°53'S, 59°40'W

A glacier 3 mi long, flowing NE into Charcot Bay immediately W of Webster Peaks, northern Graham Land. Charted in 1948 by FIDS who named the feature for Dr. J.D. Andrew, medical officer at the FIDS Hope Bay station in 1946–47.

Andrew Jackson, Mount: see Jackson, Mount 71°23'S, 63°22'W

Andrews, Mount 85°57'S, 149°41'W

Mountain, 2,480 m, standing between Mount Danforth and Mount Gerdel on the S side of Albanus Glacier, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960–63. Named by US-ACAN for Ensign Stanley J. Andrews, USN, who accompanied Lt. George W. Warden in aircraft flights over the Queen Maud Mountains during USN Operation Highjump, 1946–47.

Andrews Creek 77°37'S, 163°03'E

A glacial meltwater stream which flows S along the E margin of Canada Glacier into the W end of Lake Fryxell, in Taylor Valley, Victoria Land. The name was suggested by hydrologist Diane McKnight, leader of a USGS team which made extensive studies of the hydrology and geochemistry of streams and ponds in the Lake Fryxell basin, 1987–94. Named after USGS hydrologist

Edmund Andrews, a member of the field team who studied glacier hydrology during the 1987–88 and 1991–92 summer seasons.

Andrews Islands: see Andrews Rocks 54°04'S, 38°00'W

Andrews Peak 72°17'S, 165°25'E

A peak (2,400 m) in the Destination Nunataks, 3 mi W of Pyramid Peak in N Victoria Land. Named by NZ-APC after Peter Andrews, geologist with the VUWAE Evans Névé field party, 1971–72, who worked in this area.

Andrews Peaks 77°08'S, 144°03'W

A line of rock peaks 3 mi long near the head of Arthur Glacier, situated between Mount Warner and Mount Crow in the Ford Ranges, Marie Byrd Land. Mapped by USAS (1939–41) and by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for Stephen T. Andrews, USARP ionospheric physicist, scientific leader at Byrd Station in 1969.

Andrews Point 64°30'S, 62°55'W

Point between Hackapike Bay and Inverleith Harbor on the NE coast of Anvers Island, in the Palmer Archipelago. Charted and named in 1927 by DI personnel on the *Discovery*.

Andrews Ridge 77°39'S, 162°50'E

A gentle ridge, the northern arm of Nussbaum Riegel, which trends eastward to the south of Suess Glacier and Lake Chad in Taylor Valley, Victoria Land. Named by Griffith Taylor, leader of the Western Journey Party of the BrAE, 1910–13.

Andrews Rocks 54°04'S, 38°00'W

Small group of rocks 0.5 mi E of Cape Paryadin, South Georgia. The rocks are bare of vegetation and awash in heavy seas. The name Andrews Islands was probably given by Lt. Cdr. J.M. Chaplin, RN, of the *Discovery* during his survey of the area in 1926. The SGS, 1955–56, reported that "rocks" is a more suitable descriptive term for this group. Not: Andrews Islands.

Andreyev, Cape 68°55'S, 155°12'E

A cape which marks the SE limit of the Slava Ice Shelf. Photographed by USN Operation Highjump, 1946–47, and the Soviet Antarctic Expedition, 1956. Named by the Soviets in 1960 for Prof. A.I. Andreyev, investigator of the history of geographic discovery.

Andreyev, Mount 71°46'S, 10°13'E

Mountain, 2,320 m, standing close SW of Mount Dallmann where it forms part of the SW wall of Brattebotnen Cirque, in the Orvin Mountains, Queen Maud Land. Probably first seen by the GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Soviet historical geographer A.I. Andreyev. Not: Gora Andreyeva.

Andreyeva, Gora: see Andreyev, Mount 71°46'S, 10°13'E

Andriyana Nikolayeva, Khrebet: see Nikolayev Range 71°54'S, 6°02'E

Andromeda, Mount 57°05'S, 26°39'W

The higher (550 m) and more southerly of the twin ice domes, this one marking the summit of Candlemas Island, South Sandwich Islands. Named by UK-APC in 1971 in association with nearby Mount Perseus. The name refers to a mythical heroine rescued from a sea monster by the hero Perseus.

Andrus, Mount 75°48'S, 132°14'W

A peak 2 mi SE of Mount Boennighausen in the SE extremity of Ames Range, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1964–68. Named by US-ACAN for Lt. Carl H. Andrus, USN, medical officer and Officer-in-Charge of Byrd Station in 1964.

Andrus Point 73°53'S, 165°48'E

A prominent, rocky, digit-like point that juts eastward into Lady Newnes Bay toward the floating glacier tongue of the Parker Glacier, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Cdr. H.R. Andrus, logistics officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, 1962–66.

Andvord Bay 64°50'S, 62°39'W

Bay 9 mi long and 3 mi wide, which lies between Beneden Head and Duthiers Point along the W coast of Graham Land. Discovered by the BelgAE, 1897–99, under Gerlache, and named by him for Rolf Andvord, Belgian consul at Christiania (Oslo) at that time. Not: Andword Bay.

Andword Bay: see Andvord Bay 64°50'S, 62°39'W

Anemometer Hill 68°11'S, 67°00'W

A hill 25 m high northeast of Fishtrap Cove on Stonington Island, Marguerite Bay. Surveyed by the East Base party of the U.S. Antarctic Service, 1939–41, which built its base on this island. So named by UK-APC because the hill was the site of an anemometer in 1961.

Anfibolita, Punta: see Amphibolite Point 60°41'S, 45°21'W

Angier, Mount 83°21'S, 161°00'E

A prominent peak in the Moore Mountains, Queen Elizabeth Range. Named by the NZGSAE (1961–62) for Lt. Cdr. Donald L. Angier, USN, pilot of the reconnaissance, landing and pick-up flights in this area.

Angino Buttrass 78°14'S, 158°42'E

Prominent buttrass-type mountain near the center of the Skelton Icefalls. Named by US-ACAN in 1964 for Ernest E. Angino, geologist at McMurdo Station, 1959–60.

Anglais, Détroit: see English Strait 62°27'S, 59°38'W

Angle Peak 71°45'S, 62°03'W

A small but dominant peak that rises from one of the main spurs on the N side of Condor Peninsula. The feature stands close S of where Cline Glacier enters Odom Inlet, on the E coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for J. Phillip Angle, of the Smithsonian Institution, who made bird life observations off the W coast of South America (1965) and Antarctic areas southward to Marguerite Bay, Antarctic Peninsula (1966). He collaborated with George E. Watson in writing *Birds of the Antarctic and Sub-Antarctic*, 1975.

Angosto, Canal: see Narrows, The 67°36'S, 67°12'W

Angostura Gullet: see Gullet, The 67°10'S, 67°38'W

Angot, Cap: see Angot Point 63°48'S, 61°41'W

Angot Point 63°48'S, 61°41'W

Point which marks the S tip of Hoseason Island, in the Palmer Archipelago. Named by the FrAE under Charcot, 1903–05, for

Alfred Angot, Asst. Dir. of the French Meteorological Service and member of the commission which published the scientific results of the expedition. Not: Cap Angot.

Angus, Mount: see Argus, Mount 68°53'S, 63°52'W

Angus Nunatak 85°22'S, 124°14'W

The northern of two nunataks which lie close N of Mount Brecher in the Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1959–60. Named by US-ACAN for Gordon W. Angus, ionospheric physicist, Byrd Station winter party, 1961.

Aniline Island 54°19'S, 36°28'W

Small, flat-topped, rocky island, 5 m high, lying 0.8 mi SSW of Dartmouth Point in Moraine Fjord, South Georgia. The island appears on earlier charts, but the name was given by FIDS in 1951 following a sketch survey. The feature is one of a group in the vicinity named after the chemical stain used in the preparation of histological examination of specimens collected by FIDS.

Ann, Cape 66°10'S, 51°22'E

Projecting cape on the coast, surmounted by Mount Biscoe which rises to 700 meters. Photographed from the air on Dec. 22, 1929 by a Norwegian expedition under Riiser-Larsen in a flight from the *Norvegia*, and on Jan. 14, 1930 photographed from the *Discovery* by the BANZARE under Mawson. Both expeditions believed the peak rising just S of the cape to be the same as that discovered on March 16, 1831 and named Cape Ann by John Biscoe. The name Cape Ann, probably after Biscoe's wife, has been retained for the projecting cape; the surmounting peak was named Mount Biscoe by Mawson. Not: Cape Anne.

Anna, Cape 64°35'S, 62°26'W

Prominent black cape rising to 280 m, forming the N tip of Arctowski Peninsula on the W coast of Graham Land. Discovered by the BelgAE, 1897–99, and named after Mme. Ernest (Anna) Osterrieth, who gave financial assistance to the expedition. Not: Cabo Ana, Cap Anna Osterrieth.

Anna Cove 64°35'S, 62°26'W

Cove immediately E of Cape Anna at the N end of Arctowski Peninsula, along the W coast of Graham Land. Charted by the BelgAE on January 30, 1898, and named in association with Cape Anna (q.v.).

Annandags Peaks 72°32'S, 6°18'W

A group of small, isolated peaks about 15 mi SW of Jule Peaks in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Annandagstoppane (the next day's peaks). Not: Annandagstoppane, Gory Shul'ts.

Annandagstoppane: see Annandags Peaks 72°32'S, 6°18'W

Anna Osterrieth, Cap: see Anna, Cape 64°35'S, 62°26'W

Anna's Bay: see Gold Harbor 54°37'S, 35°56'W

Annawan, Cape 72°18'S, 95°24'W

An ice-covered cape which marks the E extremity of Thurston Island and the NW entrance to Seraph Bay. Discovered in helicopter flights from the USS *Burton Island* and *Glacier* by personnel of the USN Bellingshausen Sea Expedition in February 1960. Named by US-ACAN for the ship *Annawan*, of the United

States Expedition of 1829–31, which with the *Penguin* sailed W from the South Shetland Islands in February 1830, holding a course between 62°S and 58°S and exploring as far as 103°W, northward of this cape.

Anne, Cape 73°37'S, 169°51'E

Cape which marks the SE extremity of Coulman Island, located in the Ross Sea near the coast of Victoria Land. Discovered in January 1841 by Sir James Clark Ross and named by him for his wife.

Anne, Cape: see Ann, Cape 66°10'S, 51°22'E

Anne, Mount 83°48'S, 168°30'E

A mountain, 3,870 m, standing 6 mi N of Mount Elizabeth, in Queen Alexandra Range. Discovered by the BrAE (1907–09) and named for Anne Dawson-Lambton, a supporter of the expedition.

Anne Island: see Ann Island 68°08'S, 67°06'W

Annenkov Island 54°29'S, 37°05'W

Irregularly-shaped island 4 mi long and 650 m high, lying 8 mi off the south-central coast of South Georgia. Discovered in January 1775 by a British expedition under Cook, who named it "Pickersgills Island" for Lt. Richard Pickersgill of the expedition ship *Resolution*. Resighted in 1819 by a Russian expedition under Bellingshausen, who, thinking he was the discoverer of the island, named it Annenkov Island for Lt. Mikhail Annenkov, officer on the expedition ship *Mirnyy*. The island has since retained the name Annenkov; the name Pickersgill has become established for a group of islands 15 mi to the southeast. Not: Amenkov Island, Annenkow Insel, Pickersgills Island.

Annenkow Insel: see Annenkov Island 54°29'S, 37°05'W

Annexstad Peak 76°41'S, 125°52'W

A partially ice-free peak (2,610 m) on the W side of the crater rim of Mount Cumming, in the Executive Committee Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy trimetrogon photography, 1958–60. Named by US-ACAN for John O. Annexstad, geomagnetician and station seismologist at Byrd Station, 1958; later with the Meteorite Working Group, Johnson Space Center, Houston, Texas.

Ann Island 68°08'S, 67°06'W

Island in the Debenham Islands, lying SE of Barbara Island, off the W coast of Graham Land. Discovered by the BGLE, 1934–37, under Rymill, and named by him for a daughter of Frank Debenham, member of the BGLE Advisory Committee. Not: Anne Island.

Anniversary Nunataks: see Blånabbane Nunataks 68°02'S, 63°01'E

Ann Shirley, Mount: see Shirley, Mount 75°39'S, 142°03'W

Ansar, Islotes: see Gosling Islands 60°39'S, 45°55'W

Antarctica 90°00'S

The Antarctic continent, together with the islands rising from the continental block, centering roughly on the South Pole and lying almost wholly within the Antarctic Circle. It has an area of about 5.5 million square miles. Antarctica is a relatively high and compact mass and is snow covered except for some coastal areas and the protruding peaks of mountains and mountain ranges. The

first sighting of Antarctica is contested but apparently occurred in the 1820's. The term Antarctic has been applied to the southern polar regions of Earth, and Antarctica to the continent, by analogy with the term Arctic, applied to the northern polar regions. Not: Antarctic Continent, Antarktika, Antarktis, Antartica.

Antarctic Archipelago: see Palmer Archipelago 64°15'S, 62°50'W

Antarctic Bay 54°06'S, 36°59'W

Bay 1 mi wide which recedes SW 4 mi, entered between Antarctic Point and Morse Point on the N coast of South Georgia. Probably first sighted by a British expedition under Cook in 1775. It was explored in 1902 by members of the SwedAE, under Norden-skjöld, who named it for their ship, the *Antarctic*. Not: Woodward Harbor.

Antarctic Continent: see Antarctica 90°00'S.

Antarctic Convergence

A line encircling Antarctica where the cold, northward-flowing Antarctic waters sink beneath the relatively warmer waters of the sub-Antarctic. The line is actually a zone approximately 20 to 30 miles wide, varying somewhat in latitude in different longitudes, extending across the Atlantic, Pacific, and Indian Oceans between the 48th and 61st parallels of south latitude. The precise location at any given place and time is made evident by the sudden change in surface temperature, which averages 5 to 10 degrees Fahrenheit (2.8 to 5.5 Celsius). Although this zone is a mobile one, it usually does not stray more than a half a degree of latitude from its mean position. This line, like the tree line of the north, is a natural boundary rather than one derived from reasoning. It not only separates two hydrological regions, but also separates areas of distinctive marine life associations and of different climates. The South Shetland Islands, South Orkney Islands, South Sandwich Islands, South Georgia, Bouvetøya, Heard Island and McDonald Islands all lie south of the Antarctic Convergence. The Îles Kerguelen lie approximately on the Convergence; the Falkland Islands, Prince Edward Islands, Îles Crozet and Macquarie Island lie north of the Convergence. Not: Antarctic Polar Front.

Antarctic Peninsula 69°30'S, 65°00'W

The major peninsula of Antarctica, extending from Prime Head in the north to a line between Cape Adams and a point on the mainland coast south of Eklund Islands. The first sighting of Antarctic Peninsula is contested but it apparently occurred in the 1820's. Agreement on this name by the US-ACAN and UK-APC in 1964 resolved a long-standing difference involving use of the American name, Palmer Peninsula, and the British name, Graham Land, for this feature. (Graham Land is now restricted to that part of Antarctic Peninsula northward of a line between Cape Jeremy and Cape Agassiz; Palmer Land to the part southward of that line.) Not: Palmer Peninsula, Península Antártica, Tierra de O'Higgins, Tierra de San Martín.

Antarctic Point 54°04'W, 36°58'W

Point which marks the W side of the entrance to Antarctic Bay on the N coast of South Georgia. Charted in the period 1926–30 by DI personnel, who named it after nearby Antarctic Bay.

Antarctic Polar Front: see Antarctic Convergence.

Antarctic Sound 63°20'S, 56°45'W

Body of water about 30 mi long and from 7 to 12 mi wide, separating the Joinville Island group from the NE end of Antarctic Peninsula. The sound was named by the SwedAE under Norden-skjöld for the expedition ship *Antarctic* which in 1902, under the command of Capt. C.A. Larsen, was the first vessel to navigate it.

Antarctic Tetons: see Lyttelton Ridge 66°22'S, 63°07'W

Antarktika: see Antarctica.

Antarktis: see Antarctica.

Antarktiske Arkipel: see Palmer Archipelago 64°15'S, 62°50'W

Antártica, Península: see Antarctic Peninsula 69°30'S, 65°00'W

Antartica: see Antarctica.

Antell, Mount 54°07'S, 36°42'W

Mountain rising above 610 m, overlooking the N coast of South Georgia midway between Bjelland and Hercules Points. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Georg Antell, foreman of the South Georgia Whaling Co. station at nearby Leith Harbor, 1913–39.

Antena Zima: see Antenna Island 69°00'S, 39°35'E

Antenna Island 69°00'S, 39°35'E

A small island lying midway between Nesøya and East Ongul Island, the latter the site of the scientific station of the Japanese Antarctic Research Expeditions in Lützow-Holm Bay. Mapped from surveys and air photos by JARE, 1957. The name "Antenajima" (Antenna Island) was given by JARE Headquarters in 1972. Not: Antena Zima.

Antevs Glacier 67°19'S, 66°49'W

Glacier on Arrowsmith Peninsula, Graham Land, flowing N between Seue Peaks and Boyle Mountains into Müller Ice Shelf, Lallemand Fjord. Named by UK-APC in 1960 after Ernst V. Antevs, American glacial geologist. Not: North Heim Glacier.

Ant Hill 78°47'S, 161°27'E

Hill, 1,310 m, rising steeply on the W side of the Skelton Glacier between Ant Hill Glacier and Dilemma Glacier. Surveyed and named in 1957 by the N.Z. party of the CTAE, 1956–58. So named by geological members because of the prominent anticline in the bluff below the hill.

Ant Hill Glacier 78°49'S, 161°30'E

Glacier between Ant Hill and Bareface Bluff, rising in the Worcester Range and flowing NE into Skelton Glacier. Surveyed and named in 1957 by the N.Z. party of the CTAE, 1956–58. Named in association with Ant Hill.

Anthony Bluff 79°06'S, 160°07'E

A conspicuous rock bluff along the S wall of Mulock Glacier, about 9 mi NW of Cape Lankester. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for Capt. Alexander Anthony, USAF, in charge of science and publications on the staff of the U.S. Antarctic Projects Officer, 1963–65.

Anthony Glacier 69°47'S, 62°45'W

Glacier which flows in an ESE direction to the E coast of Palmer Land where it terminates opposite the S tip of Hearst Island. The upper part of this glacier was seen by a sledge party of the BGLE under Rymill in 1936–37. The glacier was seen from the seaward side in 1940 by a sledging party from East Base of the USAS, and in 1947 was photographed from the air by the RARE under Ronne. Named by Ronne for Alexander Anthony of the J.P. Stevens Co., New York, which contributed windproof clothing to the RARE.

Anton Island 66°02'S, 134°28'E

A low ice-capped island about 0.5 mi long. It lies 5 mi NNE of Lewis Island, just outside the E side of the entrance to Davis Bay. Discovered in 1956 from the *Kista Dan* by ANARE led by Phillip Law. An ANARE helicopter party led by Law landed on the island on Jan. 18, 1960. Named by ANCA for Anton Moyell, first officer on the *Magga Dan* in 1960.

Antwerpen Island: see Anvers Island 64°33'S, 63°35'W

Antwerp Island: see Anvers Island 64°33'S, 63°35'W

Anuchina, Lednik: see Anuchin Glacier 71°17'S, 13°31'E

Anuchin Glacier 71°17'S, 13°31'E

A glacier draining southward to Lake Unter-See in the northern part of the Gruber Mountains, Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after D.N. Anuchin, Soviet geographer. Not: Lednik Anuchina.

Anvers Island 64°33'S, 63°35'W

High, mountainous island 38 mi long, which is the largest feature in the Palmer Archipelago, lying SW of Brabant Island at the SW end of the group. Named in 1898 by the BelgAE under Gerlache after the province of Anvers, Belgium. Not: Antwerpen Island, Antwerp Island, Isla Amberes.

Anvil Crag 62°12'S, 58°29'W

A rock crag rising to 300 m 1 mi WSW of Sphinx Hill, King George Island. The vertical crag is at the head of a medial moraine. Descriptively named by the UK-APC in 1977; with its three rock faces and flat top, it has the appearance of an anvil.

Anvil Rock 65°14'S, 64°16'W

Rock between Grotto Island and the SE end of Forge Islands in the Argentine Islands, Wilhelm Archipelago. Charted and named in 1935 by the BGLE under Rymill. The name is descriptive.

Anvil Stacks 54°10'S, 37°42'W

Two conspicuous sea stacks which lie close S of the entrance to Elephant Cove, off the S coast and near the W end of South Georgia. The name "Elephant Bay Islands," derived from nearby Elephant Cove (formerly Elephant Bay), has been used locally for this feature by some South Georgia sealers. The descriptive name Anvil Stacks, a less cumbersome name, was suggested by the SGS following their survey in 1951–52. Not: Elephant Bay Islands, Rocas Yunke.

Anzac Peak 53°00'S, 73°18'E

An ice-covered peak (715 m) which marks the highest point on Laurens Peninsula, the NW arm of Heard Island. The peak appears to have been roughly shown on an 1860 sketch map prepared by

Capt. H.C. Chester, American sealer operating in the area during this period. The name Anzac Peak was applied by ANARE on April 25, 1948 to commemorate Anzac Day, the holiday on which the area was surveyed.

Aogōri Bay 69°13'S, 39°44'E

A small bay in the western side of Langhovde Hills along the coast of Queen Maud Land. The bay lies just south of Mount Futago. Mapped from surveys and air photos by the JARE, 1957–62. The name "Aogōriwan" (blue ice bay) was adopted by JARE Headquarters in 1972.

Aorangi, Mount 72°25'S, 166°22'E

The highest mountain, 3,135 m, in the Millen Range. So named by the NZFMCAE, 1962–63, because of this mountain's cloud-piercing ability, and also in memory of Mount Cook, New Zealand, known to the Maori people as "Aorangi" (the cloud piercer).

Apéndice Island 64°11'S, 61°02'W

Island lying NW of Charles Point in Hughes Bay, off the W coast of Graham Land. The name appears on an Argentine government chart of 1957. Not: Isla Rivera, Isla Telegrafista Rivera, Sternneck Island.

Apfel Glacier 66°25'S, 100°35'E

Glacier about 5 mi wide and 20 mi long, flowing WNW along the S flank of Bunger Hills and terminating in Edisto Ice Tongue. Mapped from air photos taken by USN OpHjp, 1946–47, and named by the US-ACAN for Earl T. Apfel, professor of geology at Syracuse University, who served as geologist with the USN OpWml parties, 1947–48, which established astronomical control stations along Queen Mary, Knox and Budd Coasts.

Aphrodite Glacier 68°47'S, 64°32'W

A glacier 15 mi long flowing N to the E coast of Antarctic Peninsula 3 mi W of Victory Nunatak. The lower portion of the feature was first plotted by W.L.G. Joerg from aerial photographs taken by Sir Hubert Wilkins in Dec. 1928 and Lincoln Ellsworth in Nov. 1935. The glacier was subsequently photographed by RARE in Dec. 1947 (Trimetrogon air photography) and surveyed by FIDS in Dec. 1958 and Nov. 1960. Named by UK-APC after Aphrodite, goddess of love in Greek mythology.

Apocalypse Peaks 77°23'S, 160°51'E

Group of peaks with a highest point of 2,360 m, standing E of Willett Range and between the Barwick and Balham Valleys, in Victoria Land. So named by the VUWAE (1958–59) because the peaks are cut by talus slopes which gives them the appearance of the "Riders of the Apocalypse."

Apollo Glacier 68°50'S, 64°45'W

A glacier, 9 mi long, flowing NE and joining the lower part of Aphrodite Glacier 2 mi from the E coast of Antarctic Peninsula. The lower part of this glacier was first plotted by W.L.G. Joerg from aerial photographs taken by Sir Hubert Wilkins in Dec. 1928 and Lincoln Ellsworth in Nov. 1935. The glacier was subsequently photographed by RARE in Dec. 1947 (Trimetrogon air photography) and roughly surveyed by FIDS in Nov. 1960. Named by UK-APC after Apollo, the god of manly youth and beauty in Greek mythology.

Apollo Ice Rise: see Apollo Island 70°15'S, 1°55'W

Apollo Island 70°15'S, 1°55'W

A small ice-covered island about 18 mi ENE of Blåskimen Island in the NW part of the Fimbul Ice Shelf, Queen Maud Land. The island is 10 mi ENE of the site of the South African Sanae Station. The name Apollo appears to be first used on a South African map of 1969. Not: Apollo Ice Rise.

Apollo Peak 77°30'S, 160°48'E

A dolerite capped peak rising to 1,900 m W of Mount Electra in the Olympus Range, Victoria Land. The peak was named by the NZ-APC in 1984 after work carried out by the NZARP. Named after the god Apollo, in association with other names from Greek mythology in this range.

Apolotok, Mount 72°15'S, 164°29'E

A high, prominent red granite peak, 2,555 m, in the Salamander Range, Freyberg Mountains. The name is of Eskimo origin, meaning "the big red one," and was given by the Northern Party of NZGSAE, 1963–64.

Apostrophe Island 73°31'S, 167°26'E

Small ice-covered island lying close off Spatulate Ridge in Lady Newnes Bay, Victoria Land. The name is descriptive of the appearance of the island in plan and was given by NZ-APC in 1966.

Appalachia Nunataks 69°44'S, 71°04'W

Nunataks rising to c. 600 m on the W side of Elgar Uplands, Alexander Island. Named by UK-APC in 1977 after the Delius composition *Appalachia* (1902), in association with Delius Glacier (q.v.) and the names of composers in this area.

Appleby, Point 67°25'S, 59°36'E

Point on the western side of an unnamed island lying 0.8 mi S of Warren Island in William Scoresby Bay. Discovered, charted and named by DI personnel on the *William Scoresby* in Feb. 1936, as a point on the eastern shore of the bay. Later mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, as a point on an island near the eastern side of the bay.

Aragay, Isla: see Gulch Island 63°59'S, 61°29'W

Arago Glacier 64°51'S, 62°23'W

Glacier flowing into Andvord Bay just NW of Moser Glacier, on the W coast of Graham Land. Mapped by the FIDS from air photos taken by Hunting Aerosurveys Ltd. in 1956–57. Named by the UK-APC in 1960 for Dominique-François-Jean Arago (1786–1853), French geodesist who first demonstrated the application of photography to mapmaking in 1839.

Arai Terraces 83°12'S, 163°36'E

A series of crevassed terraces and icefalls close southward of Fazekas Hills, near the head of Lowery Glacier. So named by the NZGSAE (1959–60) because the feature is a natural barrier to sledge travel which the party was unable to traverse. Arai is the Maori term for barrier.

Aramburu, Bahía: see Brandy Bay 63°50'S, 57°59'W

Aramis Range 70°37'S, 67°00'E

The third range south in the Prince Charles Mountains, situated 11 mi SE of the Porthos Range and extending for about 30 mi in a SW-NE direction. First visited in January 1957 by ANARE

southern party led by W.G. Bewsher, who named it for a character in Alexander Dumas' novel *The Three Musketeers*, the most popular book read on the southern journey.

Archambault Ridge 73°42'S, 162°55'E

A ridge which descends from the Deep Freeze Range to Campbell Glacier between Rainey and Recoil Glaciers in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Lt. John L. Archambault, USN, medical officer at McMurdo Station, 1967.

Archangel Nunataks: see Arkhangel'skiy Nunataks 69°28'S, 156°30'E

Archer, Cape 76°51'S, 162°52'E

Cape which marks the N side of the entrance to Granite Harbor on the coast of Victoria Land. Named by the Northern Party of the BrAE (1910–13) for W.W. Archer, chief steward of the expedition.

Archer, Mount 69°12'S, 157°39'E

A rock peak immediately S of Archer Point on the W side of Harald Bay. The peak was mapped from air photos taken in Feb. 1959 by the ANARE (*Magga Dan*) led by Phillip Law. Named after Archer Point.

Archer Glacier 65°10'S, 63°05'W

Glacier flowing NW into the head of Bolsón Cove, Flandres Bay, on the W coast of Graham Land. First charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for Frederick S. Archer (1813–57), English architect who in 1849 invented the wet collodion process of photography, the first practical process on glass.

Archer Peak 71°52'S, 171°10'E

Peak, 110 m, on the SW extremity of Possession Island. Named by the BrAE, 1898–1900, presumably for A. Archer, Esq., of Australia, mentioned in the preface to Borchgrevink's *First on the Antarctic Continent*, or for Colin Archer who designed Borchgrevink's vessel, the *Southern Cross*. Not: Anchor Peak.

Archer Point 69°11'S, 157°39'E

A rocky point on the coast marking the W side of Harald Bay. Discovered in Feb. 1911 by Lt. H.L.L. Pennell, RN, in the *Terra Nova*, expedition ship of the BrAE, 1910–13, under Scott. Named after W.W. Archer, chief steward of the expedition.

Archibald Point 63°12'S, 56°40'W

An exposed rocky point on the SW side of Bransfield Island in Antarctic Sound. Named by UK-APC (1963) for George K. Archibald, first officer of RRS *Shackleton*, one of the BAS ships.

Arch Pond 54°14'S, 36°30'W

A pond between Burnet Cove and Poa Cove, to the E of Maiviken, South Georgia. Named by UK-APC from the natural arch in the rocky point just W of the pond.

Arcona, Cape: see Arkona, Cape 53°10'S, 73°26'E

Arcondo, Cerro: see Passes Peak 63°27'S, 57°03'W

Arcondo, Glacier: see Russell West Glacier 63°40'S, 58°50'W

Arcondo Nunatak 82°08'S, 41°37'W

A nunatak, 780 m, standing 5 mi S of Mount Spann in the Panzarini Hills portion of the Argentina Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–67. Named by US-ACAN for Mayor Pedro Arcondo, Argentine officer in charge at General Belgrano Station, 1959–61.

Arctowski Cove 62°09'S, 58°29'W

Small cove at the SE side of Point Thomas in Admiralty Bay, King George Island. Named by a Polish Antarctic Expedition (1977–79) after Henryk Arctowski, Polish meteorologist with the BelgAE, 1897–99, and in association with the Henryk Arctowski research station on Point Thomas.

Arctowski Nunatak 65°06'S, 60°00'W

Nunatak 2 mi NW of Hertha Nunatak in the Seal Nunataks group, off the E coast of Antarctic Peninsula. Charted by the SwedAE under Nordenskjöld during a sledge journey in 1902, and named by him for Henryk Arctowski, Polish geologist, oceanographer, and meteorologist of the BelgAE, 1897–99.

Arctowski Peak 73°44'S, 61°28'W

A somewhat isolated ice-covered peak, 1,410 m, standing 8 mi WSW of the head of Howkins Inlet, on the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by members of the USAS. During 1947 the peak was photographed from the air by members of the RARE, under Ronne, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Henryk Arctowski.

Arctowski Peninsula 64°45'S, 62°25'W

Peninsula, 15 mi long in a N-S direction, lying between Andvord and Wilhelmina Bays on the W coast of Graham Land. Discovered by the BelgAE, 1897–99, under Gerlache. The name, for Henryk Arctowski of that expedition, was suggested by the US-ACAN for this hitherto unnamed feature. Not: Península Arctowsky.

Arctowsky, Peninsula: see Arctowski Peninsula 64°45'S, 62°25'W

Ardery Island 66°22'S, 110°27'E

Steep, rocky island, 0.6 mi long, lying 1.1 mi W of Odbert Island in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Maj. E.R. Ardery, Army Medical Corps observer who assisted USN OpWml parties in establishing astronomical control stations between Wilhelm II Coast and Budd Coast during the 1947–48 season.

Ardley Cove 62°12'S, 58°57'W

A cove that lies N of Ardley Island (q.v.) in Maxwell Bay, King George Island. It was named "Caleta Ardley" by an Argentine expedition (c. 1957) in association with Ardley Island.

Ardley Island 62°13'S, 58°56'W

Island 1 mi long, lying in Maxwell Bay close off the SW end of King George Island, in the South Shetland Islands. Charted as a peninsula in 1935 by DI personnel of the *Discovery II* and named for Lt. R.A.B. Ardley, RNR, officer on the ship in 1929–31 and 1931–33. Air photos have since shown that the feature is an island. Not: Ardley Peninsula, Península Hardley.

Ardley Peninsula: see Ardley Island 62°13'S, 58°56'W

Arena Corner 69°51'S, 68°02'W

An arcuate nunatak at the N end of the Traverse Mountains, 2 mi E of McHugo Peak, on the Rymill Coast, Palmer Land. The name is descriptive of the shape of this feature, which serves as a landmark in the area. Named in 1977 by the UK-APC.

Arena Glacier 63°24'S, 57°03'W

Glacier 3 mi long, flowing NE from Mount Taylor into Hope Bay 2 mi SW of Sheppard Point, at the extremity of Trinity Peninsula. Mapped in 1948 and 1955 by the FIDS and so named by them because the flat ice floor of the glacier's upper half, surrounded by the steep slopes of Twin Peaks, Mount Taylor and Blade Ridge, resembles an arena.

Arenales, Canal: see Lewis Sound 66°20'S, 67°00'W

Arena Saddle 77°53'S, 160°48'E

A saddle 1 mi W of Altar Mountain, situated at mid-point on the E-W ridge which forms the head of Arena Valley in the Quartermain Mountains, Victoria Land. Named in association with Arena Valley. The name was approved by the NZ-APC from a proposal by C.T. McElroy who, with G. Rose and K.J. Whitby, carried out geological work in these mountains, 1980-81.

Arena Valley 77°50'S, 160°59'E

An ice-free valley, between East Beacon and New Mountain, which opens to the S side of Taylor Glacier in Victoria Land. Given this descriptive name by the VUWAE, 1958-59.

Arenite Ridge 69°41'S, 69°32'W

Steep-sided rock and snow ridge in northern Alexander Island, extending 15 mi in a N-S direction and forming the eastern wall of Toynbee Glacier. The ridge includes Mount Tyrrell and Mount Tilley. Named by the UK-APC in 1977 from the sandstone-type rocks that form this feature.

Ares Cliff 71°49'S, 68°15'W

A cliff formed of pale-colored sandstone which rises to about 500 m, located E of Mars Glacier and 1 mi N of Two Step Cliffs on the E side of Alexander Island. The feature was mapped from trimetrogon air photography taken by RARE, 1947-48, and from survey by FIDS, 1948-50. Named by UK-APC in association with Mars Glacier after the Greek god of war, Ares.

Areta Rock 82°06'S, 41°05'W

A rock 3 mi SE of Mount Spann in the Panzarini Hills portion of the Argentina Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-67. Named by US-ACAN for Lt. Eduardo Ferrin Areta, Argentine officer in charge at Ellsworth Station, winter 1961.

Argentina Range 82°20'S, 42°00'W

A range of rock peaks and bluffs, 42 mi long, lying 35 mi E of the N part of Forrester Range in the NE portion of the Pensacola Mountains. Discovered and photographed on Jan. 13, 1956 in the course of a USN transcontinental nonstop plane flight from McMurdo Sound to Weddell Sea and return. Named by US-ACAN after Argentina, which for many years from 1955 maintained a scientific station on the Filchner Ice Shelf at the General Belgrano or Ellsworth Station site. The entire Pensacola Mountains were mapped by USGS in 1967 and 1968 from ground surveys and USN tricamera photographs taken in 1964.

Argentine Islands 65°15'S, 64°16'W

Group of islands 5 mi SW of Petermann Island and 4 mi NW of Cape Tuxen, in the Wilhelm Archipelago. Discovered by the FrAE, 1903-05, under Charcot, and named by him for the Argentine Republic in appreciation of that government's generosity and kindness to his expedition. The BGLE under Rymill was based in the Argentine Islands in 1935 and conducted a thorough survey of them. Not: Iles Argentines.

Argentines, Iles: see Argentine Islands 65°15'S, 64°16'W

Argentino, Canal: see Lientur Channel 64°50'S, 63°00'W

Argentino Channel 64°54'S, 63°01'W

Channel between Bryde Island and the W coast of Graham Land, connecting Paradise Harbor with Gerlache Strait. First roughly charted by the BelgAE, 1897-99. The name "Canal Argentino" appears for the feature on an Argentine government chart of 1950. Not: Brazo Sur, Ferguson Channel.

Argo Glacier 83°22'S, 157°30'E

A glacier in the Miller Range, 10 mi long, flowing NE to enter Marsh Glacier just S of Macdonald Bluffs. Named by NZGSAE (1961-62) after the vessel sailed by Jason in Greek mythology.

Argonaut Glacier 73°13'S, 166°42'E

A tributary glacier about 10 mi long in the Mountaineer Range of Victoria Land. It flows E to enter Mariner Glacier just N of Engberg Bluff. Named by NZGSAE, 1962-63, in association with Aeronaut, Cosmonaut and Cosmonette Glaciers.

Argo Point 66°15'S, 60°55'W

Prominent rock point rising steeply to 260 m on the E side of Jason Peninsula, 22 mi NE of Veier Head on the E coast of Graham Land. Probably first seen by C.A. Larsen in 1893. Surveyed by the FIDS in 1953 and named by the UK-APC in 1956. The name derives from association with Jason Peninsula; Jason sailed in the *Argo* to search for the golden fleece.

Argosy Glacier 83°08'S, 157°35'E

Glacier about 15 mi long, flowing E through Miller Range to enter Marsh Glacier N of Kreiling Mesa. Named by the NZGSAE (1961-62).

Arguindegui, Estrecho: see Picnic Passage 64°20'S, 56°55'W

Arguindeguy, Estrecho: see Picnic Passage 64°20'S, 56°55'W

Argus, Dome 81°00'S, 77°00'E

The highest ice feature in Antarctica, comprising a dome or eminence of just over 4,000 m elevation, located near the center of East Antarctica and approximately midway between the head of Lambert Glacier and the South Pole. At first called "Dome A," details of the morphology of this feature were determined by the SPRI-NSF-TUD airborne radio echo sounding program, 1967-79. Named by SPRI from Greek mythology; Argus built the ship in which Jason and the Argonauts traveled. Not: Dome A.

Argus, Mount 68°53'S, 63°52'W

A large isolated mountain mass, surmounted by three separate peaks, the highest 1,220 meters. It stands between Poseidon Pass and Athene Glacier, 10 mi WNW of Miller Point, in northeastern Palmer Land. The mountain was photographed from the air by the U.S. Antarctic Service on September 28, 1940. It was the subject of geological investigation by A.G. Fraser of BAS in 1961.

Named by UK-APC (1963) after the son of the god Zeus in Greek mythology. Not: Mount Angus.

Ariel, Mount 71°22'S, 68°40'W

Peak, 1,250 m, marking the S limit of Planet Heights and overlooking the N side of Uranus Glacier in the E part of Alexander Island. Probably first seen by Lincoln Ellsworth, who flew directly over it and photographed segments of this coast on Nov. 23, 1935. First mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. So named by the UK-APC because of its association with Uranus Glacier, Ariel being one of the satellites of Uranus.

Ark, The 80°43'S, 24°47'W

Rock summit, 1,790 m, in the central part of the Read Mountains, in the Shackleton Range. First mapped in 1957 by the CTAE. The name, given by the UK-APC, is descriptive of its shape when viewed from the west.

Arkell Cirque 80°41'S, 24°08'W

A large cirque on the south face of the central Read Mountains, Shackleton Range. Photographed from the air by U.S. Navy in 1967 and surveyed from the ground by BAS, 1968–71. Named by the UK-APC after William J. Arkell (1904–58), English geologist; specialist in Jurassic stratigraphy and paleontology.

Arkhangel'skiy Nunataks 69°28'S, 156°30'E

A group of scattered rock outcrops about 15 mi W of the central part of Lazarev Mountains. Photographed by USN Operation Highjump, 1946–47, the Soviet Antarctic Expedition, 1958, and ANARE, 1959. The largest of the outcrops had been named by the Soviet expedition after Soviet geologist A.D. Arkhangel'skiy. The broader application of the name to the entire group follows the recommendation by ANCA. Not: Archangel Nunataks, Gora Arkhangel'skogo, White Nunataks.

Arkhangel'skogo, Gora: see Arkhangel'skiy Nunataks 69°28'S, 156°30'E

Arkona, Cape 53°10'S, 73°26'E

A rocky headland between the mouths of Lied Glacier and Gotley Glacier on the SW side of Heard Island. The feature appears to be roughly charted on an 1860 sketch map prepared by Capt. H.C. Chester, American sealer operating in the area during this period. The German frigate *Arkona* (Captain von Reibnitz) examined the S coast of the island in Feb. 1874 and, in Melbourne, provided the officers of HMS *Challenger* with a position for the cape which was used in preparation of the Admiralty chart. In so doing, however, the misspelling "Cape Arcona" was used on the British chart. Not: Cape Arcona.

Arkticheskiy Institut Rocks 71°18'S, 11°27'E

A group of rocks lying 8 mi N of Nordwestliche Insel Mountains at the NW extremity of the Wohlthat Mountains, Queen Maud Land. Discovered and photographed by the GerAE, 1938–39. Mapped by the Soviet Antarctic Expedition, 1960–61, and named for that nation's Arctic Institute.

Armada Argentina, Macizo: see Patuxent Range 84°43'S, 64°30'W

Armadillo Hill 68°07'S, 66°22'W

Ice-covered hill which rises to 1,760 m and projects 120 m above the surrounding ice sheet, situated on the Graham Land plateau

4 mi ESE of the head of Northeast Glacier and 8 mi NE of the head of Neny Fjord. First roughly surveyed by the BGLE, 1934–37, and resurveyed in 1940 by sledging parties of the USAS on whose field charts the hill is labeled "Sawtooth." Named Armadillo Hill by the FIDS following its 1946–47 survey, because when viewed from the NE the tumbled ice blocks on the summit and general shape of the hill resemble the side view of an armadillo. Not: Sawtooth.

Armagost, Mount 71°38'S, 166°01'E

One in the series of peaks (2,040 m) that rise between Mirabito Range and Homerun Range in northern Victoria Land. This peak stands 9 mi SW of Mount LeResche. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Chief Equipment Operator Harry M. Armagost, USN, who wintered over at McMurdo Station in 1963 and 1967.

Årmålsryggen 73°12'S, 2°08'W

A ridge at the W end of the Neumayer Cliffs in Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Årmålsryggen (the year's goal ridge).

Armbruster Rocks 73°57'S, 116°49'W

Exposed rocks on the W side of Wright Island, 9 mi SW of Cape Felt, off Bakutis Coast, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1959–67. Named by US-ACAN after Lt. Robert B. Armbruster, USN, Communications Officer at Christchurch, N.Z., Operation Deep Freeze, 1963 and 1964.

Armitage, Cape 77°51'S, 166°40'E

Cape forming the S end of Hut Point Peninsula and the southernmost point on Ross Island. Discovered by the BrNAE, 1901–04, under Scott, and named by him for Lt. (later Captain) Albert B. Armitage, second in command and navigator on the *Discovery*.

Armitage, Mount: see Armytage, Mount 76°02'S, 160°45'E

Armitage Saddle 78°09'S, 163°15'E

The saddle at the head of Blue Glacier, overlooking the Howchin and Walcott Glaciers which drain toward Walcott Bay in the Koettlitz Glacier. The saddle is at the S end of the "Snow Valley" (upper part of Blue Glacier) mapped by Armitage in 1902, and subsequently wrongly omitted from maps of the BrAE, 1910–13. The New Zealand Blue Glacier Party of the CTAE, 1956–58, established a survey station on the saddle in September 1957. They named it for Lt. A.B. Armitage, second-in-command of the BrNAE, 1901–04, in recognition of his exploration in this area.

Armlenet Ridge 71°59'S, 2°52'E

Ridge trending N-S for 3 mi between Stabben Mountain and Jutulhogget Peak, forming the E arm of Jutulsessen Mountain in the Gjelsvik Mountains, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and by NorAE (1958–59) and named Armlenet (the armrest).

Armonía, Caleta: see Harmony Cove 62°19'S, 59°12'W

Armonía, Punta: see Harmony Point 62°19'S, 59°15'W

Armonini Nunatak 71°11'S, 65°51'E

A partly snow-covered rock outcrop about 5 mi ESE of Mount Reu in the Prince Charles Mountains. There is an area of moraine on the NW side. Plotted from ANARE air photos taken in 1960. Named for G.C. Armonini, weather observer at Davis Station in 1962.

Armour Inlet 73°38'S, 124°39'W

Ice-filled inlet indenting the N side of Siple Island just W of Armour Peninsula, along the coast of Marie Byrd Land. The inlet was first roughly delineated from air photos taken by USN OpHjp in January 1947. Named by US-ACAN for the Armour Institute of Technology, Chicago, which donated funds to the USAS, 1939-41, for purchase of the Snow Cruiser.

Armour Peninsula 73°42'S, 124°10'W

An ice-covered peninsula situated immediately E of Armour Inlet on Siple Island, along the coast of Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN in association with Armour Inlet.

Armstrong, Mount 85°50'S, 157°12'W

Mountain, 2,330 m, standing 5 mi SSE of Mount Goodale in the Hays Mountains. Mapped by USGS from ground surveys and USN air photos, 1960-64. Named by US-ACAN for Thomas B. Armstrong, USARP representative at Palmer Station, summer 1966-67.

Armstrong Glacier 71°31'S, 67°30'W

A glacier flowing from the south side of Mount Bagshawe westward into George VI Sound. It provides the only known safe route for mechanical vehicles from George VI Sound to the Palmer Land plateau. Named by UK-APC for Edward B. Armstrong, BAS surveyor at Stonington Island, 1964-65.

Armstrong Peak 66°24'S, 53°23'E

Peak, 1,470 m, standing 15 mi SE of Mount Codrington in Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936-37, and named Austnuten (the east peak). Rephotographed by ANARE in 1956. An astrofix was obtained nearby in December 1959 by J.C. Armstrong, ANARE surveyor at Mawson, for whom the feature was renamed by ANCA in 1960. Not: Austnuten.

Armstrong Platform 70°32'S, 160°10'E

A mainly ice-covered height, or small plateau, which is a northeastward extension of Pomerantz Tableland. The feature is 5 mi long and ranges from 1,200 to 1,800 m in elevation. It rises directly north of Helfferich Glacier in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960-62. Named by US-ACAN for Richard L. Armstrong, USARP geologist at McMurdo Station, 1967-68.

Armstrong Reef 65°54'S, 66°18'W

A reef, which encompasses a large number of small islands and rocks, extending for 5 mi from the SW end of Renaud Island, in the Biscoe Islands. First accurately shown on an Argentine government chart of 1957. Named by the UK-APC for Terence E. Armstrong, English sea ice specialist. Not: Arrecife Espinosa.

Army Range: see LeMay Range 70°55'S, 69°20'W

Armytage, Mount 76°02'S, 160°45'E

Dome-shaped mountain, 1,855 m, standing N of Mawson Glacier and 14 mi W of Mount Smith in Victoria Land. First charted by the BrAE (1907-09) which named it for Bertram Armytage, a member of the expedition who was in charge of the ponies. Not: Mount Armitage.

Arneb Glacier 72°25'S, 170°02'E

Glacier 3 mi long and 2 mi wide, situated in a cliff-walled bay between Hallett Peninsula and Redcastle Ridge and flowing NW into Edisto Inlet as a floating ice tongue. Named by the NZGSAE, 1957-58, for the USS *Arneb*, which in the 1957 season carried the buildings and stores for the establishment of Hallett station and revisited the station in subsequent seasons.

Arnel Bluffs 68°07'S, 56°12'E

Series of rock outcrops in a steeply-falling ice scarp S of the Leckie Range. Plotted in December 1958 by an ANARE dog-sledge party led by G.A. Knuckey. Named by ANCA for R.R. Arnel, geophysical assistant at Mawson Station, 1958.

Arne Nunatak 71°43'S, 8°20'E

The largest of the Hemmestad Nunataks, in the Drygalski Mountains of Queen Maud Land. Plotted from air photos by the GerAE (1938-39). Mapped from surveys and air photos by NorAE (1956-60) and named for Arne Hemmestad, mechanic with NorAE (1956-57). Not: Arnesteinen.

Arnesteinen: see Arne Nunatak 71°43'S, 8°20'E

Arnold Cove 77°25'S, 163°46'E

A cove along the W margin of McMurdo Sound between Gneiss Point and Marble Point, Victoria Land. Named by US-ACAN for Charles L. Arnold, leader of a USARP party that made an engineering study of Marble Point, McMurdo Station and Williams Field in the 1971-72 season.

Arnoldy Nunatak 74°54'S, 71°12'W

One of the Sky-Hi Nunataks (q.v.) lying 1 mi S of Mount Cahill in Ellsworth Land. Named by US-ACAN in 1987 after Roger L. Arnoldy, physicist, University of New Hampshire, Durham, NH; USARP Principal Investigator in upper atmospheric physics at Siple Station and South Pole Station for many years from 1973.

Aronson Corner 80°29'S, 20°56'W

The cliffed extremity of a snow-capped ridge between Mummy Cliff and Chevreul Cliffs in Pioneers Escarpment (q.v.), Shackleton Range. Photographed from the air by the U.S. Navy, 1967. Surveyed by BAS, 1968-71. In association with the names of pioneers of polar life and travel, named by the UK-APC after Louis V. Aronson (1870-1940), American founder of the Ronson Corporation, who in about 1910 developed the first practical petrol lighter, known originally as the "trench match."

Arpón, Caleta: see Harpon Bay 54°16'S, 36°37'W

Arpun, Roca: see Harpun Rocks 64°19'S, 62°59'W

Arrecife, Punta: see Reef Point 59°27'S, 27°13'W

Arriagada, Islote: see Alcock Island 64°14'S, 61°08'W

Arribista, Punta: see Parvenu Point 67°34'S, 67°17'W

Arrival Heights 77°49'S, 166°39'E

Clifflike heights which extend in a NE-SW direction along the W side of Hut Point Peninsula, just N of Hut Point. Discovered and named by the BrNAE, 1901-04, under Scott. The name suggests the expedition's arrival at its winter headquarters at nearby Hut Point. Not: Harbour Heights.

Arrol Icefall 64°35'S, 60°40'W

A steep icefall about 3 mi long, originating on the S side of Detroit Plateau, Graham Land, about 8 mi NW of Cape Worsley. Mapped from surveys by FIDS (1960-61). Named by UK-APC after the Arrol-Johnston car, which was adapted for use by Shackleton's Antarctic expedition (1907-09) and was the first mechanical transport used in Antarctica.

Arronax, Mount 67°40'S, 67°22'W

Ice-covered, pointed peak, 1,585 m, standing 6 mi WSW of Nautilus Head and dominating the N part of Pourquoi Pas Island, off the W coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS and named after Prof. Pierre Arronax, central character in Jules Verne's *Twenty Thousand Leagues Under the Sea*. A number of features on the island are named for characters in the book.

Arrowhead Nunatak 82°34'S, 157°22'E

Long, narrow nunatak 7 mi SE of Sullivan Nunatak near the head of Nimrod Glacier. Mapped and so named by the northern party of the NZGSAE (1960-61) because in plan it resembles an arrowhead.

Arrowhead Range 73°24'S, 164°00'E

A mountain range 20 mi long, situated just N of Cosmonaut Glacier and W of Aviator Glacier in the Southern Cross Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. The name was applied by US-ACAN and alludes to the shape of the eastern end of the range.

Arrow Island: see Pila Island 67°35'S, 62°43'E

Arrowsmith, Mount 76°46'S, 162°18'E

A jagged rock peak near Mount Perseverance, 2 mi along a ridge running NE from that mountain, and a like distance E of Mount Whitcombe in Victoria Land. Mapped in 1957 by the N.Z. Northern Survey Party of the CTAE (1956-58). Named by them for its similarity to the Canterbury, N.Z., mountain of that name, and in association with Mount Whitcombe (q.v.).

Arrowsmith Peninsula 67°15'S, 67°15'W

Peninsula about 40 mi long on the W coast of Graham Land, W of Forel and Sharp Glaciers. Surveyed by FIDS in 1955-58 and named for Edwin P. Arrowsmith, Governor of the Falkland Islands.

Arruiz Glacier 70°39'S, 162°09'E

A tributary glacier in the Explorers Range, Bowers Mountains. It flows WNW from Stanwix Peak and enters Rennick Glacier N of Frolov Ridge. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Lt. Alberto J. Arruiz, Argentine IGY observer, a Weather Central meteorologist at Little America V in 1958.

Arsen'yeva, Skaly: see Arsen'yev Rocks 71°51'S, 11°12'E

Arsen'yev Rocks 71°51'S, 11°12'E

Rock outcrops lying among the morainal deposits 2.5 mi W of Mount Deryugin in the Liebknecht Range, Humboldt Mountains, in Queen Maud Land. Mapped from air photos and surveys by SovAE, 1960-61, and named after Russian geographer K.I. Arsen'yev. Not: Skaly Arsen'yeva.

Art Glacier: see Alt Glacier 71°06'S, 162°31'E

Arthur, Bahía: see Wylie Bay 64°44'S, 64°10'W

Arthur, Mount 67°39'S, 49°52'E

Mountain, 1,290 m, just W of Mount Douglas at the W end of the Scott Mountains, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for J. Arthur, electrical fitter at Mawson station in 1960.

Arthur Davis Glacier: see Arthur Glacier 77°03'S, 145°15'W

Arthur Glacier 77°03'S, 145°15'W

Valley glacier about 25 mi long, flowing W to Sulzberger Ice Shelf between the Swanson Mountains on the N and Mounts Rea and Cooper on the S, in the Ford Ranges, Marie Byrd Land. Discovered by members of West Base of the USAS, in aerial flights and from ground surveys in November-December 1940. Named by US-SCAN for R. Admiral Arthur C. Davis, USN, a leader in aviation in the U.S. Navy. Not: Arthur Davis Glacier, Davis Glacier, Warpasiljo Glacier.

Arthur Harbor 64°46'S, 64°04'W

Small harbor entered between Bonaparte and Norsel Points on the SW coast of Anvers Island, in the Palmer Archipelago. Roughly charted by the FrAE under Charcot, 1903-05. Surveyed in 1955 by the FIDS, who established a station near the head of the harbor. Named by the UK-APC in 1956 for Oswald R. Arthur, then Governor of the Falkland Islands.

Arthur Owen, Mount: see Owen, Mount 74°25'S, 62°30'W

Arthurson Bluff 70°45'S, 166°05'E

A mostly ice-covered bluff overlooking the confluence of Ludvig Glacier and Kirkby Glacier from the W, near the N coast of Victoria Land. A helicopter landing was made here by an ANARE party led by Phillip Law, 1962. Named by ANARE for Capt. J. Arthurson, helicopter pilot with the expedition.

Arthurson Ridge 69°22'S, 158°30'E

A short coastal ridge or promontory, a northern extension from the Wilson Hills, rising between Cook Ridge and the terminus of McLeod Glacier at the head of Davies Bay. Photographed from aircraft of USN Operation Highjump, 1946-47. First visited by an ANARE airborne field party in March 1961. Named for J. Arthurson, helicopter pilot with ANARE (*Magga Dan*, 1961) led by Phillip Law.

Arthur Sulzberger Bay: see Sulzberger Bay 77°00'S, 152°00'W

Ascent Glacier 83°13'S, 156°24'E

Glacier, 2 mi wide, flowing N to enter Argosy Glacier in the Miller Range just E of Milan Ridge. Named by the NZGSAE (1961-62) who used this glacier to gain access to the central Miller Range.

Asconapé, Punta: see Hooker, Cape 63°18'S, 61°56'W

Asgard Range 77°37'S, 161°30'E

A mountain range dividing Wright Valley from Taylor Glacier and Taylor Valley, in Victoria Land. Named by the VUWAE (1958–59) after the home of the Norse gods.

Ash, Mount 79°57'S, 156°39'E

Mountain, 2,025 m, in the Darwin Mountains, overlooking the N side of Hatherton Glacier 11 mi WSW of Junction Spur. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for Ralph E. Ash, mechanic, a member of the U.S. McMurdo-Pole traverse party, 1960–61.

Ashen Hills 57°48'S, 26°43'W

A ridge of rounded hills of gullied ash terminating in Natriss Point at the SE end of Saunders Island, South Sandwich Islands. The name applied by UK-APC in 1971 refers to the ashy composition and pale color of the hills.

Asher Peak 75°44'S, 129°11'W

A peak (2,480 m) in the SW portion of Mount Flint in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Bill F. Asher, CECS, USN, Senior Chief Construction Electrician at Little America V in 1958. He was Nuclear Power Plant Operator and Instrument Maintenance Supervisor with the nuclear power unit at McMurdo Station, 1969.

Ashley, Mount 54°07'S, 37°21'W

Mountain, 1,155 m, standing S of the Bay of Isles, South Georgia, between the heads of Grace and Lucas Glaciers. The name Clifford Ashley Mountains was used by Robert Cushman Murphy for a number of scattered mountains and ridges on the S side of the Bay of Isles, following his visit to South Georgia in 1912–13. The SGS, 1955–56, reported that a group name for these features is unsuitable and an altered form of the name was applied to the highest of the mountains. Mount Ashley is named for Clifford W. Ashley, American whaling historian who wrote *The Yankee Whaler* and *Whale Ships of New Bedford*. Not: Clifford Ashley Mountains.

Ashley Snow Nunataks: see Snow Nunataks 73°35'S, 77°15'W

Ash Point 62°28'S, 59°39'W

Point which marks the SE side of the entrance to Discovery Bay, on Greenwich Island in the South Shetland Islands. Charted and named descriptively by DI personnel on the *Discovery II*, 1934–35. Not: Punta Bascope, Punta Ceniza.

Ashton Glacier 70°44'S, 61°57'W

Glacier 9 mi long, which flows ESE from Mount Thompson to the NW side of Lehrke Inlet, on the E coast of Palmer Land. The glacier was photographed from the air in December 1940 by the USAS, and was probably seen by the USAS ground survey party which explored this coast. A joint party consisting of members of the RARE and the FIDS charted the glacier in 1947. Named by the FIDS for L. Ashton, carpenter with the FIDS at the Port Lockroy and Hope Bay bases in 1944–45 and 1945–46, respectively.

Ashtray Basin 77°52'S, 160°58'E

A small basin near the head of Arena Valley in Victoria Land. Named by a field party of the University of New South Wales, Australia, that worked in this area in 1966–67. The name is reported to be descriptive of characteristic formations on the site.

Ashworth, Mount 70°56'S, 163°05'E

A peak (2,060 m) 4 mi ENE of Mount Ford in the Bowers Mountains. Named by ANARE for Squadron Leader N. Ashworth, RAAF, officer in charge of the Antarctic Flight with ANARE (*Thala Dan*), 1962, led by Phillip Law, which explored the area.

Asimutbreen Glacier 71°23'S, 13°42'E

A small, steep tributary glacier to Vangengeym Glacier, descending SE and then NE between Solhøgdene Heights and Skuggekammen Ridge, in the eastern Gruber Mountains of the Wohlthat Mountains, Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named Asimutbreen (the azimuth glacier).

Asman Ridge 77°10'S, 144°48'W

A serrate ridge about 6 mi long on the S side of Arthur Glacier, just N of Bailey Ridge in the Ford Ranges, Marie Byrd Land. Discovered in 1934 on aerial flights of the ByrdAE. Named by the USAS (1939–41) for Adam Asman, a member of the USAS West Base party.

Aspasia Point 54°19'S, 37°06'W

Steep rocky point forming the W extremity of Fanning Ridge, lying 10 mi ESE of Cape Nuñez on the S coast of South Georgia. The feature was named by the UK-APC following mapping by the SGS in 1951–52. The name derives from association with Fanning Ridge. The American armed corvette *Aspasia* under Capt. Edmund Fanning took 57,000 fur seals at South Georgia in 1800–01.

Asphyxia, Mount: see Curry, Mount 56°18'S, 27°34'W

Aspland Island 61°28'S, 55°55'W

Small island 4 mi W of Gibbs Island in the South Shetland Islands. The name dates back to at least 1821 and is now established in international usage. Not: Aspland's Island.

Aspland's Island: see Aspland Island 61°28'S, 55°55'W

Asquith, Mount: see Asquith Bluff 83°30'S, 167°21'E

Asquith Bluff 83°30'S, 167°21'E

A prominent wedge-shaped rock bluff on the W side of Lennox-King Glacier, 4 mi SE of Mount Allen Young. Discovered by the BrAE (1907–09) and named "Mount Asquith" for Lord Oxford and Asquith, Prime Minister, 1908–16, who was instrumental in securing a grant from the United Kingdom Government to pay off the expedition's debts. Not: Mount Asquith.

Assender Glacier 67°36'S, 46°25'E

Glacier flowing W into Spooner Bay in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for Pilot Officer K. Assender, RAAF, pilot at Mawson station in 1959.

Asses Ears 62°19'S, 59°45'W

Three small islands off NW Robert Island, forming the N part of Potmess Rocks (q.v.) in English Strait, South Shetland Islands. Presumably known to early sealers, the feature was charted and named descriptively by personnel on *Discovery II* in 1934–35. Not: Islas Orejas de Burro.

Assistance Bay 54°07'S, 37°09'W

Small bay forming the head of Possession Bay, along the N coast of South Georgia. Named by DI personnel who charted the area during the period 1926–30. Not: Caleta Ayuda.

Astakhov Glacier 70°45'S, 163°21'E

The glacier next S of Chugunov Glacier in the Explorers Range, Bowers Mountains. It flows NE from Mount Hager and enters Ob' Bay just W of Platypus Ridge. Mapped by USGS from surveys and U.S. Navy air photos, 1960–65. Named by US-ACAN for Petr Astakhov, Soviet exchange scientist at the U.S. South Pole Station in 1967.

Astapenko Glacier 70°40'S, 163°00'E

Glacier, 11 mi long, draining the N and NE slopes of Stanwix Peak in the Bowers Mountains and flowing ENE to Ob' Bay. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Pavel D. Astapenko, Soviet IGY observer, a Weather Central meteorologist at Little America V in 1958.

Astarte Horn 71°40'S, 68°52'W

A pyramidal peak at the S end of the N-S range extending to Mount Umbriel, in eastern Alexander Island. The feature was mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. Named by UK-APC in association with nearby Venus Glacier; the goddess Venus being identified with the Phoenician goddess Astarte in mythology.

Astor, Mount 86°01'S, 155°30'W

A prominent peak, 3,710 m, standing 2 mi N of Mount Bowser in the Hays Mountains of the Queen Maud Mountains. Discovered by R. Admiral Byrd on the ByrdAE flight of November 1929 to the South Pole, and named by him for Vincent Astor, contributor to the expedition. Not: Mount Vincent Astor.

Astorhortane: see Astor Rocks 71°48'S, 12°44'E

Astor Island 62°39'S, 61°11'W

Island lying between Rugged Island and Livingston Island in the South Shetland Islands. Named by the UK-APC in 1958 for B. Astor of the American sealer *Jane Maria* from New York who, in 1820–21, collected rock specimens in the South Shetland Islands for the New York Lyceum of Natural History (now American Museum of Natural History).

Astor Rocks 71°48'S, 12°44'E

Two small rock outcrops lying 4 mi SE of Mount Ramenskiy in the SE extremity of the Wohlthat Mountains. Plotted from air photos and surveys by NorAE, 1956–60, and named for Astor Ernsten, a meteorologist with NorAE, 1958–59. Not: Astorhortane.

Astraea Nunatak 71°59'S, 70°25'W

A nunatak 6 mi S of Staccato Peaks in southern Alexander Island. Mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. Named by UK-APC after one of the asteroids lying between the orbits of Mars and Jupiter.

Astro Cliffs 66°40'S, 62°26'W

Rock cliffs 60 m high, situated at the SE extremity of Churchill Peninsula, 6 mi NE of Cape Alexander on the E coast of Graham Land. Surveyed by the FIDS in 1955, they mark the most

southerly point of the survey. The UK-APC name arose from the astronomical fix obtained near the summit which was essential for the control of the survey traverse.

Astro Glacier 82°54'S, 157°20'E

Glacier between Turner Hills and Tricorn Peak in the Miller Range, flowing NE into the Marsh Glacier. Seen by the northern party of the NZGSAE (1961–62) and so named because an astro station was set up on the bluff at the mouth of the glacier in December 1961.

Astrolabe, Aiguille de l': see Astrolabe Needle 64°08'S, 62°36'W

Astrolabe Glacier 66°45'S, 139°55'E

Glacier 4 mi wide and 10 mi long, flowing NNE from the continental ice and terminating at the coast in a prominent tongue at the E side of Géologie Archipelago. Probably first sighted in 1840 by the French expedition under Capt. Jules Dumont d'Urville, although no glaciers were noted on d'Urville's chart of this coast. Photographed from the air by USN OpHjp in January 1947. It was charted by the FrAE, 1949–51, and named after d'Urville's flagship, the *Astrolabe*. Not: Glacier Géologie, Glacier Terra-Nova.

Astrolabe Glacier Tongue 66°42'S, 140°05'E

Prominent glacier tongue about 3 mi wide and 4 mi long, extending NE from Astrolabe Glacier at the E end of Géologie Archipelago. Delineated from air photos taken by USN OpHjp, 1946–47, and named for the French corvette *Astrolabe*.

Astrolabe Island 63°17'S, 58°40'W

Island 3 mi long, lying in Bransfield Strait 14 mi NW of Cape Ducorps, Trinity Peninsula. Discovered by the French expedition, 1837–40, under Capt. Jules Dumont d'Urville, and named by him for his chief expedition ship, the *Astrolabe*.

Astrolabe Island: see Dobrowolski Island 64°36'S, 62°55'W

Astrolabe Needle 64°08'S, 62°36'W

Conspicuous monolith rising 50 m above sea level S of Claude Point, Brabant Island, in the Palmer Archipelago. Discovered by the FrAE under Charcot, 1903–05, and named after the *Astrolabe*, one of the ships of the French expedition under Capt. Jules Dumont d'Urville, 1837–40. Not: Aiguille de l'Astrolabe, Islote Aguja del Astrolabio, Monolito Aguja del Astrolabio.

Astrolabe Subglacial Basin 70°00'S, 136°00'E

A subglacial basin to the S of Adélie Coast and E of Porpoise Subglacial Highlands, trending N-S and containing the thickest ice (c. 4,700 m) measured in Antarctica. The basin was delineated by the SPRI-NSF-TUD airborne radio echo sounding program, 1967–79, and named after *Astrolabe*, the flagship of the French Antarctic Expedition, 1837–40 (Capt. Jules Dumont d'Urville).

Astrolabio, Isla: see Dobrowolski Island 64°36'S, 62°55'W

Astronaut Glacier 73°05'S, 164°05'E

A broad SW flowing tributary to upper Aviator Glacier, joining the latter just W of Parasite Cone in Victoria Land. Named by the northern party of NZGSAE, 1962–63, in association with nearby Aeronaut Glacier.

Astrónomo Romero, Islote: see Romero Rock 63°19'S, 57°57'W

Astro Peak 83°29'S, 57°00'W

A peak, 835 m, standing 1 mi off the W end of Berquist Ridge in the Neptune Range, Pensacola Mountains. So named by US-ACAN because the USGS established an astro control station on this peak during the 1965–66 season.

Astrup, Cape 64°43'S, 63°11'W

Bold, dark-colored bluff marking the N end of Wiencke Island, in the Palmer Archipelago. Discovered by the BelgAE, 1897–99, and named by Gerlache for Eivind Astrup, Norwegian Arctic explorer and member of Robert E. Peary's expeditions to Greenland in 1891–92 and 1893–95. Not: Cap Edwina Astrup.

Astudillo Glacier 64°53'S, 62°51'W

Small glacier flowing into Paradise Harbor between Leith Cove and Skontorp Cove, Danco Coast, Graham Land. The glacier was surveyed by the Chilean Antarctic Expedition (1950–51) which applied the name, probably after an expedition member.

Ataúd, Roca: see Coffin Rock 56°41'S, 27°11'W

Atención, Punta: see Caution Point 65°16'S, 62°01'W

Athelstan, Mount 70°10'S, 69°16'W

Prominent, partly ice-covered mountain, 1,615 m, at the N side of Trench Glacier on a spur which extends E from Douglas Range on the E coast of Alexander Island. The E side of Douglas Range was first photographed from the air on Nov. 23, 1935, by Lincoln Ellsworth, and this feature was mapped from the photos by W.L.G. Joerg. It was roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 and 1949 by the FIDS, and named by them for Athelstan, Saxon king of England, 924–937.

Athene Glacier 68°56'S, 64°00'W

A glacier, 10 mi long, flowing E and merging with the terminus of Casey Glacier where it discharges into Casey Inlet, on the E coast of the Antarctic Peninsula. Photographed from the air by FIDS in Aug. 1947, and by RARE (Trimetrogon air photography) in Dec. 1947. Surveyed by FIDS in Nov. 1960. Named by UK-APC after Athene, daughter of Zeus and goddess of the city of Athens in Greek mythology.

Atherton Islands 62°06'S, 58°59'W

Two small islands lying 2 mi WNW of Bell Point, King George Island in the South Shetland Islands. Charted by DI in 1934–35 and named after Noel Atherton, cartographer in the Admiralty Hydrographic Office at the time; chief Civil Hydrographic Officer, 1951–62.

Atherton Peak 54°07'S, 36°45'W

A peak rising to c. 500 m east of Fortuna Bay, South Georgia. Charted by DI, 1929–30, and named after Noel Atherton, cartographer in the Admiralty Hydrographic Office at that time; Chief Civil Hydrographic Officer, 1951–62.

Athos Range 70°13'S, 64°50'E

The northernmost range in the Prince Charles Mountains of Mac. Robertson Land. It consists of a large number of individual mountains and nunataks that trend east-west for 40 mi along the north side of Scylla Glacier. These mountains were first observed from aircraft of USN Operation Highjump, 1946–47. The western part of the range was first visited by an ANARE party led by J. Béchervaise in November 1955. The range was again visited in December 1956 by the ANARE southern party, 1956–57, led by

W.G. Bewsher, and a depot was established at the eastern extremity. Named after a character in *The Three Musketeers*, a novel by Alexandre Dumas which was the most popular book read on the southern journey. Not: Moonlight Range.

Atka Bay: see Atka Iceport 70°35'S, 7°51'W

Atka Glacier 76°41'S, 161°33'E

The glacier immediately E of Flagship Mountain, draining N into Fry Glacier in Victoria Land. Discovered and named in 1957 by the N.Z. Northern Survey Party of the CTAE, 1956–58. Named after the USS *Atka*, an American icebreaker in the convoy to McMurdo Sound in the 1956–57 season.

Atka Iceport 70°35'S, 7°51'W

An iceport about 10 mi long and wide, marking a more-or-less permanent indentation in the front of the Ekström Ice Shelf on the coast of Queen Maud Land. The feature was photographed from the air and mapped from these photos by NBSAE, 1951–52. It was named by personnel of the USS *Atka*, under Cdr. Glen Jacobsen, which moored here in Feb. 1955 while investigating possible base sites for International Geophysical Year operations. The term iceport was first suggested by the US-ACAN in 1956 to denote ice shelf embayments such as this one, subject to configuration changes, which may offer anchorage or possible access to the upper surface of an ice shelf via ice ramps along one or more sides of the feature. Not: Atka Bay.

Atkinson, Mount 78°39'S, 85°29'W

A prominent mountain rising to c. 3,300 m, 3.5 mi WSW of Mount Craddock in the Sentinel Range, Ellsworth Mountains. Mapped by USGS from surveys and USN aerial photographs, 1957–60. Named by US-ACAN after Richard C. Atkinson, Director, National Science Foundation, 1977–80.

Atkinson Cliffs 71°18'S, 168°55'E

High coastal cliffs, 4 mi long, between the lower ends of Fendley Glacier and Pitkevitch Glacier on the N coast of Victoria Land. The feature was mapped in 1911 by the Northern Party of the BrAE, 1910–13, and named for Dr. Edward L. Atkinson, surgeon of the expedition.

Atkinson Glacier 71°30'S, 167°25'E

A glacier between Findlay Range and Lyttelton Range, Admiralty Mountains, flowing northward into Dennistoun Glacier. Named by the NZ-APC in 1983 after William Atkinson, field assistant, New Zealand Antarctic Division, mechanic with the NZARP geological party to the area, 1981–82, led by R.H. Findlay.

Atlas, Mount 72°44'S, 165°30'E

An extinct volcanic cone at the NE side of Mount Pleiones in The Pleiades, Victoria Land. Named by the NZ-APC in association with Mount Pleiones (q.v.) after Atlas of Greek mythology.

Atlas Cove 53°01'S, 73°22'E

Cove on the N coast of Heard Island, entered between the base of Laurens Peninsula and Rogers Head. Named by American sealers after the schooner *Atlas*, a tender to the *Corinthian* in Capt. Erasmus Darwin Rogers' sealing fleet which landed at Heard Island in 1855. The name appears on a chart by the British expedition under Nares, which visited the island in the *Challenger* in 1874 and utilized the names then in use by the sealers.

Atoll Nunataks 71°21'S, 68°47'W

A group of nunataks on the N side of Uranus Glacier, 3 mi W of Mount Ariel, in eastern Alexander Island. The feature was mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. So named by UK-APC because of the arrangement of the nunataks in a ring.

Atom Rock 66°28'S, 66°26'W

An insular rock 0.5 mi NE of Rambler Island in the Bragg Islands, lying in Crystal Sound off the W coast of Graham Land. Mapped from surveys by FIDS (1958–59). Named by UK-APC in association with Bragg Islands, q.v.

Atriceps Island 60°47'S, 45°09'W

The southernmost of the Robertson Islands, lying 3 mi S of the SE end of Coronation Island in the South Orkney Islands. Named by the FIDS, following their survey of 1948–49, after the colony of blue-eyed shags (*Phalacrocorax atriceps*) nesting on the island.

Attlee Glacier 66°13'S, 63°46'W

Glacier 8 mi long, which flows ESE from the plateau escarpment on the E side of Graham Land to the head of Cabinet Inlet to the N of Bevin Glacier. During December 1947, the glacier was charted from the ground by the FIDS and photographed from the air by the RARE. Named by the FIDS for Rt. Hon. Clement R. Attlee, M.P., British Sec. of State for Dominion Affairs, member of the War Cabinet, and later Prime Minister.

Atwater Hill 66°11'S, 66°38'W

A hill 2.5 mi S of Benedict Point on the E side of Lavoisier Island, Biscoe Islands. Mapped from air photos by FIDASE (1956–57). Named by UK-APC for Wilbur O. Atwater (1844–1907), American physiologist who, with F.G. Benedict, perfected the technique for calorimetric measurement of metabolism.

Atwood, Mount 77°16'S, 142°17'W

Mountain, 1,180 m, at the W edge of the Clark Mountains in the Ford Ranges of Marie Byrd Land. Discovered by the USAS in 1940 on aerial flights from the West Base. Named by the USAS for the late president emeritus W.W. Atwood, Sr., of Clark University, noted geologist and geographer, and his son, W.W. Atwood, Jr., who collaborated with his father in glaciological studies.

Aubert, Mount: see Aubert de la Rue, Mount 53°01'S, 73°22'E

Aubert de la Rue, Mount 53°01'S, 73°22'E

Ice-free hill, 125 m, standing at the S end and surmounting the low isthmus that connects Laurens Peninsula with the main mass of Heard Island. First charted and named by Edgar Aubert de la Rue, French geologist aboard the whale catcher *Kildalkey*, who undertook geological investigations along the N and W sides of the island in January 1929. Later surveyed by the ANARE in 1948. Not: Mount Aubert, Mount de la Rue.

Aucellina Point 54°12'S, 37°24'W

A small point 1.6 mi SE of Cape Rosa on the S coast of South Georgia. Named in 1982 by the UK-APC after a mollusk of the genus *Aucellina*, found in a rich fossil locality nearby.

Audrey Island 68°08'S, 67°07'W

Southernmost island in the Debenham Islands, off the W coast of Graham Land. Discovered by the BGLE, 1934–37, under Rymill,

and named by him for a daughter of Frank Debenham, member of the BGLE Advisory Committee.

Augen Bluffs 83°30'S, 157°40'E

Rock bluffs between Orr Peak and Isocline Hill along the W side of Marsh Glacier, in the Miller Range. So named by the Ohio State University Geological Party, 1967–68, because rocks of the locality include augengneiss.

Aughenbaugh Peak 82°37'S, 52°49'W

A sharp peak, over 1,800 m, standing 0.7 mi NE of Neuburg Peak in southwest Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Nolan B. Aughenbaugh, glaciologist at Ellsworth Station, a member of the first party to visit Dufek Massif, in December 1957.

Augusta, Mount 84°48'S, 163°06'E

A peak 2.5 mi E of Mount Wild, at the S end of the Queen Alexandra Range. Discovered by the BrAE (1907–09) and named for Mrs. Swinford Edwards, a relative of Shackleton.

Auguste Island 64°03'S, 61°37'W

A flat-topped island less than 1 mi long, lying 4 mi NE of Two Hummock Island in Gerlache Strait. Discovered by the BelgAE (1897–99) under Lt. Adrien de Gerlache, and named by him for his father. Not: Isla Augusto, Isla Manuel Rodríguez, Islote Augusto.

Augusto, Isla: see Auguste Island 64°03'S, 61°37'W

Augusto, Islote: see Auguste Island 64°03'S, 61°37'W

Aurdalen Valley 71°42'S, 12°22'E

A small moraine-covered valley between Gråkammen and Aurdalsegga Ridges, in the Petermann Ranges of the Wohlthat Mountains. Discovered and plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named Aurdalen (the gravel valley).

Aurdalsegga Ridge 71°44'S, 12°23'E

An irregular ridge 5 mi long surmounted by Mount Nikolayev, rising immediately SE of Aurdalen Valley in Südliche Petermann Range, Wohlthat Mountains. Discovered and plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named Aurdalsegga (the gravel valley ridge).

Aureole Hills 63°46'S, 58°54'W

Two smooth, conical, ice-covered hills, the higher being 1,080 m, standing close W of the N end of Detroit Plateau, Trinity Peninsula. The descriptive name was given by FIDS following its survey of 1948. Not: Cerro Camello.

Aurhø Peak 72°08'S, 3°11'W

A peak with a gravel moraine on the NW side, situated 1 mi E of Slettjell in the Ahlmann Ridge of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Aurhø (gravel height).

Auriga Nunataks 70°42'S, 66°38'W

A small group of nunataks in Palmer Land located 21 mi E of Wade Point at the head of Bertram Glacier. The highest of these rises to a sharp peak and is visible for a great distance. Named by UK-APC after the constellation of Auriga.

Aurkjosen Cirque 71°21'S, 13°33'E

A mainly ice-free cirque marked by several old moraines, lying at the E side of Lake Unter-See in the Gruber Mountains of the Wohlthat Mountains, Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named Aurkjosen (the gravel cove).

Aurkleven Cirque 71°58'S, 7°31'E

A large cirque, the bottom of which is partially covered with moraine, between Kubus Mountain and Klevekampen Mountain in the Filchner Mountains of Queen Maud Land. Plotted from surveys and air photos by NorAE (1956–60) and named Aurkleven (the gravel closet).

Aurkvaevane Cirques 71°52'S, 14°26'E

Three cirques with moraine-covered floors, indenting the W side of Kvaevfjellet Mountain in the Payer Mountains of Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by the Norwegian Antarctic Expedition, 1956–60, and named Aurkvaevane.

Aurnupen Peak 71°59'S, 3°22'W

A peak with a gravel moraine on the NW side, situated 1 mi N of Flårjuven Bluff on the Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Aurnupen (the gravel peak).

Aurora, Bahía: see Elephant Cove 54°09'S, 37°41'W

Aurora, Mount 78°14'S, 166°21'E

A round-topped volcanic summit, 1,040 m, the highest point on Black Island in the Ross Archipelago. Named by the NZGSAE (1958–59) after the *Aurora*, the vessel which conveyed the Ross Sea Party of Shackleton's Imperial Trans-Antarctic Expedition (1914–17) to McMurdo Sound.

Aurora, Mount: see Aurora Peak 67°23'S, 144°12'E

Aurora Glacier 77°37'S, 167°38'E

Large glacier draining that part of Ross Island between Mount Erebus and Mount Terra Nova, and flowing S into McMurdo Ice Shelf. Named by A.J. Heine in 1963 after the *Aurora*, the ship of the Ross Sea Party of the British expedition under Shackleton, 1914–17.

Aurora Heights 83°07'S, 157°05'E

Prominent heights 5 mi long, bordering the N side of Argosy Glacier in the Miller Range. Named by the NZGSAE (1961–62) for the *Aurora*, the ship of the Ross Sea Party of the British Trans-Antarctic Expedition (1914–17).

Aurora Islands: see Shag Rocks 53°33'S, 42°02'W

Aurora Peak 67°23'S, 144°12'E

A peak (535 m) along the W side of the Mertz Glacier, 4 mi S of Mount Murchison. Discovered by the AAE (1911–14) under Douglas Mawson who named it after the expedition ship *Aurora*. Not: Mount Aurora.

Aurora Subglacial Basin 74°00'S, 114°00'E

A large subglacial basin of Wilkes Land to the W of Dome Charlie and trending NW toward the coast in the vicinity of Shackleton Ice Shelf. The basin was delineated by the SPRI-NSF-TUD airborne

radio echo sounding program, 1967–79, and named after *Aurora*, the ship of the AAE, 1911–14, led by Douglas Mawson.

Austbanen Moraine 71°32'S, 12°21'E

A medial moraine in the glacier between Westliche and Mittlere Petermann Ranges in the Wohlthat Mountains, originating at Svartindane Peaks and trending N for 12 miles. First roughly plotted from air photos by GerAE, 1938–39. Mapped by NorAE, 1956–60, from air photos and surveys and named Austbanen (the east path). Vestbanen Moraine, a similar paralleling feature, lies 7 mi westward.

Auster Glacier 67°12'S, 50°45'E

Glacier about 2 mi wide, flowing NW into the SE extremity of Amundsen Bay. Sighted in October 1956 by an ANARE party led by P.W. Crohn, and named after the Auster aircraft used by ANARE in coastal exploration.

Auster Islands 67°25'S, 63°50'E

A group of small islands at NE end of the Robinson Group, located 5.5 mi N of Cape Daly, Mac. Robertson Land. Mapped from ANARE surveys and air photos 1959–66. So named by ANCA because of the nearness of the islands to Auster Rookery, and because they have provided a camp site for ANARE parties visiting the rookery.

Auster Pass 78°18'S, 162°38'E

A high pass in the Royal Society Range, between Mount Huggins and Mount Kempe, leading into the Skelton Glacier area from McMurdo Sound. Named by the N.Z. Northern Survey Party of the CTAE (1956–58) for the RNZAF Antarctic Flight's Auster aircraft.

Auster Point 63°49'S, 59°28'W

A point midway along the E shore of Charcot Bay, Trinity Peninsula. Named by UK-APC after the Auster aircraft used by British expeditions in this area.

Austhamaren Peak 71°44'S, 26°42'E

Peak, 2,060 m, standing close E of Byrdbreen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Expedition, 1936–37, and in 1957 from air photos taken by USN OpHjp, 1946–47. Named *Austhamaren* (the east hammer) by the Norwegians.

Austhjelmen Peak 71°42'S, 26°28'E

Peak, 1,740 m, standing 2 mi E of Vesthjelmen Peak in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Expedition, 1936–37, and in 1957 from air photos taken by USN OpHjp, 1946–47. Named *Austhjelmen* (the east helmet) by the Norwegians.

Austhovde Headland 69°42'S, 37°46'E

An icy headland, marked by several rock exposures, which forms the eastern, elevated portion of Botneset Peninsula on the S side of Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named *Austhovde* (east knoll).

Austin, Mount 74°53'S, 63°10'W

Conspicuous rock mass rising to 955 m, projecting into the head of Gardner Inlet, on the E coast of Palmer Land. Discovered by the RARE, 1947–48, under Ronne, and named by him for Stephen F.

Austin, American colonizer in Texas and one of the founders of the Republic of Texas. Not: Mount Stephen Austin.

Austin Glacier 54°04'S, 37°12'W

Glacier flowing N to Beckmann Fjord, Bay of Isles, on the N coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Austin Group: see Austin Rocks 63°26'S, 61°04'W

Austin Head 54°31'S, 36°30'W

Headland 2 mi NNW of Leon Head, projecting into Undine South Harbor on the S coast of South Georgia. Surveyed by the SGS in the period 1951–57. Named by the UK-APC for Elijah Austin, a leading merchant of New Haven, CT, who sent out the first two American sealing vessels to South Georgia in 1790.

Austin Peak 71°37'S, 165°29'E

A peak in the east-central portion of the Mirabito Range. Named by the northern party of NZGSAE, 1963–64, for William T. Austin, USARP Representative at McMurdo Station, 1963–64, who organized support for the New Zealand field parties.

Austin Rocks 63°26'S, 61°04'W

Group of rocks which extend about 3 mi in a NE-SW direction, lying in Bransfield Strait 13 mi NW of Trinity Island. Charted by a British expedition, 1828–31, under Cdr. Henry Foster, RN, and named by him for Lt. Horatio T. Austin, RN, an officer of the expedition. Not: Austin Group, Rocas Agustín.

Austin Valley 73°30'S, 93°21'W

A small ice-filled valley at the E side of Avalanche Ridge, in the Jones Mountains. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61. Named by US-ACAN for Jerry W. Austin, aviation machinist's mate of USN Squadron VX-6, a crew member on pioneering flights of LC-47 Dakota aircraft from Byrd Station to the Eights Coast area in November 1961.

Austkampane Hills 71°47'S, 25°15'E

Group of hills rising to 2,210 m, standing 5 mi N of Menipa Peak in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Expedition, 1936–37, and in 1957 from air photos taken by USN OpHjp, 1946–47. Named Austkampane (the east crags) by the Norwegians.

Austnes Peninsula 66°42'S, 57°17'E

A short, broad, ice-covered peninsula forming the SE end of Edward VIII Plateau and the N side of the entrance to Edward VIII Bay. Cape Gotley marks the extremity of this peninsula. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition in January–February 1937, and named Austnes by them because of its eastward projection. Not: Austnes Point, Poluostrov Eustnes.

Austnes Point: see Austnes Peninsula 66°42'S, 57°17'E

Austnestangen: see Gotley, Cape 66°42'S, 57°19'E

Austnuten: see Armstrong Peak 66°24'S, 53°23'E

Austpynten 69°37'S, 38°23'E

A point forming the northeast extremity of Padda Island in Lützow-Holm Bay. Mapped by Norwegian cartographers from air

photos taken by the Lars Christensen Expedition, 1936–37, and named Austpynten (the east point).

Austral, Bahía: see Gould Bay 78°00'S, 45°00'W

Austral Island 66°30'S, 110°39'E

A small island in the extreme S lobe of Penney Bay, in the Windmill Islands. The island appears in air photos taken by USN OpHjp (1946–47), but was not charted on subsequent maps. So named by US-ACAN because it is the southernmost of the Windmill Islands.

Austranten Rock 71°24'S, 14°02'E

Isolated rock outcrop lying 2 mi SE of Todt Ridge, at the eastern extremity of the Gruber Mountains and Wohlthat Mountains, in Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named Austranten (the east ridge).

Austre Petermannkjeda: see Östliche Petermann Range 71°26'S, 12°44'E

Austre Skorvebreen: see Austreskorve Glacier 71°50'S, 5°40'E

Austreskorve Glacier 71°50'S, 5°40'E

A broad glacier in the Mühlig-Hofmann Mountains which drains N from a position just E of the head of Vestreskorve Glacier and passes along the E side of Breplogen Mountain. Mapped and named from surveys and air photos by the NorAE (1956–60). Not: Austre Skorvebreen.

Austskjera 67°31'S, 64°00'E

Group of rocks lying close to the coast about 5 mi E of Cape Daly and 2 mi ESE of Safety Island. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition, 1936–37, and named Austskjera (the east skerry).

Austskotet: see East Stack 67°05'S, 58°12'E

Austvollen Bluff 72°06'S, 3°48'E

A steep rock bluff forming the east side of Festninga Mountain in the Mühlig-Hofmann Mountains, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Austvollen (the east wall).

Austvorren Ridge 73°06'S, 1°35'W

The eastern of two rock ridges which trend northward from the Neumayer Cliffs in Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and given the name Austvorren (the east jetty).

Auvert Bay 66°14'S, 65°45'W

Bay 8 mi wide, indenting the coast for 3 mi between Cape Evensen and Cape Bellue, along the W coast of Graham Land. Discovered by the FrAE, 1908–10, and named Baie Auvert (bay far from anywhere). Not: Auvert Fiord, Evensen Bay.

Auvert Fiord: see Auvert Bay 66°14'S, 65°45'W

Avalanche Bay 77°01'S, 162°44'E

Bay 1 mi wide, lying just SE of Discovery Bluff in Granite Harbor, Victoria Land. Mapped by the BrAE, 1910–13, under

Scott. So named by the expedition's Granite Harbor party because several avalanches were heard while sledging in this locality.

Avalanche Corrie 60°40'S, 45°22'W

An ice-filled cirque, or corrie, close N of Amphibolite Point on the S coast of Coronation Island, in the South Orkney Islands. So named by the FIDS, following their survey of 1948–49, because of the continuous avalanches from the hanging glaciers above the corrie.

Avalanche Ridge 73°30'S, 94°22'W

A linear rock ridge, 1 mi long, extending N from Pillsbury Tower and separating Basecamp Valley from Austin Valley, in the Jones Mountains. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61, and so named by them because of the continual avalanching of snow off the flanks of the ridge.

Avalanche Rocks 66°31'S, 98°02'E

Vertical rock outcrop rising to 185 m, midway between Delay Point and Jones Rocks on the W side of Melba Peninsula. Discovered in September 1912 by the AAE under Mawson, and so named because of the occurrence of a tremendous avalanche while members of the expedition were encamped nearby.

Avellaneda, Islas: see Pitt Islands 65°26'S, 65°30'W

Avers, Mount 76°29'S, 145°21'W

Mountain 2 mi N of Mount Ferranto in the Fosdick Mountains, in Ford Ranges of Marie Byrd Land. Discovered in December 1929 by the ByrdAE and named for Henry G. Avers, chief mathematician of the Division of Geodesy, U.S. Coast and Geodetic Survey, who was a member of the National Geographic Society Commission of Experts which determined that Cdr. (later R. Admiral) Richard E. Byrd reached the North Pole by airplane (1926) and the South Pole (1929).

Avery Plateau 66°50'S, 65°30'W

Ice-covered plateau, about 40 mi long and rising to c. 2,000 m, midway between Loubet Coast and Foyn Coast in Graham Land. The first sighting of this plateau is not ascertained, but it was presumably seen in January and February of 1909 by members of the FrAE under Charcot from various positions in Matha Strait. It was surveyed in 1946–47 by the FIDS. Named by UK-APC (1955) after Capt. George Avery, Master of the cutter *Lively*, who, with Capt. John Biscoe in the brig *Tula*, approached this part of Antarctic Peninsula in February 1832.

Aviador Tenorio, Islote: see Tenorio Rock 62°28'S, 59°44'W

Avian Island 67°46'S, 68°54'W

Island, 0.75 mi long and 40 m high, lying close off the S tip of Adelaide Island. Discovered by the FrAE, 1908–10, under Charcot. Visited in 1948 by the FIDS, who so named it because of the large number and variety of birds found there.

Aviation Islands 69°16'S, 158°47'E

A group of small rocky islands lying 3 mi N of Cape Kinsey and the Wilson Hills. Mapped by the SovAE, 1958, and named Ostrova Polyarnoy Aviatsii (Polar Aviation Islands). The feature is the site of an Adélie penguin rookery. Not: Ostrova Polyarnoy Aviatsii.

Aviator Glacier 73°50'S, 165°03'E

A major valley glacier, over 60 mi long and 5 mi wide, descending generally southward from the plateau of Victoria Land along the

west side of Mountaineer Range, and entering Lady Newnes Bay between Cape Sibbald and Hayes Head where it forms a floating tongue. The glacier was photographed from the air by Capt. W.M. Hawkes, USN, on the historic first flight from New Zealand to McMurdo Sound on Dec. 17, 1955. An attempt to reconnoiter it by helicopter and to land a party of the NZGSAE on it had to be abandoned when the USS *Glacier* was damaged in pressure ice in December 1958. Named by NZGSAE, 1958–59, as a tribute to the hazardous work of pilots and other airmen in Antarctic exploratory and scientific operations. Not: Lady Newnes Glacier.

Aviator Glacier Tongue 74°00'S, 165°50'E

The seaward extension of Aviator Glacier into the Ross Sea, between Wood Bay and Lady Newnes Bay along the coast of Victoria Land. The name was recommended by US-ACAN in association with Aviator Glacier.

Aviator Nunatak 85°11'S, 168°58'W

The northernmost of three large nunataks in the upper Liv Glacier, standing 4 mi E of Mount Wells. Named by the Southern Party of the NZGSAE (1961–62) for the aviators of R. Admiral Richard E. Byrd's flight to the South Pole in 1929.

Avicenna Bay 64°26'S, 62°23'W

Small bay lying 1.5 mi SW of D'Ursel Point along the E side of Brabant Island, in the Palmer Archipelago. Roughly charted by the BelgAE under Gerlache, 1897–99. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for Avicenna (Abu Ali al Hussein abu Abdullah ibn Sina), 980–1037, greatest of the Arabian school of physicians. Not: Avicenna Bay.

Avicenna Bay: see Avicenna Bay 64°26'S, 62°23'W

Avión, Islotes: see Sigma Islands 64°16'S, 62°55'W

Avión Cruz del Sur, Montes: see Batterbee Mountains 71°23'S, 67°15'W

Avión V Sikorsky, Grupo: see Lajarte Islands 64°14'S, 63°24'W

Avsyuk Glacier 67°07'S, 67°15'W

Glacier on Arrowsmith Peninsula, Graham Land, flowing NW to Shumskiy Cove. Named by UK-APC in 1960 for Gregori A. Avsyuk, Russian glaciologist; specialist on the glaciers of central Asia.

Awl Point 63°51'S, 60°38'W

Point 4 mi NE of Borge Point on the E side of Trinity Island, in the Palmer Archipelago. Shown on an Argentine government chart of 1952. So named by the UK-APC in 1960 because the point is low in elevation but very sharply pointed in plan.

Axel Heiberg Glacier 85°25'S, 163°00'W

A valley glacier, 30 mi long, descending from the polar plateau to the Ross Ice Shelf between Herbert Range and Mount Don Pedro Christophersen, in the Queen Maud Mountains. Discovered in November 1911 by Capt. Roald Amundsen, and named by him for Consul Axel Heiberg, Norwegian business man and patron of science, who contributed to numerous Norwegian polar expeditions.

Axtell, Mount 81°18'S, 85°06'W

A low but distinctive rock peak 1.5 mi SE of Mount Tidd in the Pirrit Hills. Positioned by the U.S. Ellsworth-Byrd Traverse Party, Dec. 7, 1958, and named for William R. Axtell, Jr., USN, cook at Ellsworth Station in 1958 who volunteered to accompany the traverse party.

Axthelm Ridge 69°33'S, 159°02'E

A narrow ridge, 4 mi long, 1.5 mi SE of Parkinson Peak in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Cdr. Charles E. Axthelm, USN, Flag Secretary to the Commander of the U.S. Naval Support Force, Antarctica, during Operation Deep Freeze 1969 and 1970; Executive Officer on the USS *Glacier* during Deep Freeze 1965 and 1966.

Axworthy, Mount 73°06'S, 62°44'W

Mountain in the NW part of the Dana Mountains in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Charles S. Axworthy, a hospital corpsman and leader of the support personnel with the Palmer Station winter party in 1965.

Ayres, Mount 79°20'S, 156°28'E

A prominent mountain, 2,500 m, lying 10 mi S of the W end of the Finger Ridges in the Cook Mountains. Climbed in December 1957 by the Darwin Glacier Party of the CTAE (1956–58). Named for H.H. Ayres, one of the two men comprising the Darwin Glacier Party.

Ayuda, Caleta: see Assistance Bay 54°07'S, 37°09'W

Azar, Roca: see Hazard Rock 64°59'S, 63°44'W

Azarashi Rock 70°01'S, 38°54'E

A bare rock lying 1 mi N of Instekleppane Hills, near the E side of Shirase Glacier on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, and named Azarashi-iwa (seal rock). Not: Azarasi Rock.

Azarasi Rock: see Azarashi Rock 70°01'S, 38°54'E

Azimut, Punta: see Azimuth Hill 63°45'S, 58°16'W

Azimuth Hill 63°45'S, 58°16'W

A low rocky outcrop (85 m) which extends to Prince Gustav Channel just S of the mouth of Russell East Glacier, Trinity Peninsula. So named by FIDS following a 1946 survey because a

sun azimuth was obtained from a cairn built near the E end of the outcrop. Not: Punta Azimut.

Azimuth Island 67°32'S, 62°44'E

The largest of the Azimuth Islands lying in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. So named by ANCA because the island was included in a triangulation survey by ANARE in 1959.

Azimuth Islands 67°32'S, 62°44'E

Group of 4 small islands lying 1 mi NW of Parallaxic Islands in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. So named by ANCA because the largest island in the group was included in a triangulation survey by ANARE in 1959.

Azopardo, Estrecho: see Herbert Sound 63°55'S, 57°40'W

Aztec Mountain 77°48'S, 160°31'E

Small pyramidal mountain over 2,000 m, just SW of Maya Mountain and W of Beacon Valley in Victoria Land. So named by the NZGS/AE (1958–59) because its shape resembles the pyramidal ceremonial platforms used by the Aztec and Maya civilizations.

Azufre Point 65°03'S, 63°39'W

Point lying 3 mi SE of Cape Renard on the S side of Flandres Bay, on the W coast of Graham Land. First charted by the BelgAE under Gerlache, 1897–99. Charted by the Argentine Antarctic Expedition (1954) and named Punta Azufre (sulfur point). Not: Punta Pedro, Wedgwood Point.

Azuki Island 69°53'S, 38°56'E

Small island 1 mi W of Rundvågs Head in the SE part of Lützow-Holm Bay. Mapped from surveys and air photos by JARE, 1957–62, and named Azuki-shima (small red bean island).

Azur, Baie d': see Azure Cove 65°04'S, 63°35'W

Azure Bay: see Azure Cove 65°04'S, 63°35'W

Azure Cove 65°04'S, 63°35'W

Cove 1 mi long, lying just E of Cangrejo Cove in the SW part of Flandres Bay, on the W coast of Graham Land. Discovered by the BelgAE under Gerlache (1897–99) and named "Baie d'Azur" because when the *Belgica* anchored near here, everything appeared to be colored blue in the evening light. Not: Azure Bay, Bahía Zapiola, Baie d'Azur.

B

Babe Island 54°16'S, 36°18'W

Island which lies in the entrance to Cobblers Cove, along the N coast of South Georgia. Charted and named by DI personnel in 1929.

Babel Rock 63°53'S, 61°24'W

The northernmost of a small group of rocks lying N of Intercurrence Island, in the Palmer Archipelago. Two of the rocks lying off the N end of Intercurrence Island were first charted and named Penguin Islands by James Hoseason, First Mate of the sealer *Sprightly*, in 1824. Since the name has not been used in recent years, it has been rejected to avoid confusion with the many other "Penguin" names. Babel Rock, the largest and most conspicuous of the rocks, is the site of a penguin rookery and the name arises from the ceaseless noise. Not: Penguin Islands.

Babis Spur 82°13'S, 163°03'E

Rocky spur in the S part of Nash Range, about 6 mi W of Cape Wilson. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for William A. Babis, USARP oceanographer on the USCGC *Eastwind*, 1962–63, and on the USS *Burton Island*, 1963–64.

Babordsranten Ridge 72°17'S, 3°26'W

A small ridge 1 mi S of Stammen Peak, at the SW end of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Babordsranten (the port side ridge).

Babushkin Island 69°06'S, 157°36'E

Small island lying 5.5 mi N of Archer Point and 5 mi E of Matusевич Glacier Tongue. Mapped by the SovAE (1958) and named for Mikhail S. Babushkin (1893–1938), Soviet polar aviator lost in the Arctic. Not: Babuskin Island.

Babuskin Island: see Babushkin Island 69°06'S, 157°36'E

Bacharach Nunatak 66°41'S, 65°11'W

Conspicuous nunatak overlooking the N arm of Drummond Glacier, in Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955–57, and mapped from these photos by the FIDS. Named by the UK-APC in 1958 for Alfred L. Bacharach, English biochemist, whose work on nutrition solved many problems of sledging rations.

Bach Ice Shelf 72°00'S, 72°00'W

An ice shelf which is irregular in shape and 45 mi in extent, occupying an embayment in the S part of Alexander Island entered between Berlioz and Rossini Points. A minor embayment in this position first appears on the charts of the USAS, which explored the S part of Alexander Island by air and from the ground in 1940. The ice shelf was delineated from air photos obtained by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by UK-APC after Johann Sebastian Bach (1685–1750), German composer.

Bachstrom Point 65°29'S, 63°51'W

Point on the NE side of Beascochea Bay, 8 mi SE of Cape Pérez on the W coast of Graham Land. First charted by the BGLE, 1934–37, under Rymill. Named by the UK-APC in 1959 for J.F. Bachstrom, author in 1734 of a classic pamphlet recognizing

scurvy as a nutritional deficiency disease and prescribing the necessary measures for its prevention and cure.

Back, Mount 54°29'S, 36°07'W

A peak (650 m) located 1.5 mi S of Doris Bay, South Georgia. Named by UK-APC for Squadron Leader Anthony H. Back, RAF, assistant surveyor with the British Combined Services Expedition, 1964–65, who assisted in the survey of this peak.

Back Bay 68°11'S, 67°00'W

Bay 0.5 mi wide along the W coast of Graham Land, entered between Stonington Island and Fitzroy Island. The head of the bay is formed by Northeast Glacier. The bay was first surveyed by the USAS, 1939–41, and so named by them because of its location at the rear (northeast) side of Stonington Island. Not: Back Bay Cove.

Back Bay Cove: see Back Bay 68°11'S, 67°00'W

Back Cirque 67°39'S, 68°28'W

An east-facing cirque to the N of Sloman Glacier in SE Adelaide Island. The cirque indents the S side of the ridge that extends from the SE part of Mount Liotard. Named by the UK-APC in 1982 after Eric K.P. Back of the BAS, who in addition to service at Adelaide Station and Grytviken from 1964–65, also served as BAS Base Commander, Signy, 1974–75, Halley, 1975–76, Faraday, 1977–78, and Rothera, 1978–79.

Backdoor Bay 77°34'S, 166°12'E

Small bay lying at the E side of Cape Royds, along the W side of Ross Island. The BrAE, 1907–09, under Shackleton, unloaded supplies at Backdoor Bay for use at their winter headquarters on Cape Royds. So named by them because it lies at the back (east) side of Cape Royds, opposite the small cove on the W side of the cape, known to them as "Front Door Bay."

Backer Islands 74°25'S, 102°40'W

A chain of small islands at the S side of Cranton Bay. The islands trend NW for 12 mi from the ice shelf which forms the S limit of the bay. Mapped by USGS from surveys and USN air photos, 1960–66. Named by US-ACAN for Walter K. Backer, USN, chief construction mechanic at Byrd Station, 1967.

Back Mesa 64°02'S, 58°12'W

Ice-covered, flat-topped mountain with rock exposures, 740 m, located E of Hidden Lake on Ulu Peninsula, James Ross Island. Following BAS geological work, 1985–86, named by UK-APC after Dr. Eric H. Back, Lt. RNVR, medical officer on Operation Tabarin at Port Lockroy, 1943–44, and Hope Bay, 1944–45.

Back Rock: see Sack Island 66°26'S, 110°25'E

Backstairs Passage Glacier 75°02'S, 162°36'E

Glacier about 2 mi long, draining E along the N side of Mount Crummer to the Ross Sea. The Magnetic Pole Party, led by T.W.E. David, of the BrAE, 1907–09, ascended this glacier from the Ross Sea, then continued the ascent via Larsen Glacier to the plateau of Victoria Land. So named by David's party because of the circuitous route to get to Larsen Glacier.

Bader Glacier 67°37'S, 66°45'W

Small glacier flowing to Bourgeois Fjord just S of Thomson Head, on the W coast of Graham Land. Named by UK-APC in 1958 for Swiss glaciologist Henri Bader of Rutgers University (U.S.A.), author of an important thesis on the development of the snowflake and its metamorphoses.

Baeza, Arrecife: see Herald Reef 65°11'S, 64°11'W

Baffle Rock 68°12'S, 67°05'W

Small rock, just visible at the surface at high tide, lying in the center of the deep water channel approach to Stonington Island, 0.6 mi NW of the W tip of Neny Island in Marguerite Bay. The rock was surveyed in 1947 by the FIDS, and so named by them because it is difficult to see and hinders approaching ships. Not: Roca Confusión.

Bage, Cape 67°43'S, 146°34'E

A prominent point on the coast between Murphy Bay and Ainsworth Bay. Discovered in 1912 by the AAE (1911–14) under Douglas Mawson, who named it for Lt. R. Bage, the expedition's astronomer, assistant magnetician and recorder of tides.

Baggott Ridge 70°19'S, 64°19'E

A low ridge, mostly snow-covered, standing 1.5 mi W of Baldwin Nunatak and 7 mi SSW of Mount Starlight in the Prince Charles Mountains, Mac. Robertson Land. Mapped from ANARE surveys and air photos, 1955–65. Named by ANCA for P.J. Baggott, radio officer at Mawson Station, 1965.

Bagnold Point 67°02'S, 67°29'W

Point between Gunnel Channel and Shumskiy Cove on Arrow-smith Peninsula, Graham Land. Named by UK-APC in 1960 for Ralph A. Bagnold, English author of *The Physics of Blown Sand and Desert Dunes*, 1941.

Bagritskogo, Gora: see Ormehausen Peak 72°01'S, 14°38'E

Bagshawe, Mount 71°25'S, 67°14'W

Southernmost and highest of the Batterbee Mountains, 2,200 m, standing 8 mi inland from George VI Sound on the W coast of Palmer Land. The mountain was first seen and photographed from the air on Nov. 23, 1935 by Lincoln Ellsworth, and was mapped from these photographs by W.L.G. Joerg. It was surveyed in 1936 by BGLE under Rymill. Named by UK-APC in 1954 after Sir Arthur W.G. Bagshawe (1871–1950), British authority on tropical medicine, who raised a special fund to defray the expenses of biological equipment for BGLE, 1934–37.

Bagshawe Glacier 64°56'S, 62°35'W

A glacier which drains the NE slopes of Mount Theodore and discharges into Lester Cove, Andvord Bay, on the west coast of Graham Land. The mouth of the glacier was first seen and sketched by the Belgian Antarctic Expedition in February 1898. The glacier was first roughly surveyed by K.V. Blaiklock of FIDS from the *Norsel* in April 1955. Named by UK-APC after Thomas W. Bagshawe who, with M.C. Lester, wintered at Waterboat Point near Andvord Bay in 1921.

Bahamonde Point 63°19'S, 57°55'W

A point which marks the W extremity of Schmidt Peninsula on Trinity Peninsula. The point was charted by the Chilean Antarctic Expedition (1947–48) and named for First Lt. Arturo Bahamonde Calderón, engineer of the expedition. Not: Punta Bahamondes.

Bahamondes, Punta: see Bahamonde Point 63°19'S, 57°55'W

Bahía, Punta: see Bay Point 64°46'S, 63°26'W

Bailey, Mount 70°00'S, 63°13'W

Mountain, 1,445 m, which stands S of Anthony Glacier and 6 mi WSW of Lewis Point, on the E coast of Palmer Land. Charted in 1936–37 by a BGLE sledge party under Rymill. It was recharted in 1947 by a joint sledge party consisting of members of the RARE under Ronne, and the FIDS. Named by Ronne for Cdr. Clay W. Bailey, USN, member of the ByrdAE, 1933–35, and the West Base party of the USAS, 1939–41, who assisted in outlining the RARE radio requirements.

Bailey Glacier: see Friederichsen Glacier 66°38'S, 64°09'W

Bailey Ice Stream 79°00'S, 30°00'W

An ice stream on the northern margin of the Theron Mountains, flowing WSW to the Filchner Ice Shelf. Named by UK-APC after Jeremy Thomas Bailey (1941–65), BAS glaciologist, who with two companions died in a crevasse accident during a radio echo sounding traverse inland from Halley station on Oct. 12, 1965. On an earlier traverse in April, 1965, Bailey sounded the upper portion of this feature.

Bailey Island: see Bailey Peninsula 66°17'S, 110°32'E

Bailey Nunatak 75°40'S, 140°02'W

Nunatak (1,010 m) located along the N flank of White Glacier, midway between Partridge Nunatak and Wilkins Nunatak, near the coast of Marie Byrd Land. Mapped from U.S. Navy air photos and USGS surveys, 1959–65. Named by US-ACAN for Andrew M. Bailey, meteorologist at Byrd Station, 1963.

Bailey Peninsula 66°17'S, 110°32'E

Rocky peninsula, 1.8 mi long and 1 mi wide, lying between Newcomb Bay and O'Brien Bay at the E side of the Windmill Islands. First mapped from USN OPHjp aerial photographs taken in February 1947 and thought to be an island connected by a steep snow ramp to the continental ice overlying Budd Coast. The term peninsula was considered more appropriate by the Wilkes Station party of 1957. Named by the US-ACAN for Cdr. Claude E. Bailey, USN, captain of the USS *Henderson*, destroyer escort of the western task group of USN OPHjp, Task Force 68, 1946–47. Not: Bailey Island.

Bailey Ridge 77°12'S, 145°02'W

A serrate ridge 4 mi long, standing between Mount Blades and Fleming Peaks in the Ford Ranges of Marie Byrd Land. Discovered on aerial flights of the ByrdAE in 1934, and named by the USAS (1939–41) for Clay W. Bailey, a member of both expeditions.

Bailey Rocks 66°17'S, 110°32'E

Small chain of rocks in the Windmill Islands which extends NE from the N side of Bailey Peninsula into Newcomb Bay. First mapped from air photos taken by USN OPHjp, 1946–47, and observed in 1957 by Wilkes Station personnel under C.R. Eklund. Named by Eklund for Aerographers Mate 1st Class Carl T. Bailey, USN, a Navy support force member of the 1957 wintering party at Wilkes Station during the IGY.

Baillie Peak 83°22'S, 161°00'E

A peak over 2,800 m, located 2 mi SSE of Mount Angier in the Moore Mountains, Queen Elizabeth Range. The peak was observed by the Ohio State University Geological Party, 1967–68, which named it for Ralph J. Baillie, field assistant with the party.

Baillieu Peak 67°51'S, 60°46'E

Peak, 1,380 m, that rises above the ice sheet 25 mi S of Cape Bruce and 10 mi WSW of Pearce Peak. Discovered in February 1931 by the BANZARE under Mawson, and named for Clive Latham Baillieu (later Baron Baillieu), a patron of the expedition.

Baily Head: see Rancho Point 62°58'S, 60°30'W

Bailys Island: see Ohlin Island 63°30'S, 60°07'W

Bain, Mount 66°33'S, 65°26'W

Mountain, 2,090 m, standing between Hopkins and Erskine Glaciers on the W coast of Graham Land. Named by the UK-APC in 1958 for James S. Bain of London, who specialized in the development of polar and high altitude rations, with special emphasis on plastic vacuum packaging, between 1948 and 1956. Not: Monte Villarrica.

Bain Crags 70°30'S, 71°45'E

A number of rock exposures, many of which are banded, in the face of or projecting from the ice cliffs along the S part of the W side of Gillock Island in the Amery Ice Shelf. The feature was visited in January 1969 by J.H.C. Bain, geologist with the ANARE Prince Charles Mountains survey party, after whom it is named.

Baines Nunatak 80°19'S, 23°58'W

Nunatak rising to 1,020 m to the E of Bernhardt Heights and 10 mi NW of Jackson Tooth, Pioneers Escarpment, in the Shackleton Range. Photographed from the air by the U.S. Navy, 1967. Surveyed by BAS, 1968–71. Named in 1977 by the UK-APC after Thomas Baines (1822–75), English explorer and joint author, with W.B. Lord, of *Shifts and Expedients of Camp Life, Travel and Exploration* (London, 1871).

Bainmedart Cove 70°51'S, 68°03'E

A cove about 1 mi long in eastern Radok Lake, in the Prince Charles Mountains. The cove leads to narrow Pagodroma Gorge which joins Radok and Beaver Lakes. The name is a composite one made from the names of C. Bain, A. Medvecky, and J. Dart who spent a month at the cove studying the geology of the lakes area during the ANARE Prince Charles Mountains survey in Jan.-Feb., 1969.

Bain Nunatak 71°06'S, 71°35'E

One of the Manning Nunataks, on the E side of the Amery Ice Shelf. The nunataks were photographed by USN OpHjp (1946–47) and ANARE (1957). They were visited by the SovAE in 1965 and by the ANARE Prince Charles Mountains survey party in 1969. Named for C.J. Bain, weather observer at Mawson Station in 1969 and a member of the 1969 ANARE survey party.

Båkenesdokka Valley 71°26'S, 3°03'W

An ice-filled valley at the E side of Roberts Knoll, draining N to Jelbart Ice Shelf in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Båkenesdokka (the beacon cape depression).

Båkeneset Headland 71°23'S, 2°48'W

An ice-covered headland, marked by Båken Nunatak near the seaward end, forming the NW extremity of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Båkeneset (the beacon cape).

Båken Nunatak 71°18'S, 2°57'W

Small isolated nunatak surmounting the N part of Båkeneset Headland in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Båken (the beacon).

Baker, Mount 84°44'S, 172°21'W

A mountain (1,480 m) in the SE part of Gabbro Hills near the edge of the Ross Ice Shelf, standing at the W side of Gough Glacier, 6 mi E of Amphibole Peak. Discovered by the U.S. Ross Ice Shelf Traverse Party (1957–58) under A.P. Crary, and named for Gladys E. Baker, who assisted in analyzing, classifying and reporting upon lichens for the ByrdAE (1933–35).

Baker Glacier 72°46'S, 169°15'E

A small tributary glacier that enters Whitehall Glacier just N of Martin Hill, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for John R. Baker, biologist at Hallett Station in 1967–68 and 1968–69.

Baker Nunatak 85°23'S, 124°40'W

A nunatak standing 1 mi NW of Mount Brecher in northern Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1959–60. Named by US-ACAN for Travis L. Baker, meteorologist, Byrd Station winter party, 1961.

Baker Ridge 83°20'S, 55°40'W

A ridge extending W for 5 mi from the N part of Washington Escarpment in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Clifford E. Baker, aviation electronics technician at Ellsworth Station, winter 1958.

Baker Rocks 74°14'S, 164°45'E

A spur-like rock exposure lying 2 mi W of Wood Bay and 7 mi N of Mount Melbourne, on the coast of Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by

US-ACAN after Billy-Ace Baker, radioman, McMurdo Station winter party in 1963, 1967, 1971, and 1975; summer seasons, 1976–1980.

Baker Three Glacier: see Lambert Glacier 71°00'S, 70°00'E

Bakewell Island 74°50'S, 18°55'W

Small ice-covered island near Princess Martha Coast and E of Lyddan Island in the S part of Riiser-Larsen Ice Shelf. The island was discovered Nov. 5, 1967, in the course of a USN Squadron VXE-6 flight over the coast in LC-130 aircraft, and was plotted by USGS from air photos taken at that time. Named by US-ACAN after William Lincoln Bakewell, the lone American on Ernest Shackleton's ill-fated 1914–16 expedition in the *Endurance* to this area. Bakewell reportedly represented himself as Canadian to gain acceptance for the voyage to Antarctica.

Bakhallet Slope 72°08'S, 2°56'E

An ice slope between Terningskarvet Mountain and Brugda Ridge in the Gjelsvik Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and by the Norwegian expedition (1958–59) and named Bakhallet (the back slope).

Bakker, Mount 70°19'S, 64°36'E

An isolated mountain marked by a northern snow-covered face, located 6.5 mi SSE of Mount Starlight in the Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1955–65. Named by ANCA for F.C.R. Bakker, radio supervisor at Davis Station, 1964.

Bakkesvodene Crags 71°56'S, 6°32'E

High rock crags overlooking the E side of Lunde Glacier in the Mühlig-Hofmann Mountains, Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956–60) and named Bakkesvodene (the hill slopes). Not: Gora Grekova.

Bakutis Coast 74°45'S, 120°00'W

That part of the coast of Antarctica extending from a point opposite eastern Dean Island, at 74°42'S, 127°05'W, to Cape Herlacher. The coast in this area is bounded by several large ice-covered islands and the very extensive Getz Ice Shelf. This coast was sighted by members of the USAS, 1939–41, and was charted in part from air photos taken by USN OpHjp, 1946–47, both expeditions led by Admiral R.E. Byrd. The USGS completely mapped the coast from ground surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for R. Admiral Fred E. Bakutis, Commander of the U.S. Naval Support Force, Antarctica, from 1965 to 1967.

Balaena Islands 66°01'S, 111°06'E

A small group of rocky islands lying close to the coast of Antarctica, 10 mi NE of Cape Folger. First mapped from air photos taken by USN Operation Highjump, 1946–47. Named by US-ACAN after the British floating factory *Balaena* from which sketches of Knox and Budd Coasts were obtained as the result of reconnaissance flights and shipboard observations in 1947.

Balaena Valley 63°20'S, 56°23'W

Gently sloping valley, filled with ice, lying E of Suspiros Bay in the W part of Joinville Island. Surveyed by the FIDS in 1953–54. The *Balaena* (Alexander Fairweather, master) was one of the Dundee whaling ships that visited the Joinville Island group in

1892–93. The name was applied in 1956 by the UK-APC and derives from association with Cape Kinnes 4 mi to the SW; Robert Kinnes was the Dundee shipowner and merchant who equipped these ships for their Antarctic voyage.

Balcarce, Ensenada: see Queen Maud Bay 54°14'S, 37°23'W

Balcarce, Punta: see Fildes Point 63°00'S, 60°34'W

Balch, Mount 65°16'S, 63°59'W

An E-W trending mountain with numerous sharp peaks, the highest 1,105 m, between Mount Peary and Mount Mill on the W coast of Graham Land. Discovered by the FrAE, 1908–10, under Charcot and named by him for Edwin Swift Balch, American author and authority on Antarctic exploration. Not: Mount Swift Balch, Sommet Swift Balch.

Balchen, Mount 85°22'S, 166°12'W

A prominent peak, 3,085 m, standing 6 mi E of the summit of Mount Fridtjof Nansen, in the Herbert Range, Queen Maud Mountains. Named by the Southern Party of the NZGSAE (1961–62) for Bernt Balchen, pilot with Roald Amundsen on Arctic flights, and with R. Admiral Richard E. Byrd on his South Pole flight of 1929.

Balchenfjella: see Balchen Mountain 72°00'S, 27°12'E

Balchen Glacier 76°23'S, 145°10'W

A crevassed glacier flowing W to Block Bay between the Phillips and Fosdick Mountains in Marie Byrd Land. Discovered on Dec. 5, 1929, by the ByrdAE and named by Byrd for Bernt Balchen, chief pilot of the expedition. Not: Bernt Balchen Glacier, Bernt Balchen Valley.

Balchen Mountain 72°00'S, 27°12'E

Mountain, 2,820 m, standing at the E side of Byrdbreen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named for Bernt Balchen, famous Norwegian polar aviator and chief pilot of the ByrdAE, 1928–30. Not: Balchenfjella.

Balch Glacier 66°50'S, 64°48'W

Glacier 9 mi long, on the E coast of Graham Land, flowing SE into Mill Inlet, to the S of Gould Glacier. First surveyed by the FIDS in 1946–47, and named East Balch Glacier. With West Balch Glacier it was reported to fill a transverse depression across Graham Land, but further survey in 1957 showed that there is no close topographical alignment between the two. The name Balch, for Edwin S. Balch, American Antarctic historian, has been limited to this glacier and an entirely new name (Drummond Glacier q.v.) approved for the west glacier. Not: East Balch Glacier, Martin Glacier.

Balchunas Pass 75°46'S, 128°45'W

A broad pass between Mount Flint and Mount Petras in the McCuddin Mountains, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Cdr. Robert C. Balchunas, USN, Executive Officer for Antarctic Support Activities during Operation Deep Freeze 1971, 1972, and 1973.

Balder Point 66°27'S, 63°45'W

Point marking the eastern tip of a narrow, rocky "cockscorb" ridge, which extends from Frigga Peak for 6 mi in an ESE direction to the W side of Cabinet Inlet, on the E coast of Graham

Land. Charted in 1947 by the FIDS, who named it after the Norse god Balder, the mythological son of Frigga and Odin.

Bald Head 63°38'S, 57°36'W

Bare, ice-free headland 8 mi SW of View Point on the S side of Trinity Peninsula. Probably first seen in 1902–03 by J. Gunnar Andersson's party of the SwedAE under Nordenskjöld. The FIDS charted it and applied the descriptive name in 1945. Not: Cabo Circular.

Baldr, Mount 77°35'S, 160°34'E

Prominent peak standing W of Mount Thor and S of Wright Upper Glacier in the Asgard Range of Victoria Land. Named by the VUWAE (1958–59) after one of the Norse gods. Not: Mount Baldur.

Baldred Rock 60°44'S, 44°26'W

Rock in Fitchie Bay at Laurie Island in the South Orkney Islands. It lies close off the S side of Ferrier Peninsula, 0.75 mi ESE of Graptolite Island. This rock was mapped by the ScotNAE under Bruce, 1902–04, and was later named Bass Rock owing to its likeness to the Bass Rock in Scotland. The name Bass Rock has also appeared on charts as an alternative name for an island in the Joinville Island group. To avoid confusion of these names, in 1954 the UK-APC recommended an entirely new name for the rock at Fitchie Bay. Baldred Rock is named after Saint Baldred (died 606), the first hermit known to have lived on the Scottish Bass Rock. Not: Bass Rock.

Baldur, Mount: see Baldr, Mount 77°35'S, 160°34'E

Baldwin, Mount 72°15'S, 163°18'E

A mountain 5 mi SE of Smiths Bench, in the Freyberg Mountains. Named by US-ACAN for T.T. Baldwin, transport specialist, a member of the USARP Victoria Land Traverse Party which surveyed this area in 1959–60.

Baldwin Bluff 72°06'S, 169°27'E

A rock bluff along the SW side of Ironside Glacier, about 5 mi SW of the summit of Mount Whewell, in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Howard A. Baldwin, biologist at McMurdo Station, 1966–67.

Baldwin Glacier 85°06'S, 177°10'W

A broad glacier, flowing generally eastward from a large icefalls at the escarpment west of Mount Rosenwald and entering Shackleton Glacier south of Mount Heekin. Discovered and photographed by USN Ophjp (1946–47) on the flights of Feb. 16, 1947, and named by US-ACAN for Sgt. George E. Baldwin, USMC, photographer on Flight 8A.

Baldwin Nunatak 70°19'S, 64°24'E

A nunatak 6.5 mi SSW of Mount Starlight in the Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1955–65. Named by ANCA for J.W. Baldwin, weather observer (radio) at Mawson Station, 1965.

Baldwin Peak 64°23'S, 60°45'W

Peak between Lilienthal Glacier and Mount Berry in northern Graham Land. Photographed by the FIDASE in 1956–57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Thomas S. Baldwin (1860–1923), American inventor of the vent opening which gives control and stability to parachutes.

Baldwin Rocks 66°24'S, 98°45'E

Group of rock outcrops about 5 mi NW of Watson Bluff on the N side of David Island. Charted by the AAE, 1911–14, under Mawson, and named by him for Joseph M. Baldwin of the Melbourne Observatory.

Baldwin Valley 77°18'S, 162°20'E

Ice-filled valley in the Saint Johns Range, lying NW of Pond Peak in Victoria Land. Named by US-ACAN for Russel R. Baldwin, USN, who was in charge of the Airfield Maintenance Branch at McMurdo Station in 1962.

Baleen, Mount 65°36'S, 62°12'W

A prominent peak of 910 m and of pyramidal shape when viewed from Larsen Ice Shelf, standing between Rachel and Starbuck Glaciers on the E coast of Graham Land. The naming by UK-APC is one in a group in this vicinity that reflects a whaling theme. Baleen whales are distinguished by the presence of a sieve of horny baleen (whalebone) plates suspended from the upper jaw, and by the absence of teeth.

Baleiniers, Anse des: see Whalers Bay 62°59'S, 60°34'W

Balfour, Mount 69°19'S, 67°13'W

Bastion-like rocky mountain, 1,010 m, which lies at the mouth of Fleming Glacier, close to the junction with Wordie Ice Shelf on the W side of Antarctic Peninsula. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed by the FIDS in 1948 and named for Henry Balfour, President of the Royal Geographical Society, 1936–38.

Balham Lake 77°26'S, 160°57'E

A small lake near the center of Balham Valley in Victoria Land. Named in 1964 by American geologist Parker E. Calkin for its location in Balham Valley.

Balham Valley 77°25'S, 161°01'E

An ice-free valley between the Insel Range and Apocalypse Peaks, in Victoria Land. Named by the VUWAE (1958–59) for R.W. Balham, biologist with the N.Z. party of the CTAE who did the first freshwater biology in this area in 1957–58.

Balin Point 60°42'S, 45°36'W

Point which marks the N side of the entrance to Borge Bay on the E side of Signy Island, in the South Orkney Islands. Charted by DI in 1933 and so named in association with Balin Rocks (q.v.).

Balin Rocks 60°42'S, 45°36'W

Small group of rocks close S of Balin Point on the E side of Signy Island, in the South Orkney Islands. Charted and named by the Norwegian whaling captains Petter Sørle and Hans Borge in 1912–13.

Balish Glacier 79°25'S, 84°30'W

A glacier, 18 mi long, flowing N from Soholt Peaks to enter Splettstoesser Glacier just NE of Springer Peak, in the Heritage Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Cdr. Daniel Balish, Executive Officer of USN Squadron VX-6 during Deep Freeze 1965, and Commanding Officer in 1967.

Baliza, Punta: see Mirounga Point 62°14'S, 58°41'W

Baliza, Punta: see Beacon Head 67°49'S, 67°21'W

Ballance Peak 76°46'S, 159°29'E

The highest peak at the southern end of the Allan Hills in Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) and named for P.F. Ballance, a geologist with the expedition.

Ballard, Mount 75°12'S, 70°05'W

Mountain in the W part of the Sweeney Mountains in Ellsworth Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for G.E. Ballard, equipment operator with the South Pole Station winter party in 1963.

Ballard Spur 82°08'S, 163°40'E

Spur 5 mi N of Cape Wilson on the E side of Nash Range. Mapped by the USGS from tellurometer surveys and Navy air photos 1960–62. Named by US-ACAN for Thomas B. Ballard, USARP aurora scientist at Hallett Station, 1961.

Ballena, Paso: see Whaler Channel 54°10'S, 36°42'W

Ballena, Rocas: see Right Whale Rocks 54°14'S, 36°24'W

Ballena Azul, Puerto: see Blue Whale Harbor 54°04'S, 37°01'W

Ballena Franca, Bahía: see Right Whale Bay 54°00'S, 37°41'W

Ballena Franca, Rocas: see Right Whale Rocks 54°14'S, 36°24'W

Balleneros, Caleta: see Whalers Bay 62°59'S, 60°34'W

Balleneros, Pasaje: see Whaler Channel 54°10'S, 36°42'W

Balleneros, Paso: see Whaler Channel 54°10'S, 36°42'W

Balleny Islands 66°55'S, 163°20'E

A group consisting primarily of three large and two smaller islands, heavily glaciated and volcanic in origin, lying 150 miles NNE of Cape Kinsey, Oates Coast. The group trends NW-SE for nearly 100 miles. The islands were discovered by John Balleny, commander of the *Eliza Scott*, in February 1839. They were named in his honor by Captain Beaufort, hydrographer to the Admiralty.

Ballesteros, Islotes: see Psi Islands 64°18'S, 63°01'W

Ballou, Mount 73°14'S, 163°03'E

A pinnacle-type mountain (2,900 m) which forms the S end of Pain Mesa and the N side of the entrance to Pinnacle Gap in the Mesa Range, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Cdr. Justin G. Ballou, USN, officer in charge of the Detachment A winter party at McMurdo Station, 1966.

Ball Stream 77°26'S, 163°43'E

A meltwater stream 2 mi west of Marble Point on the coast of Victoria Land. It issues from the front of Wilson Piedmont Glacier and flows northeast to Surko Stream just west of where the latter enters Arnold Cove. The stream was studied by Robert L. Nichols, geologist for Metcalf and Eddy, Engineers, Boston, MA, which made engineering studies here under contract to the U.S. Navy in the 1957–58 season. Named by Nichols for Donald G. Ball, soil physicist with Metcalf and Eddy.

Balsam Beach 54°19'S, 36°26'W

Narrow boulder beach with jagged islands close offshore, lying 0.75 mi E of Dartmouth Point in Cumberland East Bay, South Georgia. The beach appears on earlier charts, but the name was given by FIDS in 1951 following a sketch survey. The name is one of a group in the vicinity of Dartmouth Point derived from the chemical stains used in the preparation for histological examination of biological material collected there by FIDS.

Bamsefjell: see Bamse Mountain 72°15'S, 22°18'E

Bamse Mountain 72°15'S, 22°18'E

Mountain, 2,500 m, standing 11 mi W of Mount Nils Larsen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Bamsefjell (bear mountain). Not: Bamsefjell.

Banck, Ile: see Banck, Mount 64°54'S, 63°03'W

Banck, Mount 64°54'S, 63°03'W

Conspicuous mountain of red rock, 675 m, dominating the small peninsula just W of Mascías Cove, on the W coast of Graham Land. In 1898 the BelgAE under Gerlache applied the name "Ile Banck" to a feature which was charted as an island separated from the mainland by a narrow channel. Air photos show it is actually a small peninsula, on which the most prominent feature is this mountain. The name Mount William (q.v.), given by Biscoe in 1832 to a mountain which he described as being on the mainland but now identified on Anvers Island, has been used for the feature here described. Not: Ile Banck, Monte Contreras, Monte Guillermo, Monte Laprida, Monte William.

Bancroft Bay 64°34'S, 61°52'W

Bay lying between Charlotte and Wilhelmina Bays, along the W coast of Graham Land. The bay was first roughly indicated by the BelgAE under Gerlache, 1897–99. It was remapped by the FIDS from air photos taken by the FIDASE, 1955–57. Named by the UK-APC in 1960 for Anthony D. Bancroft, senior surveyor of the latter expedition.

Banded Bluff 85°20'S, 169°30'W

A prominent bluff about 4 mi long, rising 3 mi SE of McKinley Nunatak, where it forms a part of the E wall of Liv Glacier. So named by US-ACAN because of the alternate bands of snow and rock which mark the steep face of the bluff.

Banded Peak 85°03'S, 166°05'W

A small peak which rises over 1,400 m in the Duncan Mountains. This feature which stands 3 mi NE of Mount Fairweather has a distinctive snow band across the south face. Named by the Southern Party of NZGSAE, 1963–64.

Bandstone Block 71°40'S, 68°12'W

An almost rectangular block of sandstone which rises to c. 300 m 2 mi N of Triton Point, at the mouth of Venus Glacier on the E coast of Alexander Island. The coast in this vicinity was first seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos obtained on that flight by W.L.G. Joerg. This feature was first surveyed in 1949 by the FIDS, who so named it because of its conspicuous sedimentary bands.

Bandy Island 75°04'S, 137°49'W

A small ice-covered island lying in Hull Bay, 1.5 mi west of Lynch Point, coastal Marie Byrd Land. Mapped by USGS from

surveys and U.S. Navy aerial photographs, 1962–67. Named by US-ACAN after Orville L. Bandy (1917–73), professor of geology at the University of California, Los Angeles, and a participant since 1961 in several USARP projects. In 1964 and 1966, respectively, he was chief scientist on cruises 7 and 17 of RV *Anton Bruun*, and took part in several cruises of USNS *Eltanin*.

Banfield, Mount: see Gjeita, Mount 68°12'S, 58°14'E

Banna Peak 79°55'S, 155°03'E

A peak (2,420 m) that surmounts the S end of Banna Ridge in the NW part of Britannia Range. Named in association with Britannia by a University of Waikato (N.Z.) geological party led by M.J. Selby, 1978–79. Banna is a historical placename formerly used in Roman Britain.

Banna Ridge 79°54'S, 155°06'E

A rock ridge that rises over 2,000 m and extends from Banna Peak NE toward the head of Hatherton Glacier. The ridge forms the SE wall of Abus Valley in the NW part of Britannia Range. Named in association with Banna Peak (q.v.) by a University of Waikato (N.Z.) geological party, 1978–79.

Banzare Coast 67°00'S, 126°00'E

That portion of the coast of Antarctica lying between Cape Southard, in 122°05'E, and Cape Morse, in 130°10'E. Seen from the air by the British-Australian-New Zealand Antarctic Research Expedition, 1930–31, under Douglas Mawson. The name by Mawson is an acronym of the expedition title. Not: Banzare Land.

Banzare Land: see Banzare Coast 67°00'S, 126°00'E

Baranowski Glacier 62°12'S, 58°27'W

A glacier flowing E into Admiralty Bay, King George Island, NW of Demay Point. Named by the Polish Antarctic Expedition after Stanislaw Baranowski (1935–78), Polish glaciologist who died on King George Island as a result of an accident at the Polish Arctowski Station while a member of the 1977–78 expedition.

Barbara Island 68°08'S, 67°06'W

Largest and northernmost of the Debenham Islands, lying off the W coast of Graham Land. Discovered by the BGLE, 1934–37, under Rymill, and named by him for a daughter of Frank Debenham, member of the BGLE Advisory Committee.

Barbaro Point: see Leniz Point 64°54'S, 63°05'W

Barber Cove 54°00'S, 37°39'W

Small, rock-strewn cove bounded by Bluff Point and Craigie Point, in the E part of Right Whale Bay, South Georgia. The name Scott Bay, of unknown origin, appears for the feature on a chart based upon a 1930 survey by DI personnel. Named Barber Cove by the UK-APC in 1963, for Leading Seaman John M. Barber of HMS *Owen*, which surveyed the area in 1961. Not: Ensenada Scott, Scott Bay.

Barber Glacier 70°26'S, 162°45'E

Glacier rising just E of Mount Bruce in the Bowers Mountains and flowing N to the coast between Stuhlinger Ice Piedmont and Rosenau Head. Mapped by USGS from surveys and U.S. Navy air photos, 1960–65. Named by US-ACAN for Capt. Don W. Barber, CE, USA, construction and equipment officer, U.S. Naval Support Force, Antarctica, 1967 and 1968.

Barbière Island 65°11'S, 64°10'W

Small island, the southeasternmost of the islands lying off the S end of Petermann Island, in the Wilhelm Archipelago. Charted by the FrAE, 1908–10, and named after M. Barbière, one of the port engineers at Recife (Pernambuco), who assisted the expedition in 1910.

Barchans, The 65°14'S, 64°20'W

Group of small snow-capped islands marking the W end of the Argentine Islands, in the Wilhelm Archipelago. Charted by the BGLE, 1934–37, under Rymill, and so named by him because the snow caps resemble barchans (also barkhans), migrating, crescent-shaped sand dunes found in several very dry regions of the world.

Barclay Bay 62°33'S, 60°58'W

Bay lying between Cape Shirreff and Essex Point on the N side of Livingston Island, in the South Shetland Islands. The name appears on an 1825 chart of the British sealing expedition under Weddell, and is now established in international usage. Not: Barclay's Bay.

Barclay's Bay: see Barclay Bay 62°33'S, 60°58'W

Barcroft Islands 66°27'S, 67°10'W

A group of small islands and rocks about 5 miles in extent, lying close S of Watkins Island, Biscoe Islands. Mapped from air photos by FIDASE (1956–57). Named by UK-APC for Sir Joseph Barcroft (1872–1947), Irish physiologist, a pioneer investigator of the physiological effects of high altitudes and cold.

Barcus Glacier 74°15'S, 62°00'W

Glacier in the Hutton Mountains that drains ESE, to the N of Mount Nash and Mount Light, into Keller Inlet in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for James R. Barcus, ionospheric physics researcher at Byrd Station in the summers 1966–67 and 1967–68.

Bardas Coloradas, Cerro: see Brown Bluff 63°32'S, 56°55'W

Bardell Rock 65°20'S, 65°23'W

A rock nearly 1 mi S of Dickens Rocks in the Pitt Islands, northern Biscoe Islands. Named by UK-APC in 1971 after Mrs. Bardell, a character in Charles Dickens' *Pickwick Papers*.

Barden, Mount 77°51'S, 86°13'W

Mountain, 2,910 m, standing 2.5 mi NW of Mount Sharp in the N portion of the Sentinel Range. Named by the US-ACAN for Virgil W. Barden, ionospheric physicist, member of the 1957 wintering party at Byrd Station.

Bardina, Khrebet: see Westliche Petermann Range 71°35'S, 12°10'E

Bardsdell Nunatak 70°16'S, 63°54'W

A mainly ice-free nunatak just N of Dalziel Ridge in the Columbia Mountains of Palmer Land. Mapped by the USGS in 1974. Named by US-ACAN for Mark Bardsdell, Columbia University geologist who studied the structure of the Scotia Ridge area, 1970–71.

Bareback Ridge 54°29'S, 37°05'W

An irregular ridge extending north from Olstad Peak in central Annenkov Island, South Georgia. The UK-APC name stems from the absence of surficial material and vegetation from its top and sides.

Bareface Bluff 78°50'S, 161°40'E

A large, sheer snow-free bluff, 940 m, rising above Skelton Glacier, between Ant Hill Glacier and Mason Glacier. Surveyed and given this descriptive name in 1957 by the N.Z. party of the CTAE, 1956–58.

Barela Rock 77°01'S, 148°52'W

A rock outcrop in the S part of Przybyszewski Island in the Marshall Archipelago. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Ruben E. Barela, aviation structural mechanic, USN, of the McMurdo Station party, 1967.

Bare Rock 60°43'S, 45°36'W

Rock which lies 0.1 mi NE of Berntsen Point in the entrance to Borge Bay, off the E side of Signy Island in the South Orkney Islands. Charted and named descriptively by DI personnel on the *Discovery* in 1927.

Barff-Huk: see Barff Point 54°14'S, 36°24'W

Barff Peninsula 54°19'S, 36°18'W

Peninsula forming the E margin of Cumberland East Bay, South Georgia, extending NW from Sörling Valley 8 mi to Barff Point. Probably first seen by the British expedition under Cook in 1775. The peninsula takes its name from its northern extremity, Barff Point.

Barff Point 54°14'S, 36°24'W

Point which forms the E side of the entrance to Cumberland Bay, on the N coast of South Georgia. Named for Lt. A.D. Barff, RN, of the *Sappho*, who, assisted by Capt. C.A. Larsen, made a sketch map of Cumberland Bay in 1906. Not: Barff-Huk.

Bargh Glacier 73°05'S, 168°46'E

A glacier 6 mi long in the SW part of Daniell Peninsula, Victoria Land. It lies 2 mi N of Langevad Glacier, whose stream it parallels, and flows SW to enter Borchgrevink Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Kenneth A. Bargh, seismologist at Hallett Station, 1958.

Brialmont, Caleta: see Brialmont Cove 64°16'S, 61°00'W

Barilar Bay: see Barilari Bay 65°55'S, 64°43'W

Barilari Bay 65°55'S, 64°43'W

Bay 12 mi long and 6 mi wide, between Cape Garcia and Loqui Point on the W coast of Graham Land. Discovered by the FrAE, 1903–05, and named by Charcot for R. Admiral Atilio S. Barilari, Argentine Navy. Recharted by the BGLE, 1934–37, under Rymill. Not: Barilar Bay.

Bar Island 68°17'S, 67°12'W

A long, low, rocky islet lying 0.25 mi off the W end of Red Rock Ridge, Antarctic Peninsula. First roughly surveyed in 1936 by the BGLE under John Rymill. Resurveyed in 1948–49 by the FIDS, who so named the islet because of its shape.

Barkell Platform 72°40'S, 68°16'E

A narrow, level rock platform on the N end of Mawson Escarpment. This promontory, 1,285 m high, was the site of a geodetic survey station during the ANARE Prince Charles Mountains survey in 1971. Named for V.G. Barkell, helicopter pilot with the survey.

Barker Bank 64°01'S, 57°01'W

A marine bank in Erebus and Terror Gulf with a least depth of 20 meters. The bank extends NE from Ula Point, James Ross Island, but its limits are not precisely defined. Charted from HMS *Endurance*, 1981–82, and named by UK-APC after Capt. Nicholas J. Barker, RN, who was in command of the ship, 1980–82.

Barker Nunatak 74°53'S, 72°42'W

One of the Grossman Nunataks (q.v.) in Ellsworth Land, located 2.2 mi NE of Fletcher Nunataks. Named by US-ACAN after Kenneth Barker, USGS cartographer who, with James B. Fletcher (Fletcher Nunataks, q.v.), formed the USGS satellite surveying team at South Pole Station, winter party 1977.

Barker Range 72°32'S, 166°10'E

A mountain range trending NW-SE and including Jato Nunatak, Mount Watt, Mount McCarthy, and Mount Burton, located at the SW side of Millen Range in the Victory Mountains, Victoria Land. Named by the NZ-APC for James Barker, leader at Scott Base, 1972.

Barkhan, Gora: see Linnormegget Hill 72°08'S, 14°27'E

Barkley Mountains 72°22'S, 1°00'E

A small group of mountains including Kvitkjølen Ridge and Isingen Mountain, rising between Kvitsvodene Valley and Rogstad Glacier in the Sverdrup Mountains of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938–39, and named for Erich Barkley, biologist on the expedition. Surveyed by the NBSAE, 1949–52.

Barkova, Lednik: see Barkov Glacier 71°46'S, 10°27'E

Barkov Glacier 71°46'S, 10°27'E

Glacier draining NE between Mount Dallmann and the central part of Shcherbakov Range, in the Orvin Mountains, Queen Maud Land. First photographed and roughly plotted by the GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Soviet geographer A.S. Barkov. Not: Lednik Barkova.

Barkow, Mount 73°22'S, 62°48'W

Mountain, 1,390 m, which stands 20 mi W of Court Nunatak and New Bedford Inlet and marks the E end of the ridge separating Haines and Meinardus Glaciers, on the E side of Palmer Land. Discovered and photographed from the air in December 1940 by the USAS. Photographed from the air by RARE under Ronne, who in conjunction with the FIDS mapped it from the ground in 1947. Named by the FIDS for Erich Barkow, German meteorologist and member of the GerAE, 1911–12, under Filchner.

Barlas, Cape 60°43'S, 45°00'W

Cape marking the N end of Fredriksen Island in the South Orkney Islands. Discovered and roughly charted in the course of the joint cruise by Capt. Nathaniel Palmer and Capt. George Powell in 1821. Further charted by DI in 1933 and named after William Barlas (1888–1941), British representative at Deception Island and South Shetland Islands for the season 1914–15, and at South Georgia on various occasions, 1928–41. Not: Cape Barles.

Barlas Bank 54°00'S, 37°20'W

Small submarine bank 1.5 mi SE of Cape Buller, at the W side of the entrance to the Bay of Isles, South Georgia. Charted by DI in

1929–30 and named after William Barlas (Cape Barlas, q.v.).
Not: Banco Teniente Somoza.

Barlas Channel 67°13'S, 67°45'W

Channel, 8 mi long and 2 mi wide, in the N part of Laubeuf Fjord, extending SW from The Gullet and separating Day Island from Adelaide Island. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS, who named it for William Barlas.

Barlas, Cape: see Barlas, Cape 60°43'S, 45°00'W

Barlow Island 62°52'S, 62°21'W

Small island lying 1 mi WNW of the N tip of Smith Island, in the South Shetland Islands. The name Barlow, presumably for Peter Barlow, British physicist and mathematician, was applied to a cape on the E side of Smith Island by a British expedition under Foster, 1828–31. In 1951–52, the FIDS determined that no significant cape exists on the E side of the island, but for the sake of historical continuity applied the name to the island described above.

Barlow Rocks 78°29'S, 163°24'E

A group of rocks standing below the NW slopes of Mount Morning on the S margin of upper Koettlitz Glacier in Victoria Land. Named by US-ACAN in 1994 after Roger A. Barlow, USGS cartographer, a member of the satellite surveying team at South Pole Station, winter party 1992.

Barnacle Valley 76°47'S, 161°12'E

An ice-free valley 3 mi WSW of Dotson Ridge in the Convoy Range of Victoria Land. The name is one of a group of nautical names in the Convoy Range, this one applied by the 1989–90 NZARP field party with reference to the low and blocky floor of this valley, which has unusually large ice wedge polygon hummocks.

Barnard, Mount: see Friesland, Mount 62°40'S, 60°12'W

Barnard Peak: see Friesland, Mount 62°40'S, 60°12'W

Barnard Point 62°46'S, 60°21'W

Point which marks the SE side of the entrance to False Bay on the S side of Livingston Island, in the South Shetland Islands. This point was known to sealers as early as 1822. The name was applied about a century later, probably after Mount Barnard (now Mount Friesland) which surmounts it to the northeast. Charles H. Barnard, captain of the ship *Charity* of New York, was a sealer in the South Shetland Islands in 1820–21. Not: *Pointe Bernard*.

Barnards Peak: see Needle Peak 62°44'S, 60°11'W

Barne, Cape 77°35'S, 166°14'E

Steep, rocky bluff rising to 120 m between Cape Royds and Cape Evans on the W side of Ross Island. Discovered by the BrNAE, 1901–04, under Scott, and named by him for Lt. Michael Barne, RN, a member of the expedition.

Barne Glacier 77°36'S, 166°26'E

Steep glacier which descends from the W slopes of Mount Erebus and terminates on the W side of Ross Island between Cape Barne and Cape Evans where it forms a steep ice cliff. Discovered by the BrNAE, 1901–04, under Scott. Named by the BrAE, 1907–09, under Shackleton after nearby Cape Barne. Not: Cape Barne Glacier.

Barne Inlet 80°15'S, 160°15'E

A reentrant about 17 mi wide occupied by the lower part of Byrd Glacier, lying between Cape Kerr and Cape Selborne on the W side of the Ross Ice Shelf. Discovered by the BrNAE (1901–04) and named for Lt. Michael Barne, RN, a member of the expedition, who with Sub-Lt. George F.A. Mulock, RN, mapped the coastline this far south in 1903.

Barnes, Mount 77°38'S, 163°35'E

Peak, 985 m, surmounting the west-central side of New Harbor and marking the E end of the Kukri Hills, in Victoria Land. Discovered by the BrNAE, 1901–04, under Scott, and named New Harbour Heights. It was renamed Mount Barnes after a Canadian ice physicist by Scott's second expedition, the BrAE, 1910–13. Not: New Harbour Heights.

Barnes, Mount: see Cheeks Nunatak 74°58'S, 72°49'W

Barnes Bluff 74°46'S, 110°19'W

A projecting portion of Jones Bluffs, 1.5 mi NNE of Eckman Bluff on the E side of Bear Peninsula, Walgreen Coast, Marie Byrd Land. Mapped by USGS from surveys and USN aerial photographs taken 1966. Named by US-ACAN in 1977 after Lt. Cdr. John O. Barnes, USN, Air Operations Officer, OpDFrz, 1975–76 and 1976–77; officer in charge of the NSFA winter detachment at McMurdo Station, 1977.

Barnes Glacier 67°32'S, 66°25'W

Glacier flowing W into Blind Bay on the W coast of Graham Land. Named by UK-APC in 1958 for Howard T. Barnes, Canadian physicist and pioneer of ice engineering.

Barnes Icefalls 83°49'S, 55°53'W

The icefalls along Washington Escarpment between Mount Dover and Bennett Spires in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for James C. Barnes, meteorologist and station scientific leader at Ellsworth Station, winter 1962.

Barnes Nunatak: see Cheeks Nunatak 74°58'S, 72°49'W

Barnes Peak 84°23'S, 167°34'E

A peak, 3,360 m, standing 4 mi SE of Mount Dickerson in the Queen Alexandra Range. Named by US-ACAN for Elwood E. Barnes, USARP cosmic rays scientist at Hallett Station, 1963.

Barnes Ridge 78°08'S, 84°50'W

A ridge 7 mi long, extending between Young and Ellen Glaciers at the E side of the Sentinel Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Stephen S. Barnes, scientific leader at Byrd Station in 1958.

Barnett Glacier 70°59'S, 167°30'E

A large glacier in the Anare Mountains that flows E along the S side of Tapsell Foreland into Smith Inlet, northern Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN after Donald C. Barnett, USGS topographic engineer, a member of USGS Topo East and West, 1962–63, in which the expedition extended geodetic control from the area of Cape Hallett to the Wilson Hills (Topo West) and from the foot of Beardmore Glacier through the Horlick Mountains (Topo East).

Barn Rock 68°41'S, 67°32'W

Prominent rock, more than 90 m high, near the N end of the Terra Firma Islands in Marguerite Bay. First visited and surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS who so named the rock because of its appearance when seen from the west.

Barnum Peak 85°23'S, 171°40'W

A peak (2,940 m) surmounting the E end of a prominent snow-covered rock divide near the head of Liv Glacier, just S of the mouth of LaVergne Glacier. Discovered by R. Admiral Byrd on the ByrdAE flight to the South Pole in November 1929, and named by him for J.D. Barnum, publisher of the *Syracuse Post-Standard* and contributor to the expedition.

Baronick Glacier 78°36'S, 161°50'E

A glacier 6 mi SW of Mount Cocks, in the Royal Society Range, draining into the Skelton Glacier to the west. Named by US-ACAN in 1963 for Chief Aviation Ordnanceman Michael P. Baronick, of U.S. Navy Squadron VX-6, who wintered at Williams Air Operating Facility at McMurdo Sound in 1956 and was in Antarctica several summer seasons. Baronick, with a party of three, was in command of the Beardmore Air Operating Facility established on Oct. 28, 1956, at 84°56'S, 166°00'W.

Barracas, Cabo: see Bongrain Point 67°43'S, 67°48'W

Barracouta Ridge 85°20'S, 166°35'W

A long jagged ridge which terminates on the north in Webster Knob. The ridge is an extension from the base of Mount Fridtjof Nansen into the head of Strom Glacier, Queen Maud Mountains. Discovered and visited in 1929 by the geological party under Laurence Gould of the ByrdAE, 1928–30. It was climbed by geologists of the Southern Party of the NZGSAE, 1963–64. The descriptive name applied by the Southern Party derives from the appearance of the toothlike pinnacle along the crest of the ridge.

Barracouta Rock 54°01'S, 38°03'W

Submerged rock lying 0.4 mi S of the entrance to Jordan Cove, Bird Island, off the W end of South Georgia. First charted by personnel on HMS *Owen* in 1961. Named by the UK-APC for one of *Owen's* survey motor boats.

Barranco, Isla: see Gulch Island 63°59'S, 61°29'W

Barratt Island 68°33'S, 77°52'E

A small island lying off the Vestfold Hills, about 1 mi W of Bluff Island. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Named by ANCA for N.R. Barratt, weather observer at Davis Station in 1960.

Barré, Mount 67°30'S, 68°33'W

Mountain with an ice-covered, pyramidal peak, 2,195 m, standing 2 mi NE of Mount Gaudry in the S part of Adelaide Island. Discovered and surveyed in 1909 by the FrAE under Charcot. Resurveyed in 1948 by the FIDS and named by the UK-APC for Michel Barré, leader of the FrAE to the Adélie Coast, 1951–52.

Barré Glacier 66°35'S, 138°40'E

Channel glacier about 5 mi wide and 5 mi long, flowing N from the continental ice to the coast close E of Cape Pépin. Delineated from air photos taken by USN OpHjp, 1946–47, and named by the US-ACAN for Michel Barré, leader of the FrAE wintering party of

1951–52, whose party extended reconnaissance of the coastal features as far westward as this glacier.

Barren, Mount 54°10'S, 36°45'W

Mountain, 645 m, standing W of Husvik Harbor on the N coast of South Georgia. Named descriptively, probably by DI in 1926–30.

Barren Bluff 73°04'S, 161°18'E

Prominent rock bluff in the S part of Sequence Hills along the W side of upper Rennick Glacier, Victoria Land. So named by the northern party of NZGSAE, 1962–63, because of the extremely bare (of loose rock) and exposed nature of the surface. The party had difficulty collecting sufficient stones for construction of a survey beacon.

Barrett Buttress 72°13'S, 65°36'W

A nunatak rising to 1,600 m at the S margin of Goodenough Glacier, 9 mi SW of Blanchard Nunataks in W Palmer Land. The feature has a sheer NW face 150 m high; the SE side is level with the snow plateau. Mapped by USGS from U.S. Navy aerial photographs taken 1966–69. Named by the UK-APC in 1977 after Richard G. Barrett, BAS surveyor at Stonington Island and Adelaide Island stations, 1974–76.

Barrett Glacier 84°37'S, 174°10'W

A glacier draining from the N slopes of the Prince Olav Mountains, about 15 mi long, flowing between Longhorn Spurs and Gabbro Hills to the Ross Ice Shelf. Named by the Southern Party of NZGSAE (1963–64) for Peter J. Barrett, geologist with that party.

Barrett Island 72°09'S, 95°30'W

An ice-covered island about 2 mi long, lying just within the N part of the mouth of Morgan Inlet, Thurston Island. Mapped by USGS from surveys and USN air photos, 1960–66. Named by US-ACAN for Lt. (j.g.) Barry B. Barrett, pilot of Squadron VX-6 on photographic flights during USN OpDFrz 1964.

Barrett Nunataks 79°20'S, 81°24'W

A group of nunataks located on the E side of the Dott Ice Rise overlooking Constellation Inlet, in the Heritage Range, Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party, 1962–63, for Peter J. Barrett, geologist with the party.

Barrier Bay 67°45'S, 81°15'E

An open bay in the coastal angle formed by the coast and the W end of the West Ice Shelf. Charted by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition, 1936–37, and named by them *Barrierevika* (Barrier Bay). "Barrier" is an obsolete term for "ice shelf." Not: *Barrierevika*.

Barrierevika: see Barrier Bay 67°45'S, 81°15'E

Barrier Island 68°26'S, 78°23'E

An island, 0.5 mi long, at the N end of the Vestfold Hills, lying just N of the entrance to Tryne Fjord in Tryne Sound. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Visited in 1957 by an ANARE party and so named because the island appeared to form a barrier to the passage of icebergs up Tryne Fjord.

Barrios, Islote: see Barrios Rocks 63°19'S, 57°57'W

Barrios Rocks 63°19'S, 57°57'W

A small group of rocks lying 1 mi W of Toro Point, Trinity Peninsula. The name "Islote Barrios" was given by the Chilean Antarctic Expedition (1947-48) after Gen. Guillermo Barrios Tirado, minister of national defense who accompanied the Presidential Antarctic Expedition (1948) to this area in the *Presidente Pinto*. Air photographs of this feature appear to show three small rocks closely juxtaposed. Not: Islote Barrios.

Bar Rocks 54°10'S, 36°42'W

Group of low rocks which lie near the head of Husvik Harbor in Stromness Bay, South Georgia. Charted by DI personnel in 1928 and so named by them, presumably because their presence obstructs or impedes vessels approaching the head of the harbor.

Barros, Iles de: see Barros Rocks 65°17'S, 64°12'W

Barros, Isla: see Alcock Island 64°14'S, 61°08'W

Barros Rocks 65°17'S, 64°12'W

Group of rocks between Berthelot Islands and Argentine Islands, lying 2 mi SW of Cape Tuxen off the W coast of Graham Land. Discovered by the FrAE, 1908-10, under Charcot, and named after Capt. Barros Cobra, Brazilian naval officer at Rio de Janeiro, who assisted the expedition. Not: Iles de Barros.

Barrow, Cape 63°42'S, 61°43'W

Steep cliff forming the N end of Hoseason Island, in the Palmer Archipelago. The cape appears in rough outline on an 1828 chart published by Laurie and was presumably observed in 1824 by James Hoseason, mate of the British sealing expedition under Hughes. It was named by a British expedition under Foster, 1828-31, probably for Sir John Barrow, Sec. of the Admiralty, 1804-06 and 1807-45, and founder of the Royal Geographical Society. The cape was more accurately charted by the FrAE, 1903-05, under Charcot.

Barrow, Cape 71°22'S, 169°17'E

The high, northern point of Flat Island in Victoria Land, marking the W side of the entrance to Robertson Bay. Capt. James Ross, in Jan. 1840, applied this name to a cape of the mainland, honoring Sir John Barrow, founder of the Royal Geographic Society, 1830, and Secretary of the Admiralty, 1807-45. The feature was mapped as a point on Flat Island by the BrAE, 1910-13, led by Scott.

Barrows Isle: see Elephant Island 61°10'S, 55°14'W

Barr Smith, Mount 67°10'S, 99°12'E

A striking rock peak, 1,310 m, the northernmost in a line of peaks along the W side of Denman Glacier. Discovered in December 1912 by members of the Western Base party of the AAE under Mawson, and named by him for Robert Barr Smith of Adelaide, patron of the expedition.

Barry Hill 85°10'S, 174°44'W

An ice-free hill just W of the mouth of LaPrade Valley and about 1 mi NNE of Mount Kenyon, in the Cumulus Hills. Named by US-ACAN for Lt. Richard P. Barry, CEC, USN, communications officer at McMurdo Station, winter 1957, who participated in USN OpDFrz I, II and III, 1955-58.

Barry Island 68°08'S, 67°07'W

Island lying in the center of the Debenham Islands, off the W coast of Graham Land. Charted by the BGLE under Rymill, who used

this island for a base in 1936 and 1937. Named by Rymill for the eldest son of Frank Debenham, member of the BGLE Advisory Committee.

Barsoum, Mount 82°04'S, 88°07'W

A pointed and partly snow-free peak on the W end of Martin Hills. It was positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 10, 1958, and named for Lt. Adib H. Barsoum, USN, Medical Officer at Ellsworth Station in 1958.

Barter Bluff 75°10'S, 114°00'W

Prominent rock bluff 1.5 mi W of Leister Peak in the Kohler Range, Marie Byrd Land. The bluff forms part of the steep wall along the E side of Kohler Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Leland L. Barter, Ship's Engineer on the *Eleanor Bolling* during the ByrdAE, 1928-30, and on both the *Bear of Oakland* and the *Jacob Ruppert* during the ByrdAE, 1933-35.

Bartholin Peak 67°17'S, 66°42'W

A conspicuous peak near the N end of the Boyle Mountains in Graham Land. Named by UK-APC in 1958 for Erasmus Bartholin, of København, whose *De Figura Nivis Dissertatio*, 1661, includes the earliest known scientific description of snow crystals.

Bartlett, Mount 66°57'S, 51°07'E

Mountain 3 mi SE of Mount Storer, in the Tula Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for A.J. Bartlett, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

Bartlett, Mount 84°56'S, 163°56'E

An ice-free mountain, 2,560 m, standing 2 mi N of Mount Buckley at the head of the Beardmore Glacier. Discovered by the BrAE (1907-09) and named for H.H. Bartlett of London, a supporter of the expedition.

Bartlett Bench 86°24'S, 152°18'W

A bare, flat benchlike elevation which overlooks the Bartlett Glacier from the E, located 6 mi SSW of Mount Ruth in the Queen Maud Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by NZGSAE Scott Glacier Party, 1969-70, in association with the Bartlett Glacier.

Bartlett Glacier 86°15'S, 152°00'W

A tributary glacier, about 30 mi long and 5 mi wide at its terminus, flowing NE from Nilsen Plateau and joining Scott Glacier close N of Mount Gardiner. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for Capt. Robert A. Bartlett of Brigus, Newfoundland, noted Arctic navigator and explorer who recommended that the expedition acquire the *Bear*, an ice-ship which was purchased and rechristened by Byrd as the *Bear of Oakland*. Not: Bob Bartlett Glacier.

Bartlett Inlet 77°13'S, 156°40'W

A largely ice-filled inlet, about 16 mi wide, indenting the N coast of Edward VII Peninsula just E of Cape Colbeck. Mapped from surveys by the USGS and U.S. Navy air photos (1959-65). Named by US-ACAN for Lt. Eugene F. Bartlett, MC, USN, officer in charge at Byrd Station, 1960.

Bartley Glacier 77°32'S, 162°13'E

A hanging glacier on the south wall of Wright Valley, Victoria Land, just west of Meserve Glacier. Named by US-ACAN for construction driver Ollie B. Bartley, USN, who was killed on Jan. 14, 1957, when the vehicle (weasel) he was driving dropped through the sea ice at Hut Point, McMurdo Sound.

Bartók Glacier 69°38'S, 71°00'W

Glacier, 7 mi long and 3 mi wide, flowing SW from the S end of the Elgar Uplands in the N part of Alexander Island. First photographed from the air and roughly mapped by the BGLE in 1937. More accurately mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by the UK-APC after Béla Bartók (1881–1945), Hungarian composer.

Barton Mountains 85°02'S, 173°00'E

A group of mountains including Mount Usher, Graphite Peak, Tricorn Mountain, and Mount Clarke, located S of Commonwealth Range and Hughes Range and bounded by Keltie Glacier, Brandau Glacier, Leigh Hunt Glacier, and Snakeskin Glacier, in the Queen Maud Mountains. Mapped by USGS from surveys and USN aerial photographs, 1958–63. Named by US-ACAN after Lt. Cdr. Walter H. Barton, USN, officer in charge of the Squadron VXE-6 detachment at Beardmore South Camp in the 1985–86 field season. Lt. Cdr. Barton developed, coordinated, and executed the logistical plan for this large and remote camp, which was in operation for 78 days and required over 800 flight hours in support of research in the Beardmore Glacier area.

Barton Peninsula 62°14'S, 58°46'W

Small peninsula separating Marian and Potter Coves at the SW end of King George Island, in the South Shetland Islands. Named by the UK-APC in 1963 for Colin M. Barton, FIDS geologist who worked in this part of King George Island, 1959–61.

Bartrum Glacier 79°44'S, 158°44'E

A small steeply crevassed glacier in the Brown Hills, flowing W between Bowling Green Plateau and Blank Peaks. Mapped by the VUWAE (1962–63). Named after J.A. Bartrum (1885–1949), Professor of Geology at the University of Auckland, New Zealand.

Bartrum Plateau 83°06'S, 160°06'E

An ice-covered plateau, 11 mi long and 6 mi wide, standing W of Mount Bonaparte in the Queen Elizabeth Range. Named by the Northern Party of the NZGSAE (1961–62) for geologist, Prof. John Bartrum of Auckland University College.

Barwick Valley 77°21'S, 161°10'E

An ice-free valley N of Apocalypse Peaks, extending from Webb Glacier to Victoria Valley in Victoria Land. Named by the VUWAE (1958–59) for R.E. Barwick, summer biologist with the N.Z. party of the CTAE (1956–58) who worked in this area in 1957–58 and as a member of the VUWAE, 1958–59.

Bary Glacier 54°26'S, 36°47'W

A glacier flowing W into Jacobsen Bight, South Georgia, S of Christophersen Glacier. The glacier cuts through the longest sedimentary sequence on the island, from Christophersen Glacier to Cape Darnley. Named by the UK-APC in 1982 after Thomas de Bary, one of the first directors of the Compañía Argentina de Pesca from 1904.

Basaltspitze: see Haslum Crag 64°22'S, 56°59'W

Båsbolken Spur 71°54'S, 5°17'E

A rocky spur near the head of Tvibåsen Valley which divides the upper valley into two equal parts, in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956–60) and named Båsbolken.

Bascope, Punta: see Ash Point 62°28'S, 59°39'W

Basecamp Valley 73°30'S, 94°22'W

A small ice-filled valley at the W side of Avalanche Ridge, in the Jones Mountains. Mapped and named by the University of Minnesota-Jones Mountains Party, 1960–61, who established a base camp, "Camp Minnesota," just N of the mouth of this valley.

Baseline Nunataks 70°46'S, 67°01'E

A small group of nunataks rising above the plateau ice 5 mi S of Mount McKenzie, along the S side of the Aramis Range, Prince Charles Mountains. Visited in January 1957 by ANARE southern party of 1956–57 led by W.G. Bewsher. This was the eastern end of a photo baseline, with Mount Hollingshead as the western end, hence the name.

Baseline Rock 67°36'S, 62°44'E

An isolated rock lying between Nøst Island and the Flat Islands in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. So named by ANCA because the rock was used as one end of the baseline of a triangulation carried out by ANARE in 1959.

Basil Halls Island: see Snow Island 62°47'S, 61°23'W

Basilica Peak 70°02'S, 159°20'E

A granite peak (1,810 m) located 2.5 mi SE of Mount Gorton in the S part of Wilson Hills. Mapped by USGS (1962–63) and NZGSAE (1963–64). Named by NZGSAE because of its shape.

Basilisk Peak 59°25'S, 27°05'W

The highest peak, 255 m, marking the crater rim of Bellingshausen Island, South Sandwich Islands. The name as applied by UK-APC in 1971 "marks the aura of this savage cliff which falls abruptly into a deep and steaming crater where the basilisk of legend might properly have his den."

Basissetta 72°17'S, 3°36'W

A small, gently sloping, ice-covered plain between Pyramidene Nunatak and Stammen Peak, near the SW end of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Basissetta (the base plain).

Basso Island 62°30'S, 59°44'W

Small island linked by a mainly submerged spit to the S shore of Discovery Bay, Greenwich Island, South Shetland Islands. Charted by the Chilean Antarctic Expedition (1947), under Capt. Federico Guesalaga Toro, and named for Juan Basso C., chief storekeeper on the ship *Iquique* of this expedition. Not: Isote Cabo Basso.

Bass Rock: see Baldred Rock 60°44'S, 44°26'W

Bass Rock: see Eden Rocks 63°29'S, 55°40'W

Bastei, Mount 71°22'S, 13°32'E

A prominent buttress-type mountain (2,460 m) rising 2 mi W of Mount Mentzel in the Gruber Mountains of Queen Maud Land. Discovered and named Bastei (bastion) by the GerAE, 1938–39, under Ritscher. Not: Bastionen.

Bastien Glacier: see Union Glacier 79°45'S, 82°30'W

Bastien Range 78°50'S, 86°00'W

A mountain range of moderate height which extends in a NW-SE direction for about 40 mi, flanking the SW side of Nimitz Glacier and the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN for Thomas W. Bastien, geologist, leader of the helicopter supported University of Minnesota Geological Party to these mountains, 1963–64. Bastien was also a member of a party to the Ellsworth Mountains in 1961–62.

Bastin, Mount 72°32'S, 31°15'E

Mountain, 2,000 m, standing 1 mi N of Mount Perov in the Belgica Mountains. Discovered by the BelgAE, 1957–58, under G. de Gerlache, who named it for Capt. Frank Bastin, who assisted in the scientific preparation of the expedition.

Bastion, Mount 77°19'S, 160°29'E

Mountain, 2,530 m, standing W of Webb Glacier and Gibson Spur, where the interior ice plateau meets the Willett Range in Victoria Land. Named by the VUWAE (1959–60) for its buttress-like appearance.

Bastionen: see Bastei, Mount 71°22'S, 13°32'E

Bastion Hill 79°50'S, 158°19'E

A prominent ice-free feature in the Brown Hills, rising to 1,490 m and projecting southward into Darwin Glacier just E of Touch-down Glacier. The descriptive name was given by the Darwin Glacier Party of the CTAE (1956–58).

Bastion Peak 66°10'S, 63°35'E

Ice-capped peak, 1,610 m, with rocky exposures on its S and E sides, which forms a buttress to the plateau escarpment W of Morrison Glacier, on the E coast of Graham Land. Charted in 1947 and given this descriptive name by the FIDS. It was photographed from the air during 1947 by the RARE under Ronne.

Bates Glacier 74°13'S, 163°51'E

A small tributary glacier flowing N from the W side of Mount Queensland, and entering the W side of Campbell Glacier just N of Mills Peak, in Victoria Land. Named by the Northern Party of the NZGSAE, 1965–66, for D.R. Bates, field assistant with that party.

Bates Island 65°49'S, 65°38'W

Narrow island nearly 3 mi long lying 3 mi E of Jurva Point, Renaud Island, in the Biscoe Islands. First accurately shown on an Argentine government chart of 1957. Named by the UK-APC in 1959 for Charles C. Bates, American oceanographer who has specialized in sea ice studies. Not: Isla Videla.

Bates Nunataks 80°15'S, 153°30'E

Three isolated nunataks in the névé of Byrd Glacier, 18 mi W of Vantage Hill, Britannia Range. Discovered by the Darwin Glacier Party of the CTAE (1956–58). Named by the NZ-APC for J. Bates, a member of CTAE who accompanied Sir Edmund Hillary to the South Pole.

Bates Peak 69°35'S, 72°48'W

The westernmost peak (c. 600 m) on Rothschild Island, rising W of Fournier Ridge in the Desko Mountains, q.v. Named by US-ACAN for Cdr. Lawrence O. Bates, USCG, Executive Officer, USCGC *Edisto*, USN OpDFrz, 1969.

Bates Point 70°43'S, 166°47'E

Ice-covered point forming the N side of the entrance to Yule Bay, along the N coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Lt. Thomas R. Bates, USN, Flight Surgeon and Medical Officer at McMurdo Station, 1964.

Bathurst Island: see Ford Island 66°24'S, 110°31'E

Batterbee, Cape 65°51'S, 53°48'E

Ice-covered cape with prominent rock exposures protruding through the coastal ice cliffs, marking the most northerly projection of Enderby Land, just E of Proclamation Island. Discovered on Jan. 13, 1930 by the BANZARE under Mawson, and named by him for Sir Harry Fagg Batterbee, then Asst. Sec. of the Dominions Office.

Batterbee Mountains 71°23'S, 67°15'W

Group of prominent mountains rising to 2,200 m, which forms part of the dissected edge of Dyer Plateau overlooking George VI Sound, on the W coast of Palmer Land. First seen and photographed from the air by Lincoln Ellsworth on Nov. 23, 1935. Charted from the ground in October 1936 by the BGLE under Rymill, and named after Sir Harry Fagg Batterbee (1880–1976), Assistant Under-Secretary of State, Dominions Office, 1930–38, and Chairman of the Polar Committee in 1934, who gave help to the expedition. Not: Montes Avión Cruz del Sur.

Battlements Nunatak 76°32'S, 159°21'E

A large nunatak near the head of Mawson Glacier, about 6 mi NW of Allan Hills. It is mostly ice free and has a number of small peaks running in a line W from the main peak. Discovered and named by the N.Z. party (1957–58) of the CTAE. The name describes the steep rock peaks of the nunatak.

Battle Point 67°10'S, 64°45'W

A rocky and conspicuous coastal point lying just below and SE of Mount Dater on the E coast of Graham Land. This coastal area was photographed by several American expeditions: USAS, 1939–41; RARE, 1947–48; U.S. Navy photos, 1968. Mapped by BAS, 1963–64. Named by UK-APC for Walter R.B. Battle (1919–53), British glaciologist who worked on problems of cirque erosion.

Battleship Promontory 76°55'S, 160°55'E

A sandstone promontory which rises from the floor of Alatna Valley near its head, in Victoria Land. The name was suggested by Parker Calkin, U.S. geologist who made stratigraphic studies in the valley in the 1960–61 season.

Battye Glacier 70°52'S, 67°54'E

A glacier flowing E into Radok Lake in the Aramis Range of the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for A.C. Battye, glaciologist at Wilkes Station in 1962.

Baudin Peaks 68°49'S, 67°03'W

Group of peaks rising above 750 m, standing at the SE corner of Mikkelsen Bay, immediately SW of the mouth of Clarke Glacier,

and 9 mi ENE of Cape Berteaux, on the W coast of Graham Land. This general area was first sighted and roughly charted in 1909 by the FrAE under Charcot, who gave the name "Cap Pierre Baudin" to a cape in this vicinity. The peaks previously described were roughly surveyed in 1936 by the BGLE under Rymill, but no name was assigned to them. The peaks were resurveyed in 1948–49 by the FIDS, who subsequently identified them as the feature named "Cap Pierre Baudin" by Charcot. Named by Charcot for Pierre Baudin, then port engineer at Pernambuco (now Recife), where the *Pourquoi-Pas?* put in on her return from the Antarctic. Not: Cap Pierre Baudin.

Baudissen Glacier: see Baudissin Glacier 53°02'S, 73°26'E

Baudissin Glacier 53°02'S, 73°26'E

A glacier, 1.5 mi wide, flowing into the W part of Corinthian Bay, 1 mi W of Challenger Glacier, on the N side of Heard Island. The glacier appears to have been first noted by a sketch in the narrative accompanying the scientific reports of the 1874 *Challenger* work along the N side of the island. The GerAE under Drygalski, 1901–03, portrayed a single large glacier flowing into Corinthian Bay and named it after Admiral Count Friedrich Baudissin, a sponsor of the expedition. In 1948 the ANARE determined that more than one glacier discharges into Corinthian Bay. ANCA recommended in 1954 that Baudissin Glacier be adopted for the westernmost and largest of these glaciers. Not: Baudissen Glacier.

Bauer Buttress 67°23'S, 66°56'W

A projecting rock buttress on the NE side of Mount Rendu on Arrowsmith Peninsula, Loubet Coast, Graham Land. Named by UK-APC following geological work by BAS, 1980–81. Named after Albert Bauer, French engineer and glaciologist who conducted research on glaciers in Îles Kerguelen, Adélie Coast, Greenland, and Iceland; formerly with *Expéditions Polaires Françaises*.

Bauhs Nunatak 84°12'S, 163°24'E

A prominent nunatak, 2,225 m, at the N side of Walcott Névé, about 3.5 mi SSE of Mount Sirius. Named by US-ACAN for Luvern R. Bauhs, USARP ionospheric scientist at South Pole Station, 1959.

Baulch Peak 83°21'S, 163°05'E

A peak 8 mi NE of Claydon Peak, marking the extremity of a spur descending N from Prince Andrew Plateau, Queen Elizabeth Range. Named by US-ACAN for DeeWitt M. Baulch, USARP meteorologist at South Pole Station, 1958.

Baumann Crag 78°24'S, 161°05'E

A rock crag rising to 1,265 m and forming the S end of Halfway Nunatak, Victoria Land. Named by US-ACAN in 1994 after Christopher C. Baumann, USGS cartographer; member of the satellite surveying team at South Pole Station, winter party 1984; leader of the USGS mapping control field team on Seymour Island, summer season, 1992–93.

Baume, Mount 54°39'S, 36°13'W

Mountain, 1,910 m, rising midway along the N flank of Novosilski Glacier near the SE end of South Georgia. Surveyed by the SGS in the period 1951–57 and named for Louis C. Baume, a member of the SGS in 1955–56.

Bauprés Rocks 64°54'S, 63°37'W

Two rocks lying in the middle of the southern entrance to Peltier Channel, in the Palmer Archipelago. First charted by the FrAE under Charcot, 1903–05. The descriptive name "Rocas Bauprés" (bowsprit rocks) was used on Argentine government charts as early as 1952; when viewed from a distance the feature is reported to resemble the bowsprit of a ship. Not: Advent Island.

Bautæen Peak 71°58'S, 25°57'E

Peak, 2,240 m, on the NE side of Mount Bergersen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Bautæen (the monolith).

Bawden Ice Rise 66°59'S, 60°50'W

An ice rise, 8 mi long and 2 mi wide, near the edge of Larsen Ice Shelf, 41 mi ESE of Cape Alexander, Graham Land. The feature, which may consist of more than one ice rise, was mapped on a BAS radio echo sounding flight from Adelaide Island in February 1975. Named by the UK-APC in 1985 after John Bawden, with BAS from 1971; Finance Officer, 1973–78.

Baxter, Mount 74°22'S, 162°32'E

A large buttress-type mountain, 2,430 m, located just S of O'Kane Canyon where it forms a rounded projection of the E escarpment of Eisenhower Range, in Victoria Land. Discovered by the BrNAE (1901–04) under Scott, who named it for Sir George and Lady Baxter of Dundee, supporters of the expedition.

Baxter Glacier 76°40'S, 161°51'E

A glacier nurtured by icefalls from Flight Deck Névé, flowing NE between Flagship Mountain and Mount Davidson to enter Fry Glacier, in Convoy Range, Victoria Land. Named by a 1976–77 VUWAE field party after James K. Baxter (1926–72), New Zealand poet and social critic.

Bayard Islands 64°56'S, 63°14'W

Small group of islands lying 1 mile NE of Cape Willems, off the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for Hippolyte Bayard (1801–87), French civil servant who independently invented a photographic process for obtaining direct positives on paper, in 1839.

Bayet Peak 65°02'S, 63°01'W

Conspicuous peak, 1,400 m, overlooking the S shore of Briand Fjord in Flandres Bay, on the W coast of Graham Land. The SE entrance point of Briand Fjord was charted by the FrAE under Charcot, 1903–05, and named "Pointe Bayet" for Charles Bayet, Director of Instruction and member of the Commission of Scientific Work of the expedition. As air photos show no well-defined point in this position the name has been applied to this conspicuous peak.

Bayet Point: see Pelletan Point 65°06'S, 63°02'W

Bayle, Cape 64°17'S, 63°10'W

Cape forming the NE end of Anvers Island, in the Palmer Archipelago. Charted by the FrAE, 1903–05, under Charcot and named after Vice Admiral Charles-Jessé Bayle (1842–1918), French Navy. Not: Pointe Bayle.

Bayle, Pointe: see Bayle, Cape 64°17'S, 63°10'W

Bayley, Isla: see Bob Island 64°56'S, 63°26'W

Bayliss, Mount 73°32'S, 62°44'E

A relatively low mountain, extending 9 mi in an E-W direction, standing 6 mi E of Mount Menzies in the Prince Charles Mountains. Observed from ANARE aircraft in 1957 and seen in the same year by an ANARE ground party under K.B. Mather. Named by ANCA for E.P. Bayliss, Australian cartographer, who drew the map of Antarctica published in 1939 by the Property and Survey Branch, Dept. of Interior, Canberra.

Bayly Glacier 64°37'S, 61°50'W

Glacier flowing into the head of Bancroft Bay, on the W coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. Named by the UK-APC in 1960 for Maurice B. Bayly, FIDS geologist at the Danco Island station in 1956 who, with L. Harris, pioneered the route from the Portal Point hut (on nearby Reclus Peninsula) to the plateau in February 1957.

Bayonne, Mount 68°56'S, 70°59'W

Mountain, 1,500 m, forming the N extremity of the Rouen Mountains in Alexander Island. First mapped by the FrAE, 1908–10, under Charcot, who named it for the French city. Resighted from the air by the BGLE in 1936. Remapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960.

Bay Point 64°46'S, 63°26'W

Point which marks the E side of the entrance to Børgen Bay on the SE coast of Anvers Island, in the Palmer Archipelago. Discovered by the BelgAE under Gerlache, 1897–99. The name appears on a chart based on a 1927 DI survey, but may reflect an earlier naming. Not: Punta Bahía.

Bazett Island 66°18'S, 67°06'W

A small island close S of the W end of Krogh Island, Biscoe Islands. Mapped from air photos by FIDASE (1956–57). Named by UK-APC for Henry C. Bazett (1885–1950), American physiologist, pioneer of studies of temperature sensation and the physiology of temperature regulation of the human body.

Bazzano Island 65°11'S, 64°10'W

Small island lying off the S end of Petermann Island, between Lisboa and Boudet Islands in the Wilhelm Archipelago. Discovered and named by the FrAE, 1908–10, under Charcot.

Beach Point 59°26'S, 27°19'W

The NE tip of Thule Island, made conspicuous by a bare rock ridge and a narrow beach of boulders and pebbles, in the South Sandwich Islands. Charted and named in 1930 by DI personnel on the *Discovery II* who made a landing there. Not: Punta Playa.

Beacon Dome 86°08'S, 146°25'W

A large dome-like mountain (3,010 m) standing at the head of Griffith Glacier along the Watson Escarpment. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. So named by NZGSAE (1969–70) because the mountain is composed of a granite basement with horizontally layered rocks of the Beacon series above.

Beacon Head 67°49'S, 67°21'W

Small headland at the N side of the entrance to Lystad Bay on Horseshoe Island, off Graham Land. So named by UK-APC

because a timber beacon built on the headland by Argentines was used during the survey on Horseshoe Island by the FIDS in 1955–57. Not: Punta Baliza.

Beacon Heights 77°50'S, 160°50'E

A small cluster of peaks between Beacon Valley and Arena Valley in Quartermain Mountains, Victoria Land, rising to 2,345 m in West Beacon, and also including East Beacon and South Beacon. Named by Hartley J. Ferrar, geologist with the BrNAE (1901–04), after the beacon sandstone which caps these heights.

Beacon Hill 68°04'S, 66°23'W

An ice-covered, dome-shaped hill (1,810 m) which rises 120 m above the surrounding plateau ice surface, situated 2.5 mi NE of McLeod Hill in central Antarctic Peninsula. The hill surmounts the divide between Northeast Glacier and Bills Gulch. Surveyed and named by the USAS, 1939–41; the hill may have been the site of a beacon at that time. The USAS operated a plateau weather station close southwestward (68°07'S, 66°30'W) of the hill throughout November and December 1940.

Beacon Valley 77°49'S, 160°39'E

An ice-free valley between Pyramid Mountain and Beacon Heights, in Victoria Land. Mapped by the BrAE, 1910–13. Named by the VUWAE (1958–59) after Beacon Heights.

Beaglehole Glacier 66°33'S, 64°07'W

A glacier between Spur Point and Friederichsen Glacier on the E coast of Graham Land. Named by UK-APC after John C. Beaglehole (1901–71), New Zealand historian of the Antarctic and biographer of Capt. James Cook.

Beagle Island 63°25'S, 54°40'W

Island lying NE of Darwin Island in the Danger Islands off the E end of Joinville Island. Named by the UK-APC in 1963 after HMS *Beagle* (Captain Fitzroy), due to its proximity to Darwin Island. Not: Islote Sarandí.

Beagle Peak 69°37'S, 71°36'W

A peak rising to c. 700 m in central Lassus Mountains, Alexander Island. Named by US-ACAN for Lt. Cdr. Clyde A. Beagle, USN, LC-130 aircraft commander, Squadron VXE-6, USN OpDFrz, 1969 and 1970.

Beak Island 63°37'S, 57°18'W

Arc-shaped island, 4 mi long and 360 m high, lying 0.5 mi NE of Eagle Island in the NE part of Prince Gustav Channel. Probably first seen in 1902–03 by members of the SwedAE under Norden-skjöld. The FIDS surveyed Beak Island in 1945 and so named it because of its shape and relative position to nearby Tail and Eagle Islands. Not: Isla Pico.

Beakley Glacier 73°51'S, 119°50'W

A glacier on the W side of Duncan Peninsula on Carney Island, flowing N into Amundsen Sea. Delineated by USGS from aerial photos taken by USN OpHjp in January 1947. Named by US-ACAN for V. Admiral W.M. Beakley, USN, Deputy Chief of Naval Operations for Ship Operations and Readiness during the IGY period, 1957–58.

Beale, Cape 66°35'S, 162°45'E

A steep bluff along the SE side of Borradaile Island in the Balleny Islands. The Balleny Islands were discovered by John Balleny in 1839. Cape Beale is named for W. Beale, one of the merchants

who joined with Charles Enderby in sending out the Balleny expedition.

Beale Pinnacle 66°36'S, 162°45'E

A boot-shaped rock pinnacle (60 m) lying close off Cape Beale, Borradaile Island, in the Balleny Islands. Named for W. Beale, one of the merchants who joined with Charles Enderby in sending out the John Balleny expedition of 1839.

Beall Island 66°18'S, 110°29'E

Rocky island, 1.1 mi long, with small coves indenting the E and W sides, lying 0.2 mi NW of Mitchell Peninsula in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for James M. Beall, U.S. Weather Bureau observer with USN OpWml who assisted staff aerology officers with forecasting duties. Not: Ostrov Bill.

Beall Reefs 66°18'S, 110°27'E

Submarine ridges with depths of less than 1 fathom, located 0.5 mi W of Beall Island, in the Windmill Islands. Discovered from the launch at Wilkes Station in 1961. Named by ANCA after Beall Island.

Beaman Glacier 70°58'S, 164°38'E

A tributary to Ebbe Glacier lying close N of McLean Glacier in the SW part of Anare Mountains. Named by US-ACAN for First Lt. Charles W. Beaman, USA, helicopter pilot who flew missions in support of the USGS Topo West survey of this area in the 1962–63 season.

Bean Peaks 75°58'S, 70°00'W

A group of peaks including Carlson Peak and Novocin Peak, which form the SW part of the Hauberg Mountains in Ellsworth Land. First sighted from the air by the RARE, 1947–48. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Lawrence D. Bean, electrician with the South Pole Station winter party in 1967.

Beardmore Glacier 83°45'S, 171°00'E

One of the largest known valley glaciers, over 100 mi long, descending the polar plateau and flowing N between the Queen Alexandra and Commonwealth Ranges, to enter the Ross Ice Shelf. Discovered by the BrAE (1907–09) and named for Sir William Beardmore, a supporter of the expedition.

Beard Peak 86°40'S, 145°25'W

A peak, 2,360 m, along the N edge of the La Gorce Mountains, standing 4 mi S of the E tip of Mount Mooney. Mapped by USGS from surveys and USN air photos, 1960–63. Named by US-ACAN for Philip H. Beard, photographer with USN Squadron VX-6 during Operation Deep Freeze 1966 and 1967.

Bearing Island 64°33'S, 62°02'W

Small island lying midway between Nansen and Enterprise Islands in Wilhelmina Bay, off the W coast of Graham Land. The name Bearing or Direction Island was used for this feature by whalers in the area because the island and a rock patch on Nansen Island were used as leading marks when entering Foyn Harbor from the southeast. Not: Direction Island.

Bear Island 68°11'S, 67°04'W

Rocky island lying 1 mi W of Stonington Island in Marguerite Bay, off the coast of Graham Land. The island was presumably

known to the BGLE, 1934–37, and the USAS, 1939–41, both based in the Stonington Island area. It was surveyed in 1947 by the FIDS, who named it for the USS *Bear*, flagship of the USAS which visited this area in 1940. Not: Isla Teniente González.

Bear Island: see Bear Peninsula 74°35'S, 110°00'W

Bear Peninsula 74°35'S, 111°00'W

A peninsula about 50 mi long and 25 mi wide which is ice covered except for several isolated rock bluffs and outcrops along its margins, lying 30 mi E of Martin Peninsula on Walgreen Coast, Marie Byrd Land. First delineated from aerial photographs taken by USN OpHjp in January 1947. Named by US-ACAN after the ice-ship USS *Bear*, flagship of the USAS, from which three reconnaissance flights were made in late February 1940, resulting in the discovery of Walgreen Coast (with probable sighting of this feature) and the Thurston Island area. This ship, under the name *Bear of Oakland*, also served as flagship of the ByrdAE, 1933–35, which based at the Bay of Whales, Ross Ice Shelf. Launched in 1874 at Greenock, Scotland, for use in the sealing trade, she sank in 30-foot seas and high winds in the North Atlantic, March 19, 1963, at which time she was being towed from Nova Scotia to Philadelphia. Not: Bear Island.

Bearskin, Mount 78°20'S, 85°37'W

Mountain (2,850 m) located 5 mi NE of Mount Tyree, between Patton and Cornwell Glaciers, in the Sentinel Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Capt. Leland S. Bearskin, USAF, who participated in establishing the IGY South Pole Station in the 1956–57 season.

Beascochea Bay 65°30'S, 64°00'W

Bay, 10 mi long and 5 mi wide, indenting the W coast of Graham Land S of Cape Pérez. Discovered but incompletely defined by the BelgAE, 1897–99. Resighted by the FrAE, 1903–05, and named by Charcot for Commander Beascochea, Argentine Navy. More accurately charted by the BGLE, 1934–37.

Beaudoin Peak 79°48'S, 81°00'W

A snow-free peak, 980 m, surmounting the SE part of Meyer Hills in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Douglas W. Beaudoin, USARP meteorologist at Ellsworth Station, 1961.

Beaufort, Mount: see Foster, Mount 63°00'S, 62°33'W

Beaufort Island 76°56'S, 166°56'E

An island in the Ross Sea, the northernmost feature of the Ross Archipelago, lying 12 mi N of Cape Bird, Ross Island. Discovered and named in 1841 by Ross for Capt. Francis Beaufort, RN, Hydrographer to the Admiralty.

Beaufoy Ridge 60°38'S, 45°33'W

Conspicuous black ridge, rising to 650 m at its NW end, standing at the W side of Sunshine Glacier and close N of Iceberg Bay on the S coast of Coronation Island, in the South Orkney Islands. Named by the FIDS following their survey in 1948–49. On Dec. 12, 1821, the cutter *Beaufoy* under Michael McLeod sailed to a position at least 60 mi W of the South Orkney Islands, where a chart annotation indicates that land was sighted, possibly Coronation Island.

Beaufort, Mount: see Foster, Mount 63°00'S, 62°33'W

Beaumont Bay 81°31'S, 161°22'E

An ice-filled reentrant on the W side of the Ross Ice Shelf between Young Head and Harris Point, into which Dickey Glacier flows. Discovered by the BrNAE (1901–04) and named for Admiral Sir Lewis Beaumont, RN, Arctic explorer who took special interest in this expedition.

Beaumont Glacier 72°02'S, 62°00'W

Broad glacier flowing in a NE direction to the SW part of Hilton Inlet, on the E coast of Palmer Land. The USAS discovered and photographed it from the air in 1940. It was resighted in 1947 by the RARE under Ronne, who named it for the city of Beaumont, Texas, in recognition of the public support given his expedition by this city and the Tejas Chapter of the Daughters of the Republic of Texas, at Beaumont. Not: Tejas Glacier.

Beaumont Hill 64°01'S, 61°59'W

Hill 4.5 mi NE of Chauveau Point on the W side of Liège Island, in the Palmer Archipelago. Shown on an Argentine government chart in 1957, but not named. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for William Beaumont (1785–1853), American surgeon who made important researches on gastric function.

Beaumont Island 68°12'S, 66°57'W

Low, rocky island in Neny Bay, about 0.4 mi from the mouth of Centurion Glacier, off the W coast of Graham Land. The island was presumably first sighted in 1936 by the BGLE, and was roughly charted by them and by the USAS, 1939–41. It was surveyed in 1946 by the FIDS, who named it for the *Port of Beaumont, Texas*, ship of the RARE under Ronne, which wintered nearby in Back Bay during 1947.

Beaumont Skerries 64°46'S, 64°19'W

Two small islands and several rocks 1 mi E of Joubin Islands, off the SW coast of Anvers Island. Named by US-ACAN for Malcolm J. Beaumont, Electronics Technician in R.V. *Hero* on her first Antarctic voyage, reaching nearby Palmer Station on Christmas Eve, 1968.

Beaupré Cove 64°42'S, 62°22'W

Cove 1 mi wide lying immediately NW of Piccard Cove in Wilhelmina Bay, along the W coast of Graham Land. First charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for Charles-François Beautemps-Beaupré (1766–1854), French hydrographer who, in 1825, prepared survey instructions for the officers of the *Astrolabe* and *Zélée*, laying down for the first time principles for making measurements from landscape drawings.

Beaver Glacier 67°02'S, 50°40'E

Glacier about 15 mi long and 4 mi wide, flowing W into Amundsen Bay between Auster Glacier and Mount Gleadell. Visited by an ANARE party on Oct. 28, 1956. Named after the Beaver aircraft used by ANARE in coastal exploration.

Beaver Glacier 83°24'S, 169°30'E

A glacier, 15 mi long, draining the coastal mountains of Queen Alexandra Range just NW of Mount Fox and entering Ross Ice Shelf at McCann Point. Named by the NZGSAE (1959–60) after the Beaver aircraft *City of Auckland*, which crashed in this area in January 1960.

Beaver Island 67°07'S, 50°47'E

Island 2 mi long and 1 mi wide, on the S flank of Beaver Glacier in Amundsen Bay. First visited in 1956 by an ANARE party led by P.W. Crohn, and so named because of its proximity to Beaver Glacier.

Beaver Lake 70°48'S, 68°20'E

A lake of smooth ice, 7 mi long and 5 mi wide, enclosed on the S and E by Flagstone Bench and Jetty Peninsula. The lake is situated at the S end of an area of rough ice (a stagnant glacier), 17 mi ESE of Aramis Range, Prince Charles Mountains. Discovered by ANARE personnel in 1956. An ANARE camp was established in the vicinity in September 1957 and the lake was used extensively as a landing area by Beaver aircraft.

Beaver Rocks 63°40'S, 59°21'W

A group of rocks lying 2 mi offshore at a point midway between Notter Point and Cape Kjellman, Trinity Peninsula. Named by UK-APC after a type of aircraft used by the British Antarctic Survey.

Beazley, Mount 85°51'S, 142°51'W

Mountain, 2,410 m, surmounting the N extremity of the California Plateau. Mapped by USGS from ground surveys and USN air photos, 1960–63. Named by US-ACAN for Lt. Robert M. Beazley, MC, USN, officer in charge of the South Pole Station winter party, 1965.

Beche Blade 80°43'S, 24°19'W

A sharp-crested ridge rising to 1,600 m between Murchison Cirque and Arkell Cirque on the S side of Read Mountains, Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. In association with the names of geologists grouped in this area, named in 1971 by the UK-APC after Sir Henry Thomas de la Beche (1796–1855), English geologist, first Director-General, Geological Survey of Great Britain (later Institute of Geological Sciences), 1835–55.

Béchervaise, Mount 70°11'S, 64°48'E

A great massif of brown rock, 2,360 m, standing 1 mi E of Mount Lacey in the Athos Range, Prince Charles Mountains. It has a sheer N face and is bare except for an icecap on the flat summit. First visited in November 1955 by an ANARE party led by John M. Béchervaise, officer in charge at Mawson Station in 1955, for whom it is named.

Béchervaise Island 67°35'S, 62°49'E

Largest of the Flat Islands in Holme Bay, Mac. Robertson Land. It is one of several plotted as a part of "Flatöy" (flat island) by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Found to be a separate island by ANARE in 1954 and named for John M. Béchervaise, officer in charge at Mawson Station in 1955 and 1959.

Beck, Cape 78°18'S, 166°16'E

A rounded, bare rock cape that forms the S end of Black Island in the Ross Archipelago. Named by NZGSAE, 1958–59, for Mr. A.C. Beck, the leader of the sub-party of the expedition which explored the island. Beck examined the SE coastline and visited this cape.

Beck, Mount 71°02'S, 67°01'E

A partly snow-covered mountain 2 mi SW of Taylor Platform in the Prince Charles Mountains. Plotted from ANARE air photos

taken in 1956 and 1960. Named by ANCA for J.W. Beck, assistant cook at Mawson Station in 1964 and storeman at Wilkes Station in 1966. Not: Mount Bent.

Beck, Mount: see Beck Peak 86°05'S, 158°58'W

Becker, Mount 75°06'S, 72°02'W

A prominent mountain 1 mi NE of Mount Boyer, in the Merrick Mountains, Ellsworth Land. These mountains were discovered from the air and photographed by the RARE, 1947–48, under Finn Ronne. The mountain was named by Ronne for Ralph A. Becker, legal counsel who assisted in the formation of RARE and in obtaining financial support for the expedition.

Beckett Nunatak 76°02'S, 160°11'E

A flattish, mostly bare rock nunatak lying 9 mi W of Mount Armitage and S of Harbord Glacier in Victoria Land. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1964 for W.T. Beckett, utilities man at McMurdo Station, 1963.

Beckman Fjord: see Beckmann Fjord 54°03'S, 37°12'W

Beckmann Fjord 54°03'S, 37°12'W

Small bay immediately E of Bellingshausen Point, on the E side of the Bay of Isles, South Georgia. Charted in 1912–13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*, who named it for Captain Beckmann, master gunner of the whaler *Don Ernesto*, who lost his life in a whaling accident in December 1912. Not: Beckman Fjord.

Beck Peak 86°05'S, 158°58'W

A peak, 2,650 m, on the E flank of Amundsen Glacier, standing 2 mi NW of Mount Stubberud on the ridge descending from northern Nilsen Plateau, Queen Maud Mountains. This peak appears to have been first mapped from air and ground photos taken by the ByrdAE, 1928–30. It was mapped in greater detail by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for A. Beck, a crew member on the *Fram* on Amundsen's Norwegian expedition of 1910–12. This naming preserves the spirit of Amundsen's 1911 commemoration of "Mount A. Beck," a name applied for an unidentifiable mountain in the general area. Not: Mount A. Beck, Mount Beck.

Beddie, Mount 64°29'S, 62°43'W

A rounded, snow-covered mountain rising to 435 m on Hulot Peninsula in the SW end of Brabant Island, Palmer Archipelago. The mountain was charted and named by the FrAE, 1903–05, led by Jean B. Charcot.

Bedford Island 66°28'S, 67°09'W

Island about 1 mi long, lying at the S end of Barcroft Islands in the Biscoe Islands. Mapped from air photos taken by FIDASE (1956–57). Named by UK-APC for Thomas Bedford, English physicist who has specialized on the measurement of the physical environment of man.

Bednarz Cove 66°21'S, 110°32'E

Cove in the S side of Mitchell Peninsula on Budd Coast. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Chief Electronics Technician Donald F. Bednarz, USN, a member of the Wilkes Station party of 1958.

Beehive Hill 68°16'S, 66°10'W

Ice-covered hill which rises to 2,030 m and projects 610 m above the surrounding ice sheet, situated on the plateau of Graham Land 10 mi E of the head of Neny Fjord and close N of the head of Wyatt Glacier. First surveyed in 1940 by the USAS, on whose field charts the hill is labeled "Sphinx." Resurveyed in 1946 by the FIDS who gave the present name because of the hill's resemblance to a wicker beehive. Not: Cerro Lanudo, Sphinx.

Beehive Mountain 77°39'S, 160°34'E

A mountain 5 mi N of Finger Mountain, standing at the N margin and near the head of Taylor Glacier, in Victoria Land. Named by the BrNAE (1901–04), possibly at the suggestion of Armitage who discovered it.

Beehive Nunatak: see Teall Nunatak 74°50'S, 162°33'E

Beer Island 66°00'S, 65°41'W

Island 1 mi long, lying immediately S of Jagged Island and 8 mi W of Prospect Point, off the W coast of Graham Land. Charted and named by the BGLE under Rymill, 1934–37. Not: Isla Caleta Carnero, Isla Caleta Cordero, Mutton Cove Island.

Beethoven Peninsula 71°44'S, 73°41'W

A deeply indented, ice-covered peninsula, 60 mi long in a NE-SW direction and 60 mi wide at its broadest part, forming the SW part of Alexander Island. First seen and photographed from the air in 1940 by USAS, which compiled the first rough map of SW Alexander Island. Resighted and photographed from the air by RARE, 1947–48, and remapped from RARE photos by Searle of FIDS in 1960. Named by UK-APC after Ludwig van Beethoven (1770–1827), German composer.

Beetle Spur 84°10'S, 172°00'E

A rock spur 2 mi N of Mount Patrick in Commonwealth Range. It descends from a small summit peak on the range to the E side of Beardmore Glacier. Probably first seen by Shackleton's Southern Party in 1908. The name is descriptive of the appearance of the spur when viewed from the west. Name suggested by John Gunner of the Ohio State University Geological Expedition, 1969–70, who collected geological samples at the spur.

Begg Point 54°03'S, 37°59'W

Point forming the NE side of the entrance to Johan Harbor, on the S coast and near the W end of South Georgia. Surveyed by the SGS, 1956–57. Named by the UK-APC for Capt. Sinclair Begg, Master of the whaling transport *Coronda*, 1933–40; Master of the *Southern Opal*, 1945–46; Manager on *Southern Harvester*, 1946–47; and Manager of the South Georgia Whaling Co. station at Leith Harbor, 1947–51.

Behaim Peak 68°47'S, 66°43'W

A conspicuous pyramid-shaped rock peak (1,150 m) at the S extremity of the mountains separating Meridian Glacier and Doggo Defile, on the W side of Antarctic Peninsula. Photographed from the air by RARE in Nov. 1947, and surveyed from the ground by FIDS in Dec. 1958. Named by UK-APC after Martin Behaim (1459–1506), German cosmographer and navigator who is credited with the first adoption of the astronomer's astrolabe for navigation at sea, in 1480.

Behling, Mount 85°40'S, 161°04'W

An ice-covered, flat-topped mountain, 2,190 m, standing between the Steagall and Whitney Glaciers and 5 mi N of Mount Ellsworth

in the Queen Maud Mountains. First mapped from ground surveys and air photos by the ByrdAE, 1928–30. Named by US-ACAN for Robert E. Behling, USARP glaciologist on the South Pole-Queen Maud Land Traverse II, summer 1965–66.

Behrendt Mountains 75°20'S, 72°30'W

A group of mountains, 20 mi long, aligned in the form of a horseshoe with the opening to the SW, standing 7 mi SW of Merrick Mountains in Ellsworth Land. Discovered and photographed from the air by the RARE, 1947–48, under Finn Ronne. Named by US-ACAN for John C. Behrendt, traverse seismologist at Ellsworth Station in 1957. Behrendt led the Antarctic Peninsula Traverse party to these mountains, summer 1961–62, and carried out investigations in Marie Byrd Land and the Pensacola Mountains in 1963–64 and 1965–66.

Behr Glacier 72°55'S, 168°05'E

Steep tributary glacier, 7 mi long, flowing E along the N side of Clapp Ridge to join Borchgrevink Glacier, in Victoria Land. The glacier first appears on a 1960 New Zealand map compiled from U.S. Navy aerial photographs. Named by US-ACAN for Col. Robert Behr, USAF, who was of assistance in the review of U.S. policy toward Antarctica in 1970–71 period.

Beiszer Nunatak 83°29'S, 51°57'W

Nunatak, 1,630 m, standing 1 mi S of Ray Nunatak at the SW end of Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for John E. Beiszer, aviation structural mechanic at Ellsworth Station, winter 1957.

Beitzel Peak 80°17'S, 82°18'W

A peak rising 1.5 mi SE of Minaret Peak in the Marble Hills, Heritage Range. Named by US-ACAN for John E. Beitzel, geophysicist on the USARP South Pole-Queen Maud Land Traverses I and II, 1964–65 and 1965–66.

Bejin, Islotes: see Puffball Islands 69°02'S, 68°30'W

Bekker Nunataks 64°42'S, 60°50'W

Three nunataks lying below Ruth Ridge on the N side of Drygalski Glacier in Graham Land. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Lt. Col. Mieczyslaw G. Bekker, Canadian engineer, author of *Theory of Land Locomotion*, 1956, a comprehensive source of information on the physical relationship between snow mechanics and track-laying vehicles, skis and sledges.

Belding Island 66°24'S, 67°13'W

An island 3 mi long, lying W of the S end of Watkins Island, Biscoe Islands. Mapped from air photos taken by FIDASE (1956–57). Named by UK-APC for Harwood S. Belding, American physiologist, Dir. of the Quartermaster Climatic Research Laboratory, Department of the Army, Lawrence, MA, who has initiated considerable research on cold climate clothing.

Belec, Mount 85°34'S, 163°27'W

An ice-covered, flat-topped mountain, 2,120 m, standing 6 mi NE of Mount Ruth Gade in the Quarles Range. First mapped from ground surveys and air photos by the ByrdAE, 1928–30. Named by US-ACAN for Dan M. Belec, meteorologist with the South Pole Station winter party in 1962.

Belemnite Point 70°40'S, 68°32'W

The E extremity of a mainly ice-free, hook-shaped ridge, midway between Lamina Peak and Ablation Point and 2 mi inland from George VI Sound on the E coast of Alexander Island. First photographed from the air on Nov. 23, 1935, by Lincoln Ellsworth and mapped from these photos by W.L.G. Joerg. Roughly surveyed in 1936 by the BGLE and resurveyed in 1949 by the FIDS. So named by FIDS because of belemnite fossils found there.

Belgen Valley 73°35'S, 4°00'W

A broad, ice-filled valley between Enden Point and Heksegryta Peaks in the Kirwan Escarpment, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and additional air photos (1958–59), and named Belgen (the shell).

Belgica, Détroit de la: see Gerlache Strait 64°30'S, 62°20'W

Belgica, Monts: see Belgica Mountains 72°35'S, 31°15'E

Belgica Glacier 65°23'S, 63°50'W

Glacier 8 mi long, flowing into Trooz Glacier to the E of Lancaster Hill, on the W coast of Graham Land. First charted by the BGLE under Rymill, 1934–37. Named by the UK-APC in 1959 after the *Belgica*, the ship of the BelgAE under Gerlache which explored this area in 1897–99.

Belgica Mountains 72°35'S, 31°15'E

An isolated chain of mountains c. 10 mi long, standing 60 mi ESE of the Sør Rondane Mountains in Queen Maud Land. Discovered by the BelgAE, 1957–58, under G. de Gerlache, and named after the ship *Belgica*, commanded by his father, Lt. Adrien de Gerlache, leader of the BelgAE, 1897–99. Not: Monts Belgica.

Belgica Sea: see Bellingshausen Sea 71°00'S, 85°00'W

Belgica Subglacial Highlands 76°30'S, 129°00'E

A group of subglacial highlands to the SE of Dome Charlie in Wilkes Land, running N-S and separating Peacock Subglacial Trench and Adventure Subglacial Trench from Wilkes Subglacial Basin. The feature was delineated by the SPRI-NSF-TUD airborne radio echo sounding program, 1967–79, and named after *Belgica*, the ship of the Belgian Antarctic Expedition, 1897–99 (Lt. Adrien de Gerlache).

Belgrano, Isla: see Adelaide Island 67°15'S, 68°30'W

Belinda, Mount 58°25'S, 26°23'W

Mountain, 1,370 m, which marks the summit of Montagu Island in the South Sandwich Islands. Probably first sighted by a British expedition under Cook in 1775, and accurately sketched in 1819 by a Russian expedition under Bellingshausen. Named by DI personnel on the *Discovery II* following their survey in 1930, for Belinda Kemp, daughter of Stanley W. Kemp, Dir. of Research of the Discovery Committee, 1924–36.

Belknap Nunatak 72°26'S, 97°45'W

A nunatak about 6 mi WNW of Shelton Head, surmounting an ice-covered spur on the S coast of Thurston Island. Mapped by USGS from surveys and USN air photos, 1960–66. Named by US-ACAN for William Belknap, field assistant at Byrd Station, 1964–65.

Bell, Mount 84°04'S, 167°30'E

A bluff-type mountain, 4,305 m, forming a part of the NE edge of Grindley Plateau, 6 mi SE of Mount Mackellar in Queen Alexandra Range. Named by the BrAE (1907–09) for William Bell, a relative of Shackleton and supporter of the expedition.

Bell Bay 67°11'S, 58°25'E

Bay situated between Mount Saint Michael and the Kring Islands along the coast of Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Indrefjord (inner fjord). Renamed by ANCA for Sgt. S. Bell, RAAF, wireless fitter at Mawson Station in 1959. Not: Indrefjord.

Bell Bluff 84°04'S, 170°00'E

A rock bluff on the W side of Beardmore Glacier, just N of the mouth of Garrard Glacier. Named by US-ACAN for Charles A. Bell, Utilities Man, who wintered at Hallett Station, 1964.

Bell Glacier 66°42'S, 124°54'E

A glacier draining northward into Maury Bay immediately eastward of Blair Glacier. Mapped by G.D. Blodgett (1955) from aerial photographs taken by USN Operation Highjump (1946–47). Named by US-ACAN for Thomas G. Bell, boatswain on the sloop *Peacock* during the USEE (1838–42) under Lt. Charles Wilkes.

Bell Glacier: see Mackellar Glacier 83°47'S, 167°15'E

Bellinghausen, Mount: see Bellingshausen, Mount 75°07'S, 162°06'E

Bellinghausen Sea: see Bellingshausen Sea 71°00'S, 85°00'W

Bellingshausen, Mount 75°07'S, 162°06'E

A conspicuous cone-shaped mountain, 1,380 m, standing 5 mi NE of Mount Priestley between Larsen and David Glaciers, in the Prince Albert Mountains of Victoria Land. Discovered by the BrNAE, 1901–04, led by Scott, and named by him after Admiral Thaddeus Bellingshausen, leader of the Russian expedition of 1819–21. Not: Mount Bellinghausen.

Bellingshausen Island 59°25'S, 27°03'W

Easternmost island of Southern Thule, in the South Sandwich Islands. Probably sighted by a British expedition under Cook in 1775. The island was described by Bellingshausen, whose Russian expedition visited the area in 1819–20. Charted in 1930 by DI personnel on the *Discovery II* under Kemp, who named it for Admiral Thaddeus Bellingshausen.

Bellingshausen Point 54°03'S, 37°14'W

Point marking the E side of the entrance to Sea Leopard Fjord in the Bay of Isles, South Georgia. Charted in 1912–13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*, who named it for Admiral Thaddeus Bellingshausen.

Bellingshausen Sea 71°00'S, 85°00'W

Marginal sea off the coast of Antarctica between Alexander Island and Thurston Island. Named for Admiral Thaddeus Bellingshausen. Not: Belgica Sea, Bellinghausen Sea.

Bell Island: see Guesalaga Island 64°16'S, 61°59'W

Bellows, Mount 84°50'S, 178°58'E

A mountain, 2,390 m, located 3 mi W of Layman Peak at the E side of Ramsey Glacier. Named by US-ACAN for Frederick A. Bellows, USN, Radioman at McMurdo Station, 1964.

Bell Peak 85°22'S, 164°14'W

A peak, 1,620 m, surmounting a SE trending spur of the Herbert Range, just SW of Sargent Glacier. The peak was probably observed by Roald Amundsen's south polar party in 1911, and was later roughly mapped by the ByrdAE, 1928–30. Named by US-ACAN for G. Grant Bell who studied cosmic rays at McMurdo Station, winter party 1962.

Bell Point 62°07'S, 58°53'W

Rocky point lying 6 mi SW of Stigant Point near the W end of King George Island, in the South Shetland Islands. Charted and named Rocky Point by DI personnel on the *Discovery II* in 1935. In order to avoid duplication, the name was rejected by the UK-APC in 1960 and a new one substituted. Bell Point is named for Dennis R. Bell (1934–59), FIDS meteorological assistant at Admiralty Bay from 1958 to July 26, 1959, when he lost his life in a crevasse. Not: Punta Rocasa, Rocky Point.

Bell Rock 71°35'S, 66°26'W

A very conspicuous and isolated nunatak on Goodenough Glacier, located 12 mi E of Mount Ward in Palmer Land. Named by UK-APC for Charles M. Bell, BAS geologist at Fossil Bluff, 1968–71.

Bellue, Cape 66°18'S, 65°53'W

Cape which forms the N side of the entrance to Darbel Bay, on the W coast of Graham Land. Discovered by the FrAE, 1908–10, under Charcot, and named by him for Admiral Bellue, Superintendent of the Dockyard at Cherbourg, France.

Bellum Valley 79°54'S, 155°15'E

A small valley E of Banna Ridge in the NW part of Britannia Range. The valley entrance is adjacent to the head of Hatherton Glacier. Named in association with Britannia by a University of Waikato (N.Z.) geological party, 1978–79, led by M.J. Selby. Bellum is a historical placename formerly used in Roman Britain.

Bell Valley 79°51'S, 82°00'W

A small, mainly ice-free valley lying S of Urban Point in the Enterprise Hills, Heritage Range. Named by the University of Minnesota geological party after the Bell helicopters used by the party in the exploration of the area in 1963–64.

Belolikov, Mount 70°29'S, 162°07'E

Mountain (1,120 m) along the W wall of Gannutz Glacier, about 8 mi WNW of Mount Bruce, in the Bowers Mountains. Photographed from the air by USN OpHjp, 1946–47. Surveyed by SovAE in 1958 and named after Soviet meteorologist A.M. Belolikov, who perished in a fire at Mirnyy Station on Aug. 3, 1960.

Belousov Point 69°51'S, 160°20'E

An ice-covered point forming the S tip of Anderson Peninsula, located just N of the terminus of Suvorov Glacier. The point was mapped by the SovAE of 1958 and named for the Soviet polar captain Mikhail P. Belousov, 1904–46.

Belsham, Cape 61°05'S, 54°53'W

Prominent cape 0.5 mi W of Point Wild on the N coast of Elephant Island, South Shetland Islands. The name dates back to about 1822 and is well established in international usage.

Belyy, Ostrov: see White Island 66°44'S, 48°35'E

Bender Mountains 85°31'S, 140°12'W

Small group of mountains 4 mi SW of Berry Peaks, between the SE edge of the Ross Ice Shelf and Watson Escarpment. Mapped by USGS from ground surveys and USN air photos, 1960–63. Named by US-ACAN for Lt. Cdr. Leslie C. Bender, USN, aircraft commander at McMurdo Station, 1962–63 and 1963–64.

Beneden Head 64°46'S, 62°42'W

Steep-sided headland, 700 m, forming the N side of the entrance to Andvord Bay, on the W coast of Graham Land. Discovered by the BelgAE, 1897–99, and named after Prof. Édouard Van Beneden, president of the *Belgica* Commission and author of several of the zoological reports of the expedition. Not: Cape Van Beneden, Punta Copihue.

Benedict Peak 75°17'S, 110°32'W

A sharp, mostly ice-covered subsidiary peak standing 6 mi NE of the summit of Mount Murphy, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Philip C. Benedict, aurora researcher at Byrd Station in 1966.

Benedict Point 66°09'S, 66°36'W

A point about 5 mi S of Cape Leblond on the E side of Lavoisier Island, Biscoe Islands. Mapped from air photos taken by FIDASE (1956–57). Named by UK-APC for Francis G. Benedict, American physiologist who, with W.O. Atwater, perfected the technique for calorimetric measurement of metabolism.

Benes Peak 76°02'S, 124°07'W

A peak (2,450 m) that is almost entirely snow covered, situated along the Usas Escarpment, 4 mi E of Mount Aldaz, in Marie Byrd Land. Surveyed by USGS on the Executive Committee Range Traverse of 1959. Named by US-ACAN for Norman S. Benes, USARP meteorologist at Byrd Station, 1961.

Beney, Mount 80°16'S, 27°45'W

The largest of the La Grange Nunataks, rising to 1,000 m in the N part of Shackleton Range. Roughly mapped by CTAE in 1957; photographed from the air by USN in 1967 and surveyed by BAS, 1968–71. Named by UK-APC for Sgt. Ivor C. Beney, RE, member of the Royal Society IGY Expedition at Shackleton station in 1957, who assisted with preparations for the CTAE, 1955–58.

Beney Nunataks: see La Grange Nunataks 80°18'S, 27°50'W

Bengaard Peak 83°19'S, 163°29'E

Prominent rock peak, 2,110 m, located 6 mi S of Fazekas Hills, on the E side of Queen Elizabeth Range. Named by US-ACAN for Hans J. Bengaard, USARP ionospheric scientist at Little America V, 1957.

Benighted Pass 72°30'S, 166°15'E

A snow pass between Mount Watt and Mount Roy in the Barker Range of the Victory Mountains, Victoria Land. The name was suggested by New Zealand geologist M.G. Laird and derives from

the forced lay-over of his field party in an emergency tent due to bad weather on the pass during 1981–82.

Benjamin, Mount 85°48'S, 160°06'W

A prominent mountain, 1,750 m, rising sharply at the W side of Amundsen Glacier, 5 mi SE of Mount Ellsworth, in the Queen Maud Mountains. First seen and mapped by the ByrdAE, 1928–30. Named by US-ACAN for Benjamin F. Smith, meteorologist with the McMurdo Station winter party, 1963.

Benkert, Mount 73°38'S, 76°40'W

The easternmost member of the Snow Nunataks, standing 8 mi ESE of Mount Thornton on the coast of Ellsworth Land. Discovered and photographed by the USAS, 1939–41. Named by US-ACAN for Capt. W.M. Benkert, USCG, commander of the *Eastwind* in Antarctica during Operation Deep Freeze 1966 and 1967.

Benlein Point 66°29'S, 110°29'E

The southern point of Peterson Island, in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Construction Man Franklin J. Benlein, USN, a member of the Wilkes Station party of 1958.

Bennet, Cape: see Bennett, Cape 60°37'S, 45°13'W

Bennett, Cape 60°37'S, 45°13'W

Bold promontory at the NE extremity of Coronation Island, in the South Orkney Islands. Discovered on the occasion of the joint cruise by Capt. George Powell, a British sealer in the sloop *Dove*, and Capt. Nathaniel Palmer, an American sealer in the sloop *James Monroe*, in December 1821. Named after David Bennett of Wapping, London, Captain Powell's employer. Not: Cape Bennet.

Bennett, Mount 84°49'S, 178°55'W

A prominent mountain (3,090 m) about 3 mi E of Mount Boyd, surmounting the W part of Anderson Heights, Queen Maud Mountains. Discovered by the USAS (1939–41), and surveyed by the U.S. Ross Ice Shelf Traverse Party (1957–58) led by A.P. Crary. Named by Crary for Hugh Bennett, seismologist with the party.

Bennett, Mount: see Stor Hånakken Mountain 66°32'S, 53°38'E

Bennett Bluff 75°10'S, 134°30'W

A bluff (810 m) between the upper reaches of Venzke Glacier and Berry Glacier, 7 mi SSW of Perry Range, in Marie Byrd Land. The bluff has prominent rock exposures on the N wall and was first observed and photographed from aircraft of the USAS on Dec. 18, 1940. Mapped in detail by USGS, 1959–65. Named by US-ACAN for Clarence E. Bennett, AT1, USN, Aviation Electronics Technician with Squadron VX-6 and a member of the McMurdo Station winter party, 1963.

Bennett Dome 71°48'S, 73°03'W

A rounded snow-covered peninsula on the S side of Beethoven Peninsula, Alexander Island, rising to c. 460 m between Weber Inlet and Boccherini Inlet. Photographed from the air by RARE in 1947 and roughly mapped from the photographs by D. Searle of FIDS in 1960. Mapped definitively by USGS from U.S. Navy aerial photographs taken 1967–68 and from Landsat imagery taken

1972–73. Named by US-ACAN for Joseph E. Bennett, Head, Polar Coordination and Information Section, Division of Polar Programs, NSF, 1976–86.

Bennett Escarpment 70°36'S, 64°19'E

A rock and ice escarpment curving in a general SW direction for 20 mi from Mount Pollard, in the Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1956–65. Named by ANCA for J.M. Bennett, physicist at Mawson Station, 1965.

Bennett Islands 66°56'S, 67°40'W

A group of islands at the SW side of Liard Island in Hanusse Bay, extending in a SW direction for 6 mi off the W coast of Graham Land. The islands were sighted and sketched from the air in February 1937 by the BGLE under Rymill. Named in 1954 by the UK-APC for Arthur G. Bennett, British representative on whaling in the South Shetland Islands and South Orkney Islands for many years between 1913 and 1927, and acting government naturalist in the Falkland Islands, 1924–38.

Bennett Nunataks 84°47'S, 116°25'W

Two rock nunataks 0.5 mi apart, lying 0.5 mi N of Lackey Ridge in the Ohio Range, Horlick Mountains. Surveyed by the USARP Horlick Mountains Traverse party in Dec. 1958. Named by US-ACAN for John B. Bennett, geomagnetist-seismologist at Byrd Station, 1960.

Bennett Platform 85°13'S, 177°50'W

A high, nearly flat, snow-free mesa of dark rock, about 5 mi long and 2.5 mi wide, located immediately E of Mount Black, on the W side of Shackleton Glacier. Discovered and photographed by USN Ophj (1946–47), on the flights of Feb. 16, 1947, and named by US-ACAN for Floyd Bennett, copilot on the Byrd North Pole Flight of May 1926.

Bennett Saddle 77°05'S, 126°26'W

The deep snow saddle between Mount Waesche and Mount Sidley, in the Executive Committee Range, Marie Byrd Land. Named by US-ACAN for Gerard A. Bennett, Traverse Specialist at Byrd Station, a member of the Executive Committee Range Traverse (Feb. 1959) and Marie Byrd Land Traverse (1959–60) that carried out surveys in this area.

Bennett Spires 83°51'S, 56°10'W

Two sharp peaks overlooking the head of Jones Valley in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Staff Sgt. Robert E. Bennett, USAF, radio operator of the Electronic Test Unit in the Pensacola Mountains, summer 1957–58.

Bennett Spur 82°26'S, 50°38'W

A rock spur between Wujek Ridge and Cox Nunatak in the Dufek Massif, Pensacola Mountains, q.v. Named by US-ACAN in 1979 after David W. Bennett who, with Robin Worcester, comprised the first of the annual USGS satellite surveying teams at the South Pole Station, winter party 1973.

Benninghoff, Mount 77°55'S, 161°19'E

A mainly ice-free mountain (1,965 m) standing 1.5 mi SE of Terra Cotta Mountain in Quartermain Mountains, Victoria Land. Named by US-ACAN in 1993 after William S. Benninghoff (1918–93), Professor of Botany, University of Michigan, 1957–88, retiring as Professor Emeritus of Botany; seasonal visits to Antarctica in

1968, 1976, 1977 and 1989; member, SCAR Working Group on Biology, 1968–87; member, Polar Research Board of the National Academy of Sciences, 1966–86.

Benn Skerries 54°27'S, 3°20'E

A small group of rocks which extend up to 0.25 mi westward from Norvegia Point, Bouvetøya. Charted and named in December 1927 by a Norwegian expedition in the *Norvegia* under Capt. Harald Hornvedt. Not: Benskjaer.

Benskjaer: see Benn Skerries 54°27'S, 3°20'E

Benoit Peak 72°06'S, 163°40'E

A peak 5 mi NNE of Mount Camelot in Alamein Range, Freyberg Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Robert E. Benoit, biologist at McMurdo Station, summers 1966–67 and 1967–68.

Bensley, Mount 70°19'S, 64°15'E

Mountain, 1,920 m, standing 8.5 mi SSW of Mount Starlight in the Prince Charles Mountains, Mac. Robertson Land. Mapped from ANARE surveys and air photos, 1955–65. Named by ANCA for P.A. Bensley, carpenter at Mawson Station, 1965.

Benson, Mount 78°37'S, 84°27'W

Mountain (2,270 m) standing at the NE side of Thomas Glacier, 4 mi E of Mount Osborne, in SE Sentinel Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Robert F. Benson, seismologist at the IGY South Pole Station, 1957.

Benson Glacier 76°49'S, 162°12'E

A glacier c. 12 mi long, draining the E part of Flight Deck Névé and continuing E between the Fry and Mackay Glaciers into the N part of Granite Harbor where it forms a floating tongue. Mapped in 1957 by the N.Z. Northern Survey Party of the CTAE (1956–58), and indicated as a somewhat longer glacier including the present Midship Glacier (q.v.). Named by the party after W.N. Benson, formerly professor of geology at the University of Otago, N.Z., whose publications include a major contribution to the petrology of Victoria Land.

Benson Hills 70°28'S, 62°17'W

A cluster of coastal hills near the head of Smith Inlet, 3 mi E of Berry Massif on the E side of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Lt. Arthur K. Benson, USN, Medical Officer at Palmer Station in 1969.

Benson Knob 75°45'S, 159°17'E

A distinctive rock knob, 1,540 m, at the S extremity of Ricker Hills in the Prince Albert Mountains, Victoria Land. Mapped by USGS from surveys and USN air photos, 1956–62. Named by US-ACAN for Anthony J. Benson, hospital corpsman with the South Pole Station winter party, 1966.

Benson Point 62°39'S, 61°18'W

Point forming the SW end of Rugged Island, in the South Shetland Islands. Named by the UK-APC in 1958 for Elof Benson, first mate and keeper of the logbook of the American brig *Hersilia* from Stonington, who visited the South Shetland Islands in 1819–20 and 1820–21.

Benson Ridge 82°46'S, 164°48'E

Rugged ridge between Robb and Bondeson Glaciers, standing 5 mi W of the N end of the Holland Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by the US-ACAN for Carl S. Benson, USARP glaciologist at Roosevelt Island, 1961–62.

Bent, Mount: see Beck, Mount 71°02'S, 67°01'E

Benten Island 69°01'S, 39°13'E

Small island lying 5 mi W of Ongulkalven Island in the E part of Lützow-Holm Bay. Mapped from surveys and air photos by JARE, 1957–62, and named Benten-shima (goddess of fortune island).

Bentley, Mount 78°07'S, 86°14'W

Mountain (4,245 m) standing 2 mi N of Mount Anderson in the main western ridge of the Sentinel Range, Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse party, 1957–58, and named for Dr. Charles R. Bentley, leader of the traverse party and chief traverse seismologist at Byrd Station, 1957–59.

Bentley Crag 67°17'S, 66°53'W

A rock crag rising to c. 1,000 m N of Seue Peaks on Arrowsmith Peninsula in Graham Land. Mapped by FIDS from surveys and air photos, 1956–59. Named by UK-APC after Wilson A. Bentley (1865–1931), American meteorologist and specialist in microphotography of snow and ice crystals; joint author with W.J. Humphreys of *Snow Crystals*, New York, 1931.

Bentley Subglacial Trench 80°00'S, 105°00'W

A major subglacial trench of West Antarctica which lies S of Byrd Subglacial Basin and is separated from it by a ridge except for a juncture of the two features near their E termination. From that juncture near Ellsworth Mountains, the trench extends WSW along the N side of Ellsworth Subglacial Highlands to c. 81°S, 120°W. A maximum depth of –2,540 m is reported in the W part of the trench. Named by US-ACAN in 1961 for Charles R. Bentley, chief traverse seismologist at Byrd Station, 1957–59; leader of the 1957–58 seismic traverse that determined the existence of this trench and recorded its depth. This amended description follows further subglacial delineation by the SPRI-NSF-TUD airborne radio echo sounding program, 1967–79.

Benton Island 77°04'S, 147°53'W

An ice-covered island about 4 mi long, lying 5 mi NW of Nolan Island in Marshall Archipelago. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for William T. Benton, BM1, USN, Boatswain's Mate aboard *USS Glacier* along this coast, 1961–62.

Benz Pass 63°41'S, 58°22'W

A narrow pass between the S cliffs of Louis Philippe Plateau and a rock nunatak 2 mi NE of the head of Russell East Glacier, Trinity Peninsula. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Karl Benz (1844–1929), German engineer who constructed the first practical gasoline motor car, in 1885. Not: Paso Capitán Farrel, Paso Farrel.

Beowulf, Mount 77°38'S, 161°48'E

A peak rising to c. 2,100 m at the SE side of Mime Glacier in the Asgard Range, Victoria Land. Mapped by the USGS in 1962 from U.S. Navy aerial photographs taken 1947–59. Named by the NZ-APC in 1983 after the hero of the Old English epic poem.

Beowulf Glacier 77°38'S, 161°49'E

A small north-flowing glacier located between Mime Glacier and the head of Rhone Glacier in the Asgard Range, Victoria Land. Named in 1983 by the NZ-APC from association with Mount Beowulf which stands at the head of this glacier.

Beresino Island: see Greenwich Island 62°31'S, 59°47'W

Bergan Castle 80°36'S, 21°21'W

A castlelike nunatak rising to 1,590 m to the SW of Mount Dewar in Shotton Snowfield, Shackleton Range. Photographed from the air by the U.S. Navy, 1967. Surveyed by BAS, 1968–71. In association with the names of pioneers of polar life and travel grouped in this area, named by the UK-APC in 1971 after Ole Ferdinand Bergan (1876–1956), Norwegian inventor who designed Bergan's "meis" (carrying frames) and rucksacks, patented in Norway in 1909.

Berg Bay 71°27'S, 169°27'E

Small bay between Birthday Point and Islands Point in the W side of Robertson Bay, northern Victoria Land. Charted and named in 1911 by the Northern Party led by Victor Campbell of the BrAE, 1910–13, because icebergs appear to gravitate there. Haffner Glacier which flows into this bay may also contribute icebergs.

Bergel Rock 65°10'S, 64°58'W

Rock nearly 1 mi S of Quintana Island in southwestern Wilhelm Archipelago. Named by UK-APC for Alexandra Bergel, granddaughter of Sir Ernest Shackleton, sponsor for HMS *Endurance* which made surveys in this area in February 1969.

Bergen, Mount 76°59'S, 160°48'E

Prominent rocky peak, 2,110 m, standing 2 mi W of Mount Gran on the N side of Mackay Glacier in Victoria Land. Surveyed in 1957 by the N.Z. Northern Survey Party of the CTAE (1956–58) and named by them after the birthplace in Norway of Trygve Gran, a member of the BrAE, 1910–13.

Bergen Nunataks 72°25'S, 64°53'W

A group of nunataks 14 mi N of Journal Peaks in south-central Palmer Land. Mapped by USGS from aerial photographs taken by the U.S. Navy, 1966–69. Named in 1977 by US-ACAN after Michael Bergen, USARP engineer, Palmer Station, winter party 1970.

Berger, Mount 75°04'S, 71°57'W

A mountain with a steep northern rock face, standing 2 mi NE of Mount Becker in the Merrick Mountains, Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Lt. Cdr. Raymond E. Berger, USN, aircraft pilot who flew the University of Wisconsin Traverse Party to this area and flew support missions in its behalf in the 1965–66 season.

Bergersen, Mount 72°04'S, 25°48'E

Large mountain rising to 3,170 m, standing at the W side of Byrdreen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Expedition, 1936–37, and named for Ambassador Birger Bergersen, chairman of the Norwegian Whaling Board. Remapped in 1957 by the Norwegians from air photos taken by USN OpHjp, 1946–47. Not: Birger Bergersenfjellet.

Berg Ice Stream 73°42'S, 78°20'W

An ice stream c. 30 mi long flowing into Carroll Inlet between Rydberg Peninsula and Espenschied Nunatak, on the English Coast, Ellsworth Land. Mapped by USGS from surveys and U.S. Navy air photos, 1961–66. Named by US-ACAN after Capt. Harold Berg, commander of USNS *Eltanin* on Antarctic cruises, 1964–65.

Bergin, Mount 67°42'S, 48°55'E

Mountain, 700 m, standing 4 mi W of Mount Maslen in the Raggatt Mountains, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for R.D. Bergin, radio officer at Mawson station in 1956.

Berg Mountains 69°13'S, 156°04'E

A mountain and two ridges 14 mi S of Cape Buromskiy, Krylov Peninsula. Photographed by USN Operation Highjump, 1946–47, the Soviet Antarctic Expedition, 1958, and ANARE, 1959. The feature was visited by an airborne survey party from the Soviet expedition and called “Gory L’va Berga” after the Soviet geographer Lev Berg. Not: Gory L’va Berga, Mount Dwyer.

Bergnes: see Byrd Head 67°27'S, 61°01'E

Berg Peak 71°32'S, 161°47'E

A prominent peak (1,870 m) standing 3 mi S of El Pulgar in northern Morozumi Range. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Thomas E. Berg, geologist who wintered at McMurdo Sound in 1961, and spent three succeeding summer seasons making patterned ground studies in the area. Berg perished in the crash of a U.S. Navy helicopter near Mount McLennan, Nov. 19, 1969.

Bering Nunatak 74°55'S, 71°18'W

A nunatak lying ESE of Mount Carrara in the Sky-Hi Nunataks of Ellsworth Land. Named by US-ACAN after Edgar A. Bering, physicist, University of Houston, TX, who carried out upper atmosphere research at Siple Station in 1980–81.

Berkley Island 66°13'S, 110°39'E

Island, 0.5 mi long, which marks the NE end of the Swain Islands. First mapped from air photos taken by USN OpHjp, 1946–47, and included in a survey of Swain Islands in 1957 by Wilkes Station personnel under C.R. Eklund. Named by Eklund for Richard J. Berkley, geomagnetician with the US-IGY wintering party of 1957 at Wilkes Station.

Berkner Ice Rise: see Berkner Island 79°30'S, 47°30'W

Berkner Island 79°30'S, 47°30'W

A high and completely ice-covered island about 200 mi long and 85 mi wide. This large feature rises to 975 m and separates Ronne Ice Shelf from Filchner Ice Shelf. Discovered by members of the US-IGY party at Ellsworth Station, under the leadership of Capt. Finn Ronne, USNR, during the 1957–58 season. Named by US-ACAN for American physicist Lloyd V. Berkner, engineer with the Byrd Antarctic Expedition, 1928–30. Not: Berkner Ice Rise, Hubley Island.

Berlin, Mount 76°03'S, 135°52'W

Prominent, conical mountain, 3,500 m, standing 10 mi W of Mount Moulton at the W end of the Flood Range in Marie Byrd Land. Discovered by the ByrdAE on flights to the NE and E of Little America in November–December 1934. Named “Mount Hal

Flood” by Byrd, but the name Flood is now applied to the entire mountain range of which this is a part. Named by the US-SCAN for Leonard M. Berlin, leader of the USAS party which sledged to this mountain in December 1940. Not: Mount Hal Flood.

Berlin Crater 76°03'S, 135°52'W

A high and circular ice-filled crater near the summit of Mount Berlin in the Flood Range, Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN in association with Mount Berlin.

Berlin Crevasse Field 76°03'S, 136°30'W

A crevasse field, 10 mi in extent, located immediately W of Mount Berlin in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN in association with Mount Berlin.

Berlioz Point 72°12'S, 74°06'W

Snow-covered point on the S side of Beethoven Peninsula, Alexander Island, marking the NW entrance point to the embayment occupied by Bach Ice Shelf. The S part of Alexander Island was first roughly mapped by the USAS in 1940, but this point was not clearly identified. It was mapped from air photos obtained by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by UK-APC after Hector Berlioz (1803–69), French composer.

Bermel Escarpment 85°17'S, 89°30'W

A snow and rock escarpment, 15 mi long, extending from the base of Ford Massif to King Peak, in the Thiel Mountains. The escarpment drops 300 to 400 m from the polar plateau to the ice surface N of these mountains. Named by US-ACAN after Peter F. Bermel, cartographer, USGS (Bermel Peninsula, q.v.); co-leader (with Arthur B. Ford) of the USGS Thiel Mountains party which surveyed the mountains in 1960–61; leader of USGS Topo East and Topo West, 1962–63, in which geodetic control was extended from the area of Cape Hallett to the Wilson Hills (Topo West), and from the foot of Beardmore Glacier through the Horlick Mountains (Topo East).

Bermel Peninsula 68°27'S, 65°22'W

A rugged, mountainous peninsula, c. 15 mi long and 7 mi wide, between Solberg Inlet and Mobiloil Inlet on the Bowman Coast, Graham Land. The feature rises to 1,670 m in Bowditch Crests and includes Yule Peak, Mount Wilson, Campbell Crest, Vesconte Point, Wilson Pass, Rock Pile Peaks, Miyoda Cliff, and Rock Pile Point. The peninsula lies along the route explored and photographed from the air by Sir Hubert Wilkins, 1928, and Lincoln Ellsworth, 1935, and was first mapped from the Ellsworth photographs by W.L.G. Joerg in 1937. The USAS explored this area from the ground, 1939–41, roughly positioning the peninsula. The USAS also photographed the feature from the air in 1940, referring to it as “The Rock Pile” or “Rock Pile Point” from the appearance as a jumbled mass of peaks. The USBGN approved the name Rock Pile Point for the peninsula in 1947, but the decision was subsequently vacated. Although Rock Pile Peaks (q.v.) was approved for eastern summits and Rock Pile Point (q.v.) for the east extremity, the peninsula remained unnamed for about four decades. However, reference to a geographic feature of this magnitude is needed, and in 1993 the UK-APC recommended the peninsula be named after Peter F. Bermel (Bermel Escarpment, q.v.), cartographer, USGS, 1946–94; Assistant Director for Pro-

grams, USGS; Member, U.S. Advisory Committee on Antarctic Names, 1979–94 (Chairman, 1993–94).

Bernacchi, Cape 77°29'S, 163°51'E

Rocky cape between Bernacchi Bay and New Harbor on the coast of Victoria Land. Discovered by the BrNAE, 1901–04, under Scott, and named by him for Louis C. Bernacchi, physicist with the expedition.

Bernacchi, Cape: see Bernacchi Head 76°08'S, 168°20'E

Bernacchi Bay 77°28'S, 163°27'E

Bay about 3 mi wide between Marble Point and Cape Bernacchi, on the coast of Victoria Land. Named after Cape Bernacchi by the BrAE under Scott, 1910–13.

Bernacchi Head 76°08'S, 168°20'E

A precipitous cliff forming the S extremity of Franklin Island in the Ross Sea. Named "Cape Bernacchi" by the BrAE (1898–1900) for Louis C. Bernacchi, a member of the expedition. The generic has been changed to "Head" by the US-ACAN to avoid duplication with Cape Bernacchi on the coast of Victoria Land. Not: Cape Bernacchi.

Bernal Islands 66°22'S, 66°28'W

A group of four mainly snow-covered islands and a number of rocks lying in Crystal Sound, about 10 mi E of the S end of Lavoisier Island, Biscoe Islands. Mapped from surveys by FIDS (1958–59) and air photos obtained by RARE (1947–48). Named by UK-APC for John D. Bernal, British physicist, joint author with Sir Ralph Fowler of a classic paper on the structure of ice which suggested the location of the hydrogen atoms, in 1933.

Bernard, Pointe: see Barnard Point 62°46'S, 60°21'W

Bernard Horne, Mount: see Horne, Mount 75°46'S, 71°44'W

Bernard Island 66°40'S, 140°02'E

Rocky island 0.25 mi long lying 0.05 mi E of Buffon Islands in the Géologie Archipelago. Charted in 1951 by the FrAE and named by them for Claude Bernard (1813–78), noted French physiologist. Not: Ile Claude Bernard.

Bernard Rocks 64°08'S, 62°01'W

Small group of rocks between Davis Island and Spallanzani Point, off the NE side of Brabant Island in the Palmer Archipelago. First mapped by the FrAE under Charcot, 1903–05. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for Claude Bernard (1813–78), French physiologist who made important contributions to the understanding of digestion, function of the liver and the methods of experimental medicine.

Bernhardi Heights 80°20'S, 25°00'W

A line of heights (1,220 m), snow-covered to E but with a west-facing rock escarpment, rising E of Schimper Glacier in the Herbert Mountains, Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. In association with the names of glacial geologists grouped in this area, named by the UK-APC in 1971 after Reinhard Bernhardt, German geologist, who in 1832 first recognized the moraines and erratics of north Germany as evidence of a former south extension of the Arctic ice sheet.

Bernstein, Mount 71°37'S, 163°07'E

A prominent mountain, 2,420 m, which forms a part of the northern wall of Linder Glacier in the Lanterman Range, Bowers Mountains. Mapped by the USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for the late Capt. Fred J. Bernstein, Asst. Chief of Staff for Operations and Plans, USN Support Force, Antarctica, 1967 and 1968.

Bernt Balchen Glacier: see Balchen Glacier 76°23'S, 145°10'W

Bernt Balchen Valley: see Balchen Glacier 76°23'S, 145°10'W

Berntsen Point 60°43'S, 45°36'W

Point which forms the S side of the entrance to Borge Bay on the E side of Signy Island, in the South Orkney Islands. Charted in 1927 by DI personnel on the *Discovery*. Probably named for Capt. Søren Berntsen, master of the *Orwell*, who was of assistance in transporting DI personnel the following year.

Berntsen Ridge 54°09'S, 36°43'W

A ridge on the N coast of South Georgia, running W from Tønsberg Point and rising to c. 580 m at the W end. The ridge partly occupies the peninsula between Stromness Harbor and Husvik Harbor. Named in 1991 by the UK-APC after Capt. Søren Berntsen (1880–1940), Norwegian whaler who established Husvik whaling station for Tønsberg Hvalfangeri and became its first manager in 1910; later Master of SS *Orwell*, a whaling factory ship.

Berquist Ridge 83°31'S, 56°30'W

A curving ridge, 8 mi long, trending W from its juncture with Madey Ridge in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Robert M. Berquist, photographer at Ellsworth Station, winter 1958.

Berrigan, Mount 66°40'S, 52°43'E

Mountain 1 mi E of Budd Peak in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1957. Named by ANCA for M.G. Berrigan, assistant diesel mechanic at Wilkes Station in 1961.

Berrnabbane Crags 69°44'S, 37°58'E

Rocky crags along the SE shore of Djupvika, a bay on the SW side of Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Berrnabbane (the bare crags).

Berrodden: see Berr Point 69°46'S, 39°04'E

Berr Point 69°46'S, 39°04'E

A bare rock point along the SE shore of Lützow-Holm Bay, lying 4 mi N of Rundvågs Hills. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Berrodden (the bare point). Not: Berrodden.

Berry, Mount 64°26'S, 60°43'W

Mountain 3 mi SE of Baldwin Peak, near the head of Cayley Glacier in northern Graham Land. Photographed by the FIDASE in 1956–57, and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Albert Berry, American aviator who

in 1912 made the first parachute descent from an airplane, using a pack-type parachute.

Berry Glacier 75°00'S, 134°00'W

Glacier, about 25 mi long and 5 mi wide, draining N between Perry Range and Demas Range into the Getz Ice Shelf on the coast of Marie Byrd Land. This vicinity was first photographed and rudely charted from aircraft of the U.S. Antarctic Service in December 1940. The glacier was mapped in detail by USGS from ground surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Cdr. William H. Berry, USN, Air Operations Officer for Task Force 43 during Deep Freeze operations 1969–72; Operations Officer, 1973.

Berry Head 60°42'S, 45°37'W

Point which forms the division between Tern Cove and Stygian Cove on the NE side of Signy Island in the South Orkney Islands. The name appears on the chart by DI personnel on the *Discovery II* resulting from their survey in 1933.

Berry Hill 63°48'S, 57°49'W

Hill rising to 370 m between Lachman Crags and Cape Lachman on James Ross Island. The hill is notable for an exposure of volcanic rocks and probable glacial beds of Pliocene age. Named by the UK-APC, 1987, after Alfred Thomas Berry, Chief Steward in *Discovery II*, 1929–39; in charge of stores on Operation Tabarin at Port Lockroy, 1943–44, and Hope Bay, 1944–45.

Berry Massif 70°27'S, 62°30'W

A compact, roughly circular and mostly snow-covered massif located at the S side of the terminus of Clifford Glacier, where the latter enters Smith Inlet, on the E coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Dale L. Berry, USARP biologist who was Station Scientific Leader at Palmer Station in 1971.

Berry Peaks 85°26'S, 138°32'W

Small group of peaks 10 mi S of the terminus of Reedy Glacier, between the SE edge of the Ross Ice Shelf and Watson Escarpment. Mapped by USGS from ground surveys and USN air photos, 1960–63. Named by US-ACAN for William Berry, radioman, Byrd Station winter party of 1961.

Bertalan Peak 72°04'S, 167°08'E

A peak (2,320 m) standing at the NW side of the head of Montecchi Glacier in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Robert E. Bertalan, USN, chief machinery repairman at McMurdo Station, 1967.

Berteaux, Cape 68°51'S, 67°27'W

Cape surmounted by a high rock peak between Mikkelsen Bay and Wordie Ice Shelf on the W coast of Graham Land. The FrAE under Charcot, 1908–10, originally applied the name Berteaux to an island in essentially this position. The BGLE under Rymill, 1934–37, identified the feature sighted by Charcot as the cape described above. Named by Charcot for a Monsieur Berteaux who helped obtain funds for his expedition. Not: Berteaux Island, Ile Berteaux.

Berteaux, Ile: see Berteaux, Cape 68°51'S, 67°27'W

Berteaux Island: see Berteaux, Cape 68°51'S, 67°27'W

Bertha Island 67°23'S, 59°39'E

Island 2.5 mi long, lying 1 mi S of Islay at the E side of William Scoresby Bay. Discovered and named in February 1936 by DI personnel on the *William Scoresby*. Not: Hamreneset.

Berthelot Islands 65°20'S, 64°09'W

Group of rocky islands, the largest 1 mi long, lying 1.5 mi SW of Deliverance Point, off the W coast of Graham Land. Discovered by the FrAE, 1903–05, under Charcot, and named by him for Marcelin Berthelot, prominent French chemist.

Bertil Frödin, Monte: see Frödin, Mount 64°50'S, 62°50'W

Bertodano Bay 64°15'S, 56°44'W

A bay between Bodman Point and Cape Wiman on the N side of Seymour Island. The name appears on Argentine navy charts from 1957 and recalls J. López de Bertodano, chief engineer in the Argentine corvette *Uruguay* during the rescue of the shipwrecked SwedAE in 1903. Not: Bahía López de Bertodano.

Bertoglio Glacier 79°18'S, 160°20'E

Glacier 7 mi long, flowing from the Conway Range eastward between Cape Lankester and Hoffman Point to the Ross Ice Shelf. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for Cdr. Lloyd W. Bertoglio, USN, commander of the McMurdo Station winter party, 1960.

Bertrab Glacier 54°37'S, 35°57'W

Small glacier at the head of Gold Harbor, at the E end of South Georgia. Charted by the GerAE, 1911–12, under Filchner, and named by him for General von Bertrab, Chief Quartermaster in the German General Staff and Chief of the Land Survey, who was chairman of the expedition.

Bertrab Nunatak 77°55'S, 34°32'W

A nunatak located along the south side of Lerchenfeld Glacier and about 5 mi WSW of the Littlewood Nunataks. Discovered by the GerAE, 1911–12, under Wilhelm Filchner, who named this feature for General von Bertrab.

Bertram Glacier 70°50'S, 67°28'W

Glacier, 15 mi long and 18 mi wide at its mouth, flowing W from the Dyer Plateau of Palmer Land into George VI Sound between Wade and Gurney Points. Discovered and first surveyed in 1936 by Stephenson, Fleming and Bertram of the BGLE under Rymill. Named by the UK-APC in 1954 for George C.L. Bertram, biologist of the BGLE, 1934–37, and member of the discovery party, who in 1949 became Dir. of the Scott Polar Research Inst., Cambridge.

Bertrand Ice Piedmont 68°30'S, 67°00'W

An ice piedmont about 11 mi long and from 3 to 5 mi wide, lying between Rymill Bay and Mikkelsen Bay on the Fallières Coast of Graham Land. It is bounded on the SE side by Pavie Ridge and on the NE side by Black Thumb. Surveyed in 1936 by the BGLE under Rymill, and resurveyed in 1948–49 by the FIDS. Named by UK-APC after Kenneth J. Bertrand (1910–78), Professor of Geography, the Catholic University of America, Washington, DC. A geomorphologist and Antarctic historian, Bertrand was a member of the U.S. Advisory Committee on Antarctic Names, 1947–73; chairman, 1962–73. His *Americans in Antarctica, 1775–1948*, published in 1971, is the most extensive and authoritative account of American involvement in the Antarctic.

Bertrand Island: see Stanley Island 66°32'S, 63°40'W

Berwick Glacier 84°36'S, 165°45'E

A tributary glacier, 14 mi long, flowing SE between Marshall Mountains and Adams Mountains to enter Beardmore Glacier at Willey Point. Named by BrAE (1907–09) after HMS *Berwick*, a vessel on which Lt. Jameson B. Adams of BrAE had served. The map of the BrAE (1910–13) and some subsequent maps transpose the positions of Berwick Glacier and Swinford Glacier. The latter lies 12 mi southwestward. The original application (BrAE, 1907–09) of Berwick Glacier is the one recommended. Not: Swinford Glacier.

Berwick Glacier: see Swinford Glacier 84°45'S, 164°10'E

Besch, Mount 78°11'S, 84°43'W

Mountain (1,210 m) forming the S end of Barnes Ridge and overlooking the terminus of Ellen Glacier, on the E side of Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Capt. Marvin E. Besch, USAF, who participated in establishing the IGY South Pole Station in the 1956–57 season.

Besnard Point 64°50'S, 63°29'W

Point which lies at the SE side of Port Lockroy, Wiencke Island, and marks the E side of the entrance to Alice Creek, in the Palmer Archipelago. Discovered by the FrAE, 1903–05, under Charcot, and named by him for A. Besnard, seaman on the expedition ship *Français*.

Bessinger Nunatak 85°05'S, 64°41'W

A mound-shaped nunatak, 1,640 m, standing at the SW end of Mackin Table, 3 mi E of Mount Tolchin, in southern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Lt. C.D. Bessinger, Jr. (MC) USN, officer in charge of South Pole Station, winter 1963.

Best, Cape 54°05'S, 36°49'W

Cape which marks the W side of the entrance to Fortuna Bay on the N coast of South Georgia. The name dates back to at least 1912 and is well established. Not: Cabo Óptimo.

Best, Mount 66°49'S, 51°23'E

Mountain 1.5 mi SW of Mount Morrison, in the Tula Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for F. Best, a member of the crew of the *Discovery* during the BANZARE, 1929–31.

Best Peak 54°07'S, 36°49'W

Peak, 600 m, standing SW of Illusion Point, Fortuna Bay, on the N coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Besvikelsens Kap: see Disappointment, Cape 65°33'S, 61°43'W

Beta Island 64°19'S, 63°00'W

Small island which lies immediately N of Kappa Island and close SW of Alpha Island in the Melchior Islands, Palmer Archipelago. The name, derived from the second letter of the Greek alphabet, was probably given by DI personnel who roughly surveyed the island in 1927. The island was surveyed by Argentine expeditions in 1942, 1943 and 1948. Not: Isla Rodeada.

Beta Peak 75°51'S, 160°06'E

A rock peak, 1,620 m, surmounting a small ice-free mesa 2 mi NE of Pudding Butte, in the Prince Albert Mountains, Victoria Land. So named by the Southern Party of NZGSAE, 1962–63, because they always referred to this feature throughout the season as Station B.

Betbeder, Cape 63°37'S, 56°41'W

Cape which marks the SW end of Andersson Island, lying in Antarctic Sound off the NE tip of Antarctic Peninsula. Charted by the SwedAE, 1901–04, under Nordenskjöld, and named by him for R. Admiral Onofre Betbeder, Argentine Minister of Marine, upon whose orders the Argentine ship *Uruguay* was dispatched to rescue Nordenskjöld's expedition. Not: Punta Castro.

Betbeder Islands 65°15'S, 65°03'W

Group of small islands and rocks in the SW part of the Wilhelm Archipelago, 22 mi W of Cape Tuxen. Discovered by the FrAE, 1903–05, and named by Charcot for R. Admiral Onofre Betbeder, Argentine Navy.

Betekhtina, Khrebet: see Betekhtin Range 71°54'S, 11°32'E

Betekhtin Range 71°54'S, 11°32'E

A mountain range c. 14 mi long, forming the S arm of the Humboldt Mountains in Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Soviet Academician A.G. Betekhtin. Not: Khrebet Betekhtina.

Betsy Cove: see Horten 54°17'S, 37°07'W

Bettle Peak 77°47'S, 163°30'E

Peak, 1,490 m, standing W of Bowers Piedmont Glacier and 6 mi N of Granite Knolls in Victoria Land. Named by the US-ACAN for James F. Bettle, USARP meteorologist and scientific leader at McMurdo station in 1962.

Betty, Mount 85°11'S, 163°45'W

A small ridge overlooking Ross Ice Shelf, located on the N side of Bigend Saddle in the NE extremity of the Herbert Range, Queen Maud Mountains. Discovered in November 1911 by Capt. Roald Amundsen, and named by him for Betty Andersson, nurse and housekeeper in the Amundsen family for many years.

Bevin Glacier 66°17'S, 63°47'W

Glacier 5 mi long, which flows E from the plateau escarpment on the E side of Graham Land into the NW end of Cabinet Inlet between Attlee and Anderson Glaciers. During December 1947, it was charted by the FIDS and photographed from the air by the RARE. Named by the FIDS for Rt. Hon. Ernest Bevin, M.P., British Minister of Labor and National Service and member of the War Cabinet.

Bewsher, Mount 70°54'S, 65°28'E

A prominent flat-topped mountain about 6 mi E of Mount McMahon in the Aramis Range, Prince Charles Mountains. First visited by the ANARE southern party (1956–57) led by W.G. Bewsher, officer in charge at Mawson Station in 1956, for whom it is named.

Beyl Head 74°05'S, 116°31'W

An ice-covered headland midway on the E side of Wright Island, along Getz Ice Shelf, Bakutis Coast. Named by US-ACAN in 1977 after Cdr. David D. Beyl, USN, Operations Officer, OpDFrz 1976, with responsibility for planning the Dome Charlie (q.v.) aircraft recovery program which resulted in the successful recovery of two LC-130 aircraft damaged during OpDFrz 1975.

Bibby Point 63°48'S, 57°57'W

A steep rocky point with snow slopes falling away inland, at the NE corner of Brandy Bay, James Ross Island. Named by UK-APC for John S. Bibby, FIDS geologist at Hope Bay, 1958–59.

Bibra Valley 79°57'S, 155°30'E

Ice-free valley bounded eastward by Danum Platform, lying 6 mi NE of Haven Mountain in Britannia Range. Named in association with Britannia by a University of Waikato (N.Z.) geological party, 1978–79, led by M.J. Selby. Bibra is a historical place name formerly used in Roman Britain.

Bickerton, Cape 66°20'S, 136°56'E

Ice-covered point 5 mi ENE of Gravenoire Rock which marks the N extremity of the coastal area close E of Victor Bay. Charted by the AAE under Mawson, 1911–14, and named by him for F. H. Bickerton, engineer of the expedition and leader of the Western Party which sighted the cape from its farthest west camp. Not: Cape Richardson.

Bidlingmaier, Cape 53°01'S, 73°32'E

A rocky cape at the E side of the entrance to Mechanics Bay, on the N side of Heard Island. The feature appears to have been known to American sealers as "Morgan's Point," as shown by Capt. H.C. Chester's 1860 sketch map of the island. The name "Negros Head" was also in use by American sealers during the 1860–70 period. The name Bidlingmaier was applied by the GerAE, under Drygalski, who made a running survey and landing along the N side of the island in 1902. Friedrich Bidlingmaier served as magnetician and meteorologist with the expedition. Not: Morgan's Point, Negros Head.

Bielecki Island 64°46'S, 64°29'W

An island 0.5 mi N of Trundy Island in the W part of Joubin Islands. Named by US-ACAN for Johannes N. Bielecki, Asst. Engineer in R.V. *Hero* on her first Antarctic voyage to Palmer Station in 1968.

Bienvenido, Islas: see Welcome Islands 53°58'S, 37°29'W

Bienvenue, Cape 66°43'S, 140°31'E

Small rocky cape which is partially ice-covered, 44 m, forming the E side of the entrance to Piner Bay. Photographed from the air by USN OpHjp, 1946–47. Charted and named by the FrAE under Barré, 1951–52, who established an astronomical control station on the cape. Bienvenue is a French word meaning welcome, and describes the pleasure of the French party at finding a cape not shown on previous charts where a landing could be made.

Bierle, Mount 71°30'S, 167°19'E

A mountain (2,360 m) rising 4.5 mi N of Mount Granholm in the Admiralty Mountains of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Donald A. Bierle, USARP biologist at McMurdo Station, 1966–67 and 1967–68.

Bier Point 74°10'S, 164°09'E

A projecting point on the E side of Campbell Glacier, 7 mi NE of Mount Queensland, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for Jeffrey W. Bier, biologist, McMurdo Station winter party, 1966.

Big Ben 53°06'S, 73°31'E

A massive ice-covered mountain, 2,745 m, which is the central and dominating feature on Heard Island, and toward which the relief of the island rises from all sides. The name was apparently applied by American sealers at Heard Island following their initiation of sealing there in 1855. The name was found to be already in common use when the British expedition under Nares visited the island in the *Challenger* in 1874 and made a survey of its salient features. Not: Big Ben Peak, Emperor William Peak, Kaiser Wilhelm-Berg, Old Ben Mountain.

Big Ben Peak: see Big Ben 53°06'S, 73°31'E

Big Brother Bluff 71°28'S, 159°48'E

A high, angular granite bluff (2,840 m) along the W wall of Daniels Range, 6 mi N of Mount Burnham, in the Usarp Mountains. So named by the northern party of NZGSAE, 1963–64, because it is visible from 50 mi N and from many points across Rennick Glacier. Hence the reminiscence from George Orwell's famous saying.

Big Diamonen Island: see Diamonen Island 64°02'S, 61°17'W

Bigelow Rock 66°10'S, 95°25'E

Low, ice-covered rock about 150 ft long, with numerous rock exposures close above sea level, lying immediately W of Shackleton Ice Shelf, about 25 mi NE of Junction Corner. Delineated from aerial photographs taken by USN OpHjp, 1946–47. An astronomical control station was established on the rock by USN OpWml, 1947–48. Named by the US-ACAN for Tech. Sgt. George H. Bigelow, USMC, tractor driver-mechanic with USN OpHjp and USN OpWml. Not: Burton Island Rock.

Bigend Saddle 85°12'S, 163°50'W

A snow-covered saddle at the SW side of Mount Betty in northern Herbert Range, Queen Maud Mountains. The saddle was traversed in December 1929 by the ByrdAE geological party under Laurence Gould. It was named by the Southern Party of the NZGSAE, 1963–64, because one of the party's motor toboggans was abandoned here with a smashed big end bearing.

Biggs Island 67°48'S, 68°53'W

Small island forming the easternmost of the Henkes Islands, off the S end of Adelaide Island. Named by the UK-APC in 1963 for Thomas Biggs, a Falkland Islander, coxswain of the launch of RRS *John Biscoe* which was used by the RN Hydrographic Survey Unit to chart this island in 1963.

Bigler Nunataks 70°45'S, 159°55'E

A cluster of notable nunataks lying southeastward of Pomerantz Tableland between Keim Peak and Lovejoy Glacier. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–62. Named by US-ACAN for John C. Bigler, USARP biologist at McMurdo Station, 1966–67.

Bigo, Mount 65°46'S, 64°17'W

Mountain, 1,980 m, standing immediately SW of Mount Perchot at the head of Bigo Bay, on the W coast of Graham Land. Discovered by the FrAE, 1908–10, and named by Charcot, probably for Robert Bigo of Calais, a member of the Lique Maritime Française.

Bigo Bay 65°43'S, 64°30'W

Bay 8 mi long and 6 mi wide, indenting the W coast of Graham Land between Cape Garcia and the peninsula surmounted by Magnier Peaks. The FrAE, 1908–10, first sighted this bay but charted it as the southern part of Leroux Bay. The BGLE, 1934–37, determined that the peninsula surmounted by Magnier Peaks separates this bay from Leroux Bay. Named by Rymill after Mount Bigo, a mountain at the head of the bay.

Bigourdan Fjord 67°33'S, 67°23'W

A sound, 12 mi long in an E-W direction and averaging 2 mi wide, lying between Pourquoi Pas Island and the SW part of Arrowsmith Peninsula, along the W coast of Graham Land. Discovered by the FrAE, 1908–10, under Charcot, and named by him for Guillaume Bigourdan, noted French astronomer. It was roughly surveyed by the BGLE, 1934–37, under Rymill, and resurveyed by the FIDS, 1948–50.

Big Razorback Island 77°41'S, 166°30'E

The southeasternmost of the Dellbridge Islands, lying in Erebus Bay off the W side of Ross Island. Discovered and named by the BrNAE, 1901–04, under Scott. The name is descriptive. Not: Large Razorback Island, Razorback Island.

Bikjebugten: see Hound Bay 54°22'S, 36°13'W

Bilbad Peak: see Bildad Peak 65°49'S, 62°36'W

Bildad Peak 65°49'S, 62°36'W

A conspicuous snow-capped peak 5 mi W of Spouter Peak on the S side of Flask Glacier, in Graham Land. Surveyed by FIDS in 1955. Named by UK-APC after the fictional Captain Bildad, part-owner of the whaling ship *Pequod* in Herman Melville's *Moby Dick*. Not: Bilbad Peak.

Bilgeri Glacier 66°01'S, 64°47'W

Glacier flowing into Barilari Bay S of Huitfeldt Point, on the W coast of Graham Land. Charted by the BGLE under Rymill, 1934–37. Named by the UK-APC in 1959 for Georg Bilgeri (1873–1934), Austrian pioneer exponent of skiing, inventor of the first spring ski binding, and author of one of the earliest skiing manuals.

Bill, Ostrov: see Beall Island 66°18'S, 110°29'E

Billboard, The 77°04'S, 145°40'W

Massive granite monolith with vertical faces rising more than 300 m above the continental ice, standing just W of Mount Rea between Arthur and Boyd Glaciers, in the Ford Ranges of Marie Byrd Land. Discovered in November 1934 by the ByrdAE sledge party under Paul Siple, and so named because of its form and appearance.

Billey Bluff 75°32'S, 140°02'W

A rocky coastal bluff 4 mi SW of Mount Langway in the W part of Ickes Mountains, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by

US-ACAN for John P. Billey, ionospheric physicist, Scientific Leader at Byrd Station, 1971. Not: Landry Peak.

Billie Peak 64°45'S, 63°23'W

Peak, 725 m, which rises 1.5 mi ENE of Bay Point on the SE coast of Anvers Island, in the Palmer Archipelago. Discovered by the BelgAE, 1897–99, under Gerlache. The name appears on a chart based on a 1927 DI survey, but may reflect an earlier naming.

Billie Rocks 60°43'S, 45°37'W

Group of rocks 0.1 mi NE of Drying Point, lying in Borge Bay along the E side of Signy Island, in the South Orkney Islands. The name Billie Rock, for the easternmost rock of the group, appeared on a chart based upon a 1927 sketch survey of Borge Bay by DI personnel on the *Discovery*. The name has since been extended to include the entire group.

Billing, Mount 75°43'S, 160°54'E

A wedge-shaped mountain, 1,420 m, standing between Mount Mallis and Mount Bowen in the Prince Albert Mountains, Victoria Land. Named by the NZ-APC for Graham Billing, public relations officer at Scott Base, 1962–63 and 1963–64 seasons.

Billingane Peaks 68°21'S, 59°18'E

A cluster of four peaks, about 5 mi ESE of See Nunatak at the E end of the Hansen Mountains. Mapped and named by Norwegian cartographers working from air photos taken by the Lars Christensen Expedition, 1936–37. Not: Maruff Peaks.

Bill Inlet 54°02'S, 37°58'W

Small inlet lying immediately E of Undine Harbor, near the W end of South Georgia. The name appears to be first used on a 1929 British Admiralty chart.

Billis Islet: see Bills Island 64°49'S, 63°30'W

Bill Rock 54°09'S, 36°39'W

Rock which lies 0.3 mi E of the S end of Grass Island in Stromness Bay, South Georgia. Charted and named in 1928 by DI personnel.

Bills Gulch 68°05'S, 65°50'W

The northern of two glaciers flowing E from the plateau upland into the head of Trail Inlet, on the E coast of Graham Land. This glacier was used by the sledge party under Paul H. Knowles which traversed Antarctic Peninsula from the East Base of the USAS on its way to Hilton Inlet in 1940. Named by the USAS for a lead dog that died at this point. The name has been approved because of its wide use on maps and in reports.

Bills Island 64°49'S, 63°30'W

Island which lies close NE of Goudier Island in the harbor of Port Lockroy, in the Palmer Archipelago. Discovered and charted by the FrAE, 1903–05, under Charcot. The name appears on a chart based on a 1927 DI survey, but may reflect an earlier naming. Not: Billis Islet.

Bills Point 64°19'S, 62°59'W

Point marking the S extremity of Delta Island in the Melchior Islands, Palmer Archipelago. The name was probably given by DI personnel who roughly charted Delta Island in 1927. The feature was surveyed by Argentine expeditions in 1942, 1943 and 1948.

Billycock Hill 68°10'S, 66°33'W

Rounded, ice-covered hill which rises to 1,630 m and projects 180 m above the surrounding ice sheet, situated close N of the head of

Neny Glacier on the W coast of Graham Land. First surveyed by the USAS, 1939–41. Resurveyed in 1946 by the FIDS and named by them for its resemblance to a billycock hat.

Binary Peaks 54°29'S, 36°05'W

A steep pinnacle covered with snow with two snow free and therefore conspicuous summits, situated 1.5 mi NW of Mount Krokisius and 2 mi NNW of Moltke Harbor, South Georgia. This feature was named "Doppelspitz" (double peaks) by a German expedition under Schrader, 1882–83, and was identified by the British Combined Services Expedition of 1964–65. An English form of the name, Binary Peaks, was recommended by UK-APC in 1971. Not: Doppelspitz.

Binder Beach 54°01'S, 37°43'W

A moraine beach at the head of Right Whale Bay on the N coast of South Georgia. The name appears on a chart based upon a survey by DI personnel in 1930.

Binder Rocks 74°14'S, 115°03'W

An isolated rock outcrop located 4 mi S of Siglin Rocks on the W side of Martin Peninsula, Bakutis Coast, Marie Byrd Land. First photographed from the air by USN OpHjp in January 1947. Named by US-ACAN for Lt. R.A. Binder, USN, maintenance coordinator at the Williams Field air strip, McMurdo Sound, during Deep Freeze 1967.

Binders Nunataks 72°36'S, 62°58'E

Two small, light-colored nunataks standing 37 mi N of Mount Scherger in the southern Prince Charles Mountains. Mapped from air photos and surveys by ANARE, 1957–60. Named by ANCA after a fictional character in the novel *Ascent of Rumdoodle* by W.E. Bowman.

Bindschadler Glacier 77°58'S, 162°09'E

A glacier in the NW part of Royal Society Range, Victoria Land, flowing N between Table Mountain and Platform Spur to join Emmanuel Glacier. Named by US-ACAN in 1992 after glaciologist Robert A. Bindschadler of the NASA Goddard Space Flight Center; from 1983 a principal investigator for USARP studies of the West Antarctic ice sheet including dynamics of ice streams in the Siple Coast area, their interaction with the Ross Ice Shelf, and the role of polar ice sheets in global climate change. Not: Bindshadler Glacier.

Bindshadler Glacier: see Bindschadler Glacier 77°56'S, 162°09'E

Bingen Cirque 72°41'S, 3°18'W

A conspicuous cirque in the steep, eastern rock cliffs of Jokulskarvet Ridge in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Bingen (the bin).

Bingham Col: see Safety Col 68°20'S, 66°57'W

Bingham Glacier 69°23'S, 63°10'W

Glacier 15 mi long flowing eastward to the E coast of Antarctic Peninsula, with Cape Reichelderfer as its southern portal. The coast where Bingham Glacier reaches Larsen Ice Shelf was photographed by Sir Hubert Wilkins in 1928 and by Lincoln Ellsworth in 1935, and was mapped by the BGLE under Rymill, who with E.W. Bingham sledged across the peninsula to a point close S of this glacier in 1936. It was also mapped in 1940 by the

USAS. Named by the US-SCAN in 1947 for Surgeon Lt. Cdr. E.W. Bingham, RN, of the BGLE.

Bingham Peak 79°26'S, 84°47'W

A sharp peak (1,540 m.) located 2.5 mi SE of Springer Peak in the Heritage Range, Ellsworth Mountains. Mapped by USGS from ground surveys and USN air photos, 1961–66. Named by US-ACAN for Joseph P. Bingham, auroral scientist at Eight Station in 1965.

Bingley Glacier 84°29'S, 167°10'E

A glacier 8 mi long in Queen Alexandra Range, draining S from the slopes of Mount Kirkpatrick, Mount Dickerson and Barnes Peak and entering Beardmore Glacier just N of Adams Mountains. Named by E.H. Shackleton (BrAE, 1907–09) after Bingley, England, the ancestral home of the Shackleton family.

Binnie Peaks 54°03'S, 37°52'W

Twin peaks rising to 1,400 m to the N of Romerof Head in western South Georgia. Named by the UK-APC after Edward B. Binnie, second British resident Magistrate, South Georgia, 1915–26, succeeding James Innes Wilson.

Binn Peak 62°43'S, 60°26'W

A peak (400 m) surmounting Miers Bluff at the SW end of Hurd Peninsula, Livingston Island, in the South Shetland Islands. Named by UK-APC in 1990 after Capt. T. Binn, Master of the sealer *Minerva*, from London, who visited the South Shetland Islands in 1820–21.

Bio Bio, Isla: see Rambler Island 66°28'S, 66°27'W

Birchall Peaks 76°29'S, 146°20'W

Group of peaks 3 mi W of Mount Iphigene, on the S side of Block Bay in Marie Byrd Land. Discovered in 1929 by the ByrdAE. Named by Byrd for Frederick T. Birchall, member of the staff of the *New York Times* which published the expedition's press dispatches.

Bird, Cape 77°10'S, 166°41'E

Cape which marks the N extremity of Ross Island. Discovered in 1841 by a British expedition under Ross, and named by him for Lt. Edward J. Bird of the ship *Erebus*.

Bird, Mount 77°17'S, 166°43'E

Mountain, 1,765 m, standing about 7 mi S of Cape Bird, the N extremity of Ross Island. Mapped by the BrNAE, 1901–04, under Scott. Apparently named by them after Cape Bird.

Bird Bluff 76°30'S, 144°36'W

A rock bluff on the N side of the Fosdick Mountains, 2.5 mi E of Mount Colombo, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939–41) and by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for Cdr. Charles F. Bird, Meteorological Officer on the Staff of the U.S. Naval Support Force, Antarctica, 1968.

Birdie Rocks 54°03'S, 37°58'W

Group of rocks lying S of Undine Harbor between Begg Point and Saluta Rocks, off the W end of South Georgia. The name appears to be first used on a 1929 British Admiralty chart.

Bird Island 54°00'S, 38°03'W

Island 3 mi long and 0.5 mi wide, separated from the W end of South Georgia by Bird Sound. Discovered in 1775 by a British

Bird Ridge

expedition under Cook, who so named it because he saw numerous birds on the island. Not: Isla Pájaro, Vogel Insel.

Bird Peak: see Roché Peak 54°00'S, 38°02'W

Bird Ridge 66°47'S, 55°04'E

Partially ice-covered ridge 7 mi long, standing 6 mi NW of Mount Storegutt, westward of Edward VIII Bay. Mapped from aerial photos taken by ANARE in 1956, and named for G. Bird, senior electronics technician at Mawson in 1961.

Bird Rocks: see Bryde Rocks 54°01'S, 38°16'W

Birdsend Bluff 64°45'S, 62°33'W

Rocky bluff at the S side of the mouth of Wheatstone Glacier, on the W coast of Graham Land. First roughly surveyed by the BelgAE under Gerlache, 1897–99. The name originated when two members of the FIDS were camped immediately below this bluff in May 1956 and a fall of rock from the bluff flattened a bird outside their tent. Not: Mesa Negra.

Bird Sound 54°00'S, 38°01'W

Hazardous but navigable sound, 1 mi long and 0.5 mi wide, separating Bird Island from the W end of South Georgia. The names La Roche Strait and Bird Sound were used interchangeably for this feature on charts for many years. Bird Sound, which takes its name from nearby Bird Island, is approved on the basis of local usage. Not: Bird Strait, La Roche Strait.

Bird Strait: see Bird Sound 54°00'S, 38°01'W

Birdwell Point 74°18'S, 128°10'W

The NW point of Dean Island, lying within the Getz Ice Shelf off the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Keith W. Birdwell, ET1, USN, Electronics Technician at Byrd Station, 1969.

Biretta Peak 73°04'S, 163°12'E

A small peak (2,530 m) on the E side of Pain Mesa in the Mesa Range, Victoria Land. Named by the northern party of NZGSAE, 1962–63, from its resemblance to the square cap worn by Roman Catholic and some Anglican clerics.

Birger Bergersenfjellet: see Bergersen, Mount 72°04'S, 25°48'E

Birkenhauer Island 66°29'S, 110°37'E

A mainly ice-free island lying S of Boffa Island, in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for the Reverend Henry F. Birkenhauer, S.J., seismologist and member of the Wilkes Station party of 1958. Not: Ostrov Golyy.

Birks, Mount 65°18'S, 62°10'W

Conspicuous, pyramid-shaped mountain, 1,035 m, at the N side of the mouth of Crane Glacier, on the E coast of Graham Land. In 1928 Sir Hubert Wilkins gave the name Mount Napier Birks, after Napier Birks of Adelaide, Australia, to two conspicuous, black peaks which he observed and photographed from the air as lying close N of his Crane Channel. This coast was charted by the FIDS in 1947, but it has not been possible to identify Wilkins' Mount Napier Birks. Since Crane Channel was definitely identified as Crane Glacier, the UK-APC recommended in 1950 that the name, shortened to Mount Birks, be given to this conspicuous mountain

Geographic Names of the Antarctic

lying close N of the mouth of the glacier. Not: Mount Napier Birks.

Birley Glacier 65°58'S, 64°21'W

Glacier, at least 10 mi long, flowing W into the E extremity of Barilari Bay, on the W coast of Graham Land. First seen and roughly surveyed in 1909 by the FrAE under Charcot. Resurveyed in 1935–36 by the BGLE under Rymill, and later named for Kenneth P. Birley, who contributed toward the cost of the BGLE, 1934–37.

Birthday Point 71°26'S, 169°24'E

A bold rock point between Pressure Bay and Berg Bay on the N coast of Victoria Land. Charted and named by the Northern Party, led by Campbell, of the BrAE, 1910–13.

Bisco Bay: see Biscoe Bay 64°48'S, 63°50'W

Biscoe, Archipiélago: see Biscoe Islands 66°00'S, 66°30'W

Biscoe, Presqu'île de: see Biscoe Point 64°49'S, 63°49'W

Biscoe, Mount 66°13'S, 51°22'E

Distinctive sharp black peak, 700 m, surmounting Cape Ann, 3 mi N of Mount Hurley. Photographed from the air on Dec. 22, 1929 by a Norwegian expedition under Riiser-Larsen in a flight from the *Norvegia*, and on Jan. 14, 1930 photographed from the *Discovery* by the BANZARE under Mawson. The peak is thought to be the feature discovered on March 16, 1831 and named Cape Ann by John Biscoe. The name Cape Ann has been retained for the adjoining cape; Mawson named the peak for its apparent discoverer, John Biscoe, Master, RN, Ret., noted British Antarctic explorer. Its position was fixed by an ANARE survey party in 1957.

Biscoe Bay 64°48'S, 63°50'W

Bay which indents the SW coast of Anvers Island immediately N of Biscoe Point, in the Palmer Archipelago. First charted by the BelgAE, 1897–99, under Gerlache, and named by him for John Biscoe, who may have landed there in February 1832. Not: Bisco Bay.

Biscoe Bay: see Sulzberger Bay 77°00'S, 152°00'W

Biscoe Islands 66°00'S, 66°30'W

Chain of islands, of which the principal ones are Renaud, Rabot, Lavoisier and Watkins, lying parallel to the W coast of Graham Land and extending 80 mi in a NE-SW direction. Named for John Biscoe, leader of a British expedition which explored the islands on Feb. 17 and 18, 1832. Not: Archipiélago Biscoe.

Biscoe Point 64°49'S, 63°49'W

Rocky point forming the SE side of Biscoe Bay, immediately N of Access Point on the S side of Anvers Island, in the Palmer Archipelago. The FrAE under Charcot roughly surveyed the SW coast of Anvers Island in 1904. They gave the name "Presqu'île de Biscoe" to a small peninsula on the SE side of Biscoe Bay, honoring John Biscoe who may have landed in the vicinity in 1832. When the coast was resurveyed by the FIDS in 1955, two rocky points were found in approximately that location; the name Biscoe Point has been applied to the more prominent of the two. Not: Presqu'île de Biscoe.

Biscuit Step 72°22'S, 168°30'E

A step-like rise in the level of Tucker Glacier above its junction with Trafalgar Glacier, in Victoria Land. It is very crevassed in its north half, but there is a good route of easy gradient through it toward its southern end. Biscuits were an important part of the expedition's rations (Australasian colloquialism "tucker"), and a small cache of them was left near the step for the return down the glacier by the NZGSAE, 1957–58, which named the feature.

Bishop, Mount 83°43'S, 168°42'E

A prominent mountain, 3,020 m, standing 2 mi S of Ahmadjian Peak in Queen Alexandra Range. Named by US-ACAN after Lt. Barry Chapman Bishop (1932–94), USAF, an observer with the Argentine Antarctic Expedition (1956–57); member of the Staff of the U.S. Antarctic Projects Officer, 1958 and 1959; member of the American party which on May 22, 1962, succeeded in climbing Mount Everest.

Bishop Peak 78°10'S, 162°09'E

A sharp peak rising to 3,460 m near the center of Rampart Ridge, Royal Society Range. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1963 after the Bernice P. Bishop Museum, Honolulu, which has sent many researchers to Antarctica.

Bismarck Strait 64°51'S, 64°00'W

Strait between the S end of Anvers and Wiencke Islands and the Wilhelm Archipelago. Explored in 1874 by a German expedition under Dallmann, and named by him for the German statesman, Prince Otto von Bismarck.

Bistre, Mount 65°03'S, 62°03'W

A mountain on the N side of Evans Glacier on the E side of Graham Land. Surveyed by FIDS in 1947, and again in 1955. The name, by UK-APC, is descriptive of the dark brown color of the steep E and S rock faces of the feature.

Bitgood, Mount 76°29'S, 144°55'W

A mountain (1,150 m) between Mount Lockhart and Mount Colombo on the N side of the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939–41) and by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for Charles D. Bitgood, geologist with the USARP party to the Fosdick Mountains, 1967–68.

Bizeux Rock 66°49'S, 141°24'E

Rocky island 0.1 mi long lying 0.1 mi E of Manchot Island and close NE of Cape Margerie. Charted in 1950 by the FrAE and named by them for the island located in the center of the Rance estuary, France.

Bjaaland, Mount 86°33'S, 164°14'W

A rock peak (2,675 m), the southeasternmost summit of the massif at the head of Amundsen Glacier, in the Queen Maud Mountains. In November 1911, a number of mountain peaks in this general vicinity were observed and rudely positioned by the South Pole Party under Roald Amundsen. Amundsen named one of them for Olaf Bjaaland, a member of the party. The peak described was mapped by USGS from surveys and U.S. Navy aerial photography, 1960–64. For the sake of historical continuity and to commemorate the Norwegian exploration in this area, the US-ACAN has selected this feature to be designated Mount

Bjaaland. Other peaks in the massif have been named for members of Amundsen's South Pole Party. Not: Mount Olaf Bjaaland.

Bjarne Aagaard Islands: see Aagaard Islands 65°51'S, 53°40'E

Bjelland Point 54°06'S, 36°44'W

Point on the N coast of South Georgia, immediately S of Second Milestone and 1.5 mi ENE of Robertson Point. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Sigurd L. Bjelland, Manager of the South Georgia Whaling Co. station at Leith Harbor for several years beginning in 1951.

Bjerke, Mount 71°58'S, 9°43'E

Large mountain, 2,840 m, forming the southern end of the Conrad Mountains in the Orvin Mountains, Queen Maud Land. Discovered and photographed by the GerAE, 1938–39. Mapped by Norway from air photos and surveys by NorAE, 1956–60, and named for Henry Bjerke, mechanic with NorAE, 1957–59. Not: Bjerkenuten.

Bjerkenuten: see Bjerke, Mount 71°58'S, 9°43'E

Bjerkö Head: see Darnley, Cape 67°43'S, 69°30'E

Bjerkö Headland: see Darnley, Cape 67°43'S, 69°30'E

Bjerkø Peninsula 67°50'S, 69°30'E

Broad ice-covered peninsula forming the W shore of MacKenzie Bay. Norwegian whalers explored this area in January and February 1931, naming the cape at the end of this peninsula for gunner Reidar Bjerkø of the whale catcher *Bouvet II*, from whose deck the coast was sketched January 19. Since Sir Douglas Mawson probably saw this cape from a great distance as early as Dec. 26, 1929, the Australian name of Cape Darnley has been retained for the cape, while the Norwegian name has been applied to the peninsula.

Björnert Cliffs 74°58'S, 135°09'W

A series of ice-covered cliffs which face seaward along the northern side of McDonald Heights, Marie Byrd Land. The cliffs stand between Hanessian Foreland and Hagey Ridge and descend abruptly from about 800 m, the average summit elevation, to 400 m at the base. The feature was photographed from aircraft of the U.S. Antarctic Service, 1939–41, and was mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN (1974) for Rolf P. Björnert of the Office of Polar Programs, National Science Foundation, who served in the capacity of Station Projects Manager for Antarctica.

Bjørn Spur 71°55'S, 4°39'E

A rock spur which extends northeastward from Skigarden Ridge in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956–60) and named for Bjørn Grytøyr, scientific assistant with NorAE (1956–58).

Bjornstadt Bay 54°35'S, 35°55'W

Small bay lying 1.5 mi NE of Gold Harbor, along the E coast of South Georgia. The name dates back to at least 1929.

Black, Arrecife: see Sooty Rock 65°14'S, 65°09'W

Black, Cape: see Black Crag 71°46'S, 98°06'W

Black, Mount 85°14'S, 178°22'W

A prominent mountain (3,005 m) with a gentle snow-covered slope on its SW side and a steep rock face on its NW side, forming

a part of the polar escarpment just W of Bennett Platform and the upper reaches of Shackleton Glacier. Discovered and photographed by R. Admiral Byrd on his return flight from the South Pole in November 1929, and named by him for Van Lear Black, American financier and contributor to ByrdAE of 1928–30 and 1933–35.

Black Beach: see Blacksand Beach 77°33'S, 166°08'E

Blackburn, Mount 86°17'S, 147°16'W

A massive, flat-topped mountain, 3,275 m, standing just E of Scott Glacier where it surmounts the SW end of California Plateau and the Watson Escarpment, in the Queen Maud Mountains. Discovered by and named for Quin A. Blackburn, geologist, leader of the ByrdAE geological party which sledged the length of Scott Glacier in December 1934. Not: Mount Jessie O'Keefe.

Blackburn Nunatak 83°49'S, 66°13'W

A prominent nunatak, 965 m, marking the N extremity of Rambo Nunataks in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Lt. Archie B. Blackburn, (MC) USN, officer in charge at Plateau Station, winter 1967.

Black Cap 79°00'S, 161°51'E

A prominent black rock peak which surmounts the NW end of Teall Island, just S of the mouth of Skelton Glacier. Sighted and given this descriptive name in February 1957 by the N.Z. party of the CTAE (1956–58).

Black Coast 71°45'S, 62°00'W

That portion of the E coast of Antarctic Peninsula between Cape Boggs and Cape Mackintosh. This coast was discovered and photographed from the air by members of the East Base of the U.S. Antarctic Service, 1939–41, on a flight of Dec. 30, 1940. The most southerly point reached was Wright Inlet in 74°S, but features as far S as Bowman Peninsula are identifiable in the aerial photographs taken on the flight. Named after Cdr. (later Admiral) Richard B. Black, USNR (1902–92), leader of the Dec. 30 flight and commanding officer of the East Base. Not: Richard Black Coast.

Black Crag 71°46'S, 98°06'W

A small steep cliff rock exposure at the NE end of Noville Peninsula, Thurston Island. The feature is just S of small Mulroy Island. Delineated from aerial photographs taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for George H. Black, supply officer of the ByrdAE in 1928–30. Not: Cape Black.

Black Face 77°51'S, 160°53'E

The S wall of an E-W ridge in Arena Valley, 1 mi S of East Beacon, in the Quartermain Mountains, Victoria Land. The feature is a prominent landmark and is formed by a dolerite dike which rises over 300 m above the floor of the valley. Named by NZ-APC from the color of the rock following geological work in the area by C.T. McElroy, G. Rose, and K.J. Whitby in 1980–81.

Blackface Point 67°57'S, 65°24'W

A rocky and precipitous point 3 mi NW of Cape Freeman on the E coast of Graham Land. The point was photographed by the USAS, 1939–41. Mapped by FIDS, 1947–48. Named by UK-APC in description of the extremely black rock exposed at the end of the point.

Black Glacier 71°40'S, 164°42'E

A broad tributary to the Lillie Glacier flowing NE, marking the SE extent of the Bowers Mountains. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Robert F. Black, geologist, University of Wisconsin, project leader for Antarctic patterned ground studies, who carried out research in the McMurdo Sound region during several summer seasons in the 1960's.

Black Head 54°04'S, 37°07'W

Dark, rugged promontory, 60 m high, separating Cook and Possession Bays on the N coast of South Georgia. Named by DI personnel who charted this area in 1929–30.

Black Head 66°06'S, 65°37'W

Dark headland marking the S side of the entrance to Holtedahl Bay, on the W coast of Graham Land. First mapped and given this descriptive name by the BGLE under Rymill, 1934–37. Not: Cabo Black Head, Cabo Morro Negro.

Black Head, Cabo: see Black Head 66°06'S, 65°37'W

Blackhead Rock: see Blackrock Head 67°15'S, 58°59'E

Black Hill: see Clark Nunatak 62°40'S, 60°55'W

Black Island 65°15'S, 64°17'W

Island 0.2 mi long, lying close SW of Skua Island in the Argentine Islands, Wilhelm Archipelago. Charted and named descriptively in 1935 by the BGLE under Rymill.

Black Island 78°12'S, 166°25'E

An island in the Ross Archipelago, 12 mi long, projecting through the Ross Ice Shelf to a height of 1,040 meters. Discovered by the BrNAE (1901–04) and named by them for its appearance. The island is largely ice free and principally composed of black volcanic rock. Not: Schwarze Insel, Svart Öya.

Black Island Channel 65°15'S, 64°17'W

Channel 0.1 mi wide between Black Island and Skua Island in the Argentine Islands, Wilhelm Archipelago. Charted and named in 1935 by the BGLE under Rymill. Not: Canal Isla Negra.

Black Nunataks 72°59'S, 74°28'E

A group of about nine nunataks located 10 mi WSW of Mount Harding in the Grove Mountains. Mapped by ANARE from air photos, 1956–60. Named by ANCA after I. Black, geophysicist at Mawson Station, 1963.

Black Pass 67°40'S, 67°34'W

A pass trending NE-SW, 3 mi W of Mount Arronax, Pourquoi Pas Island, in NE Marguerite Bay. Named by UK-APC after Stanley E. Black (1933–58), FIDS meteorological assistant, Signy Island, 1957–58, and Horseshoe Island, 1958, who, with D. Statham and G. Stride, was lost between Dion Islands and Horseshoe Island in May 1958, in a break up of the sea ice.

Black Peak: see Greaves Peak 62°28'S, 59°59'W

Black Point 54°00'S, 37°42'W

Point on the W side of Right Whale Bay, 1.4 mi SSW of Nameless Point on the N coast of South Georgia. Charted and named by DI personnel in 1930.

Black Point 62°29'S, 60°43'W

Point which lies 2.5 mi SE of Cape Shirreff on the N coast of Livingston Island, in the South Shetland Islands. The point was known to sealers as early as 1822. It was charted and named in 1935 by DI personnel on the *Discovery II*. Not: Punta Negra.

Black Prince, Mount 71°47'S, 168°15'E

Mountain (3,405 m) composed of dark colored rock, which tends to create an imposing appearance. Located 4 mi W of Mount Ajax in the Admiralty Mountains of Victoria Land. Named by NZGSAE, 1957–58, for its appearance and also for the New Zealand Cruiser HMNZS *Black Prince*.

Black Pudding Peak 76°50'S, 161°45'E

An isolated black mountain located 2 mi NW of Mount Brøgger in the Prince Albert Mountains, Victoria Land. Named for its squat black appearance by the 1957 N.Z. Northern Survey Party of the CTAE, 1956–58.

Black Reef: see Sooty Rock 65°14'S, 65°09'W

Black Ridge 74°24'S, 163°36'E

A prominent rock ridge in the Deep Freeze Range, Victoria Land, 7 mi long and rising to 1,500 m, forming a divide between the Priestley and Corner Glaciers. First explored by the Northern Party of the BrAE, 1910–13, and so named by them because of its appearance.

Black Ridge: see Hanson Ridge 77°17'S, 163°19'E

Black Rock 53°39'S, 41°48'W

Low rock 10 mi SE of Shag Rocks and some 105 mi WNW of South Georgia. Black Rock may have been considered as part of the “Aurora Islands” reported in this vicinity by the ship *Aurora* in 1762. It was charted in 1927 by DI personnel on the *William Scoresby*. Not: Roca Negra.

Black Rock 53°01'S, 73°34'E

A small, dark rock lying immediately NW of Morgan Island and 0.2 mi N of Heard Island. The feature appears to be roughly shown on an 1860 sketch map prepared by Capt. H.C. Chester, American sealer operating in this area during this period. The name, which is descriptive, appears to have been applied on charts about 1932, probably as a result of the 1929 BANZARE work under Mawson.

Black Rock: see Tomblin Rock 57°04'S, 26°39'W

Blackrock Head 67°15'S, 58°59'E

Conspicuous coastal rock outcrop on the eastern part of Law Promontory, 3 mi NW of Tryne Point. Discovered in February 1936 by DI personnel on the *William Scoresby* and so named by them for its black, rocky appearance. Not: Blackhead Rock.

Blackrock Ridge 64°17'S, 56°43'W

A ridge of exposed dark rock trending WSW-ESE, located 1.5 mi N of Penguin Point in central Seymour Island. The descriptive name “Filo Negro” (black ridge) was applied to this feature in Argentine geological reports on the island in 1978. The approved name, jointly recommended by US-ACAN and UK-APC in 1991, avoids duplication with Black Ridge (q.v.), Deep Freeze Range. Not: Filo Negro.

Black Rocks 54°08'S, 36°38'W

Small group of rocks 0.5 mi SE of Framnaes Point in the N part of Stromness Bay, South Georgia. The name Blenheim Rocks has

appeared for these rocks, but since about 1930 the name Black Rocks has been used more consistently. Not: Blenheim Rocks.

Blacksand Beach 77°33'S, 166°08'E

A beach formed of black volcanic sand at Cape Royds, Ross Island, about 0.5 mi northward of Flagstaff Point. The descriptive name was given by members of the BrAE, 1907–09, who found the beach within safe walking distance of their base hut near Flagstaff Point. Not: Black Beach, Sandy Beach.

Blackstone Plain 57°45'S, 26°28'E

A small plain just S of Harper Point at the N end of Saunders Island, South Sandwich Islands. This lowland feature is made up of dark basaltic lavas and, in 1964, personnel from HMS *Protector* found it to be the only area of the island free from ice and snow. The descriptive name was given by UK-APC in 1971.

Black Stump 72°22'S, 163°48'E

A prominent but low mountain 4.5 mi SE of Monte Cassino in the Freyberg Mountains. The feature is a black peaked mass of andesite rock, possibly the stump of an old volcano. Descriptively named by NZARP geologist P.J. Oliver, who studied the mountain in the 1981–82 season.

Black Thumb 68°25'S, 66°53'W

Mountain, 1,190 m, with notched and precipitous sides, standing between Romulus Glacier and Bertrand Ice Piedmont on the W coast of Graham Land. Charted and named by the BGLE under Rymill, 1934–37. Not: Black Thumb Mountain, Monte Pulgar Negro.

Black Thumb Mountain: see Black Thumb 68°25'S, 66°53'W

Blackwall Glacier 86°10'S, 159°40'W

A tributary glacier, 8 mi long, which drains a portion of the W slope of Nilsen Plateau. It flows NW along the NE side of Hansen Spur to join Amundsen Glacier. The name was used by both the 1963–64 and 1970–71 Ohio State University field parties at Nilsen Plateau; all the rock walls surrounding this glacier are black in appearance.

Blackwall Mountains 68°22'S, 66°48'W

Mountains rising to 1,370 m, extending in a WNW-ESE direction for 5 mi and lying close S of Neny Fjord on the W coast of Graham Land. They are bounded to the E by Remus Glacier, to the S by Romulus Glacier, and are separated from Red Rock Ridge to the W by Safety Col. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948–49 by the FIDS, and so named by them because the black cliffs of the mountains facing Rymill Bay remain snow free throughout the year. Not: Climbing Range.

Blackwelder, Mount 77°59'S, 161°04'E

A sharp, mainly ice-free peak in N Wilkniss Mountains, Victoria Land, rising to 2,340 m W of Vernier Valley and 6 mi N of Pivot Peak. Mapped by USGS from surveys and USN aerial photographs, 1947–59. Named by US-ACAN in 1984 after Lt. Cdr. Billy G. Blackwelder, USN, Senior Helicopter Pilot, Antarctic Development Squadron Six (VXE-6), USN OpDFrz, 1971–72 and 1975–77.

Blackwelder Glacier 77°56'S, 164°12'E

A pocket glacier, 1 mi wide and 2 mi long, between Salmon Hill and Hobbs Glacier in Victoria Land. The glacier was studied

during USN OpDFrz, 1957–58, by Troy L. Péwé and was named by him for Dr. Eliot Blackwelder, former head of the Geology Department at Stanford University. Not: Ricky Glacier.

Blade Ridge 63°25'S, 57°05'W

Sharp rock ridge marked by three peaks, the highest 575 m, forming the NW wall of Depot Glacier near the head of Hope Bay, in the NE part of Trinity Peninsula. Discovered by the SwedAE, 1901–04, under Nordenskjöld. The descriptive name was given by the FIDS following their survey of the area in 1945.

Blades, Mount 77°10'S, 145°15'W

A mountain 3 mi WNW of Bailey Ridge, on the N side of Boyd Glacier in the Ford Ranges, Marie Byrd Land. Discovered and mapped by the USAS (1939–41). Named by US-ACAN for Cdr. J.L. Blades, USN, in charge of Antarctic support activities at McMurdo Station during the winter of 1965.

Blades Glacier 77°38'S, 153°00'W

A glacier flowing E from the snow-covered saddle just N of La Gorce Peak, Alexandra Mountains. It merges with Dalton Glacier on the N side of Edward VII Peninsula. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for William Robert Blades who served as navigator during USN Operation Highjump (1946–47) and Operation Deep Freeze (1955–59).

Blaff, Ostrov: see Bluff Island 68°33'S, 77°54'E

Blaiklock Glacier 80°30'S, 29°51'W

Glacier 16 mi long, flowing N from Turnpike Bluff, then NW to Mounts Provender and Lowe in the W part of the Shackleton Range. First mapped in 1957 by the CTAE and named for Kenneth V. Blaiklock, leader of the advance party of the CTAE in 1955–56 and surveyor with the transpolar party in 1956–58.

Blaiklock Island 67°33'S, 67°04'W

High and rugged, irregular-shaped island 9 mi long, lying between Bigourdan Fjord and Bourgeois Fjord. It is separated from Pourquoi Pas Island by The Narrows and from the W coast of Graham Land by Jones Channel. The feature was partially surveyed in 1936 by the BGLE under Rymill, at which time it was charted as a promontory. It was determined to be an island in 1949 by Kenneth V. Blaiklock, FIDS surveyor for whom it is named.

Blair, Mount 72°32'S, 160°49'E

A small but conspicuous mountain (2,120 m) standing 6 mi NW of Mount Weihaupt in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959–64. Named by US-ACAN for Terence T. Blair, biologist at McMurdo Station, 1966–67.

Blair Glacier 66°45'S, 124°32'E

A glacier draining northward to the western corner of Maury Bay. Delineated from aerial photographs taken by USN Operation Highjump (1946–47), and named by US-ACAN for James L. Blair, Midshipman on the sloop *Peacock* during the USEE (1838–42) under Lt. Charles Wilkes.

Blair Islands 66°50'S, 143°10'E

A group of small islands lying 4 mi W of Cape Gray, at the E side of the entrance to Commonwealth Bay. Discovered by the AAE (1911–14) under Douglas Mawson, who named the group for J.H. Blair, Chief Officer on the *Aurora*.

Blair Peak 67°48'S, 62°53'E

Sharp peak, 960 m, situated 2 mi SE of Rumdoodle Peak in the Masson Range of the Framnes Mountains. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition, 1936–37. Remapped by ANARE, 1957–60, and named for James Blair, senior diesel mechanic at Mawson Station, 1958.

Blåisen Valley 72°32'S, 3°42'W

A small cirquelike valley on the W side of Borg Mountain just N of Borggarden Valley, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Blåisen (the blue ice).

Blake, Cape 68°26'S, 148°55'E

A rocky cape on the Organ Pipe Cliffs, 4 mi W of Cape Wild. Discovered by the AAE (1911–14) under Douglas Mawson, who named it for L.R. Blake, geologist and cartographer with the Macquarie Island party of the expedition.

Blake Island 63°38'S, 59°01'W

A narrow ice-free island 1.5 mi long, lying in Bone Bay along the NW coast of Trinity Peninsula. Charted in 1948 by FIDS. Named by UK-APC after Patrick J. Blake, midshipman on the brig *Williams* used in exploring the South Shetland Islands and Bransfield Strait in 1820.

Blake Island: see Koll Rock 67°24'S, 60°41'E

Blakeney Point 66°14'S, 110°35'E

The north point of Clark Peninsula on Budd Coast. First roughly mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for A.A. Blakeney, Photographer's Mate on USN OpHjp flights in this area and other coastal areas between 14° and 164°, East longitude. The point was remapped from air photos taken by a Soviet expedition in 1956 and by ANARE in 1956 and 1962.

Blake Nunataks 74°10'S, 66°40'E

A group of three low, flat-topped nunataks running in a line NE-SW between Wilson Bluff and Mount Maguire, near the head of Lambert Glacier. Sighted by Flying Officer J. Seaton, RAAF, during a photographic flight in November 1956. Named by ANCA for J.R. Blake, auroral physicist at Mawson Station in 1958. Not: Blake Peaks.

Blake Peak 76°01'S, 143°44'W

An isolated peak on the SW side of Siemiatkowski Glacier in Marie Byrd Land. Mapped from surveys by the USGS and U.S. Navy air photos (1959–65). Named by US-ACAN for Dale G. Blake, ionospheric scientist at Byrd Station, 1964.

Blake Peaks: see Blake Nunataks 74°10'S, 66°40'E

Blake Rock 85°11'S, 64°50'W

An isolated rock lying 5 mi S of the S end of Mackin Table in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Joseph A. Blake, Jr., construction electrician at South Pole Station, winter 1960.

Blåklettane Hills 72°26'S, 21°30'E

A small group of hills standing 18 mi SW of Bamse Mountain at the SW end of the Sør Rondane Mountains. Mapped by Norwe-

gian cartographers in 1957 from air photos taken by USN OpHj, 1946–47, and named Blåklettane (the blue hills).

Blånabbane Nunataks 68°02'S, 63°01'E

A small group of nunataks about 15 mi E of Mount Twintop in Mac. Robertson Land. Mapped and named by Norwegian cartographers working from air photos taken by the Lars Christensen Expedition, 1936–37. Not: Anniversary Nunataks.

Blanchard, Sommet: see Blanchard Ridge 65°12'S, 64°04'W

Blanchard Glacier 64°44'S, 62°05'W

Glacier flowing into Wilhelmina Bay between Garnerin and Sadler Points, on the W coast of Graham Land. First charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for Jean P. Blanchard (1753–1809), French aeronaut, the first professional balloon pilot, who, with John J. Jeffries, made the first balloon crossing of the English Channel in 1785.

Blanchard Hill 80°26'S, 21°56'W

A hill between Mount Kelsey and Whymper Spur in the Pioneers Escarpment (q.v.), eastern Shackleton Range. Photographed from the air by the U.S. Navy, 1967. Surveyed by BAS, 1968–71. Named by the UK-APC after Robert Blanchard, American inventor of a light-weight tent using a rigidly tensioned frame erected outside the tent.

Blanchard Nunataks 72°00'S, 64°50'W

An east-west trending group of nunataks, about 16 mi long, marking the south end of the Gutenko Mountains in central Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Lloyd G. Blanchard, of the Division of Polar Programs, National Science Foundation, Assistant Editor, *Antarctic Journal of the United States*.

Blanchard Peak: see Blanchard Ridge 65°12'S, 64°04'W

Blanchard Ridge 65°12'S, 64°04'W

Rocky ridge, 520 m, at the N side of the mouth of Wiggins Glacier on the W coast of Graham Land. Mapped by the FrAE, 1908–10, and named by Charcot for a Monsieur Blanchard, then French Consul at Punta Arenas. Not: Blanchard Peak, Sommet Blanchard.

Blancmange Hill 64°00'S, 57°40'W

An outstanding ice-free coastal landmark located 3 mi NE of Stark Point on the E side of Croft Bay, James Ross Island. Named by UK-APC following FIDS surveys taken 1958–61. The name is descriptive since the feature resembles a blancmange.

Blanco, Isla: see Bristol Island 59°02'S, 26°31'W

Blanco, Monte: see Pendragon, Mount 61°15'S, 55°14'W

Blanco Encalada, Grupo: see Henkes Islands 67°48'S, 68°56'W

Blankenship Glacier 77°59'S, 161°45'E

A steep glacier which descends N between La Count Mountain and Bubble Spur to enter upper Ferrar Glacier, Victoria Land. Named by US-ACAN in 1992 after Donald D. Blankenship of the Geophysical and Polar Research Center, University of Wisconsin; geophysical researcher at Dome Charlie in East Antarctica for several seasons, 1978–82; researcher of Siple Coast ice streams in

West Antarctica, 1983–88; at Byrd Polar Research Center, Ohio State University, from 1989.

Blank Peaks 79°45'S, 158°45'E

A cluster of ice-free peaks occupying the isolated ridge between Bartrum and Foggydog Glaciers in the Brown Hills. Mapped by the VUWAE (1960–61) and named for H. Richard Blank, geologist with the expedition. Not: Blank Peninsula.

Blank Peninsula: see Blank Peaks 79°45'S, 158°45'E

Blåskimen Island 70°25'S, 3°00'W

A high, ice covered island about 8 mi N of Novyy Island, at the juncture of the Jelbart and Fimbul Ice Shelves, Queen Maud Land. The island rises about 300 m above the general level of the ice shelf and is surrounded by this ice, except for the N side which borders the sea. The feature was roughly delineated by Norwegian cartographers working with air photos taken by NBSAE in 1951–52 and NorAE in 1958–59. They called the island Blåskimen and included the area now called Novyy Island. The SovAE mapped the feature in 1961 and showed it to be separated from Novyy Island. Not: Kupol Kruglyy.

Blechnum Peaks 54°12'S, 36°43'W

Three peaks, the highest 640 m, on the N-S ridge between Gulbrandsen Lake and Olsen Valley on the N coast of South Georgia. Named by UK-APC following BAS biological work in the area after the rare fern *Blechnum penna-marina*, whose occurrence in South Georgia is known only from the N and E slopes of these peaks and from adjacent Olsen Valley.

Bleclie Peaks 75°01'S, 134°14'W

Two peaks near the southern end of the N-S trending Perry Range in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for John P. Bleclie, AGC, USN, senior aerographer's mate on USS *Glacier* in these coastal waters, 1961–62.

Bleikskoltane Rocks 72°16'S, 27°22'E

Rocky outcrop 7 mi S of Balchen Mountain in the SE part of the Sør Rondane Mountains. Mapped in 1957 by Norwegian cartographers from air photos taken by USN OpHj, 1946–47, and named Bleikskoltane (the pale knolls).

Blenheim Rocks: see Black Rocks 54°08'S, 36°38'W

Blériot Glacier 64°25'S, 61°10'W

Short, but wide, glacier lying E of Salvesen Cove on the W coast of Graham Land. Photographed by the FIDASE in 1956–57, and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Louis Blériot (1872–1936), French aviator who in 1907 flew the first full-size powered monoplane and made the first flight across the English Channel in July 1909.

Bleset Rock 73°39'S, 3°57'W

Rock lying 5 mi ESE of Enden Point, surmounting the ice divide between the Utrakket and Belgen Valleys in the Kirwan Escarpment, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and additional air photos (1958–59), and named Bleset.

Blessing Bluff 77°19'S, 163°03'E

Prominent rock bluff that marks the E end of Staeffler Ridge and overlooks Wilson Piedmont Glacier, located 6.5 mi W of Spike

Cape, Victoria Land. Named by US-ACAN for Cdr. George R. Blessing, USN, Officer-in-Charge of the Naval Support Force winter-over detachment at McMurdo Station in 1973.

Bleue, Anse: see Blue Cove 66°49'S, 141°24'E

Blue Cove 66°49'S, 141°24'E

Cove lying immediately E of Cape Margerie. Charted and named in 1950 by the FrAE. The name is descriptive of the color of the water, "bleue" being French for blue. Not: Anse Bleue.

Blind Bay 67°31'S, 66°32'W

Small bay forming the NE extremity and head of Bourgeois Fjord and marking the junction of Fallières Coast and Loubet Coast, along the W coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. So named by the FIDS, following a 1949 survey, because the bay proved a blind alley to sledging parties. Not: Bahía Ciega.

Blizzard Heights 84°37'S, 163°53'E

A high, elongate, flattish area in the Marshall Mountains, standing 2 mi NW of Blizzard Peak, from which it is separated by a broad snow col. The heights are about 2 mi long and rise 550 m above the surrounding snow surface. So named by the Ohio State University party to the Queen Alexandra Range (1966–67) because of proximity to Blizzard Peak.

Blizzard Peak 84°38'S, 164°08'E

The highest peak (3,375 m) in the Marshall Mountains, Queen Alexandra Range, standing 4 mi NW of Mount Marshall. So named by the Northern Party of the NZGSAE (1961–62) because a blizzard prevented them from reaching it for several days.

Blob, The 73°24'S, 124°56'W

A fairly conspicuous, mound-shaped knoll that is almost completely snow covered, standing midway between Thurston Glacier and Armour Inlet on the N coast of Siple Island. This feature was first plotted by USGS from air photos taken by USN Operation Highjump in January 1947. The descriptive name was suggested by a member of the US-ACAN staff on the basis of the appearance of the feature in the aerial photographs.

Bloch Peak 74°12'S, 163°15'E

A prominent peak in the Deep Freeze Range, Victoria Land, between Priestley Glacier and the W part of Tourmaline Plateau. Named by US-ACAN in 1990 after Erich Bloch, Director, National Science Foundation, 1984–90. The Foundation, through its Office of Polar Programs, is responsible for the development of the U.S. Antarctic Program.

Block, Mount 85°46'S, 176°13'E

A nunatak in the Grosvenor Mountains, standing 5 mi S of Block Peak. Discovered by R. Admiral Byrd on the ByrdAE flight to the South Pole in November 1929, and named by him for Paul Block, Jr., son of Paul Block, a patron of the expedition. Not: Mount Paul Block.

Block Bay 76°15'S, 146°22'W

A long ice-filled bay lying E of Guest Peninsula along the coast of Marie Byrd Land. Discovered in 1929 by the ByrdAE and named by Byrd for Paul Block, newspaper publisher and patron of the expedition. Not: Paul Block Bay.

Block Lake 54°10'S, 36°43'W

A lake in Karrakatta Valley, WNW of Husvik Harbor, South Georgia. The lake was dammed and served as a reservoir for the old Husvik whaling station. Named in 1990 by the UK-APC after William C. Block, invertebrate zoologist; Head, BAS Terrestrial Zoology and Microbiology Section, since 1976, who worked many summers on South Georgia and on Signy Island.

Block Mountain 70°28'S, 68°52'W

Very prominent block-shaped mountain, 1,460 m, which juts E from the Douglas Range of Alexander Island immediately S of Transition Glacier. Its N, E, and S sides, which are demarked by sharply defined corners, are nearly vertical, and from its NE corner a low spur connects this mountain with Tilt Rock. First photographed from the air on Nov. 23, 1935, by Lincoln Ellsworth and mapped from these photos by W.L.G. Joerg. Roughly surveyed in 1936 by the BGLE and resurveyed in 1949 by the FIDS. The descriptive name was given by FIDS.

Block Peak 85°41'S, 176°13'E

A peak, 2,770 m, standing 4 mi NW of Mauger Nunatak in the Grosvenor Mountains. Discovered by R. Admiral Byrd on the ByrdAE flight to the South Pole in November 1929, and named by him for William Block, son of Paul Block who was a patron of the expedition. Not: Mount William Block.

Blodgett Iceberg Tongue 66°05'S, 130°00'E

A large iceberg tongue that extends seaward from the vicinity of Cape Morse and Cape Carr on the east side of Porpoise Bay. Named by US-ACAN for Gardner D. Blodgett, Office of Geography, Department of Interior, who, in 1955, prepared a sketch map of the coastal features of Antarctica between 84°E and 144°E from USN Operation Highjump (1946–47) aerial photographs. Since the iceberg tongue was partially delineated for the first time on the 1955 sketch map by Blodgett, use of his name for it is considered appropriate.

Blong Gully: see Crescent Stream 77°37'S, 163°10'E

Blood, Mount 85°01'S, 167°30'W

A mountain at the S side of the mouth of Somero Glacier, 2.5 mi NE of Mount Johnstone, in the Queen Maud Mountains. Named by US-ACAN for Richard H. Blood, USARP ionospheric physicist at the South Pole Station, winter 1965.

Bloomfield, Mount 72°59'S, 65°37'E

A low, domed, boulder-covered mountain 5 mi W of Mount Rymill in the southern Prince Charles Mountains. Mapped from air photos taken by ANARE in 1956. Named by ANCA for Flying Officer E. Bloomfield, RAAF, navigator with the Antarctic Flight at Mawson Station, 1960.

Bloor Passage 65°14'S, 64°15'W

Passage leading northward from Meek Channel between Corner Island and Uruguay Island, in the Argentine Islands, Wilhelm Archipelago. Named by the UK-APC in 1959 for Able Seaman Vincent T. Bloor, RN, a member of the British Naval Hydrographic Survey Unit in the area in 1957–58.

Bloor Reef 54°00'S, 37°41'W

A reef that dries, located off Binder Beach at the head of Right Whale Bay, South Georgia. Named by UK-APC for Leading Seaman Vincent T. Bloor, who assisted in the survey of Right Whale Bay in April 1961.

Blount Nunatak 83°16'S, 51°19'W

A prominent nunatak, 1,630 m, standing 3 mi SW of Mount Lechner on the W side of Forrestal Range in the Pensacola Mountains. Discovered and photographed on Jan. 13, 1956 during a USN transcontinental nonstop plane flight from McMurdo Sound to Weddell Sea and return. Named by US-ACAN for Hartford E. Blount, aviation machinists mate with USN Squadron VX during Operation Deep Freeze, 1956.

Blowaway, Mount 69°41'S, 158°09'E

A gneissic mountain (1,320 m) with extensive areas of exposed rock, located 12 mi WNW of Governor Mountain in the Wilson Hills. So named by the northern party of the NZGSAE, 1963–64, because three members of the party were forced by a blizzard to abandon their proposed survey and gravity station there.

Blow-me-down Bluff 68°03'S, 66°40'W

Prominent rock bluff, 1,820 m, standing at the N flank of Northeast Glacier on the W side of Graham Land. Roughly surveyed in 1936 by the BGLE, and by the USAS in 1940. Resurveyed in 1946 and 1948 by the FIDS, who so named it because the bluff stands in the windiest part of Northeast Glacier and many members of FIDS sledge parties have fallen in this area in high winds.

Blubaugh Nunatak 85°45'S, 134°06'W

A ridge-like nunatak located just S of the mouth of Kansas Glacier where it enters Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Donald D. Blubaugh, construction mechanic, Byrd Station winter party, 1957.

Bludau, Gory: see Penck Ledge 73°03'S, 4°18'W

Blue Glacier 77°50'S, 164°10'E

Large glacier which flows into Bowers Piedmont Glacier about 10 mi S of New Harbor, in Victoria Land. Discovered by the BrNAE under Scott, 1901–04, who gave it this name because of its clear blue ice at the time of discovery.

Blue Lake 77°32'S, 166°10'E

The largest of several small frozen lakes near Cape Royds, Ross Island, lying 0.5 mi NNE of Flagstaff Point. Named by the BrAE (1907–09) on account of the intensely vivid blue color of its ice.

Blue Whale Bay: see Blue Whale Harbor 54°04'S, 37°01'W

Blue Whale Harbor 54°04'S, 37°01'W

Small, sheltered anchorage entered 1 mi WSW of Cape Constance, along the N coast of South Georgia. Charted in 1930 by DI personnel. The blue whale is a commercially important species which is widely distributed in polar and subpolar waters; numbers are now very small. Not: Blue Whale Bay, Puerto Ballena Azul.

Blue Whale Mountain 54°04'S, 37°02'W

A mountain rising to 490 m at the W side of the head of Blue Whale Harbor, South Georgia. Charted by DI personnel in 1930 and named in association with the harbor.

Bluff Island 68°33'S, 77°54'E

An island lying 0.5 mi S of Magnetic Island and 2 mi W of Breidnes Peninsula, Vestfold Hills, in Prydz Bay. Mapped from air photos taken by the Lars Christensen Expedition, 1936–37. Remapped by ANARE (1957–58) and so named because the S end of the island is marked by a steep cliff face. Not: Ostrov Blaff.

Bluff Island: see Murray Island 64°22'S, 61°34'W

Bluff Point 54°01'S, 37°40'W

Point lying SW of Craigie Point in Right Whale Bay, on the N coast of South Georgia. The name appears on a chart based on a survey by DI personnel in 1930.

Bluff Point: see Lagoon Point 54°11'S, 36°35'W

Blumcke, Promontorio: see Blümcke Knoll 66°50'S, 68°00'W

Blümcke Knoll 66°50'S, 68°00'W

A small steep-sided feature protruding through the ice of northern Adelaide Island, about 11 mi SW of Mount Vélain. Mapped from air photos taken by RARE (1947–48) and FIDASE (1956–57). Named by UK-APC after Adolf Blümcke (1854–1914), German glaciologist, professor in the Oberrealschule at Augsburg. Not: Promontorio Blumcke.

Blundell Peak 69°24'S, 76°06'E

A rock peak on Stornes Peninsula in Prydz Bay. First mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Named by ANCA for A.A. Blundell, radio operator at Mawson Station in 1968, who assisted in the ANARE tellurometer traverse from this peak to Reinbolt Hills in 1968.

Blunt, Mount 68°48'S, 65°48'W

A rounded ice-covered mountain (1,500 m) rising from the W flank of Weyerhaeuser Glacier, on the E side of Antarctic Peninsula. The mountain was photographed from the air by the USAS on Sept. 28, 1940. It was roughly surveyed by FIDS in Dec. 1958, and resurveyed in Nov. 1960. Named by UK-APC after Edmund Blunt (1770–1862), American publisher of charts and sailing directions, whose establishment was acquired by U.S. Government to form the nucleus of the U.S. Hydrographic Office (since 1972, the Defense Mapping Agency Hydrographic Center).

Blunt Bay: see Blunt Cove 66°54'S, 108°48'E

Blunt Cove 66°54'S, 108°48'E

A cove in the southwest extremity of Vincennes Bay. First mapped (1955) by G.D. Blodgett from aerial photographs taken by USN Operation Highjump (1947). Named by US-ACAN after Simon F. Blunt, Passed Midshipman on the sloop *Vincennes* during the USEE (1838–42) under Lt. Charles Wilkes. Not: Blunt Bay.

Blustery Cliffs 71°25'S, 67°53'E

A line of rocky cliffs 3.5 mi long on the N part of Fisher Massif, Mac. Robertson Land. A point on the cliffs 1,135 m high was occupied as a survey station by J. Manning, surveyor with the ANARE Prince Charles Mountains survey party in January 1969. So named because of the great amount of turbulence caused by updraft currents.

Blythe Bay 62°28'S, 60°20'W

Anchorage at the SE side of Desolation Island, lying N of Livingston Island in the South Shetland Islands. The feature was known to American and British sealers as Blythe Bay as early as 1821. In the 1930's, however, the name was applied to a large bay between Williams Point and Cape Shirreff (now Hero Bay). This error has now been rectified and the name Blythe Bay is approved as originally used. The name is probably after Blythe (now Blyth), England, home of William Smith who reported the discovery of

the South Shetland Islands in 1819. Not: Desolation Harbor, Puerto Desolación.

Blythe Bay: see Hero Bay 62°31'S, 60°27'W

Blyth Spur 64°03'S, 57°51'W

A high spur trending ESE from Dobson Dome in James Ross Island. Following geological work by BAS, 1985–86, named by the UK-APC after John Blyth, cook on Operation Tabarin at Port Lockroy, 1943–44, and Hope Bay, 1944–45.

Bo, Mont: see Boë, Mount 72°35'S, 31°19'E

Boat Harbor 54°12'S, 36°36'W

Small circular harbor lying S of Little Jason Lagoon in Jason Harbor, South Georgia. The name appears to be first used on a 1930 British Admiralty chart.

Bob Bartlett Glacier: see Bartlett Glacier 86°15'S, 152°00'W

Bobby Rocks 75°49'S, 159°11'E

Ice-free rocks lying 4 mi S of Ricker Hills in the Prince Albert Mountains, Victoria Land. Mapped by USGS from surveys and USN air photos, 1956–62. Named by US-ACAN for Bobby J. Davis, commissaryman with the South Pole Station winter party, 1966.

Bob Island 64°56'S, 63°26'W

Rocky island 1 mi long and 145 m high, lying 4 mi SE of Cape Errera, Wiencke Island, in the Palmer Archipelago. An island in this vicinity was surveyed and photographed by the BelgAE under Gerlache in 1898. It was originally called "Ile Famine," but in the reports resulting from the expedition it was renamed "Ile Bob." In a survey of the area in 1955, the FIDS made a landing on this island. Although it differs somewhat in size and position from the BelgAE reports, the FIDS found it closely resembles the BelgAE photograph and consider it to be the island originally named. Not: Ile Famine, Isla Bayley, Isla Poisson.

Bobo Ridge 85°51'S, 150°48'W

An isolated rock ridge 2 mi long, extending W along the N side of Albanus Glacier and marking the SW extremity of the Tapley Mountains. First roughly mapped by the ByrdAE, 1933–35. Named by US-ACAN for Robert Bobo, meteorologist with the McMurdo Station winter party of 1963.

Boccherini Inlet 71°50'S, 72°20'W

Ice-filled inlet, 18 mi long and 16 mi wide, which indents the S side of Beethoven Peninsula and forms the N extremity of the Bach Ice Shelf in Alexander Island. First mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by the UK-APC for Luigi Boccherini (1743–1805), Italian composer.

Boda, Mount 68°05'S, 48°52'E

A mountain just N of Amphitheatre Peaks at the western end of the Nye Mountains. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for Dr. J. Boda, medical officer at Wilkes Station, 1959.

Bode Nunataks 72°30'S, 75°07'E

Two partly snow-covered nunataks lying 23 miles N of Mount Harding in the Grove Mountains. Mapped from air photos, 1956–60, by ANARE. Named by ANCA for O. Bode, weather observer at Mawson Station, 1962.

Bodman, Cape: see Bodman Point 64°14'S, 56°48'W

Bodman Point 64°14'S, 56°48'W

Rocky point which is situated centrally on the NW coast of Seymour Island in the James Ross Island group. First surveyed by the SwedAE under Nordenskjöld, 1901–04, who named it Cape Bodman after Dr. Gösta Bodman, hydrographer and meteorologist with the expedition. Resurveyed by the FIDS in 1952. Point is considered a more suitable descriptive term for this feature than cape. Not: Cape Bodman.

Bodys, Mount 67°09'S, 67°48'W

The easternmost mountain on Adelaide Island. It rises over 1,220 m and is ice covered except for small rock exposures on the S side. First roughly surveyed in 1909 by the FrAE under Charcot. Resurveyed in 1948 by the FIDS, and named by them for Sgt. William S. Bodys, mechanic for the expedition's Norseman airplane in 1950.

Bodziony, Mount 74°34'S, 111°54'W

A bluff-type mountain with a steep W rock face, rising to over 400 m at the N end of Hunt Bluff, Bear Peninsula, on Walgreen Coast, Marie Byrd Land. Named by US-ACAN in 1977 after Maj. Ronald Bodziony, USA, Terminal Operations Officer, USN OpDFrz, 1973–76.

Boë, Mount 72°35'S, 31°19'E

Mountain, 2,520 m, standing 1 mi NE of Mount Victor in the Belgica Mountains. Discovered by the BelgAE, 1957–58, under G. de Gerlache, who named it for Capt. Sigmund Boë, commander of the ship *Polarhav*, which transported the expedition. Not: Mont Bo.

Boeckella, Lake 63°24'S, 57°00'W

Small lake which lies 0.3 mi S of Hope Bay and drains by a small stream into Eagle Cove, at the NE end of Antarctic Peninsula. Discovered and named by the SwedAE, 1901–04, under Nordenskjöld. *Boeckella* is a species of crustacean found in this area. Not: Boeckella-See.

Boeckella-See: see Boeckella, Lake 63°24'S, 57°00'W

Boeger Peak 75°49'S, 116°06'W

Snow-covered peak (3,070 m) situated 2 mi W of Richmond Peak on the Toney Mountain massif, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Alvin C. Boeger, Chief Aerographer's Mate, USN. As a member of the U.S. Naval Ice Reconnaissance Unit, Boeger made numerous ice reconnaissance flights between New Zealand and Antarctica from Oct. to Dec. 1972 which contributed to ship operations and routing.

Boennighausen, Mount 75°47'S, 132°18'W

Snow-covered mountain (2,970 m) located 4 mi SSW of Mount Kosciusko in the Ames Range of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Lt. Cdr. Thomas L. Boennighausen, CEC, USN, Officer-in-Charge of the nuclear power plant at McMurdo Station, 1966. He served as Civil Engineer on the staff of the Commander, U.S. Naval Support Force, Antarctica, 1969–70 and 1970–71.

Boerders Castex, Cabo: see Tay Head 63°21'S, 55°34'W

Boffa Island 66°28'S, 110°37'E

Rocky, ridge-like island, 0.8 mi long, lying 0.5 mi E of Browning Peninsula between Bosner and Birkenhauer Islands, in the S part of the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for W.C. Boffa, observer with the then Army Strategic Air Command, who assisted USN OpWml parties in establishing astronomical control stations in the area in January 1948.

Bofill, Isla: see Midas Island 64°10'S, 61°07'W

Bogen Glacier 54°48'S, 35°56'W

A small glacier on the N side of Drygalski Fjord between Trendall Crag and Hamilton Bay, at the SE end of South Georgia. Named by the UK-APC in 1979 after Arne Bogen, Norwegian sealer working in South Georgia after 1950; Master of the sealing vessel *Albatross* and Station Foreman, Grytviken.

Boggs, Cape 70°33'S, 61°23'W

Bold, ice-covered headland marking the E extremity of Eielson Peninsula, on the E coast of Palmer Land. Discovered by members of East Base of the USAS who charted this coast by land and from the air in 1940. Named for S.W. Boggs, Geographer, Dept. of State, whose political and geographical studies of Antarctica were used by the USAS. Not: Cape Eielson.

Boggs Strait: see Stefansson Strait 69°26'S, 62°25'W

Boggs Valley 71°55'S, 161°30'E

A valley, heavily strewn with morainal debris, which indents the E side of Helliwell Hills between Mount Van der Hoeven and Mount Alford. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for William J. Boggs, USARP biologist at McMurdo Station, 1967–68.

Böhnecke Glacier 72°23'S, 61°25'W

Steep glacier 3 mi wide, which flows SE to the NW side of Violante Inlet, on the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by members of the USAS. During 1947 the glacier was photographed from the air by members of the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Günther Böhnecke, German oceanographer and member of the German expedition in the *Meteor*, 1925–27.

Böhyō Heights 68°08'S, 42°42'E

A small, rocky elevation that overlooks the coast of Queen Maud Land 2 mi ESE of Cape Hinode. Mapped from surveys and air photos by JARE, 1957–62. The name “Böhyō-dai” (ice view heights) was given by JARE Headquarters in 1973.

Boil, The 74°09'S, 161°32'E

A prominent snow eminence marked by rock exposures on the NE side of the Reeves Névé, in Victoria Land. It rises over 2,300 m and stands 4 mi E of Shepard Cliff. The descriptive name was apparently applied by the Southern Party of the NZGSAE during a visit to the feature in December 1962.

Boiler Bay: see King Edward Cove 54°17'S, 36°30'W

Boiler Harbour: see King Edward Cove 54°17'S, 36°30'W

Boker Rocks 72°25'S, 98°40'W

A rocky exposure located 5 mi NE of Von der Wall Point on the S coast of Thurston Island. Mapped by USGS from surveys and

USN air photos, 1960–66. Named by US-ACAN for Helmut C. Boker, meteorologist at Byrd Station, 1964–65.

Boland, Mount 65°18'S, 63°50'W

Mountain over 1,065 m, standing 6 mi E of Lumière Peak on the E-W ridge between Bussey and Trooz Glaciers, on the W side of Graham Land. Discovered by the FrAE, 1908–10, under Charcot and named by him for Monsieur Boland, seaman, and later lieutenant on the *Pourquoi-Pas?*, Charcot's ship. Not: Sommet Boland.

Boland, Sommet: see Boland, Mount 65°18'S, 63°50'W

Bold Cliff: see Williams Cliff 77°35'S, 166°47'E

Bol Glacier 77°52'S, 162°34'E

Glacier between Darkowski and Condit Glaciers, flowing N from the Cathedral Rocks into Ferrar Glacier in Victoria Land. Named by the US-ACAN in 1964, for Lt. Cdr. Peter Bol, USN, chaplain with the winter party of 1956 at the Naval Air Facility on McMurdo Sound.

Bolinder Beach: see Bolinder Bluff 61°56'S, 57°58'W

Bolinder Bluff 61°56'S, 57°58'W

Prominent bluff crowned by three buttresses of dark grey and light brown rock, overlooking Venus Bay 3 mi SE of False Round Point on the N coast of King George Island, in the South Shetland Islands. The feature was known to sealers using the anchorage at nearby Esther Harbor in the 1820's. It was charted and named by DI personnel on the *Discovery II* in 1937 when the breakdown of the “Bolinder” boat engine caused 6 men to be marooned for 9 days on the beach at the foot of the bluff. Not: Bolinder Beach, Pico Amarillo.

Bølingen Islands 69°28'S, 75°45'E

A group of small islands, 8 mi in extent, lying immediately off the N side of Publications Ice Shelf in the SE part of Prydz Bay. Discovered and roughly charted by Capt. Klarius Mikkelsen in February 1935. Charted in greater detail by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition (1936–37) and given the name Bølingen (the herd).

Bolle, Mount 71°54'S, 6°50'E

A peak (2,685 m) which rises above Larsen Cliffs, 3 mi S of Kyrkjeskippet Peak, in the eastern Mühlig-Hofmann Mountains of Queen Maud Land. The name “Bolle-Berg” after Herbert Bolle, aviation supervisor of the expedition, was applied in this area by the GerAE (1938–39) under Alfred Ritscher. The correlation of the name with this peak may be arbitrary, but it is recommended for the sake of international uniformity and historical continuity.

Bolle Bay 54°27'S, 3°21'E

A cove indenting the western shore of Bouvetøya, entered on the southern side of Norvegia Point. Roughly charted in 1898 by the German expedition under Karl Chun. Recharted and named in December 1927 by a Norwegian expedition under Capt. Harald Horntvedt. Not: Bollevika.

Bollene Rocks 72°15'S, 27°14'E

Group of rocks standing just W of Bleikskoltane Rocks at the head of Byrdreen, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Bollene (the buns).

Bollevisa: see Bolle Bay 54°27'S, 3°21'E

Bolsón Cove 65°09'S, 63°05'W

Cove at the head of Flandres Bay, lying immediately E of Étienne Fjord, along the W coast of Graham Land. First charted by the BelgAE under Gerlache, 1897–99. The name appears on an Argentine government chart of 1954 and is probably descriptive; “bolsón” is Spanish for a large purse. Not: Bahía Cruz, Schulze Cove.

Bolt, Mount 71°05'S, 165°43'E

A mountain (2,010 m) rising on the N side of Ebbe Glacier and 5 mi NW of Peterson Bluff in the Anare Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Lt. Ronald L. Bolt, USN, pilot of R4D aircraft in the support of the USGS Topo West survey of this area in the 1962–63 season; he also worked the previous austral summer season in Antarctica.

Bolten Peak 71°49'S, 1°44'W

A small isolated peak 3 mi N of Litvillingane Rocks, on the E side of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Bolten (the bolt).

Bolton, Mount 85°56'S, 129°43'W

A prominent mountain in western Wisconsin Range, 2,840 m, standing 6 mi SE of Mount Soyat along the E side of Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Lt. James L. Bolton, USN, helicopter pilot on USN OpDFrz 1965, 1966 and 1967.

Bolton Glacier 65°01'S, 62°58'W

Glacier flowing into the head of Briand Fjord, Flandres Bay, on the W coast of Graham Land. Mapped in 1959 by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. Named by the UK-APC for William B. Bolton (1848–89), English photographer who, with B.J. Sayce, invented the collodion emulsion process of dry-plate photography in 1864.

Boman, Mount 82°32'S, 162°00'E

Mountain, 1,630 m, between Tranter and Doss Glaciers in the N part of the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for William M. Boman, USARP traverse engineer at Roosevelt Island, 1962–63, and McMurdo Station, winter of 1965.

Bombardier Glacier 64°19'S, 59°59'W

A glacier flowing SE from the edge of Detroit Plateau, Graham Land, and through a deep trough to join Edgeworth Glacier. Mapped from surveys by FIDS (1960–61). Named by UK-APC for J.A. Bombardier, Canadian engineer who developed the “Snowmobile,” one of the earliest successful over-snow vehicles (1926–37).

Bombay Island: see D'Hainaut Island 63°54'S, 60°47'W

Bomb Peak 77°32'S, 169°15'E

Peak, 805 m, situated 2 mi W of Cape Crozier on Ross Island. Charted and so named by the NZGSAE, 1958–59, because of the bomb-like (pyroplastic) geological formations surrounding the summit of this peak.

Bomford Peak 54°08'S, 37°38'W

The highest peak, 1,140 m, located centrally on the peninsula between Wilson Harbor and Cheapman Bay on the S side of South Georgia. Surveyed by the SGS in the period 1951–57 and named for Capt. Anthony G. Bomford, R.E., senior surveyor of the SGS, 1955–56.

Bommen Spur 72°37'S, 3°08'W

A spur, or small ridge, extending eastward from Jøkulskarvet Ridge to Flogstallen, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Bommen (the bar).

Bonaparte, Mount 83°05'S, 160°50'E

A mountain, 3,430 m, standing 4 mi NW of Mount Lecoite in the Queen Elizabeth Range. Discovered by the BrAE (1907–09) under Shackleton, and named for Prince Roland Bonaparte, President of the Geographical Society of Paris.

Bonaparte Point 64°47'S, 64°05'W

Narrow point at the S side of Arthur Harbor on the SW coast of Anvers Island, in the Palmer Archipelago. Charted by the FrAE, 1903–05, and named by Charcot for Prince Roland Bonaparte, then President of the Paris Geographical Society. Not: Roland Bonaparte Point.

Bond, Mount 66°49'S, 51°07'E

Mountain just S of Mount Rhodes, in the Tula Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for E. Bond, a member of the crew of the *Discovery* during the BANZARE, 1929–31.

Bondeson Glacier 82°44'S, 165°00'E

Glacier about 7 mi long, flowing N along the E side of Benson Ridge into the lower portion of Robb Glacier. Mapped by the USGS from tellurometer surveys (1961–62) and Navy air photos (1960). Named by US-ACAN for W. Bondeson, Master of the USNS *Pvt. John R. Towle* during USN OpDFrz 1964 and 1965.

Bond Glacier 66°58'S, 109°00'E

A steep, heavily crevassed glacier to the W of Ivanoff Head, flowing from the continental ice to Blunt Cove at the head of Vincennes Bay. Mapped from air photos taken by USN Operation Highjump (1946–47), and named by US-ACAN for Capt. Charles A. Bond, USN, commander of the expedition's Western Group.

Bond Nunatak 67°09'S, 68°10'W

Snow-capped nunatak with rock exposures on its W face, rising N of Mount Bouvier on Adelaide Island. Named by the UK-APC in 1963 for Flight Lt. Peter R. Bond, RAF, pilot with the BAS Aviation Unit based at Adelaide station in 1962–63.

Bon Docteur Nunatak 65°40'S, 140°01'E

Small coastal nunatak, 28 m, standing at the W side of Astrolabe Glacier Tongue, 0.2 mi S of Rostand Island in the Géologie Archipelago. Photographed from the air by USN OpHjp, 1946–47. Charted by the FrAE, 1952–53, and named for Dr. Jean Cendron, medical officer and biologist with the FrAE, 1951–52.

Bond Peaks 72°11'S, 25°34'E

Group of peaks, 3,180 m, at the SW side of Mount Bergersen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named for Capt. Charles A. Bond, USN, commander of the

western task group of USN OpHjp, Task Force 68, which made photographic flights over this and other coastal areas between 14° and 164° East. Not: Bondtoppane.

Bond Point 62°41'S, 60°48'W

Point lying NE of Elephant Point on the S side of Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 for Ralph Bond, Master of the sealer *Hetty* of London, who visited the South Shetland Islands in 1820–21, and provided George Powell with descriptions and sketches of their southern coasts for incorporation in his 1822 chart.

Bond Ridge 70°16'S, 65°13'E

A rock ridge 1 mi NE of Moore Pyramid on the N side of Scylla Glacier, in the Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for D.W.G. Bond, senior diesel mechanic at Mawson Station in 1968.

Bondtoppane: see Bond Peaks 72°11'S, 25°34'E

Bone Bay 63°38'S, 59°04'W

A rectangular bay which is nearly 10 mi wide at the entrance between Notter Point and Cape Roquemaurel, along the NW coast of Trinity Peninsula. The FIDS charted the bay in 1948. Named by UK-APC after Thomas M. Bone, midshipman on the brig *Williams* used in exploring the South Shetland Islands and Bransfield Strait in 1820. Not: Bone Cove.

Bone Cove: see Bone Bay 63°38'S, 59°04'W

Bone Point 66°25'S, 110°40'E

Rock point forming the SE extremity of Herring Island, in the Windmill Islands. First mapped from air photos taken by USN Op Hjp and OpWml in 1947 and 1948. Named by the US-ACAN for Steven D. Bone, meteorologist and member of the Wilkes Station party of 1962.

Bonert, Islote: see Bonert Rock 62°27'S, 59°43'W

Bonert Rock 62°27'S, 59°43'W

A rock lying 0.5 mi SE of Canto Point, Greenwich Island, South Shetland Islands. This feature was surveyed by the Chilean Antarctic Expedition (1947), which gave the name "Islote Bonert" or "Islote Capitán Bonert" after Capitán de Corbeta Federico Bonert Holzappel, second in command of the transport ship *Angamos* on the expedition. The term rock is considered appropriate for this small feature. Not: Islote Bonert, Islote Capitán Bonert.

Bongrain, Cape: see Bongrain Point 67°43'S, 67°48'W

Bongrain Ice Piedmont 69°00'S, 71°30'W

Ice piedmont, 27 mi long in a NE-SW direction and 12 mi wide in its widest part, occupying the NW coastal area of Alexander Island. First seen from a distance and roughly surveyed by the FrAE, 1908–10, under Charcot. Photographed from the air by the BGLE on Aug. 15, 1936, and roughly mapped from these photos. Named by the UK-APC in 1954 for Maurice Bongrain, surveyor of the FrAE, 1908–10, who was responsible for the first map of this coast.

Bongrain Point 67°43'S, 67°48'W

Point which forms the S side of the entrance to Dalglish Bay on the W side of Pourquoi Pas Island, off the W coast of Graham Land. Surveyed in 1936 by the BGLE under Rymill. Resurveyed

in 1948 by the FIDS, who named the point for Maurice Bongrain, surveyor and First Officer of the *Pourquoi Pas?*, ship of the FrAE, 1908–10, who was responsible for the first surveys of the area. Not: Cabo Barracas, Cape Bongrain, Punta Yungay.

Bonita, Bahía: see Brandy Bay 63°50'S, 57°59'W

Bonnabeau Dome 73°31'S, 94°10'W

A prominent ice-covered dome mountain rising on the W side of Gopher Glacier, 4 mi W of similar-appearing Anderson Dome, in the Jones Mountains. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61, and named by them for Dr. Raymond C. Bonnabeau, Jr., medical doctor with the party.

Bonne Glacier 77°53'S, 163°49'E

A steep glacier 1 mi WSW of Hobbs Peak, descending NW from Hobbs Ridge into Blue Glacier, in Victoria Land. The name is one of a group in the area associated with surveying applied in 1993 by NZGB. Named after the Bonne map projection, a derivative conical projection, in which the parallels are spaced at true distances along meridians which are plotted as curves.

Bonner Beach 54°50'S, 36°01'W

Small, flat beach on the S shore of Larsen Harbor in the SE part of South Georgia. It is the only place in South Georgia where Weddell seals breed. The area was mapped by DI-personnel in 1927 and by the SGS in the period 1951–57. Named by the UK-APC in 1957 for William N. Bonner, FIDS biologist who worked in the Bay of Isles in 1953–55 and was sealing inspector in South Georgia in 1956–57.

Bonney, Lake 77°43'S, 162°25'E

Lake lying at the mouth of Taylor Glacier in the Taylor Valley of Victoria Land. Visited by the BrNAE, 1901–04. Named by the BrAE under Scott, 1910–13, for T. Bonney, professor of geology at Cambridge University, England.

Bonney Bowl 80°21'S, 25°35'W

A cirque to the SE of Sumgin Buttress in the west-central part of the Herbert Mountains, Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. In association with the names of glacial geologists grouped in this area, named by the UK-APC in 1971 after the Reverend Thomas G. Bonney (1833–1923), English geologist who worked on the origin of cirques; Professor of Geology, University College, London, 1877–1901.

Bonney Riegel 77°43'S, 162°22'E

A riegel, or rock bar extending N from the Kukri Hills across Taylor Valley to Lake Bonney, in Victoria Land. Named in association with Lake Bonney by the Western Journey Party, led by Griffith Taylor, of the BrAE, 1910–13.

Bonnier Point 64°28'S, 63°57'W

Point marking the N side of the entrance to Hamburg Bay, on the NW coast of Anvers Island in the Palmer Archipelago. First charted by the FrAE, 1903–05, and named by Charcot for J. Bonnier, assistant director of the Laboratory of Maritime Zoology at Wimereux, who installed a laboratory on the ship *Français*.

Boobyalla Islands 67°15'S, 46°34'E

Two small islands 2 mi NE of Kirkby Head, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956.

Named by ANCA after the Australian native willow, Boobyalla (*Acacia longifolia*, Willd.).

Bool, Mount 70°11'S, 64°57'E

A mountain between Mounts Peter and Dwyer in the Athos Range of the Prince Charles Mountains. Plotted by ANARE from air photos taken in 1965. Named by ANCA for G.A. Bool, weather observer at Mawson Station, who assisted with the Prince Charles Mountains survey in 1969.

Boomerang Glacier 74°33'S, 163°54'E

A gently curving glacier, 10 mi long, draining southward from Mount Dickason in the Deep Freeze Range to enter Browning Pass, at the N side of Nansen Ice Sheet in Victoria Land. Discovered by the Northern Party of the BrAE, 1910–13, and so named by them because of its shape.

Boomerang Range 78°30'S, 158°45'E

Narrow mountain range, curved like a boomerang and extending generally N-S for about 16 mi, forming a part of the W limits of Skelton Névé. Mapped and named in 1957 by the N.Z. party of the CTAE, 1956–58.

Boothby, Cape 66°34'S, 57°16'E

A rounded cape, along the E side of the coastal projection of Edward VIII Plateau, situated 4 mi N of Kloa Point, just N of Edward VIII Bay. Discovered on Feb. 28, 1936, by DI personnel on the *William Scoresby* and named for the captain of the vessel, Lt. Cdr. C.R.U. Boothby, RNR.

Booth Island 65°05'S, 64°00'W

Y-shaped island, 5 mi long and rising to 980 m, in the NE part of the Wilhelm Archipelago. Discovered and named by a German expedition under Dallmann 1873–74, probably for Oskar Booth or Stanley Booth, or both, members of the Hamburg Geographical Society at that time. The US-ACAN has rejected the name Wandel Island, applied by the BelgAE, 1897–99, in favor of the original naming. Not: Wandel Island.

Booth Peninsula 66°06'S, 101°13'E

Rocky peninsula, 4 mi long and 1 mi wide, which projects W from the coast 3 mi SW of Remenchus Glacier. Mapped from aerial photographs taken by USN OpHjp, 1946–47, and named by the US-ACAN for George H. Booth, air crewman on the USN OpHjp seaplane commanded by D.E. Bunger which landed in this area and obtained aerial and ground photographs of this ice-free region. Not: Booth Ridge, Poluostrov Charnokitovyy.

Booth Ridge: see Booth Peninsula 66°06'S, 101°13'E

Booth Spur 75°37'S, 142°01'W

A small rock spur at the N side of El-Sayed Glacier and 1.5 mi SW of Mount Shirley, in coastal Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1959–65. Named by US-ACAN for Lt. Cdr. Robert M. Booth, USN, Public Works Officer during Operation Deep Freeze 1968 and 1969.

Boot Rock 57°03'S, 26°39'W

Rock, 30 m high, which lies 0.1 mi off the SE side of Candlemas Island in the South Sandwich Islands. Charted and named by DI personnel on the *Discovery II* in 1930. Not: Roca Bota.

Borceguí Island 61°03'S, 55°09'W

An ice-free island midway between Cape Yelcho and Gibbous Rocks, 1 mi off the N coast of Elephant Island, South Shetland Islands. The name was applied by the command of the Argentine sea-going tug *Chiriguano* in the 1954–55 cruise; Borceguí means half-boot and describes the shape of the island. Not: Buskin Rocks.

Borchgrevink, Mount 72°07'S, 23°08'E

Mountain, 2,390 m, standing 3 mi S of Tanngarden Peaks in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named for Otto Borchgrevink, leader of the Norwegian whaling expedition 1930–31, which mapped the coast of Antarctica from 51° 30' to 59° East. Not: Otto Borchgrevinkfjellet.

Borchgrevink Coast 73°00'S, 169°30'E

That portion of the coast of Victoria Land between Cape Adare and Cape Washington. The name was recommended by NZ-APC in 1961 after Carstens E. Borchgrevink, a member of H.J. Bull's expedition to this area, 1894–95, and leader of the British Antarctic Expedition, 1898–1900, the first to winter on the continent, at Cape Adare.

Borchgrevink Glacier 73°04'S, 168°30'E

A large glacier in the Victory Mountains, Victoria Land, draining S between Malta Plateau and Daniell Peninsula, and thence projecting into Glacier Strait, Ross Sea, as a floating glacier tongue. Named by the NZGSAE, 1957–58, for Carsten E. Borchgrevink, leader of the BrAE, 1898–1900. Borchgrevink visited the area in February 1900 and first observed the seaward portion of the glacier.

Borchgrevink Glacier Tongue 73°21'S, 168°50'E

The large seaward extension of the Borchgrevink Glacier in Victoria Land. It discharges into Glacier Strait, Ross Sea, just S of Cape Jones. Named in association with Borchgrevink Glacier.

Borchgrevinkisen 72°10'S, 21°30'E

Glacier flowing northward to the W of Taggen Nunatak, at the W end of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named for Carsten E. Borchgrevink, Norwegian leader of the BrAE, 1898–1900. Not: Carsten Borchgrevinkisen.

Borchgrevink Nunatak 66°03'S, 62°30'W

Nunatak 1.5 mi long which rises to 650 m, standing at the S side of the entrance to Richthofen Pass, on the E coast of Graham Land. Discovered in 1902 by the SwedAE under Nordenskjöld, who named it for C.E. Borchgrevink, leader of the BrAE to Victoria Land, 1898–1900. Not: Borchgrewink Nunatak, Borchgrewink Nunatak.

Borchgrewink Nunatak: see Borchgrevink Nunatak 66°03'S, 62°30'W

Borchgrewink Nunatak: see Borchgrevink Nunatak 66°03'S, 62°30'W

Borcik, Mount 86°12'S, 153°38'W

A prominent mountain, 2,780 m, standing 4.5 mi NNW of Mount Dietz in southern Hays Mountains of the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960–64.

Named by US-ACAN for Lt. Cdr. Andrew J. Borcik, pilot on photographic flights during USN OpDFrz, 1965–67.

Bordal Rock 54°49'S, 36°14'W

Isolated rock 1.5 mi WSW of Trollhul, off the S coast of South Georgia. Positioned by the SGS in the period 1951–57. Named by the UK-APC for Harald Bordal, a gunner of the Compañía Argentina de Pesca, Grytviken, for several years beginning in 1948.

Bore 54°16'S, 37°10'W

Small cove indenting the mid part of Jossac Bight on the S coast of South Georgia. Surveyed by the SGS in the period 1951–57. The name is well established in local use.

Boreal Point 63°07'S, 55°48'W

Point forming the W side of Rockpepper Bay, along the N coast of Joinville Island. Surveyed by the FIDS in 1953–54. The feature was so named by the UK-APC because of its position on the north coast of Joinville Island.

Boreas, Mount 77°29'S, 161°06'E

Prominent peak, 2,180 m, between Mounts Aeolus and Dido in the Olympus Range of Victoria Land. Named by the VUWAE (1958–59) for a figure in Greek mythology.

Boreas Nunatak 71°18'S, 3°57'W

A nunatak (220 m) nearly 1 mi SW of Passat Nunatak at the mouth of Schytt Glacier in Queen Maud Land. Discovered by the GerAE under Ritscher, 1938–39, and named after *Boreas*, one of the Dornier flying boats of the expedition. The feature was surveyed by the NBSAE, 1949–52.

Boreas Peak 69°38'S, 68°20'W

A nunatak (670 m) at the N side of the terminus of Eureka Glacier, on the Rymill Coast of Palmer Land. The best ramp for the approach to Eureka Glacier from George VI Sound is normally found close to this nunatak. Named by UK-APC after Boreas, the north wind in Greek, in association with other wind names in the area.

Boree Islands 67°41'S, 45°20'E

Two small islands 2 mi W of Point Widdows, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA after Boree, vernacular name for species of *Acacia* found in Australia.

Bores Dal: see Bore Valley 54°16'S, 36°31'W

Bore Tal: see Bore Valley 54°16'S, 36°31'W

Bore Valley 54°16'S, 36°31'W

Valley, 0.7 mi long in a N-S direction, extending from Lewis Pass (q.v.) to Grytviken in Cumberland Bay, South Georgia. It was first surveyed and named “Bores Dal” by the SwedAE under Nordenskjöld, 1901–04, but the form Bore Valley has since become established. The discovery by J. Gunnar Andersson, of the SwedAE, of numerous traces of a former ice covering, proving that ice had once filled the entire valley, led to the name. Bore is the Swedish word for Boreas, the Greek god of the north wind. Maidalen, to the N of Lewis Pass, was originally considered to be a part of Bore Valley but has since been determined to be a separate valley. Not: Bores Dal, Bore Tal, Mai Viken Glen.

Borga: see Borg Mountain 72°32'S, 3°30'W

Borg Bastion 78°10'S, 162°29'E

Prominent summit (3,730 m) on Johns Hopkins Ridge, standing 1.7 mi NW of Mount Rücker in Royal Society Range, Victoria Land. Named by US-ACAN in 1994 after Scott G. Borg, a geologist who conducted field investigations in Antarctica, 1978–1994; from 1992, Program Manager for Polar Earth Sciences, Office of Polar Programs, NSF.

Borge Bay 60°43'S, 45°37'W

Small bay between Balin and Berntsen Points on the E side of Signy Island, in the South Orkney Islands. Charted in 1912 by Norwegian whaling captain Petter Sørille. Named for Capt. Hans Borge, master of the *Polynesia*, who undertook additional mapping of the bay during the following year. Not: Borge Harbor, Queens Bay.

Borge Harbor: see Borge Bay 60°43'S, 45°37'W

Borgen: see Borg Mountain 72°32'S, 3°30'W

Börgen Bay 64°45'S, 63°30'W

Bay 4 mi wide, indenting the SE coast of Anvers Island close W of Bay Point, in the Palmer Archipelago. Discovered by the BelgAE, 1897–99, and named by Gerlache for Karl Börgen, German astronomer. Not: William Bay.

Borge Point 63°54'S, 60°45'W

Point forming the E side of Mikkelsen Harbor, Trinity Island, in the Palmer Archipelago. The point was charted and this name used by the Norwegian whaling captain Hans Borge during his survey of Mikkelsen Harbor, probably in 1914–15. Not: Punta Fuenzalida.

Borgesen, Mount: see Borgeson, Mount 72°07'S, 99°10'W

Borgeson, Mount 72°07'S, 99°10'W

A peak 5 mi ESE of Smith Peak in the Walker Mountains of Thurston Island. First delineated from air photos taken by USN OpHjp, 1946–47. Named by US-ACAN for Warren T. Borgeson, topographic engineer with the USN Bellingshausen Sea Expedition, who established geodetic control points in this area in February 1960. Not: Mount Borgeson.

Borggarden Valley 72°34'S, 3°48'W

A broad ice-filled valley about 10 mi long, lying between Borg Mountain and Veten Mountain in the NW part of Borg Massif, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Borggarden (the castle courtyard).

Borghallet 72°25'S, 3°30'W

A gently-sloping plain of about 100 square miles, lying N of Borg Mountain in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Borghallet (the castle slope).

Borg Island 66°58'S, 57°35'E

Island 1 mi long in the eastern part of the Øygarden Group. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37, and called by them Borgøy (castle island).

Borg Massif 72°45'S, 3°30'W

A spectacular mountain massif, about 30 mi long and with summits above 2,700 m, situated along the NW side of the Penck

Trough in Queen Maud Land. The parallel, ice-filled Raudberg Valley and Frostlandet Valley trend northeastward through the massif, dividing its summits into three rough groups. The feature was photographed from the air by the GerAE (1938–39), but was not correctly shown on the maps by the expedition. It was mapped in detail by Norwegian cartographers from surveys and air photos by NBSAE (1949–52). They named it Borgmassivet (the castle massif) in association with Borg Mountain, its most prominent feature. Not: Borgmassivet.

Borgmassivet: see Borg Massif 72°45'S, 3°30'W

Borg Mountain 72°32'S, 3°30'W

A large, flattish, ice-topped mountain with many exposed rock cliffs, standing at the N end of Borg Massif in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Borgia (the castle). Not: Borgia, Borgen.

Borgstrom, Mount 74°16'S, 162°53'E

A mountain, 2,610 m, rising 2 mi SE of Mount Meister on Nash Ridge of the Eisenhower Range, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for Cdr. Charles O. Borgstrom, air operations officer with USN Squadron VX-6 during Operation Deep Freeze 1966.

Borland, Mount 74°25'S, 67°45'E

A large, gently-domed mountain, standing 5 mi S of Mount Twigg near the head of Lambert Glacier. Sighted by Flying Officer J. Seaton, RAAF, during an ANARE photographic flight in November 1956. Named by ANCA for R.A. Borland, meteorologist at Mawson Station in 1958.

Borley, Cape 65°56'S, 55°10'E

An ice-covered cape protruding slightly from the coast midway between Cape Batterbee and Magnet Bay. Discovered in January 1930 by the BANZARE under Mawson, who named it for John Oliver Borley, a member of the Discovery Committee, who assisted BANZARE with arrangements to take over the *Discovery*.

Borley Point 58°23'S, 26°28'W

The NW tip of Montagu Island in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II* and named for John O. Borley, member of the Discovery Committee. Not: Punta Pescadora.

Bornmann Glacier 72°20'S, 170°13'E

Glacier flowing from the W side of Hallett Peninsula 1 mi S of Seabee Hook and forming a short, floating ice tongue on the shore of Edisto Inlet. Named by the NZGSAE, 1957–58, for Lt. Robert C. Bornmann, MC, USN, surgeon and leader of the USN OpDFrz party at Hallett station in 1958.

Borns Glacier 77°47'S, 162°01'E

Glacier immediately W of Mount Coates, flowing N from the Kukri Hills of Victoria Land. Charted by the BrAE under Scott, 1910–13. Named by the US-ACAN for Harold W. Borns, Jr., USARP geologist who made investigations in the area during 1960–61.

Borodin, Mount 71°36'S, 72°38'W

Mainly ice-covered mountain, 695 m, with a rock outcrop on the E side, 7 mi NNE of Gluck Peak in the SW part of Alexander Island. A number of peaks in this general vicinity first appear on

the maps of the RARE, 1947–48. This peak, apparently one of these, was mapped from the RARE air photos by Searle of the FIDS in 1960. Named by the UK-APC after Alexander Borodin (1834–87), Russian composer.

Borodino Island: see Smith Island 63°00'S, 62°30'W

Borradaile Island 66°35'S, 162°45'E

One of the Balleny Islands, about 2 mi long and 1 mi wide, lying 4 mi southeastward of Young Island. Discovered in February 1839 by John Balleny, who named it for W. Borradaile, one of the merchants who united with Charles Enderby in sending out the expedition. Not: Borradaile Island, Borradaile Öya.

Borradaile Island: see Borradaile Island 66°35'S, 162°45'E

Borradaile Öya: see Borradaile Island 66°35'S, 162°45'E

Borrascoso, Valle: see Windy Valley 68°37'S, 66°50'W

Borrello Island 66°19'S, 110°22'E

A small island lying off the W side of Hollin Island, in the Windmill Islands. First mapped from air photos taken by USN OpHjp, 1946–47. Named by US-ACAN for Sebastian R. Borrello, geomagnetician at Wilkes Station in 1958.

Boschert Glacier 74°43'S, 111°30'W

A glacier to the SE of Hayden Peak, flowing SW from Bear Peninsula into Dotson Ice Shelf, on Walgreen Coast, Marie Byrd Land. Mapped by USGS from USN aerial photographs taken 1966. Named in 1977 by US-ACAN after Ralph G. Boschert, USGS cartographer, a member of the USGS satellite surveying team at South Pole Station, winter party 1975.

Bosner Island 66°27'S, 110°36'E

Rocky island, 0.3 mi long, lying 0.1 mi NW of Boffa Island and 0.5 mi E of Browning Peninsula in the S part of the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Paul Bosner, member of one of the two USN OpWml photographic units which obtained aerial and ground photos of the area in January 1948. Not: Bosner Rock.

Bosner Rock: see Bosner Island 66°27'S, 110°36'E

Bosse Nunatak 72°08'S, 65°22'E

A small nunatak in an area of disturbed ice, about 20 mi W of Mount Izabelle in the Prince Charles Mountains. First sighted by J. Manning, surveyor with the ANARE Prince Charles Mountains survey party in 1971. Named after H.E. Bosse, helicopter pilot with the survey party.

Boss Peak 71°52'S, 166°15'E

An isolated black peak (2,170 m) at the E side of the terminus of Jutland Glacier, 8 mi NNE of Thomson Peak, in the NW part of the Victory Mountains of Victoria Land. Named by the northern party of the NZGSAE, 1963–64, partly for its resemblance to the boss on a shield, its aspect and also as a reminiscence of Sir Ernest Shackleton's nickname.

Bota, Roca: see Boot Rock 57°03'S, 26°39'W

Botánica, Bahía: see Botany Bay 63°41'S, 57°43'W

Botany Bay 63°41'S, 57°53'W

A small bay between Church Point and Camp Hill on the S coast of Trinity Peninsula. Surveyed by FIDS, December 1946, and named by UK-APC from the fossil plants collected there. Not: Bahía Botánica.

Botany Bay 77°00'S, 162°35'E

Small bight between Cape Geology and Discovery Bluff in the S part of Granite Harbor, Victoria Land. Mapped by the Western Geological Party of the BrAE under Scott, who explored the Granite Harbor area in 1911–12. Named by T. Griffith Taylor and Frank Debenham, Australian members of the party, after Botany Bay, Australia.

Botany Peak: see Lichen Peak 76°56'S, 145°24'W

Bothy Bay 62°10'S, 58°58'W

A small bay on the NW side of Fildes Peninsula, King George Island. The entrance is 0.7 mi SE of Square End Island and the bay is backed by a wide beach, with low cliffs on the NE and SW sides. The name, applied by UK-APC in 1977, is suggested by a crude stone hut (bothy), evidently built by nineteenth-century sealers, on the shore of the bay.

Bothy Lake 60°44'S, 45°40'W

A small lake at the head of Cummings Cove, Signy Island, in the South Orkney Islands. So named by the UK-APC, 1981, in reference to the BAS refuge hut SW of the lake.

Botnfjellet Mountain 71°45'S, 11°25'E

Mountain, 2,750 m, forming the NE and E walls of Livdebotnen Cirque in the Humboldt Mountains of Queen Maud Land. Discovered and photographed by the GerAE, 1938–39. Mapped by Norway from air photos and surveys by NorAE, 1956–60, and named Botnfjellet (the cirque mountain).

Botnfjorden: see Cirque Fjord 67°18'S, 58°39'E

Botnneset Peninsula 69°44'S, 37°35'E

A mainly ice-covered peninsula between Fletta Bay and Djupvika along the S side, or “bottom,” of Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Botnneset (the bottom ness).

Botnnuten 70°24'S, 38°01'E

An isolated rock peak, 1,460 m, located S of Havsbotn and 22 mi SW of Shirase Glacier in Queen Maud Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Botnnuten (the bottom peak), presumably in association with Havsbotn and because it is the farthest S peak in the immediate vicinity.

Botón, Punta: see Knob Point 57°04'S, 26°47'W

Botones, Islas: see Buttons, The 65°14'S, 64°16'W

Bottrill Head 67°42'S, 66°57'W

Rugged headland on the E side of Bourgeois Fjord which forms the N side of the entrance to Dogs Leg Fjord, on the W coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. The headland was resurveyed in 1948 by the FIDS who named it for Harold Bottrill, Chairman of the Board of Directors, later Gen. Mgr., of Maclean and Stapledon S.A., shipping agents at Montevideo, who gave great assistance to the BGLE, 1934–37, and to

FIDS, 1943–48. Not: Cabo Garay.

Bouchard, Estrecho: see Admiralty Sound 64°20'S, 57°10'W

Boucot Plateau 82°25'S, 155°40'E

A small ice-covered plateau which rises W of Wellman Cliffs and S of McKay Cliffs in the Geologists Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Arthur J. Boucot, USARP geologist at Byrd Station and to the Horlick Mountains, 1964–65.

Boudet Island 65°11'S, 64°10'W

The largest of several small islands lying off the S end of Petermann Island, in the Wilhelm Archipelago. Discovered by the FrAE, 1908–10, and named by Charcot, probably for Monsieur Boudet, then French Consul in Brazil.

Boudette Peaks 76°50'S, 126°02'W

Twin peaks (2,810 m and 2,815 m) located 1 mi WSW of Lavris Peak in the northern portion of Mount Hartigan, Executive Committee Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy trimetrogon photography, 1958–60. Named by US-ACAN for Eugene L. Boudette, Geologist, USGS, a member of the Marie Byrd Land Traverse Party, 1959–60.

Boulder Point 68°11'S, 67°00'W

The S extremity of Stonington Island, close off the W coast of Graham Land. First surveyed in 1940 by the USAS. Resurveyed in 1948 by the FIDS and so named by them because of a prominent granite boulder on this point.

Boulder Rock 71°19'S, 170°13'E

A rock lying along the W side of Adare Peninsula, immediately S of Ridley Beach, in northern Victoria Land. Charted and named in 1911 by the Northern Party led by Campbell of the BrAE, 1910–13.

Boulding Ridge 68°02'S, 66°55'W

The ridge separating Todd and McClary Glaciers on the W side of Graham Land. Named by UK-APC for Richard A. Boulding, BAS surveyor at Stonington Island, 1965–68.

Boulier, Islotes: see Rho Islands 64°17'S, 63°00'W

Boulton Peak 64°06'S, 60°42'W

A peak at the SE side of Curtiss Bay, about 5 mi S of Cape Andreas, Graham Land. Mapped from air photos taken by Hunting Aerosurveys (1955–57). Named by UK-APC for Matthew P.W. Boulton, English inventor of ailerons for lateral control of aircraft, in 1868.

Bounty Nunatak 71°37'S, 159°59'E

A prominent, largely ice-free nunatak (2,350 m) located 4 mi SE of Mount Burnham in the S part of Daniels Range, Usarp Mountains. The name was applied by the NZGSAE, 1963–64, because the party was out of food upon arrival at a food and fuel cache established near this nunatak.

Bouquet Bay 64°03'S, 62°10'W

Bay, 7 mi wide, lying between Liège Island and the N part of Brabant Island, in the Palmer Archipelago. Discovered by the FrAE, 1903–05, and named by Charcot for Jean Bouquet de la Grye, French hydrographic engineer and a member of the commission which published the scientific results of the expedition. Not: Bouquet de la Grye Bay.

Bouquet de la Grye Bay: see Bouquet Bay 64°03'S, 62°10'W

Bourgeois Fjord 67°40'S, 67°05'W

Inlet, 30 mi long in a NE-SW direction and 3 to 5 mi wide, lying between the E sides of Pourquoi Pas and Blaiklock Islands and the W coast of Graham Land. Discovered by the FrAE, 1908-10, under Charcot, and named by him for Col. Joseph E. Bourgeois, Dir. of the Geographic Service of the French Army. The outline of this inlet was more accurately delineated in 1936 by the BGLE under Rymill.

Bourgeois Nunataks 69°54'S, 158°22'E

A group of nunataks 12 mi SW of Governor Mountain in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for William L. Bourgeois, Chief Aviation Machinist's Mate, USN, flight engineer on LC-130 Hercules aircraft during Operation Deep Freeze 1967 and 1968.

Bousquet Island 66°25'S, 110°41'E

Island, 0.3 mi long, lying immediately E of Herring Island in the Windmill Islands. First mapped from air photos taken by USN OpHjp, 1946-47. Named by C.R. Eklund, station scientific leader, for Utilities Man 2d Class Edward A. Bousquet, USN, a Navy Support force member of the 1957 wintering party at Wilkes Station during the IGY.

Boutan Rocks 64°54'S, 63°10'W

Small group of rocks lying 1.5 miles SW of Bruce Island, off the W coast of Graham Land. The rocks appear on an Argentine government chart of 1954. Named by the UK-APC in 1960 for Louis-Marie-Auguste Boutan (1859-1934), French naturalist and pioneer of submarine photography, 1893-98.

Bouvet Island: see Bouvetøya 54°26'S, 3°24'E

Bouvetøya 54°26'S, 3°24'E

An island 5 mi long and 3 wide which lies in extreme isolation, about 1,370 mi SE of Cape Agulhas, South Africa, in the SE part of the Atlantic Ocean. The island terminates in steep rock and ice cliffs on all sides and rises to an ice-covered volcanic cone 780 m high. Discovered on January 1, 1739 by the French explorer J.B.C. Bouvet de Lozier in the ships *Aigle* and *Marie*. Bouvet did not circle the island and heavy pack ice and fog prevented him from determining the nature of his discovery. Although evidence, recently uncovered, indicates that Bouvetøya was resighted in 1808 by the British ships *Snow Swan* and *Otter*, it was not until the visit of the German ship *Valdivia* in 1898 that the insular nature and accurate position of the feature were determined and made known. Not: Bouvet Island.

Bouvier, Mount 67°14'S, 68°09'W

Massive, mainly ice-covered mountain, 2,070 m, immediately N of the head of Stonehouse Bay in the E part of Adelaide Island. Discovered and roughly positioned by the FrAE, 1903-05, and named by Charcot for Louis Bouvier, prominent French naturalist. Resurveyed by the FrAE, 1908-10, and by the FIDS in 1948-50. Not: Pic Bouvier.

Bouvier, Pic: see Bouvier, Mount 67°14'S, 68°09'W

Bóveda, Roca: see Cove Rock 61°54'S, 57°48'W

Bøving Island 66°17'S, 110°31'E

A small island in the S part of Newcomb Bay, lying 0.1 mi E of McMullin Island in the Windmill Islands. Mapped from USN OpHjp air photos, 1946-47. Named by ANCA for F. Bøving, third officer on M.V. *Thala Dan* in 1965, who assisted in a hydrographic survey in the vicinity.

Bowden Névé 83°30'S, 165°00'E

A névé about 20 mi wide, lying southward of Mount Miller between Queen Elizabeth Range and Queen Alexandra Range. Observed in 1958 by the N.Z. Southern Party of the CTAE (1956-58) and named for Charles M. Bowden, Chairman of the Ross Sea Committee which organized the N.Z. party of the CTAE.

Bowditch Crests 68°30'S, 65°22'W

A line of precipitous cliffs surmounted by four summits on Bermel Peninsula in eastern Graham Land. The feature was photographed from the air by Lincoln Ellsworth in Nov. 1935 and was mapped from these photos by W.L.G. Joerg. Surveyed by FIDS in 1958. Named by UK-APC for Nathaniel Bowditch (1773-1838), American astronomer and mathematician, author of *The New American Practical Navigator* (1801) which firmly set out the practical results of theories established at that date and has since gone through more than 56 editions.

Bowen, Mount 75°45'S, 161°03'E

A mountain of stratified sandstone capped by a sharp black peak, 1,875 m, standing 6 mi SW of Mount Howard in the Prince Albert Mountains, Victoria Land. Discovered by the BrNAE, 1901-04, which named it for the Honorable C.C. Bowen, one of the men who gave the expedition much assistance in New Zealand.

Bowen Cirque 80°42'S, 23°27'W

A cirque NNE of Mount Wegener in the Read Mountains, Shackleton Range. Photographed from the air by the U.S. Navy, 1967. Surveyed by BAS, 1968-71. In association with the names of geologists grouped in this area, named by the UK-APC in 1971 after Norman Levi Bowen (1887-1956), American experimental petrologist who specialized in the phase equilibria of silicate melt systems.

Bower, Mount 72°37'S, 160°30'E

A prominent mountain (2,610 m) standing 6 mi ENE of Roberts Butte in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-64. Named by US-ACAN for John R. Bower, ionospheric physicist at South Pole Station, 1968.

Bowers, Mount 85°00'S, 164°05'E

A peak, 2,430 m, standing 2 mi SSE of Mount Buckley, at the head of the Beardmore Glacier. Named by the BrAE (1910-13) for Lt. Henry R. Bowers, who accompanied Scott to the South Pole and lost his life on the return journey.

Bowers Corner 79°01'S, 84°21'W

A peak located 9 mi SE of Lishness Peak in the extreme S end of Sentinel Range, Ellsworth Mountains. The feature stands at the E side of the terminus of Nimitz Glacier where it bends, or makes a corner, on joining Minnesota Glacier. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Lt. Richard A. Bowers, USNR, in charge of the construction crew which built the IGY South Pole Station in the 1956-57 season.

Bowers Glacier 72°37'S, 169°03'E

Glacier at the W side of Mount Northhampton in the Victory Mountains, flowing N into Tucker Glacier, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Chester H. Bowers, meteorologist, senior U.S. representative at Hallett Station, 1962.

Bowers Hills: see Bowers Mountains 71°10'S, 163°15'E

Bowers Mountains 71°10'S, 163°15'E

A group of north-south trending mountains, about 90 mi long and 35 mi wide, bounded by the coast on the north and by the Rennick, Canham, Black and Lillie Glaciers in other quadrants. The seaward end was first sighted in February 1911 from the *Terra Nova*, under Lt. Harry L.L. Pennell, RN, and subsequently named "Bowers Hills." Lt. Henry R. Bowers perished with Capt. Robert F. Scott on the return from the South Pole in 1912. The feature was photographed from U.S. Navy aircraft in 1946–47 and 1960–62, and was surveyed and mapped by USGS in 1962–63. The name was amended to Bowers Mountains upon USGS mapping which showed the group to be a major one with peaks rising to nearly 2,600 meters. Not: Bowers Hills.

Bowers Peak 71°45'S, 163°20'E

A peak, 2,140 m, forming a part of the divide between the Hunter and Hoshko Glaciers in the Lanterman Range, Bowers Mountains. Named by the northern party of NZGSAE, 1963–64, for Lt. John M. Bowers, Jr., of USN Squadron VX-6, who flew support flights for this New Zealand field party.

Bowers Piedmont Glacier 77°43'S, 164°18'E

Piedmont glacier on the coast of Victoria Land, covering about 40 square mi and lying just S of New Harbor. It merges at its S side with Blue Glacier. Discovered by the BrNAE (1901–04), but not named until the BrAE (1910–13). Named by Taylor for Lt. Henry R. Bowers, who perished with Scott on the return journey from the South Pole. Not: Butter Point Piedmont Glacier.

Bowie Crevasse Field 79°03'S, 84°45'W

A large crevasse field at a break in slope on the Minnesota Glacier between the SE end of the Bastien Range and Anderson Massif in the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party, 1962–63, for Glenn E. Bowie, geophysicist with the party.

Bowin Glacier 84°53'S, 177°20'E

A tributary glacier, 5 mi long, flowing NE between Sullivan Ridge and Fulgham Ridge to enter Ramsey Glacier. Named by US-ACAN for Commissaryman C.F. Bowin, USN, OpDFrz, 1965 and 1966.

Bowler Rocks 62°21'S, 59°50'W

A group of rocks lying 0.5 mi SW of Table Island, South Shetland Islands. Named by UK-APC for David M. Bowler, surveying recorder for the RN Hydrographic Survey Unit aboard *Nimrod* in these islands, 1967.

Bowles, Cape 61°19'S, 54°06'W

Cape forming the S extremity of Clarence Island in the South Shetland Islands. Named in 1820 by Edward Bransfield, Master, RN, while exploring the islands in the brig *Williams*.

Bowles, Mount 62°37'S, 60°12'W

An ice-covered mountain over 800 m, situated 3 mi N of Mount Friesland in eastern Livingston Island, South Shetland Islands. The origin of the name is uncertain; it appears (poorly positioned and probably intended for some other peak on the island) on the 1829 chart of the British expedition (1828–31) under Capt. Henry Foster in the *Chanticleer*.

Bowles, Mount: see Irving, Mount 61°17'S, 54°08'W

Bowles Creek 77°37'S, 163°03'E

A glacial meltwater distributary stream, 0.25 mi long, which flows E from Maria Creek (q.v.) into the SW end of Lake Fryxell, close W of Green Creek, in Taylor Valley, Victoria Land. The name was suggested by hydrologist Diane McKnight, leader of a USGS team which made extensive studies of the hydrology and geochemistry of streams and ponds in the Lake Fryxell basin, 1987–94. Named after USGS hydrologist Elizabeth C. Bowles, a member of the field team in the 1987–88 summer season, who conducted a study of organic geochemistry of streams flowing into Lake Fryxell.

Bowlin, Mount 86°28'S, 147°18'W

A mountain, 2,230 m, standing between the mouths of Van Reeth and Robison Glaciers in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for William H. Bowlin, airplane pilot with the expedition.

Bowling Green Plateau 79°42'S, 158°36'E

A small but prominent ice-covered plateau at the N side of the Brown Hills in the Cook Mountains. Named by the VUWAE (1962–63). Prof. Charles C. Rich, geologist and deputy leader of the VUWAE, was affiliated with Bowling Green State University of Ohio.

Bowl Island 67°09'S, 50°50'E

An island with a bowl-like depression in the center, lying just S of Crohn Island at the head of Amundsen Bay, Enderby Land. Sighted in 1956 by an ANARE field party and given this descriptive name.

Bowman Coast 68°10'S, 65°00'W

That portion of the E coast of the Antarctic Peninsula between Cape Northrop and Cape Agassiz. Discovered by Sir Hubert Wilkins in an aerial flight of Dec. 20, 1928. Named by Wilkins for Isaiah Bowman, then Dir. of the American Geographical Society.

Bowman Glacier 85°34'S, 162°00'W

A deeply entrenched glacier, 40 mi long, descending the polar plateau between Quarles Range and Rawson Plateau of the Queen Maud Mountains to enter the Ross Ice Shelf just W of the flow of Amundsen Glacier. Discovered in December 1929 by the ByrdAE geological party under Laurence Gould, and named by Byrd for Isaiah Bowman, eminent geographer and president of Johns Hopkins University, 1935–49; Director of the American Geographical Society, 1915–35. Not: Isaiah Bowman Glacier.

Bowman Inlet 68°42'S, 64°23'W

An ice-filled inlet between Kay Nunatak and Platt Point, Hollick-Kenyon Peninsula, on the E coast of Antarctic Peninsula. The inlet was photographed from the air by Lincoln Ellsworth, Nov. 23, 1935, and its W shore was mapped from the photographs by W.L.G. Joerg. It was rephotographed by USAS, 1940, RARE,

1947, and was surveyed by FIDS, 1958. Named by the US-ACAN after Lt. Bradley J. Bowman, USNR, officer in charge, Palmer Station Construction Unit, Operation Deep Freeze, 1969.

Bowman Island 65°17'S, 103°07'E

A high ice-covered island, about 24 mi long and from 2 to 6 mi wide, shaped like a figure eight. The feature rises above the NE part of Shackleton Ice Shelf, which partially encloses the island, 25 mi NE of Cape Elliott. Discovered on Jan. 28, 1931 by BANZARE under Sir Douglas Mawson, who named it for Isaiah Bowman, then Director of the American Geographical Society.

Bowman Peak 77°29'S, 153°13'W

Peak on the S side of Butler Glacier, in the Alexandra Mountains of Marie Byrd Land. Discovered by the ByrdAE in 1929 and named for John McEntee Bowman, president of the Bowman Biltmore Hotels Corporation, who donated headquarters for the preparation of the expedition. Not: John Bowman Peak.

Bowman Peninsula 74°47'S, 62°22'W

Peninsula, 25 mi long in a N-S direction and 15 mi wide in its N and central portions, lying between Nantucket and Gardner Inlets on the E coast of Palmer Land. The peninsula is ice covered and narrows toward the S, terminating in Cape Adams. Discovered by the RARE, 1947-48, under Ronne, who named it for Isaiah Bowman.

Bowser, Mount 86°03'S, 155°36'W

A prominent peak, 3,655 m, standing 2 mi S of Mount Astor at the N end of Fram Mesa, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Carl J. Bowser, geologist at McMurdo Station, 1965-66 and 1966-67 seasons.

Bowsprit Moraine 76°37'S, 161°15'E

A medial moraine, 1.5 mi long, off the NE point of Elkhorn Ridge, where Towle Glacier and Northwind Glacier join Fry Glacier, in the Convoy Range, Victoria Land. One of a group of nautical names in Convoy Range; the mapped form of the moraine protrudes like a bowsprit out from the end of Elkhorn Ridge. Named by a 1989-90 NZARP field party.

Bowsprit Point 56°40'S, 28°08'W

The NE point of Leskov Island, South Sandwich Islands. The name applied by UK-APC in 1971 suggests the resemblance of this feature to the prow of a ship.

Bowyer Butte 74°59'S, 134°45'W

A steep-cliffed eminence with a nearly flat summit, 3 mi wide and 1,085 m high, located between the lower ends of the Johnson Glacier and Venzke Glacier on the coast of Marie Byrd Land. Discovered and photographed from the air by the U.S. Antarctic Service, 1939-41. Named by US-ACAN for Donald W. Bowyer, USARP meteorologist at Byrd Station, 1962.

Boxing Island 64°35'S, 61°41'W

Small island lying in Charlotte Bay E of Harris Peak, off the W coast of Graham Land. First charted by the BelgAE under Gerlache, 1897-99. So named by members of the FIDS because they first saw it on Boxing Day 1956.

Box Reef 67°45'S, 69°03'W

A line of drying rocks lying between Esplin Islands and League Rock, off the S end of Adelaide Island. The name, given by the

UK-APC in 1963 in association with nearby Cox Reef, derives from the well-known English literary allusion to a pair of individuals who occupied the same lodgings alternately day and night without knowledge of each other.

Boyd, Mount 84°48'S, 179°24'W

A pyramidal mountain (2,960 m) standing 3 mi W of Mount Bennett, in the Bush Mountains. Discovered and photographed by the USAS, 1939-41. Surveyed by A.P. Crary, leader of the U.S. Ross Ice Shelf Traverse Party (1957-58), and named by him for Walter Boyd, Jr., glaciologist with the party.

Boydell Glacier 64°11'S, 59°04'W

A glacier about 9 mi long, flowing SE from the Detroit Plateau, Graham Land, and merging on the S side with Sjögren Glacier. Mapped by FIDS from surveys (1960-61). Named by UK-APC for James Boydell, English inventor of a steam traction engine, the first practical track-laying vehicle (British Patents of 1846 and 1854).

Boyd Escarpment 82°26'S, 50°30'W

A rock and snow escarpment which extends NE for 10 mi from Wujek Ridge and includes Bennett Spur, Cox Nunatak and Rankine Rock, in the Dufek Massif, Pensacola Mountains, q.v. Named in 1979 by US-ACAN after Walter W. Boyd, Jr., U.S. IGY glaciologist who wintered at Little America, 1957; geologist, USGS, for three summers in the Pensacola Mountains, 1962-66.

Boyd Glacier 77°14'S, 145°25'W

Heavily crevassed glacier flowing WNW for about 45 mi to the Sulzberger Ice Shelf between Bailey Ridge and Mount Douglass in the Ford Ranges, Marie Byrd Land. Discovered on aerial flights of the ByrdAE in 1934, and named for Vernon D. Boyd, expedition machinist, and a member of West Base of the USAS (1939-41). Not: Ames Glacier.

Boyd Head 75°17'S, 110°01'W

Prominent headland close E of the mouth of Vane Glacier on the coast of Marie Byrd Land. It rises over 1,000 m and has rock exposed to seaward. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Capt. Hugh F. Boyd III, USA, Construction Projects Officer during Operation Deep Freeze 1972 and 1973.

Boyd Nunatak 69°50'S, 74°44'E

A small nunatak 8 mi SE of Mount Caroline Mikkelsen, on the S side of Publications Ice Shelf. First mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936-37. Remapped by ANARE and named by ANCA for J.S. Boyd, physicist at Wilkes Station in 1965.

Boyd Ridge 76°57'S, 116°57'W

An ice-covered ridge, 22 mi long, which extends in an E-W direction and forms the S end of Crary Mountains in Marie Byrd Land. It is separated from the main peaks of the group by Campbell Valley. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for John C. Boyd, USARP biologist at McMurdo Station, 1965-66 and 1966-67 seasons.

Boyd's Straits: see Boyd Strait 62°50'S, 62°00'W

Boyd Strait 62°50'S, 62°00'W

Strait lying between Snow and Smith Islands in the South Shetland Islands. Named in 1823 by a British expedition under Weddell for Capt. David Boyd, RN. Not: Boyds Straits, Estrecho Larrea.

Boyer, Mount 75°07'S, 72°04'W

A mountain 1 mi SW of Mount Becker, in the Merrick Mountains, Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Francis C. Boyer, hospital corpsman, USN, chief petty officer in charge of Eights Station in 1964.

Boyer Glacier 73°18'S, 167°21'E

Short tributary glacier situated 10 mi W of Index Point in the E part of Mountaineer Range. It flows N into lower Mariner Glacier, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Jack W. Boyer, USN, radioman at Hallett Station, 1962.

Boyer Rocks 63°35'S, 59°00'W

A small group of rocks in the NE corner of Bone Bay, 3 mi SW of Cape Roquemaurel, Trinity Peninsula. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Joseph Boyer, French naval officer on the *Astrolabe* during her Antarctic voyage (1837–40).

Boyer Spur 71°51'S, 62°48'W

A mountainous spur from the base of Condor Peninsula on the E side of Palmer Land. The spur stands between the Kellogg and Gruening Glaciers, about 5 mi WNW of Malva Bluff and the NW head of Hilton Inlet. Mapped by the USGS in 1974. Named by US-ACAN for Stephen J. Boyer, geologist with the USGS geological and mapping party to the Lassiter Coast area in 1972–73.

Boyle Mountains 67°21'S, 66°38'W

A wall of mountains standing between the heads of Lallemand Fjord and Bourgeois Fjord, in Graham Land. Mapped by FIDS from surveys and air photos, 1946–59. Named by UK-APC for Robert Boyle (1627–91), English natural philosopher whose book *New Experiments and Observations Touching Cold* provided the first major scientific and practical approach to a philosophy of cold in all its aspects.

Boyles, Mount 75°34'S, 70°56'W

The highest peak (1,485 m) in the Thomas Mountains (q.v.), located S of Sweeney Mountains in eastern Ellsworth Land. Discovered and roughly mapped by the RARE, 1947–48, led by Cdr. Finn Ronne, USNR. Mapped in greater detail by USGS from surveys and USN aerial photographs, 1961–67. Named by US-ACAN following the visit of a USGS geological party, 1977–78, after Joseph M. Boyles, a geologist with the party.

Boyn Ridge 69°07'S, 71°48'W

The northernmost ridge of Havre Mountains, N Alexander Island. Following geological work by BAS, 1976–77, named by UK-APC in 1980 after Charles Boyn, Director, Agence Général Maritime, France, who superintended the building of the expedition ship *Pourquoi-Pas?* of FrAE, 1908–10.

Boy Point 62°10'S, 58°11'W

A point between Cinder Spur and Low Head on the S coast of King George Island in the South Shetland Islands. Named by the Polish

Antarctic Expedition in 1980 after Wladyslaw Boy-Zelenski (1874–1941), Polish writer and essayist.

Bōzu Peak 69°25'S, 39°47'E

The central and highest (235 m) of the Byvågāsane Peaks on the E shore of Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Surveyed by JARE, 1957–62, and named Bōzu-san (treeless peak).

Braathen, Cape 71°48'S, 96°05'W

Ice-covered cape at the NW termination of Evans Peninsula on Thurston Island. Delineated from aerial photographs taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for Christoffer Braathen, ski expert and dog driver with the ByrdAE of 1928–30.

Brabante, Isla: see Brabant Island 64°15'S, 62°20'W

Brabant Island 64°15'S, 62°20'W

Second largest island of the Palmer Archipelago, lying between Anvers and Liège Islands. It is 33 mi long in a N-S direction, 16 mi wide, and rises to 2,520 m in Mount Parry. Named by the BelgAE under Gerlache, 1897–99, for the province of Brabant, Belgium, in recognition of the support given to the BelgAE by its citizens. Not: Isla Brabante.

Brabazon Point 64°24'S, 61°16'W

Point forming the E side of the entrance to Salvesen Cove, on the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for John T.C. Moore-Brabazon, First Baron Brabazon of Tara, pioneer British aviator, the first British subject to fly an airplane in the British Isles, in April 1909, and responsible for the R.F.C. Photographic Section during World War I and for the development of aerial photography.

Brabec, Mount 73°34'S, 165°24'E

A mountain (2,460 m) surmounting the E wall of Aviator Glacier 10 mi N of Mount Monteagle, in the Mountaineer Range of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Lt. Cdr. Richard C. Brabec, USN, Hercules aircraft commander on USN OpDFrz, 1966.

Braces Point 57°06'S, 26°46'W

The NE point of Vindication Island, South Sandwich Islands. The feature was named Low Point during the survey from RRS *Discovery II* in 1930, but the name was changed to avoid duplication. The new name applied by UK-APC in 1971 refers to the bifid form of this point, reaching out to the nearby sea stack of Trousers Rock. Not: Low Point, Punta Baja.

Bracken Peak 77°51'S, 85°24'W

A peak (1,240 m) standing S of the terminus of Newcomer Glacier and 3 mi NE of Mount Malone, on the E side of Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and air photos taken by USN Squadron VX-6 on photographic flights of Dec. 14–15, 1959. Named by US-ACAN for H.C. Bracken, plane captain of the airplane on these flights.

Braddock Nunataks 70°48'S, 65°55'W

A group of prominent nunataks located inland from Bertram Glacier and 9 mi SE of Perseus Crags on the W margin of the Dyer

Plateau, in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Lt. Robert L. Braddock, Jr., CEC, USN, Officer-in-Charge of the South Pole Station in 1974.

Braddock Peak 72°27'S, 166°28'E

A peak rising to 2,960 m immediately SE of Mount Aorangi in the S part of Millen Range in the Victory Mountains, Victoria Land. Named by the NZ-APC, on the proposal of geologist R.A. Cooper, after Peter Braddock, field leader of geological parties to the area in the 1974–75 and 1980–81 seasons.

Bradford Glacier 65°51'S, 64°18'W

Glacier flowing N from Mount Dewey into Comrie Glacier, on the W coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. Named by the UK-APC for Samuel C. Bradford (1878–1948), English documentalist who was a pioneer advocate of scientific information services.

Bradford Rock 66°13'S, 110°34'E

Insular rock, mainly ice covered, which marks the NW end of the Swain Islands. First roughly mapped from air photos taken by USN OpHjp, 1946–47, and included in a 1957 survey of Swain Islands by Wilkes Station personnel under C.R. Eklund. Named by Eklund for Radioman Donald L. Bradford, USN, a Navy support force member of the 1957 wintering party at Wilkes Station during the IGY.

Brading, Mount 64°17'S, 59°17'W

A mountain topped by a snow peak, 4 mi E of the NE corner of Larsen Inlet in Graham Land. Surveyed by FIDS (1960–61) and named after Christopher G. Brading, FIDS surveyor at Hope Bay (1959–60), who, with I. Hampton, R. Harbour, and J. Winham, made the first ascent of this mountain. Not: Montaña González Albarracín.

Bradley, Mount 63°53'S, 58°37'W

A pyramidal peak (835 m) at the SE end of a ridge descending from Detroit Plateau. The peak is 4 mi SW of Mount Reece in southern Trinity Peninsula. Charted in 1945 by FIDS, who named it for K.G. Bradley, Colonial Secretary in the Falkland Islands at the time. Not: Monte Director.

Bradley Nunatak 81°24'S, 85°58'W

A prominent nunatak standing 10 mi SW of Mount Tidd, Pirrit Hills. The peak was positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 7, 1958, and named for Rev. Edward A. Bradley, S.J., seismologist with the party.

Bradley Ridge 70°14'S, 65°15'E

A rock ridge about 7 mi SE of Mount Peter in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos. Named for R.G. Bradley, weather observer at Mawson Station in 1964.

Bradley Rock 65°01'S, 64°42'W

An isolated rock which lies about 9 mi NW of the entrance to French Passage in the Wilhelm Archipelago. Named by UK-APC (1973) for Lt. Cdr. Edgar M. Bradley, RN, who directed a hydrographic survey in the area in 1965.

Bradshaw, Mount 71°28'S, 163°52'E

A mountain peak (2,240 m) at the NE side of the névé of Leap Year Glacier, 4 mi NW of Ian Peak, in the Bowers Mountains, q.v. Named by the NZ-APC in 1983 after J.D. Bradshaw,

geologist, University of Canterbury, N.Z., a member of NZARP geological parties to the area, 1974–75 and 1981–82.

Bragg, Mount 84°06'S, 56°43'W

Mountain, 1,480 m, standing 6 mi SW of Gambacorta Peak in southern Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Ralph L. Bragg, photographer with USN Squadron VX-6 at McMurdo Station in 1964.

Bragg Islands 66°28'S, 66°26'W

A small group of islands in Crystal Sound, about 7 mi N of Cape Rey, Graham Land. Mapped from surveys by FIDS (1958–59) and air photos obtained by RARE (1947–48). Named by UK-APC for Sir William H. Bragg (1862–1942), English physicist who interpreted X-ray measurements to give the location of oxygen atoms in the structure of ice.

Brahms Inlet 71°28'S, 73°41'W

Ice-filled inlet, 25 mi long and 6 mi wide, indenting the N side of Beethoven Peninsula on Alexander Island between Harris Peninsula and Derocher Peninsula. Observed from the air and first mapped by the RARE, 1947–48. Remapped from the RARE air photos by Searle of the FIDS in 1960. Named by UK-APC after Johannes Brahms (1833–97), German composer.

Braillard Point 62°13'S, 58°55'W

Point forming the NE end of Ardley Island, off the SW end of King George Island in the South Shetland Islands. Charted and named by DI personnel on the *Discovery II* in 1935, for Able Seaman A.T. Braillard, a member of the crew in 1931–33 and 1933–35.

Brain Island 54°10'S, 36°42'W

Island at the N side of Husvik Harbor, in Stromness Bay, South Georgia. Charted and named by DI personnel in 1928.

Bramble Peak 72°22'S, 166°59'E

A peak (2,560 m) that surmounts the NE side of the head of Croll Glacier, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Edward J. Bramble, USN, aviation machinist's mate with Squadron VX-6 at McMurdo Station, 1967.

Bramhall, Mount 72°10'S, 98°24'W

A peak of the Walker Mountains, located 5 mi E of Mount Hawthorne on Thurston Island. First delineated from aerial photographs taken by USN OpHjp in December 1946. Named by US-ACAN for Dr. E.H. Bramhall, physicist of the ByrdAE in 1933–35.

Branco, Mount: see Rio Branco, Mount 65°25'S, 64°00'W

Brand, Bahía: see Brandy Bay 63°50'S, 57°59'W

Brandau Glacier 84°54'S, 173°30'E

A wide tributary glacier, 15 mi long, flowing westward from an ice divide between Haynes Table and Husky Heights to enter Keltie Glacier just W of Ford Spur. Named by US-ACAN for Lt. Cdr. James F. Brandau, USN, pilot with Squadron VX-6, OpDFrz 1964 and 1965.

Brandau Rocks 76°53'S, 159°20'E

Rock exposures 0.5 mi west of Carapace Nunatak in Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition

(1964), who named the rocks for Lt. Cdr. James F. Brandau, USN, helicopter pilot who made a difficult rescue flight to evacuate an injured member of the expedition.

Brandenberger Bluff 75°58'S, 136°05'W

A steep rock bluff (1,650 m) at the extreme N side of Mount Berlin in the Flood Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Arthur J. Brandenberger, USARP glaciologist with the Byrd Station Traverse of 1962–63.

Brand Peak 70°01'S, 63°55'W

A sharp snow-covered peak located 10 mi ESE of the Eternity Range and 4 mi NW of Mount Duemler, in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Timothy Brand, USARP biologist at Palmer Station in 1974.

Brandt, Mount 72°10'S, 1°07'E

A nunatak (1,540 m) which is the northernmost feature in Rømlingane Peaks, in the Sverdrup Mountains of Queen Maud Land. The name "Brandt-Berg" after Emil Brandt, sailor with the expedition, was applied in this area by the GerAE (1938–39) under Alfred Ritscher. The correlation of the name with this nunatak may be arbitrary but is recommended for the sake of international uniformity and historical continuity.

Brandt Cove 54°49'S, 36°02'W

Cove on the S side of Drygalski Fjord, South Georgia, 1 mi N of the head of Larsen Harbor. Surveyed by the SGS in the period 1951–57. Named by the UK-APC for Karl Brandt, American economist and professor of agricultural economics at Stanford University, California; author of *Whale Oil: An Economic Analysis*.

Brandy Bay 63°50'S, 57°59'W

A bay 2 mi wide on the NW coast of James Ross Island, entered W of Bibby Point. Probably first seen by Nordenskjöld in 1903. Surveyed by FIDS in 1945. During a subsequent visit to this bay by a FIDS party in 1952, there was a discussion as to whether medicinal brandy should be used as treatment for a dog bite. The name arose naturally from this incident. Not: Bahía Aramburu, Bahía Bonita, Bahía Brand.

Branscomb Glacier 78°32'S, 86°05'W

A glacier, 6 mi long, flowing W from the NW side of Vinson Massif into Nimitz Glacier, in the Sentinel Range, Ellsworth Mountains. Mapped by USGS from surveys and USN aerial photographs, 1957–60. Named by US-ACAN after Lewis M. Branscomb, Chairman, National Science Board, 1982–84.

Bransfield, Estrecho de: see Bransfield Strait 63°00'S, 59°00'W

Bransfield, Mount 63°17'S, 57°05'W

Prominent conical-topped, ice-covered mountain, 760 m, rising 2 mi SW of Cape Dubouzet at the NE tip of Antarctic Peninsula. Discovered by a French expedition, 1837–40, under Capt. Jules Dumont d'Urville, who named it for Edward Bransfield, Master, RN, who circumnavigated and charted the South Shetland Islands in 1820. Not: Mount Hope.

Bransfield, Point: see Bransfield Island 63°11'S, 56°36'W

Bransfield Island 63°11'S, 56°36'W

Island nearly 5 mi long, lying 3 mi SW of D'Urville Island off the NE end of Antarctic Peninsula. The name Point Bransfield, after Edward Bransfield, Master, RN, was given in 1842 by a British expedition under Ross to the low western termination of what is now the Joinville Island group. A 1947 survey by the FIDS determined that this western termination is a separate island. Not: Point Bransfield.

Bransfield Strait 63°00'S, 59°00'W

Body of water about 60 mi wide extending for 200 mi in a general NE-SW direction between the South Shetland Islands and Antarctic Peninsula. Named in about 1825 by James Weddell, Master, RN, for Edward Bransfield, Master, RN. Not: Estrecho de Bransfield, Mar de Flota.

Branson Nunatak 67°55'S, 62°46'E

Nunatak between Mount Burnett and Price Nunatak in the Framnes Mountains, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Horntind (horn peak). Renamed by ANCA for J. Branson, geophysicist at Mawson Station in 1962. Not: Horntind.

Branstetter Rocks 70°07'S, 72°40'E

A small group of rocks lying 1 mi ENE of Thil Island in the eastern part of Amery Ice Shelf. Delineated in 1952 by John H. Roscoe from air photos taken by USN Operation Highjump (1946–47), and named by him for J.C. Branstetter, air crewman on Operation Highjump photographic flights in the area.

Bråpiggen Peak 72°54'S, 3°18'W

One of the ice-free peaks at the S side of Frostlandet Valley, situated 1 mi S of Friis-Baastad Peak in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Bråpiggen (the abrupt peak).

Brash Island 63°24'S, 54°55'W

Isolated island lying 5 mi NW of Darwin Island, off the SE end of Joinville Island. Surveyed by the FIDS in 1953. So named by the UK-APC because the island lies in an area where brash ice is frequently found. Not: Islote Escobros.

Bratholm: see Steepholm 60°47'S, 45°09'W

Bratina Island 78°01'S, 165°32'E

Small island lying at the N tip of Brown Peninsula in the Ross Ice Shelf. Named by US-ACAN in 1963 for Chief Aviation Machinists Mate Joseph Bratina, U.S. Navy Squadron VX-6, stationed at McMurdo Station in the 1958–59, 1960–61 and 1961–62 summer seasons.

Brattebotnen Cirque 71°43'S, 10°15'E

A steep-sided cirque in the W wall of Mount Dallmann, in the Orvin Mountains of Queen Maud Land. Mapped by Norway from air photos and surveys by NorAE, 1956–60, and named Brattebotnen (the steep cirque).

Bratholmene: see Steepholm 60°47'S, 45°09'W

Brattnipane Peaks 71°54'S, 24°33'E

Group of peaks, the highest 2,660 m, standing 9 mi NW of Mefjell Mountain in the Sør Rondane Mountains. Mapped by Norwegian

cartographers in 1946 from air photos taken by the Lars Christensen Expedition, 1936–37, and in 1957 in greater detail from air photos taken by USN OPHjp, 1946–47. Named Brattnipane (the steep peaks) by the Norwegians.

Brattodden: see Abrupt Point 66°54'S, 56°42'E

Brattöy: see Abrupt Island 67°00'S, 57°46'E

Brattskarvbrekka Pass 72°10'S, 1°25'E

An E-W pass between Brattskarvet Mountain and Vendeholten Mountain, in the Sverdrup Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Brattskarvbrekka (the steep mountain slope).

Brattskarvet Mountain 72°06'S, 1°27'E

Mountain, 2,100 m, next north of Vendeholten Mountain in the Sverdrup Mountains of Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Brattskarvet (the steep mountain).

Brattstabben: see Jennings Bluff 66°42'S, 55°29'E

Brattstranda: see Brattstrand Bluffs 69°13'S, 77°00'E

Brattstrand Bluffs 69°13'S, 77°00'E

Rock bluffs on the coast of Antarctica, about 3 mi ENE of Hovde Island. First mapped from air photographs taken by the Lars Christensen Expedition (1936), and named Brattstranda (the abrupt shore). Not: Brattstranda.

Brau, Punta: see Sappho Point 54°14'S, 36°28'W

Braun, Mount 69°26'S, 71°24'W

A mountain rising to c. 900 m, forming the NE extremity of Sofia Mountains, Alexander Island. The feature forms the NE part of a horseshoe-shaped ridge 3.5 mi ESE of Mount Holt. Named by US-ACAN for Lt. Cdr. William K. Braun, USN, C-121J (Super Constellation) aircraft commander, Squadron VXE-6, USN OpD-Frz, 1970 and 1971.

Braun Berg: see Brown Mountain 54°17'S, 36°31'W

Brauning, Poluostrov: see Browning Peninsula 66°28'S, 110°33'E

Braunsteffer Lake 68°32'S, 78°22'E

A lake 0.5 mi long located 1 mi W of the central part of Lake Zvezda in the Vestfold Hills. The lake was photographed from the air by USN OPHjp (1946–47) and was mapped from air photos by the SovAE (1956) and ANARE (1957–58). Named by ANCA for C. Braunsteffer, weather observer at Davis Station in 1959, who carried out scientific investigations on lakes in the Vestfold Hills.

Brautnuten Peak 71°46'S, 1°21'W

A low peak 5 mi SE of Snøkallen Hill, on the E side of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Brautnuten.

Bravo, Rocas: see Snag Rocks 65°08'S, 64°27'W

Bravo Hills 84°41'S, 171°00'W

A group of low peaks rising to 780 m, which borders the Ross Ice Shelf between Gough and Le Couteur Glaciers. So named by the Southern Party of NZGSAE (1963–64) because their supply Depot B (Bravo) was located nearby.

Brawhm Pass 77°53'S, 160°41'E

A small pass on the E side of Farnell Valley in Victoria Land. The pass provides easy passage between Beacon Valley and Arena Valley. The name was recommended in 1968 by the NZ-APC. It is derived from the names of six party members of the University of New South Wales (Australia) expeditions of 1964–65 and 1966–67 who used this pass (e.g., Bryan, Rose, Anderson, Williams, Hobbs and McElroy).

Brawn Rocks 73°12'S, 160°45'E

Prominent isolated rocks extending over 3 mi, lying 12 mi SW of Sequence Hills in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for James E. Brawn, aviation machinist's mate with USN Squadron VX-6 at McMurdo Station, 1966.

Bray, Mount 74°50'S, 114°04'W

A rounded mountain that is ice-capped but has a steep, bare rock SE face, situated E of Jenkins Heights and 1.5 mi NW of Klimov Bluff on Walgreen Coast, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN after Thomas K. Bray, USGS topographic engineer with the Marie Byrd Land Survey party, 1966–67.

Bray Nunatak: see Office Girls, The 72°20'S, 160°01'E

Brazil, Mount 72°03'S, 167°59'E

Mountain (2,090 m) at the S end of McGregor Range in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Chief Warrant Officer John D. Brazil, USA, helicopter pilot supporting the USGS Topo North-South party that surveyed the area, 1961–62.

Brazitis Nunatak 84°58'S, 67°23'W

A nunatak, 1,625 m, along the edge of an ice escarpment 5 mi S of DesRoches Nunataks in southwestern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Peter F. Brazitis, cosmic ray scientist at South Pole Station, winter 1967.

Breakbones Plateau 57°04'S, 26°41'W

A small lava plateau just N of Chimaera Flats in Candlemas Island, South Sandwich Islands. The feature is an interesting biological area containing numerous small fumaroles with attendant vegetation. The name applied by UK-APC in 1971 refers to the difficulty of travel and to the presence of a large breeding colony of Giant Petrels (*Macronectes giganteus*), sometimes known as Breakbones.

Breaker, Mount 67°53'S, 67°16'W

Mountain with double summits, the eastern summit (880 m) being the highest on Horseshoe Island, off Graham Land. The name was given by UK-APC in 1958 and is descriptive; the two summits are separated by a shallow col and, when seen from the west, resemble a breaking wave. Not: Monte Rompiente.

Breaker Island 64°46'S, 64°07'W

Small rocky island lying close SW of Norsel Point, off the SW coast of Anvers Island in the Palmer Archipelago. Surveyed by the FIDS in 1955. So named by the UK-APC because the island causes breakers when the sea is rough.

Breakwater, The: see Breakwater Rocks 54°12'S, 36°35'W

Breakwater Island 64°47'S, 63°13'W

Small island in the Palmer Archipelago with a line of rocks extending in a SW arc from it, lying opposite Nipple Peak, 0.3 mi off the E side of Wiencke Island. The descriptive name was given by the FIDS in 1944.

Breakwater Point 54°00'S, 37°25'W

Point forming the W side of the entrance to Koppervik, Bay of Isles, on the N coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Breakwater Rocks 54°12'S, 36°35'W

Group of rocks extending across the S part of the entrance to Boat Harbor in Jason Harbor, South Georgia. The name "The Breakwater" was probably given by Lt. Cdr. J.M. Chaplin, RN, during his survey of Jason Harbor in 1929. The SGS, 1956–57, reported that the name is misleading; the rocks are not in a continuous straight line forming a natural breakwater, but are in a group. The name was therefore altered to Breakwater Rocks by the UK-APC in 1957. Not: The Breakwater.

Breakwind Range: see Breakwind Ridge 54°09'S, 36°50'W

Breakwind Ridge 54°09'S, 36°50'W

Prominent rocky ridge which is 2 mi long in a N-S direction and rises to 860 m, close SW of the head of Fortuna Bay on the N coast of South Georgia. The name Breakwind Range was probably applied by DI personnel who mapped Fortuna Bay in 1929–30. Following a resurvey by the SGS, 1951–52, the descriptive term was altered to ridge, which is more suitable for this relatively small feature. The name suggests a beneficial function of this ridge in protecting anchorages at Fortuna Bay from violent southwest and westerly winds. Not: Breakwind Range.

Brearley, Mount 77°48'S, 161°45'E

A sharp peak, 2,010 m, which is the westernmost summit of the Kukri Hills in Victoria Land. Named by the Western Journey Party, led by Griffith Taylor, of the BrAE, 1910–13.

Breccia Crags 60°42'S, 45°13'W

Rock crags, 305 m, standing 1 mi W of Petter Bay in the SE end of Coronation Island, in the South Orkney Islands. Named by the UK-APC following the 1956–58 survey by the FIDS. The feature is of geological interest owing to the contact of brecciated schist and conglomerate.

Breccia Island 68°22'S, 67°01'W

A small low island lying 1 mi NW of Tiber Rocks in the N part of Rymill Bay, off the W coast of Antarctic Peninsula. Photographed by RARE in Nov. 1947 (trimetrogon air photography). So named by RARE geologist Robert L. Nichols because the country rock is a plutonic breccia.

Brecher, Mount 85°24'S, 124°22'W

A jagged rock mountain, 2,100 m, standing immediately W of Mount LeSchack in northern Wisconsin Range, Horlick Moun-

tains. Mapped by USGS from surveys and USN air photos, 1959–60. Named by US-ACAN for Henry H. Brecher, a member of the Byrd Station winter party, 1960, who returned to Antarctica to do glaciological work in several succeeding summer seasons.

Breckenridge, Mount: see Breckinridge Peak 78°04'S, 155°07'W

Breckinridge, Mount 66°37'S, 53°41'E

Mountain, 2,050 m, standing 4 mi S of Stor Hånakken Mountain in the Napier Mountains, Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Langnuten (the long peak). Rephotographed by ANARE in 1956 and renamed by ANCA for J.E. Breckinridge, meteorologist at Wilkes Station in 1961. Not: Langnuten.

Breckinridge, Mount: see Breckinridge Peak 78°04'S, 155°07'W

Breckinridge Peak 78°04'S, 155°07'W

Peak in the S group of the Rockefeller Mountains, standing 1 mi SW of Mount Nilsen on Edward VII Peninsula. Discovered by the ByrdAE in 1929, and named by Byrd for Col. and Mrs. Henry Breckinridge of New York. Not: Mount Breckenridge, Mount Breckinridge.

Breeding Nunatak 77°04'S, 142°28'W

An isolated nunatak 10 mi NE of the Allegheny Mountains in the Ford Ranges, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for George H. Breeding, storekeeper, USN, of Byrd Station, 1967.

Breguet Glacier 64°10'S, 60°48'W

Glacier flowing into Cierva Cove S of Gregory Glacier, on the W coast of Graham Land. Shown on an Argentine government chart of 1957. Named by the UK-APC in 1960 for Louis (1880–1955) and Jacques (1881–1939) Breguet, French aircraft designers who built and flew the first helicopter to carry a man, in vertical flight.

Breid Bay 70°15'S, 24°15'E

A bay about 20 mi wide, irregularly indenting, for as much as 12 mi, the ice shelf fringing the coast of Queen Maud Land. This feature was charted and descriptively named "Breidvika" (broad bay) by H.E. Hansen, as a result of aerial photographs made on Feb. 6, 1937 by the Lars Christensen Expedition of 1936–37. Not: Breidvika, Broad Bay.

Breidhovde: see Law Promontory 67°15'S, 58°47'E

Breidneset: see Breidnes Peninsula 68°34'S, 78°10'E

Breidneskollen: see Gardner Island 68°35'S, 77°52'E

Breidnesmulen: see Mule Peninsula 68°39'S, 77°58'E

Breidnes Peninsula 68°34'S, 78°10'E

A rocky peninsula, 13 mi long and 5 mi wide, between Ellis Fjord and Langnes Fjord in the Vestfold Hills. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition (1936–37) and named Breidneset (the broad ness). Not: Breidneset, Broad Peninsula.

Breidskaret Pass 72°44'S, 3°24'W

A mountain pass between Høgfonna Mountain and Jøkulskarvet Ridge in the Borg Massif, Queen Maud Land. Mapped by

Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Breidskaret (the wide gap).

Breidsvellet 72°39'S, 3°10'W

A steep ice slope on the E side of Jøkulskarvet Ridge, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Breidsvellet (the broad icesheet).

Breidvåg Bight 69°20'S, 39°44'E

A small bight along the E shore of Lützw-Holm Bay, just W of Breidvågnipa Peak. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Breidvåg (broad bay).

Breidvågnipa Peak 69°21'S, 39°48'E

A peak (325 m) rising 0.5 mi SE of Mount Hiroe on the coast of Queen Maud Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Breidvågnipa (the broad bay peak) in association with nearby Breidvåg Bight.

Breidvika: see Breid Bay 70°15'S, 24°15'E

Breidvika: see Gwynn Bay 67°05'S, 57°57'E

Breiffuss Glacier 66°58'S, 64°52'W

Glacier 10 mi long, which flows SE from Avery Plateau into Mill Inlet to the W of Cape Chavanne, on the E coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE in 1947. Named by the FIDS for Leonid Breiffuss, German polar explorer, historian, and author of many polar bibliographies. Not: Wilson Glacier.

Brekilen Bay 70°08'S, 25°48'E

An indentation in the ice shelf about 10 mi SW of Tangekilen Bay, along the coast of Queen Maud Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Brekilen (the glacier bay).

Brekkerista Ridge 72°14'S, 0°18'W

A ridge 2 mi NE of the summit of Jutulrøra Mountain in the Sverdrup Mountains of Queen Maud Land. Plotted from air photos by the GerAE (1938–39). Remapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Brekkerista (the slope ridge).

Bremotet Moraine 71°41'S, 12°05'E

A small moraine area on the NW side of Zwiesel Mountain, at the point where the glacial flow of the Humboldt Graben meets that of Parizhskaya Kommuna Glacier, in the Wohlthat Mountains. First plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named Bremotet (the glacier meeting).

Brennan, Mount 84°15'S, 175°54'E

A dome-shaped mountain, 2,540 m, which is the northernmost prominent summit in the Hughes Range, standing 7 mi NE of Mount Cartwright. Discovered and photographed by the USAS on Flight C of February 29–March 1, 1940, and surveyed by A.P. Crary in 1957–58. Named by Crary for Matthew J. Brennan, scientific station leader at Ellsworth Station, 1958.

Brennan Inlet 74°28'S, 116°35'W

An ice-filled inlet in the SE part of Getz Ice Shelf, bounded to the W by Scott Peninsula and Nunn Island and to the E by Spaulding Peninsula, on the Bakutis Coast, Marie Byrd Land. Named by US-ACAN after Lt. Cdr. Lawrence A. Brennan, USNR, who helped plan and execute the recovery of three damaged LC-130 aircraft from Dome Charlie (q.v.) in East Antarctica, successfully accomplished in the 1975–76 and 1976–77 seasons.

Brennan Point 76°05'S, 146°31'W

An ice-covered point forming the E side of the entrance to Block Bay on the coast of Marie Byrd Land. Discovered on the ByrdAE (1928–30) flight along this coast on Dec. 5, 1929. Named for Michael J. Brennan, who was advisory on the ByrdAE (1928–30) in the selection of personnel. Brennan was skipper of the *Chantier* on the trip to the Arctic when R. Admiral R.E. Byrd flew over the North Pole.

Brennecke Nunataks 72°14'S, 63°35'W

A group of large nunataks on the N side of the head of Beaumont Glacier, to the SW of Holmes Hills in south-central Palmer Land. Mapped by USGS from aerial photographs taken by the U.S. Navy, 1966–69. In association with the names of oceanographers grouped in this area, named by the UK-APC after Carl Wilhelm A. Brennecke (1875–1924), German oceanographer; member of the staff of Deutsche Seewarte (German Naval Observatory), 1904–24; member of the German Antarctic Expedition, 1911–12.

Breoddane: see Scoble Glacier 67°23'S, 60°27'E

Breplogen Mountain 71°55'S, 5°27'E

A broad mountain, 2,725 m, which is ice covered except on its N and E sides, standing W of Austreskorve Glacier in the Mühlighofmann Mountains of Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956–60) and named Breplogen (the glacier plough).

Bresnahan, Mount 71°48'S, 161°28'E

A flat-topped, mainly ice-free mountain (1,630 m) situated along the E side of the Helliwell Hills, 6 mi NNE of Mount Van der Hoeven. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN after David M. Bresnahan, USARP biologist at McMurdo Station, 1967–68 and 1968–69; on staff of Office of Polar Programs, National Science Foundation, from 1970.

Breton Island 66°48'S, 141°23'E

Small rocky island lying 0.2 mi SW of Empereur Island. Charted in 1950 by the FrAE and named by them for their largely Breton crew.

Brewer Peak 71°34'S, 168°28'E

A peak (2,110 m) along the W wall of Pitkevitch Glacier near the glacier's head, in the Admiralty Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Thomas J. Brewer, CS1, USN, Commissaryman at McMurdo Station, 1967.

Brewster, Cape: see Byewater Point 62°45'S, 61°30'W

Brewster, Mount 72°57'S, 169°23'E

A small peak (2,025 m) that rises above the general level of the central part of Daniell Peninsula and marks its greatest elevation,

in Victoria Land. Named in 1841 by Sir James Clark Ross for Sir David Brewster, Scottish physicist.

Brewster Island 64°43'S, 62°34'W

Small island lying NE of Danco Island in Errera Channel, off the W coast of Graham Land. Shown on an Argentine government chart of 1950. Named by the UK-APC in 1960 for Sir David Brewster (1781–1868), Scottish natural philosopher who in 1844 improved the mirror stereoscope invented by Sir Charles Wheatstone by substituting prisms. Not: Islote Sorpresa.

Breyer Mesa 86°01'S, 161°12'W

An ice-covered mesa, 5 mi long and rising over 3,000 m, standing between Christy and Tate Glaciers on the W side of Amundsen Glacier, in the Queen Maud Mountains. Discovered by R. Admiral Byrd on the South Pole flight of November 1929, and named by him for Robert S. Breyer, West Coast representative and patron of the ByrdAE, 1928–30. The name “Mount Breyer” was previously recommended for this feature, but the US-ACAN has amended the terminology to the more suitable Breyer Mesa. Not: Mount Breyer.

Breyer, Mount: see Breyer Mesa 86°01'S, 161°12'W

Brialmont, Caleta: see Cierva Cove 64°09'S, 60°53'W

Brialmont Bay: see Brialmont Cove 64°16'S, 61°00'W

Brialmont Cove 64°16'S, 61°00'W

Cove in Hughes Bay, lying between Charles and Spring Points along the W coast of Graham Land. Charted in 1898 by the BelgAE under Gerlache, who named it for Lieutenant-Général Brialmont, a member of the *Belgica* Commission. Not: Bahía Maldita, Brialmont Bay, Caleta Brialmont.

Briand, Baie: see Briand Fjord 65°01'S, 63°01'W

Briand Fjord 65°01'S, 63°01'W

Bay nearly 3 mi long in the NE part of Flandres Bay, along the W coast of Graham Land. Charted by the FrAE (1903–05) and named by Charcot for Aristide Briand (1862–1932), French statesman and Minister of Public Instruction in 1906. Not: Bahía Dedo, Baie Briand.

Brian Island 68°08'S, 67°07'W

The westernmost of the Debenham Islands, off the W coast of Graham Land. Charted by the BGLE, 1934–37, under Rymill, who named it for a son of Frank Debenham, member of the BGLE Advisory Committee.

Brice, Mount 75°22'S, 72°37'W

A mountain 2.5 mi W of Mount Abrams in the Behrendt Mountains, Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Neil M. Brice, radioscience researcher in this area at Camp Sky-Hi, summer 1961–62.

Bridgeman, Mount: see Bridgeman, Mount 66°50'S, 67°23'W

Bridgeman Island 62°04'S, 56°44'W

An almost circular, volcanic island marked by steep sides, 0.5 mi long and 240 m high, lying 23 mi E of King George Island in the South Shetland Islands. Bridgeman Island is an established name dating back to about 1820. Not: *Bridgemans's Island*, *Bridgman Island*, *Helena Island*.

Bridgemans's Island: see *Bridgeman Island* 62°04'S, 56°44'W

Bridge Pass 81°46'S, 160°42'E

A high pass between the Surveyors and Nash Ranges, at the upper reaches of the Dickey and Algie Glaciers, affording a passage from the Nimrod Glacier region to Beaumont Bay. Named by NZGSAE (1960–61) for Capt. Lawrence D. Bridge, RNZE, leader at Scott Base from November 1960 to February 1961.

Bridger, Mount 72°17'S, 167°35'E

A mountain (2,295 m) along the S side of Pearl Harbor Glacier, situated 5 mi NNE of Conard Peak in the Cartographers Range, Victory Mountains, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for William D. Bridger, USN, aviation machinist's mate and flight engineer on Hercules aircraft at Williams Field, Ross Island, on Operation Deep Freeze 1968.

Bridger Bay 60°33'S, 45°51'W

Semi-circular bay 2.5 mi wide, lying W of Tickell Head along the N coast of Coronation Island, in the South Orkney Islands. Discovered in 1821 in the course of the joint cruise by Capt. Nathaniel Palmer, American sealer, and Capt. George Powell, British sealer. Surveyed by the FIDS in 1956–58 and named by the UK-APC for John F.D. Bridger, who participated in the survey of Coronation and Signy Islands.

Bridge Riegel 76°43'S, 161°00'E

A flat-topped rock ridge on the N side of Greenville Valley, immediately above Greenville Hole, in the Convoy Range, Victoria Land. The feature provides a platform that overlooks the entire valley, similar to the bridge of a ship. So named by a 1989–90 NZARP field party.

Bridgman, Mount 66°50'S, 67°23'W

A prominent mountain which surmounts the central part of Liard Island in Hanusse Bay, off the W coast of Graham Land. Mapped from photos obtained by RARE (1947–48) and FIDASE (1956–57). Named by UK-APC for Percy W. Bridgman, American physicist who discovered the high-pressure forms of ice. Not: Mount Bridgeman.

Bridgman Glacier 72°23'S, 170°05'E

Steep glacier falling away from the W side of Hallett Peninsula and forming a floating ice tongue on the E shore of Edisto Inlet between Salmon and Roberts Cliffs. Named by the NZGSAE, 1957–58, for Lt. Albert H. Bridgman, MC, USN, surgeon and USN OpDFrz leader at Hallett station in 1959.

Bridgman Island: see *Bridgeman Island* 62°04'S, 56°44'W

Bridwell Peak 71°56'S, 166°28'E

A peak (2,220 m) 6 mi SE of Boss Peak in the Victory Mountains of Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–63. Named by US-ACAN for Ray E. Bridwell, USARP meteorologist at Hallett Station, 1964–65.

Brien Rocks 73°13'S, 161°23'E

Prominent rock outcrops lying 6 mi W of Caudal Hills, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Robert J. Brien, aviation electronics technician with USN Squadron VX-6 at McMurdo Station, 1966.

Briesemeister, Mount: see Martin, Mount 69°40'S, 62°59'W

Briesemeister, Mount: see Briesemeister Peak 69°28'S, 62°45'W

Briesemeister Peak 69°28'S, 62°45'W

Peak, 690 m, which stands 7 mi WNW of Cape Rymill on the E coast of Palmer Land. This peak was photographed from the air by Sir Hubert Wilkins on Dec. 20, 1928, and by the USAS in 1940. It was named by the RARE under Ronne, 1947–48, after William A. Briesemeister (d. 1967), Chief Cartographer, American Geographical Society, 1913–63, who by recognizing this peak on two photographs taken by Wilkins established their continuity, an important clue to the identity and correct position of Stefansson Strait (*Geographical Review*, July 1948, pp. 477, 484); he supervised the preparation of maps of Antarctica for use during the IGY (1957–58) and post-IGY programs of USARP, including continental maps published at a scale of 1:6 million (1956) and 1:5 million (1962). Not: Mount Briesemeister.

Briggs Glacier 54°10'S, 37°08'W

Glacier between Mount Worsley and The Trident in central South Georgia, flowing NW into Murray Snowfield. Charted as a glacier flowing into the head of Possession Bay by Lt. Cdr. J.M. Chaplin, RN, in 1929, and named for Able Seaman A.C. Briggs, one of the crew of the *Discovery* in 1925–27 and a member of Chaplin's survey party in 1928–30. During the SGS, 1955–56, the complicated area of glaciers and snowfields S of Possession Bay was for the first time surveyed in detail, and Briggs Glacier was located.

Briggs Hill 77°49'S, 163°00'E

Conspicuous ice-free hill, 1,210 m, standing on the S side of Ferrar Glacier between Descent and Overflow Glaciers in Victoria Land. Charted by the BrAE under Scott, 1910–13. Named by the US-ACAN for Raymond S. Briggs, USARP meteorologist at McMurdo Station in 1962, and station scientific leader there in 1963.

Briggs Peak 68°59'S, 66°42'W

An isolated, conical mountain (1,120 m) on the NE side of Wordie Ice Shelf, Antarctic Peninsula. First roughly surveyed by BGLE, 1936–37. Photographed by RARE, Nov. 1947 (trimetrogon air photography). Surveyed from the ground by FIDS in 1949 and 1958. Named by UK-APC after Henry Briggs (1556–1630), English mathematician who, with John Napier, was responsible for the invention of logarithms, about 1614.

Briggs Peninsula 64°31'S, 63°01'W

Small peninsula forming the W side of Inverleith Harbor on the NE coast of Anvers Island, in the Palmer Archipelago. The NE point of the peninsula was charted in 1927 by DI personnel on the *Discovery*, who named it Briggs Point for Able Seaman A.C. Briggs, a member of the survey party. As air photos show no distinct point in this location, the name was applied to the entire peninsula by the UK-APC in 1959. Not: Briggs Point.

Briggs Point 54°17'S, 36°17'W

Point on the E side of Godthul, close SW of Cape George on the N coast of South Georgia. The name appears on a chart showing the results of a survey by DI personnel in 1929, and is probably for A.C. Briggs, a member of the survey party.

Briggs Point: see Briggs Peninsula 64°31'S, 63°01'W

Brighton Beach 54°07'S, 37°10'W

A beach lying between Zero and Adventure Points in Possession Bay, on the N coast of South Georgia. The name appears on a chart showing the results of a survey by DI personnel in 1926–30, and derives from the beach being crowded with fauna as Brighton Beach in England.

Brimstone Bluff: see Brimstone Peak 61°55'S, 57°45'W

Brimstone Peak 61°55'S, 57°45'W

Conspicuous peak surmounting the rocky headland between Venus Bay and Emerald Bay, on the N coast of King George Island in the South Shetland Islands. The name North Foreland originally appeared for this feature on a chart by British sealer Capt. George Powell in 1822, but this name has since become firmly established for the NE cape of King George Island. The name Brimstone was applied in 1937 by DI personnel on the *Discovery II*, because of its yellow color. Not: Brimstone Bluff, Brimstone Point, North Foreland, Pico Amarillo.

Brimstone Peak 75°48'S, 158°33'E

A peak, 2,340 m, surmounting a small ice-free mesa between Outpost Nunataks and Ricker Hills, in the Prince Albert Mountains, Victoria Land. Mapped by the Southern Party of NZGSAE, 1962–63, which so named it because of coloring which suggested "hellfire and brimstone."

Brimstone Point: see Brimstone Peak 61°55'S, 57°45'W

Brindle Cliffs 69°23'S, 68°33'W

Precipitous mass of ice-free rock rising to 610 m, standing 6 mi E of Cape Jeremy on the W coast of Antarctic Peninsula. First seen from the air and photographed on Aug. 16, 1936 by the BGLE under Rymill. Surveyed in 1948 by the FIDS who so named the feature because of its color.

Brinton Nunatak 85°35'S, 132°24'W

A small nunatak marking the W extremity of Ford Nunataks, in the Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Curtis C. Brinton, utilitiesman with the Byrd Station winter party, 1957.

Bris, Mount 63°59'S, 59°50'W

A broad mountain rising 1 mi W of the head of Sabine Glacier and 11 mi S of Cape Kater, in Graham Land. Named by UK-APC for Jean Marle le Bris (1808–72), French naval officer who designed a glider and became the first glider pilot, in 1857.

Brisbane, Alturas: see Brisbane Heights 60°36'S, 45°38'W

Brisbane Heights 60°36'S, 45°38'W

Series of heights rising to 960 m and extending in an arc from Worswick Hill to High Stile in the central part of Coronation Island, South Orkney Islands. The feature was named Brisbane Plateau following the FIDS survey of 1948–49, but resurvey in 1956 determined heights to be a more suitable descriptive term. Matthew Brisbane, master of the cutter *Beaufoy*, accompanied James Weddell, master of the brig *Jane*, to the South Orkney Islands in January 1823, and roughly charted the S coast of the group. Not: Alturas Brisbane, Brisbane Plateau.

Brisbane Plateau: see Brisbane Heights 60°36'S, 45°38'W

Bristly Peaks 69°23'S, 66°15'W

A series of sharp, rock peaks on a ridge separating the Seller and Fleming Glaciers in central Antarctic Peninsula. Photographed from the air by BGLE in 1937, and by RARE in 1947. Surveyed by FIDS in 1958 and 1960. The name, applied by UK-APC, is descriptive of the sharp peaks which suggest the bristles of a brush.

Bristol Island 59°02'S, 26°31'W

Island 5 mi long, lying midway between Montagu Island and Southern Thule in the South Sandwich Islands. Discovered by a British expedition under Cook in 1775 and named by him for the title name of the noble family of Hervey. Not: Isla Blanco.

Britannia, Mount 64°43'S, 62°41'W

Mountain, 1,160 m, rising in the center of Rongé Island, off the W coast of Graham Land. First charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 after H.M. Yacht *Britannia* in which Prince Philip, Duke of Edinburgh, visited South Georgia, the South Shetland Islands and Graham Land in January 1957.

Britannia Range 80°05'S, 158°00'E

A range of mountains bounded by the Hatherton and Darwin Glaciers on the north and the Byrd Glacier on the south, westward of the Ross Ice Shelf. Discovered by the BrNAE (1901–04) under Scott. Named after HMS *Britannia*, a vessel utilized as a naval college in England, which had been attended by several officers of Scott's expedition. Not: Britannia Range.

Britannia Range: see Britannia Range 80°05'S, 158°00'E

Britten Inlet 72°36'S, 72°30'W

Ice-filled inlet on the SW side of Monteverdi Peninsula, S Alexander Island. The inlet was delineated from U.S. Landsat imagery of January 1973. In association with the names of composers grouped in this area, named by the UK-APC, 1977, after Edward Benjamin Britten (1913–76), British composer.

Britt Peak 76°03'S, 135°07'W

A small peak (3,070 m) just SW of the summit of Mount Moulton, in the Flood Range of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Dale R. Britt, BU2, USN, a builder who wintered-over at South Pole Station, 1969.

Broad Bay: see Breid Bay 70°15'S, 24°15'E

Broad Peninsula: see Breidnes Peninsula 68°34'S, 78°10'E

Broad Valley 63°22'S, 57°55'W

A descriptive name for the broad glacier-filled valley on the S side of Laclavère Plateau, Trinity Peninsula. The name was suggested by V.I. Russell of FIDS following his survey in 1946.

Brockelsby, Mount 67°34'S, 50°11'E

Mountain, 1,290 m, standing 7 mi N of Simpson Peak in the Scott Mountains, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for W.K. Brockelsby, ionosphere physicist at Mawson Station in 1961.

Brocken 54°29'S, 36°04'W

Mountain rising over 610 m close SW of Calf Head on the N side of South Georgia. Named by the German group of the Inter-

national Polar Year Investigations, 1882–83, after the highest mountain in central Germany.

Brock Gully 77°43'S, 159°44'E

A valley 1 mi S of Windwhistle Peak in the Allan Hills of Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) who named it after the dialect name for a badger because of the resemblance to badger country in parts of England.

Brockhamp Islands 67°17'S, 67°56'W

Two small islands in Laubeuf Fjord, lying 3 mi SW of Mothes Point, Adelaide Island. Mapped by the FIDS from RARE air photos, 1947–48, and FIDS surveys, 1948–50. Named by UK-APC for Bernhard Brockhamp, German glaciologist who, with H. Mothes, made the first seismic soundings of a glacier, in Austria in 1926.

Brocklehurst, Mount 76°08'S, 161°27'E

Dome-shaped mountain, 1,310 m, standing N of Mawson Glacier and 6 mi W of Mount Murray in Victoria Land. First charted by the BrAE (1907–09) which named it for Sir Philip Lee Brocklehurst, who contributed to the expedition and was assistant geologist on it.

Brocklehurst Ridge 71°02'S, 67°06'E

A partly snow-covered rock ridge about 1 mi S of Taylor Platform in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for F.J. Brocklehurst, electrical fitter at Mawson Station in 1964.

Brocoum, Mount 70°12'S, 63°45'W

The dominant peak on the eastern ridge of the Columbia Mountains in Palmer Land. Mapped by the USGS in 1974. Named by US-ACAN for Stephan J. Brocoum and his wife, Alice V. Brocoum, Columbia University geologists who studied the structure of the Scotia Ridge area. He worked in 1968–69 and 1970–71; she, only the latter season.

Brøde Island 54°54'S, 36°07'W

Small, rounded tussock-covered island, 1 mi SW of Green Island, off the S tip of South Georgia. First charted in 1775 by a British expedition under Cook. Roughly surveyed by a German expedition, 1928–29, under Kohl-Larsen, who appears to have used the name "Hauptinsel" (head island) for this feature. Following a survey in 1951–52, the SGS reported that the name Brøde (Norwegian word meaning loaf) is firmly established among whalers and sealers for this island and the name is approved on this basis.

Brodie Peak 69°25'S, 66°05'W

One of the Bristly Peaks (q.v.), rising to 1,410 m 5 mi SSE of Mount Castro, in central Antarctic Peninsula. Named by US-ACAN in 1977 after Earl E. Brodie, USARP engineer, Palmer Station winter party, 1969.

Brodie Ponds 77°57'S, 163°40'E

A group of meltwater ponds lying W and SW of the base of Mount Kowalczyk on the surface of the Blue Glacier, in Victoria Land. Visited by a NZARP geological party led by R.H. Findlay, 1979–80, and named after Ken Brodie, a geologist with the party.

Brødrene Rocks 66°17'S, 56°06'E

Group of rocks lying in the entrance to Wheeler Bay, just NW of Magnet Bay. Mapped by Norwegian cartographers from aerial

photos taken by the Lars Christensen Expedition, 1936–37, and named Brødrene (the brothers). Not: Wheeler Rocks.

Brøgger, Mount 76°52'S, 161°48'E

Mountain, 1,400 m, which forms part of the N wall of Cleveland Glacier about 4 mi N of Referring Peak, in Prince Albert Mountains, Victoria Land. Charted by the BrAE (1910–13) which named it for Prof. Waldemar C. Brøgger, Norwegian geologist and mineralogist.

Brøgger Glacier 54°32'S, 36°26'W

Glacier 7 mi long, flowing W into the S part of Undine South Harbor on the S coast of South Georgia. The name appears on a chart by Prof. Olaf Holtedahl, Norwegian geologist who investigated South Georgia in 1928, and is probably for Prof. Waldemar Brøgger, Norwegian geologist and mineralogist, and member of the Norwegian Parliament, 1900–09.

Broka Island 67°07'S, 58°36'E

Rocky island, 4 mi long and rising to 140 m, with a prominent cove indenting the N side, situated 2 mi N of Law Promontory and 1 mi W of Havstein Island. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition, 1936–37. They applied the name Broka (the trousers) because the outline of the island resembles that of a pair of trousers.

Broken Island 67°49'S, 66°57'W

Island 2.5 mi long, lying 1.5 mi N of Centre Island in the N part of Square Bay, off the W coast of Graham Land. Discovered and named by the BGLE under Rymill, 1934–37. Not: Isla Quebrada.

Broms, Cape 64°20'S, 58°18'W

Cape which marks the S side of the entrance to Röhss Bay on the W side of James Ross Island, off the NE end of Antarctic Peninsula. Discovered by the SwedAE, 1901–04, under Norden-skjöld, who named it for G.E. Broms, a patron of the expedition.

Bronk, Mount 84°24'S, 175°46'E

A snow-covered mountain, 3,530 m, standing 4 mi NE of Mount Waterman in Hughes Range. Discovered and photographed by R. Admiral Byrd on the baselaying flight of Nov. 18, 1929, and surveyed by A.P. Crary in 1957–58. Named by Crary for Detlev W. Bronk, President of the U.S. National Academy of Sciences, which actively supported Antarctic operations during the 1957–58 IGY period.

Brooke, Mount 76°49'S, 159°54'E

A large isolated mountain, 2,675 m, standing 17 mi NW of Mount Gran and dominating the area near the heads of Mackay and Mawson Glaciers. Named for Lt. Cdr. F.R. Brooke, RN, leader of the 1957 N.Z. Northern Survey Party of the CTAE, 1956–58.

Brooker, Mount 54°30'S, 36°14'W

Mountain, 1,880 m, standing at the head of Webb Glacier and forming the last major summit in the SE part of the Allardyce Range of South Georgia. The feature was identified as "Pic" (meaning Peak) or "Pikstock" by the German group of the International Polar Year Investigations, 1882–83. First climbed in 1955 by Ian M. Brooker, for whom it is named, and E.C. Webb, members of the British South Georgia Expedition, 1954–55, led by George Sutton. Not: Mount Gregor, Mount Hopeful, Pikstock, Sunset Peak.

Brooklyn Island 64°39'S, 62°04'W

Island 2.5 mi long, lying 1 mi S of Nansen Island in the E part of Wilhelmina Bay, off the W coast of Graham Land. Discovered by the BelgAE under Gerlache, 1897–99, and named after the home of Dr. Frederick A. Cook, American member of the expedition who served as surgeon, anthropologist, and photographer.

Brookman Point 74°19'S, 131°51'W

The snow-covered NW point of Grant Island, lying off the coast of Marie Byrd Land and Getz Ice Shelf. Discovered and first charted from the USS *Glacier* (Capt. Edwin A. McDonald, USN) in February 1962. Named by US-ACAN for Lt. Peter J. Brookman, CEC, USN, Officer-in-Charge at Byrd Station, 1970.

Brooks, Cape 73°36'S, 60°46'W

Cape marked by steep, conspicuous walls which rise to 465 m, forming the S side of the entrance to New Bedford Inlet, on the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by members of the USAS. During 1947 the cape was photographed from the air by members of the RARE, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Charles E.P. Brooks, English meteorologist on the staff of the Meteorological Office, 1907–49.

Brooks Island: see Ivanoff Head 66°53'S, 109°07'E

Brooks Nunatak 84°59'S, 66°18'W

An isolated nunatak, 1,615 m, standing 6 mi SW of Shurley Ridge on the S side of Mackin Table in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Robert E. Brooks, biologist at South Pole Station, summer 1966–67.

Brooks Point 66°45'S, 108°25'E

A small rock point on the W shore of Vincennes Bay, about 5 mi WNW of Mallory Point. This feature was first mapped from air photos taken by USN OpHjp, 1946–47. Named by US-ACAN for John Brooks, seaman on the USEE flagship *Vincennes* under Wilkes, 1838–42. This 1972 naming resolves the problem raised by displacement of the name "Brooks Island" (now Ivanoff Head, q.v.).

Broome, Mount 73°35'S, 61°45'W

Mountain in the N part of the range which lies between the mouths of Douglas and Bryan Glaciers in the Werner Mountains, Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Howard W. Broome, Jr., electrician with the South Pole Station winter party in 1967.

Brörvika: see Wheeler Bay 66°18'S, 56°06'E

Brosnahan Island 79°28'S, 160°59'E

Island 1 mi long, rising above the western part of the Ross Ice Shelf 11 mi NE of Cape Murray. Mapped by the USGS from tellurimeter surveys and Navy air photos, 1959–63. Named by US-ACAN for Cdr. James J. Brosnahan, USN, commander of the McMurdo Station winter party, 1961.

Brothers, The: see Sørn and Bernt 53°59'S, 37°55'W

Brothers Hill: see Three Brothers Hill 62°15'S, 58°41'W

Brothers Rocks 57°46'S, 26°25'W

Group of rocks surrounded by foul ground lying 1 mi E of the N part of Saunders Island in the South Sandwich Islands. Charted

and named in 1930 by DI personnel on the *Discovery II*. Not: Rocas Hermanos, The Brothers Rocks.

Brothers Rocks, The: see Brothers Rocks 57°46'S, 26°25'W

Brouardel Point 65°03'S, 63°59'W

Point N of Port Charcot along the W side of the Mount Lacroix peninsula, Booth Island, in the Wilhelm Archipelago. First charted by the FrAE, 1903–05, and named for Doctor Brouardel, identified by Charcot as a member of the Institut de France.

Broune Insel: see Brown Peninsula 78°06'S, 165°25'E

Brounov, Mount 71°58'S, 14°20'E

Mountain, 2,370 m, standing 1.5 mi S of Mount Kibal'chich in the Payer Mountains of Queen Maud Land. First plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after P.I. Brounov, Soviet geographer. Not: Gora Brounova.

Brounova, Gora: see Brounov, Mount 71°58'S, 14°20'E

Brouwer, Mount 72°35'S, 31°26'E

Mountain, 2,460 m, between Mount Hoge and Mount Launoit in the Belgica Mountains. Discovered by the BelgAE, 1957–58, under G. de Gerlache, who named it for Carl de Brouwer, a patron of the expedition.

Brown, Cape 69°16'S, 69°45'W

Prominent ice-covered cape 5.5 mi NNE of the summit of Mount Nicholas, marking the E side of the entrance to Schokalsky Bay on the NE coast of Alexander Island. First seen from a distance by the FrAE under Charcot in 1909, but charted as part of a small island. Photographed from the air in 1937 by the BGLE under Rymill, and later roughly mapped from the photos. Surveyed from the ground in 1948 by Colin C. Brown, FIDS surveyor at Stonington Island, 1948–49, for whom the cape is named. Not: Punta 8 de Octubre.

Brown, Mount 68°18'S, 86°25'E

An elongated rock peak protruding slightly above the continental ice, situated 160 mi E of the Vestfold Hills and 100 mi SSW of Cape Penck. Delineated from air photos taken by USN Operation Highjump (1946–47), and named by US-ACAN for Lt. (j.g.) Eduardo P. Brown, USN, photographic officer for the Western Group of the expedition.

Brown Bay 66°17'S, 110°33'E

A cove just to the SE of Casey Station on Bailey Peninsula, Budd Coast. Photographed by USN OpHjp, 1946–47, the SovAE, 1956, and the ANARE, 1956. Named by ANCA for A.M. Brown, senior engineer with the Antarctic Division, Melbourne, a member of the team which planned and supervised the construction of Casey Station.

Brown Bluff 63°32'S, 56°55'W

Ice-capped, flat-topped mountain, 745 m, with a prominent cliff of reddish-brown volcanic rock on the N face, 9 mi S of Hope Bay on the E side of Tabarin Peninsula, at the NE end of Antarctic Peninsula. The descriptive name was applied by the FIDS following their survey in 1946. Not: Cerro Bardas Coloradas.

Brown-Cooper, Mount 70°42'S, 64°12'E

A partly ice-covered mountain 1 mi SW of Mount Forecast, surmounting the S end of Bennett Escarpment in the Prince Charles Mountains. Mapped from ANARE surveys and air photos,

1956–65. Named by ANCA for P.J. Brown-Cooper, geophysicist at Wilkes Station, 1965.

Brown Glacier 53°04'S, 73°39'E

A glacier just S of Round Hill on the E side of Heard Island. Surveyed by ANARE in 1948. Named by ANCA for K.G. Brown, ANARE biologist on Heard Island in 1951.

Brown Glacier 74°50'S, 65°08'W

A large glacier on the W side of Latady Mountains, flowing SSE to join Ketchum Glacier, W of Gardner Inlet, on Lassiter Coast, Palmer Land. Mapped by USGS from surveys and USN aerial photographs, 1961–67. Named by US-ACAN after Lawrence Edward Brown, geologist; member of the USGS field party which crossed this glacier, 1969–70.

Brown Hills 79°46'S, 158°33'E

A group of mainly snow-free hills in the Cook Mountains, lying N of the lower reaches of Darwin Glacier. Named for their color by the Darwin Glacier Party of the CTAE (1956–58).

Browning, Mount 74°37'S, 164°03'E

A mountain, 760 m, which rises opposite the terminus of Boomerang Glacier in the Northern Foothills, on the coast of Victoria Land. First roughly mapped by the BrAE, 1907–09. This area was explored and mapped in greater detail by the Northern Party of the BrAE, 1910–13, and the mountain named for Petty Officer Frank V. Browning, RN, a member of the Northern Party.

Browning Island: see Browning Peninsula 66°28'S, 110°33'E

Browning Pass 74°36'S, 163°59'E

An ice-covered pass, 10 mi long, lying between the main mass of Deep Freeze Range and Northern Foothills in Victoria Land. The pass facilitates movement between the lower ends of Priestley and Campbell Glaciers. The feature was first mapped as a part of Campbell Glacier by the Northern Party of the BrAE, 1910–13. It was remapped by the Southern Party of NZGSAE, 1962–63, and named for Frank V. Browning, a member of the BrAE Northern Party, for whom nearby Mount Browning is also named.

Browning Peninsula 66°28'S, 110°33'E

Rocky peninsula, 4 mi long, separating Penney Bay and Eyres Bay at the S end of the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Cdr. Charles L. Browning, USN, chief staff officer with USN OpWml and later staff officer with Task Force 43, the logistic arm of USN Operation Deep Freeze, 1955–56. Not: Browning Island, Poluostrov Brauning.

Brown Island 64°58'S, 63°47'W

Small, brown, almost snow-free island in the SE part of the Wauwermans Islands, 2 mi SW of Wednesday Island, in the Wilhelm Archipelago. Charted by the BGLE under Rymill, 1934–37, and so named because its brown color distinguished it from adjacent snow-capped islands.

Brown Island: see Brown Peninsula 78°06'S, 165°25'E

Brown Mountain 54°17'S, 36°31'W

Rounded hill, 330 m, standing 0.75 mi S of the station at Grytviken, near the W shore of Cumberland East Bay, South Georgia. First surveyed by the SwedAE, 1901–04, under Norden-skjöld. The descriptive name "Braun Berg" (Brown Mountain)

was given by A. Szielasko who mapped this area in 1906. The English form of the name recommended by the UK-APC in 1954 has been adopted. Not: Braun Berg.

Brown Nunataks 82°37'S, 53°30'W

Three nunataks lying 1 mi NW of Walker Peak at the SW extremity of Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for John B. Brown, ionospheric scientist, Ellsworth Station winter party, 1957.

Brown Peak 67°25'S, 164°35'E

A peak (1,705 m) in the northern part of Sturge Island, in the Balleny Islands. Discovered in Feb. 1839 by John Balleny, who named it for W. Brown, one of the merchants who helped Charles Enderby in sending the expedition. Resighted in 1841 by Capt. James Ross, who inadvertently applied the name Russell Peak. Not: Russell Peak.

Brown Peaks 85°35'S, 158°05'W

A series of low peaks surmounting a ridge 4 mi long, standing 7 mi E of Robinson Bluff at the E side of Amundsen Glacier. First roughly mapped from ground surveys and air photos by the ByrdAE, 1928–30. Named by US-ACAN for Kenneth R. Brown, biologist with the McMurdo Station winter party of 1964.

Brown Peninsula 78°06'S, 165°25'E

A nearly ice-free peninsula, 10 mi long and 4 mi wide, which rises above the Ross Ice Shelf northward of Mount Discovery, to which it is connected by a low isthmus. Discovered by the BrNAE (1901–04) which named it "Brown Island" because of its color and islandlike character. Since it is a peninsula, the name has been altered accordingly. Not: Broune Insel, Brown Island, Brun Öya.

Brown Point 54°07'S, 37°07'W

Point lying between Steep Point and Glacier Point on the E side of Possession Bay, South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Brown Range: see Sjørtindane Peaks 68°08'S, 62°24'E

Brown Ridge 83°38'S, 55°06'W

A bare rock ridge, 3 mi long, extending NNW from Nelson Peak in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1955–66. Named by US-ACAN for Robert D. Brown, geologist with the Patuxent Range field party, 1962–63.

Browns Bay 60°43'S, 44°36'W

Bay 1.5 mi wide, entered between Thomson Point and Cape Geddes along the N coast of Laurie Island, in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for R.N. Rudmose Brown, naturalist of the expedition.

Browns Butte 85°15'S, 167°30'E

A bare rock butte at the N side of the mouth of Koski Glacier in the Dominion Range. Named by US-ACAN for Craig W. Brown, USARP meteorologist at South Pole Station, 1963.

Brown Scarp 78°04'S, 161°24'E

A narrow wedgelike massif which has a notable southern escarpment but moderate northern slopes. The feature is 1.5 mi long and rises to 2,410 m between Palais Glacier and Waddington Glacier in Victoria Land. Named by US-ACAN in 1994 after Arthur J.

Brown, Deputy Program Director (1982–90), ITT Antarctic Services, Inc., corporate contractor to NSF in Antarctica; from 1994, Head of Safety, Environment, and Health Implementation Team, Office of Polar Programs, NSF.

Browns Glacier 68°56'S, 78°00'E

A small glacier 4 mi N of Chaos Glacier, flowing westward into the north extremity of Ranvik Bay. The glacier was charted by Norwegian cartographers from air photographs taken by the Lars Christensen Expedition (1936–37), and was further identified in John H. Roscoe's 1952 study of this area from USN Operation Highjump (1946–47) photography. Named by Roscoe for Lt. (j.g.) Eduardo P. Brown, USN, photographic officer with the western task group of Operation Highjump.

Brownson Islands 74°10'S, 103°36'W

Group of about 20 small islands which lie just outside the entrance to Cranton Bay, about 14 mi SW of the SW tip of Canisteo Peninsula. Delineated from aerial photographs taken by USN OpHjp in December 1946. Named by US-ACAN for the USS *Brownson*, a vessel of the eastern task group of this expedition.

Brown Valley 75°38'S, 132°12'W

A rectangular ice-covered valley between Mount Kauffman and Mount Kosciuszko in the NE end of Ames Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN after Thomas I. Brown, USARP meteorologist at Byrd Station in 1963.

Brownworth, Lake 77°26'S, 162°45'E

A meltwater lake immediately W of Wright Lower Glacier at the E end of Wright Valley, Victoria Land. The lake was mapped by USGS from surveys and air photos obtained in 1956–60. Named by US-ACAN for Frederick S. Brownworth, USGS topographic engineer who worked several seasons in Antarctica. In 1970–71 he supervised aerial photography of the dry valleys of Victoria Land, including this lake. Not: Wright Lake.

Brow Point 54°04'S, 37°02'W

The western entrance point of Blue Whale Harbor on the N coast of South Georgia. The descriptive name appeared on a British Admiralty chart of 1938 based upon DI surveys in 1930.

Bruce, Cape 67°25'S, 60°47'E

The N tip of a small island lying at the E side of Oom Bay, separated from the mainland rocks just W of Taylor Glacier. A landing was made there on Feb. 18, 1931, by the BANZARE under Mawson. Named by Mawson for Rt. Hon. S.M. Bruce (later Lord Bruce) Prime Minister of Australia, 1923–29.

Bruce, Cape: see Bruce Point 76°08'S, 162°26'E

Bruce, Mount 70°32'S, 162°30'E

Prominent mountain (1,640 m) rising just S of Stuhlinger Ice Piedmont and between the Gannutz and Barber Glaciers in the Bowers Mountains. Discovered by members of the BrAE, 1910–13, who explored along this coast in the *Terra Nova* in February 1911. Named for Lt. Wilfred M. Bruce, RNR, officer in charge of zoological work aboard the *Terra Nova*.

Bruce Glacier: see Hindle Glacier 54°34'S, 36°05'W

Bruce Harkness, Mount: see Harkness, Mount 86°04'S, 150°36'W

Bruce Island 64°54'S, 63°08'W

An island lying 0.5 mi off the SW corner of Bryde Island in Gerlache Strait. Discovered and mapped by the BelgAE, 1897–99, under Lt. Adrien de Gerlache. The name was first used by Scottish geologist David Ferguson, who made a geological reconnaissance in this vicinity from the whalecatcher *Hanka* in 1913.

Bruce Islands 60°41'S, 44°54'W

Group of small islands and rocks 1.5 mi NW of Eillium Island and 3 mi NW of Route Point, the NW tip of Laurie Island, in the South Orkney Islands. First roughly shown on Powell's chart resulting from the joint cruise of Capt. George Powell and Capt. Nathaniel Palmer in 1821. Remapped in 1912–13 by Capt. Petter Sørille, and in 1933 by DI personnel on the *Discovery II*, who named them for William S. Bruce, leader of the Scottish National Antarctic Expedition, 1902–04. Not: Islas Corbeta, Islotes Corbeta.

Bruce Nunatak 65°05'S, 60°15'W

Nunatak which lies 2 mi W of Donald Nunatak in the Seal Nunataks group, off the E coast of Antarctic Peninsula. First charted in 1902 by the SwedAE under Nordenskjöld, who named it for Dr. William S. Bruce, leader of the ScotNAE, 1902–04.

Bruce Plateau 66°00'S, 64°00'W

Ice-covered plateau, at least 90 mi long and about 1,830 m high, extending NE from the heads of Gould and Erskine Glaciers to the vicinity of Flandres Bay, in Graham Land. The first sighting of this plateau has not been ascertained, but it was presumably seen in January 1909 by members of the FrAE under Charcot from their position in Pendleton Strait. The plateau was mapped from aerial photographs and FIDS surveys, 1946–62. Named by UK-APC after William S. Bruce, Scottish polar explorer and leader of the ScotNAE, 1902–04.

Bruce Point 76°08'S, 162°26'E

A point situated at the south side of Charcot Cove on the coast of Victoria Land. Discovered by the BrNAE (1901–04) under Capt. Robert F. Scott, who named the feature for William S. Bruce, leader of the Scottish National Antarctic Expedition (1902–04). Not: Cape Bruce, Cape William Bruce.

Bruces Peak: see Summers Peak 69°42'S, 64°53'E

Brückner Glacier 67°18'S, 67°00'W

Glacier flowing NE on Arrowsmith Peninsula to Müller Ice Shelf in the SW part of Lallemand Fjord, Loubert Coast. Mapped by FIDS from surveys and air photos, 1956–59. Named by UK-APC after Eduard Brückner (1862–1927), German pioneer glaciologist.

Brugda Ridge 72°05'S, 2°50'E

A ridge extending ESE from the S side of Jutulsessen Mountain in the Gjelsvik Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Brugda (basking shark).

Bruggman Mountains: see Bruggmann Mountains 64°02'S, 61°55'W

Bruggmann Mountains 64°02'S, 61°55'W

Mountains rising to 850 m, which are steep and rugged on the E slopes but are icecapped and descend gently toward the W, extending in a NE-SW arc along the E side of Liège Island, in the

Palmer Archipelago. Discovered by the BelgAE under Gerlache, 1897–99, and named by him for Georges Bruggmann, a patron of the expedition. Not: Bruggman Mountains.

Brundage, Mount 75°16'S, 65°28'W

Mountain located 12 mi WSW of Mount Terwileger in the S part of the Scaife Mountains. Discovered by the RARE under Ronne, 1947–48, who named it for Burr Brundage, U.S. Dept. of State, who assisted in making arrangements for the expedition. Not: Mount Burr Brundage.

Bruner Hill 75°39'S, 142°25'W

A hill (770 m) which is snow covered except for some exposed rock on the N face. It rises at the N side of El-Sayed Glacier, 8 mi SW of Mount Shirley, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1959–65. Named by US-ACAN for Lt. Michael J. Bruner, USN, LC-130 aircraft commander during Operation Deep Freeze 1970 and 1971.

Brunhilde Peak 77°38'S, 161°27'E

A rock peak between the upper part of Donner Valley and Sykes Glacier in the Asgard Range, Victoria Land. Named by NZ-APC after Brunhilde, one in a group of names in the range derived from Norse mythology. In the *Nibelungenlied*, Brunhilde is a young and stalwart queen whom Siegfried, by magic, wins and later tames for Gunther.

Brunner Glacier 85°14'S, 175°38'W

A narrow steep-walled glacier 2 mi long, descending the W slope of the Cumulus Hills between Landry Bluff and Halfmoon Bluff to enter Shackleton Glacier. Named by the Texas Tech Shackleton Glacier Expedition (1964–65) for S/Sgt. Donald R. Brunner, member of the U.S. Army Aviation Detachment which supported the expedition.

Brunonia Glacier 54°03'S, 37°29'W

Glacier which flows E to the head of Sunset Fjord in the Bay of Isles, South Georgia. Charted in 1912–13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*, who named it for his alma mater Brown University.

Brunow Bay 62°43'S, 60°09'W

Small bay indenting the SE side of Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 for Benjamin J. Brunow, Master of the schooner *Henry*, one of James Byers' fleet of American sealers from New York which visited the South Shetland Islands in 1820–21, operating from Yankee Harbor in nearby Greenwich Island.

Brun Öya: see Brown Peninsula 78°06'S, 165°25'E

Bruns, Mount 84°29'S, 64°23'W

Mountain, 910 m, standing 4 mi N of Mount Lowry in Anderson Hills in northern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for John E. Bruns, glaciologist at Palmer Station, winter 1967.

Bruns Nunataks 72°05'S, 1°10'E

A small group of nunataks, including Tua Hill, lying 2.5 mi WNW of Brattskarvet Mountain in the Sverdrup Mountains of Queen Maud Land. The name "Bruns-Berge" after Herbert Bruns, electrical engineer with the expedition, was applied in this area by the GerAE (1938–39) under Alfred Ritscher. The correlation of

the name with these nunataks may be arbitrary but is recommended for the sake of international uniformity and historical continuity.

Brunt Icefalls 75°55'S, 25°00'W

A line of icefalls extending along Caird Coast for about 50 miles, where the steep ice-covered coast descends to Brunt Ice Shelf. The icefalls were discovered Nov. 5, 1967, in the course of a USN Squadron VXE-6 flight over the coast in LC-130 aircraft, and was plotted by USGS from air photos obtained at that time. Named by US-ACAN in association with the Brunt Ice Shelf.

Brunt Ice Shelf 75°40'S, 25°00'W

An ice shelf that borders the coast of Coats Land between Dawson-Lambton Glacier and Stancomb-Wills Glacier Tongue. The feature provided the site for the base of the Royal Society Expedition, 1955-59. Named by UK-APC after David Brunt, English meteorologist, Physical Secretary of the Royal Society, 1948-57, who was responsible for the initiation of the Royal Society Expedition to this ice shelf in 1955.

Brunvoll Glacier 67°48'S, 66°48'E

Broad glacier flowing N to the coast between Murray Monolith and Torlyn Mountain on the E and Scullin Monolith and Mikelsen Peak on the west. The name was suggested by Bjarne Aagaard for the brothers Arnold and Saebjørn Brunvoll, Norwegian whaling captains who explored along this coast in the *Seksern* in January 1931.

Brusen Nunatak 68°12'S, 58°13'E

A lone peak 3 mi W of Mount Gjeita in the Hansen Mountains. Mapped and named by Norwegian cartographers working from air photos taken by the Lars Christensen Expedition, 1936-37. Not: Foley Nunatak.

Brush Glacier 74°29'S, 111°36'W

A broad glacier in the NW part of Bear Peninsula, flowing W into Dotson Ice Shelf to the N of Jeffrey Head, in Marie Byrd Land. First mapped by USGS from air photos taken by USN OpHjp in January 1947. Named by US-ACAN for Bernard E. Brush, station engineer at the Byrd (very low frequency) Substation, 1966.

Brusilov Nunataks 66°42'S, 52°24'E

A group of nunataks lying 6 mi N of Mount Morrison in the Tula Mountains, Enderby Land. The geology of the nunataks was investigated by the SovAE, 1961-62, which named them after the Russian polar explorer G.L. Brusilov.

Brutus Island 54°04'S, 37°09'W

Small island lying near the center of Prince Olav Harbor on the N coast of South Georgia. The descriptive name Saddle Island was given for this feature, probably by a British expedition under Shackleton, 1921-22, but the same name is used elsewhere in the Antarctic. To avoid confusion a new name has been approved for this feature. The name Brutus Island, after the hulk *Brutus*, which was towed across with coal from South Africa by two small catchers and has for many years been moored alongside the whaling station in Prince Olav Harbor, was proposed by Sir Harold Salvesen. Not: Isla Montura, Saddle Island.

Bryan Coast 73°35'S, 84°00'W

That portion of the coast of Antarctica along the S shore of the Bellingshausen Sea between Pfrogner Point and the N tip of Rydberg Peninsula. The eastern end of this coast was discovered

from the air during flights of the USAS (1939-41) and RARE (1947-48). The entire coast was mapped by USGS from surveys and U.S. Navy air photos, 1961-67. Originally named George Bryan Coast after R. Admiral George S. Bryan, Hydrographer of the U.S. Navy, 1938-46, under whose direction noteworthy contributions to polar geography were made. The name has been shortened for the sake of brevity. Not: George Bryan Coast.

Bryan Glacier 73°30'S, 61°33'W

Glacier that flows N along the E side of Werner Mountains and merges with Douglas Glacier on entering New Bedford Inlet in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961-67. Named by US-ACAN for Terry E. Bryan, glaciologist at Byrd Station, summer 1966-67.

Bryant, Cape 71°12'S, 60°55'W

High, snow-covered cape forming the N side of the entrance to Palmer Inlet, on the E coast of Palmer Land. Discovered by members of East Base of the USAS who explored this coast by land and from the air in 1940. Named by the USAS for Herwil M. Bryant of the Smithsonian Inst., biologist with the East Base party.

Bryde, Mount: see O'Connor Peak 54°16'S, 36°19'W.

Bryde Channel: see Lientur Channel 64°50'S, 63°00'W

Bryde Island 64°52'S, 63°02'W

Island 6 mi long and 3 mi wide, lying immediately SW of Lemaire Island, off the W coast of Graham Land. Discovered by the BelgAE under Gerlache, 1897-99, and named for the representative of the BelgAE in Norway.

Bryde Rocks 54°01'S, 38°16'W

Small group of rocks 1 mi WSW of the S end of Main Island, off the W end of South Georgia. Positioned by the SGS in the period 1951-57. Named by the UK-APC for Thorleif Bryde, gunner of the South Georgia Whaling Co., Leith Harbor, for several years beginning in 1952. Not: Bird Rocks.

Bryggeholmen: see Gibbney Island 67°33'S, 62°20'E

Bryse Peaks 72°43'S, 74°50'E

A small nunatak, with two peaks, located 4 mi NNE of Mason Peaks in the Grove Mountains. Mapped from ANARE air photos, 1956-60. Named by ANCA for R.A. Bryse, topographic draftsman, Division of National Mapping, Australian Dept. of National Development, who has contributed substantially to the production of Antarctic maps.

Bubble Spur 77°59'S, 161°50'E

A flattish rock spur that separates the lower ends of Blankenship Glacier and Tedrow Glacier, to the W of Table Mountain, Royal Society Range, in Victoria Land. The name is one of a group in the area associated with surveying applied in 1993 by NZGB; a bubble on a surveying instrument is used to indicate its directional tilt and to facilitate its leveling.

Bubier, Mount 71°51'S, 97°48'W

Mountain visible from seaward, its summit about 4 mi S of the N tip of Edwards Peninsula on Thurston Island. First delineated from air photos taken by USN OpHjp in December 1946. Named by US-ACAN for Kennard F. Bubier, aviation mechanic on ByrdAE in 1928-30. Not: Bubier Head.

Bubier Head: see Bubier, Mount 71°51'S, 97°48'W.

Bucentaure Rock: see Bucentaur Rock 54°09'S, 36°33'W

Bucentaur Rock 54°09'S, 36°33'W

The outermost of three rocks lying close NE of Busen Point, at the SE side of the entrance to Stromness Bay, South Georgia. The name Low Rock was given for this feature by DI personnel during their survey in 1927, but this name is used elsewhere in the Antarctic. Following the survey by SGS, 1951–52, the feature was remained Bucentaur Rock after the floating factory *Bucentaur*, which was anchored at Husvik in the early years of the whaling station after 1907, and from which the Husvik transport *Busen* and the catchers *Busen I, II, III*, etc., derive their names. Not: Bucentaure Rock, Low Rock, Roca Baja.

Buchanan, Cape: see Valavielle, Cape 60°41'S, 44°32'W

Buchanan Bay 67°05'S, 144°40'E

A sheltered bay formed by the junction of the western side of the Mertz Glacier Tongue and the mainland. Cape De la Motte marks the western entrance point. Discovered by the AAE (1911–14) under Douglas Mawson, who named it after J.Y. Buchanan, a patron of the expedition and a former member of the *Challenger* expedition (1872–76).

Buchanan Channel: see Southwind Passage 65°18'S, 65°20'W

Buchanan Hills 79°39'S, 82°55'W

A cluster of rugged hills standing N of Union Glacier and between Collier Hills and Nimbus Hills, in the Heritage Range. Named by US-ACAN for Roger Buchanan, USARP biologist in Antarctica in the 1964–65 season.

Buchanan Passage 66°48'S, 67°42'W

A marine channel separating Liard Island from Adelaide Island at the north end of Hanusse Bay. Discovered and first charted by the FrAE, 1908–10, under Charcot. Named by UK-APC for Capt. Peter W. Buchanan, RN, commanding officer of HMS *Endurance* in the Antarctic Peninsula area, 1968–70.

Buchanan Point 60°43'S, 44°28'W

Point 2.5 mi NW of Cape Dundas and 1 mi SE of Mackintosh Cove, at the NE end of Laurie Island in the South Orkney Islands. In 1903 the ScotNAE under Bruce applied the name “Cape Buchanan,” after J.Y. Buchanan, a member of the *Challenger* cruise of 1872–76, to the prominent cape 3 mi northwestward, which had been named Cape Valavielle in 1838 by a French expedition under Capt. Jules Dumont d’Urville. At the same time, the French name (in English form but misspelled “Cape Vallavielle”) was transferred to the point now described. The name Cape Valavielle has been retained for the prominent cape, as applied by d’Urville, on the basis of priority and wide usage. For the sake of historical continuity, the UK-APC in 1954 recommended that the name Buchanan Point be applied to the point now described. Not: Cape Vallavielle.

Buchan Bay 60°47'S, 44°42'W

Small bay between Cape Hartree and Cape Murdoch, near the SW end of Laurie Island in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for Alexander Buchan, noted Scottish meteorologist.

Bucher Glacier 67°39'S, 66°50'W

Small glacier flowing to Bourgeois Fjord just N of Bottrill Head, on the W coast of Graham Land. Named by UK-APC in 1958 for Edwin Bucher, Swiss glaciologist and author of many publications on snow and avalanches.

Bucher Peak 75°20'S, 110°52'W

One of the highest peaks (2,445 m) in the west-central summit area of the Mount Murphy massif, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for noted American geologist Walter H. Bucher, Professor of Geology at Columbia University, 1940–56.

Bucher Rim 76°19'S, 112°09'W

A rocky eminence on the S portion of the rim of the extinct volcano Mount Takahe, in eastern Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy tricamera aerial photos, 1959–66. Named by US-ACAN for Peter Bucher (University of Bern, Switzerland), USARP glaciologist at Byrd Station, 1969–70.

Buchia Buttress 67°17'S, 68°13'W

A rock buttress at the SW end of Mount Bouvier (q.v.), eastern Adelaide Island. A geological locality investigated by BAS, 1980–81, found to contain marine fossils, including a bivalve species of the genus *Buchia*. So named by UK-APC in 1982.

Buckeye Table 84°49'S, 114°45'W

A plateau, 12 mi long and 2 to 5 mi wide, occupying the central part of Ohio Range, Horlick Mountains. The feature is a high level snow surface with precipitous northern cliffs; the plateau surface merges gradually with the inland ice to the south. The name, a nickname of the state of Ohio and Ohio State University, was proposed by William H. Chapman, USGS surveyor in these mountains in the 1958–59 season. Ohio State University and its Institute of Polar Studies initiated a program of geological investigation in the Ohio Range and the Horlick Mountains beginning in the 1960–61 season.

Buckle Island 66°50'S, 163°12'E

One of the Balleny Islands, 13 mi long and 3 mi wide, lying about midway between Sturge and Young Islands. Discovered in Feb. 1839 by John Balleny, captain of the schooner *Eliza Scott*. He named it for J.W. Buckle, one of the merchants who united with Charles Enderby in sending out the expedition.

Buckley, Mount 84°58'S, 163°56'E

An ice-free peak, 2,645 m, which is the central and highest summit of Buckley Island, a mountain massif at the head of Beardmore Glacier. Discovered by the BrAE (1907–09) and named for George Buckley of New Zealand, a supporter of the expedition.

Buckley Bay 68°22'S, 148°20'E

An embayment formed between the east side of the Ninnis Glacier Tongue and the mainland. Discovered by the AAE (1911–14) under Douglas Mawson, who named it for George Buckley of New Zealand, a patron of the expedition.

Buckley Island 84°57'S, 164°00'E

An island-like mountain massif, surmounted by the peaks of Mount Bartlett, Mount Buckley and Mount Bowers, rising above the ice at the middle of the head of Beardmore Glacier. Discovered

by the BrAE (1907–09) and named in association with Mount Buckley, 2,645 m, its highest peak.

Bucknell Ridge 79°58'S, 158°38'E

A mountainous ridge just above the Cranfield Icefalls, extending east-west along the southern side of Darwin Glacier near its mouth. Mapped by the Darwin Glacier Party of the CTAE (1956–58) and named for E.S. Bucknell, a member of the party.

Buda, Roca: see Buddha Rock 57°04'S, 26°47'W

Buddah Rock: see Buddha Rock 57°04'S, 26°47'W

Budd Coast 66°30'S, 112°00'E

That portion of the coast of Antarctica lying between Hatch Islands, in 109°16'E, and Cape Waldron, in 115°33'E. Discovered in February 1840 by the U.S. Exploring Expedition (1838–42) under the leadership of Lt. Charles Wilkes. Named by Wilkes for Thomas A. Budd, Acting Master of the sloop *Peacock*, one of the ships used on the expedition. Not: Budd Land, Budd's High Land.

Buddenbrock Range 71°52'S, 5°24'E

A group of scattered mountains and nunataks between Austreskorve Glacier and Vestreskorve Glacier in the Mühlig-Hofmann Mountains of Queen Maud Land. The name "Buddenbrock-Kette" was applied in the general area by the GerAE under Alfred Ritscher, 1938–39, for the director of the Atlantic division of the former German Lufthansa Corporation. The correlation of the name with this feature may be arbitrary but is recommended for the sake of international uniformity and historical continuity.

Buddha, Lake 78°03'S, 163°45'E

A large proglacial lake on the S margin of Joyce Glacier in the small valley known as Shangri-la. Named in association with Shangri-la by the New Zealand VUWAE, 1960–61.

Buddha Rock 57°04'S, 26°47'W

Rock, 35 m high, lying 0.3 mi W of Vindication Island in the South Sandwich Islands. Charted and named in 1930 by DI personnel on the *Discovery II*. Not: Buddah Rock, Roca Buda.

Buddington Peak 62°12'S, 58°49'W

Peak rising between Collins Harbor and Marian Cove in the SW part of King George Island, in the South Shetland Islands. Named by the UK-APC in 1960 for James W. Buddington of New London, CT, who visited the South Shetland Islands in 1876–77, 1888–89 and 1889–90, in search of fur seals. Buddington was a leading figure during the revival of United States southern sealing which began in 1871. Not: Cerro Agudo, Monte Gómez.

Budd Land: see Budd Coast 66°30'S, 112°00'E

Budd Pass 53°08'S, 73°32'E

A pass in the ridge that extends SW from Budd Peak on Heard Island. The pass is 1 mi SW of Budd Peak. Surveyed by ANARE, 1948–63. Named by ANCA for G.M. Budd, ANARE officer-in-charge on Heard Island in 1954 and leader of the 1963 ANARE Heard Island expedition.

Budd Peak 53°07'S, 73°33'E

A peak (2,315 m) 1.7 mi SE of Mawson Peak on Heard Island. The peak was mapped by ANARE in 1948. Named by ANCA for G.M. Budd, ANARE officer-in-charge on Heard Island in 1954, and leader of the 1963 ANARE Heard Island expedition.

Budd Peak 66°40'S, 52°40'E

Peak 1 mi W of Mount Berrigan and 23 mi WSW of Stor Hånakken Mountain in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1957. Named by ANCA for W. Budd, glaciologist at Wilkes station in 1961.

Budd's High Land: see Budd Coast 66°30'S, 112°00'E

Büdel Islands 65°47'S, 65°38'W

Group of islands lying between Laktionov Island and Schule Island, off the E side of Renaud Island in the Bischoe Islands. First accurately shown on an Argentine government chart of 1957. Named by the UK-APC in 1959 for Julius Büdel, German sea ice specialist. Not: Islas Aldea.

Budnick Hill 66°17'S, 110°32'E

A small, rounded hill on the S side of Newcomb Bay on Budd Coast. The hill rises between Crane Cove and Geoffrey Bay and is joined by a narrow strip of land to the N part of Bailey Peninsula. First mapped from USN Operation Highjump air photos of 1946–47. Named by ANCA for K. Budnick, ANARE surveyor in 1964 at Wilkes Station, who set up a trigonometrical station on the hill.

Buell Peninsula 70°36'S, 164°24'E

An ice-covered peninsula terminating in Cape Williams, located between the lower ends of Lillie, George and Zykov Glaciers, at the NW end of the Anare Mountains. The peninsula is 15 mi long and 8 mi at its greatest width. Photographed from U.S. Navy aircraft during Operation Highjump, 1946–47, and again in 1960–62. Mapped by USGS in 1962–63. Named by US-ACAN for Lt. (later Lt. Cdr.) Kenneth R. Buell, USN, navigator on aircraft with Squadron VX-6 in Antarctica in 1965–66 and 1966–67.

Buen Camino, Roca: see Fairway Rock 54°50'S, 36°01'W

Buennagel Peak 77°30'S, 146°46'W

A rock peak 1 mi E of Alexander Peak in the N part of Haines Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939–41) and by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for Lawrence A. Buennagel, geomagnetist/seismologist at Byrd Station, 1968.

Buenos Aires, Glacier: see Dawson-Lambton Glacier 76°08'S, 26°45'W

Buen Tiempo, Cabo: see Fairweather, Cape 65°00'S, 61°01'W

Buen Tiempo, Islotes: see Symington Islands 65°27'S, 64°58'W

Buettner Peak 75°17'S, 110°55'W

A sharp peak rising midway along the N wall of Roos Glacier in the NW part of the Mount Murphy massif, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1959–66. Named by US-ACAN for Robert J. Buettner (1914–75), manager of contract logistics support provided to the U.S. Antarctic program by Holmes and Narver, Inc. This work took him to Antarctica at least five times between 1969–74.

Buffer Ice Rise 69°10'S, 67°19'W

An ice rise on the Wordie Ice Shelf, 9 mi N of Mount Balfour, in southern Graham Land. Photographed from the air by RARE in 1947. Surveyed from the ground by FIDS in 1958. So named by

UK-APC because it obstructs the westward flow of ice which is rifted and crevassed in this vicinity.

Buff Island 64°51'S, 64°35'W

Island which lies 3 mi SW of Joubin Islands and 10.5 mi SW of Cape Monaco, Anvers Island, at the SW end of the Palmer Archipelago. The island appears to be first shown and named on a 1936 chart by the BGLE under Rymill.

Buffon Islands 66°40'S, 140°01'E

Group of 3 adjoining, rocky islands, together about 0.25 mi in extent, lying 0.1 mi E of Pétrél Island in the Géologie Archipelago. Charted in 1951 by the FrAE and named by them for Georges Buffon (1707–88), noted French naturalist.

Bugge Islands 69°12'S, 68°25'W

Small group of ice-covered islands lying close off the front of Wordie Ice Shelf and between 4 and 11 mi NW of Mount Guernsey, off the W coast of Antarctic Peninsula. First seen from the air and photographed by the BGLE in 1936, and later roughly mapped from the photographs. Observed in 1947 from the *Port of Beaumont, Texas* by the RARE under Ronne, who named these islands for his niece, Ruth Bugge, who supplied woolen clothing from Norway for the RARE. Not: Ruth Bugge Islands.

Buggisch Peak 79°50'S, 83°46'W

A peak rising to 1,445 m, 1 mi SW of Lester Peak, Edson Hills, in the Heritage Range, Ellsworth Mountains. Mapped by USGS from surveys and USN aerial photographs, 1961–66. Named by US-ACAN after Werner Buggisch, a German member of the field party (stratigrapher, paleontologist) with the USARP Ellsworth Mountains Expedition, 1979–80, led by Gerald F. Webers.

Bulcke, Mount 64°29'S, 62°37'W

Bold summit, 1,030 m, at the end of an ice-covered spur which extends S from the Solvay Mountains, in the S extremity of Brabant Island, in the Palmer Archipelago. Discovered by the BelgAE under Gerlache, 1897–99, and named by him for a supporter of the expedition.

Bulcke Finger 64°28'S, 62°37'W

Prominent finger-like pinnacle, projecting from the western slopes of Mount Bulcke in the S part of Brabant Island in the Palmer Archipelago. First seen and photographed by the BelgAE, 1897–99. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. The name derives from association with Mount Bulcke and came into use among members of the FIDS.

Bulken Hill 71°51'S, 26°58'E

Hill, 2,220 m, standing 3 mi N of Balchen Mountain in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Bulken (the lump).

Bulkington Pass 65°49'S, 62°43'W

A pass on the S side of Flask Glacier and W of Bildad Peak on the E side of Graham Land. The pass trends NE-SW for 4 mi and provides a route from the ice piedmont N of Adit Nunatak to Flask Glacier. The toponym is one in a group applied by UK-APC that reflects a whaling theme, Bulkington being a crewman on the vessel *Pequod* in Herman Melville's *Moby Dick*.

Bulkisen 71°48'S, 26°47'E

A blue icefield between Austhamaren Peak and Bulken Hill in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Bulkisen because of association with Bulken Hill.

Bull, Bay of: see Sea Leopard Fjord 54°04'S, 37°15'W

Bull, Lake 77°32'S, 161°42'E

Small lake 0.5 mi E of Lake Vanda in Wright Valley, Victoria Land. The name appears to have been applied in the 1960's, probably in association with nearby Bull Pass, or for physicist Colin Bull, for whom the pass is named.

Buller, Caleta: see Sitka Bay 53°59'S, 37°24'W

Buller, Cape 53°59'S, 37°22'W

Rugged cape forming the W side of the entrance to the Bay of Isles on the N coast of South Georgia. Discovered and named in 1775 by a British expedition under Cook.

Buller Bay: see Sitka Bay 53°59'S, 37°24'W

Bull Island 71°59'S, 171°06'E

Rocky island between Kemp Rock and Heftye Island in the Possession Islands. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for H.J. Bull who, with Capt. Leonard Kristensen, explored this area in 1895 in the ship *Antarctic* and landed on the Possession Islands.

Bull Nunatak 65°05'S, 60°23'W

Nunatak which lies 3 mi W of Bruce Nunatak in the Seal Nunataks group, off the E coast of Antarctic Peninsula. First charted in 1902 by the SwedAE under Nordenskjöld, and named by him for H.J. Bull, leader with Capt. Leonard Kristensen of a Norwegian expedition to the Antarctic, 1894–95.

Bull Pass 77°28'S, 161°42'E

A low pass through the Olympus Range, between Mount Jason and Mount Orestes, joining McKelvey and Wright Valleys in Victoria Land. Named by the VUWAE (1958–59) for C. Bull, who led this expedition.

Bull Ridge 64°41'S, 63°28'W

Ridge lying S of Mount Français, from which it is separated by a distinct col, in the SE part of Anvers Island in the Palmer Archipelago. Surveyed by the FIDS in 1955–57 and named by the UK-APC for George J. Bull, diesel mechanic at Signy Island station in 1955 and general assistant and mountaineer at Arthur Harbor in 1956, who took part in the survey.

Bullseye Lake 77°25'S, 161°15'E

A very small pond lying near the center of an elliptical depression in the Insel Range, 4.5 mi NE of Mount Boreas, in Victoria Land. The name was applied in 1964 by American geologist Parker E. Calkin and is apparently descriptive of its position and small size.

Bullseye Mountain 83°55'S, 160°05'E

A rounded, mainly ice-covered mountain rising above Peletier Plateau 4 mi NW of Mount Ropar, in the Queen Elizabeth Range. The name given by US-ACAN is descriptive of the semicircular bands of snow on the S side of the mountain.

Bulnes Island 63°18'S, 57°58'W

A small island lying 2 mi NW of Cape Legoupil, Trinity Peninsula. Charted by the Chilean Antarctic Expedition of 1947–48 under Capitán de Fragata Ernesto González Navarrete. Named by him for Manuel Bulnes Sanfuentes, Minister of National Defense during the preceding Chilean Antarctic Expedition of 1947.

Buls Bay 64°23'S, 62°19'W

Bay 2 mi wide, which indents the E side of Brabant Island just N of D'Ursel Point, in the Palmer Archipelago. Discovered by the BelgAE under Gerlache, 1897–99, and named by him for Ch. Buls, a supporter of the expedition.

Buls Island: see Maipo Island 64°25'S, 62°17'W

Bulwark, The 78°17'S, 163°33'E

A steep-walled granite bastion on the W side of Koettlitz Glacier, around which the glacier follows on its descent to Walcott Bay. First mapped by the BrAE, 1910–13. Named by the VUWAE (1960–61) because of its shape.

Bump, The 54°06'S, 36°46'W

A knoll on Robertson Point, the E entrance point of Fortuna Bay, South Georgia. Charted by DI in 1929–30 and named descriptively.

Bumstead, Mount 85°39'S, 174°10'E

A large, isolated mountain, 2,990 m, standing 10 mi SE of Otway Massif in the Grosvenor Mountains. Discovered by R. Admiral Byrd on the ByrdAE flight to the South Pole in November 1929 and named by him for Albert H. Bumstead, chief cartographer of the National Geographic Society at that time, and inventor of the sun compass, a device utilizing shadows of the sun to determine directions in areas where magnetic compasses are unreliable. Not: Windy Nunatak.

Bundermann Range 72°01'S, 2°42'E

A small range located immediately north of Nupskammen Ridge and Terningskarvet Mountain in the Gjelsvik Mountains of Queen Maud Land. The name "Bundermann-Ketten" was applied to a range of mountains in this area by the GerAE (1938–39) under Alfred Ritscher. The correlation of the name with this feature may be arbitrary, but is recommended for the sake of international uniformity and historical continuity. Named for Max Bundermann, aerial photographer on the *Passat*, one of the flying boats used by the German expedition.

Bunger Hills 66°17'S, 100°47'E

Group of moderately low, rounded coastal hills, overlain by morainic drift and notably ice free in the summer months, lying S of the Highjump Archipelago. The hills are marked by numerous meltwater ponds and are nearly bisected by E-W trending Algae Lake. Mapped from air photos taken by USN OpHjp, 1946–47, and named by the US-ACAN for Lt. Cdr. David E. Bunger, USN, plane commander of one of the three USN OpHjp aircraft which engaged in photographic missions along most of the coastal area between 14° E and 164° E. Bunger and members of his crew landed their airplane on an unfrozen lake here in February 1947. Not: Bunger Lakes, Bunger Oasis.

Bunger Lakes: see Bunger Hills 66°17'S, 100°47'E

Bunger Oasis: see Bunger Hills 66°17'S, 100°47'E

Bunker Bluff 73°04'S, 166°40'E

A notable bluff that stands just S of the mouth of Gair Glacier and forms a part of the W wall of Mariner Glacier in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for William H. Bunker, meteorologist at Hallett Station, 1962.

Bunner Glacier 74°28'S, 110°40'W

A glacier in the NE part of Bear Peninsula, flowing to the sea along the SE side of Gurnon Peninsula, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Sgt. Donald R. Bunner, a member of the U.S. Army Aviation Detachment in Antarctica during USN OpDFrz 1965 and 1966.

Bunt, Mount 70°46'S, 66°22'E

A sharp, conical peak, 2,315 m, which appears slightly truncated when viewed from NW, situated at the SW end of a group of low peaks about 7 mi SE of Mount Hollingshead in the Aramis Range, Prince Charles Mountains. Sighted in January 1957 by ANARE southern party led by W.G. Bewsher. Named by ANCA for J.S. Bunt, biologist at Mawson Station in 1956.

Bunt Island 67°09'S, 50°57'E

Island just E of Bowl Island at the head of Amundsen Bay in Enderby Land. Sighted in 1956 by an ANARE airborne field party. Named by ANCA for J. Bunt, biologist at Mawson station in 1956.

Buntley Bluff 79°12'S, 160°24'E

Prominent rock cliff 2 mi long, just northward of Cape Lankester at the mouth of Mulock Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for Ensign Ronald E. Buntley, CEC, USN, in charge of personnel at the air strip, Williams Field, McMurdo Sound in USN OpDFrz, 1964.

Burch, Mount 70°49'S, 164°25'E

A peak (1,400 m) about 3 mi SE of Mount Kelly on the S side of George Glacier, in the Anare Mountains. Named by ANARE for W.M. Burch, geophysicist with the ANARE (*Thala Dan*), 1962, led by Phillip Law, which explored the area.

Burch Peaks 66°52'S, 53°02'E

Group of peaks 6 mi E of Mount Torckler in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1957. Named by ANCA for W.M. Burch, geophysicist at Wilkes station in 1961.

Burd, Cape 63°39'S, 57°09'W

Low rock cliff forming the SW extremity of Tabarin Peninsula, at the NE end of Antarctic Peninsula. Charted by the FIDS in 1946 and named for Oliver Burd, FIDS meteorologist who lost his life when the base hut at Hope Bay burned in November 1948.

Burden Passage 63°08'S, 56°32'W

A marine passage between D'Urville Island and Bransfield Island, off the NE end of Antarctic Peninsula. Charted in 1947 by the FIDS and named after Eugene Burden (1892–1979), who, as master of the *Trepassey*, first navigated the passage in January 1947.

Burdick Channel: see Pendleton Strait 66°00'S, 66°30'W

Burdick Peak 62°38'S, 60°15'W

Peak rising SW of Mount Bowles on Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 for Christopher Burdick, Master of the American schooner *Huntress* of Nantucket, who visited the South Shetland Islands in 1820–21.

Burevestnik, Ozero: see Petrel Lake 62°13'S, 58°58'W

Burgess Glacier 85°26'S, 171°55'E

A glacier, 7 mi long, flowing NW through Otway Massif to enter Mill Stream Glacier. Named by US-ACAN for Robert W. Burgess, USARP ionospheric physicist at South Pole Station, 1963.

Burgess Ice Rise 70°23'S, 73°21'W

A small ice rise in Wilkins Ice Shelf, off the W coast of Alexander Island. Mapped from the air on a radio echo sounding flight by BAS on Feb. 11, 1967, and later accurately positioned from U.S. Landsat imagery of Feb. 1979. Named by the UK-APC in 1980 after Flight Lt. Robert William Burgess, RAF pilot in command of the Twin Otter aircraft on the flight.

Burke Island 73°08'S, 105°06'W

An ice-covered island about 16 mi long and 6 mi wide, lying 37 mi SW of Cape Waite, King Peninsula, in the Amundsen Sea. Delineated from aerial photographs taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for Admiral Arleigh A. Burke, USN, Chief of Naval Operations during USN Deep Freeze operations of 1956–61.

Burkett Islands 66°56'S, 50°19'E

Group of small islands lying just W of Mount Gleadell in the E part of Amundsen Bay, in Enderby Land. Mapped from air photos taken in ANARE aircraft in 1956. Named by ANCA for G.E.L. Burkett, radio officer at Wilkes station in 1960.

Burkett Nunatak 72°42'S, 162°14'E

A nunatak, 2,180 m, standing 1 mi E of Minaret Nunatak, in the Monument Nunataks. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Willis A. Burkett, aviation electronics technician of USN Squadron VX-6. Burkett made six deployments with Deep Freeze expeditions and participated in over 100 flights to McMurdo Sound.

Burkitt Nunatak 69°42'S, 66°53'W

A small nunatak (1,200 m) located in the NW part of Dyer Plateau, Palmer Land, 9 mi WSW of Crescent Scarp. Following glaciological work by BAS, 1980–81, the feature was named by UK-APC after David M. Burkitt, BAS general assistant who assisted in the work that season; member of Joint Services Expedition to Elephant Island, 1970–71.

Burks, Cape 74°45'S, 136°50'W

Prominent rock cape, the NW seaward extension of McDonald Heights, marking the E side of the entrance of Hull Bay on the coast of Marie Byrd Land. The cape was sighted and mapped from the USS *Glacier*, Jan. 31, 1962, and was named for Lt. Cdr. Ernest Burks, USN, senior helicopter pilot on the *Glacier* and first person to set foot on the cape.

Burley, Mount 54°29'S, 36°09'W

A peak (895 m) located 2 mi SW of Doris Bay, South Georgia. Named by UK-APC for Lt. Cdr. Malcolm K. Burley, RN, leader of the British Combined Services Expedition which surveyed this vicinity in 1964–65.

Burlock Peak 86°03'S, 132°20'W

A peak, 2,070 m, on the spur descending from Mount Simsarian, along the E face of Watson Escarpment. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for James U. Burlock, builder at Byrd Station in 1962.

Burmester Dome 83°22'S, 50°56'W

An ice-capped dome rising to 2,095 m in west-central Saratoga Table, Forrestal Range, in the Pensacola Mountains. At the suggestion of USGS party leader Arthur B. Ford, named by US-ACAN after Russell F. Burmester, geologist, Western Washington State University, Bellingham, WA, who worked in the Forrestal Range, 1978–79.

Burn Cliffs 70°06'S, 69°47'W

Two rock outlier ridges (455 m) westward of Mount Ethelwulf, Douglas Range, at the head of Haydn Inlet, Alexander Island. The feature was mapped by DOS from aerial photographs taken by U.S. Navy in 1966 and U.S. Landsat imagery taken Jan. 1974. Named by UK-APC, 1977, after Richard W. Burn, BAS geologist, Adelaide Island and N Alexander Island, 1975–76 and 1976–77.

Burnet Cove 54°14'S, 36°30'W

Cove 0.5 mi SW of Mai Point, on the E side of Maiviken in Cumberland Bay, South Georgia. Roughly surveyed by the SwedAE, 1901–04, under Nordenskjöld. Resurveyed in 1929 by DI personnel, and in 1951 by the FIDS. The name Burnet, given by the UK-APC, is the English name of a plant (genus *Acaena*) which is common in this vicinity.

Burnett, Mount 67°53'S, 62°45'E

Peak, 1,050 m, standing 1.5 mi SW of Trost Peak in the Masson Range of the Framnes Mountains. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37. Remapped by ANARE, 1957–60, and named for Eric Burnett, radiophysicist at Mawson Station, 1958.

Burnette Glacier 72°01'S, 170°03'E

Steep glacier in the Admiralty Mountains, flowing SE between Honeycomb Ridge and Quartermain Point into Moubray Bay. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Airman 2nd Class Robert L. Burnette, USAF, who perished in a crash of a C-124 Globemaster in this vicinity in 1958.

Burnette Rock 75°23'S, 143°13'W

A rock 45 m high, lying 0.7 mi NW of Groves Island, off the coast of Marie Byrd Land. Named for Chief Warrant Officer Desmond Burnette, USA, helicopter pilot on the Marie Byrd Land Traverse, 1966–67. He was pilot of the first helicopter to land on this rock during the mapping control traverse with USGS topographic engineers. The name was suggested to US-ACAN by Charles E. Morrison, Jr., USGS who, with Burnette, Thomas Bray, USGS, and Sgt. Donald Bunner, USA, occupied and positioned this rock on Dec. 4, 1966.

Burnett Island 66°13'S, 110°36'E

Rocky island, 1 mi long in an E-W direction, which lies N of Honkala Island and is the central feature in the Swain Islands. First photographed from the air by USN OpHjp, 1946–47. It was included in a 1957 survey of Swain Islands by Wilkes Station personnel under C.R. Eklund. Named by Eklund for Lt. (j.g.)

Donald R. Burnett, USN, Military Support Unit Commander of the 1957 wintering party at Wilkes Station during the IGY.

Burney Peak 62°19'S, 58°52'W

Peak rising W of Duthoit Point in the E part of Nelson Island, in the South Shetland Islands. Named by the UK-APC in 1961 for Captain Burney, Master of the British sealing vessel *Nelson*, probably from London, who visited the South Shetland Islands in 1820–23.

Burnham, Mount 71°34'S, 159°50'E

A projecting, bluff-type mountain (2,810 m) along the W wall of Daniels Range, 6 mi S of Big Brother Bluff, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for James B. Burnham, ionospheric physicist who wintered at South Pole Station in 1958 and 1961.

Burnham, Mount 77°16'S, 142°05'W

Mountain, 1,170 m, standing 2 mi N of Mount Van Valkenburg in the Clark Mountains, in the Ford Ranges of Marie Byrd Land. Discovered on aerial flights from West Base of the USAS in 1940 and named for Guy Burnham, Cartographer in the School of Geography of Clark University.

Burn Murdoch, Cape: see Murdoch, Cape 60°48'S, 44°41'W

Burn Murdoch Nunatak: see Murdoch Nunatak 65°01'S, 60°02'W

Burn Murdock, Cape: see Murdoch, Cape 60°48'S, 44°41'W

Burns Bluff 70°22'S, 67°56'W

A bluff on the W coast of Palmer Land, immediately to the S of Naess Glacier. Named by UK-APC for Frederick M. Burns, BAS geophysicist at Stonington Island, 1967–69.

Burns Glacier 73°57'S, 164°15'E

A tributary glacier, 12 mi long, flowing N along the E side of Pinckard Table to enter the SW side of Tinker Glacier, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for John P. Burns, radioman with the McMurdo Station winter parties of 1963 and 1967.

Burnside Ridges 69°12'S, 157°10'E

Three roughly parallel ridges running approximately NE-SW with their NE extremities terminating at Matusевич Glacier. This area was photographed from the air by USN Operation Highjump in 1947. The feature was sketched and photographed on Feb. 20, 1959 by Phillip Law, leader of the ANARE (*Magga Dan*) expedition. Named by ANCA after Lt. Cdr. I.M. Burnside, RAN, hydrographic surveyor on the *Magga Dan* during the voyage.

Buromskiy, Cape 69°00'S, 156°05'E

The northern point of Krylov Peninsula. Photographed from the air by USN Operation Highjump in 1947. Mapped from air photos taken by the Soviet Antarctic Expedition of 1958. Named by the latter after a member of the Soviet expedition, hydrographer N.I. Buromskiy, who died in Antarctica in 1957.

Buromskiy Island 66°32'S, 93°00'E

Small island lying 0.3 mi S of Haswell Island in the Haswell Islands. Discovered and mapped by the AAE under Mawson, 1911–14. Photographed by the Soviet expedition of 1958 and

named for N.I. Buromskiy, expedition hydrographer who lost his life in the Antarctic in 1957.

Burrage Dome 75°33'S, 161°05'E

A mainly ice-covered dome, 840 m, standing 4 mi NE of the summit of Mount Joyce, in the Prince Albert Mountains, Victoria Land. Mapped by USGS from surveys and USN air photos, 1956–62. Named by US-ACAN for Roy E. Burrage, Jr., construction mechanic with the South Pole Station winter party, 1966.

Burr Brundage, Mount: see Brundage, Mount 75°16'S, 65°28'W

Burrill, Mount 72°50'S, 167°29'E

A mountain (2,310 m) on the east edge of Malta Plateau, situated 4 mi S of Mount Hussey at the head of Hand Glacier, in the Victory Mountains of Victoria Land. Named by the NZ-APC for Dr. Meredith F. Burrill, Executive Secretary of the U.S. Board on Geographic Names, 1943–73. His leadership in the development of Antarctic names policy and principles has been instrumental in establishing greater international uniformity in the geographic nomenclature of the continent.

Burris Nunatak 71°47'S, 160°27'E

A nunatak near the N extremity of Emlen Peaks, 2 mi NW of Mount Cox, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for James M. Burris, assistant to the USARP representative at McMurdo Station, 1967–68.

Burro Peaks 62°26'S, 59°47'W

Twin rock peaks forming the summit (190 m) of Dee Island, English Strait, in the South Shetland Islands. The feature was descriptively named "Picos Orejas de Burro" (burro's ears peaks) by a Chilean Antarctic Expedition (c. 1963), but a shorter English form of the name has been approved. Not: Picos Orejas de Burro

Burrows, Mount 74°18'S, 163°39'E

A peak (2,260 m) located 5 mi WSW of Mount Queensland in the Deep Freeze Range, Victoria Land. The feature towers high above the lower, east side of Priestley Glacier. Named by the NZ-APC for A.L. Burrows, Scientific Leader at Scott Base, 1964–65.

Bursey, Mount 76°01'S, 132°38'W

A broad, ice-covered mountain, 2,780 m, which forms the E end of Flood Range in Marie Byrd Land. Discovered by members of the USAS on aerial flights in 1940. Named for Jacob Bursey, member of the ByrdAE (1928–30) and dog-driver with the USAS party which sledged to the W end of the Flood Range in December 1940.

Bursey Icefalls 75°59'S, 132°48'W

The icefalls draining the N slope of Mount Bursey in the Flood Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN in association with Mount Bursey.

Bursik, Mount 79°43'S, 84°23'W

Central peak (2,500 m) of the Soholt Peaks, in the Heritage Range, Ellsworth Mountains. Mapped by USGS from ground surveys and USN air photos, 1961–66. Named by US-ACAN for Capt. Vlada D. Bursik, USN, Deputy Commander, USN Support Force, Antarctica, during Deep Freeze 1966.

Burtis Island 73°04'S, 125°29'W

A small island lying 10 mi east of Cape Dart, Siple Island, off the coast of Marie Byrd Land. Mapped by USGS from U.S. Navy aerial photography, 1962–65. Named by US-ACAN for William J. Burtis, ionospheric physicist at Byrd Station in 1965.

Burton, Mount 72°33'S, 166°44'E

A graywacke peak (2,740 m) standing at the W side of the mouth of Osuga Glacier in the Barker Range, Victory Mountains, Victoria Land. Named by the NZFMCAE, 1962–63, after William Burton, crew member on the *Terra Nova* during the BrAE, 1910–13. Burton, who lived in New Zealand, was a guest of the U.S. Navy during the 1962–63 Antarctic season when he visited the continent again with two others of Scott's veterans.

Burton Cove 54°01'S, 38°04'W

A small cove just E of Pearson Point, the SW tip of Bird Island, South Georgia. Named by UK-APC for Robert W. Burton, BAS assistant in fur seal investigations on Bird Island, 1971–72.

Burton Island Glacier 66°49'S, 90°20'E

Channel glacier, about 9 mi wide and 7 mi long, flowing N from the continental ice to Posadowsky Bay just W of Cape Torson. Mapped from aerial photographs taken by USN OpHjp, 1946–47, and named by the US-ACAN for the USS *Burton Island*, one of the two icebreakers of USN OpWml, 1947–48, which assisted in establishing astronomical control stations along Wilhelm II, Queen Mary, Knox and Budd Coasts.

Burton Island Rock: see Bigelow Rock 66°10'S, 95°25'E

Burton Point 66°16'S, 66°56'W

The northeastern point of Krogh Island, in the Biscoe Islands. Mapped from air photos taken by FIDASE (1956–57). Named by UK-APC for Alan C. Burton, Canadian physiologist who has specialized in cold climate physiology and the problems of clothing for cold environments.

Burton Rocks 68°14'S, 67°02'W

Small group of three rocks lying in Marguerite Bay, 1 mi S of Neny Island, off the W coast of Graham Land. Surveyed in 1947 by the FIDS and named by them for the USS *Burton Island*, icebreaker with USN OpWml, which visited Marguerite Bay in 1948 and assisted in the relief of the RARE and FIDS parties on Stonington Island. Not: Roca Grumete Sánchez.

Burt Rocks 69°35'S, 159°09'E

A cluster of rocks at the W margin of Noll Glacier, 1.5 mi S of Axthelm Ridge, in Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1961–64. Named by US-ACAN for DeVere E. Burt, USARP biologist at Hallett Station, 1968–69.

Busen Fjord: see Husvik Harbor 54°10'S, 36°40'W

Busen Point 54°09'S, 36°33'W

Point forming the SE side of the entrance to Stromness Bay, on the N coast of South Georgia. The point was known at a much earlier date, but the name was first used on the charts based upon the 1927–29 survey by DI personnel. Named for the *Busen*, a Norwegian whaling transport vessel which was often stationed at the head of Husvik Harbor in Stromness Bay.

Bush, Mount: see Wade, Mount 84°51'S, 174°19'W

Bushell Bluff 71°28'S, 67°36'W

A bluff on the W coast of Palmer Land, immediately S of Norman Glacier. Named by UK-APC for Anthony N. Bushell, BAS general assistant at Fossil Bluff, 1969–70.

Bush Mountains 84°57'S, 179°30'E

A series of rugged elevations at the heads of Ramsey and Kosco Glaciers, extending from Mount Weir in the west to Anderson Heights overlooking Shackleton Glacier in the east. Photographed at a distance by the ByrdAE on several flights to the Queen Maud Mountains in November 1929. The mountains were further defined from aerial photographs taken by the USAS (1939–41), USN OpHjp (1946–47), and USN OpDFrz (1956–63). Named by US-SCAN, on the recommendation of R. Admiral Byrd, after James I. Bush, American financier and patron of the ByrdAE, 1928–30.

Bushnell, Mount 85°36'S, 150°48'W

Mountain, 840 m, between Mount Durham and Pincer Point in the NW part of Tapley Mountains. First roughly mapped by the ByrdAE, 1928–30. Remapped by USGS, 1960–64. Named by US-ACAN for Vivian C. Bushnell of the American Geographical Society, editor of the Society's *Antarctic Map Folio Series*.

Buskin Rocks: see Borceguí Island 61°03'S, 55°09'W

Buskirk Bluffs 70°47'S, 165°39'E

A sheer rock bluff on the W side of McMahon Glacier in the Anare Mountains, Victoria Land. Named by ANARE for Maj. H. Buskirk, USAF, official American observer with ANARE (*Thala Dan*), 1962, which explored this area.

Bussey Glacier 65°16'S, 64°01'W

Glacier flowing W from Mount Peary to the head of Waddington Bay, on the W coast of Graham Land. First charted by the FrAE under Charcot, 1908–10. Named by the UK-APC in 1959 for Group Captain J. Bussey of the Directorate of Overseas Surveys.

Butcher Nunatak 76°32'S, 146°30'W

A nunatak at the S end of the Birchall Peaks, 4 mi SW of Swarm Peak, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for Robert S. Butcher, builder, USN, at Byrd Station in 1967.

Butcher Ridge 79°12'S, 155°48'E

A large, mainly ice-free ridge near the polar plateau in the W part of the Cook Mountains. The ridge is in the form of an arc, extending NW from Mount Ayres. Named by US-ACAN for Cdr. H.K. Butcher, USN, air operations officer on the Staff of the U.S. Naval Support Force, Antarctica, during USN OpDFrz 1963 and 1964.

Butcher's Shoulder: see Butchers Spur 85°34'S, 166°30'W

Butchers Spur 85°34'S, 166°30'W

A high ice-covered spur which descends southwestward from Mount Don Pedro Christophersen to the polar plateau. This feature on the south margin of the Queen Maud Mountains is the location of Roald Amundsen's "Butcher Shop." It was here in November 1911 that his party slaughtered their excess sledge dogs, consuming portions themselves and permitting the remaining sledge dogs a feast, prior to making the final dash to the South Pole, which was reached December 14. Not: Butcher's Shoulder.

Butler, Mount 78°10'S, 155°17'W

The southernmost peak of the Rockefeller Mountains, on Edward VII Peninsula in Marie Byrd Land. Discovered on Jan. 27, 1929, by members of the ByrdAE on an exploratory flight over this area. Named for Raymond Butler, member of the USAS party which occupied the Rockefeller Mountains seismic station during November and December 1940. Not: Mount Navy.

Butler Glacier 77°24'S, 152°42'W

A broad glacier draining the N side of Edward VII Peninsula in the vicinity of Clark Peak, and flowing generally northeastward through the Alexandra Mountains to its terminus in Sulzberger Bay. Mapped from surveys by the USGS and U.S. Navy air photos (1959–65). Named by US-ACAN for Lt. F.M. Butler, USN, expedition navigator in charge of all navigation watch sections on the USS *Glacier* during the exploration of this area in January 1962.

Butler Island 72°13'S, 60°08'W

Circular, ice-covered island 6 mi wide which rises to 185 m, lying 7 mi E of Merz Peninsula, off the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by the USAS. During 1947 it was photographed from the air by the RARE, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for K.S.P. Butler, FIDS commander in 1947–48.

Butler Nunataks 68°03'S, 62°24'E

A small group of nunataks immediately N of Mount Twintop in the Framnes Mountains. Mapped from ANARE surveys of 1954–62. Named by ANCA for W.J. Butler, senior diesel mechanic at Mawson Station in 1967.

Butler Passage 64°58'S, 63°44'W

Passage between the Wauwermans Islands and Puzzle Islands, connecting Peltier and Lemaire Channels, off the W coast of Graham Land. The route was probably first used by the FrAE under Charcot, 1903–05 and 1908–10, on their trips between Port Lockroy and Booth Island. Named by the UK-APC in 1959 for Capt. Adrian R.L. Butler, RN, captain of the British naval guardship HMS *Protector* which was in this area in 1957–58 and 1958–59.

Butler Peaks 71°31'S, 67°10'W

A group of peaks at the S end of the Batterbee Mountains, located about 4 mi S of Mount Bagshawe between the Armstrong and Conchie Glaciers. Named by UK-APC after Peter F. Butler, BAS geophysicist at Stonington Island, 1969–70 and 1973.

Butler Rocks 82°35'S, 47°57'W

Two rock nunataks, 910 m, standing 2.5 mi SW of Vanguard Nunatak in northern Forrester Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for William A. Butler, aerographer, Ellsworth Station winter party, 1957.

Butson Ridge 68°05'S, 66°53'W

Rocky ridge with a number of ice-covered summits, the highest 1,305 m, forming the N wall of Northeast Glacier on the W coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1946–48 by the FIDS and named for Dr. Arthur R.C. Butson, FIDS medical officer at Stonington Island,

who in July 1947 rescued a member of the RARE from a crevasse in Northeast Glacier. Not: Cordón Molinero.

Butterfly Knoll 80°20'S, 28°09'W

One of the La Grange Nunataks, located 4.5 mi SW of Mount Beney in the Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. Named by the UK-APC from its resemblance in plan view to a butterfly.

Butter Point 77°39'S, 164°14'E

Low point forming the S side of the entrance to New Harbor on the coast of Victoria Land. Discovered by the BrNAE (1901–04) under Scott. So named by them because the Ferrar Glacier party left a tin of butter here, in anticipation of obtaining fresh seal meat at this point on the return journey.

Butter Point Piedmont Glacier: see Bowers Piedmont Glacier 77°43'S, 164°18'E

Butters, Mount 84°53'S, 177°28'W

The snowcapped summit (2,440 m) of a buttress-type escarpment at the extreme SE end of Anderson Heights, between Mincey Glacier on the south and Shackleton Glacier on the east. Discovered and photographed by USN OpHjp (1946–47) on the flights of Feb. 16, 1947, and named by US-ACAN for Capt. Raymond J. Butters, USMC, navigator of Flight 8A.

Butterworth, Mount 70°42'S, 66°45'E

A mountain consisting of four peaks and a long, low ridge extending in an E-W direction, situated 5 mi S of Thomson Massif in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for G. Butterworth, radio officer at Wilkes Station in 1963 and at Mawson Station in 1966.

Buttons, The 65°14'S, 64°16'W

Two small islands lying 0.2 mi NW of Galindez Island in the Argentine Islands, Wilhelm Archipelago. Charted and named in 1935 by the BGLE under Rymill. Not: Islas Botones.

Buttress Hill 63°34'S, 57°03'W

Flat-topped hill, 690 m, with steep rock cliffs on the W side, standing 2 mi E of the most northern of the Seven Buttresses on Tabarin Peninsula in the NE extremity of Antarctic Peninsula. Charted in 1946 by the FIDS and so named because of its proximity to the Seven Buttresses. Not: Cerro El Fuelle.

Buttress Nunataks 72°22'S, 66°47'W

Group of prominent coastal rock exposures, the highest 635 m, lying close inland from George VI Sound and 10 mi WNW of the Seward Mountains, on the W coast of Palmer Land. First seen from a distance and roughly surveyed in 1936 by the BGLE under Rymill. Visited and resurveyed in 1949 by the FIDS, who gave this descriptive name.

Buttress Peak 72°26'S, 163°45'E

A peak at the E end of the central ridge of Gallipoli Heights in the Freyberg Mountains. The descriptive name was suggested by P.J. Oliver, NZARP geologist who studied the peak, 1981–82.

Buttress Peak 84°27'S, 164°16'E

A conical rock peak, 2,950 m, the eastern part of which projects as a rock buttress into the head of Berwick Glacier, standing 3 mi S of Mount Stonehouse in Queen Alexandra Range. The descriptive name was given by NZGSAE, 1961–62.

Buxton Glacier 54°26'S, 36°12'W

A glacier flowing NE between Heaney Glacier and Cook Glacier into St. Andrews Bay, South Georgia. Named by the UK-APC in 1987 after the Buxton family: Aubrey Leland Oakes and Pamela Mary Oakes (Baron Buxton of Alsa and Lady Buxton), who visited South Georgia in HMS *Endurance* in March 1982, and their daughter the Hon. Lucinda Catherine Buxton, who led a filming expedition in this area in February-April 1982.

Buzfuz Rock 65°28'S, 65°53'W

A rock 1.5 mi W of Snubbin Island in the Pitt Islands, northern Biscoe Islands. Named by UK-APC in 1971 after Sergeant Buzfuz, a character in Charles Dickens' *Pickwick Papers*.

Byarne-Ogor, Ostrova: see Aagaard Islands 65°51'S, 53°40'E

Byerly, Mount 81°53'S, 89°23'W

A major peak in the eastern part of the Nash Hills. It was positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 10, 1958, and named for Perry Byerly, chairman of the Technical Panel for Seismology and Gravity of the U.S. National Committee for the IGY, as set up by the National Academy of Sciences.

Byers, Cabo: see Page, Cape 63°55'S, 60°18'W

Byers Peninsula 62°38'S, 61°05'W

Mainly ice-free peninsula forming the W end of Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 for James Byers, a New York shipowner who tried unsuccessfully in August 1820 to induce the United States Government to found a settlement in and take possession of the South Shetland Islands. Byers organized and sent out a fleet of American sealers from New York to the South Shetland Islands in 1820–21.

Byewater Point 62°45'S, 61°30'W

Point on the W side of Snow Island, in the South Shetland Islands. Charted and named Cape Byewater by the British expedition under Foster in 1829. Not: Cape Brewster.

Bynon Hill 62°55'S, 60°36'W

Ice-covered, dome-shaped hill with two rounded summits, 340 m, standing 1.5 mi N of Pendulum Cove, Deception Island, in the South Shetland Islands. The name appears on an Argentine government chart of 1953. Not: Goddard Hill.

Bynum Peak 85°03'S, 173°41'W

A rock peak 3 mi SE of Mount Finley, overlooking the N side of McGregor Glacier in the Queen Maud Mountains. Named by US-ACAN for Gaither D. Bynum, USARP satellite geodesist at McMurdo Station, winter 1965.

Byöbu Rock 68°22'S, 42°00'E

A large rock whose seaward face presents a crenulate or irregular shoreline, standing 1 mi E of Gobamme Rock on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, and named Byöbu-iwa (folding screen rock).

Bypass Hill 72°28'S, 168°28'E

Hill, 660 m, situated on the ridge at the junction of Tucker and Trafalgar Glaciers in Victoria Land. Named by the NZGSAE, 1957–58, who established a survey station at this point.

Bypass Nunatak 68°01'S, 62°28'E

A nunatak about 2 mi S of Mount Tritoppen in the David Range of the Framnes Mountains. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition (1936–37) and called Steinen (the stone). It was renamed by ANARE because the feature marked the turning point in the route taken by the 1958 ANARE seismic party in order to bypass dangerous terrain to the southwest. Not: Steinen.

Byrd, Cape 69°38'S, 76°07'W

Low, ice-covered cape forming the NW extremity of Charcot Island. First seen from the air and roughly mapped by Sir Hubert Wilkins on Dec. 29, 1929, in a flight from the *William Scoresby*. Named by Wilkins for R. Admiral Richard E. Byrd, USN, (1888–1957) noted American explorer and leader of five expeditions to Antarctica, 1928–57. Remapped from air photos taken by USN OpHjp in 1947 by Searle of the FIDS in 1960.

Byrd, Mount 77°10'S, 144°38'W

A mountain (810 m) located 1 mi N of the E end of Asman Ridge in the Sarnoff Mountains, Ford Ranges, Marie Byrd Land. Mapped by the USAS (1939–41) led by R. Admiral Richard E. Byrd. Named by US-ACAN for Richard E. Byrd, Jr., son of Admiral Byrd and a member of Operation Highjump (1946–47), who was of assistance to US-ACAN in clarifying a large number of name suggestions put forth by his father.

Byrdreen 71°45'S, 26°00'E

The largest glacier, about 40 mi long and 11 mi wide, flowing NW between Mount Bergersen and Balchen Mountain in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named for R. Admiral Richard E. Byrd, USN, commander of USN Operation Highjump. Not: Byrd Glacier.

Byrd Glacier 80°20'S, 159°00'E

A major glacier, about 85 mi long and 15 mi wide, draining an extensive area of the polar plateau and flowing eastward between the Britannia Range and Churchill Mountains to discharge into Ross Ice Shelf at Barne Inlet. Named by the NZ-APC after R. Admiral Richard E. Byrd, USN, American Antarctic explorer.

Byrd Glacier: see Byrdreen 71°45'S, 26°00'E

Byrd Head 67°27'S, 61°01'E

Conspicuous, rocky headland on the coast 1 mi SE of Colbeck Archipelago, just W of Howard Bay. Discovered in February 1931 by the BANZARE under Mawson, who named it for R. Admiral Richard E. Byrd, USN. Not: Bergnes.

Byrd Land: see Marie Byrd Land 80°00'S, 120°00'W

Byrd Mountains: see Harold Byrd Mountains 85°26'S, 146°30'W

Byrd Névé 81°00'S, 154°00'E

An immense névé at the head of Byrd Glacier. Named by the NZ-APC in association with Byrd Glacier.

Byrd Subglacial Basin 80°00'S, 115°00'W

A major subglacial basin of West Antarctica, extending E-W between Crary Mountains and Ellsworth Mountains. It is bounded to the S by a low subglacial ridge which separates this feature from Bentley Subglacial Trench. A rude delineation of this subglacial

basin was determined by several U.S. seismic parties operating from Byrd, Little America V, and Ellsworth Stations during the 1950's and 1960's. Named by US-ACAN (1961) for its locus relative to Marie Byrd Land and Byrd Station. This revised description, excluding Bentley Subglacial Trench and smaller basins to the S of Flood Range and Ford Ranges, follow delineation of the region by the SPRI-NSF-TUD airborne radio echo sounding program, 1967-79.

Bystander Nunatak 71°20'S, 159°40'E

A nunatak (2,435 m) lying 5 mi SW of Forsythe Bluff, on the W side of Daniels Range in the Usarp Mountains. The name applied by the northern party of NZGSAE, 1963-64, is suggestive of the aspect of this relatively isolated feature.

Bystrova, Skala: see Bystrov Rock 71°47'S, 12°35'E

Bystrov Rock 71°47'S, 12°35'E

Prominent rock lying 1 mi SSE of Isdalsegga Ridge in Südliche Petermann Range, Wohlthat Mountains. Mapped from air photos and surveys by NorAE, 1956-60; remapped by SovAE, 1960-61, and named after Soviet paleontologist A.P. Bystrov. Not: Skala Bystrova.

Byvågåsane Peaks 69°25'S, 39°48'E

Three low aligned rock peaks which surmount the E shore of Byvågen Bay on the E-side of Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936-37 and named Byvågåsane (the town bay peaks) in association with Byvågen Bay.

Byvågen Bay 69°25'S, 39°43'E

A small bay indenting the E shore of Lützow-Holm Bay between Skarvsnes Foreland and Byvågåsane Peaks. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936-37, and named Byvågen (the town bay).

Byway Glacier 66°30'S, 65°12'W

Northern tributary of Erskine Glacier, flowing W from Slessor Peak in Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955-57, and mapped from these photos by the FIDS. So named by the UK-APC in 1958 because the sledging route up this glacier is not as good as that along the main route up Erskine Glacier.

C

C, Dome: see Charlie, Dome 75°00'S, 125°00'E

Caballero, Rocas: see Knight Rocks 62°50'S, 61°35'W

Caballete, Isla: see Ridge Island 67°42'S, 67°06'W

Cabeza, Isla: see Head Island 64°31'S, 62°55'W

Cabeza, Mount 64°08'S, 62°11'W

A mountain on the SE side of Paré Glacier, 1 mi SW of Hales Peak, in the NE portion of Brabant Island, Palmer Archipelago. The name "Monte Cabeza" was used on a 1957 Argentine hydrographic chart. Not: Mount Morgagni.

Cabinet Inlet 66°35'S, 63°10'W

Ice-filled inlet, 36 mi long in a NW-SE direction, and some 27 mi wide at its entrance between Capes Alexander and Robinson, along the E coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE in December 1947. Named by the FIDS for the British War Cabinet which authorized the FIDS in 1943. Not: Ensenada Gabinete, Ensenada Reales Cédulas.

Cabo Basso, Islote: see Basso Island 62°30'S, 59°44'W

Cabo Paredes, Isla: see Jingle Island 65°23'S, 65°18'W

Cabrales, Islas: see Hennessy Islands 65°53'S, 65°43'W

Cabrera Nunatak 75°46'S, 128°12'W

A nunatak 6.5 mi NE of Putzke Peak in the McCuddin Mountains, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Quirino Cabrera, CM1, USN, Construction Mechanic at Byrd Station, 1966 and 1969.

Cabrial Rock 54°19'S, 36°14'W

Rock lying at the N side of the entrance to Ocean Harbor, South Georgia. Positioned by the SGS in the period 1951–57. Named by the UK-APC for Frank Cabrial, steward on the American brig *Frances Alan* of New London, who was drowned on Oct. 14, 1820; there is a grave marked by a wooden cross recording this in Ocean Harbor.

Cacapon Inlet 66°10'S, 101°00'E

An inlet about 2 mi wide and 9 mi long, lying between Thomas Island and Fuller Island in the Highjump Archipelago. The inlet is bounded on the west by Edisto Ice Tongue and on the east by the coast of Antarctica. Mapped from aerial photographs taken by USN Operation Highjump in February 1947. Named by US-ACAN after USS *Cacapon*, a tanker in the Western Task Group of Operation Highjump, 1946–47.

Cachalot Peak 65°38'S, 62°16'W

A peak (1,040 m) between Stubb and Starbuck Glaciers, about 3.5 mi W of Mount Queequeg, near the E coast of Graham Land. The toponym is one in a group by UK-APC that reflects a whaling theme, cachalot being the sperm whale.

Cache Heights 73°27'S, 94°06'W

Broad snow-covered heights about 3 mi long and 2 mi wide, located just NE of Bonnabeau Dome in the Jones Mountains. Much lower than Bonnabeau Dome, the heights rise considerably

above the adjacent ice surface. Mapped and named by the University of Minnesota-Jones Mountains Party, 1960–61. A food cache placed here by the party during a blizzard was never recovered.

Cachiyuyo, Banco: see Kelp Bank 54°00'S, 37°06'W.

Cachiyuyo, Punta: see Kelp Point 54°10'S, 36°38'W

Cadbury, Mount 71°21'S, 66°38'W

Easternmost of the Batterbee Mountains, 1,800 m, standing ESE of Mount Ness and 18 mi inland from George VI Sound on the W coast of Palmer Land. The coast in this vicinity was first seen and photographed from the air on Nov. 23, 1935 by Lincoln Ellsworth, but this mountain seems to have been obscured from Ellsworth's line of sight by clouds or intervening summits. Mount Cadbury was surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 for Mrs. Henry Tyler Cadbury, who raised a special fund to defray the cost of refitting the *Penola*, the ship of the BGLE, at South Georgia in 1936.

Cadenazzi Rock 76°18'S, 112°39'W

A rock outcrop 1.5 mi E of Roper Point on the W slope of Mount Takake in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy tricamera aerial photos, 1959–66. Named by US-ACAN for Lt. Michael P. Cadenazzi, USN, LH-34 helicopter commander. He flew close support missions for USARP scientists during the 1969–70 and 1970–71 seasons.

Cadle Monolith 71°40'S, 60°58'W

A conspicuous, somewhat isolated, bare rock monolith or headland, standing at the E end of Condor Peninsula, 9 mi SE of Cape MacDonald, on the E coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Gary L. Cadle, CE2, USN, electrician at Palmer Station in 1973.

Cadman Glacier 65°37'S, 63°47'W

A glacier, 1.5 mi wide at its mouth and about 7 mi long, flowing northwestward into the head of the southern arm of Beascochea Bay on the W side of Antarctic Peninsula. Discovered and roughly surveyed in 1909 by the FrAE under Jean B. Charcot. Surveyed in 1935 by the BGLE, led by John Rymill, and later named for John Cadman, 1st Baron Cadman of Silverdale, who contributed toward the cost of the BGLE, 1934–37.

Cadwalader Beach 76°58'S, 166°53'E

A beach nearly a mile long at the S end of Beaufort Island, in the Ross Archipelago. The beach is occupied by a large Adélie penguin rookery and there is easy access from the sea when the coast is ice free. Named by the NZGSAE (1958–59) for Capt. John Cadwalader, USN, who encouraged and assisted the expedition in its Antarctic program, and also rendered valuable assistance to the N.Z. parties of the CTAE, 1956–58.

Cadwalader Inlet 72°04'S, 96°18'W

Ice-filled inlet about 22 mi long, indenting the NE coast of Thurston Island between Evans and Lofgren Peninsulas. Discovered on helicopter flights from the USS *Burton Island* and *Glacier* by personnel of USN Bellingshausen Sea Expedition in February 1960. Named by US-ACAN for Capt. John Cadwalader, USN, chief of staff to U.S. Antarctic Projects Officer and representative

of Task Unit Commander aboard the *Burton Island* in February 1960.

Cady Nunatak 77°13'S, 142°51'W

A nunatak 3 mi E of Mount Zeigler in the NE part of the Allegheny Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Frederick M. Cady, USARP ionospheric physicist at Byrd Station, 1968.

Café Point 64°39'S, 61°59'W

Point lying 2 mi S of Zapato Point and 2 mi E of Nansen Island on the W coast of Graham Land. Charted by the BelgAE under Gerlache 1897–99. The name appears on an Argentine government chart of 1954.

Caffin Valley 77°19'S, 160°36'E

A cirque-type valley between Mount Bastion and Gibson Spur in the Willett Range, Victoria Land. Named by the NZ-APC in 1985 after James M. Caffin, New Zealand Antarctic historian who, from 1973–84, was editor of *Antarctic*, the popular news bulletin published by the New Zealand Antarctic Society.

Cagle Peaks 79°33'S, 85°28'W

A group of sharp peaks that surmount the S end of White Escarpment in the Heritage Range. Named by the University of Minnesota geological party, 1963–64, for Maj. Paul M. Cagle, commanding officer and pilot of the helicopter detachment that assisted the party in the field.

Cahill, Mount 74°53'S, 71°14'W

One of the Sky-Hi Nunataks in Ellsworth Land, rising to 1,755 m ENE of Mount Carrara. Named in 1987 by US-ACAN after Laurence J. Cahill, Jr., physicist, University of Minnesota, Minneapolis, MN; Principal Investigator in upper atmospheric physics at Siple Station and South Pole Station for many years from 1973.

Cain Nunatak 63°34'S, 57°42'W

The westernmost of two isolated nunataks on the S side of Broad Valley, Trinity Peninsula. The name arose at the time of the FIDS geological survey in 1960–61 and is in association with nearby Abel Nunatak.

Caird Coast 76°00'S, 24°00'W

That portion of the coast of Coats Land lying between the terminus of Stancomb-Wills Glacier, in 20°00'W, and the vicinity of the Hayes Glacier, in 27°54'W. Sir Ernest Shackleton sailed along the coast in the *Endurance* during January 1915, naming it for Sir James Caird, patron of the expedition.

Cairn Hill 63°30'S, 57°04'W

Hill with two summits, the higher 475 m, standing 2 mi E of Duse Bay and 1 mi SW of Mineral Hill on Tabarin Peninsula. First charted by the FIDS in 1946, who so named it because a cairn was erected on the eastern of the two summits. Not: Cerro Don Bosco.

Cairn Ridge 82°35'S, 52°50'W

A rock ridge adjoining the N side of Dufek Massif, 2 mi NE of Hannah Peak, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. A cairn was erected on this ridge during a visit in December 1957 by the US-IGY traverse party from Ellsworth Station.

Cairns Cove 54°00'S, 37°42'W

A small cove on the W side of Right Whale Bay on the N coast of South Georgia. Charted and named "Haste Cove" by DI in 1930 but, following acceptance of the name, it was withdrawn by the UK-APC in 1959. Following hydrographic survey from HMS *Owen*, 1960–61, the cove was named after Petty Officer Peter T. Cairns, RN, a member of the survey group. Not: Haste Cove.

Cairns Shoal 54°00'S, 37°40'W

Small area of shoal lying 0.6 mi W of Craigie Point in the E part of Right Whale Bay, South Georgia. Named by the UK-APC for Petty Officer Peter T. Cairns of HMS *Owen*, which first located this shoal in 1961. Not: Smith Shoal.

Calais, Massif: see Calais, Mount 69°11'S, 70°15'W

Calais, Mount 69°11'S, 70°15'W

Massive mountain, 2,345 m, at the NW side of Schokalsky Bay in the NE part of Alexander Island. First roughly surveyed in 1909 by the FrAE under Charot, who named it for the French city. The mountain was resurveyed in 1948 by the FIDS. Not: Massif Calais.

C. A. Larsen: see Larsen Islands 60°36'S, 46°04'W

Caldwell, Mount 72°04'S, 101°46'W

A peak of the Walker Mountains, located 3 mi SE of Mount Lopez, near the W end of Thurston Island. Delineated from air photos taken by USN Operation Highjump in December 1946. Named by US-ACAN for Capt. Henry Howard Caldwell, USN, captain of the seaplane tender *Pine Island* which explored the area during this expedition. Caldwell and five others survived a Dec. 30, 1946 crash of a seaplane at Thurston Island.

Caleta Carnero, Isla: see Beer Island 66°00'S, 65°41'W

Caleta Cordero, Isla: see Beer Island 66°00'S, 65°41'W

Calfee Nunatak 74°19'S, 161°40'E

An isolated nunatak at the E side of Reeves Névé, 4 mi W of Mount Fenton, in Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1956–62. Named by US-ACAN for David W. Calfee, field assistant at McMurdo Station, 1965–66.

Calf Head 54°28'S, 36°03'W

Rocky headland on the N coast of South Georgia, 3 mi NW of Cape Harcourt. The name "Kalber-Berg" (calf mountain) was given by the German group of the International Polar Year Investigations, 1882–83, but was limited to the summit of the headland. The feature was surveyed by the SGS, 1951–52, who reported that a name is more essential for its seaward extremity in order to distinguish it from Cape Harcourt, with which it is easily confused when viewed from N and NW. The English form of the name, Calf Head, was recommended by the UK-APC in 1954. Not: Kalber-Berg.

Calf Point 71°30'S, 169°45'E

A point between the terminus of Nielsen Glacier and Penelope Point on the W shore of Robertson Bay, northern Victoria Land. Charted and named in 1911 by the Northern Party, led by Campbell, of the BrAE 1910–13. Named because of the great number of young seals seen here.

Calf Rock 70°31'S, 68°38'W

Rock mass on the E coast of Alexander Island, which rises to 500 m, 2 mi NE of Lamina Peak and 2 mi inland from George VI Sound. First photographed from the air on Nov. 23, 1935, by Lincoln Ellsworth and mapped from these photos by W.L.G. Joerg. Surveyed in 1949 by the FIDS, and so named by them because of its offlying position; it is separated from the Lamina Peak ridge by faulting.

California Plateau 86°04'S, 145°10'W

An undulating ice-covered plateau, 30 mi long and from 2 to 12 mi wide, which rises to 3,000 m at the eastern side of Scott Glacier. The plateau reaches a maximum height in Mount Blackburn (3,275 m) at the southern end. The northwestern side of the plateau is marked by the steep rock cliffs of Watson Escarpment; the southeastern side grades gradually to the elevation of the interior ice. Mapped by USGS from ground surveys and U.S. Navy aerial photography, 1960–64. Named by US-ACAN for the several branches of the University of California which have sent numerous researchers to work in Antarctica.

Caliper Cove 73°34'S, 166°56'E

A rounded, ice-filled cove in Lady Newnes Bay, situated between the mouths of Wyld and Suter Glaciers along the coast of Victoria Land. The shape of the cove and the points that encompass it are nearly symmetrical suggesting calipers; hence the name applied by NZ-APC in 1966.

Calkin Glacier 77°46'S, 162°17'E

Glacier just W of Sentinel Peak, flowing N from the Kukri Hills toward the terminus of Taylor Glacier in Victoria Land. Charted by the BrAE under Scott, 1910–13. Named by the US-ACAN for Parker Calkin, USARP geologist who made investigations in the area during 1960–61 and 1961–62.

Callender Peak 75°18'S, 110°18'W

Precipitous, mainly ice-covered subsidiary peak on the Mount Murphy massif, located 9 mi ENE of the summit of Mount Murphy, on Walgreen Coast, Marie Byrd Land. First mapped by USGS from air photos obtained in January 1947 by U.S. Navy Operation Highjump. Named by US-ACAN after Lt. Gordon W. Callender (CEC), USN, officer in charge of Byrd Station in 1966.

Callisto Cliffs 71°03'S, 68°20'W

This feature, rising to 550 m, comprises two cliffs, one forming the southern margins of Jupiter Glacier, the other the eastern margin of Alexander Island. The feature was mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. Named by UK-APC in association with Jupiter Glacier after Callisto, one of the moons of the planet Jupiter.

Calmette, Cape 68°04'S, 67°13'W

Cape marking the W extremity of a rocky peninsula which rises more than 625 m and projects from the W coast of Graham Land for 3 mi to form the S shore of Calmette Bay. Discovered in 1909 by the FrAE under Charcot, who from a distance mistook this cape for an island. The BGLE under Rymill, 1934–37, determined the true nature of the feature. Named by Charcot for Gaston Calmette, editor of *Le Figaro*, who furnished the FrAE with copies of this newspaper for the two years preceding the expedition. Not: Ile Calmette.

Calmette, Ile: see Calmette, Cape 68°04'S, 67°13'W

Calmette Bay 68°03'S, 67°10'W

Small bay between Camp Point and Cape Calmette, on the W coast of Graham Land. Charted by the BGLE under Rymill, 1934–37, who named the bay for its S entrance point, Cape Calmette.

Caloplaca Cove 60°43'S, 45°35'W

A cove between Rethval Point and Pantomime Point on the east coast of Signy Island. Named by UK-APC after the abundant orange lichens of the genus *Caloplaca*, which encrust the sea cliffs around the cove.

Caloplaca Hills 86°07'S, 131°00'W

A distinctive group of rock hills including Mount Carmer and Heathcock Peak, lying E of the Watson Escarpment on the W side of Reedy Glacier. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–64. The name was suggested by J.H. Mercer of the Institute of Polar Studies, Ohio State University, and denotes the type of lichen found here.

Calvin, Mount 71°17'S, 165°06'E

A mountain over 1,600 m, standing 4 mi SE of Pilon Peak in the S part of Everett Range. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–63. Named for Lt. Calvin Luther Larsen, USN, navigator and photographic officer of USN Squadron VX-6 during Operation Deep Freeze 1969; as a chief photographer's mate, he wintered at Little America V in 1957. Lieutenant Larsen's first name was applied by US-ACAN to avoid a further overuse of the surname Larsen in Antarctic geographic names.

Calypso Cliffs 68°48'S, 64°13'W

Two prominent rocky cliffs rising to 850 m on the S side of Mobiloil Inlet immediately W of the mouth of Cronus Glacier, on the E coast of Antarctic Peninsula. Photographed from the air by USAS, Sept. 28, 1940, and by RARE (Trimetrogon air photography), Dec. 22, 1947. Surveyed by FIDS in Dec. 1958. Named by UK-APC after Calypso, daughter of Atlas, goddess in Greek mythology.

Camana Rock 54°10'S, 36°37'W

Rock midway between Kelp and Harrison Points in the S part of Stromness Bay, South Georgia. Mapped by DI personnel under Lt. Cdr. J.M. Chaplin in 1927 and 1929. Named in 1957 by the UK-APC for the sailing vessel *Camana*, owned by Tønsberg Hvalfangeri, Husvik, located at the head of Husvik Harbor in Stromness Bay.

Camber, Mount 64°41'S, 63°16'W

Mainly snow-covered mountain, 1,400 m, 1 mi NE of Molar Peak in the Osterrieth Range of Anvers Island, in the Palmer Archipelago. First seen by the BelgAE, 1897–99, under Gerlache. The name High Peak was probably given to the feature by Lt. Cdr. J.M. Chaplin, RN, during a sketch survey in 1927 on the *Discovery*. A resurvey in 1955 by the FIDS found this descriptive name to be unsuitable. The new name, given by the UK-APC, is descriptive of the summit, which is long and gently sloping like a cambered road surface. Not: High Peak, Pico Elevado.

Cambrian Bluff 82°52'S, 160°33'E

Prominent bluff jutting into the N side of Nimrod Glacier and forming the S end of the Holyoake Range. Named by the southern

named it after the Candlemas Islands group. Not: Candlemis Island, Isla Candelaria.

Candlemas Islands 57°03'S, 26°43'W

Small group, consisting of two islands and numerous rocks, lying 23 mi SE of Visokoi Island in the South Sandwich Islands. Discovered on Feb. 2, 1775 by a British expedition under Cook, who named them to commemorate the day of their discovery. Not: Islas Candelaria.

Candlemis Island: see Candlemas Island 57°03'S, 26°40'W

Canelo, Punta: see Duthiers Point 64°48'S, 62°49'W

Cangrejo Cove 65°04'S, 63°39'W

Cove 1.5 miles long lying immediately W of Azure Cove in Flandres Bay, along the W coast of Graham Land. First roughly charted by the BelgAE under Gerlache, 1897–99. The name “Bahía Cangrejo” (crayfish cove or crayfish bay) was given by the Argentine Antarctic Expedition of 1951–52. The name is descriptive and derives from the small peninsula forming the west side of the cove which, when viewed from the air, resembles the pincers of a crayfish. Not: Bahía Chavez, Crab Cove.

Canham, Mount 70°29'S, 64°35'E

A mountain at the N end of Bennett Escarpment, about 2 mi S of Corry Massif, in the Porthos Range of the Prince Charles Mountains. The feature was plotted from ANARE air photos of 1965. Named by ANCA for J.R. Canham, officer in charge at Wilkes Station in 1967.

Canham Glacier 71°49'S, 163°00'E

A tributary glacier about 30 mi long which drains the NW part of Evans Névé. The glacier drains NW between the Alamein and Salamander Ranges of the Freyberg Mountains and enters the Rennick Glacier westward of Bowers Peak. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Lt. Cdr. David W. Canham, Jr., officer in charge of the winter party at the U.S. Naval Air Facility, McMurdo Sound, 1956.

Canicula, Mount 63°43'S, 58°30'W

A mountain formed of two rock peaks, 890 and 825 m high. It stands 3 mi E of Sirius Knoll on the divide separating Russell East Glacier and Russell West Glacier in central Trinity Peninsula. Charted in 1946 by FIDS, and named by them because of the association with Sirius Knoll. Canicula is a synonym of Sirius, the dog star.

Canine Hills 71°37'S, 163°50'E

A line of mostly snow-covered hills and ridges trending NW-SE for 11 mi and forming the eastern half of Molar Massif in the Bowers Mountains, q.v. Named by the NZ-APC in 1983 from a proposal by geologist M.G. Laird, in association with the names Molar Massif and Incisor Ridge.

Caninus Nunatak 71°06'S, 70°10'W

A nunatak (c. 700 m) located E of Palindrome Buttress and the N part of Walton Mountains (q.v.), Alexander Island. In the 1974–75 field season, the BAS reduced its number of dog teams. The name derives from the burial of nine dogs near the nunatak.

Canis Heights 70°26'S, 66°19'W

A mainly snow-covered ridge located between the two upper tributaries of Millett Glacier on the western edge of the Dyer Plateau of Palmer Land. Named by UK-APC after the constellations of Canis Major and Canis Minor.

Canisteo Peninsula 73°48'S, 102°20'W

An ice-covered peninsula, about 30 mi long and 20 mi wide, which projects between Ferrero and Cranton Bays into the E extremity of Amundsen Sea. Delineated from air photos taken by USN OpHjp in December 1946. Named by US-ACAN for the USS *Canisteo*, a tanker with the eastern task group of this expedition.

Cannonball Cliffs 71°47'S, 68°15'W

Cliffs at the S side of the terminus of Neptune Glacier on the E side of Alexander Island. The feature consists of two east-west ridges about 500 m high, joined by a narrow north-south ridge. The feature was mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. The name was applied by the UK-APC for the sandstone in the area, which contains numerous spherical, brown concretions known as “cannon-ball” concretions.

Canoe Nunatak 77°59'S, 161°16'E

A nunatak, 1 mi long and 0.2 mi wide, located 2.2 mi ESE of Mount Blackwelder, Wilkniss Mountains, in Victoria Land. The distinctive shape resembles an upturned canoe. Named by Alan Sherwood, NZGS party leader in the area, 1987–88.

Cañón Point 64°34'S, 61°55'W

Point marking the SW side of the entrance to Bancroft Bay, on the W coast of Graham Land. First roughly charted by the BelgAE under Gerlache, 1897–99. The name appears on an Argentine government chart of 1954. Not: Icarus Point.

Canopus, Lake 77°33'S, 161°31'E

A small lake 65 m above the southern shore of Lake Vanda in Wright Valley, Victoria Land. Named by the Eighth VUWAE, 1963–64, after Canopus, pilot of Menelaus, the king of Sparta.

Canopus, Mount 81°50'S, 161°00'E

A prominent ice-free peak, 1,710 m, surmounting the W edge of the Nash Range, 4.5 mi E of Centaur Bluff. Named by the NZGSAE (1960–61) after the brightest of the stars, Canopus, used for survey fixes.

Canopus Crags 71°10'S, 66°38'W

A cluster of peaks of 3 mi extent, located between Vela Bluff and Carina Heights along the S side of Ryder Glacier, in Palmer Land. Named by UK-APC after the star Canopus in the constellation of Carina.

Canopus Island 67°32'S, 62°59'E

The southern of the two largest islands of the Canopus Islands in Holme Bay, Mac. Robertson Land. The two islands were mapped as one by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Spjøtøy. The island was included in a triangulation survey by ANARE in 1959, and named after the star Canopus. Not: Spjøtøy.

Canopus Islands 67°32'S, 62°59'E

Group of small islands just N of Klung Islands in the E part of Holme Bay, Mac. Robertson Land. Mapped by Norwegian car-

tographers from air photos taken by the Lars Christensen Expedition, 1936–37. Named by ANARE after the star Canopus.

Canopus Rocks 67°31'S, 62°56'E

Two small, low rocks lying 1 mi NW of Canopus Island in the E part of Holme Bay, Mac. Robertson Land. Plotted from photos taken from ANARE aircraft in 1958. Named by ANCA after Canopus Island.

Canopy Cliffs 84°00'S, 160°00'E

Steep cliffs extending from Mount Allsup to Mount Ropar on the SE side of Peletier Plateau, Queen Elizabeth Range. A descriptive name applied by the Northern Party of the NZGSAE (1961–62), suggesting the precipitous nature of the cliffs.

Canso Rocks 63°39'S, 59°18'W

Two rocks lying W of Bone Bay, 2 mi NW of Notter Point, Trinity Peninsula. Named by UK-APC after one of the types of aircraft used by FIDASE (1955–57).

Cantello, Mount 70°52'S, 163°07'E

Mountain (1,820 m) on the N side of Crawford Glacier, 4 mi NW of Mount Keith, in the Bowers Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–65. Named by US-ACAN for Dominic Cantello, Jr., USN, electrician with the South Pole Station party, 1965.

Canterbury Spur 84°43'S, 113°45'W

A flat-topped ridge leading N from the N face of Mount Glossop-teris, 1.3 mi E of Discovery Ridge, Ohio Range. Mapped by USGS from surveys and USN aerial photographs, 1958–59. The spur is named after the Canterbury Museum, Christchurch, N.Z., home of the National Antarctic Exhibition, Research and Reference Center. Geologists Jane Newman and Margaret Bradshaw of the Canterbury Museum worked on this ridge during the 1984–85 field season.

Canto Point 62°27'S, 59°44'W

Point forming the NW side of the entrance to Discovery Bay, Greenwich Island, in the South Shetland Islands. Surveyed by the Chilean Antarctic Expedition of 1947 which named it for Capitán de Corbeta Raúl Del Canto, engineer on the ship *Iquique* during the expedition. The name Fort William (q.v.) was incorrectly applied to this feature by DI personnel of the *Discovery II* in 1935. Not: Fort William, Punta Del Canto, Punta Fort William, Spark Point.

Cantrell Peak 71°12'S, 165°14'E

A peak (1,895 m) standing 6 mi NNE of Mount Calvin and overlooking Ebbe Glacier from the S, in the N part of Everett Range. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–63. Named by US-ACAN for Major Robert L. Cantrell, USMC, pilot on photographic flights in C-130 aircraft during Operation Deep Freeze 1968 and 1969.

Canty Point 64°45'S, 63°32'W

Point forming the W side of the entrance to Børgen Bay on the SE coast of Anvers Island, in the Palmer Archipelago. Roughly charted by the BelgAE under Gerlache, 1897–99. Surveyed by the FIDS in 1955. Named by the UK-APC for John Canty of FIDS, radio operator/mechanic at the Arthur Harbor Station in 1955 and a member of the sledging party which visited the point. Not: Punta Rocosa.

Canwe, Cape 74°43'S, 163°41'E

A high rock bluff 3 mi N of Vegetation Island, forming the W extremity of the Northern Foothills, Victoria Land. First explored and named by the Northern Party of the BrAE, 1910–13. The name arose from seeing this feature a long way off and wondering whether they could reach it. Not: Cape Mossyface.

Canyon Glacier 83°57'S, 175°25'E

A narrow glacier, 35 mi long, flowing to the Ross Ice Shelf. It drains the NW slopes of Mount Wexler and moves northward between steep canyon walls of the Separation Range and Hughes Range to join the ice shelf immediately W of Giovinco Ice Piedmont. The glacier was observed from nearby Mount Patrick by the N.Z. Alpine Club Antarctic Expedition (1959–60) who gave the descriptive name.

Cape Adare Peninsula: see Adare Peninsula 71°40'S, 170°30'E

Cape Armitage Promontory: see Hut Point Peninsula 77°46'S, 166°51'E

Cape Barne Glacier: see Barne Glacier 77°36'S, 166°26'E

Cape George Harbour: see Godthul 54°17'S, 36°18'W

Capella Rocks 70°39'S, 66°32'W

A low, rocky ridge composed of several nunataks, located near the head of Bertram Glacier, 2 mi NE of Auriga Nunataks, in Palmer Land. Named by UK-APC after the star Capella in the constellation of Auriga.

Cape-Pigeon Rocks 66°59'S, 143°47'E

Twin rocky promontories on the western side of Watt Bay, 3 mi south of Garnet Point. Discovered by the AAE (1911–14) under Douglas Mawson, who gave the name because of the large Cape pigeon rookery here. The US-ACAN has added a hyphen between the first and second words in the specific part of the name to reduce ambiguity and emphasize the generic term “Rocks.”

Capitán, Monte: see Doumer Hill 64°51'S, 63°34'W

Capitán Bonert, Islote: see Bonert Rock 62°27'S, 59°43'W

Capitán Farrel, Paso: see Benz Pass 63°41'S, 58°22'W

Capitán Martínez Canaveri, Islote: see Dobrowolski Island 64°36'S, 62°55'W

Capitán Mendioroz, Monte: see William, Mount 64°47'S, 63°41'W

Capitán Turrado, Islas: see Omicron Islands 64°21'S, 62°55'W

Capitán Vago, Caleta: see King Edward Cove 54°17'S, 36°30'W

Capitán Yalour, Estrecho: see Yalour Sound 63°34'S, 56°39'W

Capley, Mount 79°32'S, 83°13'W

A peak, 1,810 m, in the Nimbus Hills of the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Lt. Cdr. Joe H. Capley, USN, pilot on photographic flights over Marie Byrd and Ellsworth Lands in Deep Freeze 1965 and 1966.

Capling Peak 72°26'S, 167°08'E

A peak (2,730 m) on the N side of Croll Glacier, 5 mi SE of Bramble Peak, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Robert W. Capling, USN, aviation machinist's mate and flight engineer on Hercules aircraft at McMurdo Station during Operation Deep Freeze 1967 and 1968.

Cappellari Glacier 85°52'S, 158°40'W

A glacier 11 mi long in the Hays Mountains, flowing W from the NW shoulder of Mount Vaughan to enter Amundsen Glacier just N of Mount Dort. First roughly mapped by the ByrdAE, 1928–30. Remapped by USGS from ground surveys and USN air photos, 1960–64. Named by US-ACAN for Lewis K. Cappellari who made ionospheric studies at McMurdo Station in 1965.

Capsize Glacier 74°02'S, 163°20'E

A tributary glacier in Deep Freeze Range, draining the slopes between Mount Cavaney and Mount Levick and flowing NE to enter the Campbell Glacier, in Victoria Land. So named by the Northern Party of NZGSAE, 1965–66, because of the spectacular spill which the party had there.

Capstan Rocks 64°57'S, 63°26'W

Small group of rocks, sometimes awash at high water and in strong winds, lying 1 mi S of Bob Island in the S entrance to Gerlache Strait, off the W coast of Graham Land. Shown on an Argentine government chart of 1950, but not named. Surveyed by the British Naval Hydrographic Survey Unit, 1956–57, and given this descriptive name by the UK-APC.

Cara, Mount 82°45'S, 161°06'E

Peak, 3,145 m, standing 4 mi NNW of Mount Lysaght in the Queen Elizabeth Range. Named by the BrAE, 1907–09. Not: Mount Gara.

Carapace Nunatak 76°53'S, 159°24'E

A prominent isolated nunatak, the most westerly near the head of Mackay Glacier, standing 8 mi SW of Mount Brooke where it is visible for a considerable distance from many directions. So named by the N.Z. party of the CTAE (1956–58) because of the carapaces of small crustaceans found in the rocks.

Caraquet Rock 62°07'S, 59°02'W

Rock lying nearly 4 mi WSW of Bell Point, off the W part of King George Island in the South Shetland Islands. Named by the UK-APC in 1960 for the sealing vessel *Caraquet* (Capt. J. Usher) from Liverpool, which visited the South Shetland Islands in 1821–22.

Carbón, Puerto: see Coal Harbor 54°02'S, 37°57'W

Carbone, Mount 76°22'S, 144°30'W

A mountain 3 mi E of Mount Paige in the Phillips Mountains, Marie Byrd Land. Discovered and mapped from air photos by the ByrdAE (1928–30). Named by US-ACAN for Al Carbone, cook with the ByrdAE (1933–35).

Carbon Point 57°06'S, 26°42'W

A point just NW of Clapmatch Point, near the SW corner of Candlemas Island, South Sandwich Islands. The name derives from "Punta Carbon" used in Argentine hydrographic publications as early as 1953.

Carbutt Glacier 65°09'S, 62°49'W

Glacier entering Goodwin Glacier to the E of Maddox Peak, close E of Flandres Bay on the W coast of Graham Land. The glacier appears on an Argentine government chart of 1954. Named by the UK-APC in 1960 for John Carbutt (1832–1905), American (formerly English) photographer who introduced the first emulsion-coated celluloid photographic cut films, in 1888.

Carcelles, Punta: see Hope Point 54°17'S, 36°29'W

Carcelles Peak 54°22'S, 36°30'W

Peak rising above 1,065 m immediately S of the head of Moraine Fjord, South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Alberto Carcelles, who made biological collections at South Georgia in 1926–27 and 1929–30 for the Museo Nacional de Buenos Aires.

Cardell, Mount 70°12'S, 65°11'E

An elongated mountain 2 mi NW of Bradley Ridge in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos. Named for N. Cardell, senior technician (electronics) at Mawson Station in 1964.

Cardell Glacier 66°25'S, 65°32'W

Glacier flowing into Darbel Bay between Shanty Point and Panther Cliff, on the W coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955–57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for John D.M. Cardell, English ophthalmic surgeon, who evolved the first satisfactory snow goggle design combining adequate protection and ventilation with safety and sufficient visual field.

Cardinal, Mount 63°27'S, 57°10'W

Conical mountain, 675 m, lying close SW of Mount Taylor and overlooking the NE head of Duse Bay, at the NE end of Antarctic Peninsula. Probably first seen by a party under J. Gunnar Andersson of the SwedAE, 1901–04. Charted in 1945 by the FIDS, who named it for Sir Allan Cardinal, then Gov. of the Falkland Islands.

Cardno Point 54°00'S, 38°00'W

High flat-topped, tussock-covered point forming the E extremity of Bird Island, off the W end of South Georgia. Named by the UK-APC for Lt. Cdr. Peter G.N. Cardno, RN, navigating officer of HMS *Owen*, which made a hydrographic survey of the area in 1960–61. Not: Dixon Point.

Cardozo Cove 62°10'S, 58°37'W

The northern of two coves at the head of Ezcurra Inlet, Admiralty Bay, on King George Island in the South Shetland Islands. Probably named by the FrAE under Charcot, who charted Admiralty Bay in December 1909.

Care Heights 69°25'S, 70°45'W

A group of mostly ice-covered peaks and ridges, rising to c. 1,500 m N of Tufts Pass and forming the S end of Rouen Mountains (q.v.), Alexander Island. The feature was photographed from the air by RARE, 1947–48, and was mapped from these photographs by D. Searle of FIDS, 1960. Further delineation was made from U.S. Navy aerial photographs taken 1966–67 and from U.S. Landsat imagery taken Jan. 1974. Named by UK-APC in 1977 after Bernard W. Care, BAS geologist, Stonington Island, 1973–75; Adelaide Island and N Alexander Island, 1975–76 and 1976–77.

Carey Glacier 78°53'S, 83°55'W

A glacier on the E side of Miller Peak in the S end of the Sentinel Range, Ellsworth Mountains, flowing SE to Minnesota Glacier. Mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Lt. David W. Carey, pilot with USN Squadron VX-6, who was killed in the crash of a P2V Neptune airplane at McMurdo Sound in October 1956.

Carey Point 57°47'S, 26°32'W

Rocky point marking the W extremity of Saunders Island in the South Sandwich Islands. It was named Rocky Point by DI personnel following their survey in 1930, but the name has been changed to avoid duplication with Rocky Point on Vindication Island. Carey Point was recommended by the UK-APC in 1953 and is named for Cdr. W.M. Carey, RN, captain of the *Discovery II* at the time of the survey. Not: Punta Rocosa, Rocky Point.

Carey Range 72°53'S, 62°37'W

A mountain range, c. 35 mi long and 5 mi wide with peaks rising to 1,700 m, between Mosby Glacier and Fenton Glacier in SE Palmer Land. The range was mapped by USGS from U.S. Navy aerial photographs, 1966–69. In association with the names of continental drift scientists grouped in this area, named by US-ACAN after Samuel W. Carey, Australian geologist; Professor of Geology, University of Tasmania, 1946–70.

Cargo Pond 76°55'S, 161°05'E

A pond in a moraine enclosed basin at the foot of the cliffs to the S end of Alatna Valley, in the Convoy Range of Victoria Land. This frozen pond was the site of a 1960–61 USARP field party (Parker Calkin, Roger Hart, and Ellory Schempp) which had to be evacuated in a hurry. Equipment and provisions stockpiled on the pond ice were eventually redistributed by the wind and lodged among the surrounding morainic boulders. A 1989–90 NZARP party (Trevor Chinn) camped nearby made frequent visits to the site to clean up the area, but also to acquire various 30-year old exotic foods to supplement their standard camp fare.

Carina Heights 71°09'S, 66°08'W

A large sprawling elevation, bounded by crags to the SW and by an icefall to the NW, located near the head of Ryder Glacier at the W edge of the Dyer Plateau of Palmer Land. Named by UK-APC after the constellation of Carina.

Carleton Glacier 78°01'S, 162°30'E

Glacier which drains the NW slopes of Mount Lister in the Royal Society Range and flows N into the Emmanuel Glacier. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1963 after Carleton College, Northfield, Minnesota, which has sent researchers to Antarctica, and in association with nearby Rutgers Glacier.

Carlita Bay 54°14'S, 36°38'W

Small bay in the W side of Cumberland West Bay, South Georgia, just W of Islet Point. The feature was named "Horseshoe Bay," probably during the survey of Cumberland West Bay by HMS *Dartmouth* in 1920, but this name has been accepted for a bay close S of Cape George, less than 15 mi away. A new name, proposed by the UK-APC in 1957, has been substituted for the feature now described; Carlita Bay is for the *Carlita* (or *Lille Carl*), a whale catcher built in 1907, owned by the Compañía Argentina de Pesca and used for sealing and for general transport work. Not: Ganse Bukta, Horseshoe Bay.

Carlos, Pasaje: see Carl Passage 54°04'S, 37°08'W

Carlota, Bahía: see Carlota Cove 62°22'S, 59°42'W

Carlota, Cabo: see Charlotte, Cape 54°32'S, 35°54'W

Carlota Cove 62°22'S, 59°42'W

Cove between Coppermine Peninsula and Misnomer Point on the W coast of Robert Island, South Shetland Islands. The name derives from the Chilean name "Bahía Carlota" appearing on a 1961 Chilean hydrographic chart of the area. Not: Bahía Carlota.

Carlotta, Bahía: see Charlotte Bay 64°33'S, 61°39'W

Carl Passage 54°04'S, 37°08'W

Narrow channel 0.2 mi long, joining Elephant Lagoon to Cook Bay along the N coast of South Georgia. The name appears on a chart based upon 1929–30 surveys by DI personnel, but may reflect an earlier naming. Not: Pasaje Carlos.

Carlson Bay: see Carlsson Bay 64°24'S, 58°04'W

Carlson Buttress 82°35'S, 52°27'W

A rock buttress to the NW of Worcester Summit, rising to c. 1,800 m on the N side of Jaeger Table, Dufek Massif, in the Pensacola Mountains, q.v. Named by US-ACAN in 1979 for Christine Carlson, USGS geologist who worked in the Dufek Massif area, summer 1976–77.

Carlson Glacier 69°25'S, 68°03'W

A glacier, 9 mi long, flowing northward from between Mount Edgell and Relay Hills into Wordie Ice Shelf, Fallières Coast. Photographed from the air by the U.S. Navy, 1966, and surveyed by BAS, 1970–73. Named by US-ACAN after Cdr. Burford A. Carlson, USN, Staff Meteorologist, Naval Support Force, Antarctica, Operation Deep Freeze, 1970 and 1971.

Carlson Inlet 78°00'S, 78°30'W

An ice-filled inlet, 100 mi long and 25 mi wide, lying between Fletcher Ice Rise and Fowler Ice Rise in the SW part of Ronne Ice Shelf. Named by US-ACAN for Lt. Ronald F. Carlson, USN, pilot of R4D-8 and C-130 aircraft with Squadron VX-6, who made innumerable flights in support of IGY and USARP field parties in the 1950's and 1960's. On Dec. 14, 1961, he commanded a C-130 Hercules flight from McMurdo Station across the Ellsworth Mountains, during which he observed, photographed and roughly sketched this inlet.

Carlson Island 63°53'S, 58°16'W

Rocky island 1 mi long and 300 m high, lying in Prince Gustav Channel 3 mi SE of Pitt Point, Trinity Peninsula. Discovered in 1903 by the SwedAE under Nordenskjöld, who named it for Wilhelm Carlson, one of the chief patrons of the expedition. Not: Wilh. Carlson Island, Wilh. Carlsons Ö.

Carlson Peak 75°57'S, 70°33'W

One of the Bean Peaks in the Hauberg Mountains, Ellsworth Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Paul R. Carlson, meteorologist at Byrd Station, summer 1965–66.

Carlsson Bay 64°24'S, 58°04'W

Square bay, 2.5 mi in extent, entered 3 mi NW of Cape Foster on the SW side of James Ross Island. First seen and surveyed in 1903 by the SwedAE under Nordenskjöld, who named it for J. Carlsson

of Sweden who contributed toward the cost of the expedition. The bay was resurveyed by the FIDS in 1952–53. Not: Carlson Bay, J. Carlson Bay, John Carlson Bucht.

Carlyon Glacier 79°34'S, 159°50'E

A large glacier which flows ESE from the névé E of Mill Mountain to the Ross Ice Shelf at Cape Murray. Mapped in 1958 by the Darwin Glacier party of the CTAE (1956–58). Named by the NZ-APC for R.A. Carlyon, who with H.H. Ayres, made up the party.

Carmer, Mount 86°06'S, 131°11'W

A mountain on the E side of Wotkyns Glacier, standing 2 mi WNW of Heathcock Peak in the Caloplaca Hills. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for John L. Carmer, electronics technician at Byrd Station in 1962.

Carminatti, Bahía: see Ambush Bay 63°10'S, 55°26'W

Carnebreen: see Shinnan Glacier 67°55'S, 44°38'E

Carnein Glacier 74°41'S, 162°54'E

A glacier draining the SE corner of Eisenhower Range, flowing S along the W side of McCarthy Ridge to merge with lower Reeves Glacier at the Nansen Ice Sheet, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for Carl R. Carnein, glaciologist at McMurdo Station, summer 1965–66.

Carnell Peak 79°28'S, 85°17'W

A peak (1,730 m) in Watlack Hills, situated 2.5 mi from the SE end of the group, in the Heritage Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Lt. D.L. Carnell, CEC, USN, maintenance officer at Williams Field, McMurdo Sound, in the 1965–66 season, who was responsible for the first piercing of the Ross Ice Shelf at 50 meters.

Carnes, Mount 77°39'S, 161°21'E

A peak 2 mi E of Saint Pauls Mountain in the Asgard Range, Victoria Land. Named by US-ACAN for Philip A. Carnes, engineering and construction manager for Antarctic Support Services, who supervised construction and maintenance performed at the USARP South Pole, Siple and McMurdo Stations for three seasons, 1973–76.

Carnes Crag 71°28'S, 162°41'E

A rock crag, 1,310 m, in the NW extremity of Lanterman Range, Bowers Mountains, overlooking the junction of Sledgers Glacier and the Rennick Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for James J. Carnes USN, chief electrician's mate with the McMurdo Station winter party, 1967.

Carney Island 73°57'S, 121°00'W

An ice-covered island, 70 mi long, with all but its N coast lying within Getz Ice Shelf, located between Siple Island and Wright Island along the coast of Marie Byrd Land. First delineated (except for its S part) from aerial photographs taken by USN OPHjp in January 1947. Named by US-ACAN for Admiral R.B. Carney, USN (Ret.), Chief of Naval Operations during organization of Operation Deep Freeze support for the IGY of 1957–58.

Caroline Bluff 61°55'S, 57°42'W

Bluff lying 1 mi SE of North Foreland, King George Island, in the South Shetland Islands. The bluff was charted and named North Foreland Head by Scottish geologist David Ferguson in 1921. To avoid confusion with North Foreland, the UK-APC rejected this name in 1960 and substituted a new one. The Hobart sealing vessel *Caroline* (Capt. D. Taylor) visited the South Shetland Islands in 1821–22. Not: North Foreland Head.

Caroline Mikkelsen, Mount 69°45'S, 74°24'E

A small coastal mountain (235 m) between Hargreaves Glacier and Polar Times Glacier on Ingrid Christensen Coast. The mountain overlooks the S extremity of Prydz Bay, 4 mi NNW of Swarthaussen Nunatak, and is the highest summit in the vicinity. Discovered February 20, 1935 by Capt. Klarius Mikkelsen in the *Thorshavn*, Norwegian whaling ship sent out by Lars Christensen. Named for the wife of Capt. Klarius Mikkelsen, who accompanied her husband on this voyage.

Carpenter Island 72°39'S, 98°03'W

An oval-shaped island, 7 mi long, within the Abbot Ice Shelf of Peacock Sound. It lies 17 mi due E of Sherman Island. Mapped by USGS from surveys and USN air photos, 1960–66. Named by US-ACAN for Donald L. Carpenter, radio scientist at Byrd Station, 1966–67.

Carpenter Nunatak 73°37'S, 61°15'E

An isolated nunatak between Mount Mather and the Mount Menzies massif in the southern Prince Charles Mountains. Plotted from the summit of Mount Menzies by an ANARE dog-sledge party in 1961. Named by ANCA for G.D.P. Smith, the carpenter at Mawson Station, 1961.

Carr, Cape 66°09'S, 130°42'E

A prominent, ice-covered cape, lying 15 mi NE of Cape Morse. Delineated from air photos taken by USN Operation Highjump (1946–47). The USEE (1838–42) under Wilkes gave the name Cape Carr to an ice cape in about 65°05'S, 131°30'E, naming it for Lt. Overton Carr of the flagship *Vincennes*. Identification of Cape Carr is based on the correlation of Wilkes' chart of 1840 with G.D. Blodgett's reconnaissance map of 1955, compiled from air photos, taking into account the relative SW shift of Porpoise Bay from the 1840 to the 1955 map positions.

Carrara, Mount 74°53'S, 71°27'W

Mountain rising to 1,700 m near the center of the Sky-Hi Nunataks (q.v.) in Ellsworth Land. Named by US-ACAN after Paul E. Carrara, USGS geologist, a member of the USGS field party, 1977–78, which carried out geological reconnaissance mapping of the area between Sky-Hi Nunataks and the Orville Coast. Carrara and two party members climbed the mountain in January 1978.

Carrel, Mount: see Carroll, Mount 63°26'S, 57°03'W

Carrel Inlet: see Carroll Inlet 73°18'S, 78°30'W

Carrel Island 66°40'S, 140°01'E

Rocky island 0.25 mi long lying 0.1 mi S of Pétrél Island in the Géologie Archipelago. Charted in 1950 by the FrAE and named by them for Alexis Carrel (1873–1944), noted French surgeon and physiologist. Not: Ile Alexis Carrel.

Carrera, Isla: see Piñero Island 67°34'S, 67°49'W

Carrera Pinto, Punta: see Rock Pile Point 68°25'S, 64°58'W

Carrera Pinto, Punta: see Vesconte Point 68°31'S, 65°12'W

Carrol, Mount: see Carroll, Mount 63°26'S, 57°03'W

Carrol Kettering, Mount: see Giles, Mount 75°09'S, 137°37'W

Carroll, Mount 63°26'S, 57°03'W

A horseshoe-shaped mountain rising to 650 m, S of Hope Bay, Trinity Peninsula. Discovered and mapped by the SwedAE, 1901–04. Surveyed by FIDS, 1945–47, and named in error “Mount Carrel” after Tom Carroll (b. 1864), Newfoundland boatswain of the ship *Eagle*, which participated in establishing the FIDS Hope Bay base in February 1945. The spelling has been amended to correct the original error. Not: Mount Carrel, Mount Carrol.

Carroll Inlet 73°18'S, 78°30'W

An inlet, 40 mi long and 6 mi wide, trending SE along the coast of Ellsworth Land between Rydberg Peninsula and Smyley Island. The head of the inlet is divided into two arms by the presence of Case Island and is bounded to the E by Stange Ice Shelf. Discovered on an airplane flight, Dec. 22, 1940, by members of the USAS (1939–41), and named after Arthur J. Carroll, chief aerial photographer on USAS flights from the East Base. Not: Carrel Inlet.

Carro Pass 63°57'S, 58°07'W

A gently sloping snow pass linking Holluschickie Bay and the bay between Rink Point and Stoneley Point on the NW coast of James Ross Island. Named for Capitán Ignacio Carro of the Argentine Army, who first traversed the pass in 1959.

Carryer Glacier 71°17'S, 162°38'E

A heavily crevassed tributary glacier, 12 mi long, which drains westward from the central part of the Bowers Mountains and enters Rennick Glacier between Mounts Soza and Gow. Named by the northern party of NZGSAE, 1963–64, for S.J. Carryer, geologist with this party.

Carse, Mount 54°43'S, 36°05'W

Mountain having several peaks, the highest 2,330 m, standing 2 mi N of the head of Drygalski Fjord in the S part of the Salvesen Range of South Georgia. Surveyed by the South Georgia Survey between 1951 and 1957 and named for V. Duncan Carse, leader of the four SGS expeditions during that period.

Carse Point 70°13'S, 68°13'W

The W extremity of a rock massif with four peaks, the highest 1,250 m, standing at the S side of the mouth of Riley Glacier, Palmer Land, and fronting on George VI Sound. It lies separated from Mount Dixey to the NE by a low ice-filled col, and from Mount Flower to the E by a small glacier. It appears that the massif of which this is the W extremity, was first photographed from the air on Nov. 23, 1935 by Lincoln Ellsworth and mapped from these photographs by W.L.G. Joerg. The point was surveyed in 1936 by the BGLE under Rymill, and was named in 1954 for Verner D. Carse, member of the BGLE, 1934–37.

Carson, Mount 73°27'S, 163°11'E

A mountain 2 mi W of Chisholm Hills in the Southern Cross Mountains, Victoria Land. Mapped by USGS from surveys and

U.S. Navy air photos, 1960–64. Named by US-ACAN for Gene A. Carson, USN, construction electrician at McMurdo Station in 1963 and 1967.

Carsten Borchgrevinkisen: see Borchgrevinkisen 72°10'S, 21°30'E

Carstens Shoal 67°34'S, 62°51'E

An almost circular shoal (least depth 11.89 m) lying just N of East Budd Island in Holme Bay, Mac. Robertson Land. Charted in February 1961 by d'A.T. Gale, hydrographic surveyor with the ANARE (*Thala Dan*). Named by ANCA for D.R. Carstens, surveyor at Mawson in 1962, who assisted the hydrographic survey in 1961.

Carter Island 73°59'S, 114°57'W

A small, ice-covered island in Glade Bay, off the W side of Martin Peninsula, Bakutis Coast. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN after Lt. G.W. Carter, USN, maintenance coordinator at the Williams Field air strip on McMurdo Sound during Operation Deep Freeze 1966.

Carter Peak 70°19'S, 64°12'E

Peak standing 1 mi W of Mount Bensley and 9 mi SW of Mount Starlight, in the Prince Charles Mountains, Mac. Robertson Land. Mapped from ANARE surveys and air photos, 1955–65. Named by ANCA for D.B. Carter, electronics technician at Mawson Station, 1965.

Carter Ridge 72°37'S, 167°37'E

A high and mountainous ridge, 11 mi long, located between Coral Sea Glacier and Elder Glacier, in the Victory Mountains of Victoria Land. Mapped by the NZGSAE, 1957–58, and the USGS, 1960–62. Named by US-ACAN for American chemist Herbert E. Carter, member of the National Science Board, National Science Foundation, 1964–72; chairman, 1970–72.

Cartledge, Mount 70°17'S, 65°43'E

A mountain just E of Mount Albion in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for W.J. Cartledge, plumber at Wilkes Station in 1962, carpenter at Mawson Station in 1966.

Cartographers Range 72°21'S, 167°50'E

A rugged range about 25 mi long in the Victory Mountains, Victoria Land. It is bounded on the N by Pearl Harbor Glacier, on the E by Tucker Glacier, and on the S by Hearfield and Trafalgar Glaciers. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for the cartographers and cartographic technicians of the Branch of Special Maps, U.S. Geological Survey. Their skills and labor have produced excellent maps of Antarctica.

Cartwright, Cape: see Laurens, Cape 52°59'S, 73°15'E

Cartwright, Mount 84°21'S, 175°08'E

A sharp peak, 3,325 m, surmounting a N-S trending ridge 7 mi NNW of Mount Waterman in Hughes Range. Discovered and photographed by the USAS on Flight C of February 29–March 1, 1940, and surveyed by A.P. Crary in 1957–58. Named by Crary for Gordon Cartwright, first of the U.S. exchange IGY scientists, who wintered at the Soviet Mirnyy Station, 1957.

Casabianca Island 64°49'S, 63°31'W

Low, rocky island lying in Neumayer Channel 0.5 mi NE of Damoy Point, Wiencke Island, in the Palmer Archipelago. Discovered by the FrAE under Charcot, 1903–05, who named it for Monsieur Casabianca, then French Administrator of Naval Enlistment.

Cascade Bluff 84°57'S, 178°10'W

A low, mainly ice-covered bluff that forms the SW wall of Mincey Glacier in the Queen Maud Mountains. The feature was so named by the Texas Tech-Shackleton Glacier Party, 1962–63, because water cascades over the bluff during warm periods.

Cascade Glacier: see Delta Glacier 78°42'S, 161°20'E

Case Island 73°19'S, 77°48'W

A roughly circular ice-covered island, 12 mi in diameter, lying off the coast of Ellsworth Land. The island lies in Carroll Inlet between the mainland and Smyley Island. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1961–66. The name was suggested by Finn Ronne for Senator Francis H. Case (1896–1962), who assisted in obtaining Government support to provide a ship for the Ronne Antarctic Research Expedition, 1947–48.

Casey, Cape 66°22'S, 63°35'W

Conspicuous cape surmounted by a peak 755 m, marking the E end of the peninsula projecting into Cabinet Inlet immediately S of Bevin Glacier, on the E coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE in 1947. Named by the FIDS for Rt. Hon. Richard G. Casey, Minister of State and Australian member of the British War Cabinet.

Casey, Mount 73°43'S, 165°47'E

A mountain (2,100 m) at the N side of the head of Oakley Glacier, 5 mi ENE of Mount Monteagle in the Mountaineer Range of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Lt. Dennis Casey, USNR, Catholic chaplain with the winter party at McMurdo Station, 1967.

Casey Bay 67°30'S, 48°00'E

A large bay indenting the coast of Enderby Land between Tange Promontory and Dingle Dome. The feature was observed from ANARE aircraft in 1956. Named by ANCA for the Rt. Hon. Richard G. Casey (later Lord Casey), Australian Minister for External Affairs, 1951–60. Not: Lena Bay, Zaliv Lena.

Casey Channel: see Casey Glacier 69°00'S, 63°50'W

Casey Glacier 69°00'S, 63°50'W

Glacier 6 mi wide, flowing E into Casey Inlet on the E coast of Palmer Land. Discovered by Sir Hubert Wilkins on an aerial flight of Dec. 20, 1928. Wilkins believed the feature to be a channel cutting completely across Antarctic Peninsula, naming it Casey Channel after Rt. Hon. Richard G. Casey. Correlation of aerial photographs taken by Lincoln Ellsworth in 1935 and preliminary reports of the BGLE, 1934–37, led W.L.G. Joerg to interpret this glacier to be what Wilkins named Casey Channel. This interpretation is borne out by the results of subsequent exploration by members of the East Base of the USAS in 1940. Not: Casey Channel, Casey Strait.

Casey Inlet 69°00'S, 63°35'W

An ice-filled inlet at the terminus of Casey Glacier, between Miller Point and Cape Walcott, on the E coast of Palmer Land. Photographed from the air by Sir Hubert Wilkins in 1928, Lincoln Ellsworth in 1935 and the USAS in 1940. Surveyed by the FIDS in 1947. The inlet takes its name from Casey Glacier.

Casey Islands 64°44'S, 64°16'W

A group of small islands in the W part of Wylie Bay, S of Cape Monaco, Anvers Island, in the Palmer Archipelago. Fringing islands in this position were charted by the FrAE, 1903–05, led by Jean B. Charcot. Named by US-ACAN after Casey A. Jones, Jr., cook with the winter party at the nearby U.S. Palmer Station in 1979. He died in an accident, January 9, 1980, while serving at the U.S. South Pole Station.

Casey Range 67°47'S, 62°12'E

A jagged, razor-backed ridge and a few nunataks in a line extending N-S, standing 8 mi W of David Range, in the Framnes Mountains. Discovered by the BANZARE, 1929–31, under Mawson, who named it for Rt. Hon. Richard G. Casey.

Casey Strait: see Casey Glacier 69°00'S, 63°50'W

Cassandra Nunatak 64°27'S, 63°24'W

Nunatak, 425 m, marking the E side of the mouth of Iliad Glacier in northern Anvers Island, Palmer Archipelago. Surveyed by the FIDS in 1955–57, and mapped from photos taken by Hunting Aerosurveys Ltd. in 1956–57. Named by the UK-APC for Priam's daughter in Homer's *Iliad*.

Cassidy Glacier 77°46'S, 160°09'E

A glacier 7 mi long and 2 mi wide, flowing NE into upper Taylor Glacier between Depot Nunatak and the NW end of Quartermain Mountains, in Victoria Land. The descriptive names "South-West Arm" and "South Arm" were applied to this glacier and to the part of Ferrar Glacier S of Knobhead, respectively, by the BrNAE, 1901–04. Subsequent mapping has shown that the glacier described here is part of the Taylor Glacier system. Named by US-ACAN in 1992 after William A. Cassidy, Department of Geology and Planetary Science, University of Pittsburgh, who in 13 field seasons, 1976–90, led USARP teams in the investigation and collection of Antarctic meteorites from diverse sites through Victoria Land and southward to Lewis Cliff, adjacent to Queen Alexandra Range.

Cassini Glacier 77°53'S, 163°48'E

A steep glacier between Goat Mountain and Bonne Glacier, descending NW from Hobbs Ridge into Blue Glacier, in Victoria Land. One of a group of names in the area associated with surveying applied in 1993 by NZGB. Named from the Cassini map projection, a cylindrical projection in which the cylinder is at right angles to the axis of the globe.

Cassino, Monte 72°19'S, 163°40'E

A peak, 2,270 m, at the SE side of Moawhango Névé, in the Freyberg Mountains. Named by the Northern Party of NZGSAE, 1963–64, for the association with Lord Freyberg and the Second New Zealand Expeditionary Force.

Castex, Cabo: see Tay Head 63°21'S, 55°34'W

Castillo, Roca: see Castle Rock 62°48'S, 61°34'W

Castillo Point 75°30'S, 141°18'W

An ice-covered point which marks the east side of the terminus of Land Glacier on the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1959–65. Named by US-ACAN for Rudy Castillo, aerographer, USN, with the Marie Byrd Land Survey party and at Hallett Station, respectively, during Operation Deep Freeze 1968 and 1969.

Castillo Scarborough, Roca: see Scarborough Castle 62°28'S, 60°48'W

Castle, The: see Macey, Mount 69°52'S, 65°18'E

Castle Crags 82°01'S, 159°12'E

Prominent jagged peaks 4 mi N of Hunt Mountain, on the ridge extending N from the Holyoake Range. Named by the NZGSAE (1964–65) for their castellated appearance.

Castle Peak 67°00'S, 65°53'W

Prominent ice-covered peak, 2,380 m, standing immediately S of Murphy Glacier and close off the W side of Avery Plateau in Graham Land. It is shaped like a truncated cone with a rounded summit and rises more than 610 m above the surrounding ice. First surveyed in 1946 by the FIDS, and so named by them because of its resemblance to a ruined medieval castle.

Castle Rock 62°48'S, 61°34'W

Conspicuous rock, 175 m high, lying 2 mi off the W side of Snow Island, in the South Shetland Islands. This descriptive name dates back to 1822 and is now established in international usage. Not: Roca Castillo.

Castle Rock 77°48'S, 166°46'E

Bold rock crag, 415 m, standing 3 mi NE of Hut Point on the central ridge of Hut Point Peninsula, Ross Island. Discovered by the BrNAE (1901–04) under Scott, who so named it because of its shape.

Castle Rock: see Fort Point 62°34'S, 59°34'W

Castor Insel: see Castor Nunatak 65°10'S, 59°55'W

Castor Nunatak 65°10'S, 59°55'W

Nunatak 3 mi SW of Oceana Nunatak in the Seal Nunataks group, off the E coast of Antarctic Peninsula. First seen and mapped as an island in December 1893 by a Norwegian Sealing expedition under C.A. Larsen, who named it after the *Castor* a ship which combined sealing and exploring activities along the W coast of Antarctic Peninsula under Capt. Morten Pedersen in 1893–94. The feature was determined to be a nunatak in 1902 by the SwedAE under Nordenskjöld. Not: Castor Insel, Kastor Nunatak.

Castor Rock 57°07'S, 26°47'W

The northern of a pair of large off-lying rocks south of Vindication Island, South Sandwich Islands. This rock, with its neighbor Pollux Rock, was named "Castor and Pollux" during the survey of these islands from RRS *Discovery II* in 1930. In 1971 UK-APC recommended that they be assigned unambiguous names making each individually identifiable, and this has been done by naming the northern one Castor Rock and the southern one Pollux Rock.

Castro, Mount 69°20'S, 66°04'W

A mountain (1,630 m) on the N side of Seller Glacier, 5 mi SE of Mount Gilbert, in central Antarctic Peninsula. Photographed from the air by BGLE in 1937, and by RARE in 1947. Surveyed from

the ground by FIDS in Dec. 1958. Named by UK-APC for Joao de Castro (1500–48), Portuguese navigator who made pioneer experimental investigations of the variation of the magnetic compass.

Castro, Punta: see Betbeder, Cape 63°37'S, 56°41'W

Casy Island 63°14'S, 57°30'W

The largest feature in a group of small islands lying 2 mi SE of Lafarge Rocks and 3 mi NE of Coupvent Point, off the N side of Trinity Peninsula. Discovered and named by a French expedition under Capt. Jules Dumont d'Urville, 1837–40. Not: Casy Rock.

Casy Rock: see Casy Island 63°14'S, 57°30'W

Catacomb Hill 78°04'S, 163°25'E

A prominent rock peak, 1,430 m, on the ridge that borders the E side of the head of Blue Glacier, in Victoria Land. The N.Z. Blue Glacier Party of the CTAE (1956–58) established a survey station on its summit in December 1957. They gave it this descriptive name from the spectacular cavernous weathering occurring in the granite of the peak.

Catcher Icefall 54°09'S, 37°40'W

An icefall between Elephant Cove and Bomford Peak on the S side of South Georgia. The UK-APC name was chosen for its association with the whaling industry.

Catenary Nunatak 77°59'S, 160°31'E

A nunatak 1 mi SW of Monastery Nunatak on the S side of Quartermain Mountains, Victoria Land. One of a group of names in the area associated with surveying applied in 1993 by NZGB; catenary being the curve in which a survey chain hangs when it is suspended between two points at the same level.

Cathedral Crags 63°00'S, 60°34'W

Rocky, ice-free hill with steeply cliffed sides, 140 m, surmounting the peninsula between Neptunes Window and Fildes Point on the SE side of Deception Island, in the South Shetland Islands. Although the feature was called The Convent or Weathercock Hill by the whalers operating from Deception Island in the period before 1930, these names have not been used recently. The name Cathedral Crags was reported in 1953 to have become well established in local use at the nearby FIDS station. Not: The Convent, Weathercock Hill.

Cathedral Peaks 84°44'S, 175°40'W

A rugged mountain mass surmounted by several conspicuous peaks, located N of Lubbock Ridge and extending for about 8 mi along the E margin of Shackleton Glacier. From the glacier the peaks resemble the spires and turrets of a cathedral. Named by F. Alton Wade, who worked in this area as leader of the Texas Tech Shackleton Glacier Party, 1962–63.

Cathedral Rocks 77°51'S, 162°30'E

A series of four abrupt cliffs interspersed by short glaciers and surmounted by sharp peaks. The cliffs extend for 8 mi along the south side of Ferrar Glacier and form part of the north shoulder of the Royal Society Range, in Victoria Land. Discovered and named on Dec. 7, 1902 by Lt. A.B. Armitage, leader of a party of the BrNAE (1901–04) that explored this area. The name is descriptive of the feature.

Catherine, Mount: see Kathleen, Mount 83°46'S, 172°48'E

Catherine Sweeney Mountains: see Sweeney Mountains
75°06'S, 69°15'W

Cat Island 65°47'S, 65°13'W

Island 0.5 mi long, lying midway between Duchaylard and Larrouy Islands at the S end of Grandidier Channel. Discovered and named by the BGLE, 1934–37, under Rymill. Not: Isla Gato.

Catodon Rocks 63°30'S, 60°00'W

Small group of rocks just NE of Ohlin Island, in the Palmer Archipelago. Photographed by the FIDASE in 1955–57 and mapped from these photos. Named by the UK-APC in 1960 after the sperm whale, *Physeter catodon*.

Cato Point 54°28'S, 3°22'E

A point forming the southwest extremity of Bouvetøya. First charted in 1898 by a German expedition under Karl Chun. The Norwegian expedition under Capt. Harald Horntvedt made a landing here from the *Norvegia* in December 1927. They applied the name.

Cat Ridge 71°10'S, 61°50'W

A ridge in the middle of Gain Glacier in eastern Palmer Land. A descriptive name applied by US-ACAN. When viewed from northeastward, the limbs of the ridge are suggestive of a sprawling cat.

Catspaw Glacier 77°43'S, 161°42'E

Small alpine glacier just W of Stocking Glacier, flowing S from the slopes N of Taylor Glacier, in Victoria Land. So named by Taylor of the BrAE (1910–13) because of its resemblance to a cat's paw.

Catwalk, The 64°31'S, 60°56'W

The very narrow neck of land between Herbert and Detroit Plateaus, in northern Graham Land. Photographed by the FIDASE in 1956–57 and mapped from these photos by the FIDS. So named by the UK-APC in 1960.

Caudal Hills 73°10'S, 161°50'E

The hills lying between Sequence Hills and Lichen Hills on the W margin of upper Rennick Glacier, in Victoria Land. A series of spurs "tail" out to the north, hence the name Caudal. So named by the northern party of NZGSAE, 1962–63.

Caughley Beach 77°14'S, 166°25'E

The northernmost beach on the ice-free coast SW of Cape Bird, Ross Island. Mapped by the NZGSAE, 1958–59, and named for Graeme Caughley, biologist with the party that visited Cape Bird.

Cauldron Pool 57°04'S, 26°43'W

A hot, brackish steaming pond located E of Tow Bay and below the W slopes of volcanically active Lucifer Hill, in NW Candlemas Island, South Sandwich Islands. The descriptive name was applied by UK-APC in 1971.

Caulfeild Glacier 66°11'S, 65°00'W

The northern of two glaciers flowing into Hugi Glacier near its mouth, on the W coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955–57 and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for Vivian Caulfeild (1874–1958), English pioneer ski instructor, one of the greatest authorities on technique. Not: Caulfield Glacier.

Caulfeild Glacier: see Caulfeild Glacier 66°11'S, 65°00'W

Caupolicán, Punta: see Entrance Point 63°00'S, 60°33'W

Caution Point 65°16'S, 62°01'W

Point 4 mi NE of Mount Birks, marking the E end of a rocky range which forms the N wall of Crane Glacier, on the E coast of Graham Land. Photographed from the air by Sir Hubert Wilkins on a flight of Dec. 20, 1928. Named by the FIDS who charted it in 1947. Not: Punta Atención.

Cavalier Rock 67°50'S, 69°28'W

Isolated rock lying 13 mi SW of Cape Adriasola, off the S part of Adelaide Island. Named by the UK-APC in 1963 for Sub. Lt. Geoffrey A. Cavalier, RN, helicopter pilot of HMS *Protector* who flew the reconnaissances which located this feature.

Cavaney, Mount 74°03'S, 163°03'E

A peak, 2,820 m, rising just N of the head of Capsize Glacier in Deep Freeze Range, Victoria Land. Named by the Northern Party of the NZGSAE, 1965–66, for R.J. Cavaney, geologist with that party.

Cave Bay 53°02'S, 73°22'E

A cove, 0.3 mi wide, which has been formed by the erosion of an extinct volcanic crater of which Mount Andrée forms the N side, indenting the W side of Heard Island between West Bay and South West Bay. The cove is roughly charted on an American sealer's sketch map prepared during the 1860–70 period. It was more accurately charted and first named on a geological sketch map illustrating the 1929 work of the BANZARE under Mawson.

Cave Bay Hill: see Andrée, Mount 53°02'S, 73°22'E

Cave Island 62°27'S, 60°04'W

Island marked by a large cavern in its S side, which is the second largest of the Meade Islands lying in the N entrance to McFarlane Strait, in the South Shetland Islands. The name Cave Rock appears to have been applied by DI personnel on the *Discovery II* who charted the feature in 1935. Not: Cave Rock, Cove Rock.

Cave Landing 66°23'S, 110°27'E

An ice foot near Cave Ravine, Ardery Island, which affords a boat landing in spring and summer, in the Windmill Islands. Discovered in 1961 by Dr. M.N. Orton, medical officer at Wilkes Station. Named by ANCA after Cave Ravine.

Cavelier de Cuverville, Ile de: see Cuverville Island 64°41'S, 62°38'W

Cavendish Falls: see Cavendish Icefalls 77°49'S, 161°20'E

Cavendish Icefalls 77°49'S, 161°20'E

An icefall in the Taylor Glacier between Solitary Rocks and Cavendish Rocks, in Victoria Land. Named by C.S. Wright, of the BrAE (1910–13), after the Cavendish Laboratory of Cambridge, England, where Wright did much of his research work. Not: Cavendish Falls.

Cavendish Rocks 77°50'S, 161°24'E

Conspicuous bare rocks just S of Cavendish Icefalls in the middle of Taylor Glacier, in Victoria Land. Named by US-ACAN in 1964 after Cavendish Icefalls.

Cave Point 54°15'S, 36°24'W

Point lying 0.5 mi SW of Barff Point on the E side of Cumberland East Bay, South Georgia. The name appears to be first used on a 1929 British Admiralty chart. Not: Punta Cueva.

Cave Ravine 66°23'S, 110°27'E

A ravine in the W part of Ardery Island, in the Windmill Islands. First mapped from air photos taken by USN OpHjp, 1946–47. It was visited in 1961 by Dr. M.N. Orton, medical officer at Wilkes Station. So named by ANCA due to the presence of a cave in the W wall of the ravine.

Cave Rock: see Cave Island 62°27'S, 60°04'W

Cayley Glacier 64°20'S, 60°58'W

Glacier flowing NW into the S side of Brialmont Cove, on the W coast of Graham Land. Photographed by the FIDASE in 1956–57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Sir George Cayley (1773–1857), English engineer, the “father of aeronautica,” who first defined the main principles of mechanical flight, 1796–1857, and designed the first caterpillar tractor in 1826.

Caywood, Mount 75°18'S, 72°25'W

A conspicuous mountain rising midway between Mounts Chandler and Huffman, in the interior icefilled valley of the Behrendt Mountains, Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Lindsay P. Caywood, Jr., geomagnetist at Camp Sky-Hi in this vicinity, summer 1961–62.

Cecil Cave 68°46'S, 90°42'W

A sea cave which indents the southern part of Cape Ingrid on the west coast of Peter I Island. Discovered and named by a Norwegian expedition under Eyvind Tofte in the *Odd I* in January 1927. Tofte and the second mate rowed into the cave in an unsuccessful attempt to land on the island.

Cecilia Island 62°25'S, 59°43'W

The southernmost of the Aitcho Islands, lying in English Strait in the South Shetland Islands. The name Cecilia Straits was applied to English Strait by Captain Davis of the American sealer *Huron* of New Haven, CT, which visited the South Shetland Islands in 1820–22, after the shallow *Cecilia* tender to the *Huron*. Since English Strait is firmly established, the UK-APC in 1961 applied the name Cecilia to this conspicuous feature in order to preserve the American name in the area. Not: Isla Torre.

Cecily, Mount 85°52'S, 174°15'E

Prominent peak, 2,870 m, standing 2.5 mi NW of Mount Raymond, in the Grosvenor Mountains. Discovered by the BrAE (1907–09) and named for Shackleton's daughter. The position agrees with that shown on Shackleton's map but the peak does not lie in the Dominion Range as he thought, being separated from that range by the Mill Glacier.

Celebration Pass 83°59'S, 172°30'E

A low pass through Commonwealth Range just north of Mount Cyril permitting passage between Beardmore Glacier and Hood Glacier. The pass was crossed on Christmas Day, 1959, by the N.Z. Alpine Club Antarctic Expedition (1959–60) and was named by them because of the festivities held to mark the day. Not: Ancestor Pass.

Celestial Peak 69°33'S, 158°03'E

A granite peak (1,280 m) 8 mi N of Mount Blowaway in Wilson Hills. First mapped by the USGS Topo West survey party, 1962–63. Named by the northern party of NZGSAE, 1963–64, which occupied the peak as a survey and gravity station. So named by NZGSAE because the party's first observations of stars were made nearby.

Celsius Peak 64°25'S, 62°26'W

Peak 2 mi W of D'Ursel Point in the southern part of Brabant Island, in the Palmer Archipelago. First mapped by the BelgAE, 1897–99, under Gerlache. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for Aulus Cornelius Celsius, Roman who lived in the first century A.D., a great Latin classical medical writer.

Cemetery Bay 60°42'S, 45°37'W

A shallow southwest arm of Borge Bay, lying immediately below Orwell Glacier along the east coast of Signy Island. Named by UK-APC in association with the whalers' graves on the east side of the feature.

Ceniza, Punta: see Ash Point 62°28'S, 59°39'W

Cenobite Rocks 67°35'S, 69°18'W

Small isolated group of rocks lying 5 mi NW of Cape Adriasola, off the SW coast of Adelaide Island. So named by the UK-APC in 1963 because of its isolated position.

Cenotaph Hill 85°13'S, 167°12'W

A rock peak (2,070 m) on the ridge separating the heads of Strom Glacier and Liv Glacier in the Queen Maud Mountains. The peak is 8 mi NNE of the summit of Mount Fridtjof Nansen. It was visited by the Southern Party of NZGSAE (1963–64) who gave this name because the unusual knob of rock forming the summit resembles a monument.

Centaur Bluff 81°50'S, 160°30'E

A steep bluff on the E side of Surveyors Range, 4.5 mi W of Mount Canopus. Named by the NZGSAE (1960–61) after the star Centauri, which was frequently used to fix survey stations.

Centennial Peak 84°57'S, 174°00'W

A peak (4,070 m) situated 6.5 mi SSE of Mount Wade in Prince Olav Mountains. Mapped by USGS from surveys and U.S. Navy air photos 1960–65. Named by US-ACAN in recognition of the Centennial of the Ohio State University in 1970, the same year the University's Institute of Polar Studies celebrated its Decennial. The University and the Institute have been very active in Antarctic investigations since 1960.

Center Island: see Centre Island 67°52'S, 66°57'W

Centinel, Cadena: see Sentinel Range 78°10'S, 85°30'W

Central Masson Range 67°50'S, 62°52'E

The Masson Range is divided into three parts of which this segment is the central, rising to 1,120 m and extending 4 mi in a N-S direction. The Masson Range was discovered and named by BANZARE, 1929–31, under Mawson. This central range was mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Mekammen (the middle comb or crest). The approved name, suggested by ANCA in 1960, more clearly identifies the feature as a part of

Masson Range. Not: Mekammen, Mekammen Crest, Middle Crest.

Centre Island 67°52'S, 66°57'W

Island 4 mi long and 2 mi wide, lying 1 mi S of Broken Island in the S part of Square Bay, off the W coast of Graham Land. Discovered and named by the BGLE under Rymill, 1934–37. Not: Center Island, Isla del Centro.

Centro, Isla del: see Centre Island 67°52'S, 66°57'W

Centro, Monte: see Pavlov Peak 64°03'S, 61°58'W

Centropleura Spur 71°17'S, 163°11'E

The SW spur of a small massif enclosing a cirque, located at the head of Carryer Glacier, 3 mi NE of Mount Jamroga, in the Bowers Mountains. The spur includes a sedimentary sequence which contains the Middle Cambrian fossil *Centropleura*. Named by R.A. Cooper, leader of NZARP geological field parties to this area, 1974–75 and 1981–82.

Centurion Glacier 68°12'S, 66°56'W

Small steep glacier flowing NW to Neny Bay between Mount Nemesis and Roman Four Promontory, on the W coast of Graham Land. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1947 by the FIDS. The name, given by FIDS, derives from association with Roman Four Promontory.

Cerberus, Mount 77°26'S, 161°53'E

Prominent peak over 1,600 m, with many side peaks, between Lake Vida and Mount Orestes in the Olympus Range of Victoria Land. Named by the VUWAE (1958–59) after Cerberus, a three-headed dog of Greek mythology.

Cerberus Peak 82°01'S, 158°46'E

A prominent peak (2,765 m) at the head of Prince Philip Glacier, 6 mi NW of Hunt Mountain, in the Churchill Mountains. The name was suggested by the Holyoake, Cobham and Queen Elizabeth Ranges Party of the NZGSAE, 1964–65. Named after Cerberus, three-headed canine guardian of the gate to Hades in Greek mythology.

Ceres Nunataks 72°03'S, 70°25'W

A group of three nunataks located immediately east of the base of Shostakovich Peninsula in southern Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. Named by UK-APC after one of the asteroids lying between the orbits of the planets Mars and Jupiter.

Cerf, Roca le: see Klo Rock 63°55'S, 60°46'W

Cerreti, Roca: see Grindle Rock 59°03'S, 26°37'W

Cerrito, Isla: see Killingbeck Island 67°34'S, 68°05'W

Cerro Nevado, Isla: see Snow Hill Island 64°28'S, 57°12'W

Cervin, Mount 66°40'S, 140°01'E

Small rocky hill, 30 m, on the E side of Pétrel Island in the Géologie Archipelago. Charted in 1951 by the FrAE and named by them for the Matterhorn (Mont Cervin in French), which it resembles in form.

Cesney, Cape 66°06'S, 133°54'E

A broad ice-covered cape marking the W side of the entrance to Davis Bay. Delineated from air photos taken by USN Operation Highjump (1946–47). Named by US-ACAN for A.M. Cesney, master's mate on the *Flying Fish* of the USEE (1838–42) under Wilkes.

Cetacea Rocks 63°43'S, 61°37'W

Small group of rocks off the NE side of Hoseason Island, in the Palmer Archipelago. Charted by the FrAE under Charcot, 1908–10. Named by the UK-APC in 1960 after the zoological order *Cetacea* (whales and porpoises); these rocks lie in one of the chief Antarctic whaling areas.

Cetus Hill 70°56'S, 66°10'W

A large ice-covered mound which comes to a point with three jagged rock peaks at its W end. Located at the head of Ryder Glacier in western Palmer Land, about 27 mi ENE of Gurney Point. Named by UK-APC after the constellation of Cetus.

Cézembre Point 66°48'S, 141°26'E

Rocky point 0.5 mi NE of Cape Margerie. Charted in 1950 by the FrAE and named for an island in the Golfe de Saint-Malo, France.

Chabrier Rock 62°11'S, 58°18'W

Rock which lies 0.5 mi SW of Vauréal Peak in the E side of the entrance to Admiralty Bay, King George Island, in the South Shetland Islands. Charted and named in December 1909 by the FrAE under Charcot.

Chacabuco, Islas: see Rhyolite Islands 69°40'S, 68°35'W

Chaco, Islote: see Låvebrua Island 63°02'S, 60°35'W

Chad, Lake 77°38'S, 162°46'E

Small lake lying E of the mouth of Suess Glacier in the Taylor Valley of Victoria Land. Charted and named by the BrAE under Scott, 1910–13, after the African lake of the same name.

Chadwick, Mount 72°30'S, 160°26'E

A small, bare rock mountain (2,440 m) situated 2.5 mi ESE of Mount Walton in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959–64. Named by US-ACAN for Dan M. Chadwick, meteorologist at South Pole Station, 1968.

Chaigneau Peak 65°13'S, 64°01'W

Sharp peak, 760 m, standing immediately SE of Blanchard Ridge on the W coast of Graham Land. Probably first sighted by the BelgAE, 1897–99. Charted by the FrAE, 1908–10, under Charcot, who named it for Señor Chaigneau, then Gov. of Provincia de Magallanes, Chile.

Chain Nunataks 77°50'S, 163°24'E

A linear series of nunataks to the W of Blue Glacier, running WNW-ESE for 3.5 mi between Briggs Hill and Hannon Hill, in Victoria Land. The name is one of a group in the area associated with surveying applied in 1993 by the NZGB. Named with reference to a surveyor's chain.

Chair Peak 64°43'S, 62°43'W

Peak rising W of Mount Britannia on Rongé Island, off the W coast of Graham Land. This descriptive name was given by M.C. Lester and T.W. Bagshawe, who wintered at nearby Waterboat

Point in 1921–22 and used this peak as a prominent landmark during their survey.

Challenger, Passe du: see Neptunes Bellows 63°00'S, 60°34'W

Challenger Glacier 53°02'S, 73°28'E

A glacier, 0.8 mi wide, flowing into the E part of Corinthian Bay, 1 mi E of Baudissin Glacier, on the N side of Heard Island. The glacier appears to have been first charted by the GerAE under Drygalski, 1901–03, who portrayed a single large glacier flowing into Corinthian Bay. In 1948 the ANARE determined that more than one glacier discharges into Corinthian Bay. The ANARE applied the name Challenger Glacier to the easternmost of these glacier's to commemorate the work of the British *Challenger* expedition, 1873–76.

Challenger Island 64°21'S, 61°35'W

Island lying just N of Murray Island, off the W coast of Graham Land. The name was used in 1906 by J. Gunnar Andersson of the SwedAE under Nordenskjöld, 1901–04. Not: Isla Chica, Isla Kahn.

Chalmers, Mount 79°20'S, 159°29'E

A mountain along the E escarpment of the Conway Range, about 5 mi S of the summit of Mount Keltie. Discovered by the BrNAE (1901–04) and named for Robert Chalmers (later Baron of Northiam), Assistant Secretary of the Treasury, 1903–07.

Chamberlin Glacier 67°34'S, 65°33'W

Glacier which flows NE into Whirlwind Inlet about 4 mi SE of Matthes Glacier, on the E coast of Graham Land. Discovered by Sir Hubert Wilkins on a flight of Dec. 20, 1928, and in 1940 was photographed from the air by the USAS. Charted in 1947 by the FIDS, who named it for American glaciologist and geomorphologist Thomas C. Chamberlin, educator and professor of geology at the Universities of Wisconsin and Chicago.

Chambers Glacier 83°17'S, 49°25'W

A glacier in the Forrester Range, Pensacola Mountains, draining E from Mount Lechner and Kent Gap, at the juncture of the Saratoga and Lexington Tables, to enter Support Force Glacier. Discovered and photographed on Jan. 13, 1956 on a transcontinental patrol plane flight of U.S. Navy Operation Deep Freeze I from McMurdo Sound to the vicinity of Weddell Sea and return. Named by the US-ACAN after Capt. Washington I. Chambers, USN, one of the pioneers in the development of the airplane catapult for ships.

Chambers Hill 77°55'S, 164°08'E

A ridgelike elevation (1,105 m) on the divide between the Hobbs Glacier and Blackwelder Glacier, 1 mi W of Hofman Hill, on the Scott Coast of Victoria Land. Named by US-ACAN in 1992 after James L. Chambers of Holmes and Narver, Inc., who served as the Holmes and Narver Resident Manager at McMurdo Station during the austral summers from 1976 to 1980 and as the Senior Site Manager from 1989 to 1994. With a staff of approximately 650 contractor personnel, he had on-site responsibility for all contractor activities at McMurdo Station, South Pole Station and Siple Station, as well as numerous summer camps spread over the continent.

Chameau Island 66°46'S, 141°36'E

Rocky island 0.1 mi long, lying 0.8 mi E of Cape Découverte in the Curzon Islands. Charted and named in 1951 by the FrAE. The

name is suggestive of the island's form which resembles the two humps on a camel, "chameau" being French for camel.

Champness Glacier 71°25'S, 164°22'E

A tributary glacier, 15 mi long, draining NE from the vicinity of Ian Peak in the Bowers Mountains and entering Lillie Glacier at Griffith Ridge. Named by the NZGSAE to northern Victoria Land, 1967–68, for G.R. Champness, field assistant with that party.

Chancellor Lakes: see Chancellor Lakes 78°13'S, 163°18'E

Chancellor Lakes 78°13'S, 163°18'E

Small twin lakes near the crest of the ridge north of the Walcott Glacier. Named by the New Zealand University of Wellington Antarctic Expedition, 1960–61, in honor of the chancellor of that university. Not: Chancellor Lakes.

Chance Rock 64°00'S, 61°13'W

Isolated rock, which is awash, lying in the center of Gerlache Strait near its junction with Orléans Strait, in the Palmer Archipelago. Shown on an Argentine government chart of 1957. So named by the UK-APC in 1960 because the rock is a danger to shipping.

Chanchito, Punta: see Pig Point 54°04'S, 37°09'W

Chanchito, Rocas: see Pig Rock 62°19'S, 58°48'W

Chancho, Punta: see Pig Point 54°04'S, 37°09'W

Chandler, Mount 75°17'S, 72°33'W

A mountain 2.5 mi NW of Mount Caywood in the Behrendt Mountains, Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Lt. Cdr. J.L. Chandler, USN, pilot of R4D aircraft in support of the Antarctic Peninsula Traverse party to this area, 1961–62.

Chandler Island 77°21'S, 153°10'W

An island 4 mi long which is the southernmost of the ice-covered White Islands, located at the head of Sulzberger Bay. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Alan Chandler, electrical engineer with the Byrd Station winter party in 1969.

Changing Lake 60°42'S, 45°37'W

The central of three lakes in Paternoster Valley in northeastern Signy Island. This proglacial lake was so named by UK-APC because the lake slowly changes shape and size as the retreating land ice gradually retreats.

Chang Peak 77°04'S, 126°38'W

A snow-covered subsidiary peak (2,920 m) on the northeastern slope of Mount Waesche, in the Executive Committee Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy trimetrogon photography, 1958–60. Named by US-ACAN for Feng-Keng (Frank) Chang, Traverse Seismologist at Byrd Station, 1959, and a member of the Marie Byrd Land Traverse Party that explored this area, 1959–60.

Channel, Islote: see Passage Rock 62°23'S, 59°45'W

Channel Glacier 64°47'S, 63°19'W

A through glacier, 1.5 mi long, extending in an E-W direction across Wiencke Island, between Nipple Peak and Wall Range, in the Palmer Archipelago. Discovered by the BelgAE under

Cheetham, Cape 70°18'S, 162°42'E

An ice-covered cape forming the NE extremity of Stuhlinger Ice Piedmont. First charted by members of the BrAE, 1910–13, who explored this coast in the *Terra Nova* in February 1911. Named for Alfred B. Cheetham, boatswain on the *Terra Nova*. This identification of Cape Cheetham is in accord with the location assigned on maps of the ANARE (*Thala Dan*), 1962.

Cheetham Glacier Tongue: see Cheetham Ice Tongue 75°45'S, 162°55'E

Cheetham Ice Barrier Tongue: see Cheetham Ice Tongue 75°45'S, 162°55'E

Cheetham Ice Tongue 75°45'S, 162°55'E

A small ice tongue on the E coast of Victoria Land between Lamplugh Island and Whitmer Peninsula. It projects eastward into Ross Sea. The tongue appears to be nourished in part by Davis Glacier and partly by ice draining from Lamplugh Island and Whitmer Peninsula. First charted by the BrAE, 1907–09, under Shackleton, and named by him for Alfred B. Cheetham, third officer on the *Nimrod*. Not: Cheetham Glacier Tongue, Cheetham Ice Barrier Tongue.

Cheney Bluff 79°39'S, 159°48'E

A steep rock bluff at the S side of the mouth of Carlyon Glacier, 5 mi SW of Cape Murray. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for Lt. Cdr. D.J. Cheney, RNZN, commander of HMNZS *Rotoiti* on ocean station duty between Christchurch and McMurdo Sound, 1963–64.

Cheops, Mount 65°52'S, 64°38'W

Mountain, over 610 m, standing 8 mi SSE of Cape Garcia on the W coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. Named by the UK-APC after the Great Pyramid at Giza because of its distinctive shape.

Cherchill, Poluostrov: see Churchill Peninsula 66°30'S, 62°45'W

Chernushka Nunatak 71°35'S, 12°01'E

Nunatak, 1,640 m, lying 2 mi SW of Sandseten Mountain on the W side of Westliche Petermann Range, Wohlthat Mountains. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named in commemoration of the Soviet scientists' achievements in the study of space.

Chërnyy Island 66°08'S, 101°04'E

A small island lying 0.5 mi S of the eastern tip of Thomas Island in the Highjump Archipelago. Mapped from air photos taken by USN Operation Highjump (1946–47). Rephotographed by the Soviet expedition (1956) and named Ostrov Chërnyy (black island).

Cherry-Garrard, Mount 71°18'S, 168°41'E

A peak at the seaward end of the divide between Simpson Glacier and Fendley Glacier, on the N coast of Victoria Land. Charted by the Northern Party, led by Victor Campbell, of the BrAE, 1910–13. They named the feature for Apsley Cherry-Garrard, Asst. Zoologist on the expedition.

Cherry Glacier: see Cherry Icefall 84°27'S, 167°40'E

Cherry Icefall 84°27'S, 167°40'E

A small, steep icefall on the S side of Barnes Peak in Queen Alexandra Range, descending toward Beardmore Glacier. Originally named "Cherry Glacier" by the BrAE (1910–13), for Apsley Cherry-Garrard, zoologist with the expedition. The name has been amended on the recommendation of the NZGSAE (1961–62) to be more descriptive of the feature. Not: Cherry Glacier.

Cherry Island 73°45'S, 123°32'W

An ice-covered island, 3 mi long, lying between Siple and Carney Islands and just within the Getz Ice Shelf, along the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Chief Warrant Officer J.M. Cherry, a member of the U.S. Army Aviation Detachment in Antarctica during USN OpDFrz 1966.

Cherry Spur 72°52'S, 162°00'E

A prominent rock spur that forms the SW portion of Sculpture Mountain at the S end of Monument Nunataks. The feature was geologically studied by Ohio State University field parties in the 1981–82 and 1982–83 seasons. Named by the US-ACAN after Eric M. Cherry, geologist with those parties who worked on the spur.

Chervova, Gora: see Chervov Peak 71°50'S, 10°33'E

Chervov Peak 71°50'S, 10°33'E

Peak, 2,550 m, rising 1 mi N of Mørkenatten Peak in the Shcherbakov Range, Orvin Mountains, in Queen Maud Land. Roughly plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Soviet geologist Ye. I. Chervov. Not: Gora Chervova.

Cheshire Rock 62°22'S, 59°45'W

A rock about 1 m above mean higher high water, lying 0.1 mi SE of Passage Rock in English Strait, South Shetland Islands. Named by UK-APC for Lt. Cdr. Peter J.E. Cheshire, leader of the RN Hydrographic Survey Unit in the area in 1967.

Chester Cone 62°38'S, 61°05'W

Cone-shaped elevation in the middle of Byers Peninsula, Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 for Captain Chester, Master of the *Essex*, one of the fleet of American sealers from Stonington, CT, which visited the South Shetland Islands in 1821–22.

Chester Mountains 76°40'S, 145°35'W

Group of mountains just N of the mouth of Crevasse Valley Glacier and 10 mi N of Saunders Mountain in the Ford Ranges of Marie Byrd Land. Mapped by the ByrdAE (1933–35) and named for Colby M. Chester, president of General Foods Corporation, who gave generous support to the Byrd expeditions.

Chetwynd, Mount 76°20'S, 162°02'E

Mountain, over 1,400 m, immediately S of Mount Gauss in the Kirkwood Range of Victoria Land. Discovered by the BrNAE (1901–04) and named for Sir Peter Chetwynd, a naval friend of Scott's, who was later Superintendent of Compasses at the Admiralty.

Cheu Valley 85°11'S, 173°54'W

A narrow, N-S trending valley in the Cumulus Hills, about 3 mi long, with its N end opening at the S side of McGregor Glacier,

just W of the mouth of Gatlin Glacier. Named by the Texas Tech-Shackleton Glacier Expedition (1964–65) for Specialist 5th Class Daniel T.L. Cheu, member of the U.S. Army Aviation Detachment which supported the expedition.

Chevreur Cliffs 80°32'S, 20°36'W

Cliffs rising to c. 1,500 m to the E of Mount Dewar in Pioneers Escarpment, Shackleton Range. Photographed from the air by the U.S. Navy, 1967. Surveyed by BAS, 1968–71. In association with the names of pioneers of polar life and travel grouped in this area, named by the UK-APC after Michel Eugène Chevreul (1786–1889), French chemist whose research on the nature of fats in 1823 led to the invention of stearine candles, used subsequently by polar explorers.

Chevreur, Mount 65°46'S, 64°00'W

Mountain, 1,615 m, standing 5 mi SE of Leroux Bay on the W coast of Graham Land. Discovered by the FrAE, 1908–10, under Charcot, who named it for Édouard Chevreux, French zoologist.

Chevron Rocks 84°07'S, 173°10'E

A distinctive rock outcrop at the N end of Retrospect Spur, near the head of Hood Glacier in the Queen Maud Mountains. A New Zealand party climbed Retrospect Spur during the 1959–60 season. They gave the name Chevron Rocks because of their appearance, resembling the stripes worn by non-commissioned officers.

Chiang, Mount 77°58'S, 162°39'E

A distinctive mountain, 2,900 m, having the appearance of a gablelike projection from the N part of Chaplains Tableland, Royal Society Range, in Victoria Land. Named by US-ACAN in 1992 after Erick Chiang, Manager, Polar Operations Section, Division of Polar Programs, National Science Foundation, from 1991.

Chica, Isla: see Challenger Island 64°21'S, 61°35'W

Chick Island 66°47'S, 121°00'E

An isolated rock island lying off the eastern end of Sabrina Coast, approximately 10 mi NE of Henry Islands. Delineated from aerial photographs taken by USN Operation Highjump (1946–47), and named by US-ACAN for Amos Chick, carpenter on the sloop *Vincennes* during the USEE (1838–42) under Lt. Charles Wilkes.

Chider, Mount 72°06'S, 169°10'E

A notable mountain, 3,110 m, standing 2 mi SE of Mount Hart in the Admiralty Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Lt. Cdr. Thomas J. Chider, helicopter pilot with USN Squadron VX-6 at McMurdo Station in Operation Deep Freeze 1968.

Chijire Glacier 68°03'S, 43°23'E

Glacier flowing to the coast just E of Chijire Rocks in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, who also gave the name. Not: Tizire Glacier.

Chijire Rocks 68°02'S, 43°18'E

Group of exposed rocks standing on the coast just W of the mouth of Chijire Glacier in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, who also gave the name. Not: Tizire Rocks.

Child Rocks 67°26'S, 63°16'E

Group of rocks at the W end of the Robinson Group off the coast of Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Vestskjera (the west skerries). Renamed by ANCA for J.B. Child, Third Officer of the *Discovery* during BANZARE, 1929–31. Not: Vestskjera.

Childs Glacier 83°24'S, 58°40'W

A glacier in the Neptune Range, Pensacola Mountains, draining westward from Roderick Valley to enter Foundation Ice Stream. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for John H. Childs, builder at Ellsworth Station, winter 1958.

Chile, Bahía: see Discovery Bay 62°29'S, 59°43'W

Chileno, Ventana del: see Neptunes Window 62°59'S, 60°33'W

Chimaera Flats 57°04'S, 26°40'W

A broad stretch of flat sand with a smooth surface only a few meters above sea level, between Medusa Pool and Gorgon Pool on Candlemas Island, South Sandwich Islands. The name applied by UK-APC in 1971 refers to a mythical fire-eating monster.

Chinook Pass 69°29'S, 68°33'W

A pass running N-S between Föhn Bastion and Wright Spires on the Rymill Coast of Palmer Land. The pass is part of a convenient overland sledging route, southward from Brindle Cliffs. Named by UK-APC after the warm, dry wind descending the eastern slopes of the Rocky Mountains. One of several features in the area named after winds.

Chinstrap Cove 61°14'S, 54°11'W

A cove 3 mi NE of Escarpada Point on the NW coast of Clarence Island, South Shetland Islands. The name refers to the large colony of Chinstrap penguins (*Pygoscelis antarctica*) observed in the cove by the U.K. Joint Services Expedition, 1970–71.

Chinstrap Point 57°07'S, 26°46'W

The SE point of Vindication Island, South Sandwich Islands. This feature was named Rocky Point during survey of the island from RRS *Discovery II* in 1930, but the name was changed to avoid duplication. The new name applied by UK-APC in 1971 refers to the enormous colony of Chinstrap Penguins on the point. Not: Punta Roquedal, Rocky Point.

Chionis Island 63°52'S, 60°38'W

Island lying S of Awl Point, Trinity Island, in the Palmer Archipelago. The name Snow Island was used for this feature by whalers in the area in the 1920's, but has not been used on any published map. Since Snow Island in the South Shetland Islands lies just across Bransfield Strait, a new name has been substituted for this feature. Chionis Island was so named by the UK-APC in 1960 after the sheathbill (*Chionis alba*), a common bird in this region.

Chiriguano, Bahía: see Chiriguano Bay 64°28'S, 62°31'W

Chiriguano Bay 64°28'S, 62°31'W

A bay NE of Strath Point, indenting the S end of Brabant Island, Palmer Archipelago. The bay was surveyed and named "Bahía Chiriguano" by the Argentine Antarctic Expedition, 1948–49.

Christensen Peak: see Christensen Nunatak 65°06'S, 59°31'W

Christensens Bre: see Christensen Glacier 54°28'S, 3°24'E

Christensen Volcano: see Christensen Nunatak 65°06'S, 59°31'W

Christi, Mount 62°55'S, 62°24'W

Mountain, 1,280 m, standing nearly 3 mi NE of Mount Pisgah in the NE part of Smith Island, South Shetland Islands. The name Cape Christi was given for the N cape of Smith Island by a British expedition under Foster, 1828–31, but that feature had already been named Cape Smith. Since the latter name is approved for the cape, the UK-APC recommended in 1953 that for the sake of historical continuity the name Christi be approved for the mountain now described.

Christiaensen Glacier 71°32'S, 35°37'E

A glacier that drains westward between Mount Eyskens and Mount Derom, in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960 by the BelgAE under Guido Derom, who named it for Leo Christiaensen, captain of the polar vessel *Erika Dan* which brought the Belgian expedition to Antarctica.

Christiania Islands 63°57'S, 61°27'W

Group of islands and rocks between Liège and Trinity Islands, in the Palmer Archipelago. Charted by the BelgAE, 1897–99, under Gerlache, who named the group for Christiania (now Oslo), Norway, where he obtained assistance and equipment for the expedition. Not: Kristiania Island.

Christie, Cape 72°18'S, 170°01'E

A cape situated 5 mi WNW of Cape Hallett, marking the W side of the entrance to Edisto Inlet on the coast of Victoria Land. Discovered, Jan. 15, 1841, by Sir James Clark Ross and named for Prof. Samuel Hunter Christie, of the Royal Military Academy, Woolwich.

Christie Peaks 71°15'S, 67°25'W

A conspicuous group of sharp peaks located immediately S of the terminus of Ryder Glacier on the W coast of Palmer Land. Named by the UK-APC for Timothy J.C. Christie, BAS surveyor at Stonington Island, 1970–71.

Christine Island 64°48'S, 64°02'W

Island 0.5 mi long which lies 1 mi off the S coast of Anvers Island and 1.5 mi SE of Bonaparte Point. The name was proposed by USARP biologist Dietland Müller-Schwarze after his wife Christine Müller-Schwarze, who studied Adélie Penguins with him on the island in 1971–72.

Christmas, Cape 72°20'S, 60°41'W

Abrupt rock cape which rises to 320 m, marking the N side of the entrance to Wüst Inlet, on the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by the USAS. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. So named by the FIDS because the joint party in 1947 spent Christmas Day in this vicinity.

Christmas, Mount 81°54'S, 161°56'E

A uniform sharp peak, 1,745 m, standing 9 mi WSW of Cape May, in the Nash Range. Discovered by the BrNAE (1901–04)

and so named because it was the most salient feature in view when the polar party was abreast of it on Christmas Day, 1902.

Christmas Cliffs 73°33'S, 94°17'W

South-facing cliffs with two prominent rock outcrops, located 2 mi SSE of Pillsbury Tower in the Jones Mountains. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61, and so named by the party because the cliffs were visited on Christmas Day, 1960.

Christmas Island: see Rosamel Island 63°34'S, 56°17'W

Christoffersen Heights 73°36'S, 93°54'W

Broad snow-covered heights which form the south-central portion of the Jones Mountains, southward of Bonnabeau and Anderson Domes. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61. Named by US-ACAN for Lt. Ernest H. Christoffersen, USNR, co-pilot of ski-equipped LC-47 Dakota aircraft on pioneering flights from Byrd Station to the Eights Coast area in November 1961. Not: Christoffersen Heights.

Christoffersen Island 60°44'S, 45°03'W

Small island immediately W of the S end of Powell Island in the South Orkney Islands. The name appears on a chart by Norwegian whaling captain Petter Sørllø, who made a running survey of these islands in 1912–13. Not: Christophersen Island.

Christoffersen Heights: see Christoffersen Heights 73°36'S, 93°54'W

Christophersen Glacier 54°25'S, 36°47'W

Glacier 8 mi long, flowing W into Jacobsen Bight on the S coast of South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Pedro Christophersen, one of the first Directors of the Compañía Argentina de Pesca which operated the Grytviken whaling station for more than 50 years beginning in 1904.

Christophersen Island: see Christoffersen Island 60°44'S, 45°03'W

Christoph Nunatak 74°49'S, 73°47'W

A nunatak rising to c. 1,300 m, 2.5 mi ENE of Holtet Nunatak in the Lyon Nunataks, Ellsworth Land. Mapped by USGS from U.S. Navy aerial photographs taken 1965–68 and Landsat imagery taken 1973–74. Named by US-ACAN in 1987 after Klaus J. Christoph, upper atmospheric physicist at Siple Station, 1970–71.

Christy Glacier 86°06'S, 161°30'W

A steep tributary glacier draining SE along the SW side of Breyer Mesa to enter Amundsen Glacier, in Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Clarence C. Christy, maintenance shop supervisor at Williams Field, McMurdo Sound, on USN OpDFrz 1967.

Chugunov Glacier 70°43'S, 163°09'E

Glacier about 15 mi long located just N of Astakhov Glacier in the Bowers Mountains. It is one of several glaciers which drain the E slopes of the Explorers Range and flow to Ob' Bay. Plotted from photographs taken by the SovAE in 1958. Named for N.A. Chugunov, Soviet aerologist who died while taking part in this expedition.

Chugunov Island 65°54'S, 99°29'E

Small ice-covered island, lying at the seaward extremity of Shackleton Ice Shelf, between the projections of Denman and Scott Glaciers. Mapped from aerial photos taken by USN OpHjp, 1946–47. Rephotographed by the Soviet expedition of 1956 and later named for N.A. Chugunov, aerologist who lost his life in the Antarctic in 1958.

Church, Cape 67°51'S, 65°35'W

Rocky bluff which projects into the head of Seligman Inlet immediately N of Ahlmann Glacier, on the E coast of Graham Land. Photographed from the air in 1940 by the USAS. Charted in 1947 by the FIDS, who named it for Prof. James E. Church of the Agricultural Experiment Station, University of Nevada, who developed techniques of snow surveying and meltwater run-off forecasts now widely used. Not: Punta Zenteno.

Church Bay 54°00'S, 37°47'W

Bay 4.5 mi wide, indenting the N coast of South Georgia between Low Rock Point and Cape North. Roughly charted by DI personnel in the period 1925–30 and surveyed by the SGS, 1951–57. The name is well established in local use.

Church Glacier 71°51'S, 167°34'E

Tributary glacier, 10 mi long, flowing southward along the west side of Church Ridge to enter Leander Glacier northwest of Shadow Bluff, in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Brooks D. Church, laboratory management technician at McMurdo Station, 1966–67 and 1967–68.

Churchill Mountains 81°30'S, 158°30'E

The major range of mountains and associated elevations bordering the W side of the Ross Ice Shelf between Byrd Glacier and Nimrod Glacier. Several of its highest summits, including Mounts Eger-ton, Field, Wharton, Albert Markham and Nares, were first seen and named by the BrNAE, 1901–04. The mountains were mapped in detail by the USGS from tellurometer surveys, 1960–61, and U.S. Navy air photos, 1960. Named by the US-ACAN for Sir Winston Churchill.

Churchill Peninsula 66°30'S, 62°45'W

Ice-covered peninsula between Cabinet and Adie Inlets, extending some 30 mi in a SE direction from the E coast of Graham Land. Photographed from the air by the RARE and charted from the ground by the FIDS during 1947. Named by the FIDS for Rt. Hon. (later Sir) Winston S. Churchill, M.P., British Prime Minister and leader of the War Cabinet which authorized the FIDS in 1943. Not: Flint Peninsula, Península Ameghino, Península Suecia, Poluoströv Cherrhill.

Churchill Point 66°24'S, 110°23'E

The northwestern point of Holl Island, in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Radioman Robert W. Churchill, USN, a member of the Wilkes Station party of 1958.

Church Mountain: see Kjerka, Mount 68°03'S, 66°04'E

Church Nunataks 66°48'S, 52°39'E

A line of small nunataks 1 mi NE of Mount Smethurst and 28 mi SW of Stor Hånakken Mountain in Enderby Land. Plotted from air

photos taken from ANARE aircraft in 1957. Named by ANCA for S.W. Church, radio officer at Wilkes Station in 1961.

Church Point 63°41'S, 57°55'W

A point 2 mi W of Camp Hill on the S coast of Trinity Peninsula. The feature was sighted by SwedAE in 1903; surveyed by FIDS in 1945 and so named because the point rises to a rock peak (355 m), the sides of which resemble a church steeple. Not: Punta Iglesias.

Church Ridge 71°49'S, 167°45'E

A southwest-trending ridge, 10 mi long, with several peaks over 2,000 m high. The ridge separates the flow of the Church and Leander Glaciers in the Admiralty Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960–63. Named by US-ACAN for Cdr. A.E. Church, USN, assistant chief of staff for civil engineering with the U.S. Naval Support Force, Antarctica, 1967 and 1968.

Church Rock 53°02'S, 73°26'E

A dark, steeple-like rock, 16 m high, lying at the head of Corinthian Bay opposite the terminus of Baudissin Glacier, off the N side of Heard Island. Probably named after Captain Church of the schooner *Mechanic*, a tender to the *Corinthian* in Capt. Erasmus Darwin Rogers' sealing fleet that landed at Heard Island in 1855. The name appears in the reports of the British *Challenger* expedition that visited Heard Island in 1874 and utilized many of the names then in use. Several members of the Church family of Montville, CT are recorded as working in the area during this period.

Ciega, Bahía: see Blind Bay 67°31'S, 66°32'W

Cielo, Roca: see Sky Rock 53°59'S, 37°30'W

Cierva Cove 64°09'S, 60°53'W

Cove lying 6 mi SE of Cape Sterneck in Hughes Bay, along the W coast of Graham Land. Shown on an Argentine government chart of 1950. Named by the UK-APC in 1960 for Juan de la Cierva (1895–1936), Spanish designer of the autogiro, the first successful rotating wing aircraft in 1923. Not: Caleta Brialmont, Caleta Fontaine.

Cinder Hill 77°17'S, 166°26'E

Prominent dissected volcano, 305 m, consisting of layers of red basalt scoria and cinders and abundant olivine nodules, standing between Harrison and Wilson Streams on the ice-free lower W slopes of Mount Bird, Ross Island. Mapped and descriptively named by the NZGSAE, 1958–59.

Cinder Spur 62°09'S, 58°11'W

Small spur extending into Legru Bay, 1.5 mi W of Low Head on the S coast of King George Island, in the South Shetland Islands. So named by the UK-APC in 1963 because the feature is composed mainly of volcanic cinders.

Circe, Dome: see Charlie, Dome 75°00'S, 125°00'E

Circe, Mount 77°28'S, 160°58'E

Prominent peak over 2,000 m, standing just N of Mount Dido in the Olympus Range of Victoria Land. Named by the VUWAE (1958–59) after a figure in Greek mythology.

Circle Icefall 79°38'S, 156°30'E

An almost impenetrable icefall near Tentacle Ridge, 45 m high and 15 mi long, extending in an arc for almost the whole width

across the Darwin Glacier. Named by the Darwin Glacier Party of the CTAE (1956–58) for its similarity to the circle of an opera house.

Circoncision, Cape 54°25'S, 3°21'E

A prominent cape which forms the NW extremity of Bouvetøya. The name was given on Jan. 1, 1739 by J.B.C. Bouvet de Lozier, discoverer of Bouvetøya on that date, in memory of the holy day of the church calendar. Bouvet approached the island from a NW direction and was uncertain whether his discovery was an island or part of a continent. The cape was roughly charted in 1898 by a German expedition under Karl Chun. Cartographic correlation of the name with this cape appears to be first evidenced on the chart of the *Norvegia* expedition of 1927–28 under Capt. Harald Hornthvedt. Not: Cape Circumcision.

Circoncision, Port: see Circumcision, Port 65°11'S, 64°10'W

Circular, Cabo: see Bald Head 63°38'S, 57°36'W

Circumcision, Cape: see Circoncision, Cape 54°25'S, 3°21'E

Circumcision, Port 65°11'S, 64°10'W

A cove indenting the SE side of Petermann Island, in the Wilhelm Archipelago. Discovered on Jan. 1, 1909 by the FrAE under Charcot, who named it for the holy day on which it was first sighted. The cove served as a base for the ship *Pourquoi-Pas?* during the 1909 winter season. Not: Port Circoncision.

Cirque Fjord 67°18'S, 58°39'E

Ice-filled inlet on the S side of Law Promontory opening into Stefansson Bay in Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Botnfjorden (the cirque fjord). Seen by an ANARE party in 1956. The translated form of the name recommended by ANCA has been approved. Not: Botnfjorden.

Cirque Peak 72°11'S, 165°58'E

A peak 1 mi S of Le Couteur Peak, in the Millen Range. So named by the Northern Party of NZFMCAE, 1962–63, due to the peak's position at the head of a large cirque containing a section of the Pearl Harbor Glacier névé.

Citadel Bastion 72°00'S, 68°32'W

A rocky, flat-topped elevation at the S side of the terminus of Saturn Glacier, on the E side of Alexander Island. The feature was mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. The name applied by UK-APC refers to the resemblance of the feature to a fortified structure.

Citadel Peak 85°57'S, 154°27'W

A peak of volcanic rock along the S side of Vaughan Glacier, 6 mi E of Mount Vaughan, in the Queen Maud Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. So named by NZGSAE, 1969–70; the summit is composed of vertical rock slabs, its strange appearance being reminiscent of a castle or citadel.

Clague Ridge 71°14'S, 65°40'E

A partially snow-covered rock ridge about 5 mi SW of Armonini Nunatak in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named for E.L. Clague, weather observer at Wilkes Station in 1962.

Clapmatch Point 57°06'S, 26°39'W

A low, lava point penetrated by narrow clefts, forming the SW point of Candlemas Island, South Sandwich Islands. The name applied by UK-APC in 1971 is a traditional sealers name for a female Fur Seal. There is a breeding colony of this animal on the point. Not: Punta Baja.

Clapp Ridge 72°54'S, 167°54'E

A narrow, steep-sided ridge about 9 mi long, forming the N wall of Hand Glacier in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for James L. Clapp, member of the USARP glaciological party to Roosevelt Island, 1967–68.

Claquebue Island 66°46'S, 141°35'E

Rocky island 0.25 mi long, lying 0.05 mi E of Dru Rock in the Curzon Islands. Charted in 1951 by the FrAE and named by them for the village in *La Jument Verte*, a novel much read and appreciated by members of the French expedition.

Clara, Mount 54°51'S, 36°02'W

A peak rising to c. 790 m to the E of Mount Normann and S of Larsen Harbor, in SE South Georgia. Charted and named by DI personnel in 1927.

Clarence Island 61°12'S, 54°05'W

Island 12 mi long, which is the easternmost of the South Shetland Islands. The name dates back to at least 1821 and is now established in international usage. Not: Clarences Isle, Shishkoffs Island.

Clarence Mackay, Mount: see Mackay Mountains 77°30'S, 143°20'W

Clarences Isle: see Clarence Island 61°12'S, 54°05'W

Clare Range 77°10'S, 161°10'E

The range extending WSW from Sperm Bluff to the Willett Range on the S side of Mackay Glacier, in Victoria Land. Circumnavigated in 1957 by the N.Z. Northern Survey Party of the CTAE (1956–58). Named by them after Clare College of Cambridge, England.

Clarie Coast 66°30'S, 133°00'E

That portion of the coast of Wilkes Land lying between Cape Morse, in 130°10'E, and Pourquoi Pas Point, in 136°11'E. Discovered in January 1840 by Capt. Jules Dumont d'Urville, who recognized the existence of land lying S of the ice cliffs to which he applied the name "Côte Clarie," after Madame Jacquinet, wife of the captain of his second ship, the *Zélée*. Not: Clarie Land, Wilkes Coast.

Clarie Land: see Clarie Coast 66°30'S, 133°00'E

Clarity Point 54°04'S, 37°01'W

A point on the E side of Blue Whale Harbor, South Georgia. The feature was charted and named "Clear Point" by DI in 1930. The name was amended by UK-APC in 1991 to avoid duplication of Clear Point at Leith Harbor in Stromness Bay. Not: Clear Point, Punta Limpia.

Clarke, Mount 85°05'S, 172°18'E

A mountain (3,210 m) located 13 mi due east of Mount Iveagh in the Queen Maud Mountains. The feature rises along the east margin of the Snakeskin Glacier, near the edge of the interior ice

plateau. Discovered and named by the Southern Journey Party of the BrAE (1907–09) under Ernest Shackleton.

Clarke Barrier: see Clarke Glacier 75°34'S, 162°05'E

Clarke Bluff 69°39'S, 159°13'E

A steep bluff (840 m) at the E end of Feeney Ridge in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Lt. (j.g.) Jon B. Clarke, USN, Navigator on aerial photographic missions in LC-130F Hercules aircraft during Operation Deep Freeze 1967 and 1968.

Clarke Glacier 68°48'S, 66°56'W

Glacier, 2 mi wide and 20 mi long, flowing W to Mikkelsen Bay along the N side of Sickle Mountain and Baudin Peaks, on the W coast of Graham Land. First roughly surveyed in 1936 by the BGLE under Rymill. The glacier was traversed near its head by a USAS sledge party in January 1941. Its lower reaches were surveyed in 1948–49 by the FIDS, and the glacier was named by them for Louis C.G. Clarke, Dir. of the Fitzwilliam Museum, Cambridge, 1937–46, who greatly assisted the BGLE, 1934–37.

Clarke Glacier 75°34'S, 162°05'E

A glacier, 5 mi long, draining E to the coast of Victoria Land immediately N of Lewandowski Point. The seaward extremity of this glacier merges with the flow of Davis Glacier and other glaciers from the south and contributes to the floating tongue of ice between Cape Reynolds and Lamplugh Island. Discovered and named by the BrAE, 1907–09, under Shackleton. Not: Clarke Barrier.

Clark Glacier 77°25'S, 162°25'E

Glacier between Mount Theseus and Mount Allen, occupying a low pass in the E part of the Olympus Range in Victoria Land. Named by the VUWAE, 1958–59, for Prof. R.H. Clark, head of the Geology Dept., Victoria University of Wellington, who was immediately responsible for the sponsoring of the expedition.

Clark Hills 70°43'S, 63°25'W

A cluster of low, mainly snow-covered hills of about 4 mi extent, located 5 mi SW of the Eland Mountains in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Kerry B. Clark, USARP biologist on the International Weddell Sea Oceanographic Expedition in 1968 and 1969.

Clark Island 74°05'S, 105°17'W

An island 2 mi long in eastern Amundsen Sea. It is the largest island of a small group lying 38 mi WSW of Canisteo Peninsula. Mapped by USGS from surveys and USN air photos, 1960–66. Named by US-ACAN for F. Jerry Clark who participated in USARP glaciological-geophysical work at Roosevelt Island, 1961–62, and on traverses from Byrd Station, 1963–64.

Clark Island: see Clark Peninsula 66°15'S, 110°33'E

Clark Knoll 76°53'S, 146°59'W

An ice-covered knoll 4 mi SW of Mount Dane in the W part of Radford Island, Marshall Archipelago. Mapped by USAS (1939–41) and by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for Elton G. Clark, utilitiesman, USN, at Byrd Station in 1967.

Clark Mountains 77°16'S, 142°00'W

Group of low mountains rising above 1,200 m, standing 10 mi E of the Allegheny Mountains in the Ford Ranges, Marie Byrd Land. Discovered and photographed on aerial flights in 1940 by the USAS and named for Clark University, Worcester, MA.

Clark Nunatak 62°40'S, 60°55'W

Nunatak lying on the southern side of Rotch Dome in the W part of Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 for Daniel W. Clark, first mate of the brig *Hersilia* in 1820–21, who was in charge of a sealing gang on the South Beaches, Livingston Island. Clark was responsible for one of the surviving descriptions of the activities of early American sealers in the South Shetland Islands. Not: Black Hill, Cerro Negro, Morro Negro.

Clark Peak 77°31'S, 154°12'W

A rock peak (645 m) surmounting a bluff on the west side of Larson Glacier in northern Edward VII Peninsula. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1964–67. Named by US-ACAN for Leroy Clark, member of the winter party of the Byrd Antarctic Expedition, 1933–35.

Clark Peninsula 66°15'S, 110°33'E

Rocky peninsula, 2 mi long and 2 mi wide, lying at the N side of Newcomb Bay on Budd Coast. First mapped from aerial photographs taken by USN OpHjp in February 1947 and thought to be an island connected by a steep snow ramp to the continental ice overlying Budd Coast. The term peninsula was considered more appropriate by the Wilkes Station party of 1957 whose headquarters were on this peninsula. Named by the US-ACAN for Capt. John E. Clark, USN, captain of the USS *Currituck*, seaplane tender and flagship of the western task group of USN OpHjp, Task Force 68, 1946–47. Not: Clark Island.

Clark Point 66°33'S, 123°55'E

An ice-covered point at the E side of the entrance to Paulding Bay. Delineated by G.D. Blodgett (1955) from aerial photographs taken by USN Operation Highjump (1946–47). Named by US-ACAN for George W. Clark, Midshipman on the sloop *Peacock* during the USEE (1838–42) under Lt. Charles Wilkes.

Clark Ridge 84°32'S, 64°50'W

A prominent rock ridge, 4 mi long, located 4 mi W of Mount Lowry in Anderson Hills in northern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Larry Clark, cook at Plateau Station, winter 1967.

Clarkson Cliffs 80°28'S, 27°04'W

Ice-covered cliffs marked by rock exposures, rising to 1,400 m at the NE edge of Fuchs Dome, Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. Named by the UK-APC after Peter D. Clarkson, BAS geologist, Halley Station, 1968–70, who worked in the area for four seasons, 1968–71, 1977–78; Head, BAS Mineralogy, Geology and Geochemistry Section, 1976–89; at SPRI from 1989.

Clarkson Peak 83°19'S, 164°34'E

A prominent conical peak, 2,825 m, at the head of Robb Glacier, on the spur running W from Mount Miller. Sighted in January 1958 by the N.Z. Southern Party of the CTAE (1956–58), and

named for Mr. T.R. Clarkson, a member of the Ross Sea Committee.

Clarkson Point: see Pylon Point 68°06'S, 65°05'W

Clark Spur 84°47'S, 169°12'W

A narrow, rocky spur about 3 mi long, extending from the foothills of Prince Olav Mountains to the edge of the Ross Ice Shelf. The spur forms the E side of the mouth of Morris Glacier, about 6 mi NW of Mount Henson. Discovered and photographed by the ByrdAE (1928–30) and named for Arnold H. Clark, asst. physicist who wintered with the expedition.

Clarsach Glacier 69°57'S, 70°17'W

A glacier flowing S between Prague Spur and Finlandia Foothills in N Alexander Island. The feature was photographed from the air by RARE, 1947–48, and was mapped from these photographs by D. Searle of FIDS, 1960. Further delineation was made from U.S. Navy aerial photographs taken 1966–67 and from U.S. Landsat imagery taken Jan. 1974. So named by UK-APC, 1977; in plan view the outline of the glacier resembles a clarsach, or Irish harp.

Claude, Cape: see Claude Point 64°07'S, 62°36'W

Claude Bernard, Ile: see Bernard Island 66°40'S, 140°02'E

Claude Point 64°07'S, 62°36'W

Point which forms the S side of the entrance to Guyou Bay on the W side of Brabant Island, in the Palmer Archipelago. Discovered by the FrAE, 1903–05, under Charcot, who named it for Monsieur Claude, an associate member of the Bureau des Longitudes. Not: Cape Claude, Punta Claudio.

Claude Swanson Mountains: see Swanson Mountains 77°00'S, 145°00'W

Claudio, Punta: see Claude Point 64°07'S, 62°36'W

Clausen Glacier 76°10'S, 112°03'W

A narrow glacier draining northward from the summit of Mount Takahe in Marie Byrd Land. The terminus of the glacier is just west of Knezevich Rock. Mapped by USGS from surveys and U.S. Navy aerial photos, 1959–66. Named by US-ACAN for Henrik B. Clausen (University of Bern, Switzerland), USARP glaciologist at Byrd Station, 1969–70.

Clausnitzer Glacier 74°02'S, 164°41'E

A tributary glacier flowing E from Random Hills to enter Tinker Glacier just N of Harrow Peaks, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for Frazer W. Clausnitzer, ionospheric physics scientist at McMurdo Station, winter 1966.

Clavo, Islote: see Huemul Island 63°40'S, 60°50'W

Claydon Peak 83°25'S, 162°03'E

A peak in the Queen Elizabeth Range, 3,040 m, which presents a rocky face to the NE, standing just S of January Col. Visited by the N.Z. Southern Survey Party of the CTAE (1956–58) in early 1958. Named by them for Squadron-Leader J.R. Claydon, commanding officer of the Antarctic Flight of the RNZAF, who assisted the survey team operating in this vicinity.

Claymore Peak: see Ulla, Mount 77°32'S, 162°24'E

Clayton Glacier 54°04'S, 37°26'W

A small glacier flowing N along Murphy Wall into Sunset Fjord, Bay of Isles, South Georgia. Named by UK-APC for Roger A.S. Clayton, BAS geologist who worked in the area, 1972–74.

Clayton Hill 65°11'S, 64°10'W

Hill, 125 m, in the north-central part of Petermann Island in the Wilhelm Archipelago. First charted and named by the FrAE, 1908–10, under Charcot.

Clayton Ramparts 80°44'S, 27°25'W

A line of E-W cliffs rising to over 1,600 m at the S margin of Fuchs Dome, Shackleton Range. Surveyed by the CTAE, 1957, photographed from the air by the U.S. Navy, 1967, and further surveyed by BAS, 1968–71. Named by the UK-APC after Charles A. Clayton, BAS surveyor, Halley Station, 1969–71, who worked in the area.

Clear Island 64°55'S, 63°44'W

Small snow-capped island lying immediately N of Wednesday Island and forming the northeasternmost of the Wauwermans Islands, in the Wilhelm Archipelago. Shown on an Argentine government chart of 1950. So named by the UK-APC in 1958 because the island is conspicuous from all directions except the SW and is of great value as a reference point for mariners. Not: Isla Coy.

Clear Lake 77°32'S, 166°09'E

A small lake just WNW of Blue Lake at Cape Royds, Ross Island. A descriptive name given by the BrAE (1907–09). It is the deepest lake in this vicinity.

Clear Point 54°08'S, 36°40'W

Point forming the NE side of the entrance to Leith Harbor, Stromness Bay, on the N coast of South Georgia. The name appears to be first used on a 1929 British Admiralty chart. Not: Punta Limpia.

Clear Point: see Clarity Point 54°04'S, 37°01'W

Cleaves Glacier 82°57'S, 165°00'E

A glacier in the Holland Range, flowing NW from Mount Reid into the E side of Robb Glacier. Mapped by USGS from tellurometer surveys (1961–62) and Navy air photos (1960). Named by US-ACAN for Harold H. Cleaves, Master of the USNS *Pvt. Joseph F. Merrell* during OpDFrz 1964–65.

Cleft Island 69°21'S, 75°38'E

A small island to the N of Bølingen Islands, lying 2.5 mi SE of Lichen Island in southern Prydz Bay. The island is split by a deep channel about 6 m wide. The island was plotted from air photos taken by the Lars Christensen Expedition, 1936–37, and called Lorten by Norwegian cartographers. The feature was visited by an ANARE party from the *Nella Dan* in February 1966 and renamed with reference to the deep channel. Not: Lorten.

Cleft Peak 83°55'S, 173°34'E

A prominent coastal peak (1,245 m) whose eastern side is cleft from summit to base by a huge fissure. The feature rises from the W part of the Separation Range and overlooks the terminus of Hood Glacier. Named by the N.Z. Alpine Club Antarctic Expedition (1959–60) whose four members were landed in the vicinity by aircraft of U.S. Navy Squadron VX-6.

Cleft Point 60°37'S, 45°46'W

Point on the E side of Norway Bight on the S coast of Coronation Island, South Orkney Islands. The point marks the W extremity of an island which is separated from Coronation Island by a narrow channel, but it was mapped by DI in 1933 as a point on Coronation Island. The descriptive name alludes to the narrow separation from the main island and was given by the FIDS following their survey of 1950. Not: Islote Grieta.

Clemence Massif 72°11'S, 68°43'E

An elongated, mostly ice-free massif, 15 mi long and rising to 1,400 m, standing 30 mi SE of Shaw Massif on the E side of Lambert Glacier. Discovered by ANARE personnel from Beaver aircraft piloted by Flying Officer D.M. Johnston, RAAF, in 1957. Named by ANCA for Squadron Leader P.H. Clemence, who commanded the RAAF Antarctic Flight at Mawson Station in 1957.

Clement Hill 62°13'S, 58°58'W

Hill rising to 135 m, the highest elevation in southern Fildes Peninsula, 1 mi NW of Halfthree Point, King George Island, South Shetland Islands. The UK-APC named the hill in 1977 after Colin C. Clement, FIDS base leader and diesel mechanic at Admiralty Bay, 1956–57.

Clements Island 65°56'S, 66°00'W

An island 1 mi long lying immediately S of Rabot Island in the Biscoe Islands. The FrAE, 1903–05, under Charcot, gave the name "Ile Clements Markham" for Sir Clements Markham, President of the Royal Geographical Society, 1893–1905. Charcot applied this name to an incompletely defined island NE of Renaud Island, in what is now the Pitt Islands. The recommended application, however, is based upon the map of the BGLE, 1934–37, which provided a more reliable chart of the area. The first part of the name rather than the last, has been retained to distinguish this feature from Markham Island in Terra Nova Bay, Victoria Land. Not: Clements Markham Island, Markham Island.

Clements Markham Bay: see Markham Bay 64°17'S, 57°18'W

Clements Markham Island: see Clements Island 65°56'S, 66°00'W

Clem Nunatak 78°31'S, 160°40'E

Isolated rock nunatak, 1,260 m, standing at the W side of Skelton Glacier, 7 mi SW of Halfway Nunatak. Named by US-ACAN in 1964 for Willis R. Clem, a construction mechanic at McMurdo Station in 1959.

Clemons Spur 82°31'S, 51°13'W

A bare rock spur next S of Forlidas Ridge in the Dufek Massif, Pensacola Mountains, q.v. Named at the suggestion of party leader Arthur B. Ford, USGS, after Samuel D. Clemons, steward, USN Squadron VXE-6, with the USGS Pensacola Mountains survey, 1965–66.

Clerke Rocks 55°01'S, 34°41'W

Group of rocks extending 5 mi in an E-W direction, lying some 35 mi ESE of South Georgia. Discovered in 1775 by a British expedition under Cook, who named them for Charles Clerke, officer on the *Resolution* who first saw the rocks. Not: Clerkes Rocks.

Clerkes Rocks: see Clerke Rocks 55°01'S, 34°41'W

Cléry Peak 65°03'S, 63°58'W

Peak, 640 m, on the N side of Mount Lacroix, a conspicuous massif at the N end of Booth Island, in the Wilhelm Archipelago. Charted by the FrAE, 1903–05, under Charcot, who named it for his father-in-law L. Cléry, an eminent French lawyer.

Cletrac Peak 64°20'S, 59°38'W

A conspicuous steep-sided peak at the NW corner of Larsen Inlet, immediately N of Muskeg Gap, in Graham Land. Mapped from surveys by FIDS (1960–61). Named by UK-APC after Cletrac tractors made by the Cleveland Tractor Co., Ohio, the first to be used successfully in the Antarctic, by Admiral Byrd's second expedition (1933–35).

Cleveland Glacier 76°55'S, 162°01'E

Glacier about 2 mi wide which flows ESE from Mounts Morrison and Brøgger to enter Mackay Glacier just W of Mount Marston, in Victoria Land. Discovered by the BrAE (1910–13) and named by Frank Debenham, a member of the expedition, after his mother's maiden name.

Cleveland Mesa 86°19'S, 130°00'W

A high, ice-covered mesa, 5 mi long and 3 mi wide, situated at the SE end of Michigan Plateau. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Harlan Cleveland, Asst. Sec. of State for International Organization Affairs, 1961–65, who was Chairman of the Antarctic Policy Group in 1965.

Cleveland Rock 53°59'S, 37°22'W

Rock lying just off Cape Buller on the W side of the entrance to the Bay of Isles, South Georgia. Positioned by the SGS in the period 1951–57. Named by the UK-APC for Benjamin D. Cleveland of New Bedford, MA, captain of the brig *Daisy* which visited South Georgia in 1912–13.

Cliff Island 66°00'S, 65°39'W

Narrow cliffed island at the S side of Mutton Cove, lying immediately S of Upper Island and 8 mi W of Prospect Point, off the W coast of Graham Land. Charted and named by the BGLE under Rymill, 1934–37. Not: Islote Acantilado.

Clifford Ashley Mountains: see Ashley, Mount 54°07'S, 37°21'W

Clifford Glacier 70°23'S, 62°30'W

Broad glacier, about 40 mi long, flowing in an ENE direction to the gap between Mount Tenniel and the Eland Mountains, and then E to Smith Inlet on the E coast of Palmer Land. The upper part of this glacier was charted in 1936 by the BGLE under Rymill; the seaward side by the USAS survey party which explored along this coast in 1940. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named in 1952 by the FIDS for Sir G. Miles Clifford, then Gov. of the Falkland Islands.

Clifford Peak 64°34'S, 62°53'W

Peak, 1,160 m, at the NE end of the Osterrieth Range, Anvers Island, in the Palmer Archipelago. Probably first seen by the BelgAE, 1897–99, under Gerlache. The peak was named by members of HMS *Snipe* following an Antarctic cruise in January 1948, for Sir G. Miles Clifford.

Cliff Point: see Gony Point 54°00'S, 38°01'W

Climbing Range: see Blackwall Mountains 68°22'S, 66°48'W

Cline Glacier 71°40'S, 62°00'W

A large glacier that drains the vicinity at the E side of Mount Jackson and flows generally SE between Schirmacher Massif and Rowley Massif into the head of Odom Inlet, on the E side of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for David R. Cline, USARP biologist on the International Weddell Sea Oceanographic Expeditions in 1968 and 1969.

Clingman Peak 73°50'S, 161°12'E

The final peak (2,150 m) along the S wall at the head of Priestley Glacier, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Otis Clingman, Jr., biologist at McMurdo Station, 1965–66.

Clinker Bluff 78°31'S, 161°35'E

A detached bluff within the Skelton Glacier, due W of Mount Tricouni. Surveyed in 1957 by the N.Z. party of the CTAE (1956–58) and so named because it resembles the shape of a clinker, a rectangular nail used in alpine boots, and because of its association with nearby Mount Tricouni.

Clinker Gulch 57°03'S, 26°42'W

A gulch extending from Lucifer Hill to the N shore of Candlemas Island, South Sandwich Islands. The name applied by UK-APC in 1971 reflects the actively volcanic, sulphurous nature of the area, and the loose piles of lava debris, resembling furnace clinkers, which wall the gulch.

Clinton Spur 82°39'S, 52°45'W

A rock spur on the S side of Dufek Massif, 1.5 mi SE of Neuburg Peak, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Lt. Clinton R. Smith, (MC) USN, of the Ellsworth Station winter party, 1957.

Cloos, Cape 65°07'S, 64°00'W

High rock cape fronting on Lemaire Channel and marking the N side of the entrance to Girard Bay, on the W coast of Graham Land. Discovered by the BelgAE, 1897–99, under Gerlache, and named after M. Cloos, sometime Honorary Consul in Denmark.

Cloos, Massif: see Cloos, Mount 65°07'S, 63°57'W

Cloos, Mount 65°07'S, 63°57'W

Dome-shaped mountain probably over 915 m, standing at the N side of Girard Bay and 2 mi NE of Cape Cloos, on the W coast of Graham Land. Discovered by the BelgAE, 1897–99, under Gerlache. Named in association with Cape Cloos by the FrAE under Charcot, 1908–10. Not: Massif Cloos.

Close, Cape 65°55'S, 52°29'E

Cape on the coast of Enderby Land, 30 mi W of Cape Batterbee. Discovered by the BANZARE, 1929–31, under Mawson, who named it for Sir Charles Close, President of the Royal Geographical Society, 1927–30.

Close Islands 67°01'S, 144°27'E

A cluster of about three small islands lying in the western part of the entrance to Buchanan Bay. Discovered by the AAE (1911–14) under Douglas Mawson, who named the group for John H. Close, a member of the expedition.

Clothier, Punta: see Hammer Point 62°20'S, 59°39'W

Clothier Harbor 62°22'S, 59°40'W

Small harbor on the NW side of Robert Island, 1.5 mi NE of the W end of the island, in the South Shetland Islands. Named by American sealers in about 1820 after the sealing vessel *Clothier*, under Capt. Alexander Clark, one of several American sealing vessels headquartered at this harbor during the 1820–21 season. The *Clothier* went aground here and sank on Dec. 9, 1820. Not: *Clothier's Harbour*.

Clothier's Harbour: see Clothier Harbor 62°22'S, 59°40'W

Cloudmaker, The 84°17'S, 169°25'E

A massive mountain, 2,680 m, standing at the W side of Beardmore Glacier, just S of Hewson Glacier. Easily identified by its high, ice-free slope facing Beardmore Glacier. Discovered by the BrAE (1907–09), and so named because of a cloud which usually appeared near the summit, providing a useful landmark during their journey up the Beardmore Glacier.

Clough, Mount 85°54'S, 158°26'W

An ice-free mountain, 2,230 m, standing 2 mi E of Mount Dort, at the S side of Cappellari Glacier, in the Queen Maud Mountains. Discovered and first mapped by the ByrdAE, 1928–30. Named by US-ACAN for John W. Clough, geophysicist who participated in the South Pole–Queen Maud Land Traverse II, summer 1965–66.

Clowes Bay 60°44'S, 45°38'W

Bay 1 mi wide, entered between Confusion Point and the Oliphant Islands, along the S side of Signy Island in the South Orkney Islands. Charted in 1933 by DI personnel on the *Discovery II*, who named it for Archibald J. Clowes, English oceanographer on the staff of the Discovery Committee, 1924–46.

Clowes Glacier 72°56'S, 60°41'W

Glacier 2 mi wide, which flows E to enter Mason Inlet, on the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by the USAS. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Archibald J. Clowes.

Cloyd Island 66°25'S, 110°33'E

Rocky island, 0.6 mi long, between Ford and Herring Islands in the S part of the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for J.R. Cloyd, Army Transport Service observer with USN OpWml which established astronomical control stations in the area in January 1948. Not: Ostrov Kloyd.

Club Lake 68°33'S, 78°14'E

A salt-water lake in the central part of Breidnes Peninsula in the Vestfold Hills. The lake is 1.5 mi long and its irregular shape resembles a club which is elongated NE–SW. Mapped from air photos taken by USN OpHjp, 1946–47. Remapped by ANARE (1957–58) who gave the name.

Coal Harbor 54°02'S, 37°57'W

Small bay 0.5 mi E of Undine Harbor along the S coast and near the W end of South Georgia. The name Coaling Harbor, given in about 1912, suggests a possible early use of the bay by sealers and whalers. The name was shortened to Coal Harbor by DI personnel

who charted the area during the period 1926–30. Not: Coaling Harbor, Puerto Carbón.

Coaling Harbor: see Coal Harbor 54°02'S, 37°57'W

Coal Island 54°02'S, 37°57'W

Small tussock-covered island with off-lying rocks marking the W side of the entrance to Coal Harbor, near the W end of South Georgia. Charted by DI personnel on the *Discovery* during the period 1926–30, and by HMS *Owen* in 1960–61. Named by the UK-APC in 1963 in association with Coal Harbor.

Coal Nunatak 72°07'S, 68°32'W

Flat-topped rock mass with steep cliffs facing S, standing 2 mi SW of Corner Cliffs on the SE coast of Alexander Island. First seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and mapped from photos obtained on that flight by W.L.G. Joerg. Observed from the NW (the direction from which Ellsworth photographed this nunatak), only the summit protrudes above the coastal ice, and it was uncertain whether this was a peak on Alexander Island or an island in George VI Sound. Its true nature was determined by the FIDS who visited and surveyed this nunatak in 1949. So named by FIDS because thin lenses of coal occur there.

Coal Rock 83°29'S, 50°38'W

A prominent nunatak lying 4 mi SE of Fierle Peak at the S end of Forrester Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by Dwight L. Schmidt, USGS geologist to these mountains, for the Permian coal that is well exposed on the nunatak.

Coalsack Bluff 84°14'S, 162°25'E

A small rock bluff standing at the northern limits of Walcott Névé, 6 mi WSW of Bauhs Nunatak. So named by the NZGSAE (1961–62) because of the coal seams found running through the bluff.

Coalseam Cliffs 79°10'S, 28°50'W

Rock cliffs forming the NW part of Mount Faraway in the Theron Mountains. First mapped in 1956–57 by the CTAE. So named because a coal seam was found when members of the CTAE made an aircraft landing there in 1957.

Coast Lake 77°32'S, 166°08'E

A small lake at Cape Royds, Ross Island, lying close to the coast, about 0.75 mi N of Flagstaff Point. Named by the BrAE (1907–09) because of its position.

Coates, Mount 67°52'S, 62°31'E

Peak, 1,280 m, just S of Mount Lawrence in the David Range of the Framnes Mountains. Discovered and named in February 1931 by the BANZARE under Mawson.

Coates, Mount 77°48'S, 162°05'E

Peak, 2060 m, just E of Borns Glacier in the Kukri Hills of Victoria Land. Named by the Western Journey Party, led by Taylor, of the BrAE, 1910–13.

Coates Rocks 72°32'S, 164°20'E

A small group of rocks in the NW part of Evans Névé, at the S side of Freyberg Mountains. Mapped by USGS from surveys and USN air photos 1960–64. Named by US-ACAN for Donald A. Coates, USARP geologist at Hallett Station, summer 1964–65, and McMurdo Station, 1966–67.

Coats Land 77°00'S, 27°30'W

That part of Antarctica which lies westward of Queen Maud Land and forms the eastern shore of Weddell Sea, extending in a general northeast-southwest direction between 20°00'W and 36°00'W. The northeast part was discovered from the *Scotia* by William S. Bruce, leader of the Scottish National Antarctic Expedition, 1902–04. He gave the name Coats Land for James Coats, Jr., and Maj. Andrew Coats, the two chief supporters of the expedition. In December 1914 and January 1915, Ernest Shackleton in the *Endurance* continued the exploration southward, joining Bruce's discovery to land which Wilhelm Filchner had discovered from the *Deutschland* in 1912.

Cobalescou Island 64°11'S, 61°39'W

Small snow-free island with two rounded summits, lying 1 mile SE of Two Hummock Island in the Palmer Archipelago. Discovered and named by the BelgAE under Gerlache, 1897–99. The established name appears to be a corrupted spelling. The toponym was suggested to Gerlache by Emile Racovitza, Romanian zoologist and botanist of the BelgAE, for Romanian scholar Grigore Cobălcescu(?), a geologist of European repute.

Cobblers Cove 54°16'S, 36°18'W

Small cove which provides an anchorage 0.5 mi W of the entrance to Godthul, along the N coast of South Georgia. It was charted and named Pleasant Cove by DI personnel in 1929, but that name is not known locally. The SGS, 1951–52, reported that this feature is known to whalers and sealers as "Skomaker Hullet" (cobble's cove), because it was first entered in thick fog by a Norwegian gunner who had once been a cobbler. An English form of this name has been approved. Not: Caleta Agradable, Pleasant Cove, Skomaker Hullet.

Cobham Range 82°18'S, 159°00'E

Range trending in a NW-SE direction for about 20 mi, standing W of Prince Philip Glacier in the S part of the Churchill Mountains. Mapped by the northern party of the NZGSAE, 1961–62. Named by the NZ-APC for a former Governor-General of New Zealand, Lord Cobham.

Coblentz Peak 66°07'S, 65°08'W

Peak rising at the N side of the head of Høltedahl Bay, on the W coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for William W. Coblentz of the U.S. National Bureau of Standards, whose work on the transmissive properties of tinted glass has contributed to the design of satisfactory snow goggles.

Cobre, Glaciar del: see Copper Col 64°44'S, 63°23'W

Cochran Peak 79°39'S, 84°39'W

A sharp peak rising in the S part of Gifford Peaks, in the Heritage Range, Ellsworth Mountains. Mapped by USGS from ground surveys and USN air photos, 1961–66. Named by US-ACAN for Henry B. Cochran, IGY weather central meteorologist at Little America V in 1958.

Cocinero Honores, Islote: see Honores Rock 62°30'S, 59°43'W

Cockburn, Cape 64°01'S, 62°18'W

Cape marking the NE extremity of Pasteur Peninsula on Brabant Island, in the Palmer Archipelago. The name appears on a chart

based upon a British expedition under Foster, 1828–31, who perhaps gave the name to George Cockburn, British naval officer and Admiral of the Fleet in 1851. The cape was charted by the FrAE under Charcot, 1903–05.

Cockburn Island 64°12'S, 56°51'W

Circular island 1 mi in diameter, consisting of a high plateau with steep slopes surmounted on the NW side by a pyramidal peak 450 m high, lying in the NE entrance to Admiralty Sound, S of the NE end of Antarctic Peninsula. Discovered by a British expedition under Ross, 1839–43, who named it for Admiral George Cockburn, RN, then Senior Naval Lord of the Admiralty.

Cockerell Peninsula 63°24'S, 58°08'W

An ice-covered, bulb-shaped peninsula between Lafond Bay and Huon Bay on the N coast of Trinity Peninsula. Discovered by the French Antarctic Expedition, 1837–40, under Capt. Jules Dumont d'Urville. Named in 1977 by the UK-APC after Sir Christopher (Sydney) Cockerell, British pioneer of the hovercraft.

Cocks, Mount 78°31'S, 162°30'E

Mountain, 2,440 m, in the S part of the Royal Society Range, standing at the head of Koettlitz Glacier and forming a part of the divide between the Koettlitz and the lower Skelton Glacier. Discovered by the BrNAE (1901–04) which named it for E.L. Somers Cocks, then Treasurer of the Royal Geographical Society.

Cockscomb Buttress 60°37'S, 45°42'W

Prominent, isolated rock buttress rising to 465 m, standing 1 mi NW of Echo Mountain and overlooking the E side of Norway Bight on the S coast of Coronation Island, in the South Orkney Islands. The name, which is descriptive, was given by the FIDS following their survey of 1950.

Cockscomb Hill 62°05'S, 58°30'W

Conspicuous hill shaped like a cockscomb, 140 m high, which rises through the glacier at the head of Mackellar Inlet in Admiralty Bay, King George Island, in the South Shetland Islands. First surveyed by the FrAE, 1908–10, under Charcot. Named by Lt. Cdr. F.W. Hunt, RN, following his survey in 1951–52. Not: Cerro Cono.

Cocks Glacier 78°41'S, 162°00'E

The glacier draining the SW face of Mount Cocks and a considerable area S of the mountain, and entering the Skelton Glacier opposite the Delta Glacier. Surveyed in 1957 by the N.Z. reconnaissance party to the CTAE (1956–58), and named after Mount Cocks.

Codrington, Mount 66°18'S, 52°52'E

Prominent mountain, 1,520 m, standing 24 mi SSE of Cape Close and 17 mi E of Johnston Peak. Charted in 1930 by the BANZARE under Mawson as being the prominent peak sighted and so named by John Biscoe in March 1831. Not: Gora Kodrington.

Coffer Island 60°45'S, 45°08'W

Small island lying in the entrance to the bay on the E side of Matthews Island in the Robertson Islands group of the South Orkney Islands. The names "Koffer" and "Kotter" are used for this feature on two manuscript charts based on surveys by Capt. Petter Sørllle during 1912–15. The recommended spelling, the anglicized form of the first of the two names, was used by DI personnel on the *Discovery II* who charted these islands in 1933. Not: Isla Cofre, Koffer, Kotter.

Coffin Rock 56°41'S, 27°11'W

Rock which lies 1 mi ESE of Finger Point and 0.25 mi off the N side of Visokoi Island in the South Sandwich Islands. Charted and named in 1930 by DI personnel on the *Discovery II*. Not: Roca Ataúd.

Coffin Top 54°30'S, 36°06'W

A mountain with a flattened summit (745 m) located 1.4 mi ENE of Mount Fagan and 1.6 mi NW of Moltke Harbor, South Georgia. The feature was named "Sarg-Berg" (coffin mountain) by the German group of the International Polar Year Expedition, 1882–83. An English form of the name, Coffin Top, was recommended by UK-APC in 1954. Not: Sarg-Berg.

Cofre, Isla: see Coffer Island 60°45'S, 45°08'W

Cohen, Mount 85°16'S, 164°27'W

A peak, 1,765 m, standing 6 mi SW of Mount Betty in the Herbert Range, Queen Maud Mountains. Discovered by R. Admiral Byrd on several ByrdAE plane flights to the Queen Maud Mountains in November 1929, and named by him for Emanuel Cohen of Paramount Pictures, who assisted in assembling the motion-picture records of the expedition.

Cohen Glacier 85°12'S, 164°15'W

A small glacier draining northward from Mount Cohen of the Herbert Range to enter Strom Glacier near the head of Ross Ice Shelf. Named by the Southern Party of the NZGSAE, 1963–64, in association with Mount Cohen.

Cohen Islands 63°18'S, 57°52'W

A cluster of small islands between Ponce Island and Pebbly Mudstone Island in the SE part of Duroch Islands. The group lies 0.5 mi WSW of Halpern Point. Named by US-ACAN for Theodore J. Cohen, field assistant with the University of Wisconsin (USARP) party during geological mapping of this area, 1961–62.

Cohen Nunatak 85°24'S, 136°12'W

A nunatak lying 1 mi W of the lower part of Reedy Glacier and 7 mi E of Berry Peaks. Mapped by USGS from ground surveys and USN air photos, 1960–63. Named by US-ACAN for Lt. (jg) Harvey A. Cohen, USNR, public affairs officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, in Operation Deep Freeze 1966 and 1967.

Coker Ice Rise 69°04'S, 67°08'W

A small ice rise in Wordie Ice Shelf, 6 mi WNW of Triune Peaks, Fallières Coast. Photographed from the air by the RARE, 1947–48, and surveyed by FIDS, 1958. Named by US-ACAN for Walter B. Coker, USN, radioman, Palmer Station winter party, 1969.

Cola, Isla: see Tail Island 63°40'S, 57°37'W

Colbeck, Cape 77°07'S, 157°54'W

Prominent ice-covered cape which forms the NW extremity of Edward VII Peninsula and Marie Byrd Land. Discovered in January 1902 by the BrNAE and named for Lt. William Colbeck, RNR, who commanded Scott's relief ship, the *Morning*.

Colbeck Archipelago 67°26'S, 60°58'E

Numerous small rocky islands centered 1 mi NW of Byrd Head, just E of Taylor Glacier. Discovered in January 1930 and charted

in February 1931 by the BANZARE under Mawson. Named by Mawson for W.R. Colbeck, second officer of the expedition ship, *Discovery*. Norwegian whalers who explored this same area in January 1931 named the group 4 mi to the N the Thorfinn Islands. The name Colbeck has sometimes appeared on charts for this latter group.

Colbeck Bay 71°38'S, 170°05'E

A cove between Duke of York Island and Cape Klövstad in the S part of Robertson Bay, Victoria Land. First charted by BrAE, 1898–1900, under C.E. Borchgrevink, who named it for Lt. William Colbeck, RNR, magnetic observer of the expedition.

Colbert, Mount 86°12'S, 153°13'W

A mountain rising to 2,580 m, 1.5 mi E of Mount Borcik and 1 mi SSW of Mount Stump in SE Hays Mountains, Queen Maud Mountains. Named by US-ACAN in association with Mount Stump (q.v.) after Philip V. Colbert, geologist, Arizona State University, logistic coordinator and field associate with Edmund Stump on six USARP expeditions to the Transantarctic Mountains, 1970–71 through 1981–82, including the area of this mountain.

Colbert Hills 84°12'S, 162°35'E

A line of hills and bluffs, including Coalsack Bluff, lying E of the Lewis Cliffs, between Law Glacier and Walcott Névé. The hills trend SW for 16 mi from Mount Sirius. Named for Edwin H. Colbert, curator of vertebrate paleontology at the American Museum of Natural History, leader of the paleontology team with the Ohio State University Geological Expedition, 1969–70, which discovered *Lystrosaurus* fossils in these hills. The discovery is one of the truly significant fossil finds, with great implications on calculations concerning Gondwanaland.

Colbert Mountains 70°35'S, 70°35'W

Isolated mountain mass with several rounded snow-covered summits, the highest 1,500 m, overlooking Handel Ice Piedmont between Haydn and Schubert Inlets in the W central part of Alexander Island. First seen and photographed from a distance by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935, and partially mapped from these photos by W.L.G. Joerg. Resighted and photographed from the air by the USAS, 1939–41, and by the RARE 1947–48, under Ronne, who named it for R. Admiral Leo O. Colbert, head of the U.S. Coast and Geodetic Survey, which furnished equipment for the expedition. Remapped in detail from RARE air photos by Searle of the FIDS in 1960. Not: Colbert Range, Navy Range, United States Navy Range.

Colbert Range: see Colbert Mountains 70°35'S, 70°35'W

Colburn, Mount 74°25'S, 132°33'W

A mountain, 520 m, rising above the east-central part of Shepard Island, off the coast of Marie Byrd Land. Mapped from the *USS Glacier* on Feb. 4, 1962. Named by US-ACAN for Lt. (j.g.) Richard E. Colburn, USN, Communications Officer on the *Glacier*.

Coldblow Col 60°37'S, 45°41'W

Snow-covered col at 300 m elevation, between Echo Mountain and Cragsman Peaks on Coronation Island, in the South Orkney Islands. Surveyed in 1950 by the FIDS. The name derives from the fact that a FIDS party had their tent blown down in a gale when camped on this col in September 1948.

Cole, Mount 84°40'S, 177°08'W

A mountain over 1,400 m on the W side of Shackleton Glacier, between the mouths of Forman and Gerasimou Glaciers, in the Queen Maud Mountains. Discovered and photographed by USN OpHjp, 1946–47. Named by US-ACAN for Nelson R. Cole, Aviation Machinist's Mate with USN Squadron VX-6, who lost his life in a helicopter crash in the McMurdo Sound area in July 1957.

Cole Channel 67°22'S, 67°50'W

A marine channel running N-S between Wright Peninsula, Adelaide Island, and Wyatt Island, Laubeuf Fjord, off Loubet Coast. Named by UK-APC in 1984 after Capt. Maurice John Cole, Senior Master of the BAS ship *Bransfield* from 1975; previous Antarctic service as officer on *John Biscoe* and *Shackleton*, several seasons, 1960–72.

Cole Glacier 68°42'S, 66°06'W

A glacier on the E side of Godfrey Upland, 11 mi long, flowing NNE into the Traffic Circle, in southern Graham Land. First seen by USAS in 1940, but not named. Roughly surveyed by FIDS in 1958. Named by UK-APC after Humphrey Cole (c. 1530–91), the most famous English instrument maker of Elizabethan times, who pioneered the design of portable navigation instruments and equipped Martin Frobisher's expeditions.

Coleman, Mount 77°32'S, 163°24'E

Rounded mountain, 1,110 m, standing immediately E of Commonwealth Glacier at the head of New Harbor in Victoria Land. Mapped by the BrAE under Scott, 1910–13. Named by C.S. Wright, a member of the expedition, for Professor Coleman, geologist, of Toronto University, Canada.

Coleman Bluffs 72°28'S, 160°37'E

A loose chain of rock and ice bluffs that trend generally N-S for 5 mi, situated near the center of the Outback Nunataks, about 10 mi NW of Mount Weihaupt. Mapped by USGS from surveys and U.S. Navy air photos, 1959–64. Named by US-ACAN for Harold L. Coleman, meteorologist at South Pole Station, 1968.

Coleman Glacier 75°47'S, 132°33'W

A steep, heavily-crevassed glacier draining westward from Mount Andrus in the S part of Ames Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by the US-ACAN for Master Sergeant Clarence N. Coleman, USA, member of the Army-Navy Trail Party that traversed eastward to establish Byrd Station in 1956.

Coleman Nunatak 75°19'S, 133°39'W

A nunatak located near the head of Berry Glacier, 2 mi S of Patton Bluff in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN after Richard I. Coleman, USARP meteorologist at Byrd Station, 1962.

Cole Peak 85°45'S, 136°38'W

Peak, 2,140 m, located 6 mi NE of Mount Doumani at the N side of Watson Escarpment. Mapped by USGS from ground surveys and USN air photos, 1960–63. Named by US-ACAN for Jerry D. Cole, airman with USN Squadron VX-6 at McMurdo Sound, 1957 and 1960.

Cole Peninsula 66°50'S, 64°00'W

Peninsula, 15 mi long in an E-W direction and 8 mi wide, lying between Cabinet and Mill Inlets on the E coast of Graham Land.

It is ice covered except for several rocky spurs which radiate from Mount Hayes. First sighted and photographed from the air in 1940 by members of East Base of the USAS. During 1947 it was charted by the FIDS and photographed from the air by the RARE under Ronne. Named by Ronne for Rep. W. Sterling Cole of New York, member of the House Naval Affairs Committee, which assisted in obtaining Congressional support resulting in procurement of a ship for use by the Ronne expedition.

Cole Point 74°39'S, 127°30'W

Point at the S end of Dean Island, which lies within the Getz Ice Shelf just off the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Lawrence M. Cole, BU2, USN, Builder at Byrd Station, 1969.

Coley, Mount 81°15'S, 158°13'E

A mountain, 2,570 m, standing 3 mi S of Mount Frost, in the Churchill Mountains. Named by US-ACAN for Cdr. Vernon J. Coley, commanding officer of USN Squadron VX-6 in Antarctica, 1957–58.

Coley Glacier 69°09'S, 57°14'W

A glacier, 5 mi long, on the E side of James Ross Island. It flows into Erebus and Terror Gulf just N of Cape Gage. Surveyed by FIDS in 1945 and 1953. Named by UK-APC for John A. Coley of FIDS, meteorological assistant at Hope Bay in 1952 and 1953.

Colina, Isla de la: see Heywood Island 62°20'S, 59°41'W

Collard, Mount 72°38'S, 31°07'E

Mountain rising to 2,350 m, standing 3.5 mi S of Mount Perov at the southern extremity of the Belgica Mountains. Discovered by the BelgAE, 1957–58, under G. de Gerlache and named by him for Leo Collard, Belgian Minister of Public Instruction.

Colleen Lake 78°02'S, 163°52'E

Small meltwater lake between the lower parts of Joyce and Garwood Glaciers in Victoria Land. It was first seen on the ground by U.S. geologist Troy L. Péwé on Jan. 14, 1958. He gave it the name Colleen because the feature is similar to many of the clear, reflecting lakes in Ireland.

Collerson Lake 68°35'S, 78°11'E

A small, kidney-shaped lake 1.5 mi SW of Club Lake in the Vestfold Hills. A camp was established on the shores of this lake during geological investigations by K. Collerson, geologist at Davis Station in Jan. 1970, for whom it was named by ANCA.

Collier, Cape 70°10'S, 61°54'W

Broad ice-covered cape on the E coast of Palmer Land, about midway between the S end of Hearst Island and Cape Boggs. Discovered in 1940 by members of the USAS who explored this coast by land and from the air from East Base. Named for Zadick Collier, machinist at the East Base.

Collier Hills 79°42'S, 83°24'W

A group of mainly ice free hills located between the mouths of Schanz and Driscoll Glaciers where the two join Union Glacier, in the Heritage Range, Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party, 1962–63, for Robert M. Collier, USGS topographic engineer with the party.

Collins, Mount 71°30'S, 66°41'E

A flattish, dark-colored rock exposure standing 13 mi W of Fisher Massif in the Prince Charles Mountains. Discovered in November 1956 by Flying Officer John Seaton, RAAF. Named by ANCA for P.J. Collins, senior diesel mechanic at Mawson Station in 1957.

Collins Bay 65°21'S, 64°04'W

Bay lying between Deliverance Point and Cape Pérez on the W coast of Graham Land. First charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1959 for R. Admiral Kenneth St.B. Collins, RN, Hydrographer of the Navy for a number of years beginning in 1955.

Collins Glacier 73°41'S, 65°55'E

A glacier about 11 mi wide at its confluence with the Mellor Glacier, which it feeds from the SW, located N of Mount Newton in the Prince Charles Mountains. Mapped by ANARE from air photos taken in 1956 and 1960. Named by ANCA for N.J. Collins, senior diesel mechanic at Mawson Station, 1960.

Collins Harbor 62°11'S, 58°51'W

Bay indenting the S coast of King George Island immediately E of Fildes Peninsula, in the South Shetland Islands. The name appears on a chart by Scottish geologist David Ferguson, who roughly charted the bay in 1913–14, but may reflect an earlier naming.

Collinson Ridge 85°13'S, 175°21'W

A bare rock spur next N of Halfmoon Bluff in the NW part of Cumulus Hills, Queen Maud Mountains. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–64. Named by US-ACAN for Prof. James W. Collinson, Ohio State University, a member of the Institute of Polar Studies geological expedition who worked at this spur in 1970–71.

Collins Peak 72°58'S, 167°49'E

A small but noteworthy peak (1,810 m) at the E side of Malta Plateau, on the end of the ridge overlooking the confluence of the Hand and Line Glaciers, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Eric J. Collins, biologist at Hallett Station, 1965–66.

Collins Point 63°00'S, 60°35'W

Small but prominent point 0.75 mi WSW of Fildes Point, on the S side of Port Foster, Deception Island, in the South Shetland Islands. Charted by a British expedition under Foster, 1828–31. Named by Lt. Cdr. D.N. Penfold, RN, following his survey of the island in 1948–49, for Capt. K. St.B. Collins, RN, Superintendent of Charts in the Hydrographic Dept., Admiralty. Not: Punta Fontana.

Collins Ridge 85°35'S, 160°48'W

A rugged, ice-covered ridge which extends N from Mount Behling to the Bowman Glacier, where it trends NE between the confluence of the Bowman and Amundsen Glaciers. Mapped from ground surveys and air photos by the ByrdAE, 1928–30. Named by US-ACAN for Henry C. Collins, Asst. Chief, Branch of Special Maps, U.S. Geological Survey.

Collins Rock 66°17'S, 110°33'E

Low rock at the S side of the entrance to McGrady Cove, Newcomb Bay, on Budd Coast. First mapped from USN OpHjp aerial photographs taken in February 1947. Surveyed in February 1957 by a party from the USS *Glacier*. The name was suggested

by Lt. Robert C. Newcomb, USN, navigator of the *Glacier*, for Engineman 3d Class Frederick A. Collins, USN, a member of the survey party.

Colombo, Mount 76°31'S, 144°44'W

Mountainous projection in the NE part of the main massif of the Fosdick Mountains, standing 3 mi N of Mount Richardson in the Ford Ranges, Marie Byrd Land. Discovered by the ByrdAE on the Eastern Flight of Dec. 5, 1929. Named for Louis P. Colombo, a member of the biological party of the USAS which visited this area in December 1940.

Colorado Glacier 85°53'S, 133°05'W

A tributary glacier, 10 mi long, draining NE from Michigan Plateau to enter Reedy Glacier between the Quartz Hills and Eblen Hills. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for the University of Colorado, Boulder, CO, which has sent a number of research personnel to Antarctica.

Colosseum Cliff 77°36'S, 161°27'E

An impressive banded cliff located between Sykes Glacier and the doleritic rock of Plane Table in the Asgard Range, Victoria Land. The descriptive name was applied by the NZ-APC.

Colosseum Ridge 79°47'S, 156°20'E

A ridge between Haskell Ridge and Richardson Hill in the Darwin Mountains. The ridge contains pyramidal peaks and five large cirques, the appearance of the latter bearing a resemblance to the Colosseum in Rome. Mapped and named by the VUWAE (1962–63).

Coloured Peak 85°30'S, 156°20'W

A peak (660 m) near the head of Ross Ice Shelf in the coastal foothills of the Queen Maud Mountains, about 2 mi SE of O'Brien Peak. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. The peak was examined by members of NZGSAE, 1969–70, and so named because of the colorful yellow, pink and brown banded strata that mark the feature.

Columbia Mountains 70°14'S, 63°51'W

A striking group of largely bare rock peaks, ridges and nunataks located near the E margin of the Dyer Plateau, 20 mi SE of the Eternity Range, in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN after Columbia University, New York City, which for several seasons in the 1960's and 1970's has sent geologists to study the structure of the Scotia Ridge.

Columnar Valley 77°58'S, 161°57'E

A valley trending NW between The Handle and Table Mountain in the NW part of Royal Society Range, Victoria Land. Descriptively named by Alan Sherwood, NZGS field party leader in the area, 1987–88, after the columnar-jointed dolerite that forms the valley walls.

Column Rock 63°11'S, 57°19'W

A conspicuous rock pinnacle 1 mi N of Gourdin Island, Trinity Peninsula. The descriptive name was applied by the UK-APC. Not: Roca Faro.

Colvocoresses Bay 66°21'S, 114°38'E

A bay formed by the right angle of the Budd Coast at Williamson Glacier. The bay is over 30 mi wide at the entrance and is occupied by glacier tongues and icebergs from Williamson and Whittle

Glaciers. Delineated by G.D. Blodgett (1955) from aerial photographs taken by USN Operation Highjump (1946–47). Named by US-ACAN for George W. Colvocoresses, Midshipman on the sloop *Vincennes* during the USEE (1838–42) under Charles Wilkes. Colvocoresses, later promoted to Captain, USN, published (1852–55) his own account of the voyage in *Four Years in the Government Exploring Expedition Commanded by Captain Wilkes*.

Colwell Massif 78°02'S, 161°33'E

A rugged rock massif, about 4 mi long, rising to 2,635 m between Palais Glacier, Ferrar Glacier, and Rotunda Glacier, in Victoria Land. Named by US-ACAN in 1994 after Rita R. Colwell, marine microbiologist who has conducted field research in Antarctica; member of National Science Board (1983–90) who chaired Presidential committee on NSF roles in the polar regions; from 1991, President, Maryland Biotechnology Institute, University of Maryland.

Coman, Mount 73°49'S, 64°18'W

Prominent isolated mountain which rises above the ice-covered plateau of Palmer Land, located just westward of the Playfair Mountains. Discovered by the RARE, 1947–48, under Ronne, who named this mountain for Dr. F. Dana Coman, physician with the ByrdAE of 1928–30. Not: Mount Dana Coman.

Comandante Escuadrilla González Rojas, Isla: see Gándara Island 63°19'S, 57°56'W

Comb Island: see Peine Island 63°24'S, 54°42'W

Comb Ridge 63°55'S, 57°28'W

Ridge which rises to 105 m and forms the E and major part of the hill at the extremity of The Naze, a peninsula of northern James Ross Island, lying S of the NE end of Antarctic Peninsula. Probably first sighted in 1902 by the SwedAE under Norden-skjöld. It was charted and given this descriptive name by the FIDS in 1946. Not: Cabo Morro, Punta Morro.

Combs, Mount 73°29'S, 79°09'W

An isolated mountain rising above the ice surface at the base of Rydberg Peninsula, Ellsworth Land. Discovered by the RARE (1947–48) under Finn Ronne, who named it for Representative J.M. Combs of Beaumont, Texas, who did much to gain support for the expedition.

Comdte. Byers, Cabo: see Page, Cape 63°55'S, 60°18'W

Comdte. Cordovez, Paso: see Croker Passage 64°00'S, 61°42'W

Comer Crag 54°01'S, 37°38'W

Crag, 635 m, standing 1 mi N of the head of Ice Fjord in the W part of South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Capt. George Comer of East Haddam, CT, who made his first sealing visit to South Georgia in the topsail schooner *Era* in 1885.

Commandant Charcot Glacier 66°25'S, 136°35'E

Prominent glacier about 3 mi wide and 12 mi long, flowing NNW from the continental ice to its terminus at the head of Victor Bay. Delineated from aerial photographs taken by USN OpHjp, 1946–47. The FrAE under Marret sledged W along the coast to Victor Bay, close E of this glacier, in December 1952. Named by

the FrAE for the polar ship *Commandant Charcot* which transported French expeditions to this area, 1948–52. Not: Commandant Drovcot Glacier.

Commandant Charcot Glacier Tongue 66°22'S, 136°35'E

Broad glacier tongue about 2 mi long extending seaward from Commandant Charcot Glacier. Charted by the FrAE, 1950–52, and named by them for the French polar ship *Commandant Charcot*.

Commandant Drovcot Glacier: see Commandant Charcot Glacier 66°25'S, 136°35'E

Committee Bay 54°01'S, 37°19'W

Small, bay-like body of water near the center of the Bay of Isles, South Georgia, whose limits are formed by the semi-circular arrangement of Crescent Island, Invisible Island, Hogs Mouth Rocks and Albatross Island. Its entrance, between Crescent Island and Albatross Island, faces northwest. The arrangement of the islands was first mapped in 1912–13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*. The bay was surveyed by Discovery Investigations personnel in 1929–30, and presumably named by them for the Discovery Committee, sponsors of Discovery Investigations.

Commonwealth Bay 66°54'S, 142°40'E

An open bay about 30 mi wide at the entrance between Point Alden and Cape Gray. Discovered in 1912 by the AAE under Douglas Mawson, who established the main base of the expedition at Cape Denison at the head of the bay. Named by AAE after the Commonwealth of Australia.

Commonwealth Creek: see Commonwealth Stream 77°35'S, 163°30'E

Commonwealth Glacier 77°35'S, 163°19'E

Glacier which flows in a SE direction and enters the N side of Taylor Valley immediately W of Mount Coleman, in Victoria Land. Charted and named by the BrAE under Scott, 1910–13. Named for the Commonwealth of Australia, which made a financial grant to the BrAE and contributed two members to the Western Geological Party which explored this area.

Commonwealth Range 84°15'S, 172°20'E

A N-S trending range of rugged mountains, 60 mi long, bordering the E side of Beardmore Glacier from the Ross Ice Shelf to Keltie Glacier. Discovered by the BrAE (1907–09) and named by them for the Commonwealth of Australia, which gave much assistance to the expedition.

Commonwealth Stream 77°35'S, 163°30'E

A meltwater stream in Taylor Valley which flows E from Commonwealth Glacier into New Harbor of McMurdo Sound. Studied on the ground during USN OpDFrz, 1957–58, by Troy L. Péwé, who suggested the name in association with Commonwealth Glacier. Not: Commonwealth Creek.

Comodor de Quito, Isla: see Nupkins Island 65°26'S, 65°41'W

Compañía Blanca, Montañas: see White Company, The 61°06'S, 55°09'W

Compás, Islote: see Compass Island 68°38'S, 67°48'W

Compass Island 68°38'S, 67°48'W

Small rocky island 15 m high, lying in Marguerite Bay 7 mi NW of Terra Firma Islands. First seen and photographed from the air on Feb. 1, 1937 by the BGLE. First visited by the FIDS in 1948, and surveyed by them in 1949. So named by FIDS because of difficulties experienced here with compass bearings, eventually proved to be due to substitution of iron for copper wire in an anorak hood. Not: Islote Compás.

Compton Glacier 53°03'S, 73°37'E

A glacier, 3 mi long, flowing NE from the lower slopes of Big Ben to the NE side of Heard Island between Gilchrist and Fairchild Beaches. The lower reaches of this glacier were charted and named "Morgan's Iceberg" on an 1860 sketch map compiled by Capt. H.C. Chester, American sealer operating in the area during this period. The feature was surveyed in 1948 by the ANARE, who applied the name Compton Glacier for G.S. Compton, assistant surveyor with the expedition. Not: Morgan's Iceberg.

Compton Valley 85°01'S, 91°20'W

An ice-filled valley indenting the N side of Ford Massif between Reed Ridge and Walker Spur, in the Thiel Mountains. Surveyed by the USGS Thiel Mountains party, 1960–61. Named by US-ACAN for Lt. (j.g.) Romuald P. Compton, USN, who lost his life in the crash of a P2V Neptune aircraft soon after take-off from Wilkes Station, Nov. 9, 1961.

Comrie Glacier 65°48'S, 64°20'W

Glacier 13 mi long, flowing W to enter the head of Bigo Bay on the W coast of Graham Land. First sighted and roughly surveyed by the FrAE in 1909. Resurveyed in 1935–36 by the BGLE, and later named for Leslie J. Comrie, founder and first Dir. of the Scientific Computing Service Ltd., London, who, as Supt. of the Nautical Almanac Office in 1934, greatly assisted the BGLE, 1934–37, by providing advance copies of the *Nautical Almanac* up to 1937.

Conard Peak 72°22'S, 167°26'E

A peak (2,230 m) along the N side of Hearfield Glacier, about 5 mi N of Aldridge Peak, in the Cartographers Range, Victory Mountains, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Ralph W. Conard, a member of the aircraft ground handling crew with USN Squadron VX-6 at Williams Field, Ross Island, during Operation Deep Freeze 1968.

Concepcion, Pointe: see Conception Point 60°31'S, 45°41'W

Conception Point 60°31'S, 45°41'W

Northernmost point on Coronation Island in the South Orkney Islands. Discovered on Dec. 8, 1821, in the course of the joint cruise by Capt. George Powell, British sealer, and Capt. Nathaniel Palmer, American sealer. Named by Captain Powell. Not: Pointe Conception.

Conchie Glacier 71°36'S, 67°15'W

Glacier on the W coast of Palmer Land which flows SW into George VI Sound between the Batterbee Mountains and Steeple Peaks. Named by UK-APC for Flight-Lt. Bertie J. Conchie, RAF, pilot with the BAS, 1969–75.

Concord Mountains 71°35'S, 165°10'E

A group name applied to a complex system of ranges in northwest Victoria Land comprising Everett Range, Mirabito Range, King

Range, Leitch Massif, East Quartzite Range and West Quartzite Range. Mapped by the USGS from surveys and U.S. Navy aerial photographs, 1960–63. Named by the northern party of the NZGSAE which explored this area, 1963–64, for the international harmony existing in Antarctica and in particular for the fact that five nations participated in exploration of this region.

Condell, Islotes: see Pauling Islands 66°32'S, 66°58'W

Cóndilo, Punta: see Condyle Point 63°35'S, 59°48'W

Condit Glacier 77°52'S, 162°48'E

Glacier at the E side of Cathedral Rocks, flowing N into the Ferrar Glacier of Victoria Land. Charted by the BrAE under Scott, 1910–13. Named by the US-ACAN in 1964 for Lt. (j.g.) John C. Condit, USN, chaplain with the winter party of 1956 at the Naval Air Facility on McMurdo Sound.

Condon Hills 67°53'S, 48°38'E

Group of hills rising to 840 m along the E side of Rayner Glacier, Enderby Land. Plotted from air photos taken by ANARE in 1956 and 1957. Named by ANCA for M.A. Condon, Asst. Dir., Bureau of Mineral Resources, Canberra, Australia.

Condor, Punta: see Wollaston, Cape 63°40'S, 60°47'W

Condor Peninsula 71°46'S, 61°30'W

A mountainous, ice-covered peninsula, 30 mi long and 10 to 15 mi wide, between Odom Inlet and Hilton Inlet on the E coast of Palmer Land. The peninsula was first observed and photographed from the air in the course of the USAS "Condor" flight of Dec. 30, 1940 from the East Base with Black, Snow, Perce, Carroll and Dyer aboard. Named by US-ACAN after the twin-motored Curtiss-Wright "Condor" biplane in which personnel of the USAS, 1939–41, made numerous photographic flights and flights of discovery over Antarctic Peninsula, George VI Sound, Alexander and Charcot Islands and the Bellingshausen Sea between latitudes 67°30'S and 74°00'S. The peninsula was mapped in detail by USGS in 1974.

Condyle Point 63°35'S, 59°48'W

The SE point of Tower Island, Palmer Archipelago. Named by UK-APC. The name is descriptive of the shape of this feature; a condyle being the rounded prominence at the end of a bone. Not: Punta Cóndilo.

Cone Hill 77°47'S, 166°51'E

Hill 2 mi NE of Castle Rock on Hut Point Peninsula, Ross Island. The descriptive name "Cone Hill I" was used by the BrAE under Scott, 1910–13, but the form Cone Hill has come into general use.

Cone Hill II: see Ford Rock 77°46'S, 166°53'E

Cone Island: see Cono Island 67°41'S, 69°10'W

Cone Nunatak 63°36'S, 57°02'W

Nunatak, 350 m, which appears conical on its N side but has brown rock cliffs on its S face, lying 3 mi SSE of Buttress Hill on Tabarin Peninsula, at the NE extremity of Antarctic Peninsula. The descriptive name was applied by the FIDS following their survey of the area in 1946.

Cone Point 54°03'S, 37°01'W

Point forming the E side of the entrance to Blue Whale Harbor, on the N coast of South Georgia. The name appears to be first used on

a 1931 British Admiralty chart. Not: Punta Cono, Punta Este.

Cone Rock 62°26'S, 60°06'W

Small insular rock lying 1.5 mi NE of Williams Point, Livingston Island, in the South Shetland Islands. The descriptive name "Conical Rock" was applied by DI personnel on the *Discovery II* who charted the rock in 1935; amended to Cone Rock on charts from c. 1948. Not: Conical Rock, Roca Cono.

Cone Rock: see Cove Rock 61°54'S, 57°48'W

Confin, Costa: see Luitpold Coast 77°30'S, 32°00'W

Confluence Cone 68°56'S, 66°40'W

A small but conspicuous nunatak 4 mi SE of Sickle Mountain, near the W coast of Antarctic Peninsula. Photographed from the air by RARE in 1947. Surveyed from the ground by FIDS in 1958. So named by UK-APC because of its position at the confluence of several glaciers which merge with Harriot Glacier to flow into Wordie Ice Shelf.

Confusión, Cadena: see Perplex Ridge 67°39'S, 67°43'W

Confusion, Cape 74°50'S, 163°50'E

A rocky point which projects from the SW part of the Northern Foothills, 4 mi NW of Cape Russell, on the coast of Victoria Land. Visited by the Southern Party of the NZGSAE, 1962–63, which gave the name because of the complex geological structure of the area.

Confusión, Roca: see Baffle Rock 68°12'S, 67°05'W

Confusion Island 60°44'S, 45°38'W

An island 0.2 mi long at the west side of the entrance to Clowes Bay, off the south side of Signy Island. The southern point of this island was charted and named "Confusion Point" by DI personnel on the *Discovery II* in 1933. The UK-APC altered the name in 1974, extending the application to the whole island. Not: Confusion Point.

Confusion Point: see Confusion Island 60°44'S, 45°38'W

Confuso, Islote: see Query Island 68°48'S, 67°12'W

Conger Glacier 66°02'S, 103°33'E

A glacier 5 mi E of Glenzer Glacier, flowing N into the E part of Shackleton Ice Shelf. Mapped by G.D. Blodgett (1955) from air photos taken by USN Operation Highjump (1946–47). Named by US-ACAN for Richard R. Conger, Chief Photographer's Mate with USN Operation Windmill (1947–48), who assisted in establishing astronomical control stations along the coast from Wilhelm II Coast to Budd Coast.

Conglomerate Ridge 79°45'S, 84°06'W

A ridge, 1 mi long, located 4 mi ESE of Mount Bursik in Soholt Peaks, Heritage Range, Ellsworth Mountains. The ridge trends NW-SE and rises to c. 1,650 meters. So named from the conglomerate composition of the ridge by Gerald F. Webers, leader of the USARP Ellsworth Mountains Expedition, 1979–80.

Conical Hill 77°39'S, 168°34'E

A small but distinctive rock hill (655 m) on the S slopes of Mount Terror, above Cape MacKay, on Ross Island. Given this descriptive name by the BrAE, 1910–13, under Scott.

Conical Rock 62°43'S, 61°11'W

Rock lying in the E part of Morton Strait, 2 mi S of the SW tip of Livingston Island, in the South Shetland Islands. Named by DI personnel on the *Discovery II*, who charted the area in 1930–31. Not: Rocas Cónicas, Rocher Conique.

Conical Rock: see Cone Rock 62°26'S, 60°06'W

Cónicas, Rocas: see Conical Rock 62°43'S, 61°11'W

Conique, Rocher: see Conical Rock 62°43'S, 61°11'W

Connell Canyon 79°51'S, 83°01'W

A scenic ice-filled canyon in the NW part of Enterprise Hills, extending from Linder Peak to Union Glacier, in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Lt. Davis B. Connell, USN, supply officer at McMurdo Station in OpDFrz 1965 and 1966.

Connors Point 66°18'S, 110°29'E

The northwest point of Beall Island in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Aerographer's Mate William J. Connors, USN, a member of the Wilkes Station party of 1958.

Cono, Cerro: see Cockscomb Hill 62°05'S, 58°30'W.

Cono, Punta: see Cone Point 54°03'S, 37°01'W

Cono, Roca: see Cone Rock 62°26'S, 60°06'W

Cono Island 67°41'S, 69°10'W

Conspicuous conical island lying S of Chatos Islands, off the SW part of Adelaide Island. The feature was descriptively named "Islote Cono" (cone islet) by the Argentine Antarctic Expedition of 1952–53. Not: Cone Island.

Conrad, Mount 69°25'S, 158°46'E

A somewhat subdued peak that rises to about 600 m 6 mi S of Cape Kinsey, in central Goodman Hills in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for American aviation figure Max Conrad, who, in January 1970, became the first person to fly an aircraft solo to the South Pole.

Conradi Peak 66°08'S, 54°34'E

An isolated peak, 1,040 m, rising northward of Napier Mountains and inland from the coast, some 19 mi SW of Cape Borley. Discovered in January 1930 by the BANZARE under Mawson, who named it after a prominent member of the South African government who, in 1929, rendered much help to BANZARE during the stay of the *Discovery* at Cape Town.

Conrad Mountains 71°50'S, 9°40'E

A narrow chain of mountains, 19 mi long, between Gagarin Mountains and Mount Dallmann in the Orvin Mountains of Queen Maud Land. Discovered by the GerAE under Ritscher 1938–39 and named for Admiral Conrad, director of the meteorological division of the former Marineleitung (German Admiralty). Surveyed by the NorAE, 1956–60.

Conrow Glacier 77°34'S, 162°07'E

A small glacier, next westward of Bartley Glacier, that drains north from Asgard Range partway down the south wall of Wright Valley, Victoria Land. Named by Roy E. Cameron, leader of a

USARP biological party to the area in 1966–67, for Howard P. Conrow, a member of that party.

Conroy Point 60°44'S, 45°41'W

A point midway along the northwest side of Moe Island in the South Orkney Islands. Named by UK-APC after James W.H. Conroy, ornithologist on Signy Island, 1967–68.

Conseil Hill 67°36'S, 67°28'W

A hill midway along the N shore of Pourquoi Pas Island. Mapped by FIDS from surveys and air photos, 1946–59. Named by UK-APC after a character in Jules Verne's *Twenty Thousand Leagues Under the Sea*.

Consort Islands 67°52'S, 68°42'W

Two small islands in Marguerite Bay, lying 0.5 mi NE of Emperor Island in the Dion Islands. The Dion Islands were first sighted and roughly charted in 1909 by the FrAE. Consort Islands were surveyed in 1948 by the FIDS and so named by the UK-APC because of their association with Emperor Island.

Constance, Cape 54°03'S, 36°59'W

Cape that marks the N tip of the peninsula between Antarctic Bay and Possession Bay on the N coast of South Georgia. Cape Constance was named in about 1912, after Constance Greene Allardyce, wife of Sir William L. Allardyce, Governor of the Falkland Islands, 1904–15. Not: Cabo Constanca.

Constance, Cape: see Jones, Cape 73°17'S, 169°13'E

Constance, Mount 54°04'S, 37°00'W

Mountain, 475 m, rising immediately S of Cape Constance on the N coast of South Georgia. The toponym dates back to at least 1931 and was applied in association with nearby Cape Constance.

Constancia, Cabo: see Constance, Cape 54°03'S, 36°59'W

Constellation Dome 81°06'S, 160°13'E

An ice-covered prominence, 1,330 m, the highest feature in the Darley Hills, standing 5 mi W of Gentile Point, between the Ross Ice Shelf and Nursery Glacier. So named by the Northern Party of the NZGSAE (1960–61) because it was here that the party carried out the first astro fix of the journey.

Constellation Inlet 78°30'S, 80°30'W

An ice-filled inlet, 30 mi long and 10 mi wide, between the Dott and Skytrain Ice Rises at the SW margin of Ronne Ice Shelf. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for the Lockheed Super Constellation aircraft, C-121J. Equipped only with wheeled tricycle landing gear, it was for many years the principal carrier of personnel from the U.S. to N.Z. and thence to the ice runway near McMurdo Station. In addition to its role of hauling men and supplies, the "Connie" flew many hours of aerial photography over Antarctica.

Construction Point 72°19'S, 170°13'E

Point marking the W side of the entrance to Willett Cove and the S end of Seabee Hook, a low recurved spit 1.5 mi WSW of Cape Hallett, on the coast of Victoria Land. Surveyed in January 1956 by members of USN OpDFrz I aboard the icebreaker USS *Edisto*, and so named by the US-ACAN because of its close association with Seabee Hook.

Consulens Hat: see Whalers Bluff 60°42'S, 45°39'W

Consul Reef 67°54'S, 68°42'W

A line of drying and submerged rocks forming the S end of the Dion Islands, off the S end of Adelaide Island. So named by the UK-APC in 1963; the name extends those in the neighboring islands associated with an emperor's court.

Contact Peak 67°46'S, 67°29'W

Prominent rock peak, 1,005 m, which is the southeasternmost peak on Pourquoi Pas Island, off the W coast of Graham Land. First sighted and roughly charted in 1909 by the FrAE under Charcot. It was surveyed in 1936 by the BGLE and in 1948 by the FIDS. So named by the FIDS because the peak marks the granite-volcanic contact in the cliffs which is visible at a considerable distance.

Contact Point 63°23'S, 56°59'W

Small rock point close W of Sheppard Point on the N side of Hope Bay, Trinity Peninsula. The feature was first charted as an island by the SwedAE, 1901–04, but was surveyed by the FIDS in 1955 and proved to be a point. So named by FIDS because greywacke, tuff and diorite were found to be exposed on or very close to this point. Such contacts had not previously been recorded and they were important for the interpretation of the geology of Tabarin Peninsula.

Contramaestre Rivera, Isla: see Sawyer Island 65°26'S, 65°32'W

Contraste, Rocas: see Contrast Rocks 54°04'S, 36°57'W

Contrast Rocks 54°04'S, 36°57'W

Small group of rocks 0.5 mi E of Antarctic Point, along the N coast of South Georgia. Charted and named in the period 1926–30 by DI personnel. Not: Rocas Contraste.

Contreras, Monte: see Banck, Mount 64°54'S, 63°03'W

Convent, The: see Cathedral Crags 63°00'S, 60°34'W

Convoy Range 76°47'S, 160°45'E

A broad range, much of it with an almost flat, plateau-like summit, extending S from the Fry Saddle and ending at Mackay Glacier. The range is steeply cliffed on its E side, but on the W it slopes gently into the Cambridge Glacier. The N.Z. Northern Survey Party of the CTAE (1956–58) worked in this area in 1957. Named by them after the main convoy into McMurdo Sound in the 1956–57 season, the names of the various vessels being used for features in the range.

Conway, Cape 62°51'S, 61°24'W

Cape which forms the S extremity of Snow Island, in the South Shetland Islands. Named by a British expedition under Foster, 1828–31, for the *Conway*, a vessel on which Foster had previously served.

Conway Island 66°08'S, 65°28'W

Island lying in Holtedahl Bay to the W of Lens Peak, off the W coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for William M. Conway, First Baron of Allington (1856–1937), English mountaineer and pioneer of polar skiing during his crossing of Vestspitsbergen in 1896.

Conway Range 79°16'S, 159°30'E

A range in the Cook Mountains between Mulock and Carlyon Glaciers. The range was discovered by the BrNAE (1901–04), but the name appears to be first used in the reports of the BrAE (1907–09).

Cook, Mount 67°55'S, 56°28'E

Mountain, 1,900 m, the highest point of the main massif of the Leckie Range. Approximately mapped by Norwegian cartographers on Norwegian whalers chart No. 3. Plotted from air photos taken by ANARE in 1956, and first visited by G.A. Knuckey of ANARE in December 1956, when its position was fixed. Named by ANCA for B.G. Cook, geophysicist at Mawson station in 1958.

Cook Bay 54°03'S, 37°08'W

Irregular bay, 1.3 mi wide at its entrance between Cape Crewe and Black Head, narrowing into two western arms, Lighthouse Bay and Prince Olav Harbor, along the N coast of South Georgia. Charted by DI personnel during the period 1926–30, and named by them for Capt. James Cook, who explored South Georgia and landed in this general vicinity in 1775.

Cook Bay: see Cook Ice Shelf 68°40'S, 152°30'E

Cooke Bluff 78°13'S, 161°45'E

A bold ice-covered bluff between Ruecroft Glacier and Rutgers Glacier, to the S of Rampart Ridge in Victoria Land. Named by US-ACAN in 1994 after William B. Cooke, USGS cartographer in the Branch of Special Maps, 1951–87, who made significant contributions to the mapping of Antarctica.

Cooke Crags 83°10'S, 50°43'W

Rock crags on the ice slope between Henderson Bluff and Mount Lechner on the W side of Lexington Table, Forrestral Range, Pensacola Mountains. The area was mapped by USGS from surveys and U.S. Navy aerial photographs, 1956–66. Named by US-ACAN in 1979 after James E. Cooke, USGS geophysicist who worked in Forrestral Range and Dufek Massif, 1978–79.

Cooke Peak 72°27'S, 74°46'E

A somewhat elongated mountain surmounted by a central peak, standing 6 mi NW of Bode Nunataks in the Grove Mountains. Mapped from air photos, 1956–60, by ANARE. Named by ANCA for D.J. Cooke, cosmic ray physicist at Mawson Station, 1963.

Cook Glacier 54°27'S, 36°11'W

Glacier which flows in a NNE direction to Saint Andrews Bay on the N coast of South Georgia. Named by the German group of the International Polar Year Investigations based at nearby Moltke Harbor in 1882–83, for Capt. James Cook.

Cook Ice Shelf 68°40'S, 152°30'E

An ice shelf about 55 mi wide, occupying a deep recession of the coastline between Capes Freshfield and Hudson. This ice shelf was called a bay by the AAE, 1911–14, under Mawson, who named it for Joseph Cook, Prime Minister of the Commonwealth of Australia in 1914. The generic term has been amended, as the bay is permanently filled by an ice shelf. Not: Cook Bay, Joseph Cook Bay.

Cook Island 59°27'S, 27°10'W

Central island of Southern Thule, in the South Sandwich Islands. Southern Thule was discovered by a British expedition under

Capt. James Cook in 1775. The island was named for Cook by a Russian expedition under Bellingshausen, which explored the South Sandwich Islands in 1819–20.

Cook Mountains 79°25'S, 158°00'E

The group of mountains bounded by the Mulock and Darwin Glaciers. Parts of the group were first viewed from the Ross Ice Shelf by the BrNAE (1901–04). Additional portions of these mountains were mapped by a N.Z. party of the CTAE (1956–58), and they were completely mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by the NZ-APC for Capt. James Cook.

Cook Nunataks 67°05'S, 55°50'E

Group of four nunataks at the NE end of the Schwartz Range, in Enderby Land. Mapped from ANARE surveys and air photos, 1954–66. Named by ANCA for P.J. Cook, geologist who visited the area with ANARE (*Nella Dan*), 1965.

Cook Peak 85°36'S, 156°50'W

A rock peak 4.5 mi W of Feeney Peak, surmounting the W wall of Goodale Glacier in the foothills of the Queen Maud Mountains. Mapped by USGS from ground surveys and USN air photos, 1960–64. Named by US-ACAN for David L. Cook, logistics assistant with the McMurdo Station winter party of 1965.

Cook Peninsula: see Riiser-Larsen Peninsula 68°55'S, 34°00'E

Cook Ridge 69°24'S, 158°35'E

A northeast trending ridge, mostly ice covered, which parallels the west side of Paternostro Glacier and extends into the southeast corner of Davies Bay. First visited in March 1961 by an ANARE airborne survey party led by Phillip Law. Named for surveyor David Cook of the ANARE expedition.

Cook Rock 57°04'S, 26°45'W

Arched rock, 45 m high, lying close E of Trousers Rock and 0.3 mi NE of Vindication Island in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II* and named for Capt. James Cook.

Cook Summit 64°24'S, 62°24'W

The highest peak in the Solvay Mountains, Brabant Island, rising to 1,590 m between Galen Peak and Celsius Peak. Named by the UK-APC in 1986 after Dr. Frederick A. Cook (1865–1940), American polar explorer and surgeon with the BelgAE, 1897–99, led by Lt. Adrien de Gerlache.

Coombes Ridge 69°08'S, 157°05'E

A rocky coastal ridge 2 mi W of Magga Peak. The ridge, which runs roughly N-S, forms the E extremity of Lauritzen Bay. This area was photographed from the air by USN Operation Highjump in 1947. The ridge was mapped on Feb. 20, 1959 by ANARE (*Magga Dan*), led by Phillip Law. Named by ANCA for Bruce Coombes, airport engineer, Australian Dept. of Civil Aviation, who accompanied the expedition to investigate potential airfield sites at Wilkes Station and elsewhere.

Coombs Hills 76°47'S, 160°00'E

An area of broken and largely snow-free hills and valleys between the Odell and Cambridge Glaciers in Victoria Land. Discovered in 1957 by the N.Z. Northern Survey Party of the CTAE (1956–58) and named by them for D.S. Coombs, professor of geology at the

University of Otago, New Zealand, who assisted the expedition in obtaining essential petrological equipment.

Cooper, Mount 77°08'S, 145°22'W

A large mountain standing 4 mi W of Asman Ridge on the S side of Arthur Glacier, in the Ford Ranges of Marie Byrd Land. Discovered on aerial flights in 1934 by the ByrdAE, and named by Byrd for Merian C. Cooper, motion picture producer of Hollywood.

Cooper Bay 54°47'S, 35°48'W

Small bay 1.3 mi SW of Cape Vahsel and 1 mi NW of Cooper Island, indenting the SE end of South Georgia. The bay derives its name from nearby Cooper Island.

Cooper Bluffs 70°39'S, 164°56'E

High, ice-covered coastal bluffs on the E side of Zykov Glacier, near the mouth of the glacier, in the Anare Mountains. Named by ANARE for Flying Officer G. Cooper, RAAF, a member of the Antarctic Flight with the ANARE (*Thala Dan*), 1962, which explored the area. Not: Cooper Ridge.

Cooper Glacier 85°30'S, 164°30'W

A tributary glacier, 15 mi long, flowing NE between Butchers Spur and Quarles Range to enter the S side of Axel Heiberg Glacier, in the Queen Maud Mountains. Discovered by R. Admiral Byrd on several plane flights to the Queen Maud Mountains in November 1929, and named by him for Kent Cooper, an official of the Associated Press. Not: Kent Cooper Glacier.

Cooper Icefalls 82°31'S, 160°00'E

The main icefalls of the Nimrod Glacier, in the vicinity of Kon-Tiki Nunatak. Named by the southern party of the NZGSAE (1960–61) for Christopher Neville Cooper, a member of the expedition, and also a member of the N.Z. Alpine Club Antarctic Expedition, 1959–60.

Cooper Island 54°48'S, 35°47'W

Island 2 mi long which lies at the N side of the entrance to Drygalski Fjord, off the SE end of South Georgia. Discovered by a British expedition under Cook in 1775, and named for Lt. Robert P. Cooper, an officer aboard the *Resolution*. Not: Coopers Island.

Cooper Nunatak 79°45'S, 159°11'E

A large rocky nunatak 5 mi N of Diamond Hill, protruding through the ice E of the Brown Hills. Mapped by the VUWAE, 1962–63. Named for R.A. Cooper, geologist with the VUWAE, 1960–61.

Cooper Ridge: see Cooper Bluffs 70°39'S, 164°56'E

Coopers Island: see Cooper Island 54°48'S, 35°47'W

Cooper Sound 54°48'S, 35°47'W

Navigable channel nearly 1 mi wide, which separates Cooper Island from the SE coast of South Georgia. The existence of this channel was first noted in 1775 by a British expedition under Cook. The name, derived from nearby Cooper Island, is well established in use among the sealers in South Georgia.

Cooper Spur 70°38'S, 165°03'E

A narrow spur extending N from the E end of Cooper Bluffs, on the N coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Ronald

R. Cooper, BUC, USN, Chief Builder with the McMurdo Station winter party, 1967.

Coor Crags 74°29'S, 136°36'W

Several rock crags standing 3.5 mi SE of Cox Point in the N part of Erickson Bluffs, near the coast of Marie Byrd Land. The feature was first observed and photographed from aircraft of the USAS, 1939–41. Mapped by the USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Lt. Cdr. Lawrence W. Coor, USN, pilot of LC-130 Hercules aircraft during Operation Deep Freeze 1970 and 1971.

Cope, Mount 84°01'S, 174°33'E

A bluff-type mountain on the east side of Separation Range, Queen Maud Mountains. It overlooks the west side of Canyon Glacier 4 mi northwest of Nadeau Bluff. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1958–63. Named by US-ACAN for Lt. Ronald P. Cope, USN, Officer-in-Charge of the nuclear power plant at McMurdo Station, 1963.

Cope Hill 75°07'S, 114°47'W

A hill 1 mi W of Manfull Ridge on the N side of the Kohler Range in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Lt. Winston Cope, MC, USNR, Medical Officer at the South Pole Station, 1974.

Copetake Peak 54°15'S, 36°46'W

A peak rising to 655 m on the S side of Neumayer Glacier, South Georgia. Named by the UK-APC for Paul Goodall-Copetake, BAS biological assistant, Grytviken, 1980–82, Station Commander, Bird Island, 1982–83.

Copihue, Punta: see Beneden Head 64°46'S, 62°42'W

Co-pilot Glacier 73°11'S, 164°22'E

A short, steep tributary glacier, flowing from the W and S slopes of Mount Overlord to the upper part of Aviator Glacier in Victoria Land. Named by the northern party of NZGSAE, 1962–63, in recognition of services rendered by pilots of U.S. Navy Squadron VX-6, and in association with nearby Pilot Glacier.

Copland Pass 78°06'S, 162°57'E

A pass at c. 1,600 m over Frostbite Spine, the ridge between Hooker Glacier and Salient Glacier in Royal Society Range, Victoria Land. Named after Copland Pass, New Zealand, by R.H. Findlay, leader of a NZARP geological party to the area, 1981–82.

Copland Peak 71°27'S, 73°16'W

A peak 3 mi NE of Mussorgsky Peaks on Derocher Peninsula, SW Alexander Island. Mapped by USGS from U.S. Navy aerial photographs taken 1967–68 and from Landsat imagery taken 1972–73. In association with names of composers in the area, named by US-ACAN after Aaron Copland (1900–90), American composer.

Copper Col 64°44'S, 63°23'W

A col at 305 m, between Copper Peak and Billie Peak in the Osterrieth Range of Anvers Island, in the Palmer Archipelago. Probably first seen by the BelgAE, 1897–99, under Gerlache. The name "Copper Glacier" appears in this position on a chart based on a 1927 survey by DI personnel on the *Discovery*. The feature was resurveyed in 1955 by the FIDS, who reported that col would be

a better descriptive term. Not: Copper Glacier, Glaciar del Cobre.

Copper Cove 72°09'S, 170°00'E

Small cove 2 mi N of Helm Point, indenting the E side of Honeycomb Ridge at the W margin of Moubray Bay. So named by the NZGSAE, 1957–58, because its cliffs are in places stained green by the weathering products of copper ores.

Copper Glacier: see Copper Col 64°44'S, 63°23'W

Coppermine Cove 62°23'S, 59°42'W

Cove immediately SE of Fort William, the W tip of Robert Island, in the South Shetland Islands. The name, derived from the reported existence of copper ore in the cove, was applied by sealers in about 1821 to a much larger cove farther SE along the W side of Robert Island, but in recent years the name has become established for the cove described. Not: Caleta Mina de Cobre.

Coppermine Peninsula 62°22'S, 59°43'W

Rugged peninsula 1 mi long, located between Carlota Cove and Coppermine Cove at the W end of Robert Island, South Shetland Islands. The name was proposed by UK-APC in 1971. It derives from Coppermine Cove to the S, a name in use since the 1820's.

Copper Nunataks 74°22'S, 64°55'W

A cluster of nunataks 4 mi across, situated at the head of Wetmore Glacier, 11 mi WSW of Mount Crowell, in southern Palmer Land. Mapped by USGS from surveys and U.S. Navy tricamera aerial photography, 1961–67. The name was given by Peter D. Rowley, USGS geologist to this area (1970–71; 1972–73), who reported that the nunataks contain the largest known copper deposits in Antarctica.

Copper Peak 64°43'S, 63°21'W

Peak, 1,125 m and vivid green in color, standing 2 mi NNE of Billie Peak on the SE side of Anvers Island, in the Palmer Archipelago. First seen by the BelgAE under Gerlache, 1897–99. The descriptive name appears on a chart based on a 1927 survey by DI personnel on the *Discovery*. Not: Pico Verde.

Copperstain Ridge 71°27'S, 164°22'E

A ridge about 3 mi long which descends NNE from Mount Freed, in the Bowers Mountains. The feature was so named by NZGSAE, 1967–68, because of the extensive copper staining found here.

Cora Cove 62°28'S, 60°21'W

Small cove in the NW part of Blythe Bay, indenting the SE side of Desolation Island in the South Shetland Islands. A British sealing expedition under Powell visited the cove in 1821, reporting that the brig *Cora*, of Liverpool, had been lost at this location during the preceding year. Not: Cora's Cove.

Coral Ridge 77°35'S, 163°25'E

A ridge trending N-S, transverse to the axis of Taylor Valley, Victoria Land, forming a divide 100 m above sea level between Lake Fryxell and Explorers Cove, McMurdo Sound. A large number of solitary fossil corals have been found here by NZARP-USARP teams in the course of joint geological studies of the area. The name was suggested by Donald P. Elston, USGS, a research team member who worked at the ridge in the 1979–80 and 1980–81 seasons.

Coral Sea Glacier 72°33'S, 168°27'E

A southern tributary of Trafalgar Glacier, which in turn is a tributary of Tucker Glacier in Victoria Land. Named by the NZGSAE, 1957–58, for the Coral Sea naval victory won by the United States and her allies in 1943, and because of the coralline appearance of the glacier due to an extremely broken icefall in its lower part.

Cora's Cove: see Cora Cove 62°28'S, 60°21'W

Corbató, Mount 85°04'S, 165°42'W

A peak (1,730 m) located 4.5 mi E of Mount Fairweather in the Duncan Mountains. The peak was geologically mapped on Jan. 13, 1975 by the USARP Ohio State University field party. Named by US-ACAN for Charles E. Corbató, geologist with the party.

Corbeta, Islas: see Bruce Islands 60°41'S, 44°54'W

Corbeta, Islotes: see Bruce Islands 60°41'S, 44°54'W

Corcho, Punta: see Gaudin Point 65°05'S, 63°22'W

Cordall Stacks 54°00'S, 38°04'W

Two conspicuous rock stacks, the eastern one joined to *Bird Island* by a low isthmus, lying on the NW side of the island 0.3 mi NW of Jordan Cove. Named by the UK-APC for Peter A. Cordall, member of the South Georgia Biological Expedition, 1958–59, who made a plane-table survey of *Bird Island*.

Cordelia Bay 57°47'S, 26°24'W

Small bight along the E side of Saunders Island in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II*. Named for Cordelia A. Carey, daughter of Cdr. W.M. Carey, RN, then captain of the *Discovery II*.

Cordell Hull Bay: see Hull Bay 74°55'S, 137°40'W

Cordell Hull Glacier: see Hull Glacier 75°05'S, 137°15'W

Cordero, Caleta: see Mutton Cove 66°00'S, 65°39'W

Cordiner Peaks 82°48'S, 53°30'W

A group of peaks extending over an area of 6 mi, standing 8 mi SW of Dufek Massif in the N part of the Pensacola Mountains. Discovered and photographed on Jan. 13, 1956 in the course of a transcontinental nonstop plane flight by personnel of U.S. Navy Operation Deep Freeze I from McMurdo Sound to Weddell Sea and return. Named by US-ACAN for Capt. Douglas L. Cordiner, USN, an observer on the P2V-2N Neptune aircraft making this flight. The entire Pensacola Mountains were mapped by the USGS in 1967 and 1968 from ground surveys and U.S. Navy tricamera aerial photographs taken 1964.

Cordini Glacier 70°01'S, 62°30'W

A broad glacier that drains the Mount Bailey vicinity and flows between Lewis Point and James Nunatak to the E coast of Palmer Land. Named by US-ACAN after Argentine scientist I. Rafael Cordini, author of reports on the geology and ice of the Antarctic Peninsula and Weddell Sea region.

Cordovez, Islote: see Lobodon Island 64°05'S, 61°35'W

Cordwell, Mount 66°52'S, 53°09'E

Mountain 2 mi E of Burch Peaks and 21 mi SSW of Stor Hånakken Mountain in Enderby Land. Plotted from air photos taken from

ANARE aircraft in 1957. Named by ANCA for T.S. Cordwell, radio officer at Wilkes Station in 1961.

Corelli Horn 70°42'S, 69°49'W

Prominent rocky pinnacle with a distinctive pointed summit, 1,000 m, standing 4 mi W of the N end of LeMay Range in central Alexander Island. First mapped from air photos obtained by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by the UK-APC for Arcangelo Corelli (1653–1713), Italian composer.

Corey, Mount 76°40'S, 145°08'W

Mountain 3 mi E of the Chester Mountains in the Ford Ranges of Marie Byrd Land. Discovered by a ByrdAE sledging party which visited the area in November 1934, and named for Stevenson Corey, a member of the sledge party. Not: Corey Mountains.

Corey Mountains: see Corey, Mount 76°40'S, 145°08'W

Coria, Islote: see Dobrowolski Island 64°36'S, 62°55'W

Corinth Head 53°01'S, 73°25'E

A rocky headland 0.5 mi SE of Rogers Head, overlooking the W side of Corinthian Bay, on the N side of Heard Island. The feature appears to have been roughly charted by the GerAE under Drygalski, who made a running survey of the N side of the island in 1902. Resurveyed by the ANARE in 1948, and so named by them because of its close association with Corinthian Bay.

Corinthian Bay 53°01'S, 73°27'E

A bay, which is 3 mi wide and recedes 1.5 mi, entered between Rogers Head and Saddle Point on the N coast of Heard Island. The name appears on an early chart compiled by American sealers. It was probably given by Capt. Erasmus Darwin Rogers, American whaler and sealer, after his vessel *Corinthian* in which he made the first landing on Heard Island in March 1855. Not: Corinthien Harbor, Whiskey Bay.

Corinthien Harbor: see Corinthian Bay 53°01'S, 73°27'E

Cormorán, Rocas: see Shag Rocks 53°33'S, 42°02'W

Cormorant Island 64°48'S, 63°58'W

Island lying off the S side of Anvers Island, 2.5 mi ESE of Bonaparte Point, in the Palmer Archipelago. Shown on an Argentine government chart of 1954, but not named. So named by the UK-APC in 1958 because of the large number of cormorants on the island.

Corneliussen, Mount 54°17'S, 36°58'W

Mountain, 1,540 m, standing 1 mi N of Mount Globus at the W end of the Allardyce Range of South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Carl and Erling Corneliussen, Norwegian engineers, who between 1923 and 1938 were responsible for improvements in whaling equipment, especially devices in connection with explosive harpoons.

Cornely, Cape 76°14'S, 162°45'E

A cape on the coast of Victoria Land 3 mi north of Cape Day. The cape is marked by a rock exposure and is situated at the south side of the terminus of Mawson Glacier. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1957–61. Named by US-ACAN for Joseph R. Cornely, USN, radioman with the wintering parties at Little America V, South Pole Station, and McMurdo Station in three years, 1958, 1961 and 1963.

Corner Cliffs 72°04'S, 68°25'W

Rocky mass surmounted by two flat-topped summits 1.5 mi apart, immediately S of Saturn Glacier in the SE part of Alexander Island. The rocks of these cliffs were hidden from the line of sight by intervening ice slopes to the W, but the two rock ridges forming the NW shoulder of this feature were first seen and photographed from the air by Lincoln Ellsworth on Nov. 23, 1935, and mapped from these photos by W.L.G. Joerg. The cliffs were first surveyed in 1949 by the FIDS, who gave this name to mark the point where the exposed rock of eastern Alexander Island turns from a N-S direction toward the southwest.

Corner Glacier 74°27'S, 163°40'E

A steep glacier descending Deep Freeze Range between Black Ridge and Mount Dickason to merge with the confluent ice of Nansen Ice Sheet, in Victoria Land. First explored by the Northern Party of the BrAE, 1910–13, and so named by them because of its location with respect to the Nansen Ice Sheet.

Corner Island 65°15'S, 64°14'W

A small island in the form of a crude right angle, lying 0.1 mi NE of Galindez Island in the Argentine Islands, Wilhelm Archipelago. Charted and named in 1935 by the BGLE under John Rymill. Not: Corner Islands, Islas del Rincón.

Corner Islands: see Corner Island 65°15'S, 64°14'W

Corner Nunatak 82°52'S, 157°39'E

A nunatak at the extreme NE corner of the Miller Range, between Nimrod Glacier and Marsh Glacier. Named by the northern party of the NZGSAE (1961–62). Not: Corner Peak.

Corner Peak 63°35'S, 58°39'W

A pyramidal peak (930 m) with considerable rock exposed on its N face. Located 8 mi ESE of Cape Roquemaurel, it marks a corner in the broad glacial valley which rises immediately to the SE and fans out NW to form a piedmont ice sheet on the NW side of Trinity Peninsula. Named by FIDS following a 1946 survey.

Corner Peak: see Corner Nunatak 82°52'S, 157°39'E

Cornerpost Peak 71°57'S, 164°40'E

A peak, 2,160 m, at the SE end of Leitch Massif in the Concord Mountains. So named by the northern party of NZFMCAE, 1962–63, because they established their most northerly survey station here on the turning point of their traverse.

Corner Rock 65°15'S, 64°14'W

Rock lying about midway between Galindez Island and Corner Island at the SE entrance to Meek Channel, in the Argentine Islands, Wilhelm Archipelago. Charted and named in 1935 by the BGLE under John Rymill. Not: Roca del Rincon.

Cornet, The 61°07'S, 54°47'W

A peak on the S side of Pardo Ridge between Muckle Bluff and The Stadium, in Elephant Island, South Shetland Islands. A descriptive name for this cone-shaped feature applied by the U.K. Joint Services Expedition, 1970–71. Not: Cerro Corneta.

Corneta, Cerro: see Cornet, The 61°07'S, 54°47'W

Cornet Island 65°34'S, 64°58'W

Island lying 1.5 mi NE of Milnes Island along the W side of Grandidier Channel, in the Biscoe Islands. First charted by the BGLE under Rymill, 1934–37. The name, given by the UK-APC

in 1959, is descriptive of the island's shape when seen from the air.

Cornice Channel 65°15'S, 64°15'W

Narrow channel separating Galindez Island from the E part of Skua Island in the Argentine Islands, Wilhelm Archipelago. First surveyed in 1935–36 by the BGLE under Rymill. So named in 1954 by the UK-APC because a prominent cornice overhangs the ice cliff on the Galindez Island side of the channel. Not: Canal Cornisa.

Cornisa, Canal: see Cornice Channel 65°15'S, 64°15'W

Cornish, Cape 66°43'S, 163°05'E

A cape which forms the N tip of Buckle Island in the Balleny Islands. Named by personnel on the RRS *Discovery II* in 1938 for A.W. Cornish, meteorologist with the Australian Central Bureau, an observer aboard the *Discovery II* during 1937–38.

Cornish Islands 66°59'S, 67°28'W

Two small, snowcapped islands with a rock between them, lying 4 mi S of Liard Island in Hanusse Bay, Graham Land. Mapped from air photos obtained by RARE (1947–48) and FIDASE (1956–57). Named by UK-APC for Vaughan Cornish (1863–1948), English geographer who made pioneer investigations of snow drift forms, 1901–14.

Cornu, Mount 64°09'S, 60°35'W

Mountain standing at the head of Gregory Glacier and N of Breguet Glacier, in northern Graham Land. Shown on an Argentine government chart of 1957. Named by the UK-APC in 1960 for Paul Cornu, French engineer who, in a machine of his own construction, was the first man to leave the ground successfully, although not vertically, in a helicopter.

Cornwall Glacier 80°47'S, 26°16'W

Glacier 9 mi long, flowing S from Crossover Pass in the Shackleton Range to join Recovery Glacier E of Ram Bow Bluff. First mapped in 1957 by the CTAE and named for Gen. Sir James H. Marshall-Cornwall, member of the Committee of Management of the CTAE, 1955–58.

Cornwall Glacier 83°04'S, 162°20'E

A glacier in the Queen Elizabeth Range, draining eastward, to the south of Crowell Buttresses, to enter Lowery Glacier. Named by the Northern Party of NZGSAE (1961–62) after the English County and Dukedom of Cornwall.

Cornwallis Island 61°04'S, 54°28'W

Island 1 mi long, which lies 5 mi NE of the E end of Elephant Island, in the South Shetland Islands. The name dates back to about 1821 and is now established in international usage. Not: Cornwallis Islands, Michailoff's Island.

Cornwallis Islands: see Cornwallis Island 61°04'S, 54°28'W

Cornwall Island 62°21'S, 59°42'W

Island nearly 0.5 mi long, lying midway between Heywood Island and the W extremity of Robert Island, in the South Shetland Islands. The feature was first described as an island in the approaches to Clothier Harbor, but was not named, by Robert Fildes in 1820–22. It was seen from a distance and named Cornwall Point by DI personnel in 1934–35. Air photos now confirm that the feature is an island. Not: Cornwall Point.

Cornwall Peak: see Cornwall Peaks 54°11'S, 36°52'W

Cornwall Peaks 54°11'S, 36°52'W

Two conspicuous rock peaks, the highest 960 m, standing at the W side of König Glacier, 2.5 mi SW of Fortuna Bay, South Georgia. The name Cornwall Peak was probably given by DI personnel during their survey of Fortuna Bay in 1929. During the SGS, 1951–52, this peak could not be re-identified. At the same time it was reported that the features now described, although lying farther south, together form a conspicuous landmark requiring a name. The name Cornwall Peaks was recommended for these peaks by the UK-APC in 1954; the name Cornwall Peak has been eliminated. Not: Cornwall Peak.

Cornwall Point: see Misnomer Point 62°22'S, 59°42'W

Cornwall Point: see Cornwall Island 62°21'S, 59°42'W

Cornwell, Mount 77°40'S, 86°09'W

Mountain, 2,460 m, standing 2 mi S of Mount Washburn along the NE side of Newcomer Glacier in the N part of the Sentinel Range. Named by the US-ACAN for Lt. James W. Cornwell of USN Squadron VX-6, co-pilot on photographic flights over the range on Dec. 14–15, 1959.

Coronation Island 60°37'S, 45°35'W

The largest of the South Orkney Islands, 25 mi long and from 3 to 8 mi wide. The island extends in a general E-W direction, is mainly ice covered and comprises numerous bays, glaciers and peaks, the highest rising to 1,265 meters. Discovered in December 1821, in the course of the joint cruise by Capt. Nathaniel Palmer, an American sealer, and Capt. George Powell, a British sealer. Named by Powell in honor of the coronation of George IV, who had become King of Great Britain in 1820. Not: Mainland, Pomona.

Coronda Peak 54°07'S, 36°41'W

Peak over 610 m, standing N of Leith Harbor on the N coast of South Georgia. The name appears on a chart showing the results of surveys by DI personnel in 1927 and 1929, and is probably after the S.S. *Coronda* whose captain was of assistance to the survey party.

Coronel Zelaya, Punta: see King Edward Point 54°17'S, 36°30'W

Coronet Peak 71°39'S, 164°21'E

A peak, 2,175 m, standing at the E side of the terminus of Leap Year Glacier in the SE extremity of the Bowers Mountains. So named by NZGSAE, 1967–68, because it is a fine peak. It was climbed by two members of the expedition.

Corral Point 60°45'S, 45°43'W

Rocky point forming the SW extremity of Moe Island in the South Orkney Islands. Roughly surveyed by DI personnel in 1933. Named by the FIDS following their survey of 1947. The Corral Whaling Co. of Bergen, a subsidiary of Messrs. Christensen and Co., Corral, Chile, operated the floating factory *Tioga*, with its steam whalers *Corral* and *Fyr*, in the South Orkney Islands in 1912–13.

Correa, Pasaje: see Graham Passage 64°24'S, 61°31'W

Correll Nunatak 67°35'S, 144°14'E

A nunatak lying within the western part of Mertz Glacier, about 13 mi S of Aurora Peak. Discovered by the AAE (1911–14) under Douglas Mawson, who named it for Percy E. Correll, mechanic with the expedition.

Corrientes, Bahía: see Trepassey Bay 63°28'S, 56°58'W

Corry, Cape: see Corry Island 63°43'S, 57°31'W

Corry, Mount: see Purka Mountain 68°15'S, 58°35'E

Corry Island 63°43'S, 57°31'W

Island 2 mi long and 510 m high, lying off the S coast of Trinity Peninsula between Vega and Eagle Islands. This is believed to be the feature sighted by a British expedition under Ross, 1839–43, and named Cape Corry for Thomas L. Corry, a Lord Commissioner of the Admiralty. In 1945, the FIDS charted an archipelago in this area. The present application of this name is in accord with the FIDS "that the name of Corry should be perpetuated on the most conspicuous of these islands as seen from eastward (the direction from which it was seen by Ross)." Not: Cape Corry.

Corry Massif 70°27'S, 64°36'E

A large massif marked by an unusual moraine pattern on the N side, standing 3 mi WNW of Crohn Massif in the Porthos Range, Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1955–65. Named by ANCA for M.J. Corry, surveyor at Mawson Station, 1965.

Corry Rocks 70°20'S, 71°41'E

A cluster of rocks at the N extremity of Gillock Island, in the Amery Ice Shelf. One of these rocks was occupied as an ANARE survey station in 1968. Named by ANCA for M.J. Corry, leader and glaciologist of the Amery Ice Shelf party in 1968, who took part in the survey.

Corsario, Rocas: see Cruiser Rocks 61°13'S, 55°28'W

Cortés, Mount 68°29'S, 66°06'W

A mainly ice-covered mountain (1,490 m) on the SW side of Gibbs Glacier in southern Graham Land. It is separated from Hadley Upland by a col 1,300 m high. Photographed by RARE, Nov. 1947 (trimetrogon air photography). Surveyed from the ground by FIDS, Dec. 1958. Named by UK-APC for Martín Cortés, Spanish author of *Arte de Navegar* (Sevilla, 1551), an important manual of navigation.

Cosgrove Glacier 67°29'S, 59°10'E

Small glacier entering the S part of Stefansson Bay just W of Mulebreen. Seen from an ANARE aircraft in 1956 and later mapped. Named by ANCA for M. Cosgrove, radio supervisor at Mawson Station, 1959.

Cosgrove Ice Shelf 73°32'S, 100°45'W

An ice shelf 35 mi long and 25 mi wide, occupying the inner (east) part of the embayment between King and Canisteo Peninsulas. Mapped from air photos taken by USN OpHjp, 1946–47. Named by US-ACAN for Lt. Jerome R. Cosgrove, USNR, asst. communications officer on the staff of the Commander, USN Support Force, Antarctica, during USN OpDFrz, 1967 and 1968.

Cosmonaut Glacier 73°26'S, 164°30'E

A tributary glacier 15 mi long in the Southern Cross Mountains, flowing E along the S side of Arrowhead Range to enter Aviator

Glacier, in Victoria Land. Named by the northern party of NZGSAE, 1962–63, in association with Aviator, Aeronaut, and Astronaut Glaciers.

Cosmonette Glacier 73°37'S, 164°51'E

A tributary glacier in the Southern Cross Mountains, flowing E along the N side of Daley Hills to Aviator Glacier, in Victoria Land. Named by the northern party of NZGSAE, 1962–63, in association with Cosmonaut and Aeronaut Glaciers and to commemorate the first woman astronaut.

Costa Lázara, Cabo: see Lázara, Cape 64°20'S, 56°55'W

Cotter, Cape: see Cotter Cliffs 72°28'S, 170°18'E

Cotter Cliffs 72°28'S, 170°18'E

A line of spectacular bare rock cliffs rising 1,500 m above the Ross Sea and forming the seaward (east) face of Hallett Peninsula, in Victoria Land. A cape in this vicinity was named "Cape Cotter" in 1841 by Sir James Clark Ross, after Pownall R. Cotter, master on the *Terror*. No prominent cape exists along the east side of Hallett Peninsula, but the name Cotter has been retained for the cliffs in the same general area. Not: Cape Cotter.

Cotton Glacier 77°07'S, 161°40'E

A glacier about 10 mi long on the S side of Clare Range, flowing eastward between Sperm Bluff and Queer Mountain, in Victoria Land. Discovered by the Western Geological Party, led by G. Taylor, of the BrAE, 1910–13. Named by Taylor for Prof. Leslie A. Cotton, of the geology department of Sydney University. Cotton had earlier been a Summer Party member of the BrAE, 1907–09.

Cotton Plateau 82°54'S, 159°40'E

A snow-covered plateau just E of the mouth of Marsh Glacier, in the Queen Elizabeth Range. Named by the northern party of the NZGSAE (1961–62) for Sir Charles Cotton, noted N.Z. geomorphologist and authority on glacial landforms.

Coughtrey Island: see Coughtrey Peninsula 64°54'S, 62°53'W

Coughtrey Peninsula 64°54'S, 62°53'W

Small hook-shaped peninsula at the N side of the entrance to Skontorp Cove, Paradise Harbor, on the W coast of Graham Land. First mapped as an island in 1913–14 by Scottish geologist David Ferguson, who named it Coughtrey Island. The feature is, however, a peninsula and the site of the Almirante Brown Station, established by Argentina in 1949–50. Not: Coughtrey Island, Peninsula Sanaviron.

Couling Island 67°19'S, 59°39'E

Island 1 mi long, lying 1 mi N of Islay in the William Scoresby Archipelago. Discovered and named by DI personnel on the *William Scoresby* in February 1936. Not: Froa.

Coulman Island 73°28'S, 169°45'E

An island 18 mi long and 8 mi wide, lying 9 mi SE of Cape Jones, Victoria Land, in the western Ross Sea. Discovered in 1841 by Sir James Clark Ross who named it for his father-in-law, Thomas Coulman.

Couloir Cliffs 77°01'S, 162°48'E

Granite cliffs, 3 mi long and from 30 to 60 m high, at the E side of Avalanche Bay in Granite Harbor, Victoria Land. Named by the Granite Harbor Geological Party, led by Taylor, of the BrAE

(1910–13), because these cliffs have numerous chimneys and couloirs.

Coulston Glacier 72°25'S, 167°58'E

A small tributary glacier flowing S from Cartographers Range into Trafalgar Glacier, 10 mi W of Bypass Hill, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos 1960–64. Named by US-ACAN for Peter W. Coulston, aviation electronics technician with USN Squadron VX-6 at McMurdo Station, 1967.

Coulter, Mount 83°17'S, 58°02'W

A mountain 3 mi NW of Mount Gorecki in the Schmidt Hills portion of the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for LeRoy G. Coulter, cook at Ellsworth Station, winter 1958.

Coulter Glacier 69°20'S, 71°47'W

A steeply inclined glacier, 5 mi long, flowing S from the Havre Mountains, Alexander Island, into Lazarev Bay. The glacier was photographed from the air by RARE in 1947 and mapped from the photographs by FIDS, 1960. Named by US-ACAN for R.W. Coulter, Master of USNS *Alatna*, USN OpDFrz, 1969.

Coulter Heights 75°21'S, 138°15'W

Snow-covered heights that rise between Strauss Glacier and Frostman Glacier near the coast of Marie Byrd Land. The rock outcrops of Kuberry Rocks, Matikonis Peak and Lambert Nunatak protrude above the snow surface of the heights. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Neil M. Coulter, meteorologist at Byrd Station, 1963.

Countess Peninsula 66°09'S, 101°14'E

Rocky peninsula, 1.5 mi long and 0.5 mi wide, which projects W from the coast between Booth Peninsula and the base of the Bunger Hills. Mapped from aerial photographs taken by USN OpHjp, 1946–47, and named by the US-ACAN for Julian Countess, air crewman on the USN OpHjp seaplane commanded by D.E. Bunger which obtained aerial and ground photographs of this ice-free area. Not: Countess Ridge, Poluostrov Skalisty.

Countess Ridge: see Countess Peninsula 66°09'S, 101°14'E

Counts, Mount 83°11'S, 160°26'E

A sharply pointed peak on the E side of Marsh Glacier marking the termination of the spur running W from Mount Rabot. Named by the NZGSAE (1961–62) for Lt. Cdr. William D. Counts, USN, pilot on reconnaissance flights, killed in a Neptune plane crash at Wilkes Station in November 1961.

Counts Icefall 85°13'S, 90°48'W

A steep, heavily-crevassed icefall at the juncture of the Ford Massif and the W end of Bermel Escarpment, in the Thiel Mountains. Surveyed by the USGS Thiel Mountains party, 1960–61. Named by US-ACAN for Lt. Cdr. William D. Counts, USN, who lost his life in the crash of a P2V Neptune aircraft soon after take-off from Wilkes Station on Nov. 9, 1961.

Couperin Bay 72°08'S, 74°22'W

A bay on the S coast of Beethoven Peninsula, Alexander Island, between Perce Point and Berlioz Point. The bay was photographed from the air by the RARE, 1947–48, and was mapped from the

photographs by D. Searle of FIDS in 1960. Named by the UK-APC in 1977 in association with the names of composers grouped in this area, after François Couperin (1668–1733), French composer.

Coupvent Point 63°16'S, 57°36'W

A point, with several off-lying rocks, projecting N from Trinity Peninsula, 5 mi SW of Lafarge Rocks. The name "Roche Coupvent" (Coupvent Rock) was given by Capt. Jules Dumont d'Urville to a feature in the vicinity. The present name revives the d'Urville naming, given for August Coupvent-Desbois, officer on the *Zélée* and later the *Astrolabe*.

Courtauld, Mount 70°21'S, 67°28'W

Rounded, mainly ice-covered mountain, 2,105 m, standing 9 mi E of George VI Sound and the rocky ridge marking the N side of the mouth of Naess Glacier, on the W coast of Palmer Land. First surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 for Augustine Courtauld, British Arctic explorer who was of assistance during the organization of the BGLE, 1934–37.

Courtier Islands 67°52'S, 68°44'W

Group of about 24 small islands and rocks in Marguerite Bay, the highest 30 m, lying close SW of Emperor Island in the Dion Islands. The Dion Islands were first sighted and roughly mapped in 1909 by the FrAE. The Courtier Islands were visited and surveyed in 1949 by the FIDS and so named by the UK-APC because of their association with Emperor Island.

Courtney Peak 79°14'S, 83°35'W

A peak, 1,060 m, in the N part of the Gross Hills, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for electronics technician Kenneth N. Courtney, USN, who through Deep Freeze 1966 contributed to efficient communications during six austral summer seasons.

Court Nunatak 73°22'S, 61°36'W

Nunatak 3 mi long which rises to 685 m, standing close E of the mouth of Meinardus Glacier on the W side of New Bedford Inlet, on the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by members of East Base of the USAS. During 1947 it was photographed from the air by members of the RARE, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Arnold Court, American meteorologist and member of the West Base unit of the USAS, 1939–41.

Court Ridge 77°20'S, 146°52'W

Low, ice-drowned ridge extending to Sulzberger Ice Shelf from the NW extremity of the Haines Mountains, in the Ford Ranges of Marie Byrd Land. Discovered by members of the ByrdAE on the Northeast Flight of Dec. 15–16, 1934. Named for Arnold Court, meteorologist at the West Base of the USAS (1939–41).

Cousins Rock 75°16'S, 133°31'W

An isolated rock located eastward of the upper part of Berry Glacier and Patton Bluff, about 3.5 mi NE of Coleman Nunatak, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Michael D. Cousins, ionospheric physicist at Siple Station, 1969–70.

Couzens Bay 80°35'S, 160°30'E

An ice-filled bay about 10 mi long, entered between Senia Point and Cape Goldschmidt on the W side of the Ross Ice Shelf. Named

by the NZGSAE (1960–61) for Lt. Thomas Couzens, RNZAF, who lost his life in a crevasse accident near Cape Selborne on Nov. 19, 1959.

Covadonga, Paso: see Rodman Passage 65°52'S, 66°00'W

Covadonga, Puerto: see Covadonga Harbor 63°19'S, 57°55'W

Covadonga Harbor 63°19'S, 57°55'W

A small extension of the NE corner of Huon Bay immediately S of Cape Legoupil, Trinity Peninsula. Named by the Chilean Antarctic Expedition after their ship *Covadonga*, which first used this anchorage in 1947–48. Not: Puerto Covadonga.

Cove Rock 61°54'S, 57°48'W

Low offshore rock 3 mi W of North Foreland, King George Island, in the South Shetland Islands. Charted by DI in 1937 and called descriptively Cone Rock; the spelling Cove Rock, probably through error in transcription, appeared in a Hydrographic Office publication, 1942, and became established. Not: Cone Rock, Roca Bóveda.

Cove Rock: see Cave Island 62°27'S, 60°04'W

Covert Glacier 77°54'S, 163°04'E

A glacier flowing from the NE part of Royal Society Range between Pearsall Ridge and Stoner Peak, joining the Blue Glacier drainage in the vicinity of Granite Knolls, Victoria Land. Named in 1992 by US-ACAN after Kathy L. Covert, cartographer, USGS; leader of the two person (satellite surveying, seismology) team at South Pole Station, winter party 1982; senior member of geodetic control party at Minna Bluff, Mount Discovery, White Island, and Beaufort Island, 1986–87 season.

Covey Rocks 67°33'S, 67°43'W

Small group of rocks in Laubeuf Fjord, lying midway between Piñero Island and Cape Sáenz, off the W coast of Graham Land. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS who gave the name because of the resemblance of these rocks to a covey of partridges sitting in a field. Not: Rocas Gorriti.

Cowan, Lake 68°32'S, 78°25'E

A lake 0.5 mi S of Lake Vereteno in the E part of the Vestfold Hills. The lake, which resembles a seal in plan, has been visited by ANARE parties several seasons following 1957. Named by ANCA for D. Cowan, weather observer at Davis Station in 1969, a member of an ANARE party which passed the lake in March 1969.

Cowart, Mount 83°42'S, 56°09'W

A peak, 1,245 m, midway along Gale Ridge in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and air photos, 1956–66. Named by US-ACAN for M. Sgt. Ray J. Cowart, USAF, flight engineer and member of the Electronic Test Unit in the Pensacola Mountains, summer 1957–58.

Cowell Island 69°16'S, 76°43'E

A small island, partly contained in a glacier tongue from the coast of Antarctica, lying 3 mi WSW of Hovde Island. First mapped from air photographs by the Lars Christensen Expedition, 1936–37. First visited by an ANARE survey party led by M.J. Corry in Feb. 1969. Named by ANCA for W.D. Cowell, cook at

Mawson Station in 1969 and a member of the ANARE Prince Charles Mountains survey party in 1969.

Cowie Dome 86°25'S, 152°00'W

A dome-shaped summit at the E side of Bartlett Glacier, located 2 mi directly W of Lee Peak in the Queen Maud Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by NZ-APC for George Donald (Don) Cowie, leader of the NZGSAE which visited the region in 1969–70.

Cox, Cape 75°20'S, 63°08'W

Cape which forms the NE extremity of Dodson Peninsula at the W side of Ronne Ice Shelf. First sighted from the air by the RARE, 1947–48. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Larry E. Cox, radioman with the South Pole Station winter party in 1964.

Cox, Mount 71°50'S, 160°32'E

A mountain (1,960 m) in the north-central part of Emlen Peaks, 5 mi N of Killer Nunatak. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Allen N. Cox, ADJ2, USN, crew chief in R4D (Skytrain) aircraft during 1962–63 in support of the USGS Topo East-West survey. Cox returned to the Antarctic in the 1963–64 and 1964–65 seasons.

Cox Bluff 75°49'S, 115°07'W

A rock and ice bluff just W of Spitz Ridge on the N side of Toney Mountain, in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Tony L. Cox, geomagnetist-seismologist with the Byrd Station winter party, 1966.

Coxcomb Peak 76°38'S, 159°49'E

A dolerite elevation which overlooks the south end of Plumstead Valley in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) who gave the name because of the jaunty appearance of the feature in profile.

Cox Cove: see Fur Seal Cove 60°44'S, 45°36'W

Cox Glacier 72°11'S, 101°15'W

Small glacier immediately E of Rochray Glacier on Thurston Island, flowing S to Abbot Ice Shelf in Peacock Sound. Delineated from air photos taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for Lt. (j.g.) Jerry G. Cox, USN, helicopter pilot aboard the USS *Burton Island*, who made exploratory flights to Thurston Island in February 1960.

Cox Nunatak 82°26'S, 50°34'W

A nunatak, 795 m, standing 1 mi S of Rankine Rock in northeastern Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Walter M. Cox, photographer, Ellsworth Station winter party, 1957.

Cox Peaks 86°03'S, 153°30'W

A series of peaks on a ridge, located 5 mi SE of Mount Crockett, extending eastward from Hays Mountains of the Queen Maud Mountains and terminating at Scott Glacier. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Allan V. Cox, USGS geologist at McMurdo Station, 1965–66.

Cox Point 74°56'S, 136°43'W

A rock point at the SW side of the terminus of Garfield Glacier where the latter discharges into Hull Bay, on the coast of Marie Byrd Land. The point was first observed and photographed from aircraft of the USAS, 1939–41, led by Admiral Richard Byrd. Named by US-ACAN for E.F. Cox, carpenter of ByrdAE, 1933–35.

Cox Reef 67°45'S, 69°05'W

A group of drying rocks lying NW of Box Reef off the S end of Adelaide Island. Named by the UK-APC in 1963 for Able Seaman Edward F. Cox, a member of the RN Hydrographic Survey Unit which first charted this feature in 1963.

Coy, Isla: see Midas Island 64°10'S, 61°07'W

Coy, Isla: see Clear Island 64°55'S, 63°44'W

Coyer Point 74°24'S, 113°13'W

An ice-covered point on the SE side of Martin Peninsula. It is the N end of an ice-covered peninsula that extends into Dotson Ice Shelf, 23 mi SSE of Jacobsen Head, Bakutis Coast, Marie Byrd Land. Mapped by USGS from surveys and USN aerial photographs, 1959–67, and Landsat imagery, 1972–73. Named by US-ACAN in 1977 after Lt. Ann E. Coyer, USN, first U.S. Navy woman to participate in Antarctic operations, OpDFrz, 1974.

Crab Cove: see Cangrejo Cove 65°04'S, 63°39'W

Crabeater Point 68°46'S, 64°10'W

A point at the SE extremity of Mobiloil Inlet, 4 mi E of Victory Nunatak, on the E coast of Antarctic Peninsula. The point, the NW extremity of a prominent ridge, was photographed from aircraft of the USAS on Sept. 28, 1940, and by RARE (Trimetrogon air photos), Dec. 22, 1947. Surveyed in Dec. 1958 by FIDS who gave the descriptive name. The ridge of which this point is the extremity resembles a recumbent Crabeater Seal when seen from the air.

Crab Stack: see Fortín Rock 62°28'S, 60°44'W

Crabtree, Mount 77°00'S, 144°58'W

A mountain (820 m) 4 mi ESE of Mount Fonda in the north-central part of the Swanson Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by the USAS (1939–41) under R. Admiral R.E. Byrd. Named for Dr. E. Granville Crabtree, biologist, who was a consultant in the preparation stages of "Operation Highjump II" (which was cancelled) and for Operation Deep Freeze I (1955–56), for which Admiral Byrd was Officer in Charge, U.S. Antarctic Programs.

Crack Bluff 86°33'S, 158°38'W

A bluff 8 mi SE of Kutschin Peak on the W side of Nilsen Plateau, Queen Maud Mountains. The bluff rises to 2,810 m and has an extensive area of exposed rock. The name was proposed by Edmund Stump of the USARP Ohio State University field party which geologically mapped the bluff on Dec. 27, 1970. It is descriptive of the peculiar subhorizontal crack containing breccia fragments exposed on the steep SW face.

Cracktrack Glacier 71°40'S, 166°30'E

A glacier flowing W from central Homerun Range into upper Tucker Glacier in the Admiralty Mountains, Victoria Land. The glacier provided an access route to Field Névé for R.H. Findlay's NZARP geological party during the 1981–82 season. So named

because one of the motor toboggan tracks was torn badly here, requiring makeshift field repair.

Craddock, Mount 78°38'S, 85°12'W

A large, bold mountain (4,650 m) that marks the highest point on the southern end of Vinson Massif in the Sentinel Range, Ellsworth Mountains. Named by US-ACAN for J. Campbell Craddock, leader of a University of Minnesota expedition (1962–63) that made geological investigations and cartographic surveys in the Sentinel and Heritage Ranges of the Ellsworth Mountains. During 1960–61, Craddock led a Minnesota geological expedition in examining the Jones Mountains.

Craddock Nunatak: see Menzel, Cape 72°00'S, 95°43'W

Craft Glacier 72°11'S, 101°33'W

Valley glacier about 5 mi long, lying W of Hendersin Knob on Thurston Island and flowing S to Abbot Ice Shelf in Peacock Sound. First delineated from air photos taken by USN OpHjp in December 1946. Named by US-ACAN for Ens. Charles Craft, USN, helicopter pilot on USS *Glacier* who made exploratory flights at Thurston Island in February 1960.

Craggy Island 62°28'S, 60°19'W

Narrow island marked by crags, lying close off the E side of Desolation Island and forming the NE side of Blythe Bay, in the South Shetland Islands. Charted in 1935 by DI personnel on the *Discovery II* who gave this descriptive name. Not: Isote Escarpado.

Craggy Point: see Escarpada Point 61°17'S, 54°14'W

Cragman Peaks 60°38'S, 45°40'W

Peaks on the W side of Marshall Bay, extending from Cape Vik NW to Coldblow Col on the S coast of Coronation Island, in the South Orkney Islands. Surveyed by the FIDS in 1956–58 and so named by the UK-APC because the peaks provide a “climbers’ paradise.”

Craigie Point 54°00'S, 37°39'W

Point at the SE side of the entrance to Right Whale Bay, on the N coast of South Georgia. Craigie Point is an established name dating back to about 1912. Not: Graicie Point.

Craig Ridge 77°31'S, 86°04'W

A small rock ridge located close NE of Polarstar Peak in the Sentinel Range, Ellsworth Mountains. Named by the University of Minnesota Geological Party to these mountains, 1963–64, for James A. Craig, helicopter crew chief with the 62nd Transportation Corps Detachment, who assisted the party. The geological party found a fossil leaf of the plant *Glossopteris* on the ridge.

Crain Ridge 74°45'S, 63°50'W

A ridge along the N flank of Strange Glacier in the Latady Mountains, Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Harold D.K. Crain, utilitiesman with the South Pole Station winter party in 1967.

Crame Col 63°49'S, 57°53'W

A col at c. 175 m near the N tip of James Ross Island, trending NE-SW between the Bibby Point massif and Lachman Crags. Following geological work by BAS, 1981–83, named by the

UK-APC after James A. Crame, BAS geologist from 1976, who worked in the area, 1981–82.

Crámer, Isla: see Lautaro Island 64°49'S, 63°06'W

Crandall Peak 71°27'S, 168°41'E

A mostly snow-covered peak (1,840 m) located mid-way along the W wall of Pitkevitch Glacier in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos 1960–63. Named by US-ACAN for Lt. Eugene D. Crandall, USNR, Aircraft Commander (LC-130F) with Squadron VX-6 during Operation Deep Freeze 1968.

Crane Channel: see Crane Glacier 65°20'S, 62°15'W

Crane Cove 66°17'S, 110°31'E

Shallow cove 0.1 mi in extent, entered from the W between the N side of Bailey Peninsula and an unnamed island northward, on Budd Coast. Numerous low rocks almost join Bailey Peninsula and the unnamed island, forming the head of the cove and separating it from a similar cove just eastward. First charted in February 1957 by a party from USS *Glacier*. The name was suggested by Lt. Robert C. Newcomb, USN, navigator of the *Glacier*, after Electronics Technician 3d Class Robert I. Crane, USN, a member of the survey party.

Crane Glacier 65°20'S, 62°15'W

Narrow glacier which flows 30 mi in an ENE direction through a deep trough into Exasperation Inlet, on the E coast of Antarctic Peninsula. Sir Hubert Wilkins photographed this feature from the air in 1928 and gave it the name Crane Channel, after C.K. Crane of Los Angeles, reporting that it appeared to be a channel cutting in an E-W direction across the peninsula. The name was altered to Crane Inlet following explorations along the W coast of the peninsula in 1936 by the BGLE, which proved that no through channel from the E coast existed as indicated by Wilkins. Comparison of Wilkins' photograph of this feature with those taken in 1947 by the FIDS shows that Wilkins' “Crane Channel” is this glacier, although it lies about 75 mi NE of the position originally reported by Wilkins. Not: Crane Channel, Crane Inlet.

Crane Inlet: see Crane Glacier 65°20'S, 62°15'W

Cranfield Icefalls 79°56'S, 158°40'E

A series of about eight spectacular icefalls, in an east-west line, falling steeply from Bucknell Ridge into the narrowest portion of Darwin Glacier near its mouth. Named by the Darwin Glacier Party of the CTAE (1956–58) for W.J. Cranfield, a member of the party.

Cranfield Peak 83°38'S, 160°54'E

A peak, 2,850 m, standing 6 mi S of Mount Weeks in Queen Elizabeth Range. Tentatively named Sentinel Peak by the N.Z. Southern Survey Party of the CTAE (1956–58), who visited it in 1958. Renamed for Flying Officer W.J. Cranfield who, as one of the pilots operating with the CTAE, gave considerable assistance to the surveying party in this area.

Cranton Bay 74°10'S, 102°10'W

A bay about 20 mi long and wide, lying S of Canisteo Peninsula at the E end of Amundsen Sea. The S limit of the bay is formed by the Backer Islands and an ice shelf which separates this bay from Pine Island Bay. Mapped from air photos taken by USN OpHjp,

1946–47. Named by US-ACAN for Lt. Elmer M. Cranton, USN, medical officer and officer in charge at Byrd Station, 1967.

Crary Ice Rise 82°56'S, 172°30'W

An ice rise in the south-central part of the Ross Ice Shelf. The feature was investigated by the USARP Ross Ice Shelf Project in the 1970's. The name came into use among USARP workers and honors Albert P. Crary (1911–87), American geophysicist; Deputy Leader of the U.S. Scientific Program and Scientific Leader at Little America V during the IGY, 1957; leader of the U.S. seismic traverse of Ross Ice Shelf, 1957–58; leader, geophysical traverse W from Little America V, up Skelton Glacier to the Victoria Land plateau and W along the 78° parallel to c. 131°30'E, 1958–59; leader, geophysical traverse from McMurdo Station via Skelton Glacier to the South Pole, 1960–61; Chief Scientist, Office of Antarctic Programs, NSF, 1959–65; Deputy Director, Division of Environmental Sciences, NSF 1965–69 (Director, 1970–75); Director, Division of Earth Sciences, 1975–76; member of ACAN, 1961–76 (Chairman, 1974–76).

Crary Knoll 78°16'S, 161°37'E

A symmetrical ice-covered knoll rising to 1,520 m, 2 mi SSE of Holmes Block in the Skelton Glacier area, Victoria Land. Named by US-ACAN in 1994. The toponym provides a historical footnote that U.S. scientist Albert P. Crary (Crary Ice Rise, q.v.) led geophysical traverses past this feature to the Polar Plateau en route to the South Pole and other destinations.

Crary Mountains 76°48'S, 117°40'W

A group of ice-covered mountains, 35 mi long, rising to 3,655 m in Mount Frakes and including Mount Rees, Mount Steere and Boyd Ridge. The mountains are located 50 mi SW of Toney Mountain in Marie Byrd Land and were probably among those viewed by Admiral Byrd and other members of the USAS in plane flights from the ship *Bear* on Feb. 24 and 25, 1940. They were mapped in the course of the 1957–58 oversnow traverse from Byrd Station to the Sentinel Range led by C.R. Bentley, and named after Albert P. Crary (Crary Ice Rise, q.v.), who was then Deputy Chief Scientist for the US-IGY Antarctic Program.

Crary Trough: see Thiel Trough 81°30'S, 57°00'W

Crash Nunatak 75°47'S, 160°38'E

An isolated nunatak between Beta Peak and Mount Bowen in the Prince Albert Mountains, Victoria Land. Named by the Southern Party of NZGSAE, 1962–63, because the nunatak lies close to the scene of the U.S. Navy R4D plane crash of Nov. 25, 1962.

Crater Bay 56°40'S, 28°10'W

Small bay at the NE side of Leskov Island in the South Sandwich Islands. Mapped by the GerAE under Filchner, 1911–12, who so named it because of its apparent formation as a result of volcanic eruption. Not: Kraterbucht.

Crater Cirque 72°38'S, 169°22'E

A cirque on the S wall of Tucker Glacier, immediately W of its junction with Whitehall Glacier. In its floor is an attractive lake containing red and green algae, and in the surrounding rock walls there are nests of Wilson's petrels, skuas, and snow petrels, as well as running streams and growths of moss and lichens. Given this descriptive came by the NZGSAE, 1957–58.

Crater Hill 77°50'S, 166°43'E

Hill, 300 m, marked by a volcanic crater at its summit, about 1 mi N of Observation Hill in the S part of Hut Point Peninsula, on Ross Island. Discovered and named by the BrNAE under Scott, 1901–04.

Crater Lake 62°59'S, 60°40'W

A volcanic crater, now filled with water, lying NW of Mount Kirkwood on the S side of Deception Island, in the South Shetland Islands. The descriptive name was given by the UK-APC in 1959.

Craven, Mount 71°08'S, 165°15'E

A projecting type mountain (1,500 m) in the N part of Everett Range. The feature stands 4 mi N of Cantrell Peak and overlooks Ebbe Glacier from the south. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–63. Named by US-ACAN for Lt. Cdr. Alexander T. Craven, USN, pilot of R4D aircraft in support of the USGS Topo West survey of this area in 1962–63. He returned to Antarctica, 1963–64.

Crawford, Mount 77°43'S, 86°28'W

Mountain with two summits, 2,360 and 2,255 m, standing 3.5 mi NW of Mount Dawson in the N part of the main ridge of the Sentinel Range. Discovered by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for William B. Crawford, Jr., of the Branch of Special Maps, U.S. Geological Survey, which prepared the 1962 map of this range.

Crawford Glacier 70°53'S, 163°13'E

A tributary glacier which drains the E slopes of Explorers Range between Mount Hager and Mount Ford. It descends E to join Lillie Glacier S of Platypus Ridge. Mapped by USGS from surveys and U.S. Navy air photos, 1960–65. Named by US-ACAN after Douglas I. Crawford, biologist at McMurdo Station, 1965–66.

Craw Ridge 78°00'S, 163°00'E

A prominent ridge that trends NE from Mount Lister along the S side of Lister Glacier, in the Royal Society Range, Victoria Land. Named by the NZ-APC after D. Craw, a member of a 1980–81 NZARP geological party that reached 3,700 m on Mount Lister by way of this ridge. Not: Henderson Ridge.

Creagh Glacier 78°01'S, 161°10'E

Glacier, 4 mi long, flowing NE from Creagh Icefall to the vicinity of Canoe Nunatak, Wilkniss Mountains, Victoria Land. Named by US-ACAN in 1994 after Father Gerry Creagh (d. 1994), a New Zealand citizen, who served as honorary U.S. Navy chaplain for over 25 summer seasons at the Chapel of the Snows, McMurdo Station. He was unofficially known as the "Chaplain of Antarctica."

Creagh Icefall 78°02'S, 161°08'E

Icefall at the head of Creagh Glacier (q.v.) in the Wilkniss Mountains, Victoria Land. Named by US-ACAN in 1994 in association with Creagh Glacier.

Creak, Mount 76°36'S, 162°09'E

A sharp peak, 1,240 m, just N of Shoulder Mountain in the S end of the Kirkwood Range. Discovered by the BrNAE (1901–04) which named this peak for Capt. E.W. Creak, Director of Compasses at the Admiralty.

Crean, Mount 77°53'S, 159°30'E

Massive, rocky mountain, 2,550 m, forming the central and highest summit of the Lashly Mountains, in Victoria Land. Named by the NZ-APC for Petty Officer Thomas Crean, RN, companion of Lashly with Scott's BrNAE of 1901–04, and BrAE, 1910–13.

Creaney Nunataks 83°14'S, 51°43'W

Low nunataks lying SW of Herring Nunataks and 5.5 mi W of Mount Lechner in western Forrester Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for David B. Creaney, aviation electrician at Ellsworth Station, winter 1957.

Crean Glacier 54°08'S, 37°01'W

Glacier 4 mi long, flowing NW from Wilckens Peaks to the head of Antarctic Bay on the N coast of South Georgia. Surveyed by the USGS in the period 1951–57 and named by the UK-APC for Tom Crean, Second Officer of the *Endurance* during the British expedition under Shackleton, 1914–16. Crean accompanied Shackleton in the *James Caird* from Elephant Island to King Haakon Bay, South Georgia, and made the overland crossing with him to Stromness; this glacier lies on the route.

Creehan Cliff 75°47'S, 115°26'W

A cliff about 6 mi ENE of Richmond Peak on the N side of Toney Mountain in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959–71. Named by US-ACAN for Lt. Patrick E. Creehan, MC, USNR, Flight Surgeon of Squadron VXE-6 during Operation Deep Freeze 1971 and 1972.

Creighton, Mount 70°25'S, 65°39'E

A mountain about 3 mi ENE of Mount Gavaghan in the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos. Named for D.F. Creighton, electronics engineer at Mawson Station in 1963.

Crépin, Cape: see Crépin Point 62°06'S, 58°29'W

Crépin Point 62°06'S, 58°29'W

Point which marks the W side of the entrance to Mackellar Inlet in Admiralty Bay, on King George Island, in the South Shetland Islands. Charted and named "Cap Crépin" in 1909 by the FrAE under Charcot. Not: Cape Crépin.

Crescent Bay 71°37'S, 170°04'E

A cove in the NE side of Duke of York Island in Robertson Bay, northern Victoria Land. Charted and so named because of its shape by the BrAE, 1898–1900, under C.E. Borchgrevink. The feature is the site of an Adélie penguin rookery.

Crescent Glacier 77°40'S, 163°14'E

Small alpine glacier just E of Howard Glacier in the Kukri Hills, flowing N into Taylor Valley, in Victoria Land. The glacier was studied by U.S. geologist Troy L. Péwé in December 1957, and was so named by him because of its crescent shape when viewed from the floor of Taylor Valley.

Crescent Island 54°01'S, 37°19'W

Small, roughly crescent-shaped island lying close S of Mollyhawk Island in the Bay of Isles, South Georgia. Roughly charted in 1912–13 by Robert Cushman Murphy. Surveyed and named in 1929–30 by DI personnel.

Crescent Scarp 69°39'S, 66°20'W

A conspicuous, north-facing escarpment of rock and ice cliffs, rising to 1,400 m on the S side of Fleming Glacier in northern Palmer Land. Roughly surveyed from the ground by BGLE in 1936–37. Photographed from the air by USAS, 1940, and RARE, 1947. Resurveyed by FIDS, 1958, and named descriptively.

Crescent Stream 77°37'S, 163°11'E

A glacial meltwater stream, 2.6 mi long, flowing N from Crescent Glacier to the south-central shore of Lake Fryxell, in Taylor Valley, Victoria Land. Named in association with Crescent Glacier. The name was suggested by USGS hydrologist Diane McKnight and was approved by the US-ACAN and the NZGB in 1994. Not: Blong Gully.

Cressey Peak 85°29'S, 143°10'W

Peak, 870 m, located 7 mi E of Harold Byrd Mountains between the SE edge of the Ross Ice Shelf and Watson Escarpment. Mapped by USGS from ground surveys and USN air photos, 1960–63. Named by US-ACAN for Richard N. Cressey, storekeeper with the Byrd Station winter party in 1958.

Cresswell, Mount 72°47'S, 64°20'E

A domed, elongated mountain with a small conical peak at the W end, standing 25 mi NNE of Mount Dummett in the southern Prince Charles Mountains. Mapped from ANARE air photos taken in 1956. Named by ANCA for G. Cresswell, auroral physicist at Mawson Station, 1960. Not: Mount Creswell.

Crest, The 63°25'S, 56°59'W

The summit, 125 m, of a moraine just E of Lake Boeckella and 0.5 mi S of Hut Cove, Hope Bay, on Trinity Peninsula. Mapped in 1945 and 1948 by the FIDS. The feature marks the summit of the initial steep slope up from the FIDS station at Hope Bay. The name originated locally in about 1945.

Cresswell, Mount: see Cresswell, Mount 72°47'S, 64°20'E

Creswick Gap 70°23'S, 67°44'W

A gap between Creswick Peaks and Campbell Ridges on the W side of Palmer Land. The gap extends from Chapman Glacier to Meiklejohn Glacier and provides a safe sledging route from George VI Sound via the Naess and Meiklejohn Glaciers to the Dyer Plateau of Palmer Land. Named by UK-APC in association with Creswick Peaks at the S end of the gap.

Creswick Peaks 70°28'S, 67°43'W

An impressive mountain massif with several peaks, the highest 1,465 m, standing at the NE side of Moore Point between Naess and Meiklejohn Glaciers, and 3 mi inland from George VI Sound on the W coast of Palmer Land. First surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 after Frances E. Creswick (now Mrs. James I. Moore—see Moore Point), Asst. to the Dir. of the Scott Polar Research Institute, Cambridge, 1931–38, who helped to organize the BGLE, 1934–37.

Crevasse Valley: see Crevasse Valley Glacier 76°46'S, 145°30'W

Crevasse Valley Glacier 76°46'S, 145°30'W

A broad glacier about 30 mi long, flowing WSW between Chester Mountains and Saunders Mountain to Sulzberger Ice Shelf in Marie Byrd Land. Discovered by a sledging party of the ByrdAE,

which visited this area in November-December 1934, and so named because of its extensively crevassed surface. Not: Crevassed Valley.

Crewe, Cape 54°03'S, 37°08'W

Cape which forms the N side of the entrance to Cook Bay, on the N coast of South Georgia. Cape Crewe is an established name, dating back to about 1912.

Crewe Rock 54°03'S, 37°08'W

Rock, 3 m high, which lies 0.1 mi E of Cape Crewe, off the N coast of South Georgia. Named for nearby Cape Crewe.

Crilly Hill 85°06'S, 174°29'W

The central of three ice-free hills at the N side of McGregor Glacier, 6 mi SSW of Mount Finley, in the Queen Maud Mountains. Named by the Texas Tech Shackleton Glacier Expedition (1964-65) for Specialist 6th Class Clifford L. Crilly, medic with the U.S. Army Aviation Detachment which supported the expedition.

Crimson Hill 62°57'S, 60°36'W

Prominent, ice-free hill, 95 m, on the S side of Pendulum Cove, Deception Island, in the South Shetland Islands. So named in 1829 by the British expedition under Foster, because there was a prominent strata of brickstone in the hill. Not: Morro Varela.

Crisp Glacier 77°12'S, 162°12'E

Glacier between Killer Ridge and Second Facet, flowing SE into Debenham Glacier in Victoria Land. Named by the US-ACAN for Kelton W. Crisp, USN, who was in charge of the electric shop at McMurdo Station, 1962.

Crisscross Crags 64°06'S, 58°21'W

An irregularly shaped system of crags with arms extending in four directions, rising to 650 m E of Rum Cove in James Ross Island. Named descriptively by the UK-APC in 1987.

Cristal, Cerro: see Crystal Hill 63°39'S, 57°44'W

Crockett, Mount 86°01'S, 155°04'W

A prominent peak, 3,470 m, standing 2 mi E of Mount Astor in the Hays Mountains of the Queen Maud Mountains. Discovered by members of the geological party under Laurence Gould during the ByrdAE, 1928-30, and named by Byrd for Frederick E. Crockett, a member of that party. The application of this name has been shifted in accord with the position assigned on the maps resulting from the second ByrdAE of 1933-35.

Croft Bay 64°00'S, 57°45'W

Bay which indents the north-central side of James Ross Island and forms the S part of Herbert Sound, S of the NE end of Antarctic Peninsula. Discovered in 1903 by the SwedAE under Norden-skjöld. Charted in 1945 by the FIDS, who named it for W.N. Croft, FIDS geologist at Hope Bay in 1946.

Crohn Island 67°07'S, 50°52'E

Island 0.5 mi E of Beaver Island at the head of Amundsen Bay in Enderby Land. Sighted in 1956 by an ANARE airborne field party led by P.W. Crohn, geologist at Mawson Station in 1955 and 1956, for whom it is named.

Crohn Massif 70°27'S, 64°57'E

A large, domed massif 3 mi W of Mount Kirkby in the Porthos Range, Prince Charles Mountains. Sighted by an ANARE south-

ern party led by W.G. Bewsher (1956-57) and named for Peter W. Crohn, geologist at Mawson Station in 1955 and 1956.

Croker Inlet: see Croker Passage 64°00'S, 61°42'W

Croker Passage 64°00'S, 61°42'W

Passage lying between Christiania Islands and Two Hummock Island to the E and Hoseason Island and Liège Island to the W, in the Palmer Archipelago. The northern entrance of this passage was very roughly charted and named "Croker Inlet" by Henry Foster in 1829 for John W. Croker (1780-1857), Sec. to the Admiralty at that time. The name has since been applied to the whole of this deep water passage, which provides an alternative entrance to the N end of Gerlache Strait. Not: Croker Inlet, Paso Comdte. Cordovez, Paso Federico Puga Borne.

Croll Glacier 72°29'S, 167°18'E

A tributary glacier flowing SE along the N side of Handler Ridge into Trafalgar Glacier, in the Victory Mountains, Victoria Land. Named by the northern party of NZFMCAE, 1962-63, for W.G. Croll, a member of the survey party attached to this expedition.

Cromie, Mount 84°50'S, 179°14'W

A snow-covered mountain (2,950 m) rising 1.5 mi SE of Mount Boyd in the Bush Mountains. Discovered and photographed by the USAS, 1939-41. Surveyed by A.P. Crary, leader of the U.S. Ross Ice Shelf Traverse Party (1957-58), and named by him for William Cromie, assistant glaciologist with the party.

Cronenwett Island 77°00'S, 150°00'W

A high, ice-covered island about 20 mi long. It lies between Vollmer Island and Steventon Island in the Marshall Archipelago, off the coast of Marie Byrd Land. The feature was first observed and roughly delineated from aerial photographs taken by the ByrdAE, 1928-30. Named by US-ACAN for Cdr. W.R. Cronenwett, USN, Photographic Officer for Deep Freeze II, 1956-57, and Public Information Officer for Task Group 43.1 during Deep Freeze 1962.

Cronk Islands 66°19'S, 110°25'E

A group of islands lying NE of Hollin Island, in the Windmill Islands. First mapped from air photos taken by USN OpHjp, 1946-47. Named by the US-ACAN for Caspar Cronk, glaciologist at Wilkes Station in 1958.

Cronus, Mount 67°18'S, 50°03'E

A majestic, conical, partially snow-covered peak, 900 m, rising 8 mi S of Amundsen Bay and 9 mi WSW of Reference Peak. Sighted by an ANARE party in October 1956 and named for Cronus, the father of the gods in classical mythology.

Cronus Glacier 68°51'S, 64°04'W

A glacier 6 mi long and 3 mi wide flowing NW into Bowman Inlet between Calypso Cliffs and Crabeater Point on the E coast of Antarctic Peninsula. Photographed by RARE (Trimetrogon air photography) on Dec. 22, 1947, and roughly surveyed by FIDS in Dec. 1958. Named by UK-APC after Cronus, the god of agriculture in Greek mythology.

Crooked Fjord: see Krok Fjord 68°40'S, 78°00'E

Crooked Island: see Krok Island 67°02'S, 57°46'E

Crooked Lake: see Krok Lake 68°37'S, 78°24'E

Crooker, Mount 71°03'S, 67°15'W

A gable-shaped mountain with much exposed rock, located on the N side of Ryder Glacier and at the S end of the Pegasus Mountains, in Palmer Land. Named by US-ACAN for Allen R. Crooker, USARP biologist at Palmer Station in 1972.

Crookes Peak 66°14'S, 65°18'W

Peak at the E side of Widmark Ice Piedmont, midway between Stair Hill and Rugg Peak on the W coast of Graham Land. Charted by the BGLE under Rymill, 1934–37. Named by the UK-APC in 1959 for Sir William Crookes (1832–1919), English chemist and physicist whose pioneer work on the optical properties of tinted glass in 1909–13 led to the design of the first satisfactory snow goggles and the prevention of snow blindness.

Croom Glacier 70°18'S, 62°25'W

A steep, broad glacier flowing to the head of Smith Inlet between Moe Point and Hughes Ice Piedmont, on the E coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for John M. Croom, USARP biologist at Palmer Station in 1968–69; he was U.S. Exchange Scientist at the Soviet's Bellingshausen Station in 1970.

Crosby Nunataks 66°46'S, 51°33'E

Three nunataks 2 mi NE of Mount Morrison, in the N part of the Tula Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for W.E. Crosby, a member of the crew of the *Discovery* during the BANZARE, 1929–31.

Cross, Cape: see Hinks, Cape 69°10'S, 63°10'W

Cross, Mount 84°37'S, 63°38'W

Mountain, 1,005 m, standing 2.5 mi NE of King Ridge in Anderson Hills in central Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN at the suggestion of Capt. Finn Ronne, USNR, leader at Ellsworth Station, 1957. Dr. Allan S. Cross assisted in planning the medical supplies, in providing instruction in first aid, and in selecting trail rations for the RARE, 1947–48.

Crosscut, Mount: see Crosscut Peak 72°22'S, 166°19'E

Crosscut Peak 72°22'S, 166°19'E

A peak, 3,120 m, just N of Joice Icefall in the Millen Range. So named by the Southern Party of NZFMCAE, 1962–63, due to its jagged northern ridge and summit. Not: Mount Crosscut.

Crosscut Point 57°04'S, 26°46'W

Series of jagged rocks forming the N end of Vindication Island in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II*, and so named because numerous crosscutting dikes have withstood weathering and produced this irregular formation. Not: Punta Intersección, Punta Perfil.

Crosse Passage 67°47'S, 68°55'W

Small passage leading SE from Adelaide Anchorage between Henkes Islands and Skeen Rocks, off the S end of Adelaide Island. Named by the UK-APC in 1963 for Lt. Cdr. Anthony G. Crosse, RN, First Lieutenant of HMS *Protector* used by the Hydrographic Survey Unit in charting this area in 1961–63.

Crossfire, Cape 73°10'S, 168°21'E

A promontory at the SE extremity of Malta Plateau, marking the point of convergence of the Mariner Glacier from the west and Borchgrevink Glacier from the north, in Victoria Land. The name alludes to the converging flow of ice at this feature from different directions, and was given by NZ-APC in 1966.

Cross Hill: see Laguna Hill 62°56'S, 60°42'W

Crosson Ice Shelf 74°57'S, 109°30'W

An ice shelf about 35 mi wide, located N and NE of Mount Murphy along the Walgreen Coast of Marie Byrd Land. The ice shelf is nurtured by Smith, Pope, Vane, and Haynes Glaciers. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Cdr. W.E. Crosson, USN, Commanding Officer of the Antarctic Construction Group during Operation Deep Freeze 1973.

Crossover Pass 80°38'S, 26°30'W

Pass between Gordon and Cornwall Glaciers in the central part of the Shackleton Range. First mapped in 1957 by the CTAE and so named because this pass, together with Gordon and Cornwall Glaciers, provides a sledging route across the Shackleton Range from north to south.

Cross Valley 64°16'S, 56°42'W

Valley 2 mi long in a NW-SE direction, cutting through the mid-part of Seymour Island, which lies S of the NE end of Antarctic Peninsula. Discovered by the SwedAE under Norden-skjöld, 1901–04, and named Querthal (cross valley) because of the transverse alignment of the valley. Not: Cañadón Díaz, Querthal.

Crosswell Glacier 78°17'S, 85°24'W

Glacier 10 mi long, flowing NNE from Mount Shinn to enter Ellen Glacier, in the central part of Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Col. Horace A. Crosswell, USAF, leader of C-124 Globemaster air drops in establishing the scientific station at the South Pole in the 1956–57 season.

Crouch Island 67°49'S, 68°58'W

The second largest island of the Henkes Islands, off the S end of Adelaide Island. Surveyed by the RN Hydrographic Survey Unit, 1962–63. Named by the UK-APC for Alan Crouch, BAS general assistant at Adelaide station, 1961–62, and member of the first party to winter on Adelaide Island.

Crouse Spur 82°53'S, 48°35'W

A partly snow and rock spur descending from the E side of Forrestal Range, 3 mi S of Kester Peaks, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Carl L. Crouse, construction man with the Ellsworth Station winter party, 1957.

Crow, Mount 77°11'S, 144°04'W

A mountain just E of Mount McClung in the Ford Ranges, Marie Byrd Land. Discovered and mapped by the USAS (1939–41). Named by US-ACAN for Lt. J.L. Crow, MC, USN, officer in charge at Byrd Station, 1963.

Crowder, Mount 72°03'S, 166°23'E

A prominent mountain, 2,485 m, located 6 mi NE of Mount Tararua in Monteath Hills, Victory Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN

for Dwight F. Crowder, geologist at Hallett Station, summer 1964–65.

Crowell, Mount 74°20'S, 64°05'W

Mountain in the N part of Rare Range in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for John C. Crowell, geologist at McMurdo Station, summer 1966–67.

Crowell Buttresses 83°03'S, 162°30'E

A series of high snow and rock buttresses, 10 mi long, forming the N wall of Cornwall Glacier for a distance of 5 mi and then trending NE an equal distance along the W side of Lowery Glacier, in Queen Elizabeth Range. Named by US-ACAN after John T. Crowell (d. 1986), who served with the National Science Foundation as Antarctic Vessel Project Officer, 1960–63, and Special Projects Officer, 1963–69. He led a reconnaissance party to the Antarctic Peninsula in January 1963 to investigate the location for a U.S. station in the peninsula area.

Crown Head 60°37'S, 45°19'W

Headland forming the E side of Palmer Bay on the N coast of Coronation Island, in the South Orkney Islands. First seen in the course of the joint cruise by Capt. George Powell, British sealer, and Capt. Nathaniel Palmer, American sealer, in December 1821. Surveyed by the FIDS in 1956–58. The name derives from an association with Coronation Island and was given by the UK-APC in 1959.

Crown Hills 71°48'S, 163°57'E

A group of peaks and hills between Zenith Glacier and Gambone Peak, including All Black Peak, rising to 2,000 m and forming the SE part of Lanterman Range in the Bowers Mountains, q.v. Named by the NZ-APC in 1983, at the suggestion of geologist M.G. Laird, in association with nearby Coronet Peak.

Crown Mountain 86°18'S, 158°45'W

A mountain, 3,830 m, surmounting the W side of Nilsen Plateau, 4 mi ENE of Mount Kristensen, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN to describe the appearance of the summit, a somewhat circular rock band contrasting with the ice surface of Nilsen Plateau.

Crown Peak 63°34'S, 58°33'W

An ice-covered peak (1,185 m) topped by a conspicuous crown-shaped ice formation. It forms the highest summit and the S end of Marescot Ridge and lies 10 mi E of Cape Roquemaurel on the NW side of Trinity Peninsula. Named by the FIDS following their survey of the area in 1946.

Crown Prince Gustav Channel: see Prince Gustav Channel 63°50'S, 58°15'W

Crown Prince Olaf Mountains: see Prince Olav Mountains 84°57'S, 173°00'W

Crown Prince Olav Coast: see Prince Olav Coast 68°30'S, 42°30'E

Crown Prince Olav Land: see Prince Olav Coast 68°30'S, 42°30'E

Crown Princess Martha Land: see Princess Martha Coast 72°00'S, 7°30'W

Crozier, Cape 77°31'S, 169°24'E

Cape which forms the E extremity of Ross Island. Discovered in 1841 by a British expedition under Ross, and named for Cdr. Francis R.M. Crozier, captain of the *Terror*, one of the two ships of Ross' expedition.

Cruchley Ice Piedmont 60°41'S, 45°01'W

An ice piedmont between the east margins of Powell Island and its north-south range of hills, extending 2.5 mi northward from John Peaks, in the South Orkney Islands. A new name applied by UK-APC in 1987. Historically it derives from James Weddell's map of 1825 on which Powell Island is charted as two islands, the southern one being "Cruchley's Island."

Cruchleys Island: see Powell Island 60°41'S, 45°03'W

Cruiser Rocks 61°13'S, 55°28'W

A group of rocks 7 mi S of Cape Lindsey, Elephant Island, in the South Shetland Islands. The rocks were known to sealers as early as 1822, and appeared on charts of that period by the name Cruisers. Not: Cruisers, Cruiser Rocks, Rocas Corsario.

Cruisers: see Cruiser Rocks 61°13'S, 55°28'W

Cruizer Rocks: see Cruiser Rocks 61°13'S, 55°28'W

Crulls Island: see Crulls Islands 65°11'S, 64°32'W

Crulls Islands 65°11'S, 64°32'W

Group of small islands lying 1 mi W of Roca Islands in the S part of Wilhelm Archipelago. Discovered by the BelgAE, 1897–99, and named by Gerlache for Luis Crulls, Belgian astronomer and later Dir. of the Observatory at Rio de Janeiro. Not: Crulls Island.

Crume Glacier 71°33'S, 169°21'E

A tributary glacier, 5 mi long, flowing E to enter Ommanney Glacier near the N coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for William R. Crume, AS1, USN, Support Equipment Maintenance Supervisor with Squadron VX-6 at McMurdo Station during Operation Deep Freeze 1968.

Crummer, Mount 75°03'S, 162°34'E

A massive, brown granite mountain, 895 m, immediately S of Backstairs Passage Glacier on the coast of Victoria Land. First charted and named by the BrAE, 1907–09, under Shackleton.

Crummey Nunatak 76°48'S, 143°36'W

A linear rock nunatak, 1.5 mi long, at the NE end of Gutenko Nunataks in the Ford Ranges, Marie Byrd Land. First mapped by the USAS, 1939–41. Named by US-ACAN for Glen T. Crummey, CE1, USN, Construction Electrician at Byrd Station, 1967.

Crutch, The 54°11'S, 36°32'W

A saddle-shaped col on a ridge, located 1.5 mi NW of Larsen Point at the W side of the entrance to Cumberland Bay, South Georgia. Charted and named by DI personnel in the period 1925–29. The name alludes to the shape of the feature. Not: Colina Muleta.

Crutcher Rock 74°21'S, 72°48'W

A nunatak rising to c. 1,375 m, 6 mi SSW of Staack Nunatak in the Yee Nunataks (q.v.), Ellsworth Land. Named by US-ACAN in 1987 after Mont C. Crutcher, USGS cartographer who worked in

the field at Ross Ice Shelf, South Pole Station, Byrd Glacier, and Dome Charlie in 1974–75.

Crutch Peak: see Crutch Peaks 62°28'S, 59°56'W

Crutch Peaks 62°28'S, 59°56'W

Dark, rocky peaks, the highest 275 m, lying 1.5 mi E of Greaves Peak and 2.5 mi E of the NW tip of Greenwich Island, in the South Shetland Islands. Named Crutch Peak by DI personnel of the *Discovery II* in 1934–35. Air photos show that there are two pairs of high peaks and a number of lower peaks. Not: Crutch Peak, Pico Muleta.

Cruyt Spur 64°37'S, 60°42'W

A rocky spur 4 mi NE of Ruth Ridge, extending 2 mi SE from the S wall of Detroit Plateau, Graham Land. Mapped from surveys by FIDS (1960–61). Named by UK-APC for William Cruyt, Belgian army engineer who designed the first “auto-polaire” in 1907.

Cruz, Bahía: see Bolsón Cove 65°09'S, 63°05'W

Cruzen Island 74°47'S, 140°42'W

Rocky, but mostly snow-covered island about 50 mi NNE of the mouth of Land Glacier off the coast of Marie Byrd Land. Discovered in 1940 on aerial flights from West Base of the USAS, and named for Cdr. Richard H. Cruzen, USN, commanding officer of the USS *Bear* and second in command of the expedition.

Cryptogam Ridge 60°43'S, 45°40'W

An E-W ridge lying S of Cummings Cove in Signy Island, South Orkney Islands. The north-facing slope of the ridge supports a diversity of lichens and mosses, collectively referred to as cryptogams (spore-producing plants). Named by the UK-APC in 1991. Not: Tremolite Ridge.

Crystal Hill 63°39'S, 57°44'W

Ice-free hill, 150 m, forming the summit of a headland between Bald Head and Camp Hill on the S side of Trinity Peninsula. So named by the FIDS because crystals were collected at the foot of the hill in 1945 and 1946. Not: Cerro Cristal.

Crystal Sound 66°23'S, 66°30'W

A sound between the southern part of the Biscoe Islands and the coast of Graham Land; northern limit Cape Evensen to Cape Leblond, southern limit Holdfast Point, Roux Island, Liard Island and Sillard Islands. So named by UK-APC in 1960 because many features in the sound are named for men who have undertaken research on the structure of ice crystals.

Csejtey, Mount 82°30'S, 155°50'E

Mountain 1.5 mi S of Mount Macpherson in the central part of Geologists Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Bela Csejtey, USARP geologist at McMurdo Station, 1962–63.

Cuadrada, Bahía: see Square Bay 67°51'S, 67°00'W

Cuadrada, Isla: see Square End Island 62°10'S, 58°59'W

Cuadrado Negro, Morro: see Elephant Point 62°41'S, 60°52'W

Cuatro Romano, Punta: see Roman Four Promontory 68°13'S, 66°56'W

Cube, The: see Kubus Mountain 71°59'S, 7°21'E

Cube Rock 63°37'S, 56°22'W

A small rock lying in the S entrance to Antarctic Sound, 3 mi SE of Cape Scrymgeour, Andersson Island, off Trinity Peninsula. The name is a translation of “Roca Cubo,” a descriptive name appearing on an Argentine chart of 1960. Not: Roca Cubo.

Cubo, Roca: see Cube Rock 63°37'S, 56°22'W

Cuencas, Punta: see Shrove Point 57°04'S, 26°39'W

Cueva, Punta: see Cave Point 54°15'S, 36°24'W

Cuff Cape 76°59'S, 162°21'E

A dark rock point emerging from the icy coast of Victoria Land, immediately S of Mackay Glacier. Mapped by the BrAE (1910–13) and so named because the dark rock resembles a hand extending from a snowy cuff.

Cugnot Ice Piedmont 63°38'S, 58°10'W

An ice piedmont in Trinity Peninsula, about 15 mi long and between 3 and 6 mi wide, extending from Russell East Glacier to Eyrie Bay and bounded on the landward side by Louis Philippe Plateau. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Nicolas J. Cugnot (1725–1804), French military engineer who designed and built the first full-sized vehicle propelled by its own engine (steam), in 1769.

Cuis, Roca: see Tooth Rock 62°52'S, 61°24'W

Cumberland Bay 54°14'S, 36°28'W

Bay, 4 mi wide at its entrance between Larsen and Barff Points, which separates into two extensive arms that recede inland 9 mi along the N coast of South Georgia. Discovered and named in 1775 by a British expedition under Cook.

Cumberland East Bay 54°17'S, 36°26'W

Bay forming the eastern arm of Cumberland Bay, South Georgia. It is entered between Sappho Point and Barff Point, where it is nearly 3 mi wide, and extends 8 mi in a SE direction. This feature was surveyed by the SwedAE, 1901–04, who named it South Bay. It was remapped during 1926–29 by DI personnel and renamed East Cumberland Bay, which is more descriptive of its geographic position. The shortened form East Bay was simultaneously used. Following the SGS, 1951–52, the UK-APC proposed that the name be altered to Cumberland East Bay and that all other names be rejected. This change brings together information about the whole of Cumberland Bay in one place in indexes, and will avoid confusion with East Bay in Prince Olav Harbor, South Georgia. Not: Bahía Guardia Nacional, East Bay, East Cumberland Bay, Saco Este, South Bay.

Cumberland West Bay 54°14'S, 36°35'W

Bay forming the western arm of Cumberland Bay, South Georgia. It is entered southward of Larsen Point, where it is 2.5 mi wide, and extends 7 mi in a SW direction. This feature was surveyed by the SwedAE, 1901–04, who named it West Bay. It was remapped during 1926–29 by DI personnel and renamed West Cumberland Bay. The shortened form West Bay was simultaneously used. Following the SGS, 1951–52, the UK-APC proposed that the name be altered to Cumberland West Bay and that all other names be rejected. This change brings together information about the whole of Cumberland Bay in one place in indexes. Not: Bahía Grande, Saco Oeste, West Bay, West Cumberland Bay.

Cumbers Reef 67°35'S, 69°40'W

A group of rocks aligned in an arc forming the N and W parts of the Amiot Islands, off the SW part of Adelaide Island. Named by the UK-APC for Roger N. Cumbers, 3rd officer of RRS *John Biscoe* 1961–62, the ship which assisted the RN Hydrographic Survey Unit in the charting of this area in 1963.

Cumbie Glacier 77°13'S, 154°12'W

A short, steep glacier just E of Scott Nunataks, flowing N into Swinburne Ice Shelf along the SW side of Sulzberger Bay. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for William A. Cumbie, Jr., AT2, USN. An aviation electronics technician, Cumbie was radioman on the ski-equipped R4D aircraft carrying R. Admiral George Dufek, USN, that was first to land at the geographic South Pole, Oct. 31, 1956.

Cumming, Mount 76°40'S, 125°48'W

A low, mostly snow-covered mountain, volcanic in origin, located midway between Mount Hampton and Mount Hartigan in the Executive Committee Range. A circular snow-covered crater occupies the summit area. Discovered by the USAS (1939–41) on a flight, Dec. 15, 1940, and named for Hugh S. Cumming, Jr., State Department member of the USAS Executive Committee. Mapped by USGS from surveys and U.S. Navy trimetrogon photography, 1958–60. Not: Mount Winifred Cumming.

Cummings, Mount 73°14'S, 61°37'W

Mountain at the E end of Galan Ridge in the Dana Mountains, Palmer Land. First mapped by the joint RARE-FIDS party, 1947–48. Mapped in greater detail by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Jack W. Cummings, radioman with the Palmer Station winter party in 1965.

Cummings Cove 60°44'S, 45°41'W

Cove between Jebesen Point and Porteous Point on the W side of Signy Island in the South Orkney Islands. Roughly surveyed by DI personnel in 1933, and resurveyed in 1947 by the FIDS. Named by the UK-APC for E.T. Cummings of the FIDS, radio operator at Cape Geddes in 1946 and at Deception Island in 1947.

Cumpston Glacier 66°59'S, 65°02'W

Small glacier on the E coast of Graham Land, draining between Breiffuss and Quartermain Glaciers into the head of Mill Inlet. Named by UK-APC for J.S. Cumpston, Australian historian of the Antarctic.

Cumpston Massif 73°33'S, 66°53'E

A prominent, flat-topped rock massif, 2,070 m, trending N-S for 9 mi at the junction of Lambert and Mellor Glaciers in the Prince Charles Mountains, Mac. Robertson Land. Discovered in Nov. 1956 during an ANARE flight. Named by ANCA for J.S. Cumpston of the Australian Dept. of External Affairs, who, with E.P. Bayliss, was responsible for the 1939 map of Antarctica by the Property and Survey Branch, Dept. of Interior, Canberra.

Cumulo, Isla: see Turnabout Island 66°06'S, 65°45'W

Cumulufjellet: see Cumulus Mountain 71°51'S, 5°23'E

Cumulus Hills 85°20'S, 175°00'W

Several groups of largely barren hills, divided by the Logie Glacier. They are bounded by Shackleton Glacier on the west,

McGregor Glacier on the north and Zaneveld Glacier on the south. The exposed rock in this area was observed on a number of occasions to give rise to the formation of cumulus clouds, considered to be very rare at this elevation. Named by the Southern Party of NZGSAE (1961–62) because of these clouds.

Cumulus Mountain 71°51'S, 5°23'E

A mountain, 2,335 m, immediately N of Høgsenga Crags in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956–60) and named Cumulufjellet (Cumulus Mountain). Not: Cumulufjellet, Gora Gaydara.

Cuneiform Cliffs 73°06'S, 167°38'E

Steep, irregular cliffs at the S end of Malta Plateau, along the N side of the lower Mariner Glacier in Victoria Land. The name applied by NZ-APC in 1966 is descriptive of wedgelike spurs that project from the face of the cliffs.

Cunningham, Mount 54°12'S, 37°18'W

Mountain, 1,220 m, rising immediately NE of the head of Queen Maud Bay on the S side of South Georgia. Surveyed by the SGS in the period 1951–57 and named for John C. Cunningham, a member of the SGS in 1955–56.

Cunningham Glacier 84°16'S, 173°45'E

A tributary glacier in the Queen Maud Mountains, flowing NE to enter Canyon Glacier 5 mi N of Gray Peak. Named by US-ACAN for Willard E. Cunningham, Jr., cook at McMurdo Station, winter 1960; at South Pole Station, winter 1963.

Cunningham Peak 79°16'S, 86°12'W

A mainly ice-covered peak, 2,170 m, at the head of Gowan Glacier along the Founders Escarpment, in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Ship's Serviceman John B. Cunningham, USN, in charge of the McMurdo Station ship's store and laundry during USN OpDFrz 1966.

Cupola, Mount 69°21'S, 70°27'W

Dome-shaped mountain, 2,500 m, marking the SE limit of Rouen Mountains in the N part of Alexander Island. First photographed from the air by the BGLE in 1937. Surveyed in 1948 by the FIDS. The descriptive name was given by the UK-APC in 1960.

Curanilahue, Isla: see Andresen Island 66°53'S, 66°40'W

Curie Island 66°39'S, 140°03'E

Small rocky island near the E end of Géologie Archipelago, lying 1 mi SW of Derby Island, close N of Astrolabe Glacier Tongue. Photographed from the air by USN OpHjp, 1946–47. Charted by the FrAE, 1949–51, and named by them for the noted French family of physicians and chemists: Pierre Curie (1859–1906) and Marie Curie (1867–1934).

Curie Point 64°50'S, 63°29'W

Point which forms the NE extremity of Doumer Island, in the Palmer Archipelago. Discovered by the FrAE, 1903–05, and named by Charcot for Pierre Curie, famous French chemist. Not: Pointe P. Curie.

Curl, Mount 70°48'S, 63°07'W

The snow-covered summit of a ridge located 4 mi ENE of Mount Gatlin, just NE of the Welch Mountains in Palmer Land. Mapped

by USGS in 1974. Named by US-ACAN for James E. Curl, USARP glaciologist in the South Shetland Islands, 1971–72, 1972–73 and 1973–74.

Curphey Peaks 71°18'S, 163°23'E

Two snow-covered peaks of approximately similar height (western peak, 1,760 m), the two peaks bounding the east side of Helix Pass in the Bowers Mountains, q.v. Named by the NZ-APC in 1983 after Ian Curphey, field leader of M.G. Laird's NZARP geological party to the area, 1974–75.

Curran Bluff 68°13'S, 65°02'W

A bluff, 2 mi long, forming a part of the S coast of Joerg Peninsula, Bowman Coast, S of Reichle Mesa. The bluff rises to 910 m at the W end and is the most prominent feature on the N side of Solberg Inlet. It was photographed from the air by Lincoln Ellsworth, Nov. 21, 1935, and was mapped from these photographs by W.L.G. Joerg. Named by US-ACAN for Martin P. Curran, a member of the Pine Island Bay reconnaissance survey in USCGC *Burton Island*, 1974–75, and Project Manager, RV *Hero*-Palmer Station Research System, 1976.

Currie, Mount 67°42'S, 49°12'E

Mountain, 1,110 m, between Mount Maslen and Mount Merrick in the Raggatt Mountains, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for G.J. Currie, radio supervisor at Mawson Station in 1960.

Currituck Island 66°05'S, 100°40'E

Island 7 mi long marked by numerous small coves, lying on the NW side of Edisto Channel in the Highjump Archipelago. Mapped from air photos taken by USN OpHjp in February, 1947. Named by the US-ACAN in 1956 after the USS *Currituck*, seaplane tender and flagship of the western task group of USN OpHjp, Task Force 68, 1946–47. At that time, the northern portion was thought to be a separate feature and was named "Mohaupt Island," but subsequent Soviet Expeditions (1956–57) found that only one large island exists.

Curry, Mount 56°18'S, 27°34'W

Prominent volcanic cone, 550 m, forming the summit of Zavodovski Island, South Sandwich Islands. The name is used in Argentine hydrographic publications as early as 1958. It honors an Argentine sailor who lost his life in naval combat at Colonia, Uruguay, 1826. Not: Mount Asphyxia.

Curtis Island 65°56'S, 65°38'W

Island over 1 mi long, lying 2 mi NE of Jagged Island, off the W coast of Graham Land. First accurately shown on an Argentine government chart of 1957. Named by the UK-APC in 1959 for Robin Curtis, FIDS geologist at Prospect Point in 1957, who was attached to the British Naval Hydrographic Survey Unit in the area, 1957–58.

Curtis Peaks 84°56'S, 169°36'W

A small cluster of peaks surmounting the end of the ridge which extends E from Mount Hall of the Lillie Range, in the Queen Maud Mountains. Discovered and photographed by the U.S. Ross Ice Shelf Traverse Party (1957–58) led by A.P. Crary, and named for Lt. Cdr. Roy E. Curtis, USN, pilot with U.S. Navy Squadron VX-6 during Deep Freeze Operations.

Curtiss Bay 64°02'S, 60°47'W

A bay about 4 mi wide, indenting the W coast of Graham Land between Cape Sterneck and Cape Andreas. The name Bahía Inútil (useless bay) appearing on a 1957 Argentine chart is considered misleading; the bay has been used as an anchorage. The bay was renamed by UK-APC in 1960 for Glenn Curtiss (1878–1930), American aeronautical engineer who pioneered seaplanes from 1911 onward. Not: Bahía Guesalaga, Bahía Inútil.

Curville, Isla: see Rongé Island 64°43'S, 62°41'W

Curzon Archipelago: see Curzon Islands 66°46'S, 141°35'E

Curzon Islands 66°46'S, 141°35'E

Small group of rocky islands lying close off Cape Découverte, Adélie Coast. Probably sighted in January 1840 by a French expedition under Capt. Jules Dumont d'Urville though not identified as islands on d'Urville's maps. The islands were roughly charted in 1912 by Capt. J.K. Davis of the AAE ship *Aurora*, and were named by Mawson for Lord Curzon, President of the Royal Geographical Society, 1911–14. The islands were mapped in detail by the FrAE, 1950–52. Not: Curzon Archipelago.

Cushing Peak 64°06'S, 62°25'W

Peak in the N part of Brabant Island, standing 1.5 mi SE of Guyou Bay at the head of Lister Glacier, in the Palmer Archipelago. Shown on an Argentine government chart in 1953, but not named. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for Harvey Cushing (1869–1939), American pioneer of neurosurgery.

Cut, The 54°16'S, 36°18'W

Shallow, rock-strewn channel between Babe Island and the W side of the entrance to Cobblers Cove, along the N coast of South Georgia. Charted and named in 1929 by DI personnel.

Cutcliffe Peak 70°32'S, 65°17'E

A peak just S of Mount Mervyn in the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for M.A. Cutcliffe, electrical fitter at Mawson Station in 1966, who assisted with the ANARE survey program.

Cuthbertson Snowfield 60°42'S, 44°30'W

A snowfield rising to 340 m and covering the high ground of eastern Laurie Island (eastward of Watson Peninsula), in the South Orkney Islands. Named by the UK-APC in 1987 after William Cuthbertson, artist on the ScotNAE, led by W.S. Bruce, which wintered on Laurie Island in 1903. Not: Eastern Ice Sheet.

Cutler Stack 62°36'S, 60°59'W

Sea stack lying NE of Lair Point, off the N coast of Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 for American sealer Benjamin S. Cutler, part owner of the brig *Frederick*, which visited the area, 1820–21, and Master of the schooner *Free Gift*, which visited the area, 1821–22.

Cuverville Island 64°41'S, 62°38'W

Dark, rocky island lying in Errera Channel between Arctowski Peninsula and the N part of Rongé Island, off the W coast of Graham Land. Discovered by the BelgAE under Gerlache, 1897–99, who named it for J.M.A. Cavelier de Cuverville (1834–1912), a vice admiral of the French Navy. Not: Ile de Cavelier de Cuverville.

Cuverville Island: see Rongé Island 64°43'S, 62°41'W

Cuvier Island 66°39'S, 140°01'E

Rocky island 0.1 mi long, lying 0.2 mi N of the W part of Pétrél Island in the Géologie Archipelago. Charted in 1951 by the FrAE and named by them for Georges Cuvier (1769–1832), French naturalist.

Cuyou Bucht: see Guyou Bay 64°05'S, 62°35'W

Cyclops Peak 68°00'S, 55°40'E

A triangular peak marked by a round patch of light colored rock, standing at the NE end of Dismal Mountains in Enderby Land. Mapped by ANARE from surveys and air photos, 1956–58, and so named because the light colored patch of rock brings to mind the mythical one-eyed giant Cyclops.

Cyril, Mount 84°02'S, 172°35'E

An ice-covered mountain, 1,190 m, standing 2 mi S of Celebration Pass in the Commonwealth Range. Discovered and named by the BrAE (1907–09) under Shackleton. Named for Cyril Longhurst,

Secretary of the BrNAE (1901–04), who was best man at Shackleton's wedding.

Cytadela: see Platt Cliffs 62°11'S, 58°35'W

Czajkowski Needle: see Pawson Peak 62°11'S, 58°28'W

Czamanske Ridge 82°35'S, 52°42'W

A ridge between Jaeger Table and Welcome Pass in the Dufek Massif, Pensacola Mountains, q.v. Named by US-ACAN after Gerald K. Czamanske, USGS geologist, a member of the USGS Pensacola Mountains party, 1976–77.

Czegka, Mount 86°21'S, 148°41'W

A mountain, 2,270 m, on the E side of Scott Glacier, just N of the terminus of Van Reeth Glacier, in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd after Victor H. Czegka (1880–1973), CWO, USMC, who served as a member with the ByrdAE, 1928–30, and also as member and supply manager with the ByrdAE, 1933–35.

D

D'Abnour Bay 64°16'S, 63°14'W

A small bay 3 mi ESE of Cape Grönland in northern Anvers Island, Palmer Archipelago. First charted by the FrAE (1903–05) under J.B. Charcot, who named the bay for French naval officer Contre-amiral Richard d'Abnour. Not: Baie Richard d'Abnour.

Daedalus Point: see Zapato Point 64°36'S, 61°58'W

Dagger Peak 63°55'S, 57°29'W

Rock peak rising steeply from sea level to about 90 m at the W end of Comb Ridge, located near the extremity of The Naze on James Ross Island, close S of Trinity Peninsula. This area was first explored in 1902 by the SwedAE under Nordenskjöld. The peak was charted and given this descriptive name by the FIDS in 1945.

Daggoo Peak 65°45'S, 62°20'W

Rocky peak, 905 m, at the N side of the mouth of Flask Glacier, 5 mi WSW of Tashtego Point on the E side of Graham Land. Surveyed and photographed by the FIDS in 1947. Named by the UK-APC in 1956 after Flask's harpooner on the *Pequod* in Herman Melville's *Moby-Dick or The White Whale*.

Daguerre Glacier 65°07'S, 63°25'W

Glacier which joins with Niépce Glacier and flows into Lauzanne Cove, Flandres Bay, on the W coast of Graham Land. Shown on an Argentine government chart of 1954. Named by the UK-APC in 1960 for Louis J.M. Daguerre (1787–1851), French painter and physicist who, with J.N. Niépce, invented the daguerreotype process of photography perfected in 1839.

Dahl Reef 66°15'S, 110°29'E

A narrow rock reef which uncovers at low water, lying 1.4 mi NW of Stonehocker Point, Clark Peninsula. First charted in 1962, during a hydrographic survey of Newcomb Bay and approaches by d'A.T. Gale of ANARE. Named for Egil Dahl, third mate on the *Thala Dan*, the ship used by ANARE in 1962.

Daiichi Rock: see Tensoku Rock 68°48'S, 40°11'E

Dailey Archipelago: see Dailey Islands 77°53'S, 165°06'E

Dailey Islands 77°53'S, 165°06'E

Group of small volcanic islands lying off the coast of Victoria Land, 5 mi NE of Cape Chocolate, in the N part of the ice shelf bordering McMurdo Sound. Discovered by the BrNAE (1901–04) under Scott, and named for Fred E. Dailey, expedition carpenter. Not: Dailey Archipelago.

Daimler, Mount 63°45'S, 58°29'W

The highest point of a rock massif between Russell East Glacier and Victory Glacier, 3 mi S of Mount Canicula, Trinity Peninsula. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Gottlieb Daimler (1834–1900), German engineer who developed the light-oil medium speed internal combustion engine which made possible the first commercial production of light mechanical land transport, 1883–85.

Dais 77°33'S, 161°16'E

An elongated mesa between Labyrinth and Lake Vanda in the western part of Wright Valley, in Victoria Land. Descriptively named by the VUWAE, 1958–59.

Daisy Point 54°03'S, 37°11'W

Point extending seaward from the high rocky shore on the E side of the Bay of Isles, South Georgia. It lies 0.5 mi W of Cape Wilson, near the entrance to Beckmann Fjord. The name Low Point was given for this feature, probably by DI personnel who charted this area in 1929. Following its survey in 1951–52, the SGS reported that this part of the coast is high and rugged, and the point, though relatively low by comparison, does not merit the description "low." The new name, recommended by the UK-APC in 1954, is after the sealing brig *Daisy* of New Bedford, MA, which under Capt. Benjamin D. Cleveland visited the Bay of Isles in 1912–13. Not: Low Point.

Dakers Island 64°46'S, 64°23'W

Island between Hartshorne Island and McGuire Island in eastern Joubin Islands. Named by US-ACAN for Hugh B. Dakers, cook in R.V. *Hero* on her first Antarctic voyage to Palmer Station in 1968.

Dakota Pass 83°50'S, 160°35'E

A low pass in the Queen Elizabeth Range, to the E of Peletier Plateau. Named by NZGSAE (1961–62) because the pass was used by a Dakota R4D (new designation Skytrain C-47) plane on a reconnaissance flight into the area.

Dale Glacier 78°17'S, 162°02'E

A trenchlike glacier which drains the SW slopes of Mount Huggins in the Royal Society Range and flows W into Skelton Glacier. First visited by Brooke and Gunn of the N.Z. party of the CTAE, 1956–58. Named by US-ACAN in 1963 for Lt. Cdr. Robert L. Dale, USN, officer in charge of the Squadron VX-6 wintering-over detachment at McMurdo Station in 1960.

Dales Island 67°11'S, 59°44'E

Small island lying 1 mi N of Warnock Islands, to the N of the William Scoresby Archipelago. Discovered and named by DI personnel on the *William Scoresby* in February 1936.

Daley Hills 73°42'S, 164°45'E

A group of high, ice-covered hills along the W side of Aviator Glacier between the mouths of Cosmonette and Shoemaker Glaciers, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Robert C. Daley, USN, flight engineer on Hercules aircraft during USN OpDFrz, 1966, 1967 and 1968.

Dalgliesh Bay 67°42'S, 67°45'W

Bay, 1 mi wide and indenting 3 mi, lying between Lainez Point and Bongrain Point on the W side of Pourquoi Pas Island, off the W coast of Graham Land. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS and named for David G. Dalgliesh, FIDS medical officer at Stonington Island in 1948–49, who accompanied the 1948 sledge survey party to this area.

Dålk Glacier 69°26'S, 76°27'E

A glacier, 8 mi long, draining into the SE part of Prydz Bay between Larsemann Hills and Steinnes. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition (1936–37). Named by John H. Roscoe in his 1952 study of features in the area as identified in air photos taken by

USN Operation Highjump (1946–47). Named after Dalk Island lying at the terminus of the glacier.

Dalk Island 69°23'S, 76°30'E

A small coastal island lying at the terminus of Dalk Glacier, in the SE part of Prydz Bay. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition (1936–37) and named Dalköy. Not: Dalköy.

Dalköy: see Dalk Island 69°23'S, 76°30'E

Dallman, Roca: see Dallmann Nunatak 65°01'S, 60°18'W

Dallman Bay: see Dallmann Bay 64°20'S, 62°55'W

Dallmann, Mount 71°45'S, 10°18'E

A bold mountain (2,485 m) 11 mi E of the northern portion of the Conrad Mountains, in the Orvin Mountains of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938–39, and named for Eduard Dallmann, German whaling captain who explored along the W coast of Antarctic Peninsula in 1873–74. He was the first person to navigate under the German flag in Antarctic waters.

Dallmann Bay 64°20'S, 62°55'W

Bay lying between Brabant and Anvers Islands, connected to Gerlache Strait by Schollaert Channel, in the Palmer Archipelago. Discovered and first roughly charted in 1874 by the German whaler Capt. Eduard Dallmann. Named for Dallmann by the Society for Polar Navigation, Hamburg, which sponsored Dallmann's Antarctic exploration. Later charted by the FrAE, 1903–05, under Charcot. Not: Dallman Bay.

Dallmann Nunatak 65°01'S, 60°18'W

Nunatak Island 5 mi N of Bruce Nunatak in the Seal Nunataks group, off the E coast of Antarctic Peninsula. First charted in 1902 by the SwedAE under Nordensköld, and named by him for Capt. Eduard Dallmann. Not: Dallman Nunatak, Roca Dallman.

Dallman Nunatak: see Dallmann Nunatak 65°01'S, 60°18'W

Dallmeyer Peak 64°53'S, 62°45'W

Peak, 1,105 m, standing 2 mi SW of Steinheil Point on the S side of Andvord Bay, on the W coast of Graham Land. The peak appears on an Argentine government chart of 1952. Named by the UK-APC in 1960 for John H. Dallmeyer (1830–83), English (formerly German) optician who independently developed the "rectilinear" photographic lens.

Dalmeny, Mount 71°07'S, 166°55'E

A peak (1,610 m) 6 mi ESE of Drabek Peak and 3 mi W of Redmond Bluff in the Anare Mountains of Victoria Land. Discovered in 1841 by Capt. James Ross, RN, who named it for the Right Honorable Lord Dalmeny, then a junior lord of the Admiralty.

Dalmor Bank 62°10'S, 58°32'W

A submarine bank with a least depth of c. 80 m, lying off the E end of Dufayel Island in Ezcurra Inlet, King George Island. Named by the Polish Antarctic Expedition after the expedition ship *Dalmor*, which first used the bank in 1977 as the best anchorage in the inlet.

Dalrymple, Mount 77°56'S, 86°03'W

Mountain, 3,600 m, between Mount Alf and Mount Goldthwait in the N part of the Sentinel Range. Mapped by the Marie Byrd Land Traverse party, 1957–58. Named by the US-ACAN for Paul C.

Dalrymple, meteorologist, member of the wintering party at Little America V in 1957 and the South Pole Station in 1958.

Dalsnatten Crag 72°31'S, 0°30'E

A rock crag on the E side of Skarsdalen Valley in the Sverdrup Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Dalsnatten (the valley crag).

Dalsnuten Peak 72°36'S, 3°11'W

A peak rising above the ice in the NE part of Raudberg Valley just N of Jøkulskarvet Ridge, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Dalsnuten (the valley peak).

Dalten Nunatak 72°23'S, 3°42'W

An isolated nunatak about 1.5 mi ESE of Dilten Nunatak and 7 mi NW of Borg Mountain in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Dalten.

Dalton, Cape 66°53'S, 56°44'E

Point marking the SE end of a snow-covered island, located 1 mi N of Abrupt Point on the western side of Edward VIII Bay. First mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition (1936–37) and, though not specifically named on the map, the point appears to have been included as part of two larger features called "Skutenes" and "Skutenesmulen." "Skutenes" (barge point) was subsequently mapped by ANARE as two snow-covered islands, making this descriptive name and "Skutenesmulen," a derivative, inappropriate. ANARE named the point Cape Dalton for R.F.M. Dalton, officer in charge of ANARE work at Macquarie Island, 1953. Not: Mys Dolton.

Dalton, Mount 69°29'S, 157°54'E

A peak (1,175 m) on the E side of Matushevich Glacier, 6 mi SE of Thompson Peak, in the NW part of Wilson Hills. Sketched and photographed by Phillip Law on Feb. 20, 1959, during the ANARE (*Magga Dan*) expedition. Named by ANCA for R.F.M. Dalton, Technical Officer (aircraft) of the Antarctic Division and second-in-charge of this expedition.

Dalton Glacier 77°33'S, 152°25'W

A broad glacier on the E side of the Alexandra Mountains on Edward VII Peninsula, flowing northward into Butler Glacier just S of Sulzberger Bay. Mapped from surveys by the USGS and U.S. Navy air photos (1959–65). Named by US-ACAN for Lt. Brian C. Dalton, MC, USN, officer in charge at Byrd Station, 1957.

Dalton Iceberg Tongue 66°15'S, 121°30'E

A large iceberg tongue that extends seaward from the eastern part of Moscow University Ice Shelf. The feature was partly delineated from air photos taken by USN Operation Highjump (1946–47). It was mapped on the basis of observation by Phillip Law from ANARE aircraft in 1958. Visited in Feb. 1960 by the ANARE (*Magga Dan*) led by Phillip Law. Named by ANCA for R.F.M. Dalton, second-in-command of the latter expedition.

Daly, Cape 67°31'S, 63°47'E

Ice-covered promontory on the coast, 3 mi W of Safety Island and close SE of the Robinson Group. Discovered in February 1931 by

the BANZARE under Mawson, who named it for Senator Daly of the Australian Commonwealth Senate.

Dalziel Ridge 70°15'S, 63°55'W

The primary, western ridge of the Columbia Mountains in Palmer Land. There is considerable exposure of bare rock along the W slopes of the feature. Mapped by the USGS in 1974. Named by US-ACAN for Ian W.D. Dalziel, British geologist now at Columbia University, in several recent seasons (late 1960's to 1976) the principal USARP investigator of the structure and petrology of the Scotia Ridge area.

Damm, Mount 82°36'S, 162°37'E

Snow-covered mountain, 1,130 m, between Heidemann and Nottarp Glaciers in the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Robert Damm, USARP biologist at McMurdo Station, 1963–64.

Damocles Point 69°39'S, 69°21'W

Point on the E coast of Alexander Island, 3 mi ESE of the S summit of Mount Tyrrell. A small rock exposure near sea level is surmounted by a 60 m ice cliff. First photographed from the air in 1937 by the BGLE under Rymill. Surveyed in 1948 by the FIDS, and so named by them because the ice cliff overhanging the spot where geological specimens were collected seemed like the sword of Damocles.

Damoy Point 64°49'S, 63°32'W

Point 0.5 mi WNW of Flag Point, the N entrance point to the harbor of Point Lockroy, on the W side of Wiencke Island in the Palmer Archipelago. Discovered and named by the FrAE, 1903–05, under Charcot.

Damschroder Rock 85°38'S, 69°14'W

A conspicuous rock outlier, 1,595 m, at the end of a snow-covered spur extending westward for 2.5 mi from central Pecora Escarpment, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Gerald H. Damschroder, construction mechanic at Plateau Station, winter 1966.

Dana Coman, Mount: see Coman, Mount 73°49'S, 64°18'W

Dana Glacier 70°55'S, 62°23'W

Glacier about 30 mi long on the E side of Palmer Land. It drains the slopes at the SE side of the Welch Mountains and flows E then NE to discharge into the head of Lehrke Inlet just N of Parmelee Massif. Mapped by USGS in 1974. Named by US-ACAN for Cdr. John B. Dana, USN, Commanding Officer of USN Squadron VXE-6 in Antarctica during Operation Deep Freeze, 1973; he was squadron Executive Officer, 1972, and Operations Officer, 1971.

Dana Mountains 73°12'S, 62°25'W

A group of mountains just NW of New Bedford Inlet, bounded by Mosby Glacier on the N and the Haines and Meinardus Glaciers on the S, in Palmer Land. First seen and photographed from the air by the USAS, 1939–41. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN after James Dwight Dana (1813–95) American geologist.

Danco Coast 64°42'S, 62°00'W

That portion of the W coast of the Antarctic Peninsula between Cape Sterneck and Cape Renard. This coast was explored in Jan.

and Feb. of 1898 by the BelgAE under Gerlache, who named it for Lt. Émile Danco who died on the expedition.

Danco Island 64°44'S, 62°37'W

Island 1 mi long lying in the S part of Errera Channel, off the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Surveyed by the FIDS from the *Norsel* in 1955, and named by the UK-APC for Émile Danco (1869–98), Belgian geophysicist and member of the BelgAE, who died on board the *Belgica* in the Antarctic. Not: Isla Dedo.

Dane, Mount 76°51'S, 146°40'W

A mountain 3 mi WNW of Eilefsen Peak in the N part of Radford Island, lying in Sulzberger Ice Shelf off the coast of Marie Byrd Land. The mountain was probably first seen on aerial flights by the ByrdAE (1928–30). Named by US-ACAN for F.S. Dane, dog driver with the ByrdAE (1933–35).

Danebrog, Iles: see Dannebrog Islands 65°03'S, 64°08'W

Danforth, Mount 85°56'S, 150°01'W

An ice-free, pyramidal mountain over 2,000 m, standing immediately E of Mount Zanuck on the S side of Albanus Glacier, in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for William H. Danforth of the Purina Mills, St. Louis, contributor to the expedition.

D'Angelo Bluff 87°18'S, 154°00'W

A prominent north-facing rock bluff, 6 mi long, trending westward from Mount McIntyre. The bluff stands at the W side of Scott Glacier, near the head, 13 mi S of Mount Early. Discovered by the ByrdAE geological party led by Quin Blackburn, in Dec. 1934. The bluff was visited Dec. 5, 1962 by a geological party of the Ohio State University Institute of Polar Studies, led by George Doumani. Named by Doumani for CWO John D'Angelo, USA, helicopter pilot who landed the party on this bluff.

Danger, Cape 62°27'S, 60°23'W

Cape which forms the NW extremity of Desolation Island, in the South Shetland Islands. Charted in 1935 by DI personnel on the *Discovery II*. So named because a group of sunken rocks extends about 0.4 mi N from the cape. Not: Cabo Peligroso.

Danger Islands 63°25'S, 54°40'W

Group of islands lying 13 mi ESE of Joinville Island. Discovered Dec. 28, 1842 by a British expedition under Ross, who so named them because, appearing among heavy fragments of ice, they were almost completely concealed until the ship was nearly upon them. Not: Islotes Peligro, Islotes Peligrosos.

Danger Slopes 77°49'S, 166°40'E

An ice slope just S of Knob Point on the W side of Hut Point Peninsula, Ross Island. The initial slope is very steep and it terminates W in a sheer drop to Erebus Bay. So named by BrNAE (1901–04) because Seaman Vince of BrNAE lost his life here in a blizzard when he slipped and fell into the sea.

Daniel, Mount 84°54'S, 170°17'W

A prominent peak (2,440 m) standing 1 mi N of Mount Hall, in the Lillie Range of the Queen Maud Mountains. Discovered and photographed by the ByrdAE (1928–30), and named by Byrd for Robert W. Daniel of Lower Brandon, VA, a contributor to the expedition.

Daniel Island 66°14'S, 110°36'E

Small, rocky island which lies S of Honkala Island and marks the S end of Swain Islands. First roughly mapped as part of the Swain Islands from air photos taken by USN OPHjp, 1946–47, and included in a 1957 survey by Wilkes Station personnel under C.R. Eklund. Named by Eklund for Commissaryman 2d Class David Daniel, USN, cook and Navy support force member of the 1957 wintering party at Wilkes Station during the IGY.

Daniell, Cape 72°43'S, 169°55'E

Cape at the NE extremity of Daniell Peninsula which marks the S side of the entrance to Tucker Inlet, in Victoria Land. Discovered, Jan. 15, 1841, by Sir James Clark Ross who named it for Professor Daniell, chemist of King's College, Cambridge University, and Foreign Secretary of the Royal Society.

Daniell Peninsula 72°50'S, 169°35'E

The large peninsula between Cape Daniell and Cape Jones on the coast of Victoria Land. It is an elongated basalt dome similar to Adare and Hallett Peninsulas and rises to 2,000 meters. It is partly separated from the Victory Mountains by Whitehall Glacier, which is afloat in its lower reaches, but is joined to these mountains by the higher land in the vicinity of Mount Prior. Named by the NZGSAE, 1957–58, after Cape Daniell, and by analogy with Adare and Hallett Peninsulas.

Daniel Rex, Mount: see Rex, Mount 74°54'S, 75°57'W

Daniels Hill 70°34'S, 64°36'W

A prominent solitary nunatak that rises above the ice in the eastern part of the Dyer Plateau of Palmer Land, approximately 15 mi W of the head of Clifford Glacier. Mapped by USGS in 1974. Named by US-ACAN for Robert Daniels, USARP biologist at Palmer Station, 1975.

Daniels Range 71°15'S, 160°00'E

A principal mountain range of the Usarp Mountains, about 50 mi long and 10 mi wide, bounded to the N by Harlin Glacier and to the S by Gressitt Glacier. The range was mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN after Ambassador Paul C. Daniels (1903–86), a leading American figure in the formulation of the Antarctic Treaty in 1959.

Dannebrog, Iles: see Wilhelm Archipelago 65°08'S, 64°20'W

Dannebrog Islands 65°03'S, 64°08'W

Group of islands and rocks lying between the Wauwermans Islands and Vedel Islands in the Wilhelm Archipelago. The Wilhelm Archipelago was first sighted and named by a German expedition under Dallmann, 1873–74. It was resighted and named Dannebrog Islands by the BelgAE, 1897–99, under Gerlache, in appreciation of support given to Gerlache by Denmark. Dallmann's original naming has been retained for the archipelago, and the name Dannebrog restricted to the smaller group here described. Not: Iles Danebrog.

Danum Platform 79°59'S, 155°27'E

A mesa-like rock eminence 4 mi NE of Haven Mountain, forming the divide between Bibra Valley and Dubris Valley in Britannia Range. Named in association with Britannia by a University of Waikato (N.Z.) geological party, 1978–79, led by M.J. Selby. Danum is a historical name used in Roman Britain for present-day Doncaster.

Darbel Bay 66°30'S, 65°55'W

Bay 25 mi wide, indenting the W coast of Graham Land between Capes Bellue and Rey. Discovered and roughly charted by the FrAE under Charcot, 1908–10, who gave it the name "Baie Marin Darbel." The bay was further charted in 1931 by DI personnel on the *Discovery II*, and by the BGLE, 1934–37, under Rymill. Not: Marin Darbel Bay, Marin-Darbel Fiord.

Darbel Islands 66°23'S, 65°58'W

Group of islands and rocks extending SW from Cape Bellue for 5 mi across the entrance to Darbel Bay, off the W coast of Graham Land. Charted in 1930 by DI personnel on the *Discovery II* and named Marin Darbel Islands after the bay in which they were found. Both names have since been shortened by the UK-APC. Not: Islas Quirihue, Marin Darbel Islands.

Darboux Island 65°25'S, 64°15'W

Island 1 mi long rising to 270 m, lying 3 mi W of Cape Pérez off the W coast of Graham Land. Discovered by the FrAE, 1903–05, and named by Charcot for Jean Gaston Darboux, noted French mathematician.

Darbyshire, Mount 78°28'S, 158°05'E

A prominent bare rock mountain (2,100 m) which stands close west of Warren Range in Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1956–61. Named by US-ACAN for Maj. Leslie L. Darbyshire, USMC, pilot with U.S. Navy Squadron VX-6, 1960–61 and 1961–62.

Darkowski Glacier 77°52'S, 162°25'E

Glacier in the Cathedral Rocks, flowing N between Zoller and Bol Glaciers into the Ferrar Glacier of Victoria Land. Charted by the BrAE under Scott, 1910–13. Named by the US-ACAN in 1964 for Lt. Leon S. Darkowski, USN, chaplain in 1957 at the Naval Air Facility on McMurdo Sound.

Darley Hills 81°06'S, 160°10'E

A range of high, ice-covered coastal hills overlooking Ross Ice Shelf, trending N-S for about 20 mi between Capes Douglas and Parr. Named by US-ACAN for James M. Darley, chief cartographer of the National Geographic Society, 1940–63, under whose direction many important maps of Antarctica were published.

Darling, Mount 77°15'S, 143°20'W

Highest peak of the Allegheny Mountains, standing 1 mi W of Mount Swartley in the Ford Ranges, Marie Byrd Land. Discovered on aerial flights from the West Base of USAS in 1940, and named for Prof. Chester A. Darling of Allegheny College, Meadville, Pennsylvania.

Darling Ridge 84°46'S, 115°54'W

A snow-covered, flat-topped ridge (2,350 m) with precipitous rock sides. The ridge is 2.5 mi long and forms a notable landmark at the NW corner of Buckeye Table in the Ohio Range, Horlick Mountains. Surveyed by the USARP Horlick Mountains Traverse party in Dec. 1958. Named by US-ACAN for Fredric L. Darling, glaciological assistant with the party.

Darlington, Cape 72°00'S, 60°43'W

Ice-covered headland which rises to 305 m, forming the S side of the entrance to Hilton Inlet, on the E coast of Palmer Land. Discovered in 1940 by the USAS, but at that time it was thought to be an island. Its true nature was determined in an aerial flight by the RARE under Ronne, in November 1947. Named by the USAS

for Harry Darlington III, member of the East Base sledging party that explored this coast as far S as Hilton Inlet. Darlington was also a member of the RARE. Not: Darlington Island.

Darlington Island: see Darlington, Cape 72°00'S, 60°43'W

Darnell Nunatak 80°27'S, 155°54'E

A prominent nunatak, 1,405 m, standing 4 mi NW of Mount Rummage in the SW part of Britannia Range. Named by US-ACAN for Chief Aviation Machinist's Mate Shepard L. Darnell, a member of U.S. Navy Squadron VX-6. During the period December 27, 1962-January 4, 1963, Chief Darnell and six mechanics replaced in the field the engine of a helicopter downed on Emmanuel Glacier.

Darnley, Cape 54°27'S, 36°49'W

Cape at the SE side of Jacobsen Bight on the south-central coast of South Georgia. The name dates back to about 1920 and was given for E.R. Darnley of the Colonial Office, Chairman of the Discovery Committee, 1923–33.

Darnley, Cape 67°43'S, 69°30'E

Ice-covered cape forming the N extremity of Bjerkø Peninsula at the W side of MacKenzie Bay. On Dec. 26, 1929 Sir Douglas Mawson, from the masthead of the *Discovery* while in 66°57'S, 71°57'E, saw land miraged up on the SW horizon. On Feb. 10, 1931 he returned in the *Discovery* and was able to approach close enough to see the headland, naming it for E.R. Darnley, Chairman of the Discovery Committee of the Colonial Office, London, 1923 to 1933. Not: Bjerkø Head, Bjerkø Headland.

Darnley, Mount 59°03'S, 26°30'W

Mountain, 1,100 m, in the south-central portion of Bristol Island in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II*, who named it for E.R. Darnley.

Darryl Zanuck Mountain: see Zanuck, Mount 85°58'S, 151°10'W

Dart, Cape 73°07'S, 126°09'W

A cape at the foot of Mount Siple on the N coast of Siple Island, just southward of Lauff Island. Discovered in December 1940 by members of the USAS in a flight from West Base. Named for Justin W. Dart who, as an executive of the Walgreen Drug Co., supported the expedition.

Dart, Mount 70°12'S, 65°07'E

A mountain 1.5 mi SE of Mount Dwyer in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1965. Named by ANCA for J.R. Dart, radio operator at Mawson Station who took part in the Prince Charles Mountains survey in 1969.

Dart Island 62°14'S, 59°01'W

The largest of several small islands lying in the W entrance to Fildes Strait in the South Shetland Islands. This island and the two islands to the E and S of it were first surveyed and named collectively "70 Islets" by DI personnel on the *Discovery II* in 1934–35, because at least two of them were reported to be 70 ft high. The name was rejected by the UK-APC in 1961 and a new name substituted for the largest island in the group. Dart Island is named for the British sealing vessel *Dart* from London, which visited the South Shetland Islands in about 1823.

Dart Moraine 70°54'S, 68°00'E

An area of brown moraine, extending for 7 mi S of Radok Lake and Pagodroma Gorge and W of Flagstone Bench, at the E end of the Aramis Range, Prince Charles Mountains. Photographed by ANARE in 1956. This moraine was crossed many times in Jan.-Feb. 1969 by J. Dart, radio officer with the ANARE party camped at Radok Lake on his way to the aircraft landing strip used to supply the camp.

Dartmouth Point 54°18'S, 36°27'W

Point which marks the N end of the rugged promontory separating Moraine Fjord and the E head of Cumberland East Bay, South Georgia. Charted by the SwedAE, 1901–04. Named after HMS *Dartmouth*, a vessel used in surveying Cumberland Bay in 1920. Not: Punta Sierra.

Daruma Rock 68°32'S, 41°11'E

A rock on the coast at the W side of Nishi-naga-iwa Glacier in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, and named Daruma-iwa (tumbler rock).

Darwin, Mount 85°02'S, 163°08'E

A prominent but low-lying, ice free mountain at the head of Beardmore Glacier, about 5 mi WSW of Mount Bowers. Discovered by the BrAE (1907–09) and named after Maj. Leonard Darwin, President of the Royal Geographical Society, 1908–11.

Darwin Glacier 79°53'S, 159°00'E

A large glacier flowing from the polar plateau eastward between the Darwin and Cook Mountains to the Ross Ice Shelf. The lower part of the glacier was mapped by the BrNAE (1901–04), and the whole area traversed by N.Z. parties of the CTAE (1956–58). Named in association with the Darwin Mountains.

Darwin Island 63°26'S, 54°46'W

Largest of the Danger Islands lying 11 mi ESE of the E tip of Joinville Island, off the NE end of Antarctic Peninsula. Discovered in 1842 by a British expedition under Ross, and named by him for Charles Darwin, noted naturalist.

Darwin Mountains 79°51'S, 156°15'E

A group of mountains between the Darwin and Hatherton Glaciers. Discovered by the BrNAE (1901–04) and named for Maj. Leonard Darwin, at that time Honorary Secretary of the Royal Geographical Society.

Darwin Névé 79°30'S, 155°00'E

A large névé on the W side of the Cook and Darwin Mountains which feeds the Darwin and Hatherton Glaciers. Named for its association with Darwin Glacier by the N.Z. Darwin Glacier Party of the CTAE, 1956–58.

Dasinger, Mount 83°13'S, 55°03'W

A mountain, 1,360 m, standing 6 mi NE of Neith Nunatak in northern Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Lt. (j.g.) James R. Dasinger, USN, of the Ellsworth Station winter party, 1958.

Daspit Glacier 68°10'S, 65°45'W

Glacier 6 mi long, flowing ENE along the S side of Mount Shelby to the head of Trail Inlet, on the E coast of Graham Land. Discovered by members of East Base of the USAS, 1939–41. It was photographed from the air in 1947 by the RARE under Ronne,

and charted in 1948 by the FIDS. Named by Ronne for Capt. Lawrence R. Daspit, USN, who assisted in obtaining Navy support for the Ronne expedition.

Dater, Mount 67°08'S, 64°49'W

A prominent flat-topped coastal mountain which is marked by distinctive rock spurs and steep cliffs, rising to 1,200 m S of Mill Inlet on Foyen Coast, Graham Land. The feature was roughly surveyed by FIDS, 1947, and was photographed from the air by RARE, 1947, and the U.S. Navy, 1963. Following surveys by BAS, 1963–64, and in association with the names of Antarctic historians grouped in this area, it was named by UK-APC after Henry M. Dater (1909–74), U.S. Navy Historian; member of U.S. Advisory Committee on Antarctic Names, 1962–72 (Chairman, 1973–74); co-author (with E. Schulthess and G.J. Dufek) of *Anarctica*, Zurich, 1959.

Dater Glacier 78°17'S, 84°35'W

A steep valley glacier, 24 mi long and from 1 to 3 mi wide, flowing NE in a sinuous course from the E slopes of Vinson Massif to Rufford Ice Stream which borders the E flank of the Sentinel Range, Ellsworth Mountains. At the lower end the Dater Glacier coalesces with the terminus of the Ellen Glacier, the two emerging from the Sentinel Range as one stream just N of Flowers Hills. Discovered by USN Squadron VX-6 on photographic flights of Dec. 14–15, 1959, and mapped from these photographs by USGS. Named by US-ACAN after Henry M. Dater, (Mount Dater, q.v.), historian on the staff of the U.S. Antarctic Projects Officer and the U.S. Naval Support Force Antarctica.

Datum Peak 77°58'S, 163°48'E

A peak (1,575 m) near the SW extremity of Hobbs Ridge, rising above the S side of Gauss Glacier, 1.6 mi W of Williams Peak, in Victoria Land. The name is one of a group in the area associated with surveying applied in 1993 by NZGB. Named from datum (a practical representation of a reference system), a geodesy and surveying term defined by fixed coordinates.

Daughtery Peaks 73°29'S, 164°20'E

A small cluster of bare rock peaks (2,680 m) that surmount the S wall of Cosmonaut Glacier in the Southern Cross Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Franklin J. Daughtery, aviation structural mechanic with USN Squadron VX-6, a participant in six Deep Freeze operations.

Dauphin Island 66°46'S, 141°35'E

Rocky island 0.15 mi long with small summits at its N and S ends, between Claquebue Island and Chameau Island in the Curzon Islands. Charted in 1951 by the FrAE and named by them for Dauphiné, an ancient province of France. Not: Iles des Dauphins.

Dauphins, Iles des: see Dauphin Island 66°46'S, 141°35'E

Dausay Island: see Hope Island 63°03'S, 56°50'W

Daussy Island: see Hope Island 63°03'S, 56°50'W

Davern Nunatak 70°54'S, 69°20'E

A nunatak 1.5 mi W of Mount Bewsher in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos. Named by ANCA for E.V. Davern, radio operator at Wilkes Station in 1963 and senior weather observer (radio) there in 1967.

Davey Nunataks 72°58'S, 74°52'E

A group of seven nunataks lying 3 mi SW of Mount Harding in the Grove Mountains. Mapped by ANARE from air photos, 1956–60. Named by ANCA for S.L. Davey, topographic draftsman with the Division of National Mapping, Australian Dept. of National Development, who has contributed substantially to the production of Antarctic maps.

Davey Peak 75°53'S, 115°45'W

Small rock peak (1,855 m) 8 mi W of Scudder Peak on the S side of Toney Mountain, Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Gary R. Davey, meteorologist at Byrd Station in 1966.

Davey Point 61°58'S, 58°34'W

Conspicuous rocky point 3 mi SW of Round Point on the N coast of King George Island, in the South Shetland Islands. This feature was charted and named Round Island by DI personnel on the *Discovery II* in 1935, but air photos now show that it is not an island but a rocky point. Since there is already a Round Point on King George Island, a new name was substituted by the UK-APC in 1960. Davey Point is named for Graham J. Davey, FIDS assistant surveyor at Admiralty Bay in 1957 and 1958, who triangulated King George Island and extended this triangulation to Nelson, Robert and Greenwich Islands. Not: Punta Agnese, Round Island.

David, Mount: see Kirkwood, Mount 63°00'S, 60°39'W

David Cauldron 75°20'S, 160°50'E

An icefall of turbulent iceblocks on the David Glacier, in Victoria Land. Named by the Southern Party of the NZGSAE, 1962–63, in association with David Glacier.

David Glacier 75°19'S, 162°00'E

A glacier over 60 mi long, flowing E from the polar plateau through the Prince Albert Mountains to the coast of Victoria Land. It enters Ross Sea between Cape Philippi and Cape Reynolds to form the floating Drygalski Ice Tongue. Discovered by Ernest Shackleton's "Northern Party," November 1908, under the leadership of Prof. T.W. Edgeworth David, of Sydney University, for whom the feature was named.

David Island 66°25'S, 98°46'E

Ice-covered island, 10 mi long and 6 mi wide, marked by rock exposures along its N and E sides, lying off Davis Peninsula in the Shackleton Ice Shelf. Discovered in November 1912 by the Western Base Party of the AAE under Mawson, and named by him for Prof. Sir. T.W. Edgeworth David, member of the AAE Advisory Committee.

David Lee Glacier: see Rivard Glacier 78°04'S, 163°55'E

David Range 67°54'S, 62°30'E

Range 5 mi W of Masson Range, which it parallels, in the Framnes Mountains. It extends 16 mi in a NNE-SSW direction, with peaks rising to 1,500 meters. Discovered on Feb. 14, 1931 by the BANZARE under Mawson, who named it for Prof. Sir T.W. Edgeworth David.

Davidson, Cape 60°46'S, 44°46'W

Cape which marks the southernmost part of Mackenzie Peninsula and the W side of the entrance to Wilton Bay, in the W part of

Laurie Island in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for J. Davidson, first mate of the expedition ship *Scotia*. Not: Cabo Díaz.

Davidson, Mount 76°43'S, 161°58'E

Mountain, 1,560 m, standing at the head of Albrecht Penck Glacier in Victoria Land. Discovered by the BrNAE (1901–04) which named it for a member of the ship's company of the *Morning*, relief ship to the expedition.

Davidson Glacier 82°49'S, 166°07'E

A glacier in the Holland Range, flowing N along the E side of Longstaff Peaks into the Ross Ice Shelf. Mapped by the USGS from tellurometer surveys (1961–62) and Navy air photos (1960). Named by US-ACAN for Cdr. E.A. Davidson, USN, Commanding Officer of the USS *Edisto* during USN OpDFrz 1963.

Davidson Island 66°26'S, 66°37'W

A small, dome-shaped ice-covered island between Wollan Island and Shull Rocks in Crystal Sound. Mapped from air photos obtained by RARE (1947–48) and FIDASE (1958–59) and from surveys by FIDS (1958–59). Named by UK-APC for William L. Davidson, American physicist who used neutron diffraction to determine the position of the hydrogen atoms in ice.

David Valley 77°37'S, 162°08'E

A small partially ice-free valley lying above the Conrow Glacier and E of Horowitz Ridge in the Asgard Range, Victoria Land. Named by Roy E. Cameron, leader of a USARP biological party to the valley in 1967–68, for Charles N. David, a member of that party.

Davies, Cape 71°46'S, 100°23'W

Ice-covered cape at the NE end of Hughes Peninsula, Thurston Island. First delineated from air photos taken by USN OpHjp in December 1946. Named by US-ACAN for Frank Davies, physicist with the ByrdAE in 1928–30.

Davies, Cape: see Davis Ice Piedmont 70°38'S, 166°16'E

Davies Bay 69°18'S, 158°34'E

A bay on the coast, 10 mi wide, between Drake Head and Cape Kinsey. Discovered in February 1911 from the *Terra Nova* (Lt. Harry L.L. Pennell, RN) of the BrAE, 1910–13. Named for Francis E.C. Davies, shipwright on the *Terra Nova*. Not: Davis Bay.

Davies Dome 63°53'S, 58°03'W

A small ice dome with rock walls at the margins, rising to 400 m southeast of Stoneley Point on James Ross Island. Named by the UK-APC in 1987 after Gwion ("Taff") Davies, general assistant on Operation Tabarin at Port Lockroy, 1943–44, and Hope Bay, 1944–45.

Davies Escarpment 85°32'S, 89°48'W

An east-facing ice escarpment over 10 mi long, located southward of Bermel Escarpment in the southern part of the Thiel Mountains. The feature appears to be devoid of rock outcroppings. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party of 1960–61. Named after William E. Davies, USGS geologist aboard the icebreaker *Atka* in the Antarctic reconnaissance cruise of 1954–55 in search of station sites for use during the International Geophysical Year.

Davies Gilbert Strait: see Gilbert Strait 63°38'S, 60°16'W

Davies Heights 62°11'S, 58°56'W

An elevated area, roughly elliptical in form and 1 mi long, rising to 150 m in north-central Fildes Peninsula, King George Island. The feature has steep sides and an undulating top which rise 60 m above the surrounding plain. Named by the UK-APC for Robert E.S. Davies, BAS geologist who worked in this area, 1975–76.

Davies Top 69°24'S, 64°56'W

A conspicuous isolated peak (2,360 m) on the E side of Wakefield Highland, near the head of Lurabee Glacier in northern Palmer Land. Photographed from the air by RARE on Dec. 22, 1947. Surveyed by FIDS in Nov. 1960. Named by UK-APC after Anthony G. Davies of FIDS, Medical Officer at Horseshoe Island and Stonington Island, 1960.

Davis, Cape 66°24'S, 56°50'E

A rounded ice-covered cape along the N coast of Edward VIII Plateau, 9 mi E of Magnet Bay. Discovered on Jan. 12, 1930, by the BANZARE under Mawson, who named it for Capt. John King Davis, Director of Navigation under the Commonwealth Government and ship's captain and second in command of the BANZARE.

Davis, Cape: see Davis Ice Piedmont 70°38'S, 166°16'E

Davis, Mount 78°06'S, 86°15'W

Mountain over 3,800 m located 1 mi N of Mount Bentley in the Sentinel Range, Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse party, 1957–58, and named for Leo E. Davis, geomagnetician and seismologist at Byrd Station in 1957.

Davis, Point 60°46'S, 44°39'W

Point 1.2 mi WNW of Point Rae on the N side of Scotia Bay, Laurie Island, in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for W.G. Davis, Director of the Argentine Meteorological Office.

Davis Anchorage 68°34'S, 77°55'E

An anchorage about 1 mi in extent with general depths of 10 to 13 fathoms, lying off Breidnes Peninsula, Vestfold Hills. It is bounded on the west by Krat Rocks and Hobby Rocks, and on the east by the rocks and shoal water extending 0.5 mi offshore from Davis Station. The anchorage has been used by ANARE ships to Davis Station, for which it is named, since 1957.

Davis Bay 66°08'S, 134°05'E

A bay about 12 mi wide at the entrance between Cape Cesney and Lewis Island. Discovered from the *Aurora* by the AAE (1910–14) under Douglas Mawson. Named by Mawson for Capt. John King Davis, master of the *Aurora* and second-in-command of the expedition.

Davis Bay: see Salmon Bay 77°56'S, 164°33'E

Davis Bay: see Davies Bay 69°18'S, 158°34'E

Davis Coast 64°00'S, 60°00'W

That portion of the W coast of the Antarctic Peninsula between Cape Kjellman and Cape Sterneck. Named by US-ACAN for Capt. John Davis, American sealer who made the first recorded landing on the continent of Antarctica at Hughes Bay on this coast in the *Cecilia*, Feb. 7, 1821. Not: Costa del Presidente González Videla, Palmer Coast.

Davis Creek: see Salmon Stream 77°56'S, 164°30'E

Davis Gilbert Strait: see Gilbert Strait 63°38'S, 60°16'W

Davis Glacier 75°45'S, 162°10'E

A heavily crevassed glacier, 15 mi long, draining the NW slopes of Mount George Murray and flowing to the coast of Victoria Land opposite the S end of Lamplugh Island. The glacier contributes to ice that flows N along the W side of Lamplugh Island and to the Cheetham Ice Tongue. First charted by the BrAE, 1907–09, under Shackleton, who named it for John King Davis, first officer and later captain of the expedition ship *Nimrod*.

Davis Glacier: see Salmon Glacier 77°58'S, 164°05'E

Davis Glacier: see Arthur Glacier 77°03'S, 145°15'W

Davis Hills 86°52'S, 150°00'W

A small group of hills lying at the S side of Klein Glacier where the latter enters Scott Glacier, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960–63. Named by US-ACAN for Parker Davis, photographer with USN Squadron VX-6 in Operation Deep Freeze 1966 and 1967.

Davis Ice Piedmont 70°38'S, 166°16'E

An ice piedmont about 10 mi long and 4 mi wide, located along the N side of Missen Ridge on the N coast of Victoria Land. The name "Cape Davis," after John E. Davis, Second Master of the *Terror*, was given to a cape in the immediate area by Capt. James C. Ross in 1841. Since no significant cape exists here, the US-ACAN and NZ-APC have reapplied the name Davis to this ice piedmont. Not: Cape Davies, Cape Davis.

Davis Ice Rise 74°56'S, 110°18'W

An ice rise, 4 mi long, near the terminus of Smith Glacier, 8 mi SE of Mayo Peak, Bear Peninsula, on the Walgreen Coast, Marie Byrd Land. Mapped by USGS from USN aerial photographs taken 1966 and Landsat imagery taken 1972–73. Named by US-ACAN after Cdr. Arthur R. Davis, USN, Supply Officer, OpDFrz, 1975–76 and 1976–77.

Davis Island 64°06'S, 62°04'W

An island about 2 mi long, situated in a position which blocks much of the channel between Brabant Island and Liège Island, in the Palmer Archipelago. The island was photographed and roughly charted by the BelgAE, 1897–99. The naming, by J.B. Charcot, leader of the French Antarctic Expedition, 1903–05, honors Walter G. Davis, director of the Argentine government meteorological office at the time of the French exploration.

Davis Islands 66°40'S, 108°25'E

A small group of rocky islands lying in the west part of the entrance to Vincennes Bay. First mapped (1955) by G.D. Blodgett from aerial photographs taken by USN Operation Highjump (1947). Named by US-ACAN for Malcolm Davis, bird curator of the zoo, Washington, DC, who served as biologist aboard the ship *North Star* during the U.S. Antarctic Service (1939–41) and as ornithologist during USN Operation Windmill (1947–48).

Davis Knoll 82°10'S, 155°01'E

A partly ice-covered knoll, standing 6 mi N of Mount Ester at the head of Lucy Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for

Thomas C. Davis, Jr., USARP geologist at McMurdo Station, 1961–62.

Davis Nunataks 85°37'S, 166°36'E

A small cluster of rock nunataks 3 mi NW of Mount Ward, the feature being a southern outlier of the main body of the Dominion Range. Named by US-ACAN for Ronald N. Davis, USARP geomagnetist-seismologist at South Pole Station, winter 1963.

Davis Peninsula 66°35'S, 98°47'E

Elongated ice-covered peninsula, 3 mi wide, between Reid Glacier and Northcliffe Glacier. Discovered in November 1912 by the AAE under Mawson, who named it for Capt. John King Davis.

Davis Promontory 84°41'S, 96°30'W

A low promontory, completely snow covered, near the NE end of Havola Escarpment. This promontory which faces southward was occupied by the USARP Horlick Mountains Traverse party, 1960–61. Named by US-ACAN for Walter L. Davis, Chief Construction Mechanic, USN, who wintered over at Ellsworth Station, 1957, and Byrd Station, 1960. Davis was a member of the 11 man tractor party, led by Maj. Antero Havola, that journeyed from Byrd Station to South Pole Station, 1960–61. On Dec. 25, 1960, the party passed a few miles northward of this promontory.

Davis Ridge 71°24'S, 63°00'W

A ridge of irregular shape, apparently an outlier of the Mount Jackson massif. It rises above the ice surface 6 mi ESE of the summit of Mount Jackson in the E part of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Brent L. Davis, USARP biologist at Palmer Station, 1971, and in the Antarctic Peninsula area, 1974–75 season.

Davis Saddle 76°23'S, 147°09'W

An ice saddle just eastward of Mitchell Peak on Guest Peninsula, along the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Clinton S. Davis, BM2, USN, Boatswain's Mate aboard USS *Glacier* along this coast, 1961–62.

Davis Sea 66°00'S, 92°00'E

An area of the sea along the coast of Antarctica between West Ice Shelf and the Shackleton Ice Shelf. Discovered by AAE (1911–14) from the *Aurora*. Named by Sir Douglas Mawson for Capt. J.K. Davis, master of the *Aurora* and second in command of the expedition.

Davis Valley 82°28'S, 51°09'W

An ice-free valley just E of Forlidas Ridge in northeast Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Edward H. Davis, construction mechanic with the Ellsworth Station winter party, 1957.

Davisville Glacier 85°17'S, 128°30'W

A glacier about 30 mi long which drains the north slopes of the Wisconsin Range, between Lentz and Moran Buttresses, and trends northwestward to merge with the lower portion of the Horlick Ice Stream. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Davisville, Rhode Island, location of the Construction Battalion Center responsible for cargo matters for USN Operation Deep Freeze on the east coast.

Dawson, Mount 77°46'S, 86°21'W

Sharp, pyramidal mountain (2,695 m) located 2.5 mi NW of Mount Reimer in the Sentinel Range, Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party, 1957–58, and named after Maj. Merle R. Dawson (d.1986), USA, leader of the Army-Navy Trail Party which established an oversnow route from Little America V to the site of Byrd Station in November–December 1956; Project Manager for Ship Operations in the Office of Polar Programs, NSF, 1965–70.

Dawson and Lambton, Mount: see Dawson-Lambton, Mount 78°54'S, 160°37'E

Dawson Head 70°43'S, 61°57'W

A high coastal point, or headland, along the NW side of Lehrke Inlet on the E coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Capt. Opie L. Dawson, USCG (Ret.), Commanding Officer of the USCGC *Glacier* during the International Weddell Sea Oceanographic Expedition, 1968.

Dawson-Lambton, Mount 78°54'S, 160°37'E

A mountain, 2,295 m, standing 3 mi SW of the summit of Mount Speyer in the Worcester Range. Discovered by the BrNAE (1901–04) and named after the Misses Dawson-Lambton, contributors to the expedition. Not: Mount Dawson and Lambton.

Dawson-Lambton Glacier 76°08'S, 26°45'W

A heavily-crevassed glacier entering southeastern Weddell Sea immediately west of Brunt Ice Shelf. Discovered in January 1915 by a British expedition led by Shackleton. He named it for Elizabeth Dawson-Lambton, benefactress of the Shackleton expeditions. Not: Dawson-Lambton Ice Stream, Glaciari Buenos Aires.

Dawson-Lambton Ice Stream: see Dawson-Lambton Glacier 76°08'S, 26°45'W

Dawson Nunatak 70°13'S, 65°02'E

A nunatak about 3 mi SSE of Mount Peter in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos. Named for P.L. Dawson, senior diesel mechanic at Mawson Station in 1964.

Dawson Peak 83°50'S, 162°33'E

A prominent ice-free peak, 2,070 m, 5 mi SW of Mount Picciotto in the Queen Elizabeth Range. Named by US-ACAN after John A. Dawson, USARP aurora scientist at South Pole Station, 1958.

Day, Cape 76°18'S, 162°46'E

A cape on the coast of Victoria Land 11 mi E of Mount Gauss. First charted by the BrAE (1907–09) which named this cape after Bernard C. Day, electrician and motor expert with the expedition.

Day Island 67°15'S, 67°42'W

Island, 7 mi long and 3 mi wide, lying immediately S of The Gullet and 2 mi N of Wyatt Island in the N part of Laubeuf Fjord, off the W coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill, who used the provisional name Middle Island for this feature. The island was resurveyed in 1948 by the FIDS and renamed by them for V. Admiral Sir Archibald Day, Hydrographer to the Navy. Not: Isla Tinguiririca, Middle Island.

Daykovaya Peak 71°28'S, 12°11'E

Prominent peak, 1,995 m, rising between Mount Hansen and Kåre Bench in Westliche Petermann Range, Wohlthat Mountains. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named Gora Daykovaya (dike mountain).

Dayman, Cape 70°46'S, 167°24'E

A cape on the N side of Tapsell Foreland that forms the S side of the entrance to Yule Bay, in Victoria Land. Discovered by Capt. James Clark Ross, 1841, who named it after Joseph Dayman, mate on the ship *Erebus*.

Dayné, Mount: see Dayné Peak 64°54'S, 63°36'W

Dayné Peak 64°54'S, 63°36'W

Distinctive pyramidal peak, 730 m, immediately NE of Cape Errera, the SW tip of Wiencke Island, in the Palmer Archipelago. Discovered by the BelgAE, 1897–99, under Gerlache. Named by the FrAE, 1903–05, under Charcot, for Pierre Dayné, mountain guide and member of the expedition. Not: Mount Dayné.

Dayton, Mount 85°44'S, 158°41'W

A mainly ice-free mountain, 1,420 m, at the E side of Amundsen Glacier, standing 5 mi W of Mount Goodale in the Hays Mountains. Mapped from ground surveys and air photos by the ByrdAE, 1928–30. Named by US-ACAN for Paul K. Dayton III, biologist with the McMurdo Station winter party of 1964.

Deacock Glacier 53°11'S, 73°31'E

A glacier close W of Lavett Bluff on the S side of Heard Island. Surveyed by ANARE, 1948–63. Named by ANCA for W. Deacock, a member of ANARE on Heard Island in 1963.

Deacon, Cape 73°14'S, 59°50'W

Ice-covered cape forming the SE tip of Kemp Peninsula, on the E coast of Palmer Land. Probably first seen by members of the USAS who photographed a portion of Kemp Peninsula while exploring this coast from the air in December 1940. During 1947 the cape was photographed from the air by members of the RARE, who in conjunction with the FIDS charted it from the ground. Named by UK-APC after George E.R. Deacon (1906–84), English oceanographer and member of the Discovery Investigations staff, 1927–39; Director of the National Institute of Oceanography, 1949–71. Not: Punta Alborno.

Deacon Hill 60°34'S, 45°48'W

Conspicuous ice-covered peak, 330 m, on the divide between Bridger Bay and Norway Bight in the W part of Coronation Island, in the South Orkney Islands. First seen in 1821 by Capt. Nathaniel Palmer and Capt. George Powell on the occasion of their joint cruise, and roughly charted on Powell's map published in 1822. Recharted in 1933 by DI personnel on the *Discovery II*, who named it for George E.R. Deacon, member of the hydrological staff of the Discovery Committee. Not: Cerro Diácono.

Deacon Peak 62°06'S, 57°54'W

Peak, 170 m, marking the summit of Penguin Island, at the E side of the entrance to King George Bay, in the South Shetland Islands. Charted in 1937 by DI personnel on the *Discovery II*, who named it for George E.R. Deacon.

Dead End Glacier 54°47'S, 35°56'W

Glacier flowing E from the S end of the Salvesen Range of South Georgia into the W side of Salomon Glacier. Surveyed by the SGS in the period 1951–57, and so named by the UK-APC because there is no route for sledging parties from the head of this glacier to the N shore of Drygalski Fjord.

Dead Glacier: see König Glacier 54°10'S, 36°48'W

Deadmond Glacier 71°58'S, 96°20'W

Glacier about 6 mi long, flowing from the E side of Evans Peninsula on Thurston Island into Cadwalader Inlet. Discovered by the USN Bellingshausen Sea Expedition in February 1960. Named by US-ACAN for Lt. Cdr. Robert B. Deadmond, executive officer of the USS *Burton Island*, forming part of this expedition.

Deakin, Mount 84°40'S, 170°40'E

A prominent mountain, 2,810 m, at the E side of Beardmore Glacier, just N of the mouth of Osicki Glacier. Discovered by the BrAE (1907–09) and named by Shackleton for Sir Alfred Deakin, Prime Minister of Australia, who had supported the expedition.

Deakin Bay 68°23'S, 150°10'E

A wide, open bay on the coast between Horn Bluff and Cape Freshfield. The bay was roughly delineated by the Far Eastern Party of AAE (1911–14) under Sir Douglas Mawson, who named it for Sir Alfred Deakin, Prime Minister of Australia in 1910. In certain historical accounts and charts this feature has been correlated with "Peacocks Bay" of the U.S. Exploring Expedition (1838–42) under Lt. Charles Wilkes, USN. Not: Peacocks Bay.

De Alencar, Mount: see Alencar Peak 65°24'S, 63°53'W

De Alencar, Sommet: see Alencar Peak 65°24'S, 63°53'W

Dean, Mount 85°32'S, 163°00'W

A mountain, 1,620 m, standing at the NE end of the Quarles Range, 2 mi NE of Mount Belez. Probably first seen by Roald Amundsen's polar party in 1911. First mapped by the ByrdAE, 1928–30. Named by US-ACAN for Jesse D. Dean, meteorologist with the South Pole Station party of 1962.

DeAngelo Glacier 71°54'S, 170°10'E

Tributary glacier which drains the slopes of Mount Robinson in the Admiralty Mountains. It flows SE to enter Moubray Glacier southward of Mount Ruegg. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Richard J. DeAngelo, Airman First-Class, USAF, who perished in the C-124 Globemaster crash in this vicinity in 1958.

Dean Island 74°30'S, 127°35'W

An ice-covered island, 20 mi long and 10 mi wide, lying within the Getz Ice Shelf and midway between Grant Island and Siple Island, off the coast of Marie Byrd Land. First sighted from a distance of 20 mi from the USS *Glacier* on Feb. 5, 1962. Named for Chief Warrant Officer S.L. Dean, USN, Electrical Officer on the *Glacier* at the time of discovery.

Dean Nunataks 74°31'S, 98°48'W

Two nunataks lying about 6 mi ENE of Mount Moses in the Hudson Mountains. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960–66. Named by US-ACAN for William S. Dean of Pleasanton, Texas, who served as ham radio contact in the U.S. for the Ellsworth Land Survey party of

1968–69, and for other USARP field parties over a three year period.

Dean Rocks 67°48'S, 68°56'W

Group of four rocks lying between Preston and Biggs Islands in Henkes Islands, off the S end of Adelaide Island. Named by the UK-APC for Engineer Mechanic Thomas Dean of the RN Hydrographic Survey Unit which first charted this feature in 1963.

Dearborn, Mount 77°14'S, 160°08'E

Mountain, 2,300 m, between Mount Littlepage and the N part of the Willett Range, in Victoria Land. Named by the US-ACAN in 1964, for John Dearborn, biologist at McMurdo Station, 1959 and 1961.

Deardorff, Mount 85°48'S, 162°34'W

Prominent peak, 2,380 m, surmounting the massive ridge dividing the heads of Moffett and Steagall Glaciers in the Queen Maud Mountains. First mapped from ground surveys and air photos by the ByrdAE, 1928–30. Named by US-ACAN for J. Evan Deardorff who made cosmic ray studies at McMurdo Station in 1964.

DeAtley Island 73°18'S, 73°54'W

A large ice-covered island lying 10 mi E of Spaatz Island at the S side of Ronne Entrance. The island was sighted and roughly mapped from the air by the RARE, 1947–48. Later named by Finn Ronne for Col. Ellsworth DeAtley, USA, and his wife Thelma DeAtley, who contributed clothing and food in support of RARE.

Débarquement Rock 66°36'S, 140°04'E

Ice-free rock 0.1 mi long marking the N end of the Dumoulin Islands and the NE end of Géologie Archipelago. The French expedition under Capt. Jules Dumont d'Urville landed on a rocky islet in this vicinity in January 1840 and gave the name "Rocher du Débarquement." Positive identification of this feature has not been made, but on the basis of air photos taken by USN OpHjp, 1946–47, and surveys and geological studies made by the FrAE during the 1950–52 period, the seaward position of Débarquement Rock is believed to correlate with the feature so named by d'Urville.

Debenham, Mount: see Debenham Peak 67°21'S, 50°26'E

Debenham Glacier 77°10'S, 162°38'E

Glacier flowing into the northern part of Wilson Piedmont Glacier on the coast of Victoria Land. First mapped by the BrNAE (1901–04). It was named by the BrAE (1910–13) for Frank Debenham, geologist with the expedition and Director of the Scott Polar Research Institute, 1925–48.

Debenham Islands 68°08'S, 67°07'W

Group of islands and rocks lying between Millerand Island and the W coast of Graham Land. Discovered and named by the BGLE, 1934–37, under Rymill; the BGLE base was on Barry Island, in the center of the group, during part of this time. Named for Frank Debenham, who served as member of the BGLE Advisory Committee.

Debenham Peak 67°21'S, 50°26'E

Peak, 1,140 m, lying S of Amundsen Bay in the Scott Mountains, about 7 mi E of Mount Cronus. Discovered in January 1930 by the BANZARE under Mawson, who named it for Frank Debenham. The peak was more accurately positioned by ANARE, 1954–58. Not: Mount Debenham.

DeBreuck, Mount 71°16'S, 35°40'E

The northernmost massif in the Queen Fabiola Mountains. The feature is mainly ice free, linear in plan, and rises to about 2,000 meters. Discovered on Oct. 7, 1960 by the BelgAE under Guido Derom, who named it for William DeBreuck, glaciologist and observer aboard Belgian aircraft during reconnoitering flights in this area.

DeBreuck Glacier 82°53'S, 162°50'E

Glacier, 8 mi long, which is a southern tributary to Kent Glacier in the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by the US-ACAN for William DeBreuck, USARP glaciologist at the South Pole Station, 1962–63.

DeBusk, Mount: see DeBusk Scarp 69°23'S, 62°57'W

DeBusk Scarp 69°23'S, 62°57'W

Nearly vertical rock cliff, 2 mi long and rising to 300 m, at the S side of the mouth of Bingham Glacier, on the E coast of Palmer Land. This feature was photographed from the air in 1928 by Sir Hubert Wilkins, and again in 1940 by members of the USAS who also sledge surveyed along this coast. It was resighted by the RARE, 1947–48, under Ronne, who named it after Clarence DeBusk, executive secretary of the Chamber of Commerce, Beaumont, Texas, who was of assistance to the RARE in the preparation for the voyage south. Not: Mount DeBusk.

Debussy Heights 69°53'S, 71°23'W

Heights which rise to 1,300 m (at Ravel Peak) E of Mozart Ice Piedmont in the N part of Alexander Island. First mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by the UK-APC after Claude Debussy (1862–1918), French composer.

Debutante Island 69°34'S, 75°30'E

A narrow island which is the southernmost of the Søstrene Islands. The island is ice covered except for a small rock outcrop and barely protrudes above the general level of the Publications Ice Shelf. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition, 1936–37. Named Debutante in 1952 by John H. Roscoe because the island is just beginning to “come out” from under its ice cover.

De Camp Nunatak 72°16'S, 160°22'E

A lone nunatak standing 3 mi SE of Welcome Mountain in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959–64. Named by US-ACAN for Michael A. de Camp, biologist at McMurdo Station, 1966–67.

Decazes, Point: see Decazes Island 66°26'S, 67°20'W

Decazes Island 66°26'S, 67°20'W

An island 0.5 mi long, lying 1.5 mi SW of Belding Island at the SW extremity of the Biscoe Islands. The island is one of the largest of many small islets and rocks that fringe the northern side of Matha Strait. The vicinity was charted by the FrAE (1908–10) under Jean B. Charcot, who applied the name “Pointe Decazes” to the south end of an island in this approximate position. The original application has been altered in recent years, and the name Decazes is now established in usage for the entire island described. Not: Point Decazes.

Decennial Peak 84°22'S, 166°02'E

A peak (4,020 m) situated 3 mi SW of Mount Kirkpatrick in Queen Alexandra Range. Mapped by USGS from surveys and U.S. Navy air photos, 1958–65. Named by US-ACAN in recognition of the Decennial of the Institute of Polar Studies, Ohio State University, in 1970, the same year the University celebrated its Centennial. The University and the Institute have been very active in Antarctic investigations since 1960.

Decepción, Isla: see Deception Island 62°57'S, 60°38'W

Deception Glacier 78°33'S, 158°33'E

Glacier between the Warren and Boomerang Ranges, flowing S into upper Mulock Glacier. So named by the N.Z. party of the CTAE (1956–58) because it appears to lead directly into Skelton Névé but instead drains southward.

Deception Harbor: see Foster, Port 62°57'S, 60°39'W

Deception Island 62°57'S, 60°38'W

Ring-shaped island 8 mi in diameter, with a narrow entrance into a central landlocked harbor (a drowned breached crater), lying nearly 10 mi S of Livingston Island, in the South Shetland Islands. The name dates back to at least 1821 and is now established in international usage. Not: Isla Decepción, Teil Island, Yaroslav Island.

Deception Plateau 73°15'S, 164°50'E

High, ice-covered plateau, 11 mi long and 6 mi wide, which is bounded by Aviator Glacier, Pilot Glacier and Mount Overlord, in Victoria Land. So named by the southern party of NZGSAE, 1966–67, because of its deceptively small appearance when viewed from a distance.

Decker Glacier 77°28'S, 162°47'E

A steep, narrow glacier that drains the NE slopes of Mount Newall in the Asgard Range, Victoria Land. Named by US-ACAN for Chief Aviation Machinist's Mate William D. Decker, USN, of Squadron VXE-6, who died at McMurdo Station on Oct. 11, 1971.

Découverte, Cape 66°46'S, 141°33'E

The point of rocks which marks the northwest extremity of Curzon Islands along Adélie Coast. Discovered on January 21, 1840 by the French Antarctic Expedition under Capt. Jules Dumont d'Urville who gave the name “Cap de la Découverte” (cape of the discovery). It was the first rocky point of the coast seen by members of the expedition. Not: Cape Discovery.

De Dion Islets: see Dion Islands 67°52'S, 68°43'W

Dedo, Bahía: see Briand Fjord 65°01'S, 63°01'W

Dedo, Isla: see Danco Island 64°44'S, 62°37'W

Dedo, Mount 64°39'S, 62°33'W

Conspicuous needle-like peak, 695 m, standing S of Orne Harbor on the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. The name appears on an Argentine government chart of 1954 and is descriptive, “dedo” meaning finger in Spanish. Not: Zeiss Needle.

Dedo, Punta: see Toe, The 62°20'S, 59°11'W

Dedo, Punta: see Finger Point 56°41'S, 27°13'W

Dee Ice Piedmont 68°40'S, 66°58'W

An ice piedmont between Pavie Ridge and the mouth of Clarke Glacier on the E side of Mikkelsen Bay, W coast of Antarctic Peninsula. Surveyed from the ground by BGLE, 1936–37, and by FIDS, 1948–50. Photographed by RARE, Nov. 1947 (trimetrogon air photography). Named by UK-APC after John Dee (1527–1608), English mathematician and pioneer teacher of navigation methods for 30 years during a period of great maritime expansion and exploration.

Dee Island 62°26'S, 59°47'W

Island with a conspicuous sharp peak at its S end, lying 2.5 mi E of Ongley Island, close off the N side of Greenwich Island in the South Shetland Islands. Charted and named in 1935 by DI personnel on the *Discovery II*.

Deeley, Mount 67°01'S, 66°13'W

A mountain 2,150 m, standing 6 mi NE of Salmon Cove in Graham Land. Mapped from air photos taken by FIDASE, 1956–57. Named by UK-APC for Richard M. Deeley, British geologist who made important investigations of the structure and flow of glaciers.

Dee Nunatak 74°28'S, 136°31'W

A rock nunatak which appears to be within the flow of Garfield Glacier, in the W part of McDonald Heights, Marie Byrd Land. The feature lies 1 mi W of Rhodes Icefall. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Lt. Thomas H. Dee, USN, Medical Officer at Byrd Station, 1970.

Deep Freeze Range 74°15'S, 163°45'E

A rugged mountain range, over 80 mi long and about 10 mi wide, rising between Priestley and Campbell Glaciers in Victoria Land and extending from the edge of the polar plateau to Terra Nova Bay. Peaks in the low and mid portions of the range were observed by early British expeditions to the Ross Sea. The range was mapped in detail by the USGS from surveys and USN air photos, 1955–63. Named by US-ACAN in recognition of the splendid support to research provided by the U.S. Navy's Operation Deep Freeze expeditions to Antarctica for many years beginning in 1954.

Deep Inlet: see Greene Inlet 54°03'S, 38°01'W

Deep Lake 77°34'S, 166°13'E

A small elongate lake 0.5 mi N of Cape Barne, Ross Island. The descriptive name was applied by the BrAE, 1907–09.

Defant Glacier 72°32'S, 61°35'W

Glacier 2 mi wide at its mouth, which flows ESE to the W side of Violante Inlet, on the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by the USAS. During 1947 the glacier was photographed from the air by members of the RARE, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Prof. Albert Defant, German oceanographer (Austrian born) who was director of the Inst. für Meereskunde (German Hydrographic Office), 1927–46.

Defence Bay: see Table Bay 61°09'S, 55°24'W

Defile, The 77°39'S, 162°43'E

Narrow ice-free passageway between the terminus of Sues Glacier and the talus-covered slope of Nussbaum Riegel in Taylor

Valley, Victoria Land. Charted and descriptively named by the BrAE under Scott, 1910–13.

DeGanahl Glacier 85°13'S, 170°35'W

A narrow, steep-walled glacier about 10 mi long, flowing SE from Jones Peak into the W side of Liv Glacier, opposite June Nunatak. Discovered and photographed by R. Admiral Byrd on the South Pole Flight in November 1929 and named for Joe DeGanahl, navigator and dog driver and member of the Supporting Party, ByrdAE, 1928–30.

De Geer Glacier: see Harker Glacier 54°22'S, 36°32'W

Degerfeldt, Mount 66°58'S, 51°01'E

Mountain 3.5 mi S of Mount Storer, in the Tula Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for C. Degerfeldt, a member of the crew of the *Discovery* during the BANZARE, 1929–31.

De Gerlache, Cape: see Gerlache, Cape 66°30'S, 99°02'E

De Gerlache, Mount: see Gerlache, Mount 74°59'S, 162°26'E

De Gerlache Point: see Gerlache Island 64°35'S, 64°16'W

De Gerlache Strait: see Gerlache Strait 64°30'S, 62°20'W

DeGoes Cliff 71°44'S, 161°54'E

A steep rock cliff on the W side of Morozumi Range. The cliff is over 6 mi long, its northern end being 6 mi SW of Mount Van Veen. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Louis DeGoes of the National Academy of Sciences, Executive Secretary of the Committee on Polar Research, National Research Council.

De Guebriant Islets: see Guébriant Islands 67°48'S, 68°25'W

De Haven Glacier 67°03'S, 127°32'E

A broad glacier flowing to the SW corner of Porpoise Bay. Delineated by G.D. Blodgett (1955) from aerial photographs taken by USN Operation Highjump (1946–47). Named by US-ACAN for Edmund H. De Haven, Acting Master on the sloop *Vincennes* during the USEE (1838–42) under Lt. Charles Wilkes.

Deildedalen Valley 71°24'S, 12°43'E

Small valley partly filled with ice and opening to the north, lying between Mount Deildenapen and a similar mountain mass just westward in the Östliche Petermann Range, Wohlthat Mountains, Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named Deildedalen (the dividing valley).

Deildegasten Ridge 71°29'S, 12°42'E

A ridge about 5 mi long which rises just S of Deildedalen Valley in Östliche Petermann Range, Wohlthat Mountains, Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named Deildegasten.

Deildenapen, Mount 71°24'S, 12°46'E

A broad mountain mass rising to 2,050 m and forming the E wall of Deildedalen Valley in the Östliche Petermann Range, Wohlthat Mountains. Discovered and plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named Deildenapen (the dividing mountain).

Deimos Ridge 71°56'S, 68°36'W

Prominent, narrow rocky spur of sandstone and shales, 3 mi SW of Phobos Ridge and Mars Glacier in the SE corner of Alexander Island. First seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and mapped from photos obtained on that flight by W.L.G. Joerg. First surveyed in 1949 by the FIDS and named by the UK-APC for its association with Mars Glacier, Deimos being the outer of two satellites of Mars.

Dekefjellet Mountain 71°58'S, 13°25'E

An elongated mountain, about 3 mi long and surmounted by Kamskaya Peak, standing 1.5 mi W of Skavlrime Ridge in the Weyprecht Mountains, Queen Maud Land. The feature is partly rock and partly covered with snow. Discovered and plotted from air photos by GerAE, 1938–39. The mountain was replotted from air photos and surveys by NorAE, 1956–60, and named Dekefjellet.

Dekefjellrantane Hills 72°02'S, 13°23'E

Group of rock hills at the S end of the Weyprecht Mountains in Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Dekefjellrantane in association with nearby Dekefjellet Mountain.

DeLaca Island 64°47'S, 64°07'W

A small U-shaped island 0.8 mi W of Bonaparte Point, off the SW coast of Anvers Island. The island is one of two main investigation areas in a USARP study of terrestrial arthropods. Named by US-ACAN for Ted E. DeLaca, a member of the University of California, Davis, biological team working this area, 1971–74.

Delaite Island 64°33'S, 62°12'W

Island 1 mi long, lying 3 mi NE of Emma Island in the north-central portion of Wilhelmina Bay, off the W coast of Graham Land. Discovered by the BelgAE, 1897–99, under Gerlache, and named by him for J. Delaite, a supporter of the expedition.

De la Motte, Cape 67°00'S, 144°25'E

A prominent cape separating Watt and Buchanan Bays. Just southward the continental ice surface rises 520 m at Mount Hunt. Charted by the AAE (1911–14) under Douglas Mawson, who named it for C.P. de la Motte, third officer on the expedition ship *Aurora*. It has been conjectured that the high land behind this cape is "Point Case," which the USEE (1838–42) under Lt. Charles Wilkes saw from what was called "Disappointment Bay" on Jan. 23, 1840.

Delay Point 66°27'S, 98°15'E

Rocky bluff rising to 185 m on the W side of Melba Peninsula, about 6 mi W of Cape Charcot. Discovered by the AAE under Mawson, 1911–14, and so named by the Eastern Sledge Party of the Western Base because bad weather delayed the party near here for several days in November 1912.

Delbridge Islands: see Dellbridge Islands 77°40'S, 166°25'E

Del Canto, Punta: see Canto Point 62°27'S, 59°44'W

Deleon, Mount 80°51'S, 159°57'E

A mainly ice-free mountain, 780 m, located along the S side of Entrikin Glacier, 9 mi WNW of Cape Douglas. Named by

US-ACAN for Emilio A. Deleon, hauling equipment operator, USN, a member of the Byrd Station party, 1963.

Delius Glacier 69°37'S, 71°03'W

Glacier, 6 mi long and 2 mi wide, flowing W from Elgar Uplands into Nichols Snowfield, in the N part of Alexander Island. First seen from the air and roughly mapped by the BGLE in 1937. More accurately mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960, and from U.S. Landsat imagery of February 1975. Named by UK-APC after Frederick Delius (1862–1934), British composer.

Deliverance Point 65°18'S, 64°07'W

Rocky point 2.5 mi S of Cape Tuxen on the W coast of Graham Land. Discovered by the FrAE, 1908–10, under Charcot. So named because Charcot and two companions were rescued here after being separated from the ship *Pourquoi-Pas?* for several days, while on an exploration of the area in a small boat. Not: Cap de la Délivrance.

Délivrance, Cap de la: see Deliverance Point 65°18'S, 64°07'W

Dellbridge Islands 77°40'S, 166°25'E

Group of small volcanic islands lying in McMurdo Sound, just S of Cape Evans, Ross Island. Discovered by the BrNAE (1901–04) under Scott, who named them for James H. Dellbridge, second engineer with the expedition. Not: Delbridge Islands.

Deloncle Bay 65°05'S, 63°56'W

Bay, 1.5 mi long, indenting the W coast of Graham Land between Loubat and Glandaz Points and opening on Lemaire Channel opposite Booth Island. Discovered by the BelgAE, 1897–99. Recharted by the FrAE, 1903–05, and named by Charcot for François Deloncle, French diplomat.

De Loubat, Cape: see Loubat Point 65°04'S, 63°56'W

Delta Bluff 78°41'S, 161°22'E

Steep triangular rock bluff immediately N of the mouth of Delta Glacier, on the W side of Skelton Glacier. Surveyed and climbed in 1957 by the N.Z. party of the CTAE (1956–58) and so named because of the shape of the bluff.

Delta Creek: see Delta Stream 77°38'S, 163°07'E

Delta Glacier 78°42'S, 161°20'E

A glacier descending steeply from the Worcester Range between Northcliffe Peak and Delta Bluff to enter the W side of Skelton Glacier. It was provisionally named "Cascade Glacier" because of its broken lower icefalls by the N.Z. party of the CTAE, 1956–58. As this name is a duplication, they renamed the glacier after nearby Delta Bluff. Not: Cascade Glacier.

Delta Island 64°19'S, 62°59'W

Island 0.5 mi long, lying close SE of Lambda Island and E of Alpha Island in the Melchior Islands, Palmer Archipelago. The name, derived from the fourth letter of the Greek alphabet, was probably given by DI personnel who roughly surveyed the island in 1927. The island was surveyed by Argentine expeditions in 1942, 1943 and 1948. Not: Isla Hermelo.

Delta Island: see Acuña Island 60°46'S, 44°37'W

Delta Peak 86°35'S, 147°30'W

A very sharp peak marking a pronounced corner point on Ackerman Ridge, 6 mi NE of Mount Gjertsen, in La Gorce Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. So named by NZGSAE, 1969–70, because as seen from the south the colorful rock strata present a well visible form that is suggestive of the Greek letter “Delta.”

Delta Stream 77°38'S, 163°07'E

Small meltwater stream flowing from Howard Glacier into Lake Fryxell in Taylor Valley, Victoria Land. First studied on the ground by Troy L. Péwé during USN OpDFrz, 1957–58, and so named by him because the stream has a series of deltas along its length which have been cut through as the stream was rejuvenated, the rejuvenation being caused by the lowering of the former glacial lake. Not: Delta Creek.

Delusión, Punta: see Delusion Point 65°23'S, 62°00'W

Delusion Point 65°23'S, 62°00'W

Point which marks the E end of a rocky range which forms the S wall of Crane Glacier, on the E coast of Graham Land. The feature was photographed from the air by Sir Hubert Wilkins on a flight of Dec. 20, 1928. Named by the FIDS, who charted it in 1947. Not: Punta Delusión.

de Margerie, Cape: see Margerie, Cape 66°49'S, 141°23'E

Demaria, Mount 65°17'S, 64°06'W

Mountain with precipitous sides, 635 m, rising immediately SE of Cape Tuxen on the W coast of Graham Land. Probably first sighted by the BelgAE, 1897–99. Charted by the FrAE, 1903–05, and named by Charcot for the Demaria brothers, French developers of an anastigmatic lens used by the expedition's photographic section. Not: Demaria Peak, Sommet Demaria.

Demaria, Sommet: see Demaria, Mount 65°17'S, 64°06'W

Demaria Peak: see Demaria, Mount 65°17'S, 64°06'W

Demas Bluff 76°34'S, 144°50'W

A rock bluff on the S side of the Fosdick Mountains, 2 mi W of Mount Richardson, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939–41) under R. Admiral R.E. Byrd. Named for Dr. Charles J. Demas who provided medical assistance and supplies for the ByrdAE (1933–35) and USAS (1939–41).

Demas Ice Tongue 72°22'S, 103°20'W

Conspicuous ice tongue, about 20 mi long, extending W from Abbot Ice Shelf of Peacock Sound into Amundsen Sea. Discovered by members of the USAS in flights from the *Bear*, February 1940, and named after E.J. Demas (d. 1979), member of the ByrdAE of 1928–30 and 1933–35.

Demas Mountains: see Walker Mountains 72°07'S, 99°00'W

Demas Range 75°00'S, 133°45'W

A range about 8 mi long that forms the lower east margin of the Berry Glacier in Marie Byrd Land. The range trends N-S culminating in Mount Goorhigian (1,115 m). Discovered by the USAS, 1939–41, led by Admiral R.E. Byrd. Named by US-ACAN for E.J. “Pete” Demas, a member of the Byrd Antarctic Expeditions of 1928–30 and 1933–35.

Demas Rocks 63°21'S, 58°02'W

A group of rocks off the NW coast of Trinity Peninsula in the approach to Huon Bay, 3 mi NE of Cape Ducorps. Discovered in March 1838 by Capt. Jules Dumont d'Urville, who named the rocks for Lt. François Barlatier Demas of the expedition ship *Astrolabe*. The rocks were surveyed by FIDS in 1946.

Demay Point 62°13'S, 58°26'W

Point which forms the W side of the entrance to Admiralty Bay, King George Island, in the South Shetland Islands. This point was known to sealers as early as 1822. It was named almost 100 years later by the FrAE, 1908–10, under Charcot.

Demetri's Peak: see Abbott Peak 77°26'S, 167°00'E

Demidov, Cape 54°08'S, 37°44'W

Cape which forms the S side of the entrance to Wilson Harbor, on the S coast and near the W end of South Georgia. Discovered by a Russian expedition under Bellingshausen in 1819, and named for Lt. Dimitri Demidov of the *Vostok*. Not: Cape Demidov.

Demidov Island 67°29'S, 48°21'E

Small island 5 mi N of the mouth of Rayner Glacier and 9 mi SW of Hydrographer Islands along the coast of Enderby Land. It appears that the island was mapped by both ANARE and the Soviet expedition in 1957. Named by the Soviet expedition for Lt. Dimitri Demidov of the Russian expedition of 1819–21 under Bellingshausen.

Demidov, Cape: see Demidov, Cape 54°08'S, 37°44'W

Deming Glacier 72°00'S, 168°30'E

Tributary glacier flowing along the N side of Novasio Ridge to enter Man-o-War Glacier, in the Admiralty Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Ralph A. Deming, AE1, USN, Squadron VX-6 Aviation Electrician at McMurdo Station, 1967.

Demon Point 57°03'S, 26°40'W

A spit of coarse boulders which forms the NE tip of Candlemas Island, South Sandwich Islands. It was charted and named Spit Point by personnel on RRS *Discovery II* in 1930, but that name was changed to avoid duplication. The new name applied by UK-APC in 1971 continues a theme of features named after mythical monsters on this island. Not: Punta Lengua, Spit Point.

Demorest Glacier 67°22'S, 65°35'W

Glacier which flows SE into Whirlwind Inlet between Flint and Matthes Glaciers, on the E coast of Graham Land. Discovered by Sir Hubert Wilkins on a flight of Dec. 20, 1928, and photographed from the air by the USAS in 1940. Charted by the FIDS in 1947 and named for Max H. Demorest, American glaciologist.

Denais Stack 62°08'S, 58°30'W

Conspicuous rock stack lying 1.5 mi N of Point Thomas on the W side of Admiralty Bay, King George Island, in the South Shetland Islands. The name “Anse Denais,” for one of the seamen on the *Pourquoi-Pas?*, was given in 1908–10 by the FrAE under Charcot to a cove on the N side of Ezcurra Inlet. Recent air photos show no cove in this position and the name Denais has been transferred to the feature now described in order to preserve Charcot's naming in the area.

Denauro, Mount 86°27'S, 151°30'W

Mountain, 2,340 m, standing on the W side of Scott Glacier, 3 mi S of Lee Peak, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Ralph Denauro, aviation mechanic with USN Squadron VX-6 on Operation Deep Freeze 1966.

Dentler Island 72°58'S, 89°57'W

An ice-covered island, 14 mi long, lying in the E part of Abbot Ice Shelf between Farwell Island and Fletcher Peninsula. Mapped by USGS from surveys and USN air photos, 1960–66. Named by US-ACAN for Maj. Robert Dentler, USA, coordinating officer on the staff of the Commander, USN Support Force, Antarctica, during Deep Freeze 1967 and 1968.

Denfeld Mountains 76°55'S, 144°45'W

A group of scattered mountains between Crevasse Valley Glacier and Arthur Glacier in the Ford Ranges of Marie Byrd Land. The mountains were explored by the Byrd Antarctic Expeditions (1928–30 and 1933–35) and by the USAS (1939–41) all led by R. Admiral R.E. Byrd. Named for Admiral Louis E. Denfeld, Chief of Naval Operations and a member of the joint Chiefs of Staff (1947–49), who helped in the planning and organization of Operation Highjump (1946–47) for which Byrd was leader.

Denham, Mount 66°55'S, 52°19'E

Mountain 1 mi NW of Mount Keyser, in the E part of the Tula Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1957. Named by ANCA for W.M. Denham, weather observer at Mawson Station in 1961.

Den Hartog Peak 84°20'S, 178°52'E

A small peak at the W side of the mouth of Ramsey Glacier, 3 mi SE of Woodall Peak. Discovered and photographed by the USAS on Flight C of February 29–March 1, 1940, and surveyed by A.P. Crary in 1957–58. Named by Crary for Stephen Den Hartog, who was glaciologist on the Victoria Land Traverse Party (1958–59), and wintered at Little America V, 1958.

Denholm, Mount 68°12'S, 49°07'E

A mountain 1 mi SE of Mount Marriner in the Nye Mountains. Mapped from air photos taken from ANARE aircraft in 1956. Named by ANCA for J. Denholm, physicist at Wilkes Station in 1959.

Deniau Island 65°27'S, 64°19'W

Small island lying midway between Darboux Island and Lippmann Islands, off the W coast of Graham Land. Discovered by the FrAE, 1908–10, and named by Charcot for Monsieur Deniau, a donor of numerous gifts to the expedition.

Denise, Bahía: see Larvik Harbor 64°29'S, 62°27'W

Denison, Cape 67°00'S, 142°40'E

A rocky point at the head of Commonwealth Bay. Discovered in 1912 by the AAE (1911–14) under Douglas Mawson, who named it for Sir Hugh Denison of Sydney, a patron of the expedition. The feature was the site of the AAE Main Base.

Denison Island 66°18'S, 110°27'E

Island lying 0.25 mi W of Beall Island in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Dean R. Denison, auroral scientist and member of the Wilkes Station party of 1958.

Denman Glacier 66°45'S, 99°30'E

Glacier 7 to 10 mi wide, descending N some 70 mi, and debouching into Shackleton Ice Shelf E of David Island. Discovered in November 1912 by the AAE under Mawson, who named it for Lord Denman, Governor-General of Australia in 1911, a patron of the expedition.

Dennes Point 76°41'S, 159°45'E

A dolerite point projecting into Shimmering Icefield from the western side of Shipton Ridge, in the Allan Hills of Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) who named it after a similar dolerite feature on Bruny Island, Tasmania.

Dennison Reef 66°29'S, 66°50'W

A reef between Shull Rocks and Pauling Islands, lying E of the S end of the Biscoe Islands in Crystal Sound. Mapped from air photos obtained by the RARE (1947–48) and surveys by FIDS (1958–59). Named by UK-APC for David M. Dennison, British physicist who took x-ray diffraction pictures which were used to interpret the crystal structure of ice.

Dennistoun Glacier 71°11'S, 168°00'E

A glacier, 50 mi long, draining the N slopes of Mounts Black Prince, Royalist and Adam in the Admiralty Mountains of Victoria Land. It flows NW between Lyttelton Range and Dunedin Range, turning E on rounding the latter range to enter the sea S of Cape Scott. The coastal extremity of the glacier was charted in 1911–12 by the Northern Party, led by Victor Campbell, of the BrAE, 1910–13. It is named for James R. Dennistoun, New Zealand alpinist who was in charge of the mules on board the *Terra Nova* on her way to Antarctica. The entire extent of the glacier was mapped by USGS from surveys and U.S. Navy aerial photography, 1960–63. The name Fowlie Glacier (q.v.), a tributary glacier, has been inadvertently misapplied to this feature. Not: Fowlie Glacier.

Dentada, Isla: see Jagged Island 61°54'S, 58°29'W

Denticulada, Isla: see Jagged Island 65°58'S, 65°41'W

Denticuladas, Rocas: see Jagged Rocks 63°24'S, 56°59'W

Dentine Peak 71°35'S, 163°44'E

The highest peak (2,210 m) in the NE portion of Molar Massif, Bowers Mountains. Named from association with Molar Massif by geologist R.A. Cooper, leader of NZARP paleontological parties to this area, 1974–75 and 1981–82.

Denton Glacier 77°29'S, 162°36'E

A small hanging glacier which drains the NW slopes of Mount Newall and terminates on the S wall of Wright Valley, Victoria Land. Named by U.S. geologist Robert Nichols for George Denton, geological assistant to Nichols at nearby Marble Point in the 1958–59 field season.

Denucé, Mount 66°43'S, 64°12'W

Rounded mountain, 1,535 m, between Mounts Hulth and Haskell on the SW side of Cabinet Inlet, on the E coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE in December 1947. Named by the FIDS for Jean Denucé, Belgian polar bibliographer.

Departure Rocks 67°37'S, 62°49'E

Group of 4 steep-sided rocks lying 1 mi N of Peake-Jones Rock in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. So named by ANCA because ANARE parties going W from Mawson Station on the sea ice always pass through or close to these rocks.

Depeaux Point 65°11'S, 64°10'W

Point forming the S end of Petermann Island, in the Wilhelm Archipelago. Discovered and named by the FrAE, 1908–10, under Charcot.

Depósito, Punta: see Store Point 68°12'S, 67°02'W

Depot Glacier 63°25'S, 57°03'W

Well-defined valley glacier, flanked by lateral moraines, which terminates in a high vertical ice cliff at the head of Hope Bay, in the NE end of Antarctic Peninsula. Discovered by the SwedAE, 1901–04, under Nordenskjöld, and so named by him because, as seen from Antarctic Sound, it appeared to be a possible site for a depot. Not: Glaciér Esperanza.

Depot Island 66°56'S, 57°19'E

Small island in the Øygarden Group, lying 1 mi N of the W end of Shaula Island. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition, 1936–37. So named by ANCA because a depot was established there by the ANARE during 1956.

Depot Island 76°42'S, 162°58'E

A small granite island lying 2 mi NW of Cape Ross, off the coast of Victoria Land. Discovered by the South Magnetic Pole Party of the BrAE (1907–09) and so named by them because they put a depot of rock specimens on this island.

Dépôt Island 66°37'S, 140°05'E

Small rocky island 0.1 mi long, 0.6 mi NW of Pasteur Island, near the center of the Dumoulin Islands. Photographed from the air by USN OpHjp, 1946–47. Charted by the FrAE, 1950–51, and so named because personnel on the expedition ship *Commandant Charcot* established a depot there to support the party which surveyed the area.

Depot Mountains: see Depot Peak 69°02'S, 64°36'E

Depot Nunatak 77°45'S, 160°04'E

Nunatak, 1,980 m, standing at the W side of Cassidy Glacier and Quartermain Mountains in Victoria Land. Nearly vertical cliffs of columnar dolerite rise 150 m above glacier level at the E end. So named by the BrNAE (1901–04), on their western journey in 1903, because they made a food depot there, for use on their return.

Depot Peak 69°02'S, 64°36'E

A solitary nunatak, with a single needle-shaped peak, lying about 37 mi N of Stinear Nunataks in Mac. Robertson Land. Discovered by an ANARE party led by R.G. Dovers during a southern journey in December 1954, and so named because a depot was established in the vicinity. Not: Depot Mountains.

Derby Island 66°38'S, 140°05'E

Small rocky island close N of Astrolabe Glacier Tongue, lying 0.5 mi SW of Pasteur Island at the S end of the Dumoulin Islands.

Photographed from the air by USN OpHjp, 1946–47. Charted by the FrAE, 1949–51, and so named because French field parties competed against each other for the honor of being first to reach the island area.

Derbyshire Peak 72°31'S, 161°06'E

A small rock peak 5 mi NNE of Mount Weihaupt in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959–64. Named by US-ACAN for Edward Derbyshire, geologist at McMurdo Station, 1966–67.

DeRemer Nunataks 69°45'S, 158°09'E

A group of nunataks centered about 4 mi SE of Mount Blowaway in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–63. Named by US-ACAN for Yoeman First Class Dennis L. DeRemer, USN, who served with the U.S. Naval Support Force, Antarctica, February 1967 to July 1970.

Dergach, Mount 70°36'S, 163°01'E

A flat-topped, ice-covered mountain located just W of Ob' Bay and S of Lunik Point, in the Bowers Mountains. Photographed from the air by USN OpHjp, 1946–47. Surveyed by SovAE in 1958 and named after meteorologist A.P. Dergach, a member of SovAE, 1959–61, who perished in a fire at Mirnyy Station on Aug. 3, 1960.

Derocher Peninsula 71°25'S, 73°20'W

Snow-covered peninsula between Brahm's Inlet and Mendelssohn Inlet on the N side of Beethoven Peninsula, Alexander Island. Photographed from the air by RARE, 1947–48, and mapped from these photographs by D. Searle of FIDS, 1960. Named by US-ACAN after Cdr. Paul J. Derocher, USN, Commanding Officer, Antarctic Development Squadron Six (VXE-6), May 1985 to May 1986.

Derom, Mount 71°34'S, 35°38'E

A massif (2,400 m) standing 2 mi S of Mount Eyskens in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960 by the BelgAE under the leadership of Guido Derom. Named for Derom by the Centre National de Recherches Polaires de Belgique.

De Rongé Island: see Rongé Island 64°43'S, 62°41'W

De Rothschild Islets: see Splitwind Island 65°02'S, 63°56'W

Derrick Peak 80°04'S, 156°23'E

A prominent ice-free peak, 2,070 m, overlooking the S side of Hatherton Glacier, 3 mi W of the N end of Johnstone Ridge. Named by US-ACAN for Robert O. Derrick of the U.S. Weather Bureau, who served as assistant to the USARP Representative at Christchurch from 1960 until his death in 1966.

Deryugin, Mount 71°51'S, 11°20'E

Mountain, 2,635 m, on Vindegga Spur in the Liebknecht Range, Humboldt Mountains, in Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Soviet zoologist K.M. Deryugin. Not: Gora Deryugina.

Deryugina, Gora: see Deryugin, Mount 71°51'S, 11°20'E

Descartes Island 66°47'S, 141°29'E

Rocky island 0.1 mi long, midway between Lagrange Island and La Conchée and 0.9 mi NNE of Cape Mousse. Charted in 1951 by the FrAE and named after René Descartes (1596–1650), French mathematician and philosopher.

Descent Cliff 77°43'S, 166°53'E

Cliff on the W side of Hut Point Peninsula, between Hutton Cliffs and Erebus Glacier Tongue, on Ross Island. Charted and so named by the BrAE under Scott, 1910–13, because it was here that a descent to the sea ice was made.

Descent Glacier 77°51'S, 162°52'E

Short, steep glacier between Briggs Hill and Condit Glacier, flowing NW from Descent Pass into Ferrar Glacier, in Victoria Land. So named because of the adventurous descent made here by the party led by Armitage of the BrNAE, 1901–04. The name seems to have been first used on maps of the BrAE, 1910–13.

Descent Pass 77°52'S, 163°05'E

A pass leading from Blue Glacier to Ferrar Glacier, in Victoria Land. So named by the party led by Armitage of the BrNAE (1901–04) because of the adventurous descent to Ferrar Glacier made here via Descent Glacier in 1902.

Deschampsia Point 60°41'S, 45°38'W

A point on the NW side of Signy Island, South Orkney Islands, 0.3 mi NE of Spindrift Rocks. Descriptively named following BAS ecological research after the Antarctic hair grass *Deschampsia antarctica*, which grows on the slopes near the point. Named by the UK-APC in 1991. Not: Grass Point.

Deschanel Peak 68°55'S, 67°14'W

The summit of an isolated, partly ice-covered mountain, 750 m, rising from the S part of the glacier close SE of Cape Berteaux on the W coast of Antarctic Peninsula. The approved name derives from “Sommet Deschanel” given by J.B. Charcot, leader of the French Antarctic Expedition, in Jan. 1909.

Descubrimiento, Bahía: see Undine Harbor 54°02'S, 37°58'W

Descubrimiento, Isla: see Guépratte Island 64°30'S, 63°00'W

Desembarco, Punta: see Haulaway Point 68°11'S, 67°00'W

Desengaño, Cabo: see Disappointment, Cape 65°33'S, 61°43'W

Desengaño, Cabo: see Disappointment, Cape 54°53'S, 36°07'W

Deseo, Cabo: see Longing, Cape 64°33'S, 58°50'W

Desesperación, Rocas: see Despair Rocks 60°33'S, 46°10'W

Desko Mountains 69°37'S, 72°23'W

A WNW-ESE mountain range on Rothschild Island (q.v.), off NW Alexander Island. The range spans 20 mi from Bates Peak to Overton Peak and rises to c. 1,000 m at Enigma Peak, Fournier Ridge. Seen (in part) from a distance by Bellingshausen, 1821, and Charcot, 1909, but the nature of the feature remained obscure. The range was photographed from the air by USN OpHjp and RARE in 1947 and mapped from these air photographs by D. Searle of FIDS in 1960. The range is further defined in U.S. Navy air photographs, 1966, and Landsat imagery, 1975. Named by US-ACAN for Cdr. Daniel A. Desko, USN, Commanding

Officer, Squadron VXE-6, Operation Deep Freeze, 1977; LC-130 aircraft commander, 1976.

Desolacion, Puerto: see Blythe Bay 62°28'S, 60°20'W

Desolation, Island of: see Desolation Island 62°28'S, 60°22'W

Desolation Harbor: see Blythe Bay 62°28'S, 60°20'W

Desolation Island 62°28'S, 60°22'W

V-shaped island lying in the entrance to Hero Bay, 5 mi W of Williams Point, Livingston Island, in the South Shetland Islands. Discovered in January 1820 by a British expedition under Bransfield, and so named by him because of its desolate appearance. Not: Island of Desolation.

Despair, Rocks of: see Despair Rocks 60°33'S, 46°10'W

Despair Rocks 60°33'S, 46°10'W

Group of rocks 2 mi S of Melsom Rocks and 7.5 mi WSW of Penguin Point, the NW tip of Coronation Island, in the South Orkney Islands. Discovered and named by Capt. Nathaniel B. Palmer, an American sealer in the sloop *James Monroe*, and Capt. George Powell, a British sealer in the sloop *Dove*, in the course of their joint cruise in December 1821. Not: Rocas Desesperación, Rocks of Despair.

DesRoches Nunataks 84°53'S, 67°08'W

Two nunataks standing 3 mi E of Postel Nunatak in southwestern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Joseph DesRoches, meteorologist at South Pole Station, winter 1967.

Dessent Ridge 73°25'S, 166°37'E

A mountainous, ice-covered ridge situated 5 mi E of Mount Murchison in the Mountaineer Range of Victoria Land. The ridge trends N-S for 10 miles. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Joseph E. Dessent, meteorologist at Hallett Station, 1961.

Destination Nunataks 72°15'S, 165°28'E

A group of peaks and nunataks, 9 mi long and 4 mi wide, rising to 2,565 m at Pyramid Peak and including Sphinx Peak, Andrews Peak, Mummy Ridge, and unnamed nunataks to the NW, located in NE Evans Névé, 7 mi NW of Barker Range, Victoria Land. This group was visited in 1970–71 by a VUWAE geological party led by M.G. Laird. The name “Destination Rocks” was originally used for the feature because these nunataks were near the northern limits of Laird’s expedition. The name Destination Nunataks, as approved by the NZ-APC and US-ACAN in 1985, applies to the entire group described rather than to two nunataks at the SE end as indicated on some maps. Not: Destination Rocks.

Destination Rocks: see Destination Nunataks 72°17'S, 165°30'E

Destruction Bay 61°59'S, 57°39'W

Bay 5.5 mi wide, lying between Taylor Point and Cape Melville on the E side of King George Island, South Shetland Islands. Charted and named Bay of Destruction in 1821 by Richard Sherratt, Master of the *Lady Trowbridge* from Liverpool, probably because it was in this vicinity that his vessel was wrecked on Christmas Day, 1820. Not: Liverpool Bay.

Detaille Island 66°52'S, 66°48'W

Small island lying 2 mi NW of Andresen Island in the entrance of Lallemand Fjord, off the W coast of Graham Land. Discovered by the FrAE, 1908–10, under Charcot, who named it for Monsieur Detaille of Punta Arenas, shareholder in the Magellan Whaling Co., who assisted Charcot in obtaining supplies at the company's whaling base at Deception Island.

Detling Peak 75°14'S, 114°52'W

A cone-shaped, ice-covered peak located 12 mi SW of Morrison Bluff in the Kohler Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for James K. Detling, USARP biologist with the Marie Byrd Land Survey Party, 1966–67.

Detour Island 65°01'S, 63°55'W

Island lying 2.5 mi W of False Cape Renard, on the W side of Lemaire Channel in the Wilhelm Archipelago. First charted by the FrAE under Charcot, 1903–05. So named by the UK-APC in 1959 because the island lies near the entrance to the ships' passage W of Booth Island which provides an alternative route to Lemaire Channel when the latter is blocked by ice.

Detour Nunatak 77°08'S, 160°55'E

A broad nunatak between Frazier Glacier and the upper part of Mackay Glacier, in Victoria Land. So named in 1957 by the N.Z. Northern Survey Party of the CTAE (1956–58) because it was necessary to make a detour on the way up the Mackay Glacier, passing S of this nunatak.

Detroit Aviation Society Plateau: see Detroit Plateau 64°10'S, 60°00'W

Detroit Plateau 64°10'S, 60°00'W

A major interior plateau of Graham Land, with heights between 1,500 and 1,800 m. Its NE limit is marked by the S wall of Russell West Glacier, from which it extends some 90 mi in a general SW direction to Herbert Plateau. The plateau was observed from the air by Sir Hubert Wilkins on a flight of Dec. 20, 1928. Wilkins named it Detroit Aviation Society Plateau after the society which aided in the organizing of his expedition but the shortened form of the original name is approved. The N and E sides of the plateau were charted by the FIDS in 1946–47. Not: Detroit Aviation Society Plateau.

Deux Hummocks, Ile des: see Two Hummock Island 64°08'S, 61°42'W

Deverall Island 81°28'S, 161°54'E

A small ice-covered island, rising above the Ross Ice Shelf just NE of Beaumont Bay. Named by the NZGSAE (1960–61) for William H. Deverall, radio operator at Scott Base, 1961.

DeVicq Glacier 75°00'S, 131°00'W

A large glacier that drains the area between Ames Range and McCuddin Mountains in Marie Byrd Land and flows N to enter Getz Ice Shelf to the SE of Grant Island. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Lt. David C. deVicq, USN, engineering officer in charge of building new Byrd Station, 1960–61.

Devil Island 63°48'S, 57°17'W

Narrow island 1 mi long with a low summit on each end, lying in the center of a small bay 1 mi SE of Cape Well-met, northern Vega

Island, S of the NE end of Antarctic Peninsula. Discovered and named by the SwedAE, 1901–04, under Nordenskjöld. Not: Djäfvulsön, Isla del Diablo, Teufelsinsel.

Deville Glacier 64°48'S, 62°35'W

Glacier flowing along the S side of Laussedat Heights into Andvord Bay, on the W coast of Graham Land. The glacier is shown on an Argentine government chart of 1952. Named by the UK-APC in 1960 for Edouard G. Deville (1849–1924), Surveyor-General of Canada, 1885–1924, who introduced and developed photogrammetric methods of survey in Canada from 1888 onward.

Devils Ballroom: see Devils Glacier 86°23'S, 165°00'W

Devils Corrie 60°39'S, 45°25'W

Large and very spectacular cirque, or corrie, midway between Olivine Point and Amphibolite Point on the S coast of Coronation Island in the South Orkney Islands. Named by the FIDS following their survey of 1948–49.

Devils Glacier 86°23'S, 165°00'W

A heavily crevassed glacier at the edge of the polar plateau, about 20 mi long and 8 mi wide, draining the S part of the Mohn Basin and flowing NE to enter the upper part of Amundsen Glacier just N of the mountain group consisting of Mounts Wisting, Hassel, Bjaaland and Prestrud. The glacier was encountered by Roald Amundsen's South Pole Party in 1911 and was named by them to describe the extremely rough sledging in the area. Amundsen's route southward, between 168° and 169°W, took the party across the upper or western portion of the glacier. Not: Devils Ballroom, Fandens Brae.

Devils Peak 60°39'S, 45°27'W

Conspicuous rocky peak, 735 m, between Sunshine Glacier and Devils Corrie on the S side of Coronation Island, in the South Orkney Islands. Surveyed in 1948–49 by the FIDS, who so named it because of its proximity to Devils Corrie.

Devils Point 62°40'S, 61°11'W

Point forming the SW extremity of Livingston Island, in the South Shetland Islands. Charted and named by James Weddell, RN, Master of the brig *Jane*, during the period 1820–23. Not: Punta del Diablo.

Devils Punchbowl 77°01'S, 162°24'E

Bowl-shaped cove (an empty cirque, the floor of which is below sea level) in the SW corner of Granite Harbor, between Devils Ridge and the S side of The Flatiron, in Victoria Land. Charted and named by the BrAE, 1910–13, under Scott. Not: Punch Bowl.

Devils Ridge 77°01'S, 162°22'E

Rocky, sickle-shaped ridge extending from the S end of The Flatiron and forming the N wall of New Glacier, close W of Granite Harbor in Victoria Land. Charted and named by the BrAE, 1910–13, under Scott.

Devils Thumb 77°01'S, 162°22'E

Rocky knob, 245 m, marking the central part of Devils Ridge, just W of Granite Harbor in Victoria Land. Charted and named by the BrAE, 1910–13, under Scott.

Devold Peak 72°15'S, 26°44'E

Peak, 3,280 m, between Kjelbotn Peak and Pukkelen Rocks near the head of Byrdbreen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1937 from air photos taken by USN OpHjp, 1946–47, and named for Hallvard Devold, who with H. Riiser-Larsen and O. Kjelbotn attempted the exploration of Princess Ragnhild Coast by dog sledge in 1933.

DeVries Glacier 80°20'S, 157°30'E

A steep tributary glacier just E of Peckham Glacier, flowing from the S slopes of Britannia Range into Byrd Glacier. Named by US-ACAN for Arthur L. DeVries, USARP biologist at McMurdo Station in the 1961–62 and 1963–64 summer seasons.

DeWald Glacier 72°19'S, 167°00'E

A glacier 5 mi long draining the NE slopes of Bramble Peak in the Victory Mountains of Victoria Land. The glacier flows NW to merge with the terminus of Lensen Glacier where both glaciers join the larger Pearl Harbor Glacier. Mapped by the USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Lt. (j.g.) Bruce F. DeWald, USN, aerographer with the McMurdo Station winter party in 1963 and 1966; forecast duty officer at McMurdo Station during the summer seasons of 1972–73 and 1973–74.

Dewar, Mount 80°32'S, 21°11'W

A mountain rising to c. 1,600 m to the SW of Aronson Corner in the Pioneers Escarpment, Shackleton Range. Photographed from the air by the U.S. Navy, 1967. Surveyed by BAS, 1968–71. In association with the names of pioneers of polar life and travel grouped in this area, named in 1971 by the UK-APC after Sir James Dewar (1842–1923), Scottish chemist and physicist who invented the thermos flask, c. 1892.

Dewar Nunatak 67°20'S, 68°15'W

Mainly snow-covered nunatak rising to 520 m in the middle of Shambles Glacier, on the E coast of Adelaide Island. Named by the UK-APC in 1963 for Graham J.A. Dewar, BAS geologist at Adelaide station, 1961–63.

Dewart Island 66°13'S, 110°10'E

The central island in the Frazier Islands, in Vincennes Bay. The island was photographed from the air by USN OpHjp (1946–47) and its position fixed by ANARE (1956). Named by C.R. Eklund for Gilbert Dewart, seismologist at Wilkes Station, 1957.

Dewdrop Glacier 77°01'S, 162°22'E

Small hanging glacier at the head of Devils Punchbowl between The Flatiron and Devils Ridge, at the SW side of Granite Harbor, in Victoria Land. Charted by the BrAE (1910–13) under Scott, and named for its suggestive appearance, hanging on the edge of Devils Punchbowl.

Dewe, Mount 75°58'S, 68°39'W

Mountain in the SE part of the Hauberg Mountains in Ellsworth Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Michael B. Dewe, glaciologist at Byrd Station, summer 1965–66.

Dewey, Mount 65°54'S, 64°19'W

Mountain, 1,830 m, standing 8 mi SE of Mount Cheops on the W coast of Graham Land. Charted by the BGLE under Rymill, 1934–37. Named by the UK-APC in 1959 for Melvil Dewey (1851–1932), American originator of the Dewey Decimal Classi-

fication, from which the Universal Decimal Classification is derived.

DeWitt, Mount 77°12'S, 159°50'E

Mountain, 2,190 m, rising above the ice plateau just W of Mount Littlepage and Willett Range, in Victoria Land. Named by US-ACAN in 1964 for Hugh H. DeWitt, scientific leader on the *Eltanin*, 1962–63, who also served on the *Glacier*, 1958–59.

DeWitt Nunatak 84°49'S, 67°42'W

A nunatak, 1,295 m, along the face of an ice escarpment 7 mi W of Snake Ridge, in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Steven R. DeWitt, meteorologist at Palmer Station, winter 1966.

D'Hainaut Island 63°54'S, 60°47'W

Small island lying in Mikkelsen Harbor, Trinity Island, in the Palmer Archipelago. Charted by the FrAE under Charcot, 1908–10. Named by the sixth Chilean Antarctic Expedition (1952) for Lt. Ladislao D'Hainaut. Not: Bombay Island, Hainaut Island, Islote Norte.

Diablo, Isla del: see Devil Island 63°48'S, 57°17'W

Diablo, Punta del: see Devils Point 62°40'S, 61°11'W

Diácono, Cerro: see Deacon Hill 60°34'S, 45°48'W

Diamante, Cordillera: see Forrestal Range 83°00'S, 49°30'W

Diamond Glacier 79°51'S, 159°00'E

A small distributary glacier of the Darwin Glacier, flowing ENE into the narrow valley on the N side of Diamond Hill. Mapped by the VUWAE (1962–63) and named after Diamond Hill.

Diamond Hill 79°52'S, 159°09'E

A conspicuous snow-free hill which is diamond shape in plan, standing 10 mi E of Bastion Hill at the N side of the lower Darwin Glacier. Named by the Darwin Glacier Party of the CTAE (1956–58) which surveyed this area.

Diamond Peak 54°12'S, 36°39'W

A peak rising to 610 m W of Jason Harbor, Cumberland West Bay, on the N coast of South Georgia. Charted and named by DI between 1925–29.

Diamonen Island 64°02'S, 61°17'W

Island lying N of Moreno Rock in Gerlache Strait, off the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. The island was called Big Diamonen Island by Captain Skidsmo of the *Graham* in 1921–22. The name was shortened by the UK-APC in 1960. Not: Big Diamonen Island, Islote Madariaga, Islote Moreno.

Diana Reef 63°26'S, 56°11'W

Isolated reef lying 3 mi E of D'Urville Monument, Joinville Island, in Active Sound. Roughly surveyed by FIDS in 1954. Named in 1956 by UK-APC after *Diana* (Robert Davidson, master), one of the ships of the Dundee whaling expedition which visited the Joinville Island area in 1892–93.

Díaz, Cabo: see Davidson, Cape 60°46'S, 44°46'W

Díaz, Cañadón: see Cross Valley 64°16'S, 56°42'W

Díaz, Islote: see Diaz Rock 63°18'S, 58°45'W

Diaz Cove 54°45'S, 36°18'W

Cove with the Kupriyanov Islands at the mouth, 10 mi NW of Cape Disappointment, near the E end of the S coast of South Georgia. The cove was known to early sealers as shown by the remains of a sealing vessel found there. It was rediscovered in 1929 by Captain Johannessen and named for his ship *Diaz*. Not: Five Islands Harbour, Johannesson-Hafen, Sealer Cove.

Diaz Rock 63°18'S, 58°45'W

The largest of several rocks close N of the W end of Astrolabe Island, off Trinity Peninsula. The name was given by the first Chilean Antarctic Expedition (1947) for sub-lieutenant Joaquín Díaz Martínez. Not: Islote Diaz.

Dibble Glacier 66°17'S, 134°36'E

A prominent channel glacier flowing from the continental ice and terminating in a prominent tongue at the E side of Davis Bay. Delineated from air photos taken by USN Operation Highjump (1946–47), and named by the US-ACAN for Jonas Dibble, ship's carpenter on the sloop *Peacock* of the USEE (1838–42) under Wilkes. Dibble is credited with leaving his sick bed and working 24 hours without relief with other carpenters to repair a broken rudder on the *Peacock*, when the ship was partially crushed in an ice bay in 151°19'E and forced to retire northward.

Dibble Glacier Tongue 65°50'S, 135°00'E

A large glacier tongue extending seaward from Dibble Glacier. Delineated from air photos taken by USN Operation Highjump (1946–47). Named by the US-ACAN for Jonas Dibble and the unsung crew members of the USEE squadron under Lt. Charles Wilkes, 1838–42.

Dibble Iceberg Tongue 65°30'S, 135°00'E

An iceberg tongue at the seaward end of Dibble Glacier Tongue. The names Dibble Glacier and Dibble Glacier Tongue were applied by US-ACAN in 1955, concurrent with G.D. Blodgett's delineation of the features from aerial photographs taken by USN Operation Highjump (1946–47). The offshore segment of these two related features was photographed by ANARE in 1956 and 1959, and ANCA subsequently recommended that it be named Dibble Iceberg Tongue. US-ACAN has approved the latter name only for the portion lying seaward of Dibble Glacier Tongue.

Dibdins Island: see Powell Island 60°41'S, 45°03'W

Dick, Mount 80°49'S, 159°32'E

A prominent peak, 2,410 m, standing 6 mi E of Mount Egerton, in the Churchill Mountains. Named by the NZGSAE (1960–61) for R.G. Dick, Surveyor General of New Zealand.

Dickason, Mount 74°24'S, 163°58'E

A prominent mountain, 2,030 m, at the head of Boomerang Glacier in the Deep Freeze Range, Victoria Land. First mapped by the Northern Party of the BrAE, 1910–13, and named for Seaman Harry Dickason, RN, a member of the Northern Party.

Dickens Rocks 65°19'S, 65°23'W

Two rocks lying at the N end of the Pitt Islands, in the Biscoe Islands. Photographed by Hunting Aerosurveys Ltd. in 1956, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for Charles Dickens (1812–70), English novelist. A number of other features in the Pitt Islands are named after characters in his *Pickwick Papers*.

Dickerson, Mount 84°20'S, 167°08'E

A prominent mountain, 4,120 m, standing 4 mi E of Mount Kirkpatrick in Queen Alexandra Range. Named by US-ACAN for Lt. Cdr. Richard G. Dickerson, USN, VX-6 aircraft commander during USN OpDFrz, 1964.

Dickey Glacier 81°35'S, 161°00'E

A glacier 12 mi long, flowing N along the E side of the Surveyors Range to enter Beaumont Bay, Ross Ice Shelf. Named by US-ACAN for Capt. Willie M. Dickey, USN, commander, Naval Support Units, Antarctica, at Little America V, winter 1957.

Dickey Peak 78°19'S, 84°26'W

A peak in the NW part of Flowers Hills in the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Clifford R. Dickey, Jr., electronics technician at the South Pole Station in 1957.

Dick Glacier 84°53'S, 175°50'W

A tributary glacier, 7 mi long, flowing W from Mount Campbell to enter Shackleton Glacier just N of Taylor Nunatak, in the Queen Maud Mountains. Named by US-ACAN for Lt. Alan L. Dick, a member of U.S. Navy Squadron VX-6 during Deep Freeze 1964.

Dickinson Rocks 77°33'S, 147°55'W

Isolated rock outcrops near the N end of Hershey Ridge, 9 mi NW of Linwood Peak, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939–41) and by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for David N. Dickinson, construction mechanic, USN, at Brockton Station (80°S, 178°W) on the Ross Ice Shelf for two seasons, 1965–66 and 1966–67.

Dick Peaks 67°40'S, 49°36'E

Group of peaks 1 mi E of Mount Humble at the E end of the Raggatt Mountains, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named after W. Dick, weather observer at Mawson station in 1960.

Dickson Icefalls 76°02'S, 133°25'W

A north-draining icefalls of moderate slope at an elevation of 1,800 to 2,000 m, located between Mount Moulton and Mount Bursey in the Flood Range of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Donald T. Dickson, USARP glaciologist with the Byrd Station Traverse of 1962–63.

Dickson Pillar 71°54'S, 171°11'E

A pillar rock lying close S of Possession Island in the Possession Islands. Mapped by USGS from surveys and U.S. Navy air photos, 1958–63. Named by US-ACAN for Paul B. Dickson, PHC, USN, Photographer of Squadron VX-6 on the flight of Jan. 18, 1958, at the time this feature was photographed.

Dido, Mount 77°29'S, 160°57'E

Prominent peak, 2,070 m, between Mounts Electra and Boreas in the Olympus Range of Victoria Land. Named by the VUWAE (1958–59) for a figure in Greek mythology.

Dieglman Island 66°00'S, 100°46'E

Island about 4 mi long that is largely ice covered but has numerous rock outcrops, lying on the NW side of Edisto Channel in the Highjump Archipelago. First mapped from air photos taken by

USN OpHjp, 1946–47, and named Dieglman Islets. Subsequent Soviet expeditions (1956–57) mapped the feature as one island with numerous outcrops. The name has been altered by US-ACAN to apply to the single island. Named by US-ACAN for E.D. Dieglman, air crewman on USN OpHjp photographic flights in this area in 1946–47.

Diego Portales, Punta: see Pylon Point 68°06'S, 65°05'W

Dientes de Dragón, Punta: see Dragons Teeth 63°15'S, 58°39'W

Die Pyramide: see Pyramid Peak 54°00'S, 37°23'W

Dietz, Mount 86°16'S, 153°10'W

A mountain, 2,250 m, just N of the confluence of Souchez and Bartlett Glaciers where it marks the S limit of Hays Mountains in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Lt. D.L. Dietz, USN, pilot on photographic flights during Operation Deep Freeze 1964 and 1965.

Dietz Bluff 72°02'S, 62°08'W

A prominent bluff at the head of Hilton Inlet on the Black Coast, Palmer Land. The bluff was photographed from the air by USAS, 1940, and by RARE, 1947; mapped by USGS from U.S. Navy aerial photographs taken 1966–69. Named by US-ACAN, in association with the names of continental drift scientists grouped in this area, after Robert S. Dietz, American marine geologist with Atlantic Oceanographic and Meteorological Laboratory, Miami, Florida, from 1967.

Dike Cirque 83°14'S, 157°57'E

A semi-circular glacial cirque 1 mi wide in the Miller Range. It is carved into Macdonald Bluffs at the SE base of Kreiling Mesa. So named by the Ohio State University Geological Party, 1967–68, because the granite cliffs surrounding the cirque are cut by numerous black dikes.

Dilemma Glacier 78°45'S, 161°25'E

A steep, broken glacier descending from the Worcester Range into the W side of Skelton Glacier to the N of Ant Hill. Mapped and named in 1957 by the N.Z. party of the CTAE, 1956–58. So named because of difficulties encountered by the geological party in an attempted descent of this glacier.

Dillon Peak 73°17'S, 62°40'W

Peak in the Dana Mountains surmounting the N side of the terminus of Haines Glacier, in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Raymond D. Dillon, biologist at McMurdo Station and Palmer Station during the 1966–67 and 1967–68 seasons.

Dilten Nunatak 72°22'S, 3°47'W

An isolated nunatak about 1.5 mi WNW of Dalten Nunatak and 8 mi NW of Borg Mountain in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Dilten.

Dimaryp Peak 63°26'S, 57°02'W

The prominent northeastern peak of Mount Carroll, rising to 500 m 1 mi S of the head of Hope Bay, Trinity Peninsula. First charted by the SwedAE under Nordenskjöld, 1901–04. Surveyed in 1945 and 1955 by FIDS, who applied the name. This peak is very

similar to and has been frequently misidentified in bad weather as The Pyramid, a peak 0.8 mi to the east. The name is an anagram of pyramid.

Dimick Peaks 78°18'S, 161°56'E

Two peaks, the highest rising to 1,495 m, at the S side of the mouth of Dale Glacier in Victoria Land. Named by US-ACAN in 1994 after Dorothy Dimick, USGS cartographer, an Antarctic specialist in the Branch of Special Maps, 1944–76.

Dimitri Peak: see Abbott Peak 77°26'S, 167°00'E

Dinamita, Islote: see Dynamite Island 68°11'S, 67°00'W

Dinghy Point 54°04'S, 37°09'W

A point on the S side of Prince Olav Harbor, Cook Bay, on the N coast of South Georgia. Charted and named "Pram Point" by DI in 1929. The name Dinghy Point was approved for this feature by UK-APC in 1991 to avoid duplication with Pram Point at Leith Harbor in Stromness Bay. Not: Pram Point.

Dingle Dome 67°03'S, 48°54'E

Ice-covered dome rising above 400 m and surmounting the N end of Sakellari Peninsula, on the coast of Enderby Land. Discovered in 1956 during flights by ANARE aircraft. Named by ANCA for Robert Dingle, officer in charge at Davis station in 1957.

Dingle Lake 68°34'S, 78°04'E

A salt-water lake lying just W of Stinear Lake, on the Breidnes Peninsula, Vestfold Hills. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Named by ANCA for Robert Dingle, Officer in Charge at Davis Station in 1957. Not: Remnant Lake.

Dingsør Dome 68°01'S, 67°43'E

A small, distinct ice-covered elevation rising inland from the coast, 11 mi S of Point Williams, in Mac. Robertson Land. Discovered in Feb. 1931 by the BANZARE (1929–31) under Douglas Mawson. Named by Mawson after Captain Dingsør, a Norwegian whale fishery inspector who was aboard the *Kosmos* (Capt. Hans Andresen) in Antarctica that season. The *Kosmos* had supplied coal to Mawson's ship, the *Discovery*, on Dec. 29, 1930. Not: Dingzor Dome.

Dingzor Dome: see Dingsør Dome 68°01'S, 67°43'E

Dinsmoor Glacier 64°22'S, 59°59'W

A glacier flowing E from the S edge of Detroit Plateau, Graham Land, joining Edgeworth Glacier to the NE of Mount Elliott. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Charles Dinsmoor of Warren, PA, who invented the "endless tracking machine," a forerunner of modern tracked vehicles, in 1886; first manufactured commercially by Holt Manufacturing Co. of Stockton, CA, in 1906.

Dint Island 69°17'S, 71°49'W

Rocky island, 1.5 mi long, lying 2 mi off the W side of Alexander Island in Lazarev Bay. Probably first seen from the air by the USAS, 1939–41. First mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. So named by the UK-APC because a distinctive cirque makes a dent, or dint, on the S side of the island.

Diomedea Island 62°12'S, 58°57'W

Small island lying in Ardley Cove, Fildes Peninsula, King George Island. The SovAE called the feature "Ostrov Al'batros" or "Albatross Island" in 1968, but the English form duplicates a name in the Bay of Isles. To avoid confusion, the UK-APC recommended a new name in 1979; *Diomedea* is the generic name for several species of albatross. Not: Albatross Island, Isla Torta, Ostrov Al'batros.

Dione Nunataks 71°56'S, 69°06'W

Rock exposures at the head of Saturn Glacier, 9 mi W of Deimos Ridge in the SE part of Alexander Island. The nunataks appear to have been first seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos obtained on that flight by W.L.G. Joerg. Remapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by the UK-APC from association with Saturn Glacier, Dione being one of the satellites of Saturn.

Dion Islands 67°52'S, 68°43'W

Group of small islands and rocks lying in the N part of Marguerite Bay, 6 mi SW of Cape Alexandra, Adelaide Island. Discovered by the FrAE, 1908–10, and named by Charcot for the Marquis de Dion, who donated three motor sledges and whose De Dion-Bouton works produced equipment for the expedition. Not: De Dion Islets.

Diplock Glacier 64°03'S, 58°50'W

A narrow straight glacier, 10 mi long, flowing eastward from Detroit Plateau, Graham Land, into Prince Gustav Channel 5 mi S of Alectoria Island. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Bramah J. Diplock, British engineer who made considerable advances in the design of chain-track tractors (1885–1913).

Direction Island: see Bearing Island 64°33'S, 62°02'W

Director, Monte: see Bradley, Mount 63°53'S, 58°37'W

Director Nunatak 66°49'S, 65°06'W

Conspicuous nunatak standing between the heads of Balch and Breiffuss Glaciers, in Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955–57, and mapped from these photos by the FIDS. So named by the UK-APC in 1958 because this nunatak was used as a landmark by a FIDS sledge party from Dettail Island in 1957 when traveling on Avery Plateau.

Dirtbag Nunatak 85°32'S, 144°52'W

A ridge-like nunatak rising to 940 m, 3.5 mi SSW of Mount Manke, Harold Byrd Mountains. The feature was mapped by USGS from ground surveys and USN aerial photographs, 1960–63. It was visited in 1977–78 by a USARP-Arizona State University geological party, led by Edmund Stump, and named in the spirit of Coalsack Bluff (q.v.); thin lenses of disintegrating mica and schist form a type of light soil on the slopes of the nunatak.

Disappointment, Cape 54°53'S, 36°07'W

Cape which forms the S extremity of South Georgia. First charted and so named in 1775 by a British expedition under Cook, who upon reaching this position was greatly disappointed in realizing that South Georgia was an island rather than a continent. Not: Cabo Desengaño.

Disappointment, Cape 60°42'S, 45°05'W

Cape midway along the W side of Powell Island, in the South Orkney Islands. The name was originally applied to the S end of Powell Island by Capt. George Powell and Capt. Nathaniel Palmer in 1821, reflecting their reluctance to terminate their eastward cruise, necessitated by exhausted provisions and unfavorable winds. In recent years the name has been consistently used for the cape on the W side of the island.

Disappointment, Cape 65°33'S, 61°43'W

Cape which marks the tip of the ice-covered peninsula lying between Exasperation Inlet and Scar Inlet, on the E coast of Graham Land. Discovered in 1902 by the SwedAE, under Nordenskjöld, and so named by him because he encountered many difficult crevasses in approaching the cape. Not: Besvikelsens Kap, Cabo Desengaño.

Disch Promontory 83°34'S, 162°52'E

A high, ice-covered promontory, 6 mi long, extending from the E side of Prince Andrew Plateau, Queen Elizabeth Range. Named by US-ACAN for Carl R. Disch, USARP ionospheric physicist, who was lost at Byrd Station, May 8, 1965.

Discovery, Cape: see Découverte, Cape 66°46'S, 141°33'E

Discovery, Mount 78°22'S, 165°01'E

A conspicuous, isolated volcanic cone, 2,680 m, lying at the head of McMurdo Sound and E of Koettlitz Glacier, overlooking the NW portion of the Ross Ice Shelf. It forms the center of a three-armed mass of which Brown Peninsula is one extension to the N.; Minna Bluff is a second to the E.; the third is Mount Morning to the west. Discovered by the BrNAE (1901–04) and named for their expedition ship *Discovery*.

Discovery Bay 62°29'S, 59°43'W

Bay 3 mi long and 2 mi wide, indenting the N side of Greenwich Island, in the South Shetland Islands. This bay has been known to sealers in the area since about 1821. It was charted and named during 1935 by DI personnel on the *Discovery II*. Not: Bahía Chile.

Discovery Bay: see Undine Harbor 54°02'S, 37°58'W

Discovery Bluff 77°01'S, 162°37'E

Conspicuous headland forming the W side of the entrance to Avalanche Bay in Granite Harbor, Victoria Land. Discovered by the BrNAE (1901) under Scott, who referred to the feature as Rendezvous Bluff. It was renamed for the ship *Discovery* by Scott's second expedition, the BrAE, 1910–13. Not: Rendezvous Bluff.

Discovery Island: see Guépratte Island 64°30'S, 63°00'W

Discovery Point 54°18'S, 36°29'W

Point formed of glacial moraine, marking the W side of the entrance to Moraine Fjord, South Georgia. First surveyed by the SwedAE, 1901–04, under Nordenskjöld. Probably named by Discovery Investigations personnel in the period following their surveys of 1926–31, presumably for their organization or their ships, the *Discovery* or *Discovery II*, which were utilized in the surveys of South Georgia.

Discovery Point: see Fie, Cape 54°27'S, 3°28'E

Discovery Ridge 84°44'S, 114°06'W

A broad rock ridge with a rather flat summit area. It projects NW from Buckeye Table, Ohio Range, 2 mi NW of Mount Glossop-teris. The name was suggested by William E. Long, geologist of the Ohio State University expedition to the Horlick Mountains in 1960–61 and 1961–62. The first tillite and the first Devonian brachiopods were discovered by the expedition on this ridge, hence the name.

Discovery Rock 54°09'S, 36°35'W

Submerged rock in Stromness Bay, South Georgia, lying 0.7 mi NNE of Ems Rock. The rock was positioned by Discovery Investigations personnel under Lt. Cdr. J.M. Chaplin, RN, who made surveys of Stromness Bay in 1927 and 1929. They probably applied the name, which is now well established in local use.

Discovery Sound 64°31'S, 63°01'W

An E-W trending channel 0.5 mi wide, between Guépratte Island and Briggs Peninsula, on the NE side of Anvers Island, in the Palmer Archipelago. The channel was discovered by a German expedition under Dallmann, 1873–74, and in 1903–05 was charted by the FrAE under Charcot. During 1927 it was explored by DI personnel on the *Discovery* who applied the name.

Dismal Buttress 85°27'S, 178°42'W

A mainly ice-free rock bluff, overlooking the W side of the head of Shackleton Glacier about 3 mi NW of Roberts Massif. So named because of several depressing incidents experienced here by the Southern Party of the NZGSAE (1961–62), including the loss of Dismal, the party's only lead dog, which had to be destroyed.

Dismal Island 68°06'S, 68°50'W

Island, 1 mi long and 60 m high, which is mainly ice covered and is the largest of the Faure Islands, lying in Marguerite Bay off the W coast of Graham Land. The Faure Islands were discovered and first charted in 1909 by the FrAE under Charcot. The group was visited and surveyed in 1949 by the FIDS, who so named this island for its appearance of extreme desolation and lifelessness.

Dismal Mountains 68°05'S, 55°25'E

Group of nunataks about 35 mi SW of Rayner Peak. Photographed from ANARE aircraft in 1956, and surveyed by G.A. Knuckey during a dog-sledge journey from Amundsen Bay to Mawson Station in December 1958. So named because the mountains are frequently shrouded in clouds.

Dismal Ridge 78°17'S, 162°48'E

A forked ridge leading N and E from the Mount Kempe-Mount Huggins saddle. It is bounded on the N and W by the Radian and Glimpse Glaciers, and on the S by Kempe Glacier. The two forks enclose the Glee Glacier and descend to Roaring Valley. The ridge was so named by the VUWAE, 1960–61, because of the persistently dismal weather conditions encountered while they were mapping in January 1961, and also because of difficulties encountered in establishing a high food camp on this ridge by helicopter, again owing to the weather.

Ditte, Mount 67°43'S, 68°37'W

Mountain, 1,400 m, surmounting Cape Alexandra in the SE extremity of Adelaide Island. Discovered by the FrAE, 1908–10, and named by Charcot for Alfred Ditte, noted French chemist. Not: Mount A. Ditte.

Diver Point 54°00'S, 38°03'W

A point midway along the N shore of Bird Island, South Georgia. A UK-APC name that derives from the South Georgia Diving Petrel (*Pelecanoides georgicus*) which nests nearby.

Diversion Hills 73°09'S, 163°30'E

Small group of low rock outcrops at the E extremity of Pain Mesa, in Victoria Land. Named by the southern party of NZGSAE, 1966–67, because the party diverted eastward from their route here to visit Navigator Nunatak.

Divide, The 60°44'S, 45°10'W

A narrow channel between Matthews Island and the SE extremity of Coronation Island, in the South Orkney Islands. Charted as an isthmus in 1912–13 by Norwegian whaling captain Petter Sørllie; recharted as an isthmus and named descriptively by DI in 1933. The feature was surveyed by FIDS in 1957 and found to be a channel. Not: La División.

Divide Peaks 60°43'S, 45°12'W

Series of ice-topped peaks, the highest 640 m, rising from the SE end of Coronation Island and extending for 2 mi in a NW direction, in the South Orkney Islands. Surveyed in 1948–49 by the FIDS, 1956–58, and named Divide Peaks in association with The Divide (q.v.). Not: Divide Ridge, Picos Divisor.

Divide Ridge: see Divide Peaks 60°43'S, 45°12'W

Divisor, Picos: see Divide Peaks 60°43'S, 45°12'W

Dixey, Mount 72°10'S, 68°04'W

Mountain, 1,250 m, standing at the S side of Riley Glacier and 3 mi NE of Carse Point, on the W coast of Palmer Land. First photographed from the air on Nov. 23, 1935 by Lincoln Ellsworth, and mapped from these photographs by W.L.G. Joerg. First surveyed in 1936 by the BGLE under Rymill, and named in 1954 by members of the expedition for Neville Dixey, Chairman of Lloyd's in 1934, who raised a special fund at Lloyd's as a contribution towards the cost of the BGLE, 1934–37.

Dixey Rock 63°28'S, 54°40'W

A rock rising 25 m above sea level, 1.5 mi SE of Darwin Island in the Danger Islands, q.v. Mapped by FIDS in 1953–54 and 1956–58, and photographed from the air by FIDASE, 1956–57. Named by UK-APC in 1980 after David J. Dixey, Head, Nautical Branch 5, Hydrographic Department.

Dixon, Mount 53°00'S, 73°17'E

A snow-covered peak (705 m) standing 0.7 mi W of Anzac Peak on Laurens Peninsula, Heard Island. The feature appears to have been roughly charted on an 1860 sketch map by Capt. H.C. Chester, American sealer operating in the area during this period. Surveyed in 1948 by the ANARE, and named by them for Lt. Cdr. George M. Dixon, RANVR, commanding officer of HMS *Labuan* which landed and relieved the 1948 and 1949 ANARE parties.

Dixon Peak 54°03'S, 38°01'W

Steep-sided peak rising to 420 m at the southern end of Paryadin Ridge, 1 mi N of Cape Paryadin, South Georgia. Roughly charted by DI personnel on the *Discovery* in the period 1926–30. Named by the UK-APC in 1963 for Lt. John B. Dixon, RN, surveying officer on HMS *Owen*, which surveyed the area in 1960–61. Not: Paryadin Peak.

Dixon Point: see Cardno Point 54°00'S, 38°00'W

Dixson Island 68°08'S, 146°43'E

A high ice-covered island, 10 mi long and 5 mi wide, at the W side of the mouth of Ninnis Glacier. Discovered by the AAE (1911–14) under Douglas Mawson, who named it for Sir Hugh Dixson of Sydney, a patron of the expedition.

Djävulsön: see Devil Island 63°48'S, 57°17'W

Djupedalen Valley 71°58'S, 7°06'E

A glacier filled valley separating the Mühlig-Hofmann and Filchner Mountains in Queen Maud Land. Plotted from surveys and air photos by NorAE (1956–60) and named Djupedalen (the deep valley).

Djupedalshausane Peaks 72°05'S, 6°59'E

A group of peaks between the heads of Lunde Glacier and Djupedalen Valley in the Mühlig-Hofmann Mountains, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Djupedalshausane (the deep valley peaks).

Djupedalsleitet Saddle 72°05'S, 7°22'E

An ice saddle between the head of Djupedalen Valley and Snuggerud Glacier, S of the Filchner Mountains in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NorAE (1956–60) and named Djupedalsleitet.

Djupvika 69°44'S, 37°54'E

A bay between Botneset and Djupvikneset Peninsulas in the SW part of Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Djupvika (the deep bay) because of its deep indentation of the coast.

Djupvikneset Peninsula 69°47'S, 38°06'E

A high, ice-covered peninsula between Djupvika and Havsbøt along the SW shore of Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Djupvikneset (the deep bay ness, or promontory) in association with nearby Djupvika.

Djupvikodden: see Djupvik Point 69°43'S, 38°02'E

Djupvik Point 69°43'S, 38°02'E

A point marking the E limit of Djupvika, a bay along the SW shore of Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Djupvikodden (the deep bay point) in association with Djupvika. Not: Djupvikodden.

Dlinnoye, Ozero: see Long Lake 62°12'S, 58°58'W

Dlinnoye Lake 70°44'S, 11°39'E

A narrow, serpentine lake, 0.5 mi long, lying close NW of Tsentral'naya Hill in the Schirmacher Hills, Queen Maud Land. The feature was mapped by the SovAE in 1961 and named Ozero Dlinnoye (long lake).

Doake Ice Rumples 79°45'S, 67°00'W

An area of disturbed ice in the Ronne Ice Shelf, extending for c. 55 mi in a NW-SE direction between Korff Ice Rise and Henry Ice Rise. First visited and mapped in part by the US-IGY geophysical traverse party from Ellsworth Station 1957–58, led by Edward

Thiel. Further delineated from U.S. Landsat imagery taken 1974 and from radio echo sounding by BAS in 1981. Named by the UK-APC after Christopher S.M. Doake, senior BAS glaciologist from 1973, who has contributed to an understanding of the morphology and dynamics of the Ronne Ice Shelf.

Dobbratz Glacier 79°24'S, 85°05'W

A broad tributary glacier which drains the S part of the White Escarpment and flows NE between Watlack Hills and Weber Peaks into Spletstoesser Glacier, in the Heritage Range. Named by the University of Minnesota Geological Party, 1963–64, for Maj. Joseph Dobbratz, USMC, pilot who supported the party.

Doble, Monte: see Noire Rock 64°40'S, 62°35'W

Dobrowolski Island 64°36'S, 62°55'W

Small island which lies close to the E coast of Anvers Island, 3 mi SW of Ryswyck Point, in the Palmer Archipelago. Charted in 1927 by DI personnel on the *Discovery*, who gave the name Astrolabe Island. To avoid duplication, the name was changed in 1958 by the UK-APC; Dobrowolski Island is named after Antoni B. Dobrowolski (1872–1954), assistant meteorologist of the BelgAE which explored this area in 1898. Not: Astrolabe Island, Isla Astrolabio, Islote Capitán Martínez Canaveri, Islote Coria.

Dobrynin, Mount 71°42'S, 11°46'E

Mountain, 1,970 m, standing 1 mi ESE of Eidsgvæn Cliff on the E side of the Humboldt Mountains in Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Soviet geographer B.F. Dobrynin. Not: Gora Dobrynina.

Dobrynina, Gora: see Dobrynin, Mount 71°42'S, 11°46'E

Dobson Dome 64°02'S, 57°55'W

A prominent snow-covered, dome-shaped mountain (950 m) between Röhss Bay and Croft Bay, in the N portion of James Ross Island. Surveyed by FIDS, 1958–61. Named by UK-APC for Alban T.A. Dobson (1885–1962), British civil servant, Secretary of the International Whaling Commission, 1949–59, and President of the International Council for the Exploration of the Sea, 1952–55.

Dockery, Mount 71°13'S, 164°33'E

A mountain, 1,095 m, standing 3 mi W of Mount Matthias in the W part of Everett Range, Concord Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Lt. Olan L. Dockery, USN Squadron VX-6, pilot who flew photographic flights in northern Victoria Land, Queen Maud Mountains, Britannia Range and the McMurdo Sound area in the 1962–63 and 1963–64 seasons.

Doctor Rusch Glacier: see Reusch Glacier 71°29'S, 169°29'E

Dodd Island 69°42'S, 75°38'E

A small island in the SE part of the Publications Ice Shelf about 10 mi S of the Søstre Islands. First mapped by the Lars Christensen Expedition (1936–37) from air photos. Remapped by ANARE and named by ANCA for D.M. Dodd, weather observer at Davis Station in 1963.

Dodd Nunatak 71°50'S, 160°24'E

A nunatak 2.5 mi W of Mount Cox in the NW portion of Emlen Peaks in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Walter H. Dodd of the Public Information Office, National Science Foundation, who worked at McMurdo Station in the 1966–67 and 1967–68 austral summers.

Dodge, Mount 84°52'S, 172°22'W

A mainly ice-free peak (1,760 m) on a mountain spur descending northward from the Prince Olav Mountains, at the confluence of Holzrichter and Gough Glaciers. Discovered by the U.S. Ross Ice Shelf Traverse Party (1957–58) under A.P. Crary, and named for Prof. Carroll W. Dodge, who analyzed and reported upon lichens and lichen parasites for the ByrdAE. 1933–35.

Dodge Rocks: see Afuera Islands 64°20'S, 61°36'W

Dodman Island 65°58'S, 65°46'W

Island 3.5 mi long, lying 4 mi SE of Rabot Island and 10 mi W of Ferin Head, off the W coast of Graham Land. The island was charted and named by the BGLE, 1934–37, under Rymill.

Dodson Island: see Dodson Peninsula 75°32'S, 64°12'W

Dodson Peninsula 75°32'S, 64°12'W

An ice-covered peninsula, 40 mi long, located S of Hansen Inlet on the Orville Coast of Ellsworth Land. Discovered by the RARE, 1947–48, under Ronne, and named by him after Capt. Harry L. Dodson, USN, a director of the American Antarctic Society (the organizing body of RARE), and for his son, Robert H.T. Dodson, assistant geologist, surveyor, and chief dog team driver with RARE. Not: Dodson Island, Harry Dodson Island.

Dodson Rocks 69°55'S, 68°25'E

Two small, dark rock exposures on the S side of Single Island, on the W side of the Amery Ice Shelf. Discovered from an ANARE aircraft in 1969. Photographed from an ANARE aircraft in 1971. Named for R. Dodson, senior geologist with the ANARE Prince Charles Mountains survey in 1971.

Doe Nunatak 72°22'S, 160°47'E

A somewhat isolated nunatak, situated 3 mi WNW of Doescher Nunatak and 15 mi NNW of Mount Weihaupt in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959–64. Named by US-ACAN after Wilfred I. Doe, USN, hospital corpsman with the McMurdo Station winter party, 1967.

Doescher Nunatak 72°23'S, 160°59'E

A somewhat isolated nunatak situated 13 mi N of Mount Weihaupt in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959–64. Named by US-ACAN for Roger L. Doescher, glaciologist, McMurdo Station, 1967–68.

Doggers Bay 69°07'S, 69°09'E

An ice-filled bay about 16 mi long and 5 mi wide on the W side of the Amery Ice Shelf, between Foley Promontory and Landon Promontory. Plotted from ANARE air photos taken in 1956. First visited in November 1962 by an ANARE dog-sledge party led by I. Landon-Smith. Named by ANCA after the dog-sledge party.

Doggers Nunataks 67°46'S, 54°51'E

Group of peaks 30 mi SW of Rayner Peak, to the SW of Edward VIII Bay. Photographed in October 1956 by ANARE aircraft and surveyed in December 1958 by G.A. Knuckey during a dog-sledge journey from Amundsen Bay to Mawson Station. Named by ANCA for the members of the 1958 ANARE dog sledging party who were always referred to as the “Doggers.”

Doggo Defile 68°44'S, 66°47'W

A narrow, steep-sided defile, in parts less than 1 mi wide, cutting through the coastal mountains E of Dee Ice Piedmont, W coast of Antarctic Peninsula. Photographed from the air by RARE in 1947. Surveyed by FIDS in 1948–50, and 1958. The UK-APC name is descriptive; the NW entrance is only partly visible to sledge parties traveling along the coast, and the true nature of the feature is completely hidden by the surrounding mountains.

Dog Island 65°49'S, 65°05'W

The northernmost of the Llanquihue Islands, off the W coast of Graham Land. Charted by the BGLE under Rymill, 1934–37. So named by the UK-APC in 1959 because the island faces Cat Island across the navigable channel. Not: Isla Perro.

Dogs Leg Fjord 67°43'S, 66°52'W

Inlet 6 mi long in an E-W direction and 1.5 mi wide, lying directly E of Ridge Island and opening on Bourgeois Fjord, along the W coast of Graham Land. Discovered by the BGLE, 1934–37, under Rymill, and so named because of its shape. Not: Fiordo Pata de Perro, Seno Pata de Perro.

Dogwatch Saddle 76°53'S, 161°41'E

A snow saddle between Mount Brøgger and Mount Morrison, separating the glacial catchments of the Benson Glacier and Cleveland Glacier in Prince Albert Mountains, Victoria Land. A NZARP field party made a late night temporary camp on the saddle in January 1990. The name commemorates the midnight hours kept at this location.

Dohle Nunatak 71°17'S, 66°06'E

A rock feature, consisting of two small peaks and a connecting ridge, between Mount Gleeson and Mount Gibson in the Prince Charles Mountains. Named after C. Dohle, helicopter pilot with the ANARE Prince Charles Mountains survey in 1971.

Dokkene Coves 69°14'S, 39°38'E

Two coves just NW of Hamna Bay on the W side of Langhovde Hills, along the E shore of Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and given the descriptive name Dokkene (the docks).

Doktor Nachtigal Gletscher: see Nachtigal Glacier 54°29'S, 36°09'W

Dolan Peak 85°56'S, 133°15'W

A rock peak, 2,070 m, standing 2 mi WNW of Hendrickson Peak in the NW part of the Quartz Hills. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Theodore G. Dolan, glaciologist at Byrd Station, summer 1959–60.

Dolber, Mount 77°07'S, 145°31'W

A prominent mountain (865 m) with a large snow-free summit, located between Mount Rea and Mount Cooper in the Sarnoff

Mountains, Ford Ranges, Marie Byrd Land. Mapped by USAS (1939–41) and by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for Capt. Sumner R. Dolber, USCG, captain of the icebreaker *Southwind* in the Antarctic Peninsula Ship Group (1967–68) and the Ross Sea Ship Group (1968–69).

Dolence, Mount 79°51'S, 83°13'W

A remarkably spired bare rock mountain, 1,950 m, located in the NW extremity of the Enterprise Hills and separated from Edson Hills by the upper part of Union Glacier, in the Heritage Range, Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party, 1962–63, for Jerry D. Dolence, geologist and member of the party.

Dolleman Island 70°37'S, 60°45'W

Rounded, ice-covered island, 13 mi long, lying 8 mi E of Cape Boggs, off the E coast of Palmer Land. Discovered in 1940 by members of East Base of the USAS. Named for Heinrich Dolleman, tractor driver for the East Base.

Dolphin Spur 84°12'S, 172°48'E

A broad ice-covered spur just E of Mount Patrick in the Commonwealth Range, descending N into the upper reaches of Hood Glacier. Its several rock outcrops when seen from lower levels of the glacier resemble a school of dolphins diving through the sea. Named by the N.Z. Alpine Club Antarctic Expedition, 1959–60.

Dolton, Mys: see Dalton, Cape 66°53'S, 56°44'E

Domashnyaya Bank 67°39'S, 45°50'E

A shoal, covered by only 0.6 m of water, near Molodezhnaya Station in Enderby Land. It lies close to shore, about 0.5 mi SW of Cape Granat. First charted by the SovAE, 1961–62, which called it “Banka Domashnyaya” (domestic bank), presumably for the nearness of the feature to their station.

Dome 53°05'S, 73°30'E

A rounded, snow-covered peak, 2,410 m, standing 1.1 mi NW of Mawson Peak, near the summit of Heard Island. Surveyed and given this descriptive name by the ANARE in 1948.

Dome, The: see McLeod Hill 68°05'S, 66°30'W

Dome Mountain: see Fusilier Mountain 54°25'S, 36°15'W

Domen Butte 72°43'S, 3°50'W

A snow-topped butte with steep rock sides, just SW of Høgskavlen Mountain in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Domen (the dome).

Dome Nunatak 77°01'S, 161°27'E

Dome-shaped nunatak, 990 m, protruding above the Mackay Glacier, about 4 mi NW of Mount Suess, in Victoria Land. Charted and named by the BrAE under Scott, 1910–13.

Dominion Range 85°20'S, 166°30'E

A broad mountain range, about 30 mi long, forming a prominent salient at the juncture of the Beardmore and Mill Glaciers. Discovered by the BrAE (1907–09) and named by Shackleton for the Dominion of New Zealand, which generously aided the expedition.

Donald Nunatak 65°05'S, 60°06'W

Nunatak 1.5 mi N of Gray Nunatak in the Seal Nunataks group, off the E coast of Antarctic Peninsula. Charted in 1902 by the SwedAE under Nordenskjöld, and named by him for Dr. C.W. Donald, ship's doctor and naturalist on the *Active*, one of the vessels of the Dundee whaling expedition, 1892–93.

Donald Ridge 79°37'S, 83°10'W

A narrow ridge extending S from Mount Capley in the Pioneer Heights, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Donald L. Willson, meteorologist at Little America V Station in 1958.

Donaldson, Mount 84°37'S, 172°12'E

A mountain, 3,930 m, standing 5 mi NNE of Flat Top and W of the head of Ludeman Glacier in the Commonwealth Range. Discovered and named by the BrAE (1907–09).

Donald Woodward, Mount: see Woodward, Mount 77°18'S, 145°47'W

Donald Woodward Mountains: see Woodward, Mount 77°18'S, 145°47'W

Donati, Isla: see Kappa Island 64°19'S, 63°00'W

Don Bosco, Cerro: see Cairn Hill 63°30'S, 57°04'W

Don Ernesto Glacier: see Ernesto Pass 54°01'S, 37°44'W

Don Juan, Lake: see Don Juan Pond 77°34'S, 161°11'E

Don Juan Pond 77°34'S, 161°11'E

A shallow saline pond located south of the Dais in the South Fork of Wright Valley, Victoria Land. The pond was sighted on Oct. 11, 1961 in a field reconnaissance by U.S. Navy helicopter. In the next three months, a USARP party with George H. Meyer and others made several trips to study the pond. They named it Don Juan Pond for Lieutenants Donald Roe and John Hickey, U.S. Navy Air Development Squadron Six, who were of assistance to the field party. A new mineral, calcium chloride hexahydrate, was discovered in the pond. The name Antarcticite was proposed for the new mineral. Not: Lake Don Juan.

Donnachie Cliff 64°01'S, 58°04'W

A cliff on Ulu Peninsula, James Ross Island, rising to c. 500 m northeast of Back Mesa. Following geological work by BAS, 1985–86, named by the UK-APC after Thomas Donnachie, radio operator on Operation Tabarin at Hope Bay, 1944–45.

Donnally Glacier 81°37'S, 159°18'E

A glacier about 12 mi long in the Churchill Mountains, flowing E along the N side of Swithinbank Range to enter Starshot Glacier. Named by US-ACAN for Cdr. Edward W. Donnally, USN, officer in charge of Naval support personnel at McMurdo Station, winter 1962.

Donner Valley 77°37'S, 161°27'E

A small, mainly ice-free valley located NNE of Mount Thundergut in the Asgard Range, Victoria Land. Named by the NZ-APC, presumably in association with nearby Mount Thundergut, “donner” being a German word for “thunder.”

Donovan Islands 66°11'S, 110°24'E

A chain of about 8 islands lying well offshore, about 5 mi NW of Clark Peninsula in the E part of Vincennes Bay. First mapped from

air photos taken by USN OpHjp, 1946–47. They were photographed from the air by ANARE in January, 1956. Named after J. Donovan, Administrative Officer of the Antarctic Division, Melbourne, and leader of a number of relief expeditions to Heard and Macquarie Islands. Not: Chappel Islets.

Don Pedro Christophersen, Mount 85°32'S, 165°47'W

A massive, largely ice-covered, gabled mountain (3,765 m), surmounting the divide between the heads of Axel Heiberg and Cooper Glaciers, in the Queen Maud Mountains. Discovered in 1911 by Roald Amundsen, who named it for one of the expedition's chief supporters who lived in Buenos Aires. Not: Mount Don Pedro Christophersen.

Don Pedro Christopherson, Mount: see Don Pedro Christophersen, Mount 85°32'S, 165°47'W

Don Samuel, Bahía: see Edgell Bay 62°16'S, 58°59'W

Doolette Bay 67°55'S, 147°00'E

A bay lying at the junction of the western side of the Ninnis Glacier Tongue with the mainland. Discovered by the AAE (1911–14) under Douglas Mawson, who named it after G.P. Doolette of Perth, a patron of the expedition.

Doorly, Mount 77°23'S, 162°54'E

A summit surmounting the E part of the rocky ridge between Greenwood Valley and Wright Lower Glacier, in Victoria Land. Discovered by the BrNAE, 1901–04, under Scott, and named after Lt. Gerald S. Doorly, RN, of the *Morning*, relief ship to the expedition.

Doppelspitz: see Binary Peaks 54°29'S, 36°05'W

Doppler Nunatak 74°51'S, 71°41'W

A nunatak lying SW of Mount Mende in the Sky-Hi Nunataks, Ellsworth Land. Named by US-ACAN in 1987 after Christian Johann Doppler (1803–53), Austrian scientist who discovered the Doppler effect in physics.

Dorchuck Glacier 74°44'S, 113°56'W

A narrow glacier, 9 mi long, flowing NE from Jenkins Heights between Klinger Ridge and Ellis Ridge into Dotson Ice Shelf, on Walgreen Coast, Marie Byrd Land. Mapped by USGS from surveys and USN aerial photographs, 1959–67, and Landsat imagery, 1972–73. Named by US-ACAN after Robert E. Dorchuck, USN, nuclear power plant operator with the Naval Nuclear Power Unit at McMurdo Station, summer and winter seasons, OpDFrz, 1965 and 1969.

Dorian, Anse: see Dorian Bay 64°49'S, 63°30'W

Dorian Bay 64°49'S, 63°30'W

Cove on the NW side of Wiencke Island, 0.5 mi ENE of Damoy Point, in the Palmer Archipelago. Discovered by the FrAE, 1903–05, under Charcot, and named by him after Monsieur Dorian, a member of the French Chamber of Deputies. Not: Anse Dorian.

Doris Bay 54°27'S, 36°08'W

Small bay immediately SE of Saint Andrews Bay, along the N coast of South Georgia. The name dates back to about 1929 and is now well established. Not: Little Bucht.

Dorrel Rock 75°26'S, 111°22'W

A rock outcrop 11 mi SW of the summit of Mount Murphy, protruding through the ice near the head of Pope Glacier, on the Walgreen Coast, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN after Leo E. Dorrel, USN, hospital corpsman with the Byrd Station winter party, 1966.

Dorrer Glacier 82°41'S, 163°05'E

Glacier just S of Mount Heiser, flowing E into Lowery Glacier from the NE slopes of the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Egon Dorrer, USARP glaciologist on the Ross Ice Shelf 1962–63 and 1965–66.

Dorsey Island 70°22'S, 71°33'W

Mainly ice-covered island, 12 mi long, lying in Wilkins Sound off the W coast of Alexander Island. Discovered and roughly mapped from aircraft by members of East Base of the USAS, 1939–41, and named after Herbert G. Dorsey, Jr., of the U.S. Weather Bureau, meteorologist at East Base who devised a method of predicting with exceptional accuracy the periods in which weather would be suitable for flying. Remapped from air photos taken by RARE, 1947–48, by Searle of the FIDS in 1960. The position of the island and its outline were corrected from U.S. Landsat imagery of 1973–75 and 1979.

Dorsey Mountains 67°04'S, 67°04'W

Mountains just E of Somigliana Glacier in the N part of Arrow-smith Peninsula in Graham Land. Mapped by FIDS from surveys and air photos, 1956–59. Named by UK-APC for Noah E. Dorsey (1873–1959), American physicist, author of *Properties of Ordinary Water-Substance* (New York, 1940), a comprehensive study of ice.

Dort, Mount 85°54'S, 158°53'W

Conspicuous ice-free mountain, 2,250 m, projecting into the E side of Amundsen Glacier just S of the mouth of Cappellari Glacier. Discovered and first mapped by the ByrdAE, 1928–30. Named by US-ACAN for Wakefield Dort, Jr., geologist at McMurdo Station, summer 1965–66, and exchange scientist at the Japanese Shōwa Station, winter 1967.

Dory Nunatak 76°47'S, 161°18'E

An isolated sandstone nunatak, 1.2 mi long, rising above the SW part of Flight Deck Névé, 1.5 mi SW of Dotson Ridge, in Convoy Range, Victoria Land. One of a group of nautical names in Convoy Range. So named by a 1989–90 NZARP party because the feature appears to be sailing in the midst of the glacier névé like a small boat.

Dos Colinas, Isla: see Two Hummock Island 64°08'S, 61°42'W

Dos Lomos, Islote: see Pyrox Island 68°12'S, 66°41'W

Dos Lomos, Islotes: see Eden Rocks 63°29'S, 55°40'W

Dos Mogotes, Isla: see Two Hummock Island 64°08'S, 61°42'W

Dos Morros, Isla: see Two Summit Island 62°15'S, 58°57'W

Doss Glacier 82°30'S, 162°21'E

Small glacier just E of Mount Boman, flowing into Nimrod Glacier from the N slopes of Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Edgar L. Doss, USARP glaciologist at Roosevelt Island, 1962–63.

Dot Island 54°03'S, 37°21'W

Tiny island lying 0.6 mi W of Tern Island in the S part of the Bay of Isles, South Georgia. First charted by Robert Cushman Murphy in 1912–13. Surveyed in 1929–30 by DI personnel, who probably so named it because of its size and minute appearance when represented on charts.

Dot Peak 79°46'S, 159°10'E

A small eminence, 1,450 m, marking the highest point of Cooper Nunatak, at the E side of the Brown Hills. Mapped by the VUWAE (1962–63) and so named because of its small size.

Dotson Ice Shelf 74°24'S, 112°22'W

An ice shelf about 30 mi wide between Martin and Bear Peninsulas on the coast of Marie Byrd Land. First mapped by USGS from air photos obtained by USN OpHjp in January 1947. Named by US-ACAN for Lt. William A. Dotson, USN, formerly Officer in Charge of the Ice Reconnaissance Unit of the Naval Oceanographic Office, killed in a plane crash in Alaska in November 1964 while on an ice reconnaissance mission.

Dotson Ridge 76°46'S, 161°25'E

A ridgelike nunatak, 1.5 mi long, rising to 1,640 m in the NW part of Flight Deck Névé, Convoy Range. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1964 for Morris F. Dotson, electrician at McMurdo Station, 1962. Not: Dotsun Ridge.

Dotsun Ridge: see Dotson Ridge 76°46'S, 161°25'E

Dotten Nunatak 71°57'S, 24°05'E

Nunatak 2 mi N of Smalegga Ridge, near the mouth of Gillock Glacier in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Dotten (the lump).

Dott Ice Rise 79°18'S, 81°48'W

A peninsula-like feature that is ice-drowned except for the Barrett Nunataks, about 20 mi long, extending eastward from the Heritage Range of the Ellsworth Mountains and terminating at Constellation Inlet at the SW edge of Ronne Ice Shelf. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Robert H. Dott, USARP geologist and senior U.S. representative at Bernardo O'Higgins Base, summer 1961–62.

Douanier Rock 66°49'S, 142°04'E

A small rocky island lying close to the coast and just east of Point Alden, the point which separates Adélie Coast and George V Coast. Discovered and named "Rocher du Douanier" by the 1949 French expedition under André Liotard. The name is whimsical. It alludes to the coastal division and the proximity of this island.

Double Curtain Glacier 77°39'S, 163°31'E

Small glacier on the S slope of the Kukri Hills, just SW of Mount Barnes, flowing toward the mouth of Ferrar Glacier in Victoria Land. Mapped by the BrAE under Scott, 1910–13, and so named by them because of its shape.

Doublefinger Peak 76°53'S, 162°15'E

A peak about 4 mi inland from Granite Harbor, just NE of Mount Marston, in Victoria Land. Named by the BrAE (1910–13). A snow filled cleft along the E face of the peak separates two dark rock exposures, suggesting the origin of the name.

Double Islands 66°45'S, 141°11'E

Two small rocky islands lying close E of the tip of Zélée Glacier Tongue and 0.4 mi NNW of Triple Islands. Photographed from the air by USN OpHjp, 1946–47. Charted and named by the FrAE, 1949–51.

Doublets, The 66°25'S, 98°40'E

Rock outcrops located centrally on the western side of David Island. Discovered and named by the Western Base Party of the AAE (1911–14) under Douglas Mawson.

Doubtful Bay 54°52'S, 36°01'W

Small, deeply indented bay, which lies 1 mi ENE of Smaaland Cove and immediately W of Rumbolds Point on the SE coast of South Georgia. Charted by the GerAE under Filchner, 1911–12, who named it for Walter Slossarczyk, third officer of the expedition ship *Deutschland*. Later the names Doubtful Bay and Smaaland Bay (now Smaaland Cove, q.v.) were erroneously transposed on charts of this area. The SGS, 1951–52, reported that the name Slossarczyk Bay is not known locally and that this feature is best known as Doubtful Bay. Despite the undoubted priority of Filchner's naming, the name Doubtful Bay is approved in order to conform with local usage. The name Slossarczyk Crag has been approved for the elevation at the E side of the Bay. Not: Bahía Dudosa, Bai Slosarczyk, Green Bay, Slosarczyk Bai, Slosarczyk Harbour, Slosarczyk Bay, Slossarczyk Bay, Smedland Bay.

Doubtful Bay: see Smaaland Cove 54°52'S, 36°03'W

Doubtful Point 54°13'S, 36°36'W

Point forming the E side of the entrance to Enten Bay, Cumberland West Bay, in South Georgia. The name appears to be first used on a 1929 British Admiralty chart.

Dougherty, Mount 82°43'S, 161°05'E

Mountain, 2,790 m, between Mount Sandved and Mount Cara on the main N-S ridge in the N part of the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Ellsworth C. Dougherty, USARP biologist at McMurdo Sound, 1959–60 and 1961–62.

Douglas, Cape 80°55'S, 160°52'E

An ice-covered cape marking the S side of the entrance to Matterson Inlet, on the W side of Ross Ice Shelf. Discovered by the BrNAE (1901–04) and named for Admiral Sir Archibald Douglas, Lord of the Admiralty, who persuaded the Admiralty to assign naval seamen to the expedition.

Douglas, Mount 76°31'S, 161°18'E

A striking pyramidal peak, 1,750 m, near the head of Fry Glacier, on the divide between the Fry and Mawson Glaciers. The N.Z. Northern Survey Party of the CTAE (1956–58) established a survey station on its summit in December 1957. Named for Murray H. Douglas, a member of the party.

Douglas Crag 54°46'S, 36°00'W

Crag, 1,670 m, standing 1 mi SE of Mount Macklin at the S end of the Salvesen Range of South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for George V. Douglas, geologist with the British expedition under Shackleton, 1921–22.

Douglas Gap 71°05'S, 167°44'E

A glacier-filled gap, 1.5 mi wide, between Hedgpeth Heights and Quam Heights in the Anare Mountains of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Donald S. Douglas, USARP biologist at Hallett Station, 1959–60 and 1960–61.

Douglas Glacier 73°31'S, 61°45'W

Glacier that flows ENE through the central Werner Mountains in Palmer Land. The glacier merges with Bryan Glacier just N of Mount Broome where it enters New Bedford Inlet. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Everett L. Douglas, biologist at Palmer Station, summer 1967–68.

Douglas Inlet: see New Bedford Inlet 73°22'S, 61°15'W

Douglas Islands 67°23'S, 63°22'E

Two small islands 12 mi NW of Cape Daly. Discovered by the BANZARE under Mawson, 1929–31, and named for V. Admiral (later Sir Percy) Douglas, then Hydrographer of the British Navy. The islands were first sighted during an aircraft flight from the *Discovery* on Dec. 31, 1929, and reported to lie in about 66°40'S, 64°30'E, but after the 1931 voyage they were placed at 67°20'S, 63°32'E. In 1956, an ANARE sledge party led by P.W. Crohn was unable to find them in this position, but found two uncharted islands farther south to which the name has now been applied.

Douglas Peak 66°24'S, 52°28'E

Peak, 1,525 m, lying 11 mi SW of Mount Codrington and 8 mi E of Mount Marr. Discovered in January 1930 by the BANZARE under Mawson, and named for Flight Lt. E. Douglas, RAAF, pilot with the expedition. Not: Gora Duglas.

Douglas Peaks 80°00'S, 81°25'W

The group of peaks standing S of Plummer Glacier in the SE extremity of the Heritage Range, Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party, 1962–63, for Lt. Cdr. John Douglas, USN, LC-47 pilot who flew to the area to evacuate one of the party for emergency appendectomy.

Douglas Range 70°00'S, 69°35'W

Sharp-crested range, with peaks rising to 3,000 m, extending 75 mi in a NW-SE direction from Mount Nicholas to Mount Edred and forming a steep E escarpment of Alexander Island, overlooking the N part of George VI Sound. Mount Nicholas was seen in 1909 from a distance by the FrAE under Charcot. The full extent of the range was observed by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935, and its E escarpment first roughly mapped from air photos taken on that flight by W.L.G. Joerg. The E face of the range was roughly surveyed from George VI Sound by the BGLE in 1936 and resurveyed by the FIDS in 1948–50. The entire range, including the W slopes, was mapped in detail from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by the BGLE, 1934–37, for V. Admiral Sir Percy Douglas, chairman of the BGLE Advisory

Committee, member of the Discovery Committee from 1928 until his death in 1939, formerly Hydrographer of the British Navy.

Douglass, Mount 77°20'S, 145°20'W

Ice-covered mountain 8 mi ESE of Mount Woodward on the S side of Boyd Glacier, in the Ford Ranges of Marie Byrd Land. Discovered in 1934 on aerial flights of the ByrdAE. Named for Malcolm C. Douglass, dog driver at West Base of the USAS (1939–41).

Douglas Strait 59°27'S, 27°14'W

Strait 2 mi wide between Thule and Cook Islands, in the South Sandwich Islands. The existence of this strait was first noted by a Russian expedition under Bellingshausen in 1820. It was charted in 1930 by DI personnel on the *Discovery II* and named for V. Admiral Sir Percy Douglas, member of the Discovery Committee. Not: Estrecho San Lesmes.

Doumani, Mount 85°49'S, 137°38'W

Prominent mountain, 3,240 m, standing between Johns and Kansas Glaciers at the N side of Watson Escarpment. Mapped by USGS from ground surveys and USN air photos, 1960–63. Named by US-ACAN for George A. Doumani, geologist with the Byrd Station winter party in 1959. Doumani explored the Horlick Mountains area that year and in 1960–61, 1961–62 and 1964–65. He visited the Mount Weaver area in 1962–63.

Doumani Peak 77°07'S, 126°03'W

A subsidiary peak (2,675 m) on the southern slopes of Mount Sidley in the Executive Committee Range, Marie Byrd Land. Named by US-ACAN for George A. Doumani, Traverse Seismologist at Byrd Station, a member of the Executive Committee Range Traverse (Feb. 1959) and Marie Byrd Land Traverse (1959–60) that carried out surveys of this area.

Doumer Hill 64°51'S, 63°34'W

Snow-covered pyramid, 515 m, forming the summit of Doumer Island in the Palmer Archipelago. First charted by the FrAE under Charcot, 1903–05. Named in 1958 by the UK-APC, in association with Doumer Island. Not: Monte Capitán, Monte López.

Doumer Island 64°51'S, 63°35'W

Island 4.5 mi long and 2 mi wide, surmounted by a snow-covered pyramidal peak, 515 m, lying between the S portions of Anvers Island and Wiencke Island in the Palmer Archipelago. First seen by the BelgAE, 1897–99, under Gerlache. Resighted and charted by the FrAE, 1903–05, under Charcot, who named it for Paul Doumer, President of the Chamber of Deputies and later President of France.

Dove Channel 60°45'S, 45°36'W

Narrow channel bisecting the Oliphant Islands, trending in an E-W. direction between the two larger islands on the N and the main group of smaller islands and rocks on the S, lying 0.4 mi S of Gourlay Peninsula, the SE tip of Signy Island in the South Orkney Islands. The name Dove Strait dates back to about 1930, but the generic term channel is approved because of the small size of this feature. Not: Dove Strait.

Dover, Mount 83°46'S, 55°50'W

A mountain, 1,645 m, surmounting the SE end of Gale Ridge where the ridge abuts the Washington Escarpment, in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and

USN air photos, 1956–66. Named by US-ACAN for James H. Dover, geologist with the Patuxent Range field party, 1962–63.

Dovers, Cape 66°29'S, 97°08'E

Cape fronting on Shackleton Ice Shelf, 5 mi S of Henderson Island. Discovered by the Western Base Party of the AAE, 1911–14, under Mawson, and named for G. Dovers, cartographer with the expedition.

Dovers, Mount 70°08'S, 64°59'E

A high, brown rock ridge 2 mi NW of Mount Dwyer in the Athos Range of the Prince Charles Mountains. It was observed from Stinear Nunataks in 1954 by an ANARE party led by Robert G. Dovers, officer in charge at Mawson Station, and its position plotted in December 1955 by a party led by J.M. Béchervaise. Named by ANCA for Robert G. Dovers.

Dovers Glacier: see Mulebreen 67°28'S, 59°21'E

Dovers Moraine 53°07'S, 73°42'E

A band of coarse glacial moraine, extending in a N-S direction for 1.5 mi, deposited at the E end of the main mass of Heard Island immediately E of Stephenson Glacier. Surveyed in 1948 by the ANARE, and named by them for Robert G. Dovers, geologist and chief surveyor with the party. Small settlements were occupied near both ends of this morainal belt by American sealers engaged in the extraction of sea-elephant oil during the 1858–82 period.

Dovers Nunatak: see Dovers Peak 69°42'S, 64°26'E

Dovers Peak 69°42'S, 64°26'E

A peak in the W part of the Stinear Nunataks in Mac. Robertson Land. Discovered in 1954 by an ANARE party led by Robert G. Dovers, officer in charge at Mawson Station in 1954, for whom it is named. Not: Dovers Nunatak.

Dove Strait: see Dove Channel 60°45'S, 45°36'W

Dow, Mount 54°42'S, 36°10'W

Mountain, 1,680 m, standing at the S side of Novosilski Glacier, 1 mi W of the N end of Mount Carse in the S part of South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for George F. Dow (1868–1936), American whaling historian and author of *Whale Ships and Whaling: A Pictorial History of Whaling During Three Centuries*.

Dowie, Mount 70°42'S, 66°00'E

A ridgelike mountain which rises to a central crest, about 4 mi W of Mount Hollingshead in the Aramis Range, Prince Charles Mountains. Sighted by the ANARE southern party led by W.G. Bewsher in January 1957, and named for Dr. Donald A. Dowie, medical officer at Mawson Station in 1956.

Dowling, Mount 72°27'S, 98°08'W

Small mountain overlooking the S coast of Thurston Island, about 13 mi E of Von der Wall Point. Mapped by USGS from surveys and USN air photos, 1960–66. Named by US-ACAN for Forrest L. Dowling, geophysicist at Byrd Station, 1960–61.

Downer Glacier 66°58'S, 56°25'E

Glacier 15 mi long, flowing eastward into Edward VIII Ice Shelf just north of Wilma Glacier. Part of the glacier was mapped by ANARE in 1954 during a sledging journey to Edward VIII Bay led by R. Dovers. Photographed from ANARE aircraft in 1956 and

named by ANCA for Sgt. G.K. Downer, RAAF, electrical and instrument fitter at Mawson Station in 1958.

Downes Glacier 53°02'S, 73°31'E

A broad glacier flowing N on both sides of Cape Bidlingmaier to the N coast of Heard Island. Surveyed by ANARE in 1948. Named by ANCA for M.C. Downes, ANARE biologist at Heard Island in 1951 and 1963.

Downfall, The 64°48'S, 62°23'W

A mountain (c. 1,500 m) between the heads of Arago and Woodbury Glaciers on the W coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. So named by the UK-APC in 1960 because the feature marked the end of the route from Ore Ice Fringe by which members of the FIDS at Danco Island station had hoped in 1956 to reach Forbidden Plateau. A very steep drop on the E side of the summit precludes further progress.

Downham Peak 64°17'S, 58°54'W

A rock pyramid at the S side of the mouth of Sjögren Glacier, Trinity Peninsula. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Noel Y. Downham, FIDS meteorological assistant at Hope Bay, who assisted in the triangulation of this area in 1961.

Downs Cone 75°50'S, 116°16'W

One of several small cones or cone remnants along the SW side of Toney Mountain in Marie Byrd Land. Located 3 mi WSW of Boeger Peak. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Bill S. Downs, AC1, USN, Air Controlman at Williams Field near McMurdo Station in the 1969–70 and 1970–71 austral summers. He wintered at Little America V on the Ross Ice Shelf, 1958.

Downshire, Cape: see Downshire Cliffs 71°37'S, 170°36'E

Downshire Cliffs 71°37'S, 170°36'E

A line of precipitous basalt cliffs rising to 2,000 m above the Ross Sea and forming much of the E side of Adare Peninsula along the coast of Victoria Land. In 1841 Capt. James Ross applied the name "Cape Downshire" to a part of these cliffs. He did so at the request of Cdr. Francis R.M. Crozier of the *Terror*, after the latter's friend, the late Marquis Downshire. No prominent cape exists here and, for the sake of historical continuity, the name has been reapplied to these cliffs. Not: Cape Downshire.

Downs Nunatak 69°36'S, 66°40'W

A nunatak rising to 1,000 m between Garcie Peaks and Webb Peak, Crescent Scarp, in NW Palmer Land. The nunatak was photographed from the air by USAS, 1940, U.S. Navy, 1966, and was surveyed by BAS, 1970–73. Named by US-ACAN for Bobby G. Downs, USN, cook, Palmer Station, winter party 1968.

Dow Nunatak 75°01'S, 136°14'W

A small, relatively isolated nunatak 3.5 mi NW of Mount Sinha in the SW part of McDonald Heights, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Charles R. Dow, who participated in glaciological research at Byrd Station, 1969–70.

Dow Peak 71°03'S, 163°04'E

A peak located 2 mi ESE of Mount Sturm in the Bowers Mountains. Named by the NZGSAE to northern Victoria Land, 1967–68, for its senior geologist, J.A.S. Dow.

Doyle Glacier 66°00'S, 65°18'W

Glacier flowing to the W coast of Graham Land on both sides of Prospect Point. Charted by the BGLE under Rymill, 1934–37. Named by the UK-APC in 1959 for Sir Arthur Conan Doyle (1859–1930), the first Englishman to make a full day's journey on skis, in March 1893.

Doyle Point 65°53'S, 54°52'E

Point between Cape Batterbee and Cape Borley on the coast of Enderby Land. Discovered on Jan. 12, 1930 by the BANZARE under Mawson, who named it for Stuart Doyle, who assisted the expedition photographer with the film record. Not: Stuart Doyle Point.

Drabanten Nunatak 73°54'S, 5°55'W

An isolated nunatak about 10 mi W of Tunga Spur, just N of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and additional air photos (1958–59), and named Drabanten (the satellite).

Drabek Peak 71°05'S, 166°37'E

A peak (2,090 m) 6 mi N of Anare Pass and 9 mi W of Redmond Bluff in the Anare Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–63. Named by US-ACAN for Charles M. Drabek, USARP biologist at McMurdo Station, 1964–65 and 1967–68.

Draeger, Mount 71°09'S, 163°54'E

A mountain, 1,690 m, in the NW part of Posey Range, Bowers Mountains. The mountain overlooks from the E the junction of Smithson Glacier with the Graveson Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for chief radioman Ernest J. Draeger, USN, a member of the winter party at McMurdo Station in 1967.

Dragon Cove 62°28'S, 60°08'W

Cove lying SE of Williams Point on the NE side of Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 after the brig *Dragon* (Captain McFarlane) of Liverpool, which visited the South Shetland Islands in 1820–21.

Dragons Back, The 80°23'S, 28°33'W

A mostly ice-free ridge rising to 1,315 m in the W part of La Grange Nunataks, Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. Descriptively named by the UK-APC, 1971, from the spikes on the ridge crest giving an allusion of a dragon.

Dragons Lair Névé 85°51'S, 154°00'W

A névé of about 25 square miles in the Hays Mountains, bounded by Mount Griffith, Mount Pulitzer, Taylor Ridge, and Vaughan Glacier. The feature was mapped by the USGS from surveys and USN aerial photographs, 1960–64. During November 1987, the névé was the camp site of the USARP-Arizona State University geological party, which suggested the name. The name derives from the setting, surrounded by peaks, and from the appearance of Mount Pulitzer, the profile of which is remindful of a dragon.

Dragons Teeth 63°15'S, 58°39'W

A small group of rocks off the NE part of Astrolabe Island, off Trinity Peninsula. The name, applied by UK-APC, is descriptive of these black tooth-shaped rocks. Not: Punta Dientes de Dragón.

Drake Head 69°13'S, 158°15'E

A headland forming the W side of the entrance to Davies Bay. Discovered from the *Terra Nova* under Lt. Harry L.L. Pennell, RN, in February 1911. Named for Francis R.H. Drake, meteorologist on board the *Terra Nova*.

Drake Icefall 79°46'S, 83°50'W

An icefall 2 mi wide between Soholt Peaks and Edson Hills, draining eastward from the plateau to join the general flow of Union Glacier through the Heritage Range, Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party, 1962–63, for Benjamin Drake IV, geologist and member of the party.

Drake Nunatak 85°17'S, 89°20'W

A nunatak (1,935 m) at the base of Bermel Escarpment and 1 mi E of Elliott Nunatak, in the Thiel Mountains. The name was proposed by Arthur Ford and Peter Bermel, co-leaders of the USGS Thiel Mountains party of 1960–61. Named for Avery A. Drake, Jr., USGS geologist aboard the USS *Glacier* to the Thurston Island and Bellingshausen Sea area, 1960–61.

Drápene Nunataks 73°46'S, 5°03'W

Nunataks close N of Urmosa Spur, near the SW end of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and additional air photos (1958–59), and named Drápene (the drops).

Draves Island: see Draves Point 66°04'S, 101°04'E

Draves Point 66°04'S, 101°04'E

The westernmost point of Booth Peninsula, lying 0.3 mi N of the eastern portion of Thomas Island. The name "Draves Island" was given by US-ACAN in 1956 to the western portion of Booth Peninsula, then thought to be a separate feature. Subsequent Soviet Expeditions (1956–57) found that feature to be part of Booth Peninsula and US-ACAN has reapplied the name to the point described. Named for Dale Draves, air crewman on the USN OpHjp seaplane commanded by D.E. Bunger which landed in this area and obtained aerial and ground photographs in February 1947. Not: Draves Island.

Dreadnought Point 64°00'S, 57°48'W

A prominent rocky point on the W side of Croft Bay, James Ross Island. Surveyed by FIDS in Aug. 1953. The UK-APC name is descriptive; the appearance of the feature is reminiscent of the bows of the early ironclads (battleships).

Dream Island 64°44'S, 64°14'W

Island lying 1 mi SE of Cape Monaco, off the SW coast of Anvers Island in the Palmer Archipelago. Surveyed by the British Naval Hydrographic Survey Unit in 1956–57. So named by the UK-APC because among the island's natural features are a cave and, in summer, a small waterfall, with mossy patches and grass.

Drei Brüder: see Three Brothers 54°16'S, 36°48'W

Dreikanter Head 76°53'S, 162°30'E

A dark triangular headland between the mouths of Hunt and Marston Glaciers, on the W side of Granite Harbor, Victoria Land. The triangular appearance of the feature when viewed from the SE suggests the name; "Dreikantig" is a German word meaning three-edged.

Drew Cove 66°20'S, 110°30'E

Cove indenting the W side of Mitchell Peninsula on the Budd Coast. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Chief Construction Electrician John W. Drew, USN, a member of the Wilkes Station party of 1958.

Drewry, Mount 84°27'S, 167°21'E

A prominent blocklike mountain on the W side of Beardmore Glacier, rising to 2,910 m between Bingley Glacier and Cherry Icefall in Queen Alexandra Range. Discovered and roughly mapped by the Southern Journey Party of the BrAE, led by Ernest Shackleton, which was abreast of this mountain on December 13, 1908. Named by US-ACAN in 1986 after David J. Drewry, British glaciologist; a leader of the SPRI-NSF-TUD airborne radio echo sounding program, 1967–79; Director, Scott Polar Research Institute, 1984–87; Director, British Antarctic Survey, from 1987.

Dreyfus, Cape: see Well-met, Cape 63°47'S, 57°19'W

Dreyfuss, Kap: see Well-met, Cape 63°47'S, 57°19'W

Driencourt, Cabo: see Driencourt Point 64°12'S, 62°31'W

Driencourt Point 64°12'S, 62°31'W

Point 6 mi SE of Claude Point on the W side of Brabant Island, in the Palmer Archipelago. First charted by the FrAE, 1903–05, and named by Charcot after Joseph F.L. Driencourt, a French engineer who advised on the hydrographic equipment for the expedition. Not: Cabo Driencourt.

Driscoll Glacier 79°42'S, 83°00'W

A glacier 13 mi long in the Heritage Range, draining SE between the Collier and Buchanan Hills to enter Union Glacier. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Cdr. Jerome M. Driscoll, administration officer with USN Squadron VX-6 during Deep Freeze 1965.

Driscoll Island 76°12'S, 146°55'W

A narrow, ice-covered island 16 mi long, lying in Block Bay along the coast of Marie Byrd Land. The feature was partially delineated from air photos taken by the ByrdAE (1928–30) on the flight of Dec. 5, 1929. The island was completely mapped by USGS, 1959–65. Named by US-ACAN after Lawrence J. Driscoll, BMI, USN, Boatswain's Mate aboard USS *Glacier* along this coast, 1961–62.

Driscoll Point 82°59'S, 168°00'E

Point forming the E side of the entrance to Wise Bay, overlooking the Ross Ice Shelf. Mapped by the USGS from tellurometer surveys (1961–62) and Navy air photos (1960). Named by the US-ACAN after C.E. Driscoll, Master of the USNS *Pvt. Joseph F. Merrell* during USN OpDFrz 1963.

Dromedary, Mount 78°19'S, 163°02'E

Hump-shaped mountain, over 2,400 m, standing 4 mi E of Mount Kempe in the Royal Society Range of Victoria Land. First mapped

by the BrNAE, 1901–04, but named by the BrAE, 1910–13. Named for the appearance of the mountain which resembles a dromedary's hump.

Dromedary Glacier 78°18'S, 163°10'E

A small alpine glacier occupying a high cirque on the E side of Mount Dromedary in the Royal Society Range. Named by the VUWAE (1960–61) for its proximity to Mount Dromedary.

Dronning Fabiolaffjella: see Queen Fabiola Mountains 71°30'S, 35°40'E

Dronning Mary Land: see Queen Mary Coast 66°45'S, 96°00'E

Dronning Maud Land: see Queen Maud Land 72°30'S, 12°00'E

Dronning Mauds Fjell: see Queen Maud Mountains 86°00'S, 160°00'W

Drummond Glacier 66°40'S, 65°43'W

Glacier 10 mi long and 2 mi wide, on the W coast of Graham Land, flowing WNW into Darbel Bay to the S of Hopkins Glacier. First roughly surveyed by FIDS in 1946–47, and named West Balch Glacier. With East Balch Glacier it was reported to fill a transverse depression across Graham Land, but a further survey in 1957 showed that there is no close topographical alignment between the two. The name Balch has been limited to the east glacier and an entirely new name approved for this glacier. Sir Jack C. Drummond (1891–1952), professor of biochemistry at the University of London, helped in the selection and calculation of the sledging rations of many British polar expeditions between World War I and II. Not: West Balch Glacier.

Drummond Peak 77°51'S, 153°58'W

A low, isolated rock peak 19 mi SW of La Gorce Peak, rising above the ice surface of Edward VII Peninsula. Mapped by USGS from surveys and U.S. Navy air photos, 1955–59. Named by US-ACAN for Lt. (j.g.) Glenn N. Drummond, Jr., USN, Assistant Aerologist on the staff, U.S. Naval Support Force, Antarctica, 1959–62.

Drum Rock 65°14'S, 64°16'W

An insular rock in the Argentine Islands, Graham Coast, rising 6 m above sea level on the eastern edge of Forge Islands, between Smooth Island and Grotto Island. The name is descriptive of the shape of the rock and became established through local usage at the BAS Faraday station during the 1980's.

Dru Rock 66°46'S, 141°35'E

Rocky island 0.15 mi long between Retour Island and Claquebue Island in the Curzon Islands. Charted in 1951 by the FrAE and named by them "Rocher des Drus" in memory of the scaling of the needle-shaped peaks of Chamonix, France, "dru" being French for strong. Not: Rocher des Drus.

Drury Nunatak 69°14'S, 156°58'E

A bare, black, isolated nunatak standing up boldly from the ice at the head of Lauritzen Bay, 1.5 mi NW of Reynolds Peak. The feature was observed and charted on Feb. 20, 1959 by ANARE (*Magga Dan*) led by Phillip Law. Named by ANCA for Alan Campbell-Drury, Photographic Officer of the Antarctic Division who accompanied this expedition.

Drury Ridge 83°39'S, 55°45'W

A mainly snow-covered ridge, 9 mi long, extending W from Nelson Peak in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for David L. Drury, meteorologist at Ellsworth Station summer 1959–60, winter 1961.

Drury Rock 52°56'S, 73°35'E

A rock, about 37 m high, lying 0.3 mi SSE of Shag Island and 6 mi N of Heard Island. This rock, though positioned several miles too far westward, appears to have been first shown on an 1860 sketch map compiled by Capt. H.C. Chester, American sealer operating in the area during this period. It was more accurately charted on an 1874 chart by a British expedition under Nares in the *Challenger*. Surveyed in 1948 by the ANARE, who named it for Alan Campbell-Drury, radio operator and photographer with the party.

Drus, Rocher des: see Dru Rock 66°46'S, 141°35'E

Dryfoose, Mount 84°52'S, 169°56'W

A ridge-type mountain about 2 mi long, with peaks rising above 1,600 m, located 3 mi NE of Mount Daniel astride the ridge descending NE from the S part of Lillie Range. Discovered by the U.S. Ross Ice Shelf Traverse Party (1957–58) under A.P. Crary, and named after Lt. Earl D. Dryfoose, Jr., USNR, pilot of USN Squadron VX-6 during Deep Freeze operations.

Drygalski, Mount 53°02'S, 73°23'E

Ice-free hill, 210 m, standing 0.7 mi SE of Atlas Cove, near the NW end of Heard Island. The feature appears to have been roughly charted on an 1882 sketch map compiled by Ens. Washington I. Chambers aboard the USS *Marion* during the rescue of the shipwrecked crew of the American sealing bark *Trinity*. It was more accurately charted and named by the GerAE in 1902. Prof. Erich von Drygalski, GerAE leader, was a member of the landing party which investigated the area between Rogers Head and the summit of this feature. Not: Drygalski-Fels.

Drygalski Barrier: see Drygalski Ice Tongue 75°24'S, 163°30'E

Drygalski Bay: see Drygalski Glacier 64°43'S, 60°44'W

Drygalski-Fels: see Drygalski, Mount 53°02'S, 73°23'E

Drygalski Fjord 54°49'S, 36°00'W

Bay 1 mi wide which recedes NW 7 mi, entered immediately N of Natriss Head along the SE coast of South Georgia. Charted by the GerAE, 1911–12, under Filchner, and named for Prof. Erich von Drygalski, leader of the German Antarctic Expedition, 1901–03.

Drygalski Glacier 64°43'S, 60°44'W

Broad glacier, 18 mi long, which flows SE from Herbert Plateau through a rectangular re-entrant to a point immediately N of Sentinel Nunatak on the E coast of Graham Land. Discovered in 1902 by the SwedAE, under Nordenskjöld, and named Drygalski Bay after Prof. Erich von Drygalski. The feature was determined to be a glacier by the FIDS in 1947. Not: Drygalski Bay, V. Drygalski Bay.

Drygalski Glacier: see Jenkins Glacier 54°46'S, 36°07'W

Drygalski Glacier Tongue: see Drygalski Ice Tongue 75°24'S, 163°30'E

Drygalski Ice Tongue 75°24'S, 163°30'E

A glacier tongue that is the prominent seaward extension of the David Glacier into the Ross Sea. It ranges from 9 to 15 mi wide and is over 30 mi long. Capt. R.F. Scott, leader of the BrNAE, discovered this feature in January 1902 and named it for Prof. Erich von Drygalski, a contemporary German explorer then in Antarctica. This feature became well established by the name Drygalski Ice Tongue prior to initiation of systematic application of common specific names to a glacier and its glacier tongue. Although this feature is a glacier tongue, the generic term ice tongue has been retained in the name to reduce ambiguity. Not: Drygalski Barrier, Drygalski Glacier Tongue.

Drygalski Island 65°45'S, 92°30'E

A domed, ice-capped island that is 11 mi long and rises to 325 m, lying 45 mi NNE of Cape Filchner. Viewed from the continental coast in November 1912 by members of the Western Base Party of the AAE, and observed more closely from the *Aurora* on the homeward journey in January 1914. Thought to be "Drygalski's High Land," charted by Prof. Erich von Drygalski of the GerAE in 1902, his name was given to the island.

Drygalski Mountains 71°45'S, 8°15'E

A group of scattered mountains and nunataks lying between the Filchner Mountains and Kurze Mountains in the Orvin Mountains of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938–39, and named for Prof. Erich von Drygalski, leader of the GerAE of 1901–03. Remapped from air photos and survey by NorAE, 1956–60.

Drying Point 60°43'S, 45°37'W

Point on the SW side of Borge Bay, lying 0.2 mi NW of Mooring Point on the E side of Signy Island, in the South Orkney Islands. The name appears on a chart based upon a 1927 survey of Borge Bay by DI personnel on the *Discovery*.

Dry Valley: see Taylor Valley 77°37'S, 163°00'E

Dry Valleys: see McMurdo Dry Valleys 77°30'S, 162°00'E

Dry Valleys Region: see McMurdo Dry Valleys 77°30'S, 162°00'E

DuBeau Glacier 66°23'S, 106°27'E

A channel glacier flowing to the Antarctic coast 18 mi W of Merritt Island. Mapped (1955) by G.D. Blodgett from air photos taken by USN Operation Highjump (1947). Named by US-ACAN for Earl P. DuBeau, photo interpreter with USN Operation Windmill (1947–48), who assisted in establishing astronomical control stations along Queen Mary, Knox and Budd Coasts.

Dublitskiy Bay 70°05'S, 7°45'E

A bay 12 mi wide indenting the ice shelf fringing the coast of Queen Maud Land. The bay lies 70 mi N of Sigurd Knolls. The feature was photographed from the air by NorAE in 1958–59 and mapped from these photos. It was also mapped in 1961 by the SovAE and named for K.A. Dublitskiy, former captain of the icebreaker *Litke*. Not: Zaliv Dublitskogo.

Dublitskogo, Zaliv: see Dublitskiy Bay 70°05'S, 7°45'E

DuBois Island 66°16'S, 67°10'W

One of the Biscoe Islands, lying 1 mi W of Krogh Island near the S end of the chain. Mapped from air photos by FIDASE

(1956–57). Named by UK-APC for Eugene F. DuBois, American physiologist who has specialized in the measurement of basic metabolism and studies in the regulation of body temperature in man.

Dubouzet, Cape 63°16'S, 57°03'W

Cape which marks the NE extremity of Antarctic Peninsula. Charted in 1838 by a French expedition under Capt. Jules Dumont d'Urville, who named it for Lt. Joseph Dubouzet of the expedition ship *Zélée*.

DuBridge Range 71°30'S, 168°53'E

A mountain range over 20 mi long in the Admiralty Mountains. The range trends SW-NE. between Pitkevitch Glacier and Shipley Glacier and terminates at the N coast of Victoria Land just W of Flat Island. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Lee DuBridge, member of the National Science Board for several years, Science Advisor to the President of the United States, 1969–70.

Dubris Valley 80°00'S, 155°28'E

A narrow ice-free valley just E of Danum Platform in northern Britannia Range. Named in association with Britannia by a University of Waikato (N.Z.) geological party, 1978–79, led by M.J. Selby. Dubris is a historical name used in Roman Britain for a stream at Dover.

Duce Bay: see Duse Bay 63°32'S, 57°15'W

Duchaylard Island 65°42'S, 65°07'W

Island 3 mi long at the W side of Grandidier Channel, lying 1 mi SE of Vieugué Island and 10 mi W of Cape Garcia, off the W coast of Graham Land. Discovered by the FrAE, 1903–05, and named by Charcot for Monsieur du Chaylard, French Minister Plenipotentiary at Montevideo, Uruguay. The recommended spelling follows the form used in Bongrain's report of 1914 and is now firmly established. Not: Ile du Chaylard.

Duclaux Point 64°04'S, 62°15'W

Point extending into Bouquet Bay from the E side of Pasteur Peninsula, 3 mi SE of Cape Cockburn on Brabant Island in the Palmer Archipelago. First charted by the FrAE, 1903–05, and named by Charcot for Pierre E. Duclaux, French biochemist, director of the Pasteur Institute in Paris (1895).

Ducloy Head: see Ducloz Head 54°31'S, 36°39'W

Ducloz Head 54°31'S, 36°39'W

Headland which forms the NW side of the entrance to Undine South Harbor on the S coast of South Georgia. First charted in 1819 by a Russian expedition under Bellingshausen. Named by the UK-APC, following a survey by the SGS, 1951–52, for Le Sieur Ducloz Guyot, a passenger in the Spanish vessel *Leon*, which sighted South Georgia in 1756. Not: Ducloy Head.

Ducorps, Cape 63°23'S, 58°09'W

A point marking the N end of Cockerell Peninsula on the N coast of Trinity Peninsula. Discovered by a French expedition, 1837–40, under Capt. Jules Dumont d'Urville, and named by him for Louis Ducorps, a member of the expedition.

Dudley, Mount 68°16'S, 66°30'W

Mountain over 1,375 m, standing at the head of Neny Fjord and bounded on the N and E sides by Neny Glacier, on the W coast of

Graham Land. The W side of this mountain was first roughly surveyed in 1936 by the BGLE under Rymill. It was surveyed in entirety in 1940 by the USAS. The feature was photographed from the air and ground by the RARE, 1947–48, under Ronne, who named it for Harold M. Dudley, executive secretary of the American Council of Commercial Laboratories, Inc., Washington, DC, who procured various types of equipment and arranged financial aid for RARE.

Dudley, Mount: see Dudley Head 84°18'S, 172°15'E

Dudley Head 84°18'S, 172°15'E

A snow-covered, prominent ridge projecting into the E side of Beardmore Glacier, surmounted by several domes rising to 2,540 m, about 5 mi S of Mount Patrick. Discovered and named by the BrAE (1907–09), and called "Mount Dudley" by Shackleton. The name was amended by US-ACAN in keeping with the appearance of the feature. Not: Mount Dudley.

Dudosa, Bahía: see Doubtful Bay 54°52'S, 36°01'W

Duemler, Cape: see Robinson, Cape 66°52'S, 63°43'W

Duemler, Mount 70°01'S, 63°45'W

Mountain, 2,225 m, rising SW of the head of Anthony Glacier and 11 mi W of Mount Bailey, inland from the E coast of Palmer Land. This feature was first charted by the BGLE under Rymill in 1936–37. It was photographed from the air by the USAS in 1940, and the RARE under Ronne in 1947, and recharted in 1947 by a joint sledge party consisting of members of the RARE and FIDS. Named by Ronne for R.F. Duemler, vice president of the Delaware, Lackawanna and Western Coal Co., New York, which contributed coal to the expedition.

Dufaure, Islas: see Lajarte Islands 64°14'S, 63°24'W

Dufaure de Lajarte Islands: see Lajarte Islands 64°14'S, 63°24'W

Dufayel Island 62°10'S, 58°34'W

Island lying near the center of Ezcurra Inlet, Admiralty Bay, in the South Shetland Islands. Charted and named in December 1909 by the FrAE under Charcot. Not: Haakon Island.

Dufek Coast 84°30'S, 179°00'W

That portion of the coast along the SW margin of the Ross Ice Shelf between Airdrop Peak on the E side of the Beardmore Glacier and Morris Peak on the E side of Liv Glacier. Named by NZ-APC in 1961 after R. Admiral George J. Dufek (1903–77), USN, who served under R. Admiral Richard E. Byrd during USAS, 1939–41, and as commander of the Eastern Task Force of USN Operation Highjump, 1946–47. He was Commander, U.S. Naval Support Force Antarctica, 1954–59, a period in which the following American science stations were established: McMurdo, Little America V, Byrd, South Pole, Wilkes, Hallett and Ellsworth. U.S. Navy ships, aircraft, and personnel under his command provided broad logistical support to research and survey operations, including aerial photographic missions to virtually all sectors of Antarctica. On Oct. 31, 1956, Dufek in the ski-equipped R4D Skytrain aircraft *Que Sera Sera* (pilot Lt. Cdr. Conrad Shinn), flew from McMurdo Sound via Beardmore Glacier to make the first plane landing at the South Pole.

Dufekfjellet: see Dufek Mountain 72°10'S, 24°45'E

Dufek Massif 82°36'S, 52°30'W

A rugged, largely snow-covered massif 27 mi long, standing W of the Forrestal Range in the N part of the Pensacola Mountains. Discovered and photographed on Jan. 13, 1956 on a transcontinental patrol plane flight of U.S. Navy Operation Deep Freeze I from McMurdo Sound to the vicinity of Weddell Sea and return, and named by the US-ACAN for R. Admiral George J. Dufek, USN (Dufek Coast, q.v.), in direct operational command of U.S. Navy Task Force 43 during that operation. The entire Pensacola Mountains were mapped by USGS in 1967 and 1968 from ground surveys and U.S. Navy tricamera aerial photographs taken in 1964. Not: Macizo Santa Teresita, Santa Teresita Range.

Dufek Mountain 72°10'S, 24°45'E

Large mountain rising to 3,150 m, standing 2 mi SW of Mefjell Mountain in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named for R. Admiral George J. Dufek, USN (Dufek Coast, Dufek Massif, q.v.), who had been commander of the Eastern Group of USN Operation Highjump. Not: Dufekfjellet.

Duff Peak 77°47'S, 162°27'E

A peak 1 mi ESE of Sentinel Peak, rising to 1,945 m at the head of Hughes Glacier in Kukri Hills, Victoria Land. Named in 1992 by US-ACAN after Roger S. Duff (d. 1978), for 30 years director of the Canterbury Museum, Christchurch, New Zealand. To celebrate the Museum's centenary in 1970, a Hundredth Anniversary Wing was planned which would incorporate a National Antarctic Exhibition, Research and Reference Center. A landmark of Dr. Duff's administration, the Antarctic wing was opened on March 4, 1977.

Duff Point 62°27'S, 60°02'W

Point forming the W extremity of Greenwich Island, in the South Shetland Islands. The name Duffs Straits was applied to McFarlane Strait by James Weddell in 1820–23, after Capt. Norwich Duff under whom Weddell served in HMS *Espoir* in 1814. The name Duff Point was given by the UK-APC in 1961 in order to preserve Weddell's name in the area; this point forms the NE entrance to McFarlane Strait.

Duffs Straits: see McFarlane Strait 62°32'S, 59°55'W

Duffy Peak 71°45'S, 70°40'W

A peak SE of Hageman Peak in the Staccato Peaks, Alexander Island. The peak was photographed from the air by Lincoln Ellsworth in 1935. Named by US-ACAN for Lt. Cdr. Joseph A. Duffy, USN, aircraft pilot, Squadron VXE-6, OpDFrz, 1969 and 1970.

DuFief, Sierra 64°52'S, 63°28'W

A mountain range 4 mi long with numerous sharp peaks, the highest 1,415 m, extending in a NE-SW direction in the S part of Wiencke Island, in the Palmer Archipelago. Discovered by the BelgAE, 1897–99, and named by Gerlache for Jean DuFief, then general secretary of the Belgian Royal Geographical Society. Not: Fief Mountains.

Dugdale Glacier 71°38'S, 169°50'E

A glacier about 25 mi long, draining NE from the Admiralty Mountains into Robertson Bay on the N coast of Victoria Land. It flows along the W side of Geikie Ridge before coalescing with

Murray Glacier just W of Duke of York Island. Charted by BrAE, 1898–1900, under C.E. Borchgrevink, who named it for Frank Dugdale, Esq., of Snitterfield, Stratford-on-Avon.

Douglas, Gora: see Douglas Peak 66°24'S, 52°28'E

Dugurdspiggen Peak 72°26'S, 2°46'W

An isolated peak about 4 mi N of the Borg Massif in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Dugurdspiggen (the second breakfast peak).

Duke Ernst Bay: see Vahsel Bay 77°49'S, 35°07'W

Duken Flat 73°48'S, 5°10'W

A small, flat, ice-covered area between Urnosa Spur and Framranten Point, near the SW end of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and additional air photos (1958–59), and named Duken.

Duke of York Island 71°38'S, 170°04'E

A mountainous ice-free island, 2.5 mi long, lying in the S part of Robertson Bay, along the N coast of Victoria Land. First charted in 1899 by the BrAE under C.E. Borchgrevink, who named it for the Duke of York.

Dumais, Mount 85°02'S, 64°28'W

A bluff-type mountain, 1,830 m, standing on the SW edge of Mackin Table, 2 mi N of Lekander Nunatak, in southern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Lt. Clarence C. Dumais (MC) USN, officer in charge of South Pole Station, winter 1960.

Dumbbell Island 68°43'S, 67°35'W

Low rocky island lying 1 mi W of Alamode Island in the Terra Firma Islands, off the W coast of Graham Land. The island was surveyed in 1948 by the FIDS, who so named it because of its shape.

Dummett, Mount 73°11'S, 64°01'E

An elongated mountain 11 mi E of Mount McCauley in the southern Prince Charles Mountains. Plotted from air photos taken by ANARE in 1956. Named by ANCA for R.B. Dummett, formerly Managing Director, B.P. Australia Ltd., in recognition of the valuable assistance given to ANARE by the company.

Dumoulin, Iles: see Dumoulin Rocks 63°29'S, 59°46'W

Dumoulin, Islote: see Jurien Island 63°32'S, 59°49'W

Dumoulin Islands 66°37'S, 140°04'E

Small group of rocky islands at the NE end of the Géologie Archipelago, 2.5 mi N of Astrolabe Glacier Tongue. A French expedition under Capt. Jules Dumont d'Urville landed on one of these islands in 1840. The islands were roughly charted by the AAE, 1911–14, under Mawson, who named them after C.A. Vincendon-Dumoulin of the French expedition who conducted observations on terrestrial magnetism in this locality. The group was photographed from the air by USN OpHjp, 1946–47, and recharted by the FrAE under Liotard, 1949–51.

Dumoulin Rocks 63°29'S, 59°46'W

Group of rocks 4 mi NE of Cape Leguillou, the N tip of Tower Island, in the Palmer Archipelago. The French expedition under Capt. Jules Dumont d'Urville, 1837–40, applied the name Iles Dumoulin, for C.A. Vincendon-Dumoulin, hydrographer with the expedition, to a group of small islands in this area. A study of air photos has shown that there are two groups of rocks. The SW group has been named Kendall Rocks and the NE group Dumoulin Rocks. Not: Iles Dumoulin.

Dumoutier, Cape 63°33'S, 59°46'W

Point which forms the E tip of Tower Island, at the NE end of Palmer Archipelago. Named by the French expedition under Capt. Jules Dumont d'Urville, 1837–40, for Pierre Dumoutier, a surgeon with the expedition.

Dunbar Islands 62°29'S, 60°12'W

Group of islands lying SW of Williams Point, off the N coast of Livingston Island in the South Shetland Islands. Named by the UK-APC in 1958 for Thomas Dunbar, Master of the schooner *Free Gift*, one of the fleet of American sealers from Stonington, CT, which visited the South Shetland Islands in 1820–21.

Dunbar Ridge 79°33'S, 84°16'W

A narrow ridge, 10 mi long, which separates the upper reaches of the Balish and Schneider Glaciers in the Heritage Range. Named by the University of Minnesota Geological Party, 1963–64, for Warrant Officer William Dunbar, maintenance officer of the 62nd Transportation Detachment, who aided the party.

Duncan Mountains 85°02'S, 166°00'W

A group of rugged coastal foothills, about 18 mi long, extending from the mouth of Liv Glacier to the mouth of Strom Glacier at the head of Ross Ice Shelf. Discovered by the ByrdAE in November 1929 and named for James Duncan, Manager of Tapley, Ltd., shipping agents for the Byrd expeditions at Dunedin, New Zealand. Not: James Duncan Mountains.

Duncan Peninsula 73°56'S, 119°30'W

An ice-covered peninsula, 30 mi long, which forms the E part of Carney Island, along the coast of Marie Byrd Land. Delineated from aerial photographs taken by USN OpHjp in January 1947. Named by US-ACAN for Admiral Donald B. Duncan, USN (Ret.), Vice Chief of Naval Operations under Admiral Carney during the IGY period of 1957–58.

Dundas, Cape 60°44'S, 44°24'W

Easternmost point of Laurie Island, in the South Orkney Islands. Sighted by Capt. James Weddell on Jan. 12, 1823, and named by him in honor of the illustrious Dundas family.

Dundee Island 63°30'S, 55°55'W

Ice-covered island lying E of the NE tip of Antarctic Peninsula and S of Joinville Island. Discovered on Jan. 8, 1893 by Capt. Thomas Robertson of the *Active* and named for the home port, Dundee, Scotland, from whence the ship sailed in company with three other vessels in search of whales.

Dunedin Range 71°24'S, 167°54'E

A northwest-trending mountain range, 23 mi long and 2 to 4 mi wide, located 5 mi E of Lyttelton Range in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for the city of Dunedin, New Zealand which over the years has had a close association with

Antarctic expeditions; also in recognition of the friendship and cooperation of its citizens with American participation in the U.S. Antarctic Research Program.

Dungane Peaks 72°11'S, 24°09'E

Two peaks, 2,870 m, standing 9 mi W of Dufek Mountain in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Dungane (the heaps).

Dungey, Mount 67°00'S, 51°15'E

Mountain 1 mi W of Pythagoras Peak in the Tula Mountains, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for F.G. Dungey, a member of the crew of the *Discovery* during the BANZARE, 1929–31.

Dun Glacier 77°48'S, 162°14'E

A short, steep tributary to the Ferrar Glacier in Victoria Land. It descends the southern side of Kukri Hills midway between Mount Coates and Sentinel Peak. Named by the Western Journey Party led by Griffith Taylor of the BrAE (1910–13) under Scott.

Dunikowski Ridge 62°09'S, 58°11'W

A ridge trending NW-SE and rising to c. 315 m NE of Legru Bay, King George Island, in the South Shetland Islands. Named following geological work by the Polish Antarctic Expedition, 1977–79, after Xawery Dunikowski (1875–1964), Polish sculptor.

Dunlop, Cape 77°14'S, 163°27'E

Rocky point just W of Dunlop Island on the coast of Victoria Land. First mapped by the BrAE (1907–09) under Shackleton, who named this feature Rocky Point. It has since taken its name from Dunlop Island. Not: Dunlop Point, Rocky Point.

Dunlop Island 77°14'S, 163°30'E

Rocky island, 1 mi long, lying just off the Wilson Piedmont Glacier and the coast of Victoria Land, close NE of Cape Dunlop. First mapped by the BrAE (1907–09) under Shackleton, who named it for H.J.L. Dunlop, chief engineer of the ship *Nimrod*. Not: Terrace Island.

Dunlop Peak 67°57'S, 62°28'E

One of the Smith Peaks, 1,330 m, standing 1 mi S of Mount Hordern in the David Range, Framnes Mountains. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Named by ANCA for R. Dunlop, cosmic ray physicist at Mawson station in 1959.

Dunlop Point: see Dunlop, Cape 77°14'S, 163°27'E

Dunn Glacier 73°36'S, 165°46'E

Steep tributary glacier which drains the NW slopes of Mount Casey and flows N to Icebreaker Glacier, in the Mountaineer Range, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Robert Dunn, USN, commissaryman, McMurdo Station, 1967.

Dunn Spur 86°21'S, 147°22'W

A prominent rock spur which descends from Mount Blackburn and extends for 5 mi along the N side of Van Reeth Glacier, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960–63. Named by US-ACAN for Thomas H. Dunn of USN Squadron VX-6, aircrewman on photographic

aircraft over Antarctica on Operation Deep Freeze 1964, 1966 and 1967.

Duparc Rocks 63°31'S, 58°50'W

A group of rocks between 1 and 2 mi off the coast, 3 mi NE of Cape Roquemaurel, Trinity Peninsula. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Louis Duparc, French naval officer on the *Astrolabe* during her Antarctic voyage (1837–40).

Duperré Bay 64°27'S, 62°41'W

Bay 3 mi long, lying immediately NE of Hulot Peninsula at the SW extremity of Brabant Island, in the Palmer Archipelago. Discovered by the FrAE, 1903–05, under Charcot, who named it for V. Admiral Charles Duperré, French Navy. Not: Bahía Santa Marta, Baie Ch. Duperré, Shackleton Harbour.

Durham, Mount 85°33'S, 151°12'W

A mainly ice-free mountain, 860 m, standing at the E side of the mouth of Scott Glacier and marking the NW limit of the Tapley Mountains in the Queen Maud Mountains. First observed in December 1929 by the ByrdAE geological party under Laurence Gould. The mountain was climbed in December 1934 by the ByrdAE geological party under Quin Blackburn, and was named by Byrd after Durham, NH, seat of the University of New Hampshire and home of Stuart D.L. Paine, a member of the latter party.

Durham Point 85°32'S, 151°12'W

A small rock spur extending N from Mount Durham at the NW end of the Tapley Mountains, in the Queen Maud Mountains. The feature was visited in December 1934 by the ByrdAE geological party under Quin Blackburn, and named in association with Mount Durham.

Durnford, Mount 80°58'S, 158°15'E

A mountain, 2,715 m, standing 5 mi SE of Mount Field in the Churchill Mountains. Discovered and named "Durnford Bluff" by the BrNAE (1901–04), for Admiral Sir John Durnford, a Junior Naval Lord who was of assistance to the expedition. The NZGSAE (1960–61) remapped the feature and amended the name to Mount Durnford. Not: Durnford Bluff.

Durnford Bluff: see Durnford, Mount 80°58'S, 158°15'E

Duroch Islands 63°18'S, 57°54'W

Group of islands and rocks which extend over an area of about 3 mi, centering about 1 mi NW of Cape Legoupil, off the N coast of Trinity Peninsula. Discovered by a French expedition under Capt. Jules Dumont d'Urville, 1837–40, who gave the name "Rocher Duroch" to one of the largest islands in the group. The FIDS, which charted the islands in 1946, recommended that the name Duroch be extended to include the entire group of islands. Named for Ensign Joseph Duroch of d'Urville's expedition ship, the *Astrolabe*. Not: Duroch Rock, Durock Rock.

Duroch Rock: see Duroch Islands 63°18'S, 57°54'W

Durock Rock: see Duroch Islands 63°18'S, 57°54'W

Durrance Inlet 73°50'S, 16°30'W

An ice-filled inlet 10 mi N of Veststraumen Glacier along Princess Martha Coast. The inlet is 5 mi wide, recedes 12 mi, and opens to Riiser-Larsen Ice Shelf. It was plotted by USGS from aerial

photographs obtained by USN Squadron VXE-6 in a Nov. 5, 1967 reconnaissance flight over this coast. Named by US-ACAN for Lt. (j.g.) Frank M. Durrance, Jr., USNR, navigator on that flight.

D'Ursel, Cape: see D'Ursel Point 64°25'S, 62°20'W

D'Ursel Point 64°25'S, 62°20'W

Point which marks the S side of the entrance to Buls Bay on the SE coast of Brabant Island, in the Palmer Archipelago. Discovered by the BelgAE, 1897–99, under Gerlache, and named by him for Count Hippolyte d'Ursel, a supporter of the expedition. Not: Cape D'Ursel.

D'Urville, Monte: see D'Urville Monument 63°25'S, 56°18'W

D'Urville, Mount 63°31'S, 58°11'W

Mountain, 1,085 m, standing close N of the E end of Louis Philippe Plateau on Trinity Peninsula. Discovered by the French expedition, 1837–40, and named for the expedition leader, Capt. (later Admiral) Jules Dumont d'Urville. Not: D'Urville Berg.

D'Urville Berg: see D'Urville, Mount 63°31'S, 58°11'W

D'Urville Island 63°05'S, 56°20'W

Northernmost island of the Joinville Island group, 17 mi long, lying immediately N of Joinville Island, from which it is separated by Larsen Channel. Charted in 1902 by the SwedAE under Nordenskjöld, who named it for Capt. Jules Dumont d'Urville, French explorer who discovered land in the Joinville Island group.

D'Urville Monument 63°25'S, 56°18'W

Conspicuous conical summit, 575 m, at the SW end of Joinville Island, off the NE end of Antarctic Peninsula. Discovered by a British expedition, 1839–43, under Ross, and named by him for Capt. Jules Dumont d'Urville. Not: D'Urville's Monument, Monte D'Urville.

D'Urville's Monument: see D'Urville Monument 63°25'S, 56°18'W

D'Urville Wall 75°16'S, 162°13'E

A great glacier-cut wall of granite which rises to 720 m and forms the N wall of David Glacier near its terminus, in the Prince Albert Mountains of Victoria Land. Discovered by the BrAE, 1907–09, under Shackleton. He named this feature for Admiral Jules Dumont d'Urville.

Duse, Mount 54°16'S, 36°29'W

Conspicuous mountain, 505 m, surmounting King Edward Point on the W side of Cumberland East Bay, South Georgia. Charted in 1902 by Lt. S.A. Duse, cartographer of the SwedAE, 1901–04, for whom it is named. Not: Duseberg.

Duse Bay 63°32'S, 57°15'W

Bay indenting the S side of Trinity Peninsula between View Point and the W side of Tabarin Peninsula. Discovered by a party under J. Gunnar Andersson, of the SwedAE, 1901–04. Named by Nordenskjöld, leader of the SwedAE, for Lt. S.A. Duse. Not: Bay of the Thousand Icebergs, Duce Bay, Duses Bukt.

Duseberg, Cap: see Duseberg Buttress 65°10'S, 64°06'W

Duseberg: see Duse, Mount 54°16'S, 36°29'W

Duseberg Buttress 65°10'S, 64°06'W

Conspicuous rocky cone, 500 m, standing at the SW side of Mount Scott on the W coast of Graham Land. Discovered by the BelgAE 1897–99 and named “Cap Duseberg” by Gerlache. Aerial photos show no cape, only a rock buttress, evidently the feature Gerlache intended to name. Not: Cap Duseberg.

Duses Bukt: see Duse Bay 63°32'S, 57°15'W

Dusky Mountains: see Dusky Ridge 80°05'S, 157°02'E

Dusky Ridge 80°05'S, 157°02'E

An ice-free rock ridge, 9 mi long and 2 mi wide, between Lieske and Hinton Glaciers in the Britannia Range. Named “Dusky Mountains” by the Darwin Glacier Party of the CTAE (1956–58) because of the lack of snow on its slopes. The name was amended to Dusky Ridge following remapping of the feature by the USGS from surveys and U.S. Navy air photos, 1960–62. Not: Dusky Mountains.

Dustin Island 72°34'S, 94°50'W

An island about 18 mi long, lying 15 mi SE of Cape Annawan, Thurston Island. The feature forms the SE limit of Seraph Bay. Discovered by R. Admiral Byrd and other members of the USAS in a flight from the *Bear* on Feb. 27, 1940. Named by Byrd for Frederick G. Dustin, member of the ByrdAE, 1933–35, and mechanic with the USAS, 1939–41.

Duthiers Head: see Duthiers Point 64°48'S, 62°49'W

Duthiers Point 64°48'S, 62°49'W

Point forming the S side of the entrance to Andvord Bay on the W coast of Graham Land. Discovered by the BelgAE, 1897–99, under Gerlache, who named it “Cap Lacaze-Duthiers” for Félix Henri de Lacaze-Duthiers (1821–1901), French naturalist and authority on the anatomy of mollusks. Not: Cape Lacaze-Duthiers, Duthiers Head, Punta Canelo.

Duthoit Point 62°19'S, 58°50'W

Point which forms the E tip of Nelson Island, in the South Shetland Islands. The point appears on charts dating back to 1822. It was recharted by DI, 1934–35, and named after Arthur Duthoit, a draftsman in the Admiralty Hydrographic Office at the time. Not: Punta Duthon.

Duthon, Punta: see Duthoit Point 62°19'S, 58°50'W

Du Toit Mountains 72°28'S, 62°11'W

A group of mountains about 35 mi long and 10 mi wide, to the SW of Wilson Mountains in SE Palmer Land. The mountains have peaks rising to 1,700 m and are bounded by Beaumont Glacier, Maury Glacier and Defant Glacier. First photographed from the air by the USAS, 1940; rephotographed by the U.S. Navy, 1966–69, and mapped from the photographs by the USGS. In association with the names of continental drift scientists grouped in this area, named by US-ACAN after Alexander Logie Du Toit (1878–1948), South African geologist, an early proponent of the theory of continental drift.

Du Toit Nunataks 80°43'S, 25°50'W

A group of nunataks between Cornwall Glacier and Glen Glacier, marking the W end of the Read Mountains, Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by the BAS, 1968–71. In association with the names of geologists

grouped in this area, named by the UK-APC after Alexander Logie Du Toit, South African geologist.

Duyvis Point 65°55'S, 64°35'W

Point on the E side of Barilari Bay 11 mi SSE of Cape Garcia, on the W coast of Graham Land. First roughly charted by the BGLE under Rymill, 1934–37. Mapped more accurately by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. Named by the UK-APC for F. Donker Duyvis, Dutch documentalist, secretary of the International Federation for Documentation.

Dvergen Hill 72°13'S, 0°47'E

Small, isolated rock hill about 4 mi N of Fuglefjellet in the Sverdrup Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Dvergen (the dwarf).

Dvořák Ice Rise 71°21'S, 72°46'W

An ice rise 1.5 mi in extent, rising above the ice of Mendelssohn Inlet in the SW part of Alexander Island. First mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by the UK-APC after Antonín Dvořák (1841–1904), Bohemian composer.

Dwyer, Mount 70°11'S, 65°04'E

A mountain 2 mi SE of Mount Dovers in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos. Named for V.J. Dwyer, radio operator at Mawson Station in 1964.

Dwyer, Mount: see Berg Mountains 69°13'S, 156°04'E

Dwyer Escarpment 70°38'S, 165°24'E

Ice-covered escarpment that overlooks the N coast of Victoria Land between Cooper Spur and Cape North. Mapped by ANARE, 1962, which gave the name after L.J. Dwyer, former Director of the Australian Commonwealth Bureau of Meteorology, a member of the ANARE Executive Planning Committee.

Dwyer Nunataks 68°13'S, 58°27'E

A scattered group of low peaks and ridges about 6 mi long and 3 mi wide, lying 2 mi SE of Mount Gjeita in the Hansen Mountains. Plotted from ANARE air photos. Named by ANCA after V. Dwyer, radio officer at Mawson Station in 1964, a member of one of the survey parties which carried out a tellurometer traverse passing through the Hansen Mountains in 1965.

Dybvadskog Peak 79°19'S, 86°21'W

A sharp, somewhat isolated peak, 2,180 m, the westernmost of those rising above the ice surface just W of the S part of Founders Escarpment, in the Heritage Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN after Olav Dybvadskog, Norwegian glaciologist, a member of the USARP South Pole-Queen Maud Land Traverse of 1964–65.

Dyer Island 67°36'S, 62°52'E

Small island between Lee Island and Entrance Island in Holme Bay, Mac. Robertson Land. Plotted from photos taken by ANARE aircraft in 1956. Named by ANCA after R. Dyer, cook at nearby Mawson station in 1960.

Dyer Plateau 70°30'S, 65°00'W

A broad ice-covered upland of north-central Palmer Land, bounded to the N by Fleming Glacier and Bingham Glacier, and to the S by the Gutenko Mountains. The plateau was first explored on land and photographed from the air by the USAS, 1939–41. Named after J. Glenn Dyer, surveyor with the then General Land Office, Dept. of the Interior; leader of the USAS surface party which sledged from Fleming Glacier SE across the plateau to the Welch Mountains; U.S. observer with the ANARE during the 1956–57 season.

Dyer Point 71°52'S, 100°55'W

Ice-covered point just W of Hughes Peninsula on the N coast of Thurston Island. First plotted from air photos taken by USN OpHjp in December 1946. Named by US-ACAN for J.N. Dyer, radio engineer with the ByrdAE in 1933–35.

Dyke, Mount 67°35'S, 49°25'E

Mountain, 1,100 m, standing 3 mi N of Mount Humble in the NE part of the Raggatt Mountains. Plotted from air photos taken by ANARE in 1956. Named by ANCA for Flying Officer G. Dyke, RAAF, pilot at Mawson station in 1960.

Dykeman Point 71°33'S, 75°08'W

Snow-covered point between Rameau Inlet and Verdi Inlet, marking the NW extremity of Pesce Peninsula, Alexander Island. Mapped by USGS from U.S. Navy aerial photographs taken 1967–68 and from Landsat imagery taken 1972–73. Named by US-ACAN for Cdr. Paul R. Dykeman, USN, Commanding Officer, Antarctic Development Squadron Six (VXE-6), from May 1981 to May 1982.

Dykes Peak 77°13'S, 161°01'E

A peak (2,220 m) at the head of Victoria Upper Glacier, 4 mi east of Skew Peak, in the Clare Range of Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1947–62. Named by US-ACAN (1974) for Leonard H. Dykes who was associated for nearly 20 years with the successive Antarctic co-ordinating committees within the U.S. Government.

Dyment Island 74°08'S, 102°02'W

A small island lying 5 mi SW of McKinzie Islands in the inner-central part of Cranton Bay. Mapped by USGS from surveys and USN air photos, 1960–66. Named by US-ACAN after Donald I. Dyment, USN, cook at Byrd Station, 1967.

Dyna Hill 72°22'S, 0°40'E

A hill 2 mi W of Kvithovden Peak in the Sverdrup Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Dyna (the dune).

Dynamite Island 68°11'S, 67°00'W

Small, low, rocky island in Back Bay, lying 0.1 mi E of Stonington Island, off the W coast of Graham Land. First surveyed by the USAS, 1939–41, who referred to it as Petrel Island; a name not approved because it duplicates an existing name in the Antarctic. The name Dynamite Island was proposed by Finn Ronne, leader of RARE, 1947–48. In 1947 it was necessary to dynamite a passage for the *Port of Beaumont, Texas* through the ice to the E of this island. Not: Islote Dinamita, Petrel Island.

Dyrdal Peak 83°25'S, 51°23'W

A peak, 1,820 m, standing at the SW extremity of Saratoga Table, 2 mi WNW of Fierle Peak, in the Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Frederick F. Dyrdal, aviation structural mechanic at Ellsworth Station, winter 1957.

Dzema Peak 85°45'S, 138°00'W

Peak, 2,570 m, standing 5 mi WSW of Mount Ratliff on the N side of Watson Escarpment. Named by US-ACAN for Lt. (jg) John Dzema of USN Squadron VX-6 who was at McMurdo Station the 1962–63 and 1963–64 seasons.

Dzhalil', Mount 72°01'S, 14°36'E

A small mountain, 2,510 m, in the Linnormen Hills of the Payer Mountains, in Queen Maud Land. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Musa Dzhalil', Soviet poet. Not: Gora Musy Dzhalilya.

Dzhonston, Pik: see Johnston Peak 66°16'S, 52°06'E

Dziura Nunatak 71°44'S, 161°15'E

An ice-free nunatak (1,480 m) located 2 mi NW of Mount Remington in the NW extremity of Helliwell Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Charles S. Dziura, USARP meteorologist at South Pole Station, 1967–68.

E

E, Monte: see Aciar, Mount 64°24'S, 62°33'W

Eadie Island 61°28'S, 55°57'W

Island 1 mi long which lies between Aspland and O'Brien Islands, in the South Shetland Islands. The island was charted in February 1821 by a Russian expedition under Bellingshausen, who gave the name "Ostrova Tri Brata" (three brothers islands) for the present Aspland, Eadie and O'Brien Islands. Eadie Island was named by Lt. L.C. Hill, RNR, captain of the *Discovery II*, which engaged in survey work in the area in 1936–37, for the dockyard manager of the Melbourne Harbour Trust of Williamstown, Australia.

Eady Ice Piedmont 78°31'S, 165°20'E

The ice piedmont lying S of Mount Discovery and Minna Bluff, merging at the S side with the Ross Ice Shelf. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1963 for Capt. Jack A. Eady, USN, Chief of Staff to the Commander, U.S. Naval Support Force, Antarctica, from July 1959 to April 1962.

Eagle Cove 63°24'S, 57°00'W

Small cove immediately W of Seal Point along the S side of Hope Bay, at the NE end of Antarctic Peninsula. Discovered by J. Gunnar Andersson's party of the SwedAE, 1901–04, who wintered at Hope Bay in 1903. Named by the FIDS after the ship *Eagle*, which participated in the establishment of the FIDS base at Hope Bay in 1945. Not: Caleta Águila, Caleta Teniente Sabrido.

Eagle Island 63°40'S, 57°29'W

Island 5 mi long and 4 mi wide, rising to 560 m on the NE side. It is the largest island in the archipelago which lies between Trinity Peninsula and Vega Island. Probably first seen by a party under J. Gunnar Andersson of the SwedAE, 1901–04. Eagle Island was charted in 1945 by the FIDS and named after the ship *Eagle*, used by the FIDS. Not: Isla Águila.

Earle Island 63°29'S, 54°47'W

Small island 3 mi SW of Darwin Island and marking the SW end of Danger Islands, q.v. Following work in the area from HMS *Endurance*, 1977–78, was named after Augustus Earle (born c. 1790), artist in HMS *Beagle*, in association with Beagle Island (q.v.) and other names in the group.

Early, Mount 87°04'S, 153°46'W

A solitary volcanic cone (2,720 m) standing 13 mi N of D'Angelo Bluff, on the W side and near the head of Scott Glacier. Discovered in December 1934 from nearby Mount Weaver by the ByrdAE geological party led by Quin Blackburn. Visited by the Ohio State University geological party led by George Doumani on Nov. 21, 1962. Named by US-ACAN after Capt. Neal E. Early, USA, a member of the aviation unit that supported the USGS Topo East survey of this area, 1962–63.

Early Bluff 75°13'S, 113°57'W

A high bluff on the S side of Kohler Range in Marie Byrd Land. It stands at the E side of Kohler Glacier at the point where this distributary drains northward from Smith Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named

by US-ACAN after Thomas O. Early, USARP geologist with the Marie Byrd Land Survey Party, 1966–67.

Early Islands 73°40'S, 101°40'W

Group of small islands lying just W of Cosgrove Ice Shelf in the SE corner of Ferrero Bay, Amundsen Sea. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960–66. Named by US-ACAN for Tommy Joe Early, biologist with the Ellsworth Land Survey, 1968–69.

Earnshaw Glacier 68°45'S, 65°11'W

A glacier 10 mi long, flowing northward to the east of Norwood Scarp and entering Maitland Glacier to the south of Werner Peak, in eastern Antarctic Peninsula. Photographed from the air by the USAS on Sept. 28, 1940. Surveyed by the FIDS in Jan. 1961. Named by UK-APC after Thomas Earnshaw (1749–1829), English watchmaker who made innovations leading to the modern marine chronometer.

Earp, Mount: see Wyatt Earp, Mount 77°34'S, 86°25'W

Easson, Cape: see Little, Cape 74°05'S, 61°04'W

East Antarctica 80°00'S, 80°00'E

One of the two major regions of Antarctica, lying on the Indian Ocean side of the Transantarctic Mountains and comprising Coats Land, Queen Maud Land, Enderby Land, Mac. Robertson Land, Wilkes Land and Victoria Land. All but a small portion of this region lies within the Eastern Hemisphere, a fact that has suggested the name. The name has been in existence more than 90 years (Balch, 1902; Nordenskjöld, 1905), but its greatest use followed the International Geophysical Year (1957–58) and explorations disclosing that the Transantarctic Mountains provide a useful regional separation of East Antarctica and West Antarctica. The name was approved by US-ACAN in 1962. Not: Greater Antarctica.

East Arm 67°36'S, 62°53'E

Rock mass forming the eastern limit of Horseshoe Harbor in Holme Bay, Mac. Robertson Land. Roughly mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Rephotographed by USN OpHjp, 1946–47. First visited by an ANARE party on Feb. 5, 1954. Named by ANARE.

East Balch Glacier: see Balch Glacier 66°50'S, 64°48'W

East Bay 54°04'S, 37°09'W

Bay, 0.5 mi wide, indenting the east portion of Prince Olav Harbor, South Georgia. The name, which is descriptive of position, was given by a British expedition under Shackleton which visited South Georgia in 1921–22.

East Bay: see Cumberland East Bay 54°17'S, 36°26'W

East Beacon 77°50'S, 160°52'E

The prominent eastern peak, rising to 2,265 m in Beacon Heights (q.v.), in the Quartermain Mountains, Victoria Land. Named East Beacon by the NZGSAE, 1958–59.

East Budd Island 67°35'S, 62°51'E

The eastern of two larger islands at the N end of the Flat Islands in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, who named the northern islands Flatøy-nålane (the flat island needles). This island was named by ANCA for Dr. G.M. Budd, medical officer at Mawson Station in 1959.

East Cape 60°38'S, 45°11'W

Cape 1.4 mi SE of Cape Bennett on the N coast of Coronation Island, in the South Orkney Islands. Discovered and roughly charted in the course of the joint cruise by Capt. George Powell and Capt. Nathaniel Palmer in December 1821. Named by DI personnel on the *Discovery II* who charted the South Orkney Islands in 1933. It is the easternmost cape on the N coast of Coronation Island.

East Commonwealth Range: see Separation Range 84°05'S, 174°00'E

East Cumberland Bay: see Cumberland East Bay 54°17'S, 36°26'W

East Egerton 80°50'S, 158°06'E

A prominent peak, 2,815 m, rising 2 mi east of Mount Egerton in the Churchill Mountains. Mapped by the NZGSAE (1960–61) and named in association with Mount Egerton.

Eastern Ice Sheet: see Cuthbertson Snowfield 60°42'S, 44°30'W

Eastern Plain: see Polar Subglacial Basin 85°00'S, 110°00'E

Eastface Nunatak 78°42'S, 163°38'E

A small nunatak about 11 mi S of Mount Morning in Victoria Land. It is ice covered with a conspicuous rock face on the east side. Mapped by USGS from ground surveys and Navy air photos. Given this descriptive name by US-ACAN in 1963.

East Fork: see Ferrar Glacier 77°46'S, 163°00'E

East Gould Glacier: see Gould Glacier 66°47'S, 64°39'W

East Groin 77°39'S, 160°57'E

Narrow rock spur that forms the east wall of Flory Cirque on the south side of Asgard Range, Victoria Land. The descriptive name was given by US-ACAN in 1976 and is in association with the nearby West Groin, named by the BrAE (1910–13) under Capt. Robert F. Scott.

Eastman, Mount 65°10'S, 62°59'W

Mountain overlooking the head of Flandres Bay, 4 mi S of Pelletan Point on the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for George Eastman (1854–1932), American inventor, manufacturer and philanthropist who, with W.H. Walker, produced the first practicable photographic rollfilm camera (Kodak) in 1888.

East Melchior Islands 64°19'S, 62°55'W

A group of small ice-covered islands and rocks which lie E of The Sound in the Melchior Islands, Palmer Archipelago. The islands W of The Sound are called West Melchior Islands. The name was probably given by DI personnel who roughly charted these islands in 1927. The islands were surveyed by Argentine expeditions in 1942, 1943 and 1948.

East Ongul Island 69°01'S, 39°35'E

An island, 1 mi long, lying immediately E of the N part of Ongul Island at the E side of the entrance of Lützw-Holm Bay. This island was originally mapped as a part of Ongul Island by Norwegian cartographers who worked from air photos taken by the Lars Christensen Expedition, 1936–37. A strait separating this island from Ongul Island was discovered in 1957 by the JARE. They named this small island for its position with relation to Ongul Island.

East Perrier Bay: see Perrier Bay 64°23'S, 63°45'W

East Point 54°11'S, 36°32'W

A point between Jason Harbor and Allen Bay in Cumberland West Bay, South Georgia. The point was charted and probably named by DI between 1926–29.

East Quartzite Range 72°00'S, 165°05'E

A range, 12 mi long, forming a subordinate SW unit of King Range, in the Concord Mountains. It lies 5 mi E of West Quartzite Range. Named by the Northern Party of NZFMCAE, 1962–63, after the distinctive geological formation of the feature.

East Russell Glacier: see Russell East Glacier 63°44'S, 58°20'W

East Skerry 54°15'S, 36°18'W

Small group of islands and rocks forming the E part of Skrap Skerries, lying 2 mi NW of Cape George, off the N coast of South Georgia. The name was applied in the period 1926–30 by DI personnel who charted these islands. Not: East Skrapskjar, Skerry Este.

East Skrapskjar: see East Skerry 54°15'S, 36°18'W

East Stack 67°05'S, 58°12'E

A coastal rock outcrop which rises to 60 m on the E side of Hoseason Glacier, 16 mi SE of Edward VIII Bay. Discovered in February 1936 by DI personnel on the *Willam Scoresby*, and probably so named by them for its distinctive appearance and association with nearby West Stack. Not: Austskotet.

Eastwind Ridge 76°36'S, 160°47'W

A broad, partially ice-covered ridge about 10 mi long between the Chattahoochee and Towle Glaciers in the Convoy Range. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1964 for the USCGC *Eastwind*, an icebreaker in several American convoys into McMurdo Sound since the 1958–59 season.

Eather, Mount 70°29'S, 65°50'E

A mountain about 2 mi S of Martin Massif in the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos. Named for R.H. Eather, auroral physicist at Mawson Station in 1963.

Eaton Nunatak 75°10'S, 72°00'W

A prominent nunatak marking the SE extremity of the Merrick Mountains, in Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for John W. Eaton, aurora scientist at Eights Station in 1963.

Ebano, Muralla de: see Ebony Wall 63°55'S, 59°09'W

Ebba Glacier: see Liotard Glacier 66°37'S, 139°30'E

Ebbe Glacier 71°03'S, 164°45'E

A tributary glacier about 60 mi long, draining NW from the Homerun Range and Robinson Heights, and then WNW between Everett Range and Anare Mountains into Lillie Glacier. This feature saddles with Tucker Glacier, the latter draining SE to the Ross Sea. Mapped by USGS from surveys and air photos by USN Squadron VX-6, 1960–62. Named by US-ACAN for Cdr. Gordon K. Ebbe, commanding officer of Squadron VX-6 from June 1955 to June 1956.

Eblen Hills 85°51'S, 133°28'W

A cluster of precipitous rock hills, 1,640 m, rising just N of the mouth of Colorado Glacier where the latter enters the W side of Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for James C. Eblen, aviation machinist with the McMurdo Station winter party of 1959, a participant in several USN Deep Freeze expeditions.

Ebon Pond 77°11'S, 165°11'E

A pond located in the SW extremity of Brown Peninsula in Victoria Land. First studied on the ground by U.S. geologist Troy L. Péwé during USN OpDFrz, 1957–58. So named by him because of the black volcanic terrain which entirely surrounds the pond.

Ebony Ridge 83°46'S, 172°46'E

A coastal ridge 5 mi long between Airdrop Peak and Mount Robert Scott at the N end of the Commonwealth Range. It consists of dark metamorphosed greywacke contrasting sharply with the predominant brown ochre of the weathered surface of the granitic intrusions forming nearby Mounts Kyffin and Harcourt. Descriptively named by the N.Z. Alpine Club Antarctic Expedition, 1959–60.

Ebony Wall 63°55'S, 59°09'W

A dark, nearly vertical rock wall which rises about 400 m at the head of Pettus Glacier. The wall is about 2 mi long and forms a part of the W escarpment of Detroit Plateau near the base of Trinity Peninsula. Charted in 1948 by FIDS who applied the descriptive name. Not: Muralla de Ebano.

Echeverría, Puerto: see New Plymouth 62°37'S, 61°12'W

Echo Mountain 60°37'S, 45°41'W

Conspicuous mountain, 790 m, surmounting the W side of Laws Glacier close N of Cragman Peaks on Coronation Island, in the South Orkney Islands. Surveyed in 1948–49 by the FIDS, and so named by them because of the remarkable echoing noted in this part of Laws Glacier.

Echo Pass 54°17'S, 36°33'W

Pass, 305 m in elevation, lying 1.5 mi SW of Grytviken, South Georgia, in the chain of mountains which extends SW from Mount Hodges. The pass provides a ski route from the station at Grytviken to the head of Cumberland West Bay. The name is used on the chart of a German expedition 1928–29, under Kohl-Larsen, who states that the name was already in use by whalers.

Eckener Point 64°26'S, 61°36'W

Point marking the NE side of the entrance to Charlotte Bay, on the W coast of Graham Land. First roughly charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for Hugo Eckener (1868–1954), German pioneer of airship aviation, president of Aeroarctic, an international society for exploration of

the Arctic with airships, 1929–37, who piloted the *Graf Zeppelin* for more than 600 flights including a major Arctic flight in 1931.

Eckhörner Peaks 71°31'S, 11°27'E

A series of about six peaks that form the N wall of Schüssel Cirque, in the north-central Humboldt Mountains of Queen Maud Land. Discovered and given the descriptive name Eck-Hörner (corner peaks) by the GerAE, 1938–39, under Ritscher. Not: Hjörnehorna.

Eckins Nunatak 85°07'S, 175°51'W

A small, isolated nunatak lying 5 mi NE of Matador Mountain, in the E part of Shackleton Glacier. Named by US-ACAN for Henry J. Eckins, USARP meteorologist at South Pole Station, winter 1961.

Eckman Bluff 74°47'S, 110°22'W

An angular bluff, mostly ice covered but with a steep SE rock face, rising to c. 350 m in the S part of Jones Bluffs, Bear Peninsula, on the Walgreen Coast, Marie Byrd Land. Mapped by USGS from surveys and USN aerial photographs taken 1966. Named by US-ACAN after Cdr. James F. Eckman, USCG, Engineer Officer on USCGC *Burton Island*, 1970–71; (Executive Officer, 1975–76); Ship Operations Officer on the staff of the Commander, Naval Support Force, Antarctica, 1977–78 and 1978–79.

Eclipse Glacier 54°23'S, 36°50'W

Glacier flowing SW into the N part of Jacobsen Bight on the S coast of South Georgia. So named by the British South Georgia Expedition, 1954–55, led by George A. Sutton.

Eclipse Point: see Aguda Point 65°02'S, 63°41'W

Eddy Col 63°26'S, 57°06'W

A steep-sided rocky col between Mount Taylor and Blade Ridge, 1.5 mi SW of the head of Hope Bay on Trinity Peninsula. Surveyed in 1955 by the FIDS, who applied the descriptive name; the wind direction varies continually in this col.

Eddy Point 62°14'S, 58°59'W

Small point on the S side of Fildes Peninsula, 0.5 mi W of Halfthree Point on King George Island, in the South Shetland Islands. Charted and named by DI personnel on the *Discovery II* in 1935. The feature is used as a reference point for locating the rocks which lie along the route of boats passing through Fildes Strait.

Eddystone Rocks 62°36'S, 61°23'W

Group of rocks lying 4.5 mi WSW of Start Point, Livingston Island, in the South Shetland Islands. The name dates back to about 1822 and is now established in international usage.

Eden Glacier 66°12'S, 63°15'W

Glacier 5 mi long, which flows in a southerly direction into the head of Cabinet Inlet, NW of Lyttelton Ridge, on the E coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE in 1947. Named by the FIDS for Rt. Hon. Robert Anthony Eden, M.P., then British Secretary of State for Foreign Affairs and member of the War Cabinet.

Eden Island: see Eden Rocks 63°29'S, 55°40'W

Eden Rocks 63°29'S, 55°40'W

Two rocks lying just off the E end of Dundee Island, off the N end of Antarctic Peninsula. A small island was reported here by Capt.

James Ross, RN, on Dec. 30, 1842. He named it "Eden Island" for Capt. Charles Eden, RN. Following survey by FIDS in 1953, it was reported that the feature consists of two rocks lying close together. Not: Bass Rock, Eden Island, Islotes Dos Lomos.

E. de Rothschild Island: see Rothschild Island 69°25'S, 72°30'W

Edge Glacier 82°29'S, 51°07'W

A small cliff-type glacier draining northward into Davis Valley in northeast Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Joseph L. Edge, photographer with USN Squadron VX-6 on Operation Deep Freeze 1963 and 1964.

Edge Hill: see Tranchant, Mount 65°14'S, 64°05'W

Edgell, Mount 69°26'S, 68°16'W

Mountain, 1,675 m, rising eastward of Cape Jeremy, the E side of the N entrance to George VI Sound, on the W coast of Antarctic Peninsula. Discovered by the FrAE under Charcot, 1908–10. Seen from a great distance and thought to be an island, he named it "Ile Gordon Bennett" for James Gordon Bennett (1841–1918) of the *New York Herald*, who gave financial aid to the expedition. The BGLE under Rymill, surveying this area in 1936–37 and finding no island, applied the name Mount Edgell to the feature now recognized as Charcot's "Ile Gordon Bennett." The name Mount Edgell, after Sir John Augustine Edgell, Hydrographer of the British Navy, 1932–45, has since become established through international usage. Not: Ile Gordon Bennett, Monte Gordon Bennet.

Edgell Bay 62°16'S, 58°59'W

Bay 1.5 mi long and wide, indenting the NE side of Nelson Island, in the South Shetland Islands. This bay appears in rough outline on Powell's chart of the South Shetland Islands published in 1822. It was recharted during 1934–35 by DI personnel on the *Discovery II* who named it for V. Admiral Sir John Augustine Edgell, RN. Not: Bahía Don Samuel.

Edge Rocks 83°59'S, 52°55'W

Two rock exposures at the SE margin of Iroquois Plateau, 11 mi E of Hill Nunatak, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Given this name by US-ACAN because of their fringe position with relation to Iroquois Plateau.

Edgeworth Glacier 64°23'S, 59°55'W

A glacier 12 mi long, flowing SW from the edge of Detroit Plateau below Wolseley Buttress to the ice shelf W of Sobral Peninsula, Graham Land. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Richard L. Edgeworth (1744–1817), English inventor of the "portable railway," the first track-laying vehicle, in 1770.

Edholm Point 66°15'S, 67°04'W

The northwestern point of Krogh Island, Biscoe Islands. Mapped from air photos by FIDASE (1956–57). Named by UK-APC for Otto G. Edholm, British physiologist, Head of the Division of Human Physiology of the National Institute for Medical Research since its foundation in 1949, who has specialized in studies of the effects of cold on man.

Edimburgo, Cerro: see Edinburgh Hill 62°33'S, 60°01'W

Edinburgh Hill 62°33'S, 60°01'W

Conspicuous volcanic knob forming the N side of the entrance to Moon Bay in the E part of Livingston Island, in the South Shetland Islands. Photographed and named by Scottish geologist David Ferguson in 1913–14. The feature was renamed High Point in 1935 by DI personnel on the *Discovery II* but the original name has been approved. Not: Cerro Edimburgo, High Point, Punta Alta.

Edisto Bay: see Edisto Inlet 72°20'S, 170°05'E

Edisto Channel 66°05'S, 100°50'E

Channel, whose S end is filled by Edisto Ice Tongue. It extends in a NE-SW direction between the Taylor Islands and the NW islands of the Highjump Archipelago on the W, and the Bunger Hills, Thomas Island, and the remaining islands in the Highjump Archipelago on the east. Delineated from aerial photographs taken by USN OpHjp, 1946–47, and named by the US-ACAN for the USS *Edisto*, one of the two icebreakers of USN OpWml, 1947–48, which assisted in establishing astronomical control stations along Wilhelm II, Queen Mary, Knox and Budd Coasts.

Edisto Glacier 72°27'S, 169°53'E

Glacier flowing NE between Felsite Island and Redcastle Ridge into the head of Edisto Inlet. Named by the NZGSAE, 1957–58, for the USS *Edisto*, first vessel to visit the Edisto Inlet area.

Edisto Ice Tongue 66°10'S, 100°40'E

An ice tongue along the northwest margin of Bunger Hills where it occupies the southwestern portion of Edisto Channel, in the Highjump Archipelago. The ice tongue is a seaward extension of the flow of Apfel Glacier as well as part of the main flow of Scott Glacier. Mapped from air photos taken by USN Operation Highjump, 1946–47. Named by US-ACAN in association with Edisto Channel.

Edisto Inlet 72°20'S, 170°05'E

Rectangular arm of Moubray Bay, 7 mi long and 3 mi wide, entered between Cape Hallett and Cape Christie. The USS *Edisto* (Cdr. Roger W. Luther) was the first ship to enter this branch of Moubray Bay in February 1956, and the name Edisto Bay was given at that time. Edisto Inlet has overtaken the earlier name in usage. Not: Edisto Bay.

Edisto Rock: see Edisto Rocks 68°13'S, 67°08'W

Edisto Rocks 68°13'S, 67°08'W

Low rocks 1.2 mi SW of the W tip of Neny Island, lying in Marguerite Bay off the W coast of Graham Land. Surveyed in 1947 by the FIDS and named for the USS *Edisto*, icebreaker with USN OpWml, which visited Marguerite Bay in February 1948 and assisted in the relief of the RARE and FIDS parties on Stonington Island. Not: Edisto Rock.

Edith, Bahía: see Eyrie Bay 63°35'S, 57°38'W

Edith Ronne Ice Shelf: see Ronne Ice Shelf 78°30'S, 61°00'W

Edith Ronne Land: see Ronne Ice Shelf 78°30'S, 61°00'W

Edixon, Mount 71°49'S, 163°35'E

A mountain, 2,080 m, located 6 mi SE of Bowers Peak in the Lanterman Range, Bowers Mountains. Named by the northern party of NZGSAE, 1963–64, for Lt. James R. Edixon, pilot with USN Squadron VX-6, who, with considerable willingness and skill, was responsible for the expedition's air support.

Edlin Névé 71°10'S, 163°06'E

A névé at the S side of Mount Sturm in the Bowers Mountains. Several glaciers, including the Carryer, Irwin, McLin and Grave-son, are nourished by this névé. Named by NZGSAE, 1967–68, for G. Edlin, who served as postmaster at Scott Base and assisted in the field during this expedition.

Edman Island 66°18'S, 110°32'E

Island near the center of O'Brien Bay, Budd Coast. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Donald H. Edman, ionospheric scientist and member of the Wilkes Station party of 1958.

Edmonson Point 74°20'S, 165°08'E

A rounded, largely ice-free point lying below Mount Melbourne along the W side of Wood Bay, Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for Larry D. Edmonson, satellite geodesy scientist at McMurdo Station, winter party 1966.

Edred, Mount 70°35'S, 69°00'W

Prominent ice-covered mountain, 2,195 m, which stands 10 mi inland from George VI Sound and marks the S limit of Douglas Range on Alexander Island. First photographed from the air on Nov. 23, 1935 by Lincoln Ellsworth and mapped from these photos by W.L.G. Joerg. Its E side was roughly surveyed in 1936 by the BGLE and resurveyed in 1949 by the FIDS. Named by the FIDS for Edred, Saxon king of England, 946–955. The W face of the mountain was mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960.

Edsel Ford Mountains: see Ford Ranges 77°00'S, 144°00'W

Edsel Ford Ranges: see Ford Ranges 77°00'S, 144°00'W

Edson Hills 79°50'S, 83°39'W

A group of mainly ice-free hills lying S of Drake Icefall and W of Union Glacier in the Heritage Range, Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party, 1962–63, for Dean T. Edson, USGS topographic engineer with the party.

Edvind Astrup, Cap: see Astrup, Cape 64°43'S, 63°11'W

Edward, Mount 75°12'S, 69°33'W

A prominent rock mountain (1,635 m) located centrally along the S margin of the Sweeney Mountains, in eastern Ellsworth Land. Discovered by the RARE, 1947–48, under Ronne, who named this summit for Cdr. Edward C. Sweeney, USNR, a contributor to the expedition.

Edward Cove: see King Edward Cove 54°17'S, 36°30'W

Edward Point: see King Edward Point 54°17'S, 36°30'W

Edward Ridge 67°15'S, 55°34'E

Gently rising, snow-covered ridge standing 13 mi NW of Rayner Peak in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1959. Named by ANCA for Edward Nash, aircraft mechanic with the ANARE (*Nella Dan*), under Phillip Law in 1965.

Edwards, Mount 76°51'S, 144°07'W

A mountain 5 mi ESE of Morris Peak in the Denfeld Mountains of the Ford Ranges, Marie Byrd Land. Mapped by the USAS (1939–41) led by R. Admiral R.E. Byrd. Named for Leroy P.

Edwards who acted as financial advisor to Admiral Byrd with regard to funds for the early Byrd expeditions.

Edwards Gap 71°15'S, 70°20'W

A pass at c. 500 m through the Walton Mountains (q.v.), southward of Mount McArthur, on Alexander Island. Named by UK-APC for Christopher W. Edwards, BAS geologist at Stonington Island, 1973–75, who mapped this area.

Edwards Glacier 71°35'S, 160°30'E

A glacier draining the E slopes of Daniels Range between Thompson Spur and Schroeder Spur, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Lloyd N. Edwards, USARP geologist at McMurdo Station, 1967–68.

Edwards Island 65°35'S, 64°19'W

The second largest and innermost of the group of islands lying in the entrance to Leroux Bay, off the W coast of Graham Land. Mapped from air photos and surveys by FIDS, 1955–57. Named by UK-APC for Lt. Cecil J.C. Wynne-Edwards, RN, leader of a hydrographic survey unit in the area, 1956–57 and 1957–58.

Edwards Islands 66°51'S, 50°29'E

A group of islands in the E side of Amundsen Bay, about 2.5 mi SW of Mount Oldfield in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for T. Edwards, assistant diesel mechanic at Wilkes station in 1960.

Edwards Islands 73°53'S, 103°08'W

Group of about 20 small islands, mostly ice free, lying off the SW tip of Canisteo Peninsula in Amundsen Sea. Plotted from air photos taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for "Z" "T" Edwards, chief quartermaster on the USS *Glacier* during the USN Bellingshausen Sea Expedition to this area in February 1960.

Edwards Nunatak 70°46'S, 65°42'E

A nunatak with two small rock outliers, lying 2 mi SW of Mount Kizaki in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos. Named by ANCA for D.R. Edwards radio technician at Mawson Station in 1969, who took part in the Prince Charles Mountains Survey in 1969.

Edwards Peninsula 71°55'S, 97°46'W

Ice-covered peninsula about 20 mi long, between Murphy and Koether Inlets on the N side of Thurston Island. Delineated from aerial photographs made by USN OpHjp in December 1946 and by USN Squadron VX-6 in January 1960. Named by US-ACAN for Lt. Donald L. Edwards, navigator of USS *Burton Island* on the USN Bellingshausen Sea Expedition to this area in February 1960.

Edwards Pillar 73°05'S, 66°20'E

A large rock pillar on the western face of Mount Stinear, Prince Charles Mountains. The feature is in the vicinity of a geodetic survey station established by the ANARE Prince Charles Mountains survey party in 1971. Named for N.F. Edwards, a surveyor with the party.

Edwards Point 62°29'S, 59°30'W

Point which marks the S extremity of Robert Island, in the South Shetland Islands. Charted in 1935 by DI personnel on the *Discovery II* but the name appears to be first used on a 1948 Admiralty chart based upon this survey. Not: Punta Prat.

Edwards Spur 75°59'S, 135°18'W

A spur with a small rock exposure along its crest, located on the lower NW slopes of Mount Moulton in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Alvah G. Edwards, CD1, USN, Construction Driver with the Army-Navy Trail Party that traversed eastward from Little America V to establish Byrd Station in 1956.

Edward VIII Bay 66°50'S, 57°00'E

Bay about 20 mi in extent, entered between Edward VIII Plateau and the Øygarden Group. Discovered in 1936 by DI personnel on the *William Scoresby*, and named for Edward VIII, then King of England. Not: Edward VIII Gulf, King Edward VIII Gulf.

Edward VIII Gulf: see Edward VIII Bay 66°50'S, 57°00'E

Edward VIII Ice Shelf 66°50'S, 56°33'E

An ice shelf occupying the head of Edward VIII Bay. The northern part of this feature was called Innviksletta (the inner bay plain) by Norwegian cartographers, who mapped it from aerial photos taken by the Lars Christensen Expedition, 1936–37. The area was first visited in 1954 by an ANARE sledge party. The entire ice shelf was then mapped and named in association with Edward VIII Bay. Not: Innviksletta, King Edward Ice Shelf, King Edward VIII Ice Shelf.

Edward VIII Plateau 66°35'S, 56°50'E

A dome-shaped, ice-covered peninsula between Magnet Bay and Edward VIII Bay. Probably seen by personnel on the *William Scoresby* in 1936. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37, and named Gulfplataet (the gulf plateau). It was renamed King Edward Plateau by ANCA, but the form Edward VIII Plateau has been approved by the US-ACAN to be consistent with the names of nearby Edward VIII Bay and Ice Shelf. Not: Gulfplåtæt, King Edward Plateau.

Edward VII Peninsula 77°40'S, 155°00'W

A large ice-covered peninsula which forms the NW extremity of Marie Byrd Land and projects into the Ross Sea between Sulzberger Bay and the NE corner of the Ross Ice Shelf. Discovered on Jan. 30, 1902, by the BrNAE under Scott, who named it King Edward VII Land for the King of England. Its peninsular character was determined by exploration conducted by the ByrdAE (1933–35) and the USAS (1939–41). Not: King Edward VII Land, King Edward VII Peninsula, Kong Edward VII Land, König Edward VII Land.

E. Fournier, Baie: see Fournier Bay 64°31'S, 63°06'W

Efrain, Monte: see Ephraim Bluff 62°34'S, 59°43'W

Egbert, Mount 69°57'S, 69°37'W

Mainly ice-covered mountain, 2,895 m, 8 mi SSE of Mount Stephenson in the Douglas Range of Alexander Island. Possibly first seen in 1909 by the FrAE under Charcot, but not recognized as a part of Alexander Island. Surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS, who named the mountain for Egbert, Saxon king of England, 802–839.

Ege, Mount 83°34'S, 55°53'W

Mountain, 1,350 m, between Berquist and Drury Ridges in the Neptune Range, Pensacola Mountains. Mapped by USGS from

surveys and USN air photos, 1956–66. Named by US-ACAN for John R. Ege, geologist with the Neptune Range field party, 1963–64.

Egeberg Glacier 71°34'S, 169°50'E

A small glacier between Scott Keltie Glacier and Dugdale Glacier, flowing into the W side of Robertson Bay, Victoria Land. First charted by the BrAE, 1898–1900, under C.E. Borchgrevink, who named it for Consul Westye Egeberg of Christiania (now Oslo), Norway. Not: Westye Egeberg Glacier.

Egerton, Mount 80°50'S, 157°55'E

A mountain, 2,830 m, rising 3 mi NNW of Mount Field in the Churchill Mountains. Discovered by the BrNAE (1901–04) and named for Admiral Sir George Le Clerc Egerton, a member of the Arctic Expedition of 1875–76, one of Scott's advisors for this expedition.

Egg Island 63°41'S, 57°42'W

Circular island 1.5 mi in diameter and 310 m high, lying 1 mi W of Tail Island in the NE part of Prince Gustav Channel. Probably first seen by a party under J. Gunnar Andersson of the SwedAE, 1901–04. It was charted in 1945 by the FIDS, who so named it because of its relative position to Tail, Eagle and Beak Islands. Not: Isla Huevo.

Egilnuten: see Egil Peak 72°24'S, 1°18'E

Egil Peak 72°24'S, 1°18'E

A peak, 2,640 m, at the E side of Isingen Mountain, in the Sverdrup Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59). Named for Egil Rogstad, chief radio operator with the NBSAE. Not: Egilnuten.

E. Gruening, Mount: see Jackson, Mount 71°23'S, 63°22'W

Ehlers Knob 72°34'S, 95°04'W

A small but conspicuous ice-covered knob which surmounts the W part of the N coast of Dustin Island. The knob was photographed from helicopters of the *Burton Island* and *Glacier* on the USN Bellingshausen Sea Expedition in February 1960. It was visited and surveyed by a party from the *Glacier* in February 1961. Named by US-ACAN for Robert C. Ehlers, field assistant at Byrd Station, 1966–67.

Ehrenspeck, Mount 84°46'S, 175°35'W

One of the Cathedral Peaks, a group of summits that form a portion of the wall on the east side of Shackleton Glacier, in the Queen Maud Mountains. This peak (2,090 m) stands 2 mi SW of Mount Kenney. Named by US-ACAN for Helmut Ehrenspeck, geologist with the Ohio State University Party of 1970–71 which geologically mapped this vicinity.

Ehrlich, Mount: see Aciar, Mount 64°24'S, 62°33'W

Eichorst Island 64°47'S, 64°04'W

Small island whose W end is deeply cleft into three parts, giving the appearance of three separate rocks at high tide, lying between Shortcut Island and Surge Rocks off the SW coast of Anvers Island. Named by US-ACAN for Marvin H. (Ike) Eichorst of Glenview, IL, licensed operator of amateur radio station W9RUK

who handled radio traffic between points in the United States and Palmer Station during the period 1964–72.

Eidsgavlen Cliff 71°41'S, 11°42'E

A cliff 1 mi S of Eidshaugane Peaks in the Humboldt Mountains of Queen Maud Land. Discovered and photographed by the GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60, and named Eidsgavlen (the isthmus gable).

Eidshaugane Peaks 71°40'S, 11°46'E

A group of peaks 1 mi N of Eidsgavlen Cliff in the Humboldt Mountains of Queen Maud Land. Discovered and photographed by the GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60, and named Eidshaugane (the isthmus hills).

Eielson, Cape: see Boggs, Cape 70°33'S, 61°23'W

Eielson Peninsula 70°35'S, 61°45'W

Rugged, mainly snow-covered peninsula, 20 mi long in an E-W direction and averaging 10 mi wide, lying between Smith Inlet and Lehrke Inlet on the E coast of Palmer Land. The rocky N wall of this peninsula is probably the feature which, on his flight of Dec. 20, 1928, Sir Hubert Wilkins sighted and named "Cape Eielson" from a position above Stefansson Strait (Wilkins gave the name to the farthest S rock outcrop seen from this position). This rock wall is conspicuous in the aerial photographs of the peninsula taken by members of the USAS in 1940 from an aerial position at the N side of Stefansson Strait. The peninsula is named for Carl B. Eielson, pilot on Wilkins' flight of 1928.

Eigg Rock: see Nigg Rock 60°43'S, 44°51'W

Eights Coast 73°30'S, 96°00'W

That portion of the coast of Antarctica between Cape Waite and Phrogner Point. This coast is bordered by Thurston Island, Abbot Ice Shelf and some islands within the ice shelf. It was sighted by members of the USAS in flights from the ship *Bear* in February 1940. It was mapped in detail by USGS from surveys and U.S. Navy air photos, 1960–66. Named by US-SCAN for James Eights of Albany, NY, geologist on the *Annawan* in 1830, who carried on geologic investigations in the South Shetland Islands, and who cruised westward on the *Annawan*, in company with the *Penguin*, to 103°W. Eights, the earliest American scientist in the Antarctic, discovered the first known fossils in the Antarctic region, a tree section, in the South Shetland Islands. As a result of these investigations Eights, in 1833, published in the *Transactions of the Albany Institute* (Vol. 2) what proved to be remarkably accurate observations and conclusions on the natural phenomena of the region.

Eights Peninsula: see Thurston Island 72°06'S, 99°00'W

Eijkman Point 65°37'S, 64°10'W

The extremity of a rocky spur projecting into Leroux Bay from the W coast of Graham Land, 4 mi SSE of Nuñez Point. First mapped by the BGLE under Rymill 1934–37. Named by the UK-APC in 1959 for Christiaan Eijkman (1858–1930), Dutch biologist, who in 1890–97 first produced experimental beriberi and initiated work on its prevention.

Eilefsen Peak 76°52'S, 146°25'W

A peak in the NE part of Radford Island, lying in Sulzberger Ice Shelf off the coast of Marie Byrd Land. The peak was probably seen on an aerial flight by the ByrdAE (1928–30). Named by

US-ACAN for Albert Eilefsen, driver with the ByrdAE (1933–35).

Eillum Island 60°42'S, 44°51'W

Small island 1.2 mi NW of Route Point, the NW tip of Laurie Island in the South Orkney Islands. It was first seen and roughly charted by Capt. George Powell and Capt. Nathaniel Palmer during their joint cruise in 1821. Recharted in 1903 by the ScotNAE under Dr. William S. Bruce, who named it for his son Eillum. Not: Eillum Island.

Eillum Island: see Eillum Island 60°42'S, 44°51'W

Einstødingane: see Einstøding Islands 67°28'S, 61°41'E

Einstødingen Island 69°39'S, 38°50'E

A lone island lying 10 mi E of Padda Island in southern Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Einstødingen (the hermit) because of its isolated position.

Einstøding Islands 67°28'S, 61°41'E

A group of three small islands, 2 mi N of the Stanton Group off the coast of Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Einstødingane. Not: Einstødingane.

Einthoven Hill 64°14'S, 62°09'W

Hill 3 mi SW of Mitchell Point on the E side of Brabant Island, in the Palmer Archipelago. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for Willem Einthoven (1860–1927), Dutch inventor of the electrocardiograph.

Eisberg Head 75°12'S, 110°27'W

A headland consisting of steep cliffs marked by rocky exposures, located just W of the mouth of Vane Glacier on the coast of Marie Byrd Land. The headland is the N extremity of a mountainous ridge descending from the central part of the Mount Murphy massif Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Cdr. (later Capt.) Harry B. Eisberg, USN, Staff Medical Officer on Operation Highjump, 1946–47.

Eisenhower Range 74°15'S, 162°15'E

A majestic mountain range, about 45 mi long and rising to 3,070 m, which rises between Reeves Névé on the west, Reeves Glacier on the south, and Priestley Glacier on the north and east, in Victoria Land. The range is flat topped and descends gradually to Reeves Névé, but is steep cliffed and marked by sharp spurs along the Priestley Glacier. The range was probably observed by most early expeditions due to its prominence as viewed from the Ross Sea. It was mapped in detail by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for Dwight D. Eisenhower, who was President of the United States in 1954, at the time when the U.S. Navy's Operation Deep Freeze expeditions to Antarctica were initiated.

Eisner Peak 68°50'S, 65°45'W

A peak rising to 1,525 m at the W side of the terminus of Sumner Glacier, 2 mi SSE of Mount Blunt, on the E coast of Antarctic Peninsula. The peak was photographed from the air by the RARE, 1947, and U.S. Navy, 1966, and was surveyed from the ground by

FIDS, 1960–61. Named in 1977 by US-ACAN for Glen Eisner, USARP biologist, Palmer Station, 1975.

Eissinger, Mount 70°02'S, 67°44'W

A large ridge-like mountain at the N side of Riley Glacier on the W side of Palmer Land. The feature has a snow-topped upper surface, bare rock cliffs along the N side, and an impressive rectangular rock buttress rises in an unbroken, near-vertical sweep from the glacier to 500 m at the W end. Mapped by the USGS in 1974. Named by US-ACAN for Karlheinz Eissinger, USGS topographic engineer with the Ellsworth Land Survey party, 1968–69.

Ekblad Glacier 83°04'S, 167°17'E

A glacier, 8 mi long, flowing from the E slopes of the Holland Range into Wise Bay, Ross Ice Shelf. Named by US-ACAN for A. Ekblad, Master of the USNS *Wyandot* during USN OpDFrz, 1964 and 1965.

Ekblaw, Mount 77°19'S, 141°48'W

Mountain, 1,235 m, standing 3 mi E of Mount Van Valkenburg in the E part of the Clark Mountains in Marie Byrd Land. Discovered on aerial flights from the West Base of the USAS in 1940 and named for W.E. Ekblaw, professor of geography at Clark University and a member of the Crocker Land Expedition in the Arctic (1913–17).

Ekelöf, Kap: see Ekelöf Point 64°14'S, 57°12'W

Ekelöf Point 64°14'S, 57°12'W

High rocky point which lies 5 mi SW of Cape Gage and marks the N side of the entrance to Markham Bay on the E side of James Ross Island. First seen and surveyed by the SwedAE under Nordenskjöld, 1901–04, who named it Kap Ekelöf after Dr. Eric Ekelöf, medical officer of the expedition. Resurveyed by FIDS in 1953. Point is considered a more suitable descriptive term for this feature than cape. Not: Kap Ekelöf.

Ekesteinen Rock 71°46'S, 10°46'E

An isolated rock 3.5 mi SE of Smirnov Peak, Shcherbakov Range, at the E end of the Orvin Mountains, Queen Maud Land. Mapped from air photos and surveys by NorAE, 1956–60, and named Ekesteinen (the spoke stone).

Ekho Mountain 71°28'S, 15°26'E

Mountain, 1,690 m, standing 3 mi SW of Vorposten Peak in the Lomonosov Mountains, Queen Maud Land. Discovered and roughly plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1958–59; remapped by SovAE, 1960–61, and named Gora Ekho (Echo Mountain).

Eklund Islands 73°16'S, 71°50'W

Group of islands which rise through the ice near the SW end of George VI Sound. The largest island, 5 mi in extent and rising to 410 m, was discovered in December 1940 by Finn Ronne and Carl R. Eklund of the USAS during their 1,097-mile sledge journey S from Stonington Island to the SW part of George VI Sound and return. At that time this large island, named by Ronne for Eklund, ornithologist and assistant biologist of the expedition was the only land protruding above an area of hummocky ice. V.E. Fuchs and R.J. Adie of the FIDS sledged to the SW part of George VI Sound in 1949, at which time, because of a recession of the ice in the sound, they were able to determine that the island discovered by Ronne and Eklund is the largest of a group of mainly ice-covered

islands. On the basis of original discovery, the US-ACAN recommends that the name Eklund be applied to the island group rather than the single island discovered by Ronne and Eklund.

Ekspress Nunatak 71°48'S, 2°53'E

An isolated nunatak 10 mi N of Stabben Mountain in Queen Maud Land. Mapped by Norsk Polarinstittut from air photography of 1951–52 and 1958–59. Also mapped by SovAE in 1961 and named Gora Ekspress (express hill).

Ekström Ice Shelf 71°00'S, 8°00'W

The ice shelf lying between Søråsen Ridge and Halvfarryggen Ridge, on the coast of Queen Maud Land. First mapped by NBSAE, 1949–52. Named for Bertil Ekström, Swedish mechanical engineer with NBSAE, who drowned when the weasel (track-driven vehicle) he was driving plunged over the edge of Quar Ice Shelf, Feb. 24, 1951. Not: Östre Shelf-Is, Ekströmisen.

Ekströmisen: see Ekström Ice Shelf 71°00'S, 8°00'W

Ekzoticheskiy, Mys: see Exotic Point 62°13'S, 59°02'W

Eland Mountains 70°35'S, 63°10'W

Range of mountains which rise above 2,440 m and extend about 20 mi in a NE-SW direction along the S side of Clifford Glacier, on the E coast of Palmer Land. The mountains were discovered in 1936 by the BGLE, and they appear in aerial photographs taken by the USAS in September 1940. During 1947 they were photographed from the air by members of the RARE, who in conjunction with the FIDS charted them from the ground. The name Eland, Lady Clifford's maiden name, was given in 1952 by Sir Miles Clifford, Gov. of the Falkland Islands, at the request of members of the FIDS staff.

Elbow Peak 83°32'S, 56°37'W

A peak, 1,195 m, located at the southernmost bend of Berquist Ridge in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. The name given by US-ACAN describes the peak's position along the ridge.

Elder, Mount 61°13'S, 55°12'W

A mountain between Endurance Glacier and Mount Pendragon in Elephant Island, South Shetland Islands. Named by UK-APC for Capt. John P. Elder, RE, surveyor of the U.K. joint Services Expedition to Elephant Island, 1970–71. Not: Misty Mountain.

Elder Bluff 70°31'S, 61°44'W

A prominent and mostly bare rock bluff that forms a portion of the N side of Eielson Peninsula and overlooks Smith Inlet, on the E coast of Palmer Land. Named by US-ACAN for Robert B. Elder, Chief of the U.S. Coast Guard Oceanographic Unit on the first International Weddell Sea Oceanographic Expedition on board USCGC *Glacier* in 1968.

Elder Glacier 72°35'S, 168°46'E

Tributary glacier entering the Tucker Glacier just W of Oread Spur, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for William C. Elder, topographic engineer, a member of the USGS Topo North-South party that surveyed the area, 1961–62.

Eld Peak 69°20'S, 157°12'E

A prominent peak (800 m) rising 6 mi SE of Reynolds Peak on the W side of Matusевич Glacier. Two conical peaks were sighted in the area from the *Peacock* on Jan. 16, 1840 by Passed Midshipmen Henry Eld and William Reynolds of the USEE (1838 42). The southeastern peak was named for Eld by USEE leader Lt. Charles Wilkes. In 1959 Phillip Law of ANARE made investigations of features in this area. Reference to Wilkes' narrative showed that the recorded descriptions of the peaks sighted by Eld and Reynolds to be in accord with photographs of the peaks on the W side of Matusевич Glacier. The peak described was selected by Law to commemorate Wilkes' naming.

Eldred Glacier 61°58'S, 58°16'W

Glacier 2.5 mi long, flowing to the N coast of King George Island immediately E of Potts Peak, in the South Shetland Islands. Named by the UK-APC in 1960 for Andrew J. Eldred, Master of the sealing vessel *Thomas Hunt* from Stonington, CT, who visited the South Shetland Islands in 1873–74, 1875–76, 1878–79 and 1879–80. During the latter season he took part in the unsuccessful search for the *Charles Shearer*.

Eldred Point 75°30'S, 141°58'W

An ice-covered point which marks the west side of the terminus of Land Glacier on the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1959–65. Named by US-ACAN for David T. Eldred, a member of the U.S. Navy winter-over support unit at McMurdo Station in 1958, 1965 and 1969.

Eldridge Bluff 73°27'S, 164°48'E

A prominent rock bluff 5 mi long, comprising that part of the W wall of Aviator Glacier immediately S of Cosmonaut Glacier, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Lt. Cdr. David B. Eldridge, Jr., USN, officer in charge of the winter detachment of Squadron VX-6 at McMurdo Station, 1967.

Eldridge Peak 84°51'S, 116°50'W

A small, mainly ice-free peak, or nunatak, marking the W extremity of the Ohio Range. Surveyed by the USARP Horlick Mountains Traverse party in Dec. 1958. Named by US-ACAN for Henry M. Eldridge, Antarctic cartographer, Branch of Special Maps, U.S. Geological Survey.

Electra, Mount 77°30'S, 160°52'E

Prominent peak, over 2,000 m, immediately W of Mount Dido in the Olympus Range of Victoria Land. Named by the VUWAE (1958–59) for a figure in Greek mythology.

Elefante, Isla: see Elephant Island 61°10'S, 55°14'W

Elefante, Punta: see Mirounga Point 62°14'S, 58°41'W

Elefanten-Bucht: see Elephant Cove 54°09'S, 37°41'W

Elefant Öya: see Elephant Island 61°10'S, 55°14'W

Elena, Isla: see Agurto Rock 63°18'S, 57°54'W

Elena Cerda de Bulnes, Isla: see Agurto Rock 63°18'S, 57°54'W

Elephant Bay: see Elephant Cove 54°09'S, 37°41'W

Elephant Bay Islands: see Anvil Stacks 54°10'S, 37°42'W

Elephant Cove 54°09'S, 37°41'W

Small circular cove lying 0.5 mi N of Klutschak Point along the S coast and near the W end of South Georgia. The name Elephant Bay, probably applied by early sealers at South Georgia, was recorded on the chart of the German expedition under Kohl-Larsen, 1928–29, and the chart by DI personnel who mapped South Georgia in this period. Cove is considered a better descriptive term for the feature. Not: Bahía Aurora, Elefanten-Bucht, Elephant Bay.

Elephant Flats 60°42'S, 45°37'W

A mud flat along the shore between Cemetery Bay and Marble Knolls on the east side of Signy Island. Named by UK-APC after the elephant seals that frequent the flat.

Elephant Island 61°10'S, 55°14'W

Island 24 mi long and 12 mi wide in its widest part, lying in the E part of the South Shetland Islands. The name dates back to at least 1821 and is now established in international usage. Not: Barrows Isle, Elefant Öya, Isla Elefante, Isla Pardo, Isla Piloto Pardo, Mordrins Island.

Elephant Lagoon 54°04'S, 37°08'W

Lagoon, 0.3 mi long, situated close S of Cook Bay to which it is connected by Carl Passage, on the N coast of South Georgia. Probably named by DI personnel who charted the area during the period 1926–30.

Elephant Moraine 76°17'S, 157°20'E

An isolated moraine, 3 mi long, located 27 mi W of Reckling Peak, to the W of the head of Mawson Glacier in Victoria Land. The moraine, described in some reports as an ice core moraine, is situated along a long, narrow patch of bare ice that extends W from Reckling Peak for 60 miles. The feature was noted in U.S. satellite imagery of 1973, and in aerial photographs obtained subsequently, by William R. MacDonald of USGS, who originally described it to William A. Cassidy as "a possible nunatak having an outline similar to an elephant." Several USARP field parties led by Cassidy successfully searched for meteorites at this moraine from the 1979–80 season. The descriptive name was approved by US-ACAN in 1989.

Elephant Point 62°41'S, 60°52'W

Mainly ice-free promontory on which there is a square black rock, forming the southernmost point of the W half of Livingston Island, in the South Shetland Islands. First charted and named by Robert Fildes in 1820–22. The name was incorrectly placed on the point between South and False Bays (now Miers Bluff) for many years. Not: Morro Cuadrado Negro.

Elephant Point: see Miers Bluff 62°43'S, 60°27'W

Elephant Rocks 64°46'S, 64°05'W

A group of three prominent rocks connected by shoals, located between Torgersen Island and the NW entrance to Arthur Harbor, off the SW coast of Anvers Island. The name became established locally among USARP personnel at nearby Palmer Station in about 1971, as these rocks provide a favorite habitat for elephant seals.

Eleuterio Ramírez, Isla: see Ramírez Island 69°09'S, 68°28'W

Elevado, Pico: see Molar Peak 64°41'S, 63°19'W

Elevado, Pico: see Camber, Mount 64°41'S, 63°16'W

Elevation Point 77°48'S, 161°39'E

A bold rock point which forms the W end of Kukri Hills, overlooking Taylor Glacier in Victoria Land. The name is one of a group in the area associated with surveying applied by NZGB in 1993.

Eley Peak 79°39'S, 84°20'W

Small rock peak in the N part of Soholt Peaks, over-looking the head of Balish Glacier in the Heritage Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN; for Richard G. Eley, USN, photographer on flights over Marie Byrd Land and Ellsworth Land, 1965–66 and 1966–67.

El Fuelle, Cerro: see Buttress Hill 63°34'S, 57°03'W

Elgar Uplands 69°39'S, 70°43'W

Uplands rising to 1,900 m, between Tufts Pass to the N and Sullivan Glacier to the S, in the N part of Alexander Island. First photographed from the air and roughly mapped by the BGLE in 1937. Remapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960, and from U.S. Landsat imagery of February, 1975. Named by UK-APC after Sir Edward Elgar (1857–1934), English composer.

Eliason Glacier 64°15'S, 59°25'W

A glacier 5 mi long close W of Mount Hornsby, flowing S from Detroit Plateau into the ice piedmont N of Larsen Inlet, Graham Land. Mapped from surveys by FIDS (1960–61). Named by UK-APC after the Eliason motor sledge, invented in 1942 in Sweden, now made in Canada, and used in Arctic Canada since 1950 and in the Antarctic since 1960.

Elizabeth, Mount 83°54'S, 168°23'E

A massive ice-free mountain, 4,480 m, standing 6 mi S of Mount Anne in Queen Alexandra Range. Discovered by the BrAE (1907–09) and named for Elizabeth Dawson-Lambton, a supporter of the expedition.

Eliza Cone 66°55'S, 163°12'E

A rock with an archway through it standing 1 mi W of Cape McNab on the S end of Buckle Island, in the Balleny Islands. Located adjacent to Scott Cone, the two features appear to have been named after John Balleny's schooner, the *Eliza Scott*, in which he discovered the Balleny Islands in Feb. 1839.

Eliza Rocks 62°26'S, 60°14'W

Group of rocks lying W of Zed Island, in the South Shetland Islands. Named by the UK-APC in 1958 after the sealer *Eliza* from London, which was moored in nearby Blythe Bay, Desolation Island, during part of the 1821–22 season.

Elkhorn Ridge 76°40'S, 161°03'E

Rugged ridge, 10 mi long, between Towle and Northwind Glaciers in the Convoy Range of Victoria Land. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1964 for the USNS *Elkhorn*, a tanker in the American convoy into McMurdo Sound, 1961–62.

Elkins, Mount 66°39'S, 54°08'E

Steep-sided mountain with three major peaks, the highest 2,300 m, standing close N of Young Nunataks in the Napier Mountains. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37, and named Jökelen

(the glacier). Remapped by ANARE from air photos taken in 1956, and named for T.J. Elkins, ionosphere physicist at Mawson in 1960. Not: Jökelen.

Ellefsen Harbor 60°44'S, 45°03'W

Harbor lying at the S end of Powell Island between Christoffersen and Michelsen Islands, in the South Orkney Islands. Discovered in the course of the joint cruise by Capt. George Powell, British sealer, and Capt. Nathaniel Palmer, American sealer, in December 1821. The name first appears on Powell's chart published in 1822. Not: Ellessen Harbour.

Ellen Glacier 78°13'S, 84°30'W

A large glacier in central Sentinel Range, Ellsworth Mountains, draining the E slopes of Mount Anderson and Long Gables and flowing generally SE for 22 mi to Barnes Ridge, where it leaves the range and enters S.-flowing Rutford Ice Stream. First mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Lt. Col. Cicero J. Ellen, USAF, who was in command of many of the air operations when the South Pole Station was established by air drop in the 1956–57 season.

Ellerbeck Peak 54°23'S, 36°19'W

A peak rising to 685 m on the S side of Sörling Valley, South Georgia. Named by the UK-APC in 1987 for Lt. Cdr. John A. Ellerbeck, RN, pilot in command of the helicopter from HMS *Endurance*, who attacked and disabled the Argentine submarine *Santa Fe* during the retaking of Grytviken, Apr. 25, 1982.

Ellery, Mount 69°53'S, 159°38'E

A mountain (1,110 m) near the head of Suvorov Glacier, 2 mi NW of Hornblende Bluffs, in the Wilson Hills. The region was photographed by USN Operation Highjump, 1946–47. The position of the mountain was fixed on Feb. 21, 1962 by Syd L. Kirkby, surveyor with the ANARE *Thala Dan* cruise led by Phillip Law. Named for R.L.J. Ellery, a member of the Australian Antarctic Exploration Committee of 1886.

Ellessen Harbour: see Ellefsen Harbor 60°44'S, 45°03'W

Elliot, Mount 70°53'S, 166°32'E

A mountain (1,500 m) rising between Kirkby Glacier and O'Hara Glacier, about 5 mi S of Yule Bay, in the Anare Mountains, Victoria Land. A mountain in this approximate position was sighted by Capt. James C. Ross, RN, in Feb. 1841, who named it for R. Admiral George Elliot, Commander-in-Chief in the Cape of Good Hope Station. Not: Mount Elliott.

Elliot Peak 84°31'S, 164°04'E

The summit peak of a conspicuous NE trending basalt ridge, rising 1 mi NW of Tempest Peak, in Queen Alexandra Range. Named by the Ohio State University party to the Queen Alexandra Range (1966–67) for David H. Elliot, geologist with the party.

Elliott, Cape 65°52'S, 102°35'E

An ice-covered cape marking the N extremity of the Knox Coast of Wilkes Land. It fronts on Shackleton Ice Shelf, 28 mi SW of Bowman Island. Delineated from aerial photographs taken by USN Operation Highjump (1946–47) and named by the US-ACAN after J.L. Elliott, chaplain on the sloop *Vincennes* of the USEE (1838–42) under Wilkes.

Elliott, Mount 64°24'S, 60°02'W

Conspicuous mountain, 1,265 m, with a few small rock exposures and ice-free cliffs on the SE side, standing 16 mi NW of Cape Sobral, on the E coast of Graham Land. Charted in 1947 by the FIDS and named for F.K. Elliott, leader of the FIDS base at Hope Bay in 1947 and 1948.

Elliott, Mount: see Elliot, Mount 70°53'S, 166°32'E

Elliott Glacier 66°33'S, 115°14'E

A small channel glacier that drains northward to Budd Coast midway between Cape Hammersly and Cape Waldron. Delineated from aerial photographs taken by USN Operation Highjump (1946–47), and named by US-ACAN after Samuel Elliott, Midshipman on the sloop *Vincennes* during the USEE (1838–42) under Lt. Charles Wilkes.

Elliott Hills 71°25'S, 65°25'W

A group of low hills and nunataks, 12 mi long, that mark the NW end of the Gutenko Mountains, in central Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Lt. Cdr. David J. Elliott, USN, Commander of LC-130 aircraft in aerial photographic and ice-sensing flights over extensive areas of the Antarctic continent during Operation Deep Freeze, 1970 and 1971.

Elliott Nunatak 85°16'S, 89°43'W

A large nunatak (2,165 m) jutting out from the center of Bermel Escarpment, in the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party that surveyed these mountains in 1960–61. Named for Raymond L. Elliott, geologist with the Thiel Mountains party.

Elliott Passage 67°44'S, 68°28'W

A marine channel running NE-SW between the SE coast of Adelaide Island and Jenny Island. Named by the UK-APC in 1984 after Capt. Christopher R. Elliott, Master of RRS *John Biscoe* from 1975; he served in other officer positions on *John Biscoe* and RRS *Bransfield* from 1967.

Elliott Ridge 83°57'S, 57°00'W

A hook-shaped ridge, 8 mi long, extending westward from Wiens Peak in southern Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Cdr. James Elliott, captain of the icebreaker USS *Stalten Island* which assisted the cargo ship *Wyandot* through the Weddell Sea pack ice to establish Ellsworth Station on the Filchner Ice Shelf in January 1957.

Elliott Rock 54°00'S, 38°05'W

Rock lying in Stewart Strait, close W of Bird Island, off the W end of South Georgia. Positioned by DI personnel under Lt. Cdr. J.M. Chaplin in the period 1926–30. Named in 1957 by the UK-APC for Henry W. Elliott (1846–1930), American naturalist; pioneer of fur seal studies in the North Pacific and life-long champion of fur seal protection. Fur seals breed on nearby Bird Island.

Ellipsoid Hill 77°48'S, 163°49'E

A rounded, partly ice-covered summit (1,130 m) to the N of Blue Glacier, between Geoid Glacier and Spheroid Hill, in Victoria Land. The name is one of a group in the area associated with surveying applied in 1993 by NZGB. Named from ellipsoid, in geodesy a mathematical figure formed by revolving an ellipse about its minor axis.

Ellis, Mount 79°52'S, 156°14'E

The highest point, 2,330 m, of the Darwin Mountains, surmounting the northern edge of Midnight Plateau. Mapped by the Darwin Glacier Party of the CTAE (1956–58). Named for M.R. Ellis, engineer with the CTAE, who accompanied Sir Edmund Hillary to the South Pole.

Ellis Bluff 85°20'S, 175°35'W

A rock bluff rising to 2,280 m at the S side of the mouth of Logie Glacier, in the Cumulus Hills. Named by US-ACAN for W. Ellis, a chief air controlman, USN, during OpDFrz 1965 and 1966.

Ellisbreen: see Ellis Glacier 71°58'S, 24°17'E

Ellis Cone 75°49'S, 116°23'W

One of several small cones or cone remnants along the SW side of Toney Mountain in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Homer L. Ellis, ACC, USN, radar air traffic controller at McMurdo Station, winter party 1968, and chief in charge of the ground controlled approach unit at the Byrd Station skiway landing strip, summer season, 1969–70.

Ellis Fjord 68°36'S, 78°05'E

A long narrow fjord between Breidnes Peninsula and Mule Peninsula in the Vestfold Hills. Photographed by the Lars Christensen Expedition (1936–37), and plotted by Norwegian cartographers as a bay and a remnant lake which were called Mulvik (snout bay) and Langevatnet (the long lake) respectively. Analysis by John Roscoe of air photos taken by USN Operation Highjump (1946–47) showed these two features to be connected. The feature was renamed Ellis Fjord by Roscoe after Edwin E. Ellis, aerial photographer on USN Operation Highjump flights over this area. Not: Langevatnet, Mulvik.

Ellis Glacier 71°58'S, 24°17'E

Glacier, 4 mi long, flowing N from Mount Walnum between Gillock and Jennings Glaciers in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named for Edwin E. Ellis, aerial photographer on USN OpHjp photographic flights in this area and other coastal areas between 14° and 164° East. Not: Ellisbreen.

Ellis Ridge 74°45'S, 113°54'W

An ice-covered ridge, 10 mi long and 1.5 mi wide, extending NE from Jenkins Heights between Dorchuck Glacier and Keys Glacier, on Walgreen Coast, Marie Byrd Land. Mapped by USGS from surveys and USN aerial photographs, 1959–67, and U.S. Landsat imagery, 1972–73. Named by US-ACAN for Melvin Y. Ellis, USGS cartographer, a member of the USGS satellite surveying team at South Pole Station, winter party 1974.

Ellsworth, Cape 66°17'S, 162°18'E

A sheer rock bluff (290 m) forming the N end of Young Island in the Balleny Islands. Named by personnel of the *Discovery II* in 1936 for American explorer Lincoln Ellsworth. The vessel, after picking up Ellsworth at Little America on the Ross Ice Shelf made a running survey around the northern end of the Balleny Islands on the way back to Australia.

Ellsworth, Mount 85°45'S, 161°00'W

The highest peak, 2,925 m, on the elongated massif between Steagall and Amundsen Glaciers, in the Queen Maud Mountains.

Discovered by R. Admiral Byrd on the South Pole flight of November 28–29, 1929, and named by him for Lincoln Ellsworth, American Antarctic explorer. Not: Mount Lincoln Ellsworth.

Ellsworth Highland: see Ellsworth Land 75°30'S, 80°00'W

Ellsworth Land 75°30'S, 80°00'W

That portion of the Antarctic continent bounded on the west by Marie Byrd Land, on the north by Bellingshausen Sea, on the northeast by the base of Antarctic Peninsula, and on the east by the western margin of Ronne Ice Shelf. It is largely a high ice plateau, but includes the majestic Ellsworth Mountains and a number of scattered mountain groups as the Hudson, Jones, Behrendt, Merrick, Sweeney and Scaife Mountains. This land lies near the center of the area traversed by American explorer Lincoln Ellsworth on an airplane flight during November–December 1935. It was named for him by US-ACAN (1962) to commemorate that historic transcontinental flight from Dundee Island to the Ross Ice Shelf. Not: Ellsworth Highland, James W. Ellsworth Land.

Ellsworth Mountains 78°45'S, 85°00'W

A major group of mountains, 200 mi long and 30 mi wide, which trend NNW-SSE and rise from the relatively featureless snow plain that borders the western margin of the Ronne Ice Shelf. They are bisected by Minnesota Glacier to form the northern Sentinel Range and the southern Heritage Range. The former is by far the higher and more spectacular with Vinson Massif (5,140 m) constituting the highest point on the continent. The mountains were discovered on Nov. 23, 1935, by Lincoln Ellsworth in the course of a trans-Antarctic flight from Dundee Island to the Ross Ice Shelf. He gave the descriptive name Sentinel Range. The mountains were mapped in detail by USGS from ground surveys and U.S. Navy aerial photography, 1958–66. When it became evident that the mountains comprise two distinct ranges, the US-ACAN restricted the application of Sentinel Range to the high northern one and gave the name Heritage Range to the southern one; the Committee recommended the name of the discoverer for this entire group of mountains.

Ellsworth Subglacial Highlands 80°30'S, 94°00'W

A line of subglacial highlands in West Antarctica that extend WSW from central Ellsworth Mountains to the vicinity of Mount Moore and Mount Woollard. The existence of the feature was first indicated from seismic soundings by the Marie Byrd Land Traverse Party, 1957–58, led by Charles R. Bentley. It was delineated in detail by the SPRI-NSF-TUD airborne radio echo sounding program, 1967–79, and named in association with the Ellsworth Mountains.

Ellyard Nunatak 70°19'S, 64°54'E

A nunatak on the N side of Scylla Glacier, about 7 mi SSE of Mount Béchervaise, in the Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for D.G. Ellyard, physicist at Mawson Station in 1966.

Elmers Nunatak 83°58'S, 55°25'W

A prominent nunatak 5 mi SE of Mount Hawkes in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Elmer H. Smith, aerographer with the wintering parties at Ellsworth Station in 1958 and McMurdo Station in 1961.

El Monolito: see Petes Pillar 63°00'S, 60°33'W

El Pulgar 71°29'S, 161°46'E

A precipitous granite monolith (1,660 m) standing 3 mi N of Berg Peak in northern Morozumi Range. The feature was climbed by four members of NZGSAE, 1967–68, who gave the name El Pulgar (Spanish for “the thumb”).

Elsa Bay: see Elsehul 54°01'S, 37°59'W

El-Sayed Glacier 75°40'S, 141°52'W

A glacier about 15 mi long which drains the NE slopes of Zuncich Hill in Marie Byrd Land. It flows NE to enter Land Glacier at the S side of Mount Shirley. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Sayed Z. El-Sayed, USARP oceanographer on the International Weddell Sea Oceanographic Expedition, 1967–68 and 1969–70.

Else Bay: see Elsehul 54°01'S, 37°59'W

Else Cove: see Elsehul 54°01'S, 37°59'W

Elsehul 54°01'S, 37°59'W

Bay 0.5 mi wide, entered close W of Cape Pride along the N coast of South Georgia. The name dates back to the period 1905–12 and was probably applied by Norwegian sealers and whalers working in the area. Not: Elsa Bay, Else Bay, Else Cove, Else's Hole, Elsie Bay, Paddocks Cove.

El Seno: see Sound, The 64°19'S, 62°58'W

Else Nunataks 67°21'S, 55°40'E

Group of low, partially snow-covered nunataks 3 mi N of Mount Øydeholmen, on the S, side of Wilma Glacier, Enderby Land. Mapped from ANARE surveys and air photos, 1954–66. Named by ANCA for H. Else, pilot with ANARE (*Nella Dan*), 1965.

Else Platform 70°22'S, 66°48'E

An elevated, flat-topped mass of rock at the N end of Jetty Peninsula, Mac. Robertson Land. The feature was the site of a survey station occupied by M.N. Rubeli, surveyor with the ANARE Prince Charles Mountains survey in 1969. Named after H. Else, helicopter pilot with the survey.

Else's Hole: see Elsehul 54°01'S, 37°59'W

Elsie Bay: see Elsehul 54°01'S, 37°59'W

Elsner Ridge 71°47'S, 167°21'E

A narrow, southwest-trending ridge, or spur, 6 mi long, located 4 mi NE of the S end of Homerun Range in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy, aerial photographs, 1960–63. Named by US-ACAN for Robert W. Elsner, USARP biologist at McMurdo Station, 1967–68, 1968–69 and 1969–70.

Eltanin Bay 73°40'S, 82°00'W

A bay about 35 mi wide in southern Bellingshausen Sea. It indents the coast of Ellsworth Land west of Wirth Peninsula. Mapped by USGS from surveys and U.S. Navy air photos, 1961–66. Named by US-ACAN for the USARP oceanographic research ship *Eltanin* which has made numerous research cruises in the South Pacific Ocean.

Elton Hill 68°50'S, 66°35'W

A prominent rocky hill (1,000 m) which marks the SE limit of Meridian Glacier at its junction with Clarke Glacier in southern Graham Land. First seen from the air and photographed by RARE,

Nov. 1947. Surveyed by FIDS, Dec. 1958. Named by UK-APC after John Elton, English inventor of the artificial horizon and its application to quadrants and sextants, in 1732.

Elvers Peak 79°52'S, 83°33'W

A peak, 1,615 m, at the SE end of Edson Hills in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Douglas J. Elvers, seismologist on the USARP South Pole-Queen Maud Land Traverse II, in 1965–66.

Ely Nunatak 72°08'S, 66°30'E

A small, dark-colored nunatak 4 mi N of Mount Izabelle in the Prince Charles Mountains. The position of the nunatak was fixed by intersection from geodetic survey stations in 1971. Named by ANCA for J. Ely, Technical Officer (survey) with the ANARE Prince Charles Mountains survey in 1971.

Em, Isla: see Emma Island 64°36'S, 62°20'W

Embassy Islands 67°53'S, 68°45'W

Two small islands, the westernmost of the Dion Islands, lying 7 mi S of Adelaide Island. The Dion Islands were first sighted and roughly charted in 1909 by the FrAE under Charcot. This feature was surveyed in 1949 by the FIDS and named Embassy Rock by the UK-APC because of its detached position in association with Emperor Island. In 1963 the British Royal Navy Hydrographic Survey Unit found there were two islands, not one as previously supposed. Not: Embassy Rock.

Embassy Rock: see Embassy Islands 67°53'S, 68°45'W

Embree Glacier 77°59'S, 85°10'W

Glacier 20 mi long in the north-central part of the Sentinel Range, flowing NNE from the slopes of Mount Anderson and Mount Bentley and then E to its terminus opposite Mount Tegge on the E side of the range. Named by the US-ACAN for Maj. Henry Embree, USAF, who participated in the establishment of the South Pole Station in 1956.

Eme, Roca: see Emm Rock 62°16'S, 58°42'W

Emeline Island 62°24'S, 59°48'W

One of the Aitcho Islands, lying 2 mi NW of Cecilia Island in the South Shetland Islands. Named by the UK-APC in 1961 after the American sealing vessel *Emeline* (Capt. Jeremiah Holmes) from Stonington, CT, which visited the South Shetland Islands in 1820–21 and operated from nearby Clothier Harbor.

Emerald Cove 61°35'S, 57°46'W

Cove 2 mi wide, lying between North Foreland and Brimstone Peak on the N coast of King George Island, in the South Shetland Islands. The name Shireff's Cove (sic) was given by William Smith in 1819, after Capt. William H. Shirreff, RN, to whom he reported his discovery of the South Shetland Islands. In 1820, Smith's description of his landing on North Foreland was confused with his description of features on northern Livingston Island, and the name was applied to a feature on that island, where it has been officially accepted. Emerald Cove was applied by the UK-APC in 1960 and is for the brig *Emerald* (Capt. John G. Scott) from Boston, MA, which visited the South Shetland Islands in 1820–21 in company with the *Esther*. These two vessels rescued the crew of the *Venus* from Esther Harbor in March 1821.

Emerald Lake 60°43'S, 45°39'W

A small lake in western Signy Island, about 0.6 mi SE of Jebesen Point. The name, applied by UK-APC, describes the unique (for Signy Island) color of the water.

Emerald Nunatak 69°39'S, 69°59'W

Nunatak (1,250 m) on the W side of Douglas Range near the head of Hampton Glacier, NE Alexander Island. So named by UK-APC following surveys by BAS, 1973–77, because of the greenish rock of which the feature is composed.

Emerging Island 73°23'S, 168°02'E

An ice-covered island 2 mi long, lying 1.5 mi E of Index Point, Victoria Land, in the N part of Lady Newnes Bay. The feature appears to be barely emerging above the ice at the terminus of Mariner Glacier. Named in 1966 by the NZ-APC.

Emerson, Mount 71°35'S, 168°44'E

A mountain (2,190 m) 5 mi ESE of Brewer Peak in the S part of DuBridge Range, Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for George L. Emerson, SW1, USN, Steelworker at McMurdo Station, 1967.

Emily, Mount 85°50'S, 174°20'E

A rock peak 2 mi N of Mount Cecily, in the Grosvenor Mountains. Shown by the BrAE (1907–09) as being part of the Dominion Range, but it is separated from that range by the flow of the Mill Glacier. Named by Shackleton for his wife, Lady Emily Dorman Shackleton.

Em Island: see Grassholm 54°03'S, 37°56'W

Emison, Mount 74°12'S, 163°44'E

A prominent mountain, 2,050 m, rising on the W side of Campbell Glacier, just N of the mouth of Bates Glacier, in the Deep Freeze Range, Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN after William B. Emison, biologist at McMurdo Station, 1964–65 and 1965–66 seasons.

Emlen Peaks 71°54'S, 160°35'E

A group of scattered peaks and nunataks, 16 mi long and 7 mi wide, lying 6 mi S of Daniels Range in the S end of the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN after John T. Emilen, biologist, University of Wisconsin, program leader who made penguin navigational studies on the Ross Ice Shelf, the interior of Victoria Land, and elsewhere in Antarctica, 1962–63.

Emma Cove: see Rodman Cove 61°07'S, 55°28'W

Emma Island 64°36'S, 62°20'W

Island 1.5 mi long, with bare jagged peaks projecting through an icecap, lying 4 mi W of Nansen Island in the SW half of the entrance to Wilhelmina Bay, off the W coast of Graham Land. Discovered by the BelgAE, 1897–99, under Lt. Adrien de Gerlache, and named after his mother, Emma de Gerlache de Gomery. Not: Isla Ema.

Emmanuel Glacier 77°54'S, 162°05'E

Glacier in the Royal Society Range of Victoria Land, descending from Mount Lister northwestward between Table Mountain and

Cathedral Rocks to enter Ferrar Glacier. Named by the BrAE (1910–13) after Emmanuel College, Cambridge, England.

Emmons, Point: see Wild, Cape 68°23'S, 149°07'E

Emm Rock 62°16'S, 58°42'W

Conspicuous rock 30 m high, lying 0.5 mi off the S coast of King George Island at the E side of the entrance to Potter Cove, in the South Shetland Islands. This rock, presumably known to early sealers in the area, was sketched by the FrAE, 1908–10, under Charcot, and charted by DI personnel on the *Discovery II* in 1935. The name derives from the shape of the rock, which resembles the letter M. Not: Roca Eme, Roca Ewens.

Emory Land Bay: see Land Bay 75°25'S, 141°45'W

Emory Land Glacier: see Land Glacier 75°40'S, 141°45'W

Empereur Island 66°48'S, 141°23'E

Rocky island 1 mi N of Cape Margerie, lying immediately N of Breton Island in the entrance to Port Martin. Photographed from the air by USN OpHjp, 1946–47. Charted by the FrAE under Liotard, 1949–51, and so named because the first emperor penguin captured by the expedition was taken on this island.

Emperor Bay 75°32'S, 26°52'W

A small bay which indents the Brunt Ice Shelf due W of Halley Station. So named by the Royal Society IGY expedition because of the Emperor penguin colony on the fast ice in the embayment during 1956. The expedition's base was a few miles eastward (1955–59) on the Brunt Ice Shelf.

Emperor Island 67°52'S, 68°43'W

Small island in Marguerite Bay, lying close NE of Courtier Islands in the Dion Islands. The islands in this group were discovered and roughly charted in 1909 by the FrAE. This island was surveyed in 1948 by the FIDS and so named by the UK-APC because a low rock and shingle isthmus at the SE end of the island is the winter breeding site of emperor penguins.

Emperor William Peak: see Big Ben 53°06'S, 73°31'E

Ems Rock 54°10'S, 36°35'W

Rock midway between Harrison and Busen Points in the S part of Stromness Bay, South Georgia. Charted by DI personnel under Lt. Cdr. J.M. Chaplin in 1927 and 1929. Named in 1957 by the UK-APC for the sailing vessel *Ems*, owned by the Tønsberg Hvalfangeri, Husvik, located at the head of Husvik Harbor in Stromness Bay.

Enceladus Nunataks 71°43'S, 69°27'W

A group of about eight nunataks scattered over a wide area at the head of the drainage basin of Saturn Glacier, in southern Alexander Island. Mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. Named by UK-APC from association with Saturn Glacier, Enceladus being one of the moons of the planet Saturn.

Enchanted Valley 82°37'S, 53°10'W

A small snow-filled valley between Walker Peak and Hannah Peak in the SW end of Dufek Massif, Pensacola Mountains. The name describes the scenic beauty of the valley and was applied by the US-IGY party from Ellsworth Station that visited the valley in December 1957.

Enchantress Rocks 62°42'S, 60°49'W

Group of rocks lying 1.5 mi SE of Elephant Point, Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1961 after the British sealing vessel *Enchantress* (Captain Bond) from Plymouth, which visited the South Shetland Islands in 1821–22.

Endeavour, Mount 76°33'S, 162°01'E

A huge flat-topped coastal mountain, 1,810 m, standing N of Fry Glacier and NW of Mount Creak and Shoulder Mountain and forming the southern block of the Kirkwood Range in Victoria Land. Surveyed in 1957 by the N.Z. Northern Survey Party of the CTAE (1956–58) and named by them for HMNZS *Endeavour*, supply ship for the N.Z. party.

Enden Point 73°37'S, 4°14'W

A rock point at the SW side of Belgen Valley, in the Kirwan Escarpment of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and additional air photos (1958–59), and named Enden (the end). Not: Gora Kleynshmidt.

Enderby Land 67°30'S, 53°00'E

A projecting land mass of Antarctica, extending from Shinnan Glacier in about 44°38'E to William Scoresby Bay in 59°34'E. Discovered in February 1831 by John Biscoe in the *Tula*. Named after Enderby Bros. of London, owners of the *Tula*, who encouraged their captains to combine exploration with sealing.

Endresen Islands 67°17'S, 60°00'E

Group of small islands, the highest rising to 60 m, lying just N of the Hobbs Islands. Discovered and named by DI personnel on the *William Scoresby* in February 1936.

Endurance, Glacier: see Français Glacier 66°33'S, 138°15'E

Endurance Cliffs 82°47'S, 155°05'E

A line of steep east-facing cliffs between Mount Summerson and Mount Albright in the S part of the Geologists Range. Mapped by the northern party of the NZGSAE (1961–62) and named for the *Endurance*, ship of the British Trans-Antarctic Expedition, 1914–16. Not: Endurance Nunatak.

Endurance Glacier 61°10'S, 55°08'W

Broad glacier N of Mount Elder, draining SE to the S coast of Elephant Island, South Shetland Islands. It is the main discharge glacier on the island. Named by UK-APC after HMS *Endurance* which took the joint Services Expedition, 1970–71, to Elephant Island and established several anchorages off this glacier. Not: Flog Glacier.

Endurance Glacier: see Veststraumen Glacier 74°15'S, 15°00'W

Endurance Nunatak: see Endurance Cliffs 82°47'S, 155°05'E

Endurance Reef 68°18'S, 67°32'W

A reef lying 8 mi W of Red Rock Ridge in Marguerite Bay. The name is after HMS *Endurance* which at this position in Feb. 1972 struck a rock in a depth of 2 meters. The area was surveyed by boats from the *Endurance* in 1973 when similar depths were found up to 1 mi SSW of the rock.

Engberg Bluff 73°13'S, 166°48'E

Bold ice-covered bluff between the mouths of the Argonaut and Meander Glaciers at the point where these tributaries enter the S part of Mariner Glacier, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Larry W. Engberg, meteorologist at Hallett Station, 1961.

Engel, Cape: see Freeman, Cape 67°59'S, 65°20'W

Engel Peaks 69°32'S, 63°08'W

Three peaks, the highest 1,460 m, extending in a NW-SE direction for 4 mi, standing 15 mi W of Cape Rymill on the E side of Palmer Land. This feature was photographed from the air in 1928 by Sir Hubert Wilkins, and again in 1940 by members of the USAS who also sledge surveyed along this coast. The peaks were resighted by the RARE, 1947–48, under Ronne, who named them for Bud Engel, president of the Albert Richard Division of the Osterman Co., Milwaukee, who contributed garments suitable for winter use to the expedition.

Engelstad, Mount 85°29'S, 167°24'W

A rounded snow-covered summit rising from the edge of the polar plateau at the head of Axel Heiberg Glacier, about midway between Helland-Hansen Shoulder and Mount Wilhelm Christophersen. Discovered in 1911 by Roald Amundsen and named by him for Capt. Ole Engelstad, of the Norwegian Navy, who had been selected as second in command of the *Fram* to carry the expedition to Antarctica, but who was killed in a scientific experiment preceding its departure. Not: Mount Englestat, Mount Ole Engelstad.

England, Mount 77°03'S, 162°27'E

Conical-topped mountain, 1,205 m, rising immediately S of New Glacier in the NE part of Gonville and Caius Range, in Victoria Land. Discovered by the BrNAE, 1901–04, under Scott, who named it for Lt. Rupert England, RN, of the *Morning*, relief ship to the expedition.

England Peak 82°37'S, 52°49'W

A sharp peak c. 2,150 m, located 0.5 mi S of Aughenbaugh Peak and E of Neuburg Peak in the W part of Dufek Massif, Pensacola Mountains. Named by US-ACAN at the suggestion of USGS field party leader Arthur B. Ford after Anthony W. England, USGS geophysicist who worked in the Dufek Massif during the 1976–77 and 1978–79 seasons.

England Ridge 77°02'S, 162°29'E

The NE continuation of the glaciated steep NE crest of Mount England, forming a snow-free rock crest with steep NW-facing snow-free walls down to the frozen sea at the terminus of New Glacier, in Victoria Land. The feature was explored by F. Ugolini, K. Wise and H. Janetschek in Jan. 1962. Named by US-ACAN in association with Mount England.

Englestat, Mount: see Engelstad, Mount 85°29'S, 167°24'W

English, Mount: see Mooney, Mount 86°34'S, 145°48'W

English Coast 73°30'S, 73°00'W

That portion of the coast of Antarctica between the N tip of Rydberg Peninsula and Buttress Nunataks (west side of Palmer Land). This coast was discovered and explored in 1940, on land by F. Ronne and C.R. Eklund and from the air by other members of

the East Base of the USAS, 1939–41. It was originally named Robert English Coast after Capt. Robert A.J. English, USN, Executive Secretary of the USAS, 1939–41, and formerly Captain of the *Bear of Oakland* on the ByrdAE, 1933–35. The name is shortened for the sake of brevity. Not: Robert English Coast.

English Rock 76°49'S, 118°00'W

A rock outcrop near the foot of the western slope of Mount Frakes, in the Crary Mountains, Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy aerial photography, 1959–66. Named by US-ACAN for Claude L. English, Jr., USN, helicopter crewman with Squadron VXE-6 during Deep Freeze 1970; he also deployed with the Squadron during Deep Freeze 1961, 1962 and 1965.

English Strait 62°27'S, 59°38'W

Strait lying between Greenwich and Robert Islands, in the South Shetland Islands. The name dates back to at least 1822 and is now established in international usage. Not: Détroit Anglais, Estrecho Espora, Estrecho Inglés, Spencers Straits.

Enigma Peak 69°34'S, 72°44'W

Peak, 1,000 m, surmounting Fournier Ridge, Desko Mountains, on Rothschild Island. Probably seen from a distance by Bellingshausen in 1821, Charcot in 1909, and the BGLE in 1936. It was observed and photographed from the air by the USAS, 1939–41, and mapped as the prominent NW peak of the island. Mapped in greater detail from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960, and from U.S. Landsat imagery of February 1975. So named by UK-APC because of difficulty in identifying the peak during the map compilation.

Enrique, Isla: see Harry Island 64°08'S, 61°59'W

Enten Bay 54°13'S, 36°37'W

Small bay lying SW of Jason Harbor in the W side of Cumberland West Bay, South Georgia. The name "Entenbucht" (duck bay) seems to have been first used on a 1907 chart of Cumberland Bay by Dr. A. Szielasko, physician and ornithologist on the Norwegian whaler *Fridtjof Nansen*, who published an account of his natural history observations made at Cumberland Bay during the previous year. Not: Entenbucht.

Entenbucht: see Enten Bay 54°13'S, 36°37'W

Enterprise Hills 79°55'S, 82°00'W

A prominent group of largely ice-free hills and peaks in the form of an arc. The feature extends for about 30 mi to form the N and NE boundary of Horseshoe Valley in the Heritage Range, Ellsworth Mountains. Enterprise Hills were mapped by USGS from surveys and USN air photos, 1961–66. The name was applied by US-ACAN in association with the name Heritage Range.

Enterprise Island 64°32'S, 62°00'W

Island 1.5 mi long lying at the NE end of Nansen Island in Wilhelmina Bay, off the W coast of Graham Land. This island and Nansen Island were first charted as one feature and named "Ile Nansen" by the BelgAE under Gerlache in 1898. The islands became well known to whalers operating in the area in the early 1900's and the names North and South Nansen Islands were used to distinguish them. Since Nansen Island has now become established for the larger feature, a new name has been given to the smaller by the UK-APC, commemorating the enterprise of the whalers who made the anchorage at the S side of the island (Foyen

Harbor) a major center of summer industry during the period 1916–30. Not: Isla Lientur, Isla Nansen Norte, North Nansen Island.

Entrada, Punta: see Entrance Point 63°00'S, 60°33'W

Entrance Island 67°36'S, 62°52'E

Island just N of the entrance to Horseshoe Harbor in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Rephotographed by USN OpHjp, 1946–47, and ANARE in 1956. So named by ANARE because of its position at the entrance to the harbor at Mawson Station.

Entrance Point 63°00'S, 60°33'W

Point marking the S side of Neptunes Bellows, the entrance to Port Foster, Deception Island, in the South Shetland Islands. Deception Island was known to sealers in the area as early as 1821. The point was named by the Hydrographic Dept. of the Admiralty following a survey by Lt. Cdr. D.N. Penfold, RN, in 1948–49. Not: Punta Caupolicán, Punta Entrada.

Entrance Shoal 67°36'S, 62°52'E

Small shoal (least depth 7.9 m) just W of Entrance Island at the NW entrance to Horseshoe Harbor in Holme Bay, Mac. Robertson Land. Charted in February 1961 by d'A.T. Gale, hydrographic surveyor with the ANARE (*Thala Dan*), and so named because of its location.

Entrikin Glacier 80°49'S, 160°00'E

A broad sweeping glacier flowing eastward from the Churchill Mountains into Matterson Inlet. Named by US-ACAN for Lt. Cdr. Joseph W. Entrikin, USN, pilot with Squadron VX-6 during USN OpDFrz I, 1955–56.

Entuziastov, Lednik: see Entuziasty Glacier 70°30'S, 14°30'E

Entuziasty Glacier 70°30'S, 14°30'E

A broad outlet glacier of Queen Maud Land including its tributary, the Musketov Glacier. The glacier flows generally northward into Lazarev Ice Shelf and is nourished in its upper reaches by ice draining from the Hoel Mountains and the NE end of the Wohlthat Mountains. The lower part of the glacier, particularly the relationship with the Musketov Glacier, was first delineated by the SovAE in 1961. They named it Lednik Entuziastov (enthusiasts' glacier). Not: Lednik Entuziastov.

Enviada, Roca: see Envoy Rock 67°51'S, 68°42'W

Envoy Rock 67°51'S, 68°42'W

Rock marking N limit of the Dion Islands, off the S end of Adelaide Island. Charted by a RN Hydrographic Survey Unit from HMS *Protector* in 1963 and so named in association with Emperor Island and names from an emperor's court. Not: Roca Enviada.

Eos, Mount 71°42'S, 168°38'E

A mountain with a bare summit rising to c. 2,600 m, 4.5 mi N of Mount Adam in the Admiralty Mountains, Victoria Land. Visited in 1981–82 by Bradley Field, geologist, NZGS, who suggested the name because the area provided excellent views of dawns and sunsets. In Greek mythology, Eos is the goddess of dawn.

Eosin Hill 54°19'S, 36°26'W

Hill, 90 m, rising 0.5 mi SE of Dartmouth Point in Cumberland East Bay, South Georgia. Roughly surveyed by the SwedAE,

1901–04, under Nordenskjöld. Named by the FIDS following their sketch survey in 1951. The name is one of a group in the vicinity of Dartmouth Point derived from the chemical stains used in the preparation for histological examination of biological material collected there by FIDS.

E. Perrier, Baie: see Perrier Bay 64°23'S, 63°45'W

Ephraim, Mount: see Ephraim Bluff 62°34'S, 59°43'W

Ephraim Bluff 62°34'S, 59°43'W

High bluff at the S end of Greenwich Island, overlooking the S entrance to McFarlane Strait, 1.7 mi W of Sartorius Point, in the South Shetland Islands. The name Mount Ephraim was used for this feature by American sealers as early as 1820–22. Air photos show that bluff is the more suitable descriptive term. Not: Monte Efrain, Mount Ephraim.

Epidote Peak 84°46'S, 176°56'W

A prominent rock peak just N of the mouth of Held Glacier, overlooking the W side of Shackleton Glacier in the Queen Maud Mountains. So named by the Texas Tech Shackleton Glacier Party (1964–65) because of the abundance of the mineral epidote which gives the peak a spotted appearance.

Epler Glacier 86°15'S, 161°00'W

A tributary glacier, 10 mi long, draining W from Nilsen Plateau in Queen Maud Mountains to enter Amundsen Glacier just S of Olsen Crag. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Charles F. Epler, storekeeper with USN Squadron VX-6 on Operation Deep Freeze 1966 and 1967.

Epperly, Mount 78°26'S, 85°53'W

Mountain over 4,600 m, located 2 mi S of Mount Tyree in the main ridge of the Sentinel Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Lt. Robert M. Epperly, USNR, pilot on reconnaissance and traverse support flights in this area in the 1957–58 season.

Epsilon Island 64°19'S, 63°00'W

Small island lying between Alpha Island and the S extremity of Lambda Island in the Melchior Islands, Palmer Archipelago. The island was roughly surveyed by DI personnel in 1927. The name, derived from the fifth letter of the Greek alphabet, appears to have been first used on a 1946 Argentine government chart following surveys of the Melchior Islands by Argentine expeditions in 1942 and 1943. Not: Isla Alberti.

Ercilla, Islote: see Heroína Island 63°24'S, 54°36'W

Erebus, Mount 77°32'S, 167°10'E

An active volcano, 3,795 m high, which forms the summit of Ross Island at the southwestern corner of Ross Sea. Named by Captain James Clark Ross in 1841 for his ship, the *Erebus*.

Erebus and Terror Gulf 63°55'S, 56°40'W

Gulf on the SE side of the tip of Antarctic Peninsula, bordered on the NE by the Joinville Island group and on the SW by the James Ross Island group. Named for HMS *Erebus* and HMS *Terror*, the vessels used by Sir James Clark Ross in exploring these waters in 1842–43.

Erebus Bay 77°44'S, 166°31'W

Bay about 13 mi wide between Cape Evans and Hut Point Peninsula, on the W side of Ross Island. The bay was explored by the BrNAE (1901–04) under Scott. It was named by Scott's second expedition, the BrAE (1910–13), which built its headquarters on Cape Evans. The feature is surmounted by Mount Erebus.

Erebus Glacier 77°41'S, 167°00'W

A glacier draining the lower S slopes of Mount Erebus, Ross Island, and flowing W to Erebus Bay where it forms the floating Erebus Glacier Tongue. Named in association with Mount Erebus by the BrNAE, 1901–04, under Scott.

Erebus Glacier Tongue 77°42'S, 166°40'E

The seaward extension of Erebus Glacier from Ross Island, projecting into Erebus Bay where part of it is floating. Charted and named by the BrNAE under Scott, 1901–04.

Ereby Point 62°38'S, 60°27'W

Point lying 4.5 mi ENE of Hannah Point along the N side of South Bay, Livingston Island, in the South Shetland Islands. The name Ereby's Bay was applied to South Bay on a chart of 1825 by James Weddell. Ereby Point was applied by the UK-APC in 1961 in order to preserve Weddell's name in the area.

Ereby's Bay: see South Bay 62°40'S, 60°28'W

Erehwon Nunatak 74°31'S, 76°41'W

A small nunatak (6 m high, 15 m long) at an elevation of 1,050 m, located 16 mi NW of Henkle Peak in Ellsworth Land. It was discovered in January 1985 by chance in a snowstorm and fog by the joint USGS-BAS geological party led by Peter D. Rowley. *Glossopteris*-bearing sandstone discovered here by the party is significantly older than the oldest previously dated rock from southern Antarctic Peninsula. The name is "nowhere" spelled backwards and was suggested by Rowley because the field party was uncertain of its location during the foul weather. Not: Erehwon Nunatak.

Eremitten Nunatak 72°11'S, 27°13'E

Nunatak 3 mi S of Balchen Mountain in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjpp, 1946–47, and named Eremitten (the hermit).

Erehwon Basin 79°48'S, 158°34'E

An extensive ice-free area forming a basin in the Brown Hills separating the snouts of the Foggydog and Bartrum Glaciers from the northern edge of the Darwin Glacier. Explored by the VUWAE, 1962–63, and named from Samuel Butler's novel *Erehwon*.

Erehwon Nunatak: see Erehwon Nunatak 74°31'S, 76°41'W

Erickson Bluffs 75°02'S, 136°30'W

A series of conspicuous rock bluffs extending from Gilbert Bluff to Mount Sinha, forming the SW edge of McDonald Heights, near the coast of Marie Byrd Land. A portion of the bluffs were photographed from aircraft of the USAS, 1939–41. They were mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Albert W. Erickson, leader of a biology party that made population studies of seals, whales, and birds in the pack ice of the Bellingshausen and Amundsen Seas using USCGC *Southwind* and its two helicopters, 1971–72.

Erickson Glacier 84°25'S, 179°50'W

A glacier, 12 mi long, flowing N from the Queen Maud Mountains, between Mount Young and O'Leary Peak, to join Ramsey Glacier at the edge of the Ross Ice Shelf. Named by US-ACAN for Cdr. J.L. Erickson, USN, commanding officer of the USS *Staten Island* during USN OpDFrz 1965.

Erizo, Roca: see Urchin Rock 65°19'S, 64°16'W

Erlanger Spur 83°16'S, 51°06'W

A rock spur from the SW extremity of Lexington Table, Forrestal Range, in the Pensacola Mountains. The spur lies S of Abele Spur and extends W toward Blount Nunatak. Named by US-ACAN, at the suggestion of USGS geologist Arthur B. Ford, after George L. Erlanger, electronics specialist with Geophysical Survey Systems Inc., who worked with the USARP-CRREL survey in the Pensacola Mountains, 1973–74.

Ernest Gruening, Mount: see Jackson, Mount 71°23'S, 63°22'W

Ernesto Pass 54°01'S, 37°44'W

Pass between Morsa Bay and Right Whale Bay in the NW part of South Georgia. The name Don Ernesto Glacier, for the catcher *Don Ernesto* owned by the Compañía Argentina de Pesca, was used for a glacier in the area on a British Admiralty chart in 1931. The SGS, 1955–56, reported that the glacier is now vestigial and no longer reaches the sea, but that the pass requires a name. The form Ernesto Pass was recommended by the UK-APC in 1957. Not: Don Ernesto Glacier.

Eroica Peninsula 71°11'S, 72°30'W

An ice-covered peninsula lying N of Beethoven Peninsula and Mendelssohn Inlet in W Alexander Island. Mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. Named by UK-APC after Beethoven's *Eroica* symphony (1804), in association with Beethoven Peninsula.

Eros Glacier 71°18'S, 68°20'W

Glacier on the E coast of Alexander Island, 7 mi long and 2 mi wide at its mouth, flowing SE from Planet Heights into George VI Sound immediately N of Fossil Bluff. Probably first seen on Nov. 23, 1935, by Lincoln Ellsworth, who flew directly over the glacier and obtained photos of features N and S of it. The mouth of the glacier was observed and positioned by the BGLE in 1936 and the FIDS in 1948 and 1949. The glacier was mapped in detail from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by UK-APC after the minor planet Eros in association with nearby Pluto and Uranus Glaciers.

E. Roux, Cap: see Roux, Cape 64°01'S, 62°28'W

Errant Glacier 82°21'S, 160°58'E

Glacier, 15 mi long, which lies on the E side of Holyoake Range and drains S into Nimrod Glacier. This glacier offered a route to the southern party of the NZGSAE (1960–61) when they journeyed north from Nimrod Glacier in December 1960. Named by them to describe the zigzag route of the party in traveling on the glacier in search for a route north.

Erratic Point 53°04'S, 73°22'E

A small, moss-covered point at the head of South West Bay, 1.3 mi NE of Cape Gazert, on the W side of Heard Island. The GerAE

in 1902 charted a cape in this vicinity, from the summit of Mount Drygaliski, and applied the name "Kap Lerche." In November 1929 the BANZARE under Mawson charted a small point in this position and applied the name Erractic Point because of the large number of massive erratic boulders encountered there. The ANARE was unable to find any significant feature in this immediate area during their 1948 survey of the island, hence the name Erratic Point was retained by them for this small point. Not: Kap Lerche.

Erratic Valley 70°47'S, 68°25'W

A short valley that joins Ablation Valley, Alexander Island, from the north. Named from the large number of erratic igneous blocks observed in the valley by a University of Aberdeen (Scotland) field party which mapped the area, 1978–79.

Errera, Cape 64°55'S, 63°37'W

Cape which forms the SW end of Wiencke Island, in the Palmer Archipelago. Discovered by the BelgAE, 1897–99, and named by Gerlache for Leo Errera, Paul Errera, and Madame M. Errera, contributors to the expedition.

Errera Channel 64°42'S, 62°36'W

Channel between the W coast of Graham Land and Rongé Island. Discovered by the BelgAE, 1897–99, under Gerlache, who named this feature for Léo Errera, professor at the University of Brussels and a member of the *Belgica* Commission.

Erskine Bay: see Erskine Iceport 69°56'S, 19°12'E

Erskine Glacier 66°29'S, 65°40'W

Glacier 16 mi long on the W coast of Graham Land, flowing W into Darbel Bay to the N of Hopkins Glacier. First surveyed by the FIDS in 1946–47, and named West Gould Glacier. With East Gould Glacier it was reported to fill a transverse depression across Graham Land, but further survey in 1957 showed no close topographical alignment between the two. The name Gould has been limited to the east glacier and an entirely new name, for Angus B. Erskine, leader of the first FIDS party to travel down the glacier and to survey it in detail, has been approved for the west glacier. Not: West Gould Glacier.

Erskine Iceport 69°56'S, 19°12'E

An iceport, about 3 mi wide and 6 mi long, which marks a more-or-less permanent indentation extending SE into the seaward front of the extensive ice shelf fringing Queen Maud Land. The "General Erskine Bay" was applied by USN OpDFrz I personnel on the USS *Glacier* who made a running survey of this coast in March 1956. The term iceport was suggested by the US-ACAN in 1956 to denote an ice shelf indentation, subject to configuration changes, which may offer anchorage or possible access to the upper surface of an ice shelf via ice ramps along one or more sides of the feature. Named for Gen. Graves B. Erskine, USMC (Ret.), director of the Office of Special Operations, Dept. of the Navy, who assisted in formulating expedition plans and policy. Not: Erskine Bay, General Erskine Bay.

Erven Nunataks 75°45'S, 128°10'W

Small nunatak group 7.5 mi NE of Putzke Peak in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Raymond D. Erven, USARP meteorologist at Byrd Station, 1964.

Esbensen Bay 54°52'S, 35°57'W

Small bay 1 mi SW of Nattriss Head, along the SE end of South Georgia. Charted by the GerAE, 1911–12, under Filchner, and named for Capt. V. Esbensen, manager of the Compañía Argentina de Pesca whaling station at Grytviken. Not: Espensen Bucht.

Escalade Peak 78°38'S, 159°22'E

Prominent peak, 2,035 m, about 8 mi E of the S end of Boomerang Range, in Victoria Land. So named by the N.Z. party of the CTAE (1957–58) because its vertical pitches and platforms provide a ladder-like route to the summit.

Escarceo, Roca: see Channel Rock 62°28'S, 60°05'W

Escarpada Point 61°17'S, 54°14'W

The rocky, rugged SW point of Clarence Island, South Shetland Islands. The descriptive name was applied in Argentine government cruises of 1953–54. Escarpada means craggy. Not: Craggy Point.

Escarpadas, Rocas: see Rugged Rocks 62°37'S, 59°48'W

Escarpado, Islote: see Craggy Island 62°28'S, 60°19'W

Escombros, Islote: see Brash Island 63°24'S, 54°55'W

Escondida, Bahía: see Hidden Bay 65°02'S, 63°46'W

Escondido, Lago: see Hidden Lake 64°02'S, 58°18'W

Escribiente Rebolledo, Isla: see Webb Island 67°27'S, 67°56'W

Escritor Orrego Vicuña, Isla: see Runaway Island 68°12'S, 67°07'W

Esfinge, Isla: see Sphinx Island 65°54'S, 64°53'W

Esfinge, Roca: see Sphinx Rock 60°37'S, 46°05'W

Eskers: see Strand Moraines, The 77°45'S, 164°31'E

Eskimo Point 74°17'S, 162°33'E

A flat-topped, steep-sided promontory which protrudes from the E side of Eisenhower Range and forms the N wall of O'Kane Canyon, in Victoria Land. So named by the Southern Party of NZGSAE, 1962–63, which camped on its upper surface and built an igloo while waiting for white-out conditions to lift.

Eskimo Ysbult: see Novvy Island 70°50'S, 2°50'W

Eskola Cirque 80°43'S, 23°49'W

A cirque 2 mi wide between Arkell Cirque and Bowen Cirque in central Read Mountains, Shackleton Range. Photographed from the air by the U.S. Navy, 1967. Surveyed by the BAS, 1968–71. In association with the names of geologists grouped in this area, named by the UK-APC in 1971 after Pentti Eskola (1883–1964), Finnish geologist, an authority on the Precambrian rocks of Finland and on silicate melt systems.

Esmark Glacier 54°13'S, 37°13'W

Glacier flowing into the W part of Jossac Bight on the S coast of South Georgia. Named by the Norwegian expedition under Høltedahl, 1927–28, probably for Jens Esmark, professor of mineralogy at the University of Kristiania (Oslo), Norway.

Espenchied Nunatak: see Espenschied Nunatak 73°35'S, 77°52'W

Espensen Bucht: see Esbensen Bay 54°52'S, 35°57'W

Espenschied Nunatak 73°35'S, 77°52'W

The westernmost member of the Snow Nunataks, on the English Coast of Ellsworth Land. This nunatak was mapped by USGS from surveys and U.S. Navy air photos, 1961–66. Named by US-ACAN after Peter C. Espenschied, USARP auroral scientist at the Byrd Auroral Sub-Station, 1960–61. Not: Espenschied Nunatak.

Esperanza, Bahía: see Hope Bay 63°23'S, 57°00'W

Esperanza, Glaciar: see Depot Glacier 63°25'S, 57°03'W

Esperanza, Isla: see Hope Island 63°03'S, 56°50'W

Esperanza, Lago: see Hope, Lake 63°25'S, 57°01'W

Esperanza, Punta: see Hope Point 54°17'S, 36°29'W

Espina, Islote: see Spine Island 60°36'S, 46°02'W

Espinosa, Arrecife: see Armstrong Reef 65°54'S, 66°18'W

Esplin Islands 67°45'S, 69°00'W

Group of two small islands and off-lying rocks lying NE of Box Reef, off the S end of Adelaide Island. Named by the UK-APC for Sub. Lt. Christopher J. Esplin Jones, RN, a member of the RN Hydrographic Survey Unit which charted this group in 1962–63.

Espora, Estrecho: see English Strait 62°27'S, 59°38'W

Esser Hill 77°56'S, 164°05'E

A peak, 1,235 m, standing between the divergent flow of the Priddy Glacier and Blackwelder Glacier, 1 mi SW of Chambers Hill, on the Scott Coast, Victoria Land. Named in 1992 by US-ACAN after Alan C. Esser of Holmes and Narver, Inc., who served as Project Manager of Antarctic Support Activities, 1976–80, and was responsible for contractor operations at McMurdo Station, South Pole Station and Siple Station, as well as field activities in support of the U.S. Antarctic Program.

Essex Point 62°35'S, 61°12'W

Point lying 1 mi NE of Start Point at the W end of Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 after the *Essex* (Captain Chester), one of the fleet of American sealers from Stonington, CT, which visited the South Shetland Islands in 1820–21 and 1821–22. Not: Punta Start.

Essinger, Mount 77°52'S, 162°38'E

A peak rising to 1,905 m, surmounting the most eastern massif of Cathedral Rocks, Royal Society Range, in Victoria Land. Named in 1992 by US-ACAN in association with Chaplains Tableland (q.v.) after Lt. Cdr. Jesse W. Essinger, USN, chaplain with the 1968 winter party at McMurdo Station.

Estadio, Glaciar: see Stadium, The 61°07'S, 54°42'W

Estanque, Monte: see Pond, Mount 62°57'S, 60°33'W

Estay, Islote: see Estay Rock 63°19'S, 57°59'W

Estay Rock 63°19'S, 57°59'W

A rock lying 1.8 mi WSW of Toro Point, Trinity Peninsula. The name appears on a Chilean government chart of 1948. Named for a minister of the Chilean government, Fidel Estay Cortéz. Not: Islote Estay, Islote Fidel Estay.

Este, Glaciar: see Shoemith Glacier 67°51'S, 67°12'W

Este, Punta: see Cone Point 54°03'S, 37°01'W

Este, Saco: see Cumberland East Bay 54°17'S, 36°26'W

Ester, Mount 82°18'S, 155°04'E

Mountain over 2,200 m, surmounting the western part of McKay Cliffs in the Geologists Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Donald W. Ester, USARP geologist at McMurdo Station, 1962–63.

Ester's Harbour: see Esther Harbor 61°55'S, 57°59'W

Esther Bay: see Venus Bay 61°55'S, 57°54'W

Esther Harbor 61°55'S, 57°59'W

Small harbor at the W side of Venus Bay, lying immediately W of Pyrites Island and S of Gam Point, on the N coast of King George Island in the South Shetland Islands. The harbor was known to both American and British sealers as early as 1821. The sealing vessel *Esther* (Captain Low) of Boston worked in this area in the 1820–21 season. Not: Ester's Harbour.

Esther Islands: see Pyrites Island 61°55'S, 57°59'W

Esther Nunatak 61°57'S, 57°50'W

Nunatak lying 2 mi SW of Brimstone Peak in the NE part of King George Island, South Shetland Islands. Charted and named by DI personnel on the *Discovery II* in 1937, probably from association with nearby Esther Harbor.

Estrella, Punta: see Start Point 54°03'S, 37°21'W

Estrella del Norte, Islote: see Northstar Island 68°11'S, 67°07'W

Eta Island 64°19'S, 62°55'W

Island, 1.5 mi long, which lies immediately N of Omega Island in the Melchior Islands, Palmer Archipelago. This island, the largest feature in the NE part of the Melchior Islands, is part of what was called "Ile Melchior" by the FrAE under Charcot, 1903–05, but the name Melchior now applies to the whole island group. Eta Island was roughly surveyed by DI personnel in 1927. The name Eta, derived from the seventh letter of the Greek alphabet, appears to have been first used on a 1946 Argentine government chart following surveys of the Melchior Islands by Argentine expeditions in 1942 and 1943. Not: Isla Piedrabuena, North Star Island.

Ethells, Mount 80°17'S, 28°20'W

One of the La Grange Nunataks in the Shackleton Range, rising to c. 900 m to the W of Mount Beney. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. Named by the UK-APC after William A. Ethells, diesel mechanic and Projects Officer (engineering) with BAS, 1962–88, who worked in Shackleton Range, 1968–69.

Eternidad, Cadena: see Eternity Range 69°46'S, 64°34'W

Eternity Mountains: see Welch Mountains 70°57'S, 63°30'W

Eternity Range 69°46'S, 64°34'W

A range of mountains 28 mi long, rising 2,860 m, and trending N-S approximately in the middle of the Antarctic Peninsula. Eternity Range is divided into three main mountain blocks, the major summits in each from N to S being Mounts Faith, Hope and

Charity. These four names were applied by Lincoln Ellsworth who discovered the range from the air during his flights of Nov. 21 and 23, 1935. In Nov. 1936, the range was surveyed by J.R. Rymill of BGLE who gave the name Mount Wakefield to the central mountain in the range. This complication by Rymill, and uncertainty as to the precise location or extent of Ellsworth's discovery, hindered for a time a resolution of its nomenclature (i.e., following the USAS, 1939–41, the name Eternity Range or Eternity Mountains was incorrectly applied to the present Welch Mountains 60 miles farther south). A careful study of the original reports, maps and photographs, and comparison with materials from subsequent expeditions such as RARE, 1947, and FIDS, 1960, has led to the conclusion that the range described comprises at least the core of Ellsworth's Eternity Range and appropriately commemorates his discovery. The name Wakefield, given by Rymill, has been transferred to nearby Wakefield Highland. Not: Cadena Eternidad.

Ethelred, Mount 70°04'S, 69°29'W

Mainly ice-covered mountain, 2,470 m, 3 mi SE of Mount Ethelwulf and 8 mi inland from George VI Sound, in the Douglas Range of Alexander Island. Probably first observed by Lincoln Ellsworth, who photographed the E side of the Douglas Range from the air on Nov. 23, 1935. Its E face was roughly surveyed in 1936 by the BGLE. Resurveyed in 1948 by the FIDS and named for Ethelred I, Saxon king of England, 865–871. The W face of the mountain was mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960.

Ethelwulf, Mount 70°02'S, 69°34'W

Mainly ice-covered mountain, 2,590 m, standing between Mounts Egbert and Ethelred at the head of Tumble Glacier, in the Douglas Range of Alexander Island. Probably first observed by Lincoln Ellsworth, who photographed the E side of the Douglas Range from the air on Nov. 23, 1935. Its E face was roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS and named for Ethelwulf, Saxon king of England, 839–858. The W face of the mountain was mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960.

Étienne, Baie: see Étienne Fjord 65°09'S, 63°13'W

Étienne Fjord 65°09'S, 63°13'W

Bay 5 mi long, lying between Bolsón and Thomson Coves on the S side of Flandres Bay, along the W coast of Graham Land. Charted by the FrAE, 1903–05, and named by Charcot for Eugène Étienne (1844–1921), French politician, Vice President of the Chamber of Deputies, 1902–04, and Minister of War, 1905–06. Not: Baie Étienne.

Etna Island 63°05'S, 55°09'W

Island with a high summit, lying 6 mi N of the eastern end of Joinville Island, off the NE tip of Antarctic Peninsula. Discovered by a British expedition under Ross, 1839–43, who so named it because of its resemblance to volcanic Mount Etna. Not: Aetna Insel.

Eubanks, Mount 70°02'S, 67°15'W

An isolated mountain that rises 600 m above the ice surface and provides a prominent landmark near the head of Riley Glacier in Palmer Land. Named by US-ACAN for Lt. Cdr. Paul D. Eubanks, USN, Commander of LC-130 aircraft on long-range flights between McMurdo Station and Lassiter Coast, 1969–70. He also

carried out open field and resupply missions to various stations and camps elsewhere in Antarctica.

Eubanks Point 73°27'S, 93°38'W

A point with steep ice-covered slopes which is marked by a rock exposure on the NE face, located 2 mi WSW of the summit of Mount Loweth in the Jones Mountains. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61. Named by US-ACAN for Staff Sgt. Leroy E. Eubanks, USMC, navigator with USN Squadron VX-6, who participated in pioneering flights of LC-47 Dakota aircraft from Byrd Station to the Eights Coast area in November 1961.

Eureka Glacier 69°44'S, 68°45'W

Broad, gently sloping glacier, 18 mi long and 17 mi wide at its mouth, which flows westward from the W side of Palmer Land into George VI Sound. It is bounded on its N side by the nunataks S of Mount Edgell, on its S side by the Traverse Mountains and Terminus Nunatak, and at its head Prospect Glacier provides a route to Wordie Ice Shelf. First surveyed in 1936 by the BGLE under Rymill and resurveyed in 1948 by the FIDS. The name expresses triumph of discovery and arose because the BGLE sledge party found their way to George VI Sound via this glacier in 1936.

Eureka Spurs 72°42'S, 166°00'E

Several rock spurs exposed along the E side of the head of Mariner Glacier, 8 mi SW of Mount McCarthy, in Victoria Land. So named by the VUWAE field party to Evans Névé, 1971–72, on the occasion of fossil discoveries made in the area.

Europa Cliffs 70°52'S, 68°45'W

A group of interconnected hills and rock ridges on the west side of Jupiter Glacier in eastern Alexander Island. Mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. Named by UK-APC from association with Jupiter Glacier after Europa, one of the satellites of Jupiter.

Eustnes, Mys: see Gotley, Cape 66°42'S, 57°19'E

Eustnes, Poluostrov: see Austnes Peninsula 66°42'S, 57°17'E

Eva, Cape 68°42'S, 90°37'W

A cape forming the north end of Peter I Island. Discovered and named in 1927 by a Norwegian expedition in the *Odd I* under Eyvind Tofte.

Evans, Cape 77°38'S, 166°24'E

Rocky cape on the W side of Ross Island, forming the N side of the entrance to Erebus Bay. Discovered by the BrNAE (1901–04) under Scott, who named it the Skuary. Scott's second expedition, the BrAE (1910–13), built its headquarters here, renaming the cape for Lt. Edward R.G.R. Evans, RN, second in command of the expedition. Not: Skuary.

Evans, Mount 77°15'S, 162°29'E

Mountain with a double summit rising to 1,420 m, dominating the central part of Saint Johns Range in Victoria Land. Discovered by the BrNAE (1901–04) under Scott, who named it for Lt. Edward R.G.R. Evans (later Admiral Lord Mountevans) of the *Morning*, relief ship to the expedition. It was from this mountain that he took his "Mountevans."

Falkland Harbor 60°44'S, 45°03'W

Harbor along the SW side of Powell Island in the South Orkney Islands. Charted by Norwegian whaling captain Petter Sørllle in 1912–13. Named for the floating whale factory *Falkland* which was badly damaged while entering the harbor in the 1912–13 season.

Falla, Mount 84°22'S, 164°55'E

A prominent conical mountain, 3,825 m, standing 3.5 mi NE of Mount Stonehouse, between Berwick and Prebble Glaciers, in Queen Alexandra Range. Sighted in January 1958 by the N.Z. party of the CTAE (1956–58), and named for R.A. Falla, a member of the Ross Sea Committee.

Falla Bluff 67°34'S, 61°29'E

Prominent rocky coastal bluff at the head of Utstikkar Bay. Discovered in February 1931 by the BANZARE under Mawson, and named by him for R.A. Falla, ornithologist with the expedition. Not: Svarthovden.

Fallières Coast 68°30'S, 67°00'W

That portion of the W coast of the Antarctic Peninsula between the head of Bourgeois Fjord and Cape Jeremy. This coast was first explored in Jan. 1909 by the FrAE under J.B. Charcot, who named it for Clément Armand Fallières, then President of France. Not: Fallières Land.

Fallières Land: see Fallières Coast 68°30'S, 67°00'W

Fallone Nunataks 85°21'S, 142°54'W

A chain of nunataks 10 mi long, located 10 mi NE of Harold Byrd Mountains, between the edge of Ross Ice Shelf and Watson Escarpment. Named by US-ACAN for Lt. (jg) Paul R. Fallone, Jr., USN, aide to the Commander, U.S. Naval Support Force, Antarctica, 1962.

Falsa, Bahía: see False Bay 62°43'S, 60°22'W

Falsa, Isla: see False Island 64°31'S, 62°53'W

Falsa Aguja, Pico: see Helmet Peak 62°39'S, 60°01'W

Falsa Isla, Punta: see False Island Point 63°55'S, 57°20'W

Falsa Punta Redonda, Punta: see False Round Point 61°54'S, 58°02'W

Falsa Redonda, Punta: see False Round Point 61°54'S, 58°02'W

False Bay 62°43'S, 60°22'W

Bay 4 mi long, which lies between Barnard Point and Miers Bluff on the S side of Livingston Island, in the South Shetland Islands. Probably first entered and charted by Capt. Nathaniel Palmer in November 1820; so named because of the possibility in thick weather of confusion between this feature and nearby South Bay (q.v.), where Johnson Dock was frequented by the early sealers. Not: Bahía Falsa, Palmer Bay, Palmers Bay.

False Cape Renard 65°02'S, 63°50'W

Rocky cape 1.5 mi SW of Cape Renard, on the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. This feature and Cape Renard together were called “The Needles” by Henryk Arctowski, geologist, oceanographer and meteorologist with the Belgian expedition. Since the two capes are easily confused and need to be distinguished, a collective name is

considered unsuitable. False Cape Renard was applied by the FrAE under Charcot, 1908–10.

False Island 64°31'S, 62°53'W

The largest of three islands lying at the E side of Hackapike Bay, off the NE coast of Anvers Island, in the Palmer Archipelago. Two islands were charted in this approximate position by the FrAE, under Charcot, 1903–05. False Island was named by DI personnel on the *Discovery* in 1927. Not: Isla Falsa.

False Island Point 63°55'S, 57°20'W

Headland 1 mi long and 0.5 mi wide, which is connected by a low, narrow, almost invisible isthmus to the S side of Vega Island, lying S of the NE end of Antarctic Peninsula. First sighted in February 1902 and charted as an island by the SwedAE under Nordenskjöld. It was determined to be a part of Vega Island in 1945 by the FIDS, who applied this descriptive name. Not: Punta Falsa Isla, Punta Isla Falsa.

False Round Point 61°54'S, 58°02'W

Point 8.5 mi W of North Foreland and 2 mi S of Ridley Island, on the N coast of King George Island in the South Shetland Islands. This point has appeared on charts since about 1822. Probably named for its similarity to Round Point, which lies 12 mi to the W, by DI personnel on the *Discovery II* who charted the N coast of this island in 1937. Not: Falsa Punta Redonda, Punta Falsa Punta Redonda.

Falucho, Glacier: see Recovery Glacier 81°10'S, 28°00'W

Famine, Ile: see Bob Island 64°56'S, 63°26'W

Fandens Brae: see Devils Glacier 86°23'S, 165°00'W

Fanfare Island 65°13'S, 64°11'W

The northernmost of the Argentine Islands, lying 1.5 mi S of Herald Reef in the Wilhelm Archipelago. Named by the UK-APC in 1961 from association with Herald Reef.

Fang, The: see Fang Ridge 77°29'S, 167°12'E

Fang Buttress 64°41'S, 63°21'W

Rock buttress immediately W of Molar Peak near the S end of the Osterrieth Range of Anvers Island, in the Palmer Archipelago. The buttress has a small but prominent tooth-like rock in front of it and is a landmark for parties crossing William Glacier. Surveyed by the FIDS, 1955–57, and given this descriptive name by the UK-APC in 1959.

Fang Glacier 77°29'S, 167°06'E

Glacier on the W side of Fang Ridge, separating the old and new craters of Mount Erebus on Ross Island. Charted by Frank Debenham of the BrAE, 1910–13, and named by him in association with Fang Ridge.

Fang Peak 67°48'S, 62°35'E

Prominent conical peak 1 mi S of Mount Parsons in the David Range of the Framnes Mountains, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. So named by ANCA because of its resemblance to a tooth.

Fang Ridge 77°29'S, 167°12'E

A conspicuous ridge on the NE slope of Mount Erebus, on Ross Island. It is a much denuded portion of the original caldera rim left

by a catastrophic eruption. So named, probably for its curved shape, by Frank Debenham of the BrAE, 1910–13, who made a plane table survey in 1912. Not: The Fang.

Fan Lake 54°30'S, 37°03'W

A small lake located in SE Annenkov Island, South Georgia. The lake is fed by meltwater and is bounded to the W by an alluvial fan, from which the name is derived. So named following a geological survey by BAS, 1972–73.

Fanning, Cape 72°24'S, 60°39'W

Cape which forms the N side of the entrance to Violante Inlet, on the E coast of Palmer Land. Discovered by the USAS in a flight from East Base on Dec. 30, 1940. Named by the US-ACAN for Edmund Fanning, of Stonington, CT, and New York City, who in addition to actual Antarctic exploration in connection with his sealing and whaling business also vigorously promoted exploration by others under both private and public auspices. His book, *Voyages Round the World*, published in 1833, is an authoritative work on early American Antarctic exploration.

Fanning Ridge 54°20'S, 37°02'W

Prominent rock ridge, 5 mi long, paralleling the S coast of South Georgia between Aspasia Point and the W side of Newark Bay. The ridge was named by the UK-APC, following its mapping by the SGS in 1951–52, for Capt. Edmund Fanning (1770–1841) of Stonington, CT, who with the *Aspasia* took 57,000 fur seal skins at South Georgia in 1800–01, and published the earliest account of sealing there.

Fannings Harbor: see Yankee Harbor 62°32'S, 59°47'W

Fantasma, Punta: see Phantom Point 66°25'S, 65°41'W

Fantome Rock 54°00'S, 38°01'W

A dangerous rock in the middle of Bird Sound, South Georgia, lying 0.1 mi S of Gony Point, Bird Island. Charted by DI personnel on the *Discovery* in the period 1926–30. Named by the UK-APC in 1963 for HMS *Owen's* motor cutter, used in a survey of this area in February–March 1961, and lost in heavy seas near this rock.

Faraday, Cape 60°38'S, 45°04'W

Cape which forms the N tip of Powell Island in the South Orkney Islands. Discovered by Capt. George Powell and Capt. Nathaniel Palmer on the occasion of their joint cruise in December 1821. The name first appears on Powell's chart published in 1822.

Faraway, Mount 79°12'S, 28°49'W

Prominent, snow-covered mountain, 1,175 m, marking the S extremity of the Theron Mountains. Discovered by the CTAE in 1956, and so named because during days of sledging toward this mountain they never seemed to be any nearer to it.

Farbo Glacier 75°50'S, 141°45'W

A tributary glacier which drains northeastward and enters the Land Glacier 8 mi west of Mount McCoy, on the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1959–65. Named by US-ACAN for Richard R. Farbo, equipment operator, USN, who wintered-over in Antarctica on three expeditions of Operation Deep Freeze. He was at McMurdo Station in 1959 and 1965, and the South Pole Station in 1969.

Farewell Point 54°00'S, 38°01'W

Point which forms the NE extremity of Bird Island, off the W end of South Georgia. The name appears to have been applied by DI personnel who charted South Georgia in the period 1926–30. Not: Punta del Adiós.

Farewell Rock 63°52'S, 61°01'W

Rock 0.5 mi long lying off the SW end of Spert Island and 6 mi NW of Skottsberg Point, Trinity Island, in the Palmer Archipelago. Although the origin of the name is unknown, it has appeared on maps for over one hundred years and its usage has become established internationally.

Farias, Punta: see Skottsberg Point 63°55'S, 60°49'W

Farley, Mount 86°35'S, 152°30'W

A conspicuous rock peak, 2,670 m, standing at the W side of Scott Glacier, 3 mi E of McNally Peak, in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named at that time by Byrd for the Hon. James M. Farley, Postmaster General of the United States.

Farley Massif 70°13'S, 65°48'E

A mountain 1 mi N of Mount Jacklyn in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos. Named for J.A. Farley, surveyor at Mawson Station in 1964.

Farman Highland 74°08'S, 61°30'W

A relatively smooth ice-covered upland, rising to c. 750 m and forming the E part of Hutton Mountains, between Wright Inlet and Keller Inlet, Lassiter Coast, Palmer Land. The feature was mapped by USGS from surveys and USN aerial photographs, 1961–67. Named by UK-APC in 1991 after Joseph C. Farman, FIDS-BAS atmospheric physicist, 1957–90; scientific officer, Argentine Islands, 1957–59 (Base Leader, 1958–59).

Farman Nunatak 64°25'S, 61°07'W

Nunatak, 655 m, rising W of Mount Morton in Blériot Glacier, on the W coast of Graham Land. Photographed by the FIDASE in 1956–57, and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Henry Farman (1874–1958), pioneer Anglo-French aviator and aircraft designer, who carried the first airplane passenger in 1908.

Farmer Island 76°38'S, 147°04'W

An ice-covered island 14 mi long, lying 6 mi N of Radford Island in Sulzberger Ice Shelf along the coast of Marie Byrd Land. The island was first roughly mapped by the USAS, 1939–41. Named by US-ACAN for Floyd L. Farmer, SFCA, USN, senior shipfitter on the USS *Glacier* along this coast, 1961–62.

Farnell Valley 77°53'S, 160°39'E

An ice-free valley, 1 mi long, a tributary to Beacon Valley, descending to the latter from the SE side, in Victoria Land. Named by US-ACAN in 1964, for James B.H. Farnell, who assisted in supplying field parties at McMurdo Station, 1960.

Faro, Caleta: see Lighthouse Bay 54°03'S, 37°08'W

Faro, Roca: see Column Rock 63°11'S, 57°19'W

Farquharson Nunatak 64°30'S, 59°42'W

A nunatak 1.3 mi NW of Mount Lombard on Sobral Peninsula, Nordenskjöld Coast. Named by the UK-APC after Geoffrey W.

Farquharson, BAS geologist who worked in this area in the 1979–80 and 1980–81 field seasons.

Farr Bay 66°35'S, 94°23'E

Bay on the coast of Antarctica, 7 mi wide, lying just E of Helen Glacier. Discovered in November 1912 by the Western Base Party of the AAE under Mawson. In some early reports the feature was called Depot Bay. It was later named by Mawson for Dr. C.C. Farr of New Zealand, a member of the Expedition Advisory Committee.

Farrel, Paso: see Benz Pass 63°41'S, 58°22'W

Farrell, Mount 78°21'S, 85°03'W

Mountain over 2,600 m, rising just NW of Dater Glacier and about 13 mi E of Mount Shear, in the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Lt. (j.g.) Lawrence J. Farrell, USN, who died in the crash of a UB-1 Otter airplane at Marble Point on Jan. 4, 1959.

Farrington Island 67°15'S, 59°42'E

Small island lying 4 mi NNE of Couling Island and 1.5 mi W of Klakkane Islands, in the William Scoresby Archipelago. Discovered and named by DI personnel on the *William Scoresby* in February 1936.

Farrington Ridge 73°35'S, 94°20'W

An isolated linear ridge, 1.5 mi long, with continuous rock exposure along the crest, located 2 mi NNW of Forbidden Rocks in the Jones Mountains. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61, who named it for Lt. Robert L. Farrington, USN, co-pilot of the LC-47 Dakota aircraft that made the first landing in the Jones Mountains, Dec. 9, 1960.

Farwell Island 72°49'S, 91°10'W

An ice-covered island, about 38 mi long and 10 mi wide, lying between McNamara and Dendler Islands in the E part of Abbot Ice Shelf. The feature was positioned by parties from the *USS Glacier* and *Staten Island* in February 1961, and was mapped by USGS from USN air photos of 1966. Named by US-ACAN for Capt. A.F. Farwell, Chief of Staff to the Commander, U.S. Naval Support Force, Antarctica, during Deep Freeze 1968 and 1969.

Fasettfjellet 72°33'S, 2°59'W

Mountain, 2,425 m, standing N of Flogstallen in the NE part of Borg Massif in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Fasettfjellet (the facet mountain).

Faulkender Ridge 75°02'S, 115°00'W

An ice-covered ridge about 12 mi long, located W of Horrall Glacier in the NW part of Kohler Range, Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for DeWayne J. Faulkender, USGS topographic engineer with the Marie Byrd Land Survey party, 1966–67.

Faulkner Escarpment 86°12'S, 156°00'W

An ice-covered escarpment, 30 mi long and over 3,000 m high, trending in a N-S direction and forming the E edge of Nilsen Plateau and Fram Mesa in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under

Quin Blackburn, and named by Byrd for Charles J. Faulkner, Jr., chief counsel of Armour and Co. of Chicago, contributors to the expedition.

Faulkner Nunatak 69°36'S, 71°42'W

A distinctive nunatak (c. 200 m) just W of Beagle Peak, Lassus Mountains, in NW Alexander Island. The feature appears in USN aerial photographs obtained in 1966. Named by US-ACAN after Harold T. Faulkner, USN, Leading Chief of Squadron VXE-6 Photo Division on Operation Deep Freeze, 1969.

Fault Bluff 79°18'S, 157°40'E

A notable rock bluff (2,320 m) situated 9 mi NE of Mount Longhurst in the Cook Mountains. The feature was visited in the 1957–58 season by members of the Darwin Glacier Party of the CTAE, 1956–58. They applied the name which presumably refers to a geological fault at the bluff.

Fauré Inlet 72°37'S, 70°48'W

Ice-filled inlet on the S side of Monteverdi Peninsula, S Alexander Island. Discovered and first charted by Finn Ronne and Carl Eklund of the USAS, 1939–41. Named by the UK-APC, 1977, in association with the names of composers grouped in this area, after Gabriel Fauré (1845–1924), French composer.

Faure Islands 68°06'S, 68°52'W

Group of rocky islands and reefs, 3 mi in extent, lying 21 mi SW of Cape Alexandra, the SE end of Adelaide Island. Discovered by the FrAE, 1908–10, under Charcot, who named them for Maurice Faure, French scholar and statesman. Not: Maurice Faure Islands.

Faure Passage 68°14'S, 68°33'W

A marine channel or passage between the Faure Islands and Kirkwood Islands in Marguerite Bay. The name "Pasaje Faure" was applied by Argentine workers in the area in association with the Faure Islands.

Faure Peak 85°42'S, 128°35'W

A peak, 3,940 m, standing 3.5 mi E of Mount Minshew along the N side of Wisconsin Plateau in the Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Gunter Faure, leader of the Ohio State University geological party to the Horlick Mountains, 1964–65.

Favela Rocks 76°12'S, 145°21'W

A group of rocks at the NW end of the Phillips Mountains, 4 mi NW of Mount June, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for Rafael Favela, Jr., equipment operator, USN, Byrd Station winter party, 1967.

Favreau Pillar 71°57'S, 171°07'E

A pillar rock lying close E of Foyn Island in the Possession Islands. Mapped by USGS from surveys and U.S. Navy air photos, 1958–63. Named by US-ACAN for Robert D. Favreau, USMC, Navigator on the USN Squadron VX-6 flight of Jan. 18, 1958, at the time this feature was photographed.

Fazekas Hills 83°08'S, 163°10'E

Rugged, ice-free hills trending in a N-S direction for 9 mi just E of Mount Oona on the E side of Lowery Glacier, Queen Elizabeth Range. Named by US-ACAN for Stephen P. Fazekas, Sr., USARP meteorologist at South Pole Station, 1958.

Fazio, Mount 73°23'S, 162°48'E

An ice-free mountain, 2,670 m, marking the SW end of Tobin Mesa, in the Mesa Range, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for William Z. Fazio, USN, helicopter crewmember during USN OpDFrz, 1966, 1967 and 1968.

Fearon, Mount 75°05'S, 161°42'E

A mountain, 1,140 m, rising at the E side of Woodberry Glacier, 6 mi NW of Mount Priestley, in the Prince Albert Mountains, Victoria Land. Mapped by USGS from surveys and USN air photos, 1956–62. Named by US-ACAN for Colin E. Fearon, biologist at McMurdo Station, summer 1962–63.

Feather, Mount 77°57'S, 160°21'E

A massive mountain, 3,010 m, with a broad flattish summit, standing at the S extremity of the Quartermain Mountains, in Victoria Land. Named after Thomas A. Feather, RN, Boatswain on the *Discovery* during the BrNAE (1901–04), who accompanied Scott in his Western Journey to this area in 1903.

Fedallah, Mount 65°43'S, 62°52'W

A mountain (c. 1,250 m) situated E of Pip Cliffs on the N side of Flask Glacier in eastern Graham Land. Named after a crewman of *Pequod* in association with other names from *Moby Dick* in this area. Named by UK-APC in 1987.

Federico Puga Borne, Paso: see Croker Passage 64°00'S, 61°42'W

Feeley Peak 85°26'S, 126°26'W

A peak, 1,730 m, standing 3 mi NW of Sheets Peak, between Davisville and Quonset Glaciers on the N side of Wisconsin Range. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Keith E. Feeley, construction mechanic, Byrd Station winter party, 1959.

Feeney Col 85°37'S, 155°45'W

A col at the NE side of Feeney Peak, near the center of Medina Peaks in the Queen Maud Mountains. Though steep on both sides and high (970 m), the col provides a good route through Medina Peaks. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. The col was used by members of NZGSAE, 1969–70, who named it in association with Feeney Peak.

Feeney Peak 85°37'S, 155°50'W

A peak, 1,210 m, near the center of Medina Peaks, standing 7 mi N of Patterson Peak on the E side of Goodale Glacier. Mapped by USGS from ground surveys and USN air photos, 1960–64. Named by US-ACAN for Robert E. Feeney, biologist at McMurdo Station for several summers, 1964–65 to 1968–69.

Feeney Ridge 69°40'S, 159°06'E

A ridge, 6 mi long, which is mainly ice free along the crest. It parallels the SE side of Fergusson Glacier in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Lt. Cdr. Edward J. Feeney, USN, Aircraft Commander (LC-130F Hercules) during Operation Deep Freeze 1968.

Fegley Glacier 83°24'S, 167°25'E

A tributary glacier in the Holland Range, flowing E into Lennox-King Glacier, 5 mi NE of Mount Allen Young. Named by US-ACAN for Lt. Charles E. Fegley, III, CEC, USN, officer in

charge of the nuclear power unit at McMurdo Station during OpDFrz, 1964.

Feistmantel Valley 76°43'S, 159°35'E

A fossiliferous valley lying south of Shimmering Icefield and west of Mount Watters in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964), who named it after Prof. O. Feistmantel, who made pioneering studies of Gondwana flora.

Feldkotter, Mount 84°06'S, 56°06'W

Mountain, 1,510 m, standing 4 mi S of Gambacorta Peak in southern Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Henry H.J. Feldkotter, aviation electrician at Ellsworth Station, winter 1958.

Félicie, Cape: see Félicie Point 64°42'S, 63°09'W

Félicie Point 64°42'S, 63°09'W

Point which forms the S end of Lion Island, lying immediately E of Anvers Island in the Palmer Archipelago. Charted and named by the BelgAE, 1897–99, under Gerlache. Not: Cape Félicie.

Feliz Encuentro, Cabo: see Well-met, Cape 63°47'S, 57°19'W

Fell, Mount 73°26'S, 62°16'W

Mountain 8 mi W of Mount Hemmingsen in the N part of Werner Mountains in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Jack W. Fell, biologist on the *Eastwind* in the cruise along Antarctic Peninsula in the 1965–66 season.

Felsite Island 72°26'S, 169°49'E

A rock island 1 mi long and 300 m high, lying at the head of Edisto Inlet within the northward stream of Edisto Glacier. Named by the NZGSAE, 1957–58, as descriptive of several prominent dikes of cream-colored igneous rocks (*felsite*) in its otherwise dark sedimentary rock formation.

Felt, Cape 73°52'S, 116°23'W

An ice-covered cape which marks the N end of Wright Island, on Bakutis Coast, Marie Byrd Land. First mapped from air photos taken by USN OpHjp in January 1947. Named by US-ACAN after Admiral Harry D. Felt, USN, Vice Chief of Naval Operations in the post 1957–58 IGY period.

Felton Head 67°17'S, 46°59'E

Flat-topped, dark brown headland with a sheer seaward side, standing 3.5 mi E of Harrop Island on the coast of Enderby Land. Plotted from air photos taken by ANARE in 1956. Named for Sgt. K. Felton, RAAF, engine fitter at Mawson in 1960.

Fender Buttress 64°34'S, 61°04'W

A rock buttress rising to more than 1,600 m, projecting from the S side of Herbert Plateau into the head of Drygalski Glacier, Graham Land. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Guillaume Fender of Buenos Aires, inventor of an early type of track-laying vehicle (British Patent of 1882, taken out by John C. Mewburn).

Fendley Glacier 71°18'S, 168°47'E

A glacier, 17 mi long, flowing NE from the Admiralty Mountains to enter the sea between Mount Cherry-Garrard and Atkinson

Cliffs, on the N coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Tech. Sgt. Iman A. Fendley, USAF, who perished in the crash of a C-124 Globemaster aircraft in this vicinity in 1958.

Fendorf Glacier 79°30'S, 84°49'W

A broad glacier draining from the E slopes of Gifford Peaks and flowing N to merge with Dobbratz Glacier, in the Heritage Range, Ellsworth Mountains. Mapped by USGS from ground surveys and USN air photos, 1961–66. Named by US-ACAN for Lt. Cdr. James E. Fendorf, USN, pilot with Squadron VX-6 during Deep Freeze 1966.

Fénix, Pico: see Phoenix Peak 64°24'S, 59°39'W

Fenrir Valley 77°37'S, 161°56'E

A small, mainly ice-free valley between the upper reaches of the Heimdall and Rhone Glaciers in the Asgard Range, Victoria Land. The name, applied by NZ-APC and US-ACAN in consultation, is one in a group in the range derived from Norse mythology, wherein Fenrir is a wolf chained by Tiw.

Fenriskjeften Mountain 71°53'S, 8°18'E

A large bare rock mountain which in plan resembles a hairpin, forming the S portion of Drygalski Mountains in Queen Maud Land. Plotted from air photos by the GerAE (1938–39). Mapped from surveys and air photos by NorAE (1956–60) and because of its shape named Fenriskjeften (Fenrir's jaw), after the wolf in Norse mythology.

Fenristunga 71°52'S, 8°17'E

A sloping field of ice within the rock walls of hairpin-shaped Fenriskjeften Mountain, in the Drygalski Mountains of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956–60) and named Fenristunga (Fenrir's tongue) in association with Fenriskjeften Mountain.

Fenton, Mount 74°20'S, 161°55'E

A peak (2,480 m) rising from the northern part of Skinner Ridge, 2 mi NE of Mount Mackintosh, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1956–62. Named by US-ACAN for Michael D. Fenton, geologist at McMurdo Station, 1965–66.

Fenton Glacier 73°03'S, 61°48'W

Glacier that drains S into Mosby Glacier just E of Mount Adkins in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Lt. (j.g.) Ernest R. Fenton, USN, Officer-in-Charge of Palmer Station in 1971.

Ferguslie Peninsula 60°43'S, 44°34'W

Peninsula 1.5 mi long, lying between Browns Bay and Macdougall Bay on the N coast of Laurie Island, in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for the residence of James Coats, chief patron of the expedition.

Ferguson, Mount 84°56'S, 168°35'W

An irregular, mound-shaped mass (1,190 m) which surmounts the S part of Mayer Crags on the W side of Liv Glacier, in the Queen Maud Mountains. Discovered and photographed by the ByrdAE (1928–30), and named for Homer L. Ferguson, president of the Newport News Shipbuilding and Dry Dock Co., Newport News, VA, which made repairs and alterations on ByrdAE ships.

Ferguson Bay 59°28'S, 27°16'W

Small bay which forms an excellent anchorage between Hewison and Herd Points at the SE end of Thule Island, in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II*, who named it for Messrs. Ferguson Brothers of Port Glasgow, Scotland, builders of the *Discovery II*.

Ferguson Channel: see Argentino Channel 64°54'S, 63°01'W

Ferguson Nunataks 73°33'S, 63°48'W

A nunatak group lying between the heads of Meinardus and Swann Glaciers in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Charles L. Ferguson, electrician with the Palmer Station winter party in 1965.

Ferguson Peak 54°47'S, 35°50'W

Peak, 560 m, standing close W of the head of Cooper Bay in the E extremity of South Georgia. Photographed by Niall Rankin during his visit to South Georgia in 1947. Rankin did not disclose the locality because he wished to protect the fur seals found there and shown in his photo. The photo was identified as the feature now described by the British South Georgia Expedition, 1954–55, and the peak was unofficially named Fur Seal Peak. Since Bird Island, at the W end of South Georgia, is now the only place where fur seals breed, this name is misleading. A new name, Ferguson Peak was recommended by the UK-APC in 1957 for David Ferguson, a Scottish geologist, who carried out geological investigations in South Georgia in 1911–12 for Messrs. Chr. Salvesen and Company. Not: Fur Seal Peak.

Ferguson Ridge 64°23'S, 59°48'W

A ridge trending NNW-SSE and rising to 855 m SW of Nodwell Peaks, Nordenskjöld Coast, Graham Land. Named in 1983 by the UK-APC after Harry G. Ferguson (1884–1960), British pioneer of tractor design from 1911 onward.

Fergusson Glacier 69°38'S, 159°10'E

Tributary glacier that flows NE between Serba Peak and Feeny Ridge into Noll Glacier, in the Wilson Hills. Named by the northern party of NZGSAE, 1963–64, after Sir Bernard Ferguson, Governor-General of New Zealand, who made a flight over the party during his visit to Antarctica.

Ferin, Ile: see Ferin Head 65°59'S, 65°20'W

Ferin Head 65°59'S, 65°20'W

Headland 4 mi N of the entrance to Holtedahll Bay, on the W coast of Graham Land. Discovered by the FrAE, 1908–10, who from a distant position in Pendleton Strait charted this feature as an island, which Charcot named for A. Ferin, French Vice-consul at Ponta Delgada, Azores. The BGLE under Rymill, 1934–37, charted this coast and correlated their work with that of Charcot. Ferin Head, as here applied, is in accord with the BGLE interpretation. Not: Férin Island, Ile Ferin.

Férin Island: see Ferin Head 65°59'S, 65°20'W

Fernando, Isla: see Prevot Island 64°53'S, 63°58'W

Fernette Peak 85°35'S, 176°58'W

A peak (2,700 m) that rises above the south-central part of Roberts Massif in the Queen Maud Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–65. Named by

US-ACAN for Gregory L. Fernette, USARP field assistant in Antarctica during the 1968–69 season.

Ferranto, Mount 76°32'S, 145°25'W

Mountain which forms the extreme SW projection of the main massif of the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. Discovered by a sledging party of the ByrdAE which visited this area in November–December 1934. Named for Felix Ferranto, radio and tractor operator with the USAS (1939–41).

Ferrara, Mount 82°15'S, 41°25'W

A mountain, 875 m, standing 2.5 mi NE of Vaca Nunatak in the Panzarini Hills portion of the Argentina Range, Pensacola Mountains. Discovered and photographed during a USN transcontinental nonstop plane flight of Jan. 13, 1956 from McMurdo Sound to Weddell Sea and return. Named by US-ACAN for Chief Aviation Machinists Mate Frederick J. Ferrara, USN, crew chief of the P2V-2N Neptune aircraft making the flight. Not: San Rafael Nunatak.

Ferrar Glacier 77°46'S, 163°00'E

Glacier about 35 mi long, flowing from the plateau of Victoria Land west of the Royal Society Range to New Harbor in McMurdo Sound. The glacier makes a right (east) turn northeast of Knobhead, where it is apposed, i.e., joined in Siamese-twin fashion, to Taylor Glacier. From there, it continues east along the south side of Kukri Hills to New Harbor. Discovered by the BrNAE (1901–04) under Capt. Robert F. Scott, R.N., who named this feature for Hartley T. Ferrar, geologist of the expedition. The name Ferrar Glacier was originally applied both to the part of this glacier below its right turn and to the present Taylor Glacier. Griffith Taylor, geologist of the BrAE (1910–14) under Scott, found evidence that these are not two parts of a single glacier but are two glaciers apposed. With this discovery Scott gave the names Ferrar Glacier and Taylor Glacier essentially as now applied; the Taylor Glacier (q.v.) makes a left turn at Cavendish Rocks and drains east along the north side of Kukri Hills. Not: East Fork, Lower Ferrar Glacier, New Harbour Glacier, South Arm.

Ferrell Nunatak 83°54'S, 54°53'W

A nunatak protruding from the ice surface of Iroquois Plateau 5 mi NE of Elmers Nunatak, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for James T. Ferrell, construction mechanic at Ellsworth Station, winter 1958.

Ferrer, Bajos: see Ferrer Rocks 64°42'S, 62°48'W

Ferrer, Bancos: see Ferrer Rocks 64°42'S, 62°48'W

Ferrer, Monte: see Aciar, Mount 64°24'S, 62°33'W

Ferrero Bay 73°28'S, 102°30'W

A body of water about 15 mi wide, lying immediately W of Cosgrove Ice Shelf and occupying the outer (west) part of the embayment between King and Canisteo Peninsulas. Mapped from air photos taken by USN OpHjp in December 1946. Named by US-ACAN for Lt. Cdr. H.H. Ferrero, communications officer on the staff of the Commander, USN Support Force, Antarctica, 1966–68.

Ferrer Point 62°30'S, 59°42'W

An ice-free point in the S part of Discovery Bay, Greenwich Island, South Shetland Islands. The point is 1.1 mi SW of Iquique Cove. Charted by the Chilean Antarctic Expedition (1950–51) and named for Lt. Fernando Ferrer Fougá, hydrographic officer on the transport ship *Angamos* during the expedition. Not: Punta Teniente Ferrer.

Ferrer Rocks 64°42'S, 62°48'W

A group of rocks in Gerlache Strait lying between Ketley Point, Ronge Island, and Useful Island. Charted by the Chilean Antarctic Expedition (1950–51) and named for Lt. Fernando Ferrer Fougá, hydrographic officer on the *Angamos*. Not: Bajos Ferrer, Bancos Ferrer.

Ferrier Peninsula 60°44'S, 44°26'W

Narrow peninsula, 1.5 mi long, forming the E end of Laurie Island in the South Orkney Islands. Roughly charted in 1823 by a British sealing expedition under Weddell. Surveyed in 1903 by the ScotNAE under Bruce, who named it for his secretary J.G. Ferrier, also manager in Scotland of the expedition.

Ferrigno Glacier 78°08'S, 161°59'E

A broad glacier on the N side of Rampart Ridge, Victoria Land, flowing WNW from Mount Lynch and Bishop Peak to the vicinity of The Spire. Named by US-ACAN in 1994 after Jane G. Ferrigno, USGS geologist, specialist in the use of satellite imagery to study and map Antarctica, and other ice and snow areas throughout the world; co-editor (with Richard S. Williams, Jr.) of *Satellite Image Atlas of Glaciers of the World*.

Ferri Ridge 75°01'S, 113°41'W

A gentle ridge forming the W wall of Simmons Glacier. It terminates in Mount Isherwood at the N side of the Kohler Range, Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Guy Ferri, U.S. Dept. of State, Chairman of the Interagency Committee on Antarctica, 1969–70.

Fersmana, Gory: see Ormeryggen 72°04'S, 14°33'E

Festive Plateau 79°24'S, 157°30'E

An ice-covered plateau over 2,200 m, about 10 mi long and 3 mi wide, just N of Mount Longhurst in the Churchill Mountains. Named by two members of the Darwin Glacier Party of the CTAE (1956–58) who spent Christmas Day 1957 on the plateau.

Festninga Mountain 72°07'S, 3°43'E

A broad, ice-topped mountain, 2,535 m, standing W of Mount Hochlin at the W end of the Mühligh-Hofmann Mountains, in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Festninga (the fortress).

Festningsporten Pass 72°05'S, 3°43'E

An ice-covered gap in the middle of the N face of Festninga Mountain leading to the mountain's flat summit, in the Mühligh-Hofmann Mountains, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Festningsporten (the fortress gate).

Feury, Mount 71°44'S, 98°26'W

Mountain between Sikorski and Frankenfield Glaciers on the NE side of Noville Peninsula, Thurston Island. First delineated from

air photos taken by USN OpHjp in December 1946. Named by US-ACAN for James Feury, mechanic and snowmobile driver of the ByrdAE, 1928–30. Not: Feury Head.

Feury Head: see Feury, Mount 71°44'S, 98°26'W

Feyerharm Knoll 77°00'S, 125°46'W

An ice-covered knoll on the lower northeastern slope of Mount Sidley, in the Executive Committee Range of Marie Byrd Land. Surveyed by USGS during the Executive Committee Range Traverse of 1959. Named by US-ACAN for William R. Feyerharm, Meteorologist at Byrd Station, 1960.

F. Gjertsen, Mount: see Gjertsen, Mount 86°40'S, 148°27'W

F. Gueguen, Sommet: see Guéguen, Mount 65°04'S, 64°00'W

Fid, The 68°39'S, 65°58'W

A sharp peak rising to 1,640 m at the E side of the mouth of Cole Glacier in southern Graham Land. The peak was photographed from the air by the USAS on Sept. 28, 1940. Surveyed by the FIDS in Dec. 1958. The name derives from its shape, which suggests the conical wooden pin used in splicing, known as a fid. Named by UK-APC.

Fidase Peak 63°23'S, 57°33'W

A distinctive peak 9 mi E of Mount Jacquinet, rising to 915 m at the W end of Mott Snowfield, Trinity Peninsula. FIDASE represents the initial letters of the Falkland Islands and Dependencies Aerial Survey Expedition (1955–57) led by P.G. Mott.

Fidel Estay, Islote: see Estay Rock 63°19'S, 57°59'W

Fidjeland, Mount 71°42'S, 25°36'E

Mountain, 1,630 m, standing close NE of Mehaugen Hill on the W side of the mouth of Byrdreen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named for one of the mechanics on the Lars Christensen Expedition to this area, 1936–37. Not: Fidjelandfjellet.

Fidjelandfjellet: see Fidjeland, Mount 71°42'S, 25°36'E

Fie, Cape 54°27'S, 3°28'E

A cape marking the SE extremity of Bouvetøya. First roughly charted in 1898 by a German expedition under Karl Chun. Recharted and named by the Norwegian expedition under Capt. Harald Horntvedt who explored the area from the *Norvegia* in December 1927. Not: Discovery Point.

Fiebelman Nunatak 74°57'S, 72°37'W

One of the Grossman Nunataks (q.v.), lying 3.5 mi ENE of Cheeks Nunatak in Ellsworth Land. Mapped by USGS from USN aerial photographs taken 1965–68. Named in 1987 by US-ACAN after Harold E. Fiebelman, USGS cartographer, who worked in the field at Byrd Station and South Pole Station, 1972–73.

Fiedler, Mount 85°33'S, 140°41'W

One of the Bender Mountains, 1,140 m, standing between the edge of Ross Ice Shelf and the Watson Escarpment. Named by US-ACAN for Leonard G. Fiedler, electrician with the Byrd Station winter parties of 1960 and 1964.

Fief Mountains: see DuFief, Sierra 64°52'S, 63°28'W

Field, Déroit de: see Fildes Strait 62°14'S, 59°00'W

Field, Mount 80°53'S, 158°02'E

A mountain, 3,010 m, standing 3 mi SSE of Mount Egerton in the Churchill Mountains. Discovered and named by the BrNAE, 1901–04, under Scott.

Field Glacier 67°08'S, 66°24'W

A glacier S of Salmon Cove, flowing W into Lallemand Fjord, Loubet Coast. Mapped from air photos taken by FIDASE, 1956–57. In association with the names of glaciologists grouped in this area, named by UK-APC after William B.O. Field (b. 1904), American glaciologist and surveyor; sometime Research Fellow of the American Geographical Society, NY.

Fielding Col 68°52'S, 66°59'W

An east-west trending pass between Baudin Peaks and Hag Pike in southern Graham Land. It provides the best known route leading inland to Morgan Upland between Neny Fjord and Wordie Ice Shelf. Named by UK-APC after Harold M. Fielding, BAS surveyor at Stonington Island, 1967–69.

Field Islands: see Hydrographer Islands 67°23'S, 48°50'E

Field Névé 71°38'S, 167°00'E

A large névé between Homerun Range and Findlay Range in the Admiralty Mountains, Victoria Land. The feature lies between the upper reaches of Ebbe Glacier, which flows northwest, and Tucker Glacier, which flows southeast. Named by the NZ-APC after Bradley Field, geologist, NZGS, a member of a NZARP geological party to N Victoria Land, 1981–82.

Field Rock 67°36'S, 62°54'E

A rock outcrop 0.5 mi S of Teyssier Island, on the coast of Mac. Robertson Land. Mapped from ANARE surveys and air photos, 1954–62. Named by ANCA for E.D. Field, cook at nearby Mawson Station, 1957.

Fields Peak 75°59'S, 135°56'W

A small but distinctive peak 2.5 mi SE of Brandenberger Bluff on the lower N slopes of Mount Berlin, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Master Sgt. Samuel J. Fields, USA, member of the 1956 Army-Navy Trail Party that blazed trail from Little America V to 80°S, 120°W, to establish Byrd Station.

Fields Strait: see Fildes Strait 62°14'S, 59°00'W

Fierle Bay: see McCarthy Inlet 78°50'S, 45°00'W

Fierle Peak 83°25'S, 50°58'W

A sharp peak, 1,960 m, standing 3 mi ESE of Dyrddal Peak at the S extremity of Saratoga Table in the Forrester Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Gerard R. Fierle, meteorologist at Ellsworth Station, winter 1957.

Fiftyone Glacier 53°11'S, 73°34'E

A large glacier flowing S between Lavett Bluff and Lambeth Bluff on the S side of Heard Island. Surveyed by ANARE in 1948. Named "The 1951 Glacier" by an ANARE party that made a traverse of Heard Island in 1951. The form Fiftyone Glacier was recommended by ANCA in 1964.

Figaro Nunatak 70°07'S, 70°44'W

Isolated nunatak rising to c. 200 m near the E end of Mozart Ice Piedmont, in the N part of Alexander Island. Mapped from air

photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by UK-APC from association with ice piedmont after Mozart's opera *The Marriage of Figaro*. Not: Figaru Nunatak.

Figaru Nunatak: see Figaro Nunatak 70°07'S, 70°44'W

Figurnoye, Ozero: see Algae Lake 66°18'S, 100°48'E

Fikkan Peak 71°31'S, 159°50'E

A peak midway between Big Brother Bluff and Mount Burnham along the W wall of Daniels Range, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Philip R. Fikkan, USARP geologist at McMurdo Station, 1967–68.

Filchner, Cape 66°27'S, 91°54'E

Ice-covered cape fronting on Davis Sea, 17 mi WNW of Adams Island. The cape is the division between Wilhelm II Coast and Queen Mary Coast. Discovered by the AAE, 1911–14, under Mawson, who named it for Wilhelm Filchner, leader of the German Antarctic Expedition of 1911–12.

Filchner Group: see Filchner Mountains 72°03'S, 7°40'E

Filchner Ice Shelf 79°00'S, 40°00'W

The ice shelf lying between Berkner Island and Luitpold Coast, at the head of Weddell Sea. Over 200 mi long and 100 mi wide, the feature is nourished primarily by the Slessor, Recovery, and Support Force Glaciers, all located E of Berkner Island. The E part of Filchner Ice Shelf was discovered in January–February 1912 by the GerAE under Wilhelm Filchner. Filchner named the feature for Kaiser Wilhelm, but the Emperor requested it be named for its discoverer. The ice shelf lying W of Berkner Island has now been found to be a distinct feature (see Ronne Ice Shelf). The latter was first seen and explored by the RARE, 1947–48, under Cdr. Finn Ronne. Not: Filchner Shelf Ice, Wilhelm Barrier, Wilhelm Shelf Ice.

Filchner Klippen: see Filchner Rocks 54°42'S, 35°44'W

Filchner Mountains 72°03'S, 7°40'E

A group of mountains 7 mi SW of Drygalski Mountains, at the W end of the Orvin Mountains of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938–39, and named for Wilhelm Filchner, leader of the German expedition to the Weddell Sea area in 1911–12. Remapped from air photos taken by the NorAE, 1958–59. Not: Filchner Group.

Filchner Rocks 54°42'S, 35°44'W

Group of rocks, some of which are submerged, 4 mi NE of Cape Vahsel, off the E end of South Georgia. The existence of these rocks was reported in 1775 by a British expedition under Cook. They were charted by the GerAE, 1911–12, and named for Dr. Wilhelm Filchner, leader of the expedition. Not: Filchner Klippen, Hvalsten.

Filchner Shelf Ice: see Filchner Ice Shelf 79°00'S, 40°00'W

Fildes, Bahta: see Maxwell Bay 62°15'S, 58°51'W

Fildes Peninsula 62°12'S, 58°58'W

Peninsula 4.5 mi long, forming the SW extremity of King George Island, in the South Shetland Islands. Named from association with nearby Fildes Strait by the UK-APC in 1960.

Fildes Point 63°00'S, 60°34'W

Point which forms the N side of Neptunes Bellows, the entrance to Port Foster, Deception Island, in the South Shetland Islands. Deception Island was known to sealers in the area as early as 1821; the point was later named for Robert Fildes, a British sealer in these waters at that early time. Not: Punta Balcarce.

Fildes Strait 62°14'S, 59°00'W

Strait which extends in a general E-W direction between King George Island and Nelson Island, in the South Shetland Islands. This strait has been known to sealers in the area since about 1822, but at that time it appeared on the charts as Field's Strait. Probably named for Robert Fildes, a British sealer of that period. Not: Déroit de Field, Fields Strait.

Filer Haven 60°44'S, 45°35'W

A small cove between Pantomime Point and Pageant Point on the east side of Gourlay Peninsula, Signy Island. Named by UK-APC after John Filer, BAS biologist who fell to his death from the cliffs here in 1961.

Filla Island 68°49'S, 77°50'E

A rocky island over 3 mi long, located in the N part of the Rauer Islands and being the largest island in the group. Charted by Norwegian cartographers from air photos taken by the Lars Christensen Expedition (1936–37). They gave the name Filla (the tatters) to a larger island here, presumably for the ragged outline of the feature as shown on the Norwegian chart. In 1952, John Roscoe made a study of this area as revealed in aerial photographs taken by USN Operation Highjump (1946–47). He found that what the Norwegians had named Filla was in fact a cluster of small islands. He applied the name Filla Island to the largest of these as described.

Filson Nunatak 67°52'S, 63°03'E

Small nunatak 6 mi E of Trost Peak in the E part of the Framnes Mountains, Mac. Robertson Land. Photographed from ANARE aircraft in 1958 and seen by an ANARE party in December 1962. Named by ANCA for R. Filson, carpenter at Mawson Station in 1962, a member of the party.

Filsponen Nunatak 72°12'S, 14°25'E

Nunatak rising NE of Steinfila Nunatak in the S part of the Payer Mountains in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Filsponen (the filings).

Fimbul Ice Shelf 70°30'S, 0°10'W

An ice shelf about 120 mi long and 60 mi wide, nourished by Jutulstraumen Glacier, bordering the coast of Queen Maud Land, from 3°W to 3°E. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Fimbulisen (the giant ice). Not: Fimbulisen.

Fimbulisen: see Fimbul Ice Shelf 70°30'S, 0°10'W

Final Island 65°05'S, 64°29'W

The westernmost of the Myriad Islands, lying 3.5 mi NW of Snag Rocks in the Wilhelm Archipelago. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57 and from the helicopter of HMS *Protector* in March 1958. So named by the

UK-APC because it is the furthest W of the Myriad Islands and the westernmost of all the islands bordering French Passage.

Final Rock 84°09'S, 56°10'W

An isolated rock standing 3 mi S of Mount Feldkötter at the S extremity of the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. So named by US-ACAN because it is the southernmost rock of the Neptune Range.

Finback Massif 65°41'S, 62°25'W

A massif rising to more than 1,000 m between Stubb and Flask Glaciers. It stands 6 mi WNW of Tashtego Point on the E side of Graham Land. The name is one of several applied by UK-APC in this vicinity that reflects a whaling theme, the finback being a species of baleen whale.

Finch, Mount 72°34'S, 167°23'E

A mountain (2,100 m) standing at the W side of the mouth of Trainer Glacier where the latter enters Trafalgar Glacier, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Lt. Jerry L. Finch, USN, Squadron VX-6 project officer for infrared ice sounding equipment and an aircraft commander in Operation Deep Freeze, 1968.

Findlay Point 60°35'S, 45°23'W

Point 2 mi NW of Palmer Bay on the N coast of Coronation Island, in the South Orkney Islands. First seen in December 1821 in the course of the joint cruise by Capt. George Powell, British sealer, and Capt. Nathaniel Palmer, American sealer, and roughly charted by Powell. Surveyed by the FIDS in 1956–58 and named by the UK-APC for Alexander G. Findlay (1812–75), English geographer and hydrographer who compiled a long series of nautical directories and charts, including the South Orkney Islands.

Findlay Range 71°39'S, 167°22'E

A range lying parallel to and W of Lyttelton Range, extending between Grigg Peak and Sorensen Peak in the Admiralty Mountains, Victoria Land. Named by the NZ-APC after Robert H. Findlay, geologist, New Zealand Antarctic Division, DSIR; leader of a NZARP geological party to this area, 1981–82.

Fine Point 54°04'S, 37°09'W

A point W of Sheer Point on the N side of Prince Olav Harbor, Cook Bay, in South Georgia. Charted and named descriptively by DI personnel, 1929–30.

Fingeren Peak 72°38'S, 3°47'W

A peak immediately NW of Høgskavlpiggen Peak, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Fingeren (the finger).

Finger Mountain 77°45'S, 160°40'E

An elongated mountain rising to 1,920 m on the N side of Turnabout Valley, in the Quartermain Mountains, Victoria Land. So named by the BrNAE (1901–04) because a long tongue of dolerite between the sandstone strata has the appearance of a finger.

Finger Point 56°41'S, 27°13'W

Point marking the N tip of Visokoi Island in the South Sandwich Islands. Charted in 1930 and given this descriptive name by DI personnel on the *Discovery II*. Not: Punta Dedo.

Finger Point 65°15'S, 64°17'W

Point which forms the SW end of Skua Island in the Argentine Islands, Wilhelm Archipelago. Charted and named by the BGLE, 1934–37, under Rymill.

Finger Point 77°00'S, 162°26'E

Narrow rocky point forming the E extremity of The Flatiron, in Granite Harbor, Victoria Land. Mapped and descriptively named by the BrAE (1910–13) under Scott.

Finger Ridges 79°11'S, 157°00'E

Several mainly ice-free ridges and spurs extending over a distance of about 12 miles, east-west, in the NW part of the Cook Mountains. The individual ridges are 1 to 2 miles long and project northward from the higher main ridge. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. The descriptive name was given by the US-ACAN.

Finlandia Foothills 69°56'S, 70°09'W

A rock massif, 10 mi long and 3 mi wide, rising to c. 1,130 m at the W side of Sibelius Glacier, Alexander Island. Photographed from the air by RARE, 1947–48, and mapped from these photographs by D. Searle of FIDS, 1960. In association with the glacier, named after the symphonic poem *Finlandia* (1899) by Jean Sibelius.

Finley, Mount 85°01'S, 173°58'W

A prominent mountain (3,470 m) on the ridge which extends S from Mount Wade, located 5 mi SSW of Mount Oliver in the Queen Maud Mountains. Named by R. Admiral Byrd for John H. Finley, President of the American Geographical Society at the time of the ByrdAE, 1928–30.

Finley Glacier 73°35'S, 165°38'E

A tributary glacier which drains the NW slopes of Mount Monteagle and flows N into the upper part of Icebreaker Glacier, in the Mountaineer Range, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Russell H. Finley, aviation boatswain's mate with Squadron VX-6 during USN OpDFrz, 1966, 1967 and 1968.

Finley Heights 69°13'S, 63°13'W

Rugged coastal heights rising to 1,070 m between the mouths of Bingham and Lurabee Glaciers, on the E coast of Palmer Land. Discovered by Sir Hubert Wilkins in an aerial flight on Dec. 20, 1928. He considered the heights to be islands lying in a great transverse channel across Antarctic Peninsula and named them Finley Islands for John H. Finley of *The New York Times*, then president of the American Geographical Society. Correlation of aerial photographs taken by Lincoln Ellsworth in 1935 and preliminary reports of the findings of the BGLE, 1934–37, led W.L.G. Joerg to interpret this to be joined to the mainland. In published reports, members of the BGLE have concurred in this interpretation which was also borne out by the results of subsequent flights and a sledge trip from East Base, in 1940, by members of the USAS. Not: Finley Islands, Finley Peninsula, Finley Ridge.

Finley Islands: see Finley Heights 69°13'S, 63°13'W

Finley Peninsula: see Finley Heights 69°13'S, 63°13'W

Finley Ridge: see Finley Heights 69°13'S, 63°13'W

Fin Nunatak 69°03'S, 64°03'W

A nunatak (805 m) in the middle of Casey Glacier, near the E coast of Palmer Land. The nunatak was photographed from the air by Sir Hubert Wilkins on Dec. 20, 1928, and was first mapped from these photos by W.L.G. Joerg. Surveyed by FIDS in Dec. 1960. The name by UK-APC is suggested by the fin-like shape of the feature.

Finsterwalder Glacier 67°19'S, 66°20'W

Glacier, 2 mi wide and 10 mi long, flowing SW from the central plateau of Graham Land toward the head of Lallemand Fjord. Its mouth lies between the mouths of Haefeli and Klebelsberg Glaciers, the three glaciers merging with Sharp Glacier where the latter enters the fjord. First surveyed from the plateau in 1946–47 by the FIDS, and named by them for Sebastian Finsterwalder and his son, Richard Finsterwalder, German glaciologists.

Fireman Glacier 77°47'S, 160°16'E

A glacier in the W part of Quartermain Mountains, Victoria Land, flowing NW into Cassidy Glacier. Named in 1992 by US-ACAN after Edward L. Fireman (d. 1990), physicist, Smithsonian Astrophysical Observatory, Cambridge, MA; authority on the analysis and dating of extraterrestrial materials and space debris; from 1979 conducted investigations on the dating and composition of Antarctic meteorites and Antarctic ice samples, including deep core ice obtained at Byrd Station.

Firlingane Nunataks 71°52'S, 27°07'E

Four nunataks standing between Bulken Hill and Hestekoen Nunatak in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Firlingane (the quadruplets).

First Crater 77°50'S, 166°39'E

A crater on Arrival Heights, located 0.75 mi N of Hut Point on Ross Island. Named by Debenham in 1912 on his local survey of Hut Point Peninsula during the BrAE, 1910–13.

First Facet 77°09'S, 162°30'E

Steep ice-free bluff rising just eastward of Second Facet, forming a part of the N wall of Debenham Glacier in Victoria Land. Charted and descriptively named by the BrAE under Scott, 1910–13.

First Milestone 54°06'S, 36°40'W

Rock marked by breakers, 2 mi NW of Cape Saunders, off the N coast of South Georgia. Charted and named by DI personnel on the *Discovery* during the period 1926–30. Not: Primer Mojón.

First Point 54°28'S, 37°07'W

The NW point of Annenkov Island off the south-central coast of South Georgia. Charted and named by DI personnel on the *Discovery* during the period 1926–30. Not: Punta Primera.

First Rock 54°55'S, 36°07'W

Rock lying 1 mi SSE of Brøde Island and 2 mi S of Cape Disappointment, the S extremity of South Georgia. It is first (southernmost) in a line of three insular features S of Cape Disappointment discovered in 1775 by Capt. James Cook. So named because of its position by DI personnel who charted South Georgia in the period 1926–30. Not: Roca Primera.

First View Point 77°01'S, 163°03'E

A small point between Cape Roberts and Avalanche Bay in Granite Harbor, Victoria Land. Named by the Granite Harbor Geological Party, led by Taylor, of the BrAE, 1910–13.

Fischer Nunatak 67°44'S, 63°03'E

Nunatak, 750 m, standing 2 mi S of Mount Henderson in the NE part of the Framnes Mountains, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Sörnuten (the south peak). Renamed by ANARE for H.J.L. Fischer, cook at Mawson Station in 1958. Not: Fisher Nunatak, Sörnuten.

Fischer Ridge 71°58'S, 169°00'E

An ice-covered ridge trending NW-SE between Kirk Glacier and Ironside Glacier in the Admiralty Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for William H. Fischer, Atmospheric Chemist at McMurdo Station, 1966–67.

Fisher, Mount 85°06'S, 171°03'W

A domed, snow-capped summit (4,080 m) standing 2 mi NW of Mount Ray in the Prince Olav Mountains. Discovered and photographed by R. Admiral Byrd on flights to the Queen Maud Mountains in November 1929, and named by him for the Fisher brothers, Detroit industrialists and contributors to the ByrdAE, 1928–30. Not: Fisher Mountains.

Fisher Bastion 78°21'S, 162°31'E

A high rectangular massif (2,650 m) between the upper reaches of Potter Glacier and Foster Glacier, 4.5 mi SE of Mount Huggins in Royal Society Range, Victoria Land. Named by US-ACAN in 1994 after Cdr. Dwight David Fisher (Fisher Peak, q.v.), USN Commanding Officer of NSFA, 1987–89.

Fisher Bay 67°31'S, 145°45'E

An embayment about 14 mi wide between the eastern side of the Mertz Glacier Tongue and the mainland. Discovered by the AAE (1911–14) under Douglas Mawson, who named it for Andrew Fisher, Prime Minister of Australia in 1911.

Fisher Glacier 73°15'S, 66°00'E

Prominent western tributary to the Lambert Glacier, about 100 mi long, flowing E past the N sides of Mounts Menzies and Rubin and joining the main stream of the Lambert Glacier just E of Mount Stinear. Sighted from ANARE aircraft by K.B. Mather in 1957. Named by ANCA for N.H. Fisher, chief geologist, Bureau of Mineral Resources, Dept. of National Development, Australia.

Fisher Island 77°08'S, 154°00'W

An ice-covered island 7 mi long, lying just N of Edward VII Peninsula where it marks the W side of the entrance to Sulzberger Bay. Mapped from surveys by the USGS and U.S. Navy air photos (1959–65). Named by US-ACAN for Wayne Fisher of the U.S. Department of State.

Fisher Massif 72°19'S, 67°40'E

A rock massif about 16 mi long and 5 mi wide, standing at the W side of Lambert Glacier about 42 mi S of the Aramis Range, in the Prince Charles Mountains. Discovered by an ANARE party led by B.H. Stinear in October 1957. Named by ANCA for Morris M. Fisher, surveyor at Mawson Station in 1957.

Fisher Mountains: see Fisher, Mount 85°06'S, 171°03'W

Fisher Nunatak 77°43'S, 87°27'W

A nunatak with rock exposure, standing 13 mi W of Mount Crawford of the Sentinel Range, Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse party, 1957–58, under C.R. Bentley. Named for Diana D. Fisher, director, Glaciological Headquarters, US-IGY Program, 1956–59.

Fisher Nunatak: see Fischer Nunatak 67°44'S, 63°03'E

Fisher Peak 75°52'S, 68°23'W

A peak rising to c. 1,100 m, 5 mi SE of Mount Leek, Hauberg Mountains, in eastern Ellsworth Land. Mapped by USGS from surveys and USN aerial photographs, 1961–67. Climbed in December 1977 by members of a USGS field party. Named by US-ACAN in 1985 after Cdr. Dwight D. Fisher, USN, command pilot on the first landing by LC-130 Hercules aircraft on English Coast in December 1984; Commanding Officer, U.S. Navy Antarctic Development Squadron Six (VXE-6), from May 1984 to May 1985; Commanding Officer, NSFA, 1987–89; Naval Officer on detail to NSF, 1989–92; Deputy Manager, Polar Operations Section, Office of Polar Programs, NSF, from 1992.

Fisher Spur 71°09'S, 159°50'E

A rugged rock spur jutting northward from the W flank of Daniels Range immediately N of Mount Nero, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Dean F. Fisher, USARP geophysicist at McMurdo Station, 1967–68.

Fishhook Ridge 64°27'S, 59°36'W

A ridge rising to c. 100 m on the E side of Sobral Peninsula, Nordenskjöld Coast. So named by UK-APC in 1990 from the shape of the feature in plan view.

Fish Islands 66°02'S, 65°25'W

Group of small islands lying in the N part of the entrance to Høltedahl Bay, off the W coast of Graham Land. Discovered and named by the BGLE, 1934–37, under Rymill. Not: Islotes Peces.

Fishtail Point 78°57'S, 162°36'E

The southernmost point of Shults Peninsula, at the E side of the mouth of Skelton Glacier. Surveyed and given this descriptive name in 1957 by the N.Z. party of the CTAE (1956–58).

Fishtrap Cove 68°11'S, 67°00'W

Small cove 0.1 mi NW of Boulder Point on the SW side of Stonington Island, close off the W coast of Graham Land. First surveyed by the USAS, 1939–41. Resurveyed in 1946–47 by the FIDS, who so named it because FIDS parties used this cove for setting fish traps.

Fiske, Cape 74°21'S, 60°27'W

Cape which forms the E tip of Smith Peninsula, on the E coast of Palmer Land. This cape was photographed from the air by members of the USAS in December 1940, and in 1947 by members of the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by Ronne for C.O. Fiske climatologist with the Ronne expedition.

Fission Wall 85°52'S, 155°12'W

A 1,400 m high granite cliff on the N face of Mount Griffith, Hays Mountains, in the Queen Maud Mountains. The feature was climbed on Nov. 16, 1987, by a USARP-Arizona State University geological party led by Edmund Stump. The name derives from

granite samples collected on the wall at 100 m spacing for dating by the fission-track method.

Fist, The: see Wegger Peak 62°06'S, 58°31'W

Fitch Glacier 72°01'S, 168°07'E

Tributary glacier flowing south along the east side of McGregor Range to enter Man-o-War Glacier in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Lt. E.E. Fitch, USN, medical officer at Hallett Station, 1963.

Fitchie Bay 60°45'S, 44°29'W

Bay lying between Cape Dundas and Cape Whitson on the S side of Laurie Island, in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for John Fitchie, second mate of the expedition ship *Scotia*.

Fitton Rock 67°46'S, 68°34'W

A flat-topped rock lying SE of Cape Alexandra, off the S end of Adelaide Island. First charted by the FrAE under Charcot, 1908–10. Named by the UK-APC in 1963 for Gordon F. Fitton, BAS general assistant at Adelaide Station, 1961–62, and member of the first party to winter on Adelaide Island.

FitzGerald Bluffs 74°03'S, 77°20'W

Prominent north-facing bluffs, 9 mi long, located 30 mi S of Snow Nunataks in Ellsworth Land. Discovered by RARE (1947–48) under Finn Ronne, who named the bluffs after Gerald FitzGerald, Chief Topographic Engineer, USGS, 1947–57.

Fitzgerald Glacier 73°33'S, 166°15'E

A prominent valley glacier draining to Lady Newnes Bay from the ice cascades on the S and W slopes of Mount Murchison, in Victoria Land. At the mouth it coalesces with the Icebreaker Glacier before debouching on Lady Newnes Bay. Explored by NZGSAE, 1958–59, and named by NZ-APC for E.B. Fitzgerald, deputy leader of the expedition.

Fitzgerald Hill 77°16'S, 166°25'E

Hill, 230 m, standing W of Mount Bird between Fitzgerald Stream and Shell Glacier on Ross Island. Mapped by the NZGSAE, 1958–59, and named by the NZ-APC for E.B. Fitzgerald, deputy leader of the expedition.

Fitzgerald Nunataks 66°15'S, 52°49'E

Three isolated nunataks 2 mi N of Mount Codrington, at the NW end of the Napier Mountains in Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Veslenutane (the little peaks). Photographed from ANARE aircraft in 1956 and renamed by ANCA for Brigadier L. Fitzgerald, Director of Survey in the Australian Army, 1942–60. Not: Veslenutane.

Fitzgerald Stream 77°16'S, 166°21'E

Stream between Fitzgerald Hill and Inclusion Hill on the lower ice-free W slopes of Mount Bird, Ross Island, flowing to McMurdo Sound across McDonald Beach. Explored by the NZGSAE, 1958–59, and named by the NZ-APC for E.B. Fitzgerald, deputy leader of the expedition.

Fitzmaurice Point 66°16'S, 63°43'W

A point on the NW side of Cabinet Inlet, Foyn Coast, between Attlee Glacier and Bevin Glacier. Photographed from the air by RARE and surveyed from the ground by FIDS in December 1947.

Named in 1985 by UK-APC after Sir Gerald G. Fitzmaurice (1901–82), Legal Advisor, Foreign Office, 1953–60 (Second Legal Advisor, 1945–53), who served Cabinet Ministers commemorated in this area; Chairman, UK-APC, 1952–60.

Fitzpatrick Rock 66°16'S, 110°30'E

Low icecapped rock lying 0.5 mi NW of Kilby Island at the mouth of Newcomb Bay, in the Windmill Islands. First charted in February 1957 by a party from the USS *Glacier*. The name was suggested by Lt. Robert C. Newcomb, USN, navigator of the *Glacier*, for Boatswain's Mate 2d Class John A. Fitzpatrick, USN, member of the survey party.

FitzRoy, Cape: see Fitzroy Point 63°11'S, 55°07'W

Fitzroy Island 68°11'S, 66°58'W

Island 0.5 mi E of the S tip of Stonington Island, lying in Neny Bay at the foot of Northeast Glacier, by which it is partially covered, off the W coast of Graham Land. The island was presumably first sighted in 1936 by the BGLE, and was roughly charted by them and by the USAS, 1939–41. It was surveyed in 1947 by the FIDS who named it for the RMS *Fitzroy*, FIDS ship which visited this area in 1947.

Fitzroy Point 63°11'S, 55°07'W

Low point at the E side of Fliess Bay forming the NE extremity of Joinville Island. Discovered on Dec. 30, 1842 by a British expedition under Ross, who named it Cape Fitzroy for Capt. (later Vice Admiral) Robert Fitzroy, RN (1805–65), English hydrographer and meteorologist. Not: Cape FitzRoy.

Fitzsimmons, Mount 77°54'S, 154°55'W

Peak standing between Mounts Jackling and Shideler in the N group of the Rockefeller Mountains on Edward VII Peninsula. Discovered on Jan. 27, 1929, by members of the ByrdAE on an exploratory flight to this area. Named for Roy G. Fitzsimmons, physicist in charge of the Rockefeller Mountains seismic station for the USAS during November–December 1940. Not: Mount Margaret Wade.

Fitzsimmons Nunataks 72°08'S, 161°42'E

A group of small nunataks about 27 mi ENE of Welcome Mountain of the Outback Nunataks and 8 mi SE of Helliwell Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1959–64. Named by US-ACAN for John M. Fitzsimmons, biologist at McMurdo Station, 1965–66.

Five Islands Harbour: see Diaz Cove 54°45'S, 36°18'W

Fivemile Rock 63°29'S, 57°03'W

Small nunatak, 375 m, rising just NW of Mineral Hill on Tabarin Peninsula. Mapped in 1946 and again in 1956 by the FIDS, and so named because the feature is located 5 miles from their station at Hope Bay on the route from there to Duse Bay.

Fizkin Island 65°31'S, 65°31'W

Island lying 2.5 mi SE of Pickwick Island, Pitt Islands, in the Biscoe Islands. Shown on an Argentine government chart of 1957. Named by the UK-APC in 1959 after Horatio Fizkin, Esquire, a character in Charles Dickens' *Pickwick Papers*.

Fjellimellom Valley 72°05'S, 2°29'E

An ice-filled valley between Jutulsessen Mountain and Nupskammen Ridge in the Gjelsvik Mountains, Queen Maud Land.

Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52), and air photos by the Norwegian expedition (1958–59) and named Fjellimellom (between the mountains).

Fjomet Nunatak 73°25'S, 2°55'W

An isolated nunatak about 8 mi ESE of Mount Hallgren, along the Kirwan Escarpment of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Fjomet.

Fladerer Bay 73°15'S, 80°20'W

A bay about 15 mi long and 6 mi wide between Wirth and Rydberg Peninsulas, Ellsworth Land. Mapped by USGS from surveys and U.S. Navy air photos, 1961–66. Named by US-ACAN for Capt. George Fladerer, commander of USNS *Eltanin* on Antarctic cruises.

Flagon Point 72°14'S, 60°41'W

Point surmounted by two peaks, 295 and 395 m, marking the S side of the entrance to Schott Inlet, on the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by members of the USAS. It was charted in 1947 by a joint party consisting of members of the RARE and FIDS. So named by the FIDS because the two peaks are suggestive of a flagon tilted on its side when viewed from north or south. Not: Punta Almonacid.

Flag Point 64°49'S, 63°31'W

Point which lies 0.3 mi ESE of Damoy Point and forms the N side of the entrance to Port Lockroy, Wiencke Island, in the Palmer Archipelago. Discovered by the FrAE, 1903–05, under Charcot. Named by the FIDS in 1944. When the FIDS base at Port Lockroy was established in 1944, a metal Union Jack was erected on this point.

Flagpole Point 68°11'S, 67°01'W

Point 0.2 mi NW of Fishtrap Cove, forming the S part of the W extremity of Stonington Island, close off the W coast of Graham Land. First surveyed by the USAS, 1939–41, whose East Base was located on this island. Resurveyed in 1946–47 by the FIDS, and so named by them because of the flag pole which was erected by the USAS on a rocky knoll close NE of this point.

Flagship Mountain 76°43'S, 161°30'E

Prominent, conical rock peak, 1,720 m, surmounting the S part of the large rock mass between Northwind and Atka Glaciers in the Convey Range, Victoria Land. Named by the N.Z. Northern Survey Party of the CTAE (1956–58) after the USS *Glacier*, flagship of the American convoy into McMurdo Sound in the 1956–57 season, and closely associated with the area in other years.

Flagstaff Glacier 62°05'S, 58°26'W

Very small glacier lying immediately N of Flagstaff Hill on Keller Peninsula, King George Island, in the South Shetland Islands. The name arose locally in about 1958 and derives from association with Flagstaff Hill.

Flagstaff Hill 62°05'S, 58°25'W

Hill 265 m, lying 0.5 mi N of Plaza Point on Keller Peninsula, King George Island, in the South Shetland Islands. The name has been used at the FIDS station at Admiralty Bay since about 1952.

and arose because there was an iron flagstaff on the summit of the hill.

Flagstaff Point 77°33'S, 166°11'E

Point forming the S end of the Cape Royds headland on the W side of Ross Island. Charted and named by the BrAE under Shackleton, 1907–09, which established its winter headquarters and erected a flag near the point.

Flagstone Bench 70°51'S, 68°12'E

A large rock bench which is littered with flaggy slabs of sandstone, bordering the SE sides of Radok Lake and Beaver Lake in the Prince Charles Mountains. Visited by ANARE survey parties in 1957 and 1958. The descriptive name was applied by ANCA.

Flanagan Glacier 79°29'S, 82°42'W

A glacier in the Pioneer Heights, Heritage Range, draining E from Thompson Escarpment between Gross and Nimbus Hills to the confluent ice at the lower end of Union Glacier. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Lt. Walter B. Flanagan, assistant maintenance officer with USN Squadron VX-6 at McMurdo Station in Deep Freeze 1963 and 1964.

Flanders Bay: see Flandres Bay 65°02'S, 63°20'W

Flandes, Bahía: see Flandres Bay 65°02'S, 63°20'W

Flandres Bay 65°02'S, 63°20'W

Large bay lying between Capes Renard and Willems, along the W coast of Graham Land. Explored in 1898 by the BelgAE under Gerlache, who named it, probably after the historical area of that name, now constituting part of France, Belgium and the Netherlands. Not: Bahía Flandes, Flanders Bay.

Flank Island 65°07'S, 64°21'W

The southernmost of the Myriad Islands, lying 2 mi ENE of Snag Rocks in the Wilhelm Archipelago. Mapped by the FIDS from photos taken by Hunting Aerosurveys in 1956–57 and from the helicopter of HMS *Protector* in March 1958. So named by the UK-APC because of its position.

Flannery, Cape 59°27'S, 27°21'W

Cape which forms the W end of Thule Island in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II* who named it for Sir Fortescue Flannery, a member of the Discovery Committee.

Flånuten, Mount 71°47'S, 11°17'E

A mountain (2,725 m) extending as a massif between Livdebotnen Cirque and Vindegghallet Glacier, in the Humboldt Mountains of Queen Maud Land. Discovered and photographed by the GerAE, 1938–39. Mapped by Norway from air photos and surveys of the NorAE, 1956–60, and named Flånuten (the flat summit).

Flårjuven Bluff 72°02'S, 3°24'W

A flat-topped, largely ice-free bluff about 1 mi N of Storkletten Peak, on the Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Flårjuven.

Flårjuvnutane Peaks 72°01'S, 3°32'W

A group of small rock peaks about 1 mi W of Flårjuven Bluff, on the Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian

cartographers from surveys and air photos by NBSAE (1949–52) and named Flårjuvnutane.

Flask Glacier 65°47'S, 62°25'W

A gently-sloping glacier 25 mi long, flowing E from Bruce Plateau to enter Scar Inlet between Daggoo and Spouter Peaks in Graham Land. The lower reaches of this glacier were surveyed and photographed by the FIDS in 1947. The entire glacier was photographed by the FIDASE in 1955–56, and mapped by the FIDS in 1957. Named by the UK-APC after the third mate on the *Pequod* in Herman Melville's *Moby-Dick or The White Whale*.

Flatcap Point 64°07'S, 58°07'W

The most northerly of two relatively low flat-topped rock cliffs on the east side of the northern arm of Röhss Bay, James Ross Island. Mapped from surveys by FIDS (1960–61). The descriptive name was given by UK-APC. Not: Punta Ibanez.

Flatiron, The 77°01'S, 162°23'E

Rocky, triangular-shaped headland which overlooks the SW part of Granite Harbor, in Victoria Land. Charted by the BrAE under Scott, 1910–13, who so named it because of its distinctive shape.

Flatiron Valley 70°54'S, 68°29'W

A N-S valley including a lake, located in the S part of Ganymede Heights, marginal to Jupiter Glacier, Alexander Island. The name derives from field work in 1978–79 by the Department of Geography, University of Aberdeen, Scotland, with BAS support. Named from the triangular slope facets between prominent gullies on the W side of the valley.

Flat Island 53°02'S, 72°36'E

An island 0.1 mi long, lying 0.1 mi N of McDonald Island, in the McDonald Islands. The feature appears to have been first shown on an 1874 chart by the British expedition under Nares in the *Challenger*. It was surveyed and given this descriptive name by the ANARE in 1948.

Flat Island 71°24'S, 169°18'E

High (480 m), flat-topped island, 3 mi long, lying at the terminus of Shipley Glacier off the N coast of Victoria Land. Its NE tip, Cape Barrow, marks the W side of the entrance to Robertson Bay. First charted and given this descriptive name by the BrAE, 1910–13.

Flat Islands 67°36'S, 62°49'E

A small chain of islands which extends 2.5 mi in a NE-SW direction, lying 2 mi SW of Welch Island in the E part of Holme Bay. The islands were mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and the name Flatøyholmane (the flat island islets) was applied to the group at the S end of the chain. Following surveys by the ANARE, ANCA recommended in 1958 that the descriptive name Flat Islands be applied for the entire group. Not: Flatøyholmane.

Flat Isle: see Watchkeeper, The 62°18'S, 59°49'W

Flatnes: see Flatnes Ice Tongue 69°16'S, 76°44'E

Flatnes Ice Tongue 69°16'S, 76°44'E

An ice tongue forming the W limit of Hovde Cove in the SE part of Prydz Bay. The tongue is nourished by local drainage from Ingrid Christensen Coast and extends for 3 mi into the bay. Plotted by Norwegian cartographers from air photos taken by the Lars

Christensen Expedition (1936–37) and named Flatnes (flat point). The generic ice tongue has been approved for this feature on the basis of John H. Roscoe's 1952 study of features in the area as identified in air photos taken by USN Operation Highjump (1946–47). Not: Flatnes.

Flatøyholmane: see Flat Islands 67°36'S, 62°49'E

Flat Spur 77°36'S, 161°30'E

Rock spur that descends NE from Brunhilde Peak between the N and S branches of Sykes Glacier, in the Asgard Range of Victoria Land. The descriptive name was applied by NZ-APC.

Flat Top 80°27'S, 28°16'W

Distinctive table mountain, 1,330 m, with steep rocky cliffs, 4 mi NE of Lister Heights in the W part of the Shackleton Range. First seen and given this descriptive name during the early reconnaissance flights of the CTAE, 1955–58. Visited and mapped by the CTAE in 1957.

Flat Top 84°42'S, 171°50'E

A prominent ice-covered mountain, over 4000 m, with a broad, flat summit area, standing just E of the head of Osicki Glacier. It is the highest point in the Commonwealth Range. Named by the BrAE (1910–13) as being descriptive.

Flat Top Peninsula 62°13'S, 59°02'W

Small, flat-topped peninsula 1 mi N of the SW extremity of King George Island, South Shetland Islands. The peninsula was named on a chart based upon a survey by DI personnel of the *Discovery II* during 1935. Not: Morro Plano, Peninsula Morro Chato, Peninsula Morro Plano.

Flattunga 68°51'S, 40°00'E

A small ice tongue protruding into the sea between Tottsuki Point and Tensoku Rock, at the western end of Prince Olav Coast in Queen Maud Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Flattunga (the flat tongue).

Flatvaer Islands 69°01'S, 39°33'E

A group of small islands, of which Ongul Island is the largest, lying at the E side of the entrance of Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Flatvaer (flat islands). Not: Ongul Islands.

Fleece Glacier 65°54'S, 63°10'W

A tributary glacier that enters Leppard Glacier on its N side about 1.5 mi E of Moider Peak, on the E side of Graham Land. The toponym is one in a group applied in the vicinity by UK-APC that reflects a whaling theme, Fleece being the cook aboard the *Pequod* in Herman Melville's *Moby Dick*.

Fleet Point 67°37'S, 65°24'W

A rocky point 4 mi NW of Tent Nunatak on the E coast of Graham Land. The point has a rocky spine ranging from 260 m to 870 m in height. The point appears in the aerial photographs of several American expeditions: USAS, 1939–41; RARE, 1947–48; U.S. Navy photos, 1968. Mapped by BAS 1963–64. Named by UK-APC for Michael Fleet, General Assistant with the BAS Larsen Ice Shelf party, 1963–64.

Flein Island 69°45'S, 39°05'E

Small island lying 0.4 mi N of Berr Point in the SE part of Lützow-Holm Bay. Norwegian cartographers working from air photos taken by the Lars Christensen Expedition, 1936–37, mapped this feature as two islands, applying the name Fleinøya (the bare island) to the larger. The JARE, 1957–62, determined that only one island exists in this position and retained the name given earlier for the larger island. Not: Fleinøya, Fleinøyholmen.

Fleinøya: see Flein Island 69°45'S, 39°05'E

Fleinøyholmen: see Flein Island 69°45'S, 39°05'E

Fleming, Mount 77°33'S, 160°06'E

Mountain, over 2,200 m, standing at the SW side of Airdevronsix Icefalls and Wright Upper Glacier, in Victoria Land. Named in 1957 by the N.Z. Northern Survey Party of the CTAE (1956–58) for Dr. C.A. Fleming, Senior Paleontologist of the N.Z. Geological Survey, and Chairman of the Royal Society's Antarctic Research Committee.

Fleming Glacier 69°25'S, 66°40'W

Broad glacier 25 mi long on the W side of Antarctic Peninsula, flowing WNW and terminating in Forster Ice Piedmont to the E of Wordie Ice Shelf. The glacier was charted by the BGLE under Rymill, 1934–37, and was photographed from the air by the USAS on Sept. 29, 1940. This hitherto unnamed feature was named by the US-SCAN in 1947 for Rev. W.L.S. Fleming, Dean of Trinity Hall, Cambridge University; also, chaplain, chief scientist, and geologist of the BGLE.

Fleming Head 75°10'S, 162°38'E

Prominent rock headland on the coast of Victoria Land, marking the S side of the terminus of Larsen Glacier where it enters Ross Sea. Mapped by USGS from surveys and U.S. Navy air photos, 1957–62. Named by US-ACAN for John P. Fleming, Senior Chief Construction Electrician, USN, a member of the McMurdo Station winter party, 1962 and 1966.

Fleming Peaks 77°15'S, 144°30'W

A small group of peaks 6 mi ESE of Bailey Ridge, on the N side of Boyd Glacier in the Ford Ranges, Marie Byrd Land. Discovered and mapped by the USAS (1939–41). Named by US-ACAN for Bernard Fleming, an assistant to the scientific staff on the ByrdAE (1933–35).

Fleming Point 64°20'S, 62°35'W

Point 4.5 mi NE of Humann Point on the W side of Brabant Island, in the Palmer Archipelago. Roughly charted by the FrAE under Charcot, 1903–05. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for Sir Alexander Fleming (1881–1955), Scottish bacteriologist who discovered penicillin in 1928.

Flenserne: see Flensing Islands 60°42'S, 45°41'W

Flensing Icefall 70°55'S, 163°44'E

A large icefall at the E side of the Bowers Mountains, situated S of Platypus Ridge at the junction of Graveson and Rastorguev Glaciers with the Lillie Glacier. So named by the northern party of NZGSAE, 1963–64, because the icefall's longitudinal system of parallel crevassing resembles the carcass of a whale when being flensed.

Flensing Islands 60°42'S, 45°41'W

Group of small islands lying 1 mi W of Foca Point on the W side of Signy Island, in the South Orkney Islands. The islands were named "Flenserne" on a chart of 1912-13 by Norwegian whaling captain Petter Sørllø. The name Flensing Islands, suggested by the earlier Norwegian name, was used by DI personnel on the *Discovery II* who surveyed the group in 1933. Flensing is the process of stripping skin and blubber from whales. Not: Flenserne.

Flesa Rock 72°29'S, 2°25'W

An isolated rock lying 7 mi E of the NE end of the Borg Massif, in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Norwegian expedition (1958-59) and named Flesa (the low-lying islet).

Fletcher, Cape 67°41'S, 65°35'E

A minor projection of the ice-covered coastline S of Martin Reef, midway between Strahan Glacier and Scullin Monolith. Discovered by the BANZARE, 1929-31, under Mawson, and named by him for H.O. Fletcher, asst. biologist with the expedition.

Fletcher Bluff 67°36'S, 68°42'W

A rock-faced, snow-backed bluff (c. 800 m) located 3 mi WNW of the summit of Mount Liotard on the E margin of Fuchs Ice Piedmont, Adelaide Island. Named in 1983 by the UK-APC after David D.W. Fletcher, BAS general assistant, Halley Station, 1972-73; Station Commander, Signy, 1973-74, and Rothera, 1976-81.

Fletcher Ice Rise 78°20'S, 81°00'W

A large ice rise, 100 mi long and 40 mi wide, at the southwest side of Ronne Ice Shelf. The feature is completely ice covered and rises between Rutford Ice Stream and Carlson Inlet. The ice rise was observed, photographed and roughly sketched by Lt. Ronald F. Carlson, USN, in the course of a C-130 aircraft flight of Dec. 14-15, 1961 from McMurdo Sound to this vicinity and return. Mapped in detail by USGS from Landsat imagery taken 1973-74. Named by US-ACAN for Joseph O. Fletcher, director of the Office of Polar Programs, National Science Foundation, 1971-74. Not: Fletcher Peninsula, Fletcher Promontory.

Fletcher Island 66°53'S, 143°05'E

A rocky island, 0.25 mi in diameter, which is the largest of the Fletcher Islands. It lies in the E part of Commonwealth Bay, 6 mi WSW of Cape Gray. Discovered by the AAE (1911-14) under Douglas Mawson, who named it for Frank D. Fletcher, First Officer on the expedition ship *Aurora*.

Fletcher Islands 66°53'S, 143°05'E

A small group of islands lying 6 mi WSW of Cape Gray in the E part of Commonwealth Bay. Discovered by the AAE (1911-14) under Douglas Mawson, who gave the name Fletcher to the large island of the group. The US-ACAN recommends that the name Fletcher also be applied for the group in keeping with the interpretation shown on G.D. Blodgett's 1955 map compiled from air photos taken by USN Operation Highjump (1946-47).

Fletcher Nunataks 74°54'S, 72°47'W

Two nunataks lying 2.2 mi SW of Barker Nunatak in the Grossman Nunataks, Ellsworth Land. Mapped by USGS from USN aerial photographs taken 1965-68 and Landsat imagery taken

1973-74. Named by US-ACAN after James B. Fletcher, USGS cartographic technician who, with Kenneth Barker (Barker Nunatak, q.v.), formed the USGS satellite surveying team at South Pole Station, winter party 1977.

Fletcher Peninsula 72°45'S, 88°50'W

A broad ice-covered peninsula which extends into the Bellingshausen Sea between the Abbot and the Venable Ice Shelves. Mapped by USGS from surveys and U.S. Navy air photos, 1961-66. Named by US-ACAN for Fred C. Fletcher of Boston, a contributor to the USAS, 1939-41.

Fletcher Peninsula: see Fletcher Ice Rise 78°20'S, 81°00'W

Fletcher Promontory: see Fletcher Ice Rise 78°20'S, 81°00'W

Flett, Mount 68°09'S, 49°12'E

A mountain between Mount Marriner and Mount Underwood in the central Nye Mountains. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for A. Flett, radio officer at Wilkes Station, 1959.

Fletta Bay 69°45'S, 37°12'E

A bay indenting the SW shore of Lützow-Holm Bay immediately W of Botneset Peninsula. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936-37, and named Fletta (the braid).

Flett Buttress 64°07'S, 57°49'W

A rock crag rising to 905 m northwest of Mount Haddington, James Ross Island. It provides the highest exposure of volcanic rock on the island. Named by the UK-APC in 1987 after William R. Flett, geologist on Operation Tabarin at Deception Island (Base Leader), 1943-44, and Hope Bay, 1944-45.

Flett Crags 80°39'S, 23°35'W

Rock crags on the N slope of Read Mountains, 5 mi N of Mount Wegener, in the Shackleton Range. Photographed from the air by the U.S. Navy in 1967. Surveyed by BAS, 1968-71. In association with the names of geologists grouped in this area, named by the UK-APC after Sir John Smith Flett (1869-1947), British geologist who worked on Scottish geology and volcanoes; Director, Geological Survey and Museum of Practical Geology (later British Geological Survey), 1920-35.

Fleurus Island 64°34'S, 62°13'W

Island lying 0.5 mi S of Delaite Island in Wilhelmina Bay, off the W coast of Graham Land. Shown on an Argentine government chart of 1950. Named by the UK-APC in 1956 after the British ship *Fleurus*, which visited the area in 1928.

Fliess Bay 63°12'S, 55°10'W

Bay lying immediately W of Fitzroy Point along the N coast of Joinville Island. The name appears on an Argentine government chart of 1957. Named "Caleta Almirante Fliess" after Admiral Felipe Fliess (1878-1952) who, as a lieutenant, was commander of the Argentine navy group detached for duty with the crew of the ship *Uruguay* in 1903, on the occasion of the rescue expedition to the members of the SwedAE (1901-04) led by Dr. Otto Norden skjöld. Not: Caleta Almirante Fliess.

Flight Deck Névé 76°47'S, 161°30'E

An elevated and unusually flat glacier névé, about 5 mi by 3 mi, between Flagship Mountain and Mount Razorback in the Convoy

Range, Victoria Land. The feature is the primary source of ice to the east-flowing Benson Glacier at Scuppers Icefalls. One of a group of nautical names in Convoy Range applied by NZGB in 1994. Not: Waterhouse Névé.

Flinders Peak 69°21'S, 66°40'W

A conspicuous triangular peak (960 m) on the W end of Bristly Peaks. The peak overlooks Forster Ice Piedmont near the W coast of Antarctic Peninsula. Photographed from the air by BGLE (Feb. 1937) and RARE (Dec. 1947). Surveyed from the ground by FIDS in Dec. 1958. Named by UK-APC after Matthew Flinders (1774–1814), English navigator who discovered the cause of deviation in magnetic compasses, and pointed the way to a solution, 1805–14.

Flint, Mount 75°44'S, 129°06'W

Prominent rounded and mainly snow-covered mountain, 2,695 m, standing 10 mi NW of Mount Petras in the McCuddin Mountains of Marie Byrd Land. The feature was observed from aircraft of the USAS in Flight G, Dec. 15, 1940, and was briefly referred to as "Mount Gray." It was mapped in detail by USGS, 1959–65. Named by US-ACAN for Robert B. Flint, Jr., USARP scientist on high latitude geophysical and geomagnetic phenomena. Flint wintered over at Byrd Station, 1964, Plateau Station where he was scientific leader, 1966, and Vostok Station where he was U.S. Exchange Scientist, 1974. Not: Mount Gray.

Flint Glacier 67°20'S, 65°25'W

Glacier which flows S into Whirlwind Inlet between Demorest Glacier and Cape Northrop, on the E coast of Graham Land. Discovered by Sir Hubert Wilkins on his flight of Dec. 20, 1928, and photographed from the air by the USAS in 1940. Charted in 1947 by the FIDS, who named it for Richard F. Flint, glaciologist and professor of geology at Yale University.

Flint Peninsula: see Churchill Peninsula 66°30'S, 62°45'W

Flint Ridge 77°31'S, 163°02'E

A N-S trending ridge with a summit elevation of 995 m, located immediately N of Commonwealth Glacier in Victoria Land. Named by US-ACAN for Lawrence A. Flint, manager of the USARP Berg Field Center at McMurdo Station in 1972. A standard USGS survey tablet stamped "Flint ET 1971–72" was fixed in a rock slab atop this ridge by the USGS Electronic Traverse, 1971–72.

Flogeken Glacier 72°04'S, 4°25'E

A deeply entrenched glacier, flowing NW between Mount Grytøy and Langfloget Cliff, in the Mühlig-Hofmann Mountains, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Flogeken (the rock wall spoke).

Flog Glacier: see Endurance Glacier 61°10'S, 55°08'W

Flogstallen 72°36'S, 2°59'W

A flat, icecapped mountain with steep rock sides just NE of Jøkulskarvet Ridge, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Flogstallen (the rock wall stable).

Flood Range 76°03'S, 134°30'W

Range of large snow-covered mountains extending in an E-W direction for about 60 mi and forming a right angle with the S end of the Ames Range in Marie Byrd Land. Discovered by the ByrdAE in 1934 from a great distance. Reconnaissance flights by the USAS (1939–41) explored the range. The principle mountain was named "Mount Hal Flood" by Byrd for his uncle, the Hon. Henry D. Flood, U.S. Senator from Virginia. The name was subsequently transferred by US-SCAN from the mountain to the entire range. Not: Hal Flood Range.

Flora, Mount 63°25'S, 57°01'W

Mountain, 520 m, containing a well-defined cirque which faces NE, standing 0.5 mi SE of the head of Hope Bay, at the NE end of Antarctic Peninsula. Discovered by the SwedAE under Norden-skjöld, 1901–04, and named by J. Gunnar Andersson, second-in-command of the expedition who discovered flora fossils of the Jurassic period in certain strata of this mountain. Not: Flora-Berg, Florasberg.

Flora-Berg: see Flora, Mount 63°25'S, 57°01'W

Florasberg: see Flora, Mount 63°25'S, 57°01'W

Florence Island 66°38'S, 140°05'E

Small rocky island lying 0.4 mi S of Derby Island near the N extremity of Astrolabe Glacier Tongue. Charted by the FrAE in 1951 and named after Florence, Italy.

Florence Nunatak 62°13'S, 58°37'W

Conspicuous nunatak, 280 m, nearly 2 mi E of the head of Potter Cove in the SW part of King George Island, South Shetland Islands. Named by the UK-APC in 1960 for the sealing vessel *Florence* (Capt. James W. Buddington) from New London, CT, which visited the South Shetland Islands in 1876–77 during the revival of United States southern fur sealing. Some of the crew of the *Florence* wintered at Potter Cove during 1877; only one survived. Not: Nunatak Yamana.

Florence Rock 60°47'S, 44°36'W

Rock 0.1 mi long with a smaller rock off its NE end, lying 0.8 mi SW of Cape Anderson, off the S coast of Laurie Island in the South Orkney Islands. Charted and named by the ScotNAE, 1902–04, led by W.S. Bruce. Not: Roca Florencia.

Florencia, Roca: see Florence Rock 60°47'S, 44°36'W

Flory Cirque 77°39'S, 160°52'E

A cirque between West Groin and East Groin, two rock spurs on the north side of Taylor Glacier in Victoria Land. Named by US-ACAN for Robert F. Flory, USARP geologist at McMurdo Station for three seasons, 1968–71.

Flota, Mar de: see Bransfield Strait 63°00'S, 59°00'W

Flotsam Moraines 76°51'S, 161°40'E

The moraines trailing northeastward from Mount Morrison, trapped in the ice eddies between Midship Glacier and ice from local mountainside glaciers, in Prince Albert Mountains, Victoria Land. So named by a 1989–90 NZARP field party from association with Jetsam Moraine and because all supraglacial moraines are "floating" on the glacier ice, and drift in a manner similar to marine flotsam and jetsam.

Flounder Island 66°01'S, 65°24'W

The largest of the Fish Islands at the N side of Holtedahll Bay, off the W coast of Graham Land. Charted by the BGLE under Rymill, 1934–37. So named by the UK-APC in 1959 because it lies in the Fish Islands.

Flower, Mount 70°12'S, 67°53'W

Mountain with two summits, the highest 1,465 m, standing 6.5 mi inland from Carse Point and George VI Sound, on the W coast of Palmer Land. This mountain lies partially within the margin of area first photographed from the air on Nov. 23, 1935 by Lincoln Ellsworth, and its N extremity was mapped from these photographs by W.L.G. Joerg. It was first surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 for Geoffrey C. Flower, instructor in survey at the Royal Geographical Society, 1933–40, who helped with the organization and working out of the surveys made by the BGLE, 1934–37.

Flowers Hills 78°24'S, 84°10'W

A group of hills, 20 mi long and with peaks of 1,240 and 1,390 m, lying S of the terminus of Dater Glacier and extending along the E edge of the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Edwin C. Flowers, meteorologist at the South Pole Station in 1957.

Fløyemannun Nunatak 73°09'S, 2°14'W

A nunatak just N of the W end of Neumayer Cliffs in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Fløyemannun (the wing man).

F. L. Smith, Mount 83°38'S, 169°29'E

A mountain, 2,635 m, standing 1 mi NE of Mount Fox in the Queen Alexandra Range. Discovered by the BrAE (1907–09) and named for F.L. Smith, London tobacconist, who was a supporter of the expedition. Not: Mount P.L. Smith.

Fluke Ridge 65°45'S, 62°28'W

A narrow rock ridge rising to c. 300 m on the N side of Flask Glacier near the terminus, on Oscar II Coast, Graham Land. Named by the UK-APC in 1987. One of several names in the area from Melville's *Moby Dick* which reflect a whaling theme.

Fluted Peak 85°37'S, 176°40'W

A fluted snow peak rising at the SE extremity of Roberts Massif. The only snow peak on the massif, it is visible for many miles to the south as a distinctive landmark. Surveyed and named by the Southern Party of the NZGSAE (1961–62) because of its appearance.

Fluted Rock 67°34'S, 46°21'E

Column-like rock standing on the NE side of Spooner Bay in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. The ANARE (*Thala Dan*) visited the rock in February, 1961 and so named it because of its fluted appearance when viewed from the sea.

Flutter Island 68°33'S, 77°58'E

An irregular-shaped island, almost cut in two, lying in Prydz Bay between Trigwell Island and Breidnes Peninsula, Vestfold Hills. First mapped from air photos taken by the Lars Christensen Expedition (1936–37) as two islands. Remapped as a single island

by ANARE (1957–58) and named for Maxwell J. Flutter, officer in charge at Davis Station in 1958.

Flying Fish, Cape 72°06'S, 102°29'W

An ice-covered cape which forms the W extremity of Thurston Island. Discovered by R. Admiral Byrd and members of the USAS in a flight from the *Bear*, February 1940. Named by US-SCAN for the USEE ship *Flying Fish*, commanded by Lt. William M. Walker, USN, which reached a point within 125 mi of this cape; the ship's position on the morning of Mar. 23, 1839 was 70°00'S, 100°16'W.

Flynn Glacier 81°31'S, 159°21'E

A glacier about 10 mi long, draining eastward from Mount Nares in the Churchill Mountains and entering Starshot Glacier S of Kelly Plateau. Named by US-ACAN for Cdr. William F. Flynn (CEC), USN, commanding officer Mobile Construction Battalion, Special Detachment Bravo, at McMurdo Sound, winter 1957.

Flyspot Rocks 68°35'S, 68°19'W

Rocks rising 35 m above sea level, lying 14 mi NW of Terra Firma Islands in Marguerite Bay. The rocks are ice covered on the S sides but mainly ice free on their N sides. Probably first sighted in 1909 by the FrAE under Charcot who, from a position slightly northwestward, charted a "doubtful" island in essentially this position. The group was roughly sketched from the air by the BGLE on a flight, Feb. 1, 1937. They were visited and surveyed in 1949 by the FIDS. The name arose at an earlier date because of their indistinct appearance as represented on the BGLE map. Not: Islas Iquique, Islotes Patrignani, Islotes Teniente Patrignani.

Foale Nunatak 70°16'S, 65°20'E

A nunatak lying 4 mi ENE of Moore Pyramid on the N side of Scylla Glacier, in the Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for K.A. Foale, radio operator at Davis Station in 1963.

Foca, Islas: see Seal Islands 60°58'S, 55°24'W

Foca, Islotes: see Seal Islands 60°58'S, 55°24'W

Foca, Nunataks: see Seal Nunataks 65°03'S, 60°18'W

Foca, Pointe: see Penguin Point 60°31'S, 45°56'W

Foca, Punta: see Seal Point 63°24'S, 56°59'W

Foca Cove 60°42'S, 45°39'W

A cove just south of Foca Point on the west side of Signy Island. Named by UK-APC in association with Foca Point.

Foca Point 60°42'S, 45°40'W

Rocky point forming the S side of the entrance to Express Cove on the W side of Signy Island in the South Orkney Islands. Surveyed in 1947 by the FIDS. Named by the UK-APC for the whale catcher *Foca*, belonging to the Compañía Argentina de Pesca, which visited the South Orkney Islands in December 1926.

Focas, Farallones: see Seal Islands 60°58'S, 55°24'W

Fog Bay 77°40'S, 168°10'E

A small bay immediately WNW of Terror Point in Windless Bight, on the S side of Ross Island. So named by the Winter Journey Party, led by Wilson of the BrAE, 1910–13, in July 1911 because of the thick white fog they encountered in this locality.

Fogg Highland 72°45'S, 60°50'W

An ice-covered upland, 20 mi long and 10 mi wide, on the Black Coast, Palmer Land, terminating on the NE in Cape Herdman and bounded on the N by Violante Inlet and on the S by Clowes Glacier. The feature was photographed from the air by the USAS in 1940, the RARE in 1947, and the USN, 1965–67; surveyed by the joint RARE-FIDS sledge party in November 1947. Named in 1981 by the UK-APC after Gordon E. Fogg, Professor of Marine Biology, University College of North Wales, 1971–85, who conducted research in the Antarctic Peninsula area in conjunction with BAS in 1966, 1974, and 1979; Chairman, BAS Scientific Advisory Committee, 1970–86.

Foggydog Glacier 79°47'S, 158°40'E

A glacier between Blank Peaks and Mount Rich in the Brown Hills. Mapped by the VUWAE (1962–63) and so named because in plan the glacier is shaped like the head and neck of a dog, with a moraine suggesting a collar and a glacial lake in the position of the ears. Fog accumulated regularly over the glacier.

Foggy Pass 71°59'S, 164°50'E

A pass running NE-SW between the Leitch Massif on the north and West Quartzite Range and East Quartzite Range on the south, in the Concord Mountains. Named by the NZ-APC in 1983 on a proposal from geologist M.G. Laird. So named from the weather conditions encountered in the area.

Fogle Peak 77°57'S, 162°34'E

A distinctive pointed peak, 2,475 m, standing at the head of Kamb Glacier in Royal Society Range, Victoria Land. Named in 1992 by US-ACAN after Benson Fogle, Program Manager for Upper Atmospheric Research, Division of Polar Programs, National Science Foundation, 1976–85.

Föhn Bastion 69°31'S, 68°36'W

A landmark mountain rising to 915 m about 8 mi SE of Cape Jeremy, on the Rymill Coast, Palmer Land. Named by the UK-APC in 1977 in association with other wind names in this area. Föhn (foehn) is the descending warm wind common in the European Alps.

Fokker Rocks 78°04'S, 155°10'W

Rock outcrops just S of Mount Schlossbach in the Rockefeller Mountains of Edward VII Peninsula. The name, applied by US-ACAN, recalls the fact that a Fokker airplane of the ByrdAE, 1928–30, was damaged beyond repair by strong winds while it was on the ground on the S side of nearby Washington Ridge. The plane was visited by Charles Morrison of USGS on Dec. 31, 1966.

Fokknuten Nunatak 71°56'S, 23°15'E

Small nunatak standing 4 mi E of Perlebandet Nunataks in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Fokknuten (the spray peak).

Fold Island 67°17'S, 59°23'E

An offshore island, 6 mi long and 3 mi wide, which with smaller islands close southward separate Stefansson Bay to the W from William Scoresby Bay to the east. This feature was seen by DI personnel on the *William Scoresby* in February 1936, who mapped it as part of the mainland. It was determined to be an island and named Foldöya by Norwegian cartographers who charted this area from aerial photographs taken by the Lars Christensen expedition

in January-February 1937. Not: Foldöya.

Foldöya: see Fold Island 67°17'S, 59°23'E

Foley Nunatak: see Brusen Nunatak 68°12'S, 58°13'E

Foley Promontory 68°57'S, 69°24'E

An ice-covered promontory about 5 mi N of Landon Promontory on the W side of the Amery Ice Shelf. Plotted from ANARE air photos taken in 1956. First visited by an ANARE party led by D.R. Carstens in November 1962. Named by ANCA for N.E. Foley, weather observer at Mawson Station in 1962, a member of the field party.

Folger, Cape 66°08'S, 110°44'E

An ice-covered cape forming the E side of the entrance to Vincennes Bay on Budd Coast. The position of Cape Folger correlates closely with the W end of Wilkes' "Budd's High Land," as charted as a coastal landfall by the USEE in 1840. Mapped from aerial photographs taken by USN OpHjp, 1946–47, and named by the US-ACAN for Cdr. Edward C. Folger, Jr., USN, commander of the icebreaker *Edisto* which assisted USN OpWml parties in establishing astronomical control stations in the Windmill Islands, close SW in Vincennes Bay.

Folger Rock 62°16'S, 59°15'W

Rock lying 2.5 mi N of Harmony Point, Nelson Island, in the South Shetland Islands. Named by the UK-APC in 1961 for Tristan Folger, Master of the American sealing vessel *William and Nancy* from Nantucket, which visited the South Shetland Islands in 1820–21, operating from nearby Harmony Cove.

Folk Ridge 73°09'S, 161°49'E

A ridge just SE of Moore Ridge and parallel to it in the Caudal Hills, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for John E. Folk, biolab technician at McMurdo Station, 1965–66.

Foltz Nunatak 74°08'S, 76°20'W

A nunatak rising to c. 800 m, 1 mi N of Schwartz Peak in Ellsworth Land. The feature is part of a nunatak group discovered and photographed from the air by Lincoln Ellsworth in Nov. 1935. Mapped by USGS from surveys and USN aerial photographs, 1961–68, and from Landsat imagery taken 1973–74. Named by US-ACAN in 1987 after Gary F. Foltz, USGS cartographic technician, a member of USGS satellite surveying teams at the South Pole Station during two winter periods, 1978 and 1984.

Fomalhaut Nunatak 70°58'S, 66°40'W

An isolated, flat-topped nunatak near the head of Ryder Glacier, 6.5 mi E of Mount Alpheratz of the Pegasus Mountains, in Palmer Land. Named by UK-APC after the star Fomalhaut in the constellation of Piscis Austrinus.

Fonda, Mount 76°59'S, 145°15'W

A mountain (695 m) in the NW part of the Swanson Mountains, 6 mi S of Greegor Peak, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939–41) under R. Admiral R.E. Byrd. Named for Howard B. Fonda who contributed medical supplies to the Byrd Antarctic Expeditions of 1928–30 and 1933–35.

Fontaine, Caleta: see Cierva Cove 64°09'S, 60°53'W

Fontaine Bluff 79°35'S, 159°42'E

Bluff 4 mi W of Cape Murray on the S side of Carlyon Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for Lt. Cdr. R.K. Fontaine, USN, commander of USS *Hissem* on ocean station duty in support of aircraft flights between Christchurch and McMurdo Sound, 1963–64.

Fontaine Heights 65°48'S, 64°28'W

A line of heights that extend from Mount Dewey to Cape Garcia on the S side of Bigo Bay, W coast of Graham Land. Mapped from air photos and FIDS surveys, 1955–57. Named by UK-APC for Henri La Fontaine (1854–1943), Belgian documentalist, co-founder of Institut International de Bibliographie at Bruxelles, 1895, and of Office Central des Associations Internationales at Bruxelles, 1907; initiator of the Universal Decimal Classification.

Fontana, Punta: see Collins Point 63°00'S, 60°35'W

Foolsmate Glacier 74°01'S, 161°55'E

A small, heavily crevassed tributary glacier flowing NE to enter Priestley Glacier, 11 mi W of Shafer Peak, in Victoria Land. The name was applied by the Southern Party of the NZGSAE, 1962–63.

Football, The 72°30'S, 169°42'E

Prominent bare rock scar of football shape on the N side of Football Mountain, on the ridge separating Edisto Inlet and Tucker Glacier. The scar is surrounded by an unbroken snow slope and is said to be always visible, though occasionally lightly covered by snow for short periods, and is consequently a landmark for pilots and men at Hallett station. Given this descriptive name by the NZGSAE, 1957–58.

Football Mountain 72°31'S, 169°42'E

Mountain, 830 m, with a prominent and peculiar rock scar called The Football on its N side, on the ridge between Edisto Inlet and Tucker Glacier. It was occupied as a survey station, and marked by a large rock cairn, by the NZGSAE, 1957–58, who named it for The Football.

Football Saddle 72°31'S, 169°46'E

Broad pass at 700 m, 2 mi ESE of Football Mountain on the ridge between Edisto Inlet and Tucker Glacier. The pass is an all-snow route that can be crossed by sledge, but there are two other saddles close E and W of Football Mountain that are no higher and are more easily crossed on foot, though more difficult by sledge because they are steeper and have stretches of bare rock. So named by the NZGSAE, 1957–58, because of its proximity to The Football.

Foote Islands 66°12'S, 66°12'W

A small group of snow-capped islands and several rocks, lying 12 mi SE of Cape Leblond, Lavoisier Island, in Crystal Sound. Mapped from air photos obtained by RARE (1947–48) and surveys by FIDS (1958–59). Named by UK-APC for Brian L.H. Foote, FIDS radio mechanic at Arthur Harbor (1957) and surveyor at Detaille Island (1958), who made surveys of the Crystal Sound area.

Footscrew Nunatak 77°54'S, 160°57'E

A nunatak (1,865 m) to the SW of Windy Gully, standing 1.4 mi SE of Altar Mountain, Quartermain Mountains, in Victoria Land. One of a group of names in the area associated with surveying

applied in 1993 by NZGB; footscrew being a leveling screw of a tripod as used with surveying instruments.

Fopay Peak 83°03'S, 161°47'E

A peak 5 mi NW of Mount Macbain, on the S side of Cornwall Glacier, Queen Elizabeth Range. Named by US-ACAN for Charles F. Fopay, Weather Central Meteorologist at Little America V, 1958.

Foqueros, Pasaje: see Sealers Passage 61°02'S, 55°23'W

Forbes Glacier 67°48'S, 66°44'W

Glacier which flows W into the NE corner of Square Bay, on the W coast of Graham Land. It is 10 mi long, 4 mi wide in its central part, and narrows to 2 mi at its mouth. The lower reaches of the glacier were first surveyed in 1936 by the BGLE under Rymill. The survey was completed in 1946–48 by the FIDS who named the glacier for James D. Forbes (1809–68), Scottish physicist who was noted for his pioneer works on glaciology.

Forbes Hill: see Forbes Point 64°53'S, 62°33'W

Forbes Point 64°53'S, 62°33'W

Point forming the E side of the entrance to Lester Cove, Andvord Bay, on the W coast of Graham Land. The name Forbes Hill was given by Scottish geologist David Ferguson in 1913–14 to a corner or spur of the plateau escarpment which is not a definable feature. From it, however, a ridge runs down to a prominent point useful for reference purposes, to which the name Forbes has been applied. Not: Forbes Hill.

Forbes Ridge 80°09'S, 157°30'E

A ridge about 7 mi long in the Britannia Range, extending N from Mount McClintock along the E side of Hinton Glacier. Named by the US-ACAN for Robert B. Forbes of the University of Alaska, who made geological studies in the McMurdo Sound area with USN OpDFrz, 1955–56, and during the summer season, 1962–63.

Forbidden Plateau 64°47'S, 62°05'W

The long, narrow plateau extending southwestward from Charlotte Bay to Flandres Bay in Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. So named by the UK-APC because all attempts to reach the plateau failed until it was finally traversed by FIDS members in 1957.

Forbidden Rocks 73°36'S, 94°12'W

Linear rock outcrops, 1 mi long, located on the W edge of Christoffersen Heights and between Haskell and Walk Glaciers, in the Jones Mountains. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61. So named by the party because the rocks were inaccessible from their NW approach because of crevasse fields.

Forbidden Valley 85°59'S, 154°00'W

A valley to the S of Citadel Peak in Hays Mountains. The valley drains ENE from Mount Crockett to Scott Glacier and is partly covered by glacier and moraine. It was visited in December 1987 by a USARP-Arizona State University geological party led by Edmund Stump. The mouth of the valley is blocked by a moraine which denies easy access, hence the name.

Ford, Mount 70°57'S, 162°52'E

A prominent mountain (2,580 m) located 2 mi N of Miller Peak and 4 mi WSW of Mount Ashworth in Explorers Range, Bowers

Mountains. Explored by the northern party of NZGSAE, 1963–64, and named for M.R.J. Ford who wintered at Scott Base and was deputy leader-surveyor of the northern party.

Forde, Mount 76°53'S, 162°05'E

Mountain over 1,200 m, standing at the head of Hunt Glacier, 2 mi NW of Mount Marston, in Victoria Land. Mapped by the BrAE (1910–13) and named for Petty Officer Robert Forde, RN, a member of the expedition's Western Geological Party.

Fordell, Mount 80°19'S, 82°09'W

A mountain, 1,670 m, marking the S end of the Marble Hills in the Heritage Range. Named by US-ACAN for Lt. William D. Fordell, USN, co-pilot of LC-47 aircraft, who perished in a plane crash on the Ross Ice Shelf, Feb. 2, 1966.

Ford Ice Piedmont 82°10'S, 50°00'W

The large ice piedmont lying northward of Dufek Massif and Forrester Range between the lower ends of Foundation Ice Stream and Support Force Glacier, in the Pensacola Mountains, q.v. Named by US-ACAN after Arthur B. Ford of the USGS, Menlo Park, CA, geologist and co-leader (with Peter F. Berml) of the USGS party in the Thiel Mountains, 1960–61 (leader 1961–62); field work at Lassiter Coast, 1970–71; leader of geological parties to the Pensacola Mountains in 1965–66, 1973–74, 1976–77, and 1978–79.

Ford Island 66°24'S, 110°31'E

Rocky island, 1.3 mi long, between O'Connor and Cloyd Islands in the S part of the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Homer D. Ford, photographic officer with the eastern task group of USN OpHjp, 1946–47, and assistant photographic officer with the USN OpWml parties which obtained air and ground photos of this area in January 1948. Not: Bathurst Island.

Ford Massif 85°05'S, 91°00'W

A broad, snow-topped massif 15 mi long and 5 mi wide, forming the major topographic landmark of northern Thiel Mountains. The massif rises to 2,810 m, is essentially flat, and terminates in steep rock cliffs in all but the southern side. Named by US-ACAN for geologist Arthur B. Ford of USGS, co-leader of the 1960–61 USGS Thiel Mountains survey party and leader of the 1961–62 geologic party to these mountains. Ford led geological parties working in the Pensacola Mountains in several austral seasons, 1962–63 to 1978–79.

Ford Nunataks 85°35'S, 131°30'W

A cluster of nunataks and low peaks rising above a network of ice-drowned ridges about 9 mi in extent, lying 7 mi NW of Murtaugh Peak in the Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Franklin E. Ford, construction mechanic with the winter parties at Byrd Station in 1961 and South Pole Station in 1965.

Ford Peak 75°43'S, 160°27'E

A rock peak, 1,830 m, standing 6.5 mi W of Mount Billing in the Prince Albert Mountains, Victoria Land. Named by the Southern Party of NZGSAE, 1962–63, for M.R.J. Ford, asst. surveyor with that party, who had wintered over at Scott Base in 1962.

Ford Range: see Ford Ranges 77°00'S, 144°00'W

Ford Ranges 77°00'S, 144°00'W

The mountain groups and ranges standing E of Sulzberger Ice Shelf and Block Bay in the NW part of Marie Byrd Land. Discovered by the ByrdAE on Dec. 5, 1929, and named by Byrd for Edsel Ford of the Ford Motor Co., who helped finance the expedition. Not: Edsel Ford Mountains, Edsel Ford Ranges, Ford Range.

Ford Rock 77°46'S, 166°53'E

Prominent rock 1 mi NE of Cone Hill on Hut Point Peninsula, Ross Island. Cone Hill and this rock were designated "Cone Hill I" and "Cone Hill II," respectively, by the BrAE under Scott, 1910–13. Cone Hill has been approved for Scott's "Cone Hill I," but a new name suggested by A.J. Heine has been substituted for this prominent rock. M.R.J. Ford, New Zealand surveyor, established a survey beacon network for the McMurdo Ice Shelf Project, 1962–63. A survey beacon was established earlier on this rock by a U.S. Hydrographic Office survey team, 1955–56. Not: Cone Hill II.

Ford Spur 84°51'S, 173°50'E

A prominent spur which marks the SW extremity of Haynes Table, and the confluence of Keltie Glacier and Brandau Glacier in the Queen Maud Mountains. Named by NZGSAE (1961–62) for C. Reginald Ford, Stores Officer for Scott's BrNAE (1901–04).

Forecast, Mount 70°40'S, 64°18'E

A large mountain comprising several peaks, standing just NE of Mount Brown-Cooper and 12.5 mi SW of Mount Pollard in the Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1956–65. Named by ANCA for M.J. Forecast, weather observer at Wilkes Station, 1965.

Forecastle Summit 76°46'S, 161°08'E

The highest mountain summit (2,040 m) in the N part of Staten Island Heights, with a rounded top that gives a commanding view of Fry Glacier and Benson Glacier, in Convoy Range, Victoria Land. One of the nautical names in Convoy Range. So named by a NZARP field party in the 1989–90 season.

Forefinger Point 67°37'S, 48°04'E

Prominent rock point between McKinnon Island and Rayner Glacier on the coast of Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. So named by ANCA because in plan it resembles a pointing left hand.

Foreland Island 61°57'S, 57°39'W

Island 1 mi ESE of Taylor Point, off the E side of King George Island, in the South Shetland Islands. This island was known to sealers as early as 1821 and takes its name from North Foreland, the prominent cape 3.5 mi to the northwest. Not: Islote Promontorio.

Forel Glacier 67°29'S, 66°30'W

Glacier 1.5 mi wide and 4 mi long, flowing SW into Blind Bay, on the W coast of Graham Land. First roughly surveyed in 1936 by the BGLE under Rymill. Its lower reaches were surveyed in 1949 by the FIDS, and the glacier named by them for François A. Forel, noted Swiss glacier physicist and author, and first President of the International Commission of Glaciers in 1894.

Foreman Peak 85°45'S, 138°24'W

Peak, 2,050 m, standing 2 mi W of Dzema Peak on the N side of Watson Escarpment. Named by US-ACAN for Donald L. Fore-

man, mechanic with USN Squadron VX-6 who wintered at Little America V in 1958 and McMurdo Station in 1960.

Forge Islands 65°14'S, 64°17'W

Group of small islands lying NE of The Barchans and 0.5 mi NW of Grotto Island, in the Argentine Islands, Wilhelm Archipelago. Charted and named Horseshoe Islands by the BGLE under Rymill, 1934–37. The name was changed by the UK-APC in 1959 to avoid confusion with Horseshoe Island in Marguerite Bay. This new name arises from association with the old name and with nearby Anvil Rock. Not: Horseshoe Islands, Islas Herradura.

Forgotten Hills 72°59'S, 164°00'E

A small group of hills 6 mi SE of Intention Nunataks, at the W side of the head of Astronaut Glacier. Named by the Southern Party of NZGSAE, 1966–67, because none of the three parties that had visited the area had time to examine these hills.

Forlidas Pond 82°27'S, 51°21'W

A round frozen pond, 100 m in diameter, lying in a morainal valley E of the N end of Forlidas Ridge, Dufek Massif. The only pond in the northern Pensacola Mountains, it is of much interest to biologists. The pond was discovered and briefly investigated in December 1957 by a US-IGY party from Ellsworth Station. The name is in association with Forlidas Ridge and was suggested by Arthur B. Ford of USGS following geological work in the area, 1978–79.

Forlidas Ridge 82°29'S, 51°16'W

A rock ridge that forms the W side of Davis Valley in the Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN after Charles W. Forlidas, radioman, Ellsworth Station winter party, 1957.

Forman Glacier 84°39'S, 177°10'W

A tributary glacier, 4 mi long, flowing E to enter Shackleton Glacier between Mount Franke and Mount Cole, in the Queen Maud Mountains. Named by US-ACAN after John H. Forman, Construction Mechanic, USN, a member of the McMurdo Station winter party, 1959.

Forposten: see Vorposten Peak 71°25'S, 15°31'E

Forrestal Range 83°00'S, 49°30'W

A largely snow-covered mountain range, about 65 mi long, standing E of Dufek Massif and the Neptune Range in the Pensacola Mountains. Discovered and photographed on Jan. 13, 1956 on a transcontinental patrol plane flight of U.S. Navy Operation Deep Freeze I from McMurdo Sound to the vicinity of the Weddell Sea and return. Named by the US-ACAN after the USS *Forrestal*, first supercarrier of the U.S. Navy. The entire Pensacola Mountains were mapped by USGS in 1967 and 1968 from U.S. Navy tricamera aerial photographs taken in 1964. Not: Cordillera Diamante.

Forrester Island 74°09'S, 132°13'W

An ice-capped island 3.5 mi long that lies 13 mi NNE of Shepard Island, off the Getz Ice Shelf of Marie Byrd Land. The island was discovered and charted from the USS *Glacier* on Feb. 5, 1962. Named by US-ACAN after Lt. Cdr. John J. Forrester, USN, Executive Officer aboard *Glacier* at the time of discovery.

Forrest Pass 75°53'S, 132°34'W

A broad ice-filled pass between Mount Bursey, in the Flood Range, and the southern elevations of the Ames Range in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Robert B. Forrest, USARP glaciologist with the Byrd Station Traverse of 1962–63.

Førstefjell 71°50'S, 5°43'W

An isolated nunatak about 5 mi N of Førstefjellsrabben, in the NW part of Giaevever Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Førstefjell (first mountain).

Førstefjellsrabben 71°55'S, 5°49'W

An isolated nunatak about 5 mi S of Førstefjell, in the NW part of Giaevever Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52), and named Førstefjellsrabben (the first mountain hill) in association with Førstefjell.

Førstefjellsryggen: see Giaevever Ridge 72°00'S, 5°00'W

Förster Cliffs 64°01'S, 57°33'W

Cliffs located ENE of Stark Point, running E-W for 2 mi and rising to 550 m in northern James Ross Island. Named by the UK-APC in 1987 after Reinhard Förster (1935–87), West German geologist from the University of Munich, who was a member of the BAS field party to the area, 1985–86.

Forster Ice Piedmont 69°22'S, 67°00'W

An ice piedmont lying landward of Wordie Ice Shelf along the W coast of the Antarctic Peninsula. It is formed by the confluence of Airy, Seller, Fleming and Prospect Glaciers and is about 25 mi long from north to south and 12 mi wide. First surveyed from the ground by BGLE in 1936–37, and again in more detail by P. Forster and P. Gibbs of FIDS in 1958. Named by UK-APC after Peter D. Forster of FIDS, surveyor at Stonington Island in 1958 and at Horseshoe Island in 1960.

Forster's Bay: see Forsters Passage 59°15'S, 26°50'W

Forsters Passage 59°15'S, 26°50'W

Body of water between Bristol Island and Southern Thule in the South Sandwich Islands. In 1775, a British expedition under Cook gave the name Forster's Bay, after John R. Forster, naturalist with the expedition to what appeared to be a bay in essentially this position. The "bay" was determined to be a strait by a Russian expedition under Bellingshausen in 1820. Not: Forster's Bay.

Forsythe Bluff 71°16'S, 159°50'E

A bluff rising to more than 2,500 m along the W edge of Daniels Range, in the Usarp Mountains. The bluff is 11 mi N of Big Brother Bluff Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN after Warren L. Forsythe, USARP geologist at McMurdo Station, 1967–68.

Fortenberry Glacier 70°48'S, 166°57'E

A glacier on the N side of Tapsell Foreland in Victoria Land. It flows N into Yule Bay 3 mi E of Ackroyd Point. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Lt. Ralph M. Fortenberry, USN, Medical Officer at McMurdo Station, 1960.

Fortín Rock 62°28'S, 60°44'W

A conspicuous rock or sea stack lying off Black Point, Livingston Island, in the South Shetland Islands. The name appears in a 1953 volume of Argentine sailing directions for Antarctica and Argentine charts. In Spanish, *fortín* means small fort. This feature has sometimes been misidentified on charts as Scarborough Castle (q.v.). Not: Crab Stack.

Fort Point 62°34'S, 59°34'W

Rocky point, 85 m high, forming the SE extremity of Greenwich Island, South Shetland Islands. The highest rock at the seaward end of the point was named Castle Rock by DI personnel following their survey in 1935. The name Fort Rock, considered equally descriptive of the feature, was recommended by the UK-APC in 1954 to avoid confusion with Castle Rock lying close westward of Snow Island, only 60 mi away. Air photos now show that the feature is not an isolated sea feature but is connected to Greenwich Island. Not: Castle Rock, Fort Rock, Punta Hardy, Roca Peñón.

Fortress, The 77°18'S, 160°55'E

A platform of Beacon Sandstone dissected to form four promontories bordered by cliffs over 300 m high. Situated on the shoulder to the NE of Webb Glacier, they form part of the divide between the Webb and Victoria Upper Glaciers. Named by the VUWAE, 1959–60, for its fortress-like appearance.

Fortress, The: see Pendragon, Mount 61°15'S, 55°14'W

Fortress Hill 63°56'S, 57°31'W

Hill, 120 m, which stands 2 mi N of Terrapin Hill in northern James Ross Island, close S of Trinity Peninsula. Charted in 1946 by the FIDS, who gave this descriptive name.

Fortress Rocks 77°51'S, 166°41'E

A cluster of low rock summits 0.5 mi N of the summit of Observation Hill on Hut Point Peninsula, Ross Island. A descriptive name given by members of the BrAE, 1910–13, under Scott.

Fort Rock: see Fort Point 62°34'S, 59°34'W

Fortuna Bay 54°07'S, 36°48'W

Bay 3 mi long and 1 mi wide, entered between Cape Best and Robertson Point on the N coast of South Georgia. Named after the *Fortuna*, one of the ships of the Norwegian-Argentine whaling expedition under C.A. Larsen which participated in establishing the first permanent whaling base at Grytviken, South Georgia, in 1904–05.

Fortuna Glacier 54°06'S, 36°51'W

Glacier flowing in a NE direction to its terminus just W of Cape Best, with an eastern distributary almost reaching the W side of Fortuna Bay, on the N coast of South Georgia. Named in about 1912, presumably for the whale catcher *Fortuna*.

Fortuna Peak 54°07'S, 36°47'W

Peak, 385 m, standing at the E side of Fortuna Bay, on the N coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart, and is probably in association with Fortuna Bay.

Fortuna Rocks 54°06'S, 36°47'W

Small group of rocks extending across the E side of the entrance to Fortuna Bay along the N coast of South Georgia. These rocks were indicated on a chart by the GerAE under Filchner, who examined

Fortuna Bay in 1911–12. The name Fortuna Rocks was in use prior to 1920 and derives from nearby Fortuna Bay.

Fort William 62°23'S, 59°43'W

A flat-topped headland (100 m) forming the western end of Robert Island in the South Shetland Islands. Robert Fildes described Fort William in 1820–22 as being the eastern side of the entrance (to English Strait). His subsequent report (1829) described Fort William in detail, but erroneously placed it on the western side of the entrance (on Greenwich Island), a position which was adopted for a period following a survey by DI personnel in 1934–35. The UK-APC has re-interpreted all known versions of Fildes' sailing directions in conjunction with photographs and has concluded that the feature named Fort William by Fildes is the one here described; the Greenwich Island feature for which the name Fort William was erroneously applied is now named Canto Point (q.v.). Not: Cape Morris.

Fort William, Punta: see Canto Point 62°27'S, 59°44'W

Fort William: see Canto Point 62°27'S, 59°44'W

Fosdick Mountains 76°32'S, 144°45'W

An E-W trending mountain range with marked serrate outlines, standing along the S side of Balchen Glacier at the head of Block Bay, in the Ford Ranges of Marie Byrd Land. Discovered by the ByrdAE in 1929, and named by Byrd for Raymond B. Fosdick, President of the Rockefeller Foundation. Not: Raymond Fosdick Mountains, Raymond Fosdick Range.

Fósil, Acantilado: see Fossil Bluff 71°20'S, 68°17'W

Fósil, Bahía: see Fossil Bight 64°18'S, 56°52'W

Fósiles, Bahía: see Fossil Bight 64°18'S, 56°52'W

Fósiles, Ensenada: see Fossil Bight 64°18'S, 56°52'W

Fossatti, Cabo: see Lookout, Cape 61°16'S, 55°12'W

Fossil Bay: see Fossil Bight 64°18'S, 56°52'W

Fossil Bight 64°18'S, 56°52'W

A shallow recession in the N coast of Seymour Island, 1 mi NNE of Cape Lamas. The feature was called "Fossil Bay" or "Bahía Fósiles" by USARP and Argentine researchers because of fossils found here in 1982. The generic term bight is considered appropriate to this feature. Not: Bahía Fósil, Bahía Fósiles, Ensenada Fósiles, Fossil Bay.

Fossil Bluff 71°20'S, 68°17'W

Prominent rock bluff on the E coast of Alexander Island marking the N side of the mouth of Uranus Glacier where it enters George VI Sound. Probably first seen by Lincoln Ellsworth, who flew directly over it and photographed segments of the coast in this vicinity on Nov. 23, 1935. First roughly surveyed in 1936 by the BGLE and so named by them because fossils were found in the rock strata there. Resurveyed in 1948 by the FIDS. Not: Acantilado Fósil.

Fossil Wood Point 70°50'S, 68°02'E

A point of land between Bainmedart Cove and Radok Lake in the E part of Aramis Range, Prince Charles Mountains. The area was visited several times in Jan.-Feb. 1969 by A. Medvecký, geologist with the ANARE Prince Charles Mountains survey party. So named because deposits of fossil wood were found on the point.

Foster, Cape 64°27'S, 57°59'W

Cape lying 2 mi SE of Carlsson Bay on the S side of James Ross Island. Discovered by a British expedition 1839–43, under Ross, who named it for Capt. Henry Foster, RN, leader of a British expedition in the *Chanticleer*, 1828–31. The cape was mapped by the SwedAE under Nordenskjöld, 1901–04.

Foster, Mount 63°00'S, 62°33'W

A triple peak, 2,105 m, standing 4 mi SW of Mount Pisgah and forming the summit of Smith Island in the South Shetland Islands. Capt. Henry Foster, RN, who visited the island in the *Chanticleer* in 1829, named this feature Mount Beaufort, but this name has gradually been superseded by the present name honoring Captain Foster. Not: Mount Beaufort, Mount Beaufurt.

Foster, Port 62°57'S, 60°39'W

Basin-like harbor (a drowned breached crater), 5 mi long and 3 mi wide, lying within Deception Island in the South Shetland Islands. The harbor was known to sealers as early as 1820, and in its early history was called Port Williams, after Capt. William Smith's brig, the *Williams*, or Yankee Harbor, because of the number of American sealers who harbored there. A few years later it was named Port Foster after Capt. Henry Foster of the *Chanticleer*, who made pendulum and magnetic observations in this harbor in 1829. The latter name has become established by usage. Not: Deception Harbor, Port Williams, Williams Harbour, Yankee Harbor.

Foster Bluff 66°25'S, 110°37'E

Conspicuous rock bluff surmounting the shore in the SW part of Herring Island, in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Danny L. Foster, meteorologist and member of the Wilkes Station party of 1962.

Foster Glacier 78°24'S, 162°50'E

A glacier in the Royal Society Range, 4 mi S of Mount Kempe, flowing SE into the Koettlitz Glacier. Named by the US-ACAN in 1963 for Maj. James Foster, USMC, assistant air operations officer for U.S. Navy Task Force 43 in Antarctica, 1960.

Foster Island 66°04'S, 100°16'E

Rocky island 0.3 mi long, lying 7 mi WNW of Currituck Island at the NW end of the Highjump Archipelago. Mapped from aerial photographs taken by USN OpHjp, 1946–47, and named by the US-ACAN for H.C. Foster, motion picture photographer on USN OpHjp photographic flights in this area and other coastal areas between 14° and 164° east longitude. Not: Ostrov Severnyy.

Foster Nunatak 71°06'S, 71°40'E

A horseshoe shaped rock outcrop in the S part of the Manning Nunataks, on the E side of the Amery Ice Shelf. The Manning Nunataks were photographed by USN OpHjp (1946–47) and ANARE (1957). They were visited by the SovAE in 1965 and ANARE in 1969. Named by ANCA for A.L. Foster, electronics engineer at Mawson Station in 1970, a member of an ANARE glaciological traverse party on the Amery Ice Shelf in January 1970.

Foster Peninsula 71°18'S, 61°10'W

A high ice-covered peninsula between Palmer Inlet and Lamplugh Inlet on the E coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Theodore D. Foster, USARP oceanog-

rapher on the International Weddell Sea Expedition, 1969. He was party leader on Weddell Sea investigations, 1972–73 and 1974–75.

Foster Plateau 64°43'S, 61°25'W

A plateau, about 80 square mi in area, lying between Drygalski and Hektor Glacier in northern Graham Land. Photographed by the FIDASE in 1956–57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Richard A. Foster, FIDS leader of the Danco Island station in 1956 and 1957.

Fothergill Point 64°35'S, 60°12'W

A low rocky coastal point 5 mi NE of Cape Worsley, on the E side of Graham Land. Named by UK-APC for Ian L. Fothergill, leader and meteorological assistant at the FIDS station at Hope Bay, 1959–63.

Foul Point 60°32'S, 45°29'W

The N point of the island, with off-lying rocks, lying at the E side of the entrance to Ommanney Bay on the N side of Coronation Island, in the South Orkney Islands. Discovered in December 1821 in the course of the joint cruise by Capt. George Powell, British sealer, and Capt. Nathaniel Palmer, American sealer. The name first appears on Powell's chart, published in 1822. Not: Punta Peligrosa.

Foundation Ice Stream 83°15'S, 60°00'W

A major ice stream in the Pensacola Mountains, draining northward for 150 miles along the west side of the Patuxent and Neptune Ranges to enter Ronne Ice Shelf westward of Dufek Massif. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for the National Science Foundation, which has played a leading role in support of the U.S. Antarctic Research Program during this period.

Founders Escarpment 79°15'S, 86°15'W

A prominent escarpment located W of Founders Peaks in the Heritage Range, extending from Minnesota Glacier to Spletts-toesser Glacier. Named after the nearby Founders Peaks by the University of Minnesota Geological Party, 1963–64.

Founders Peaks 79°10'S, 86°15'W

A cluster of sharp peaks and ridges located just E of Founders Escarpment and between Minnesota and Gowan Glaciers, in the Heritage Range, Ellsworth Mountains. Founders Peaks were mapped by USGS from surveys and USN air photos, 1961–66. The name was applied by US-ACAN in association with the name Heritage Range.

Fourcade, Mount 64°36'S, 62°30'W

Mountain standing 2 mi SW of Cape Anna on the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for H.G. Fourcade, South African surveyor who designed the stereogoniometer and gave it practical application for plotting photogrammetric surveys in about 1900.

Fourier Island 66°48'S, 141°30'E

Small rocky island 0.05 mi off the coast and 0.75 mi ENE of Cape Mousse. Charted in 1951 by the FRAE and named by them for Jean-Baptiste Fourier (1768–1830), French geometrician.

Fournier Bay 64°31'S, 63°06'W

Bay 8 mi long and 3 mi wide, indenting the NE coast of Anvers Island immediately W of Briggs Peninsula, in the Palmer Archi-

pelago. Probably first seen by a German expedition 1873–74, under Dallmann. Charted by the FrAE, 1903–05, under Charcot, and named by him for V. Admiral Ernest Fournier, French Navy. Not: Baie E. Fournier.

Fournier Island 64°33'S, 62°49'W

A small island in southern Schollaert Channel, lying 0.5 mi off the east extremity of Anvers Island, in the Palmer Archipelago. The island was charted but left unnamed by the FrAE, 1903–05. The name appears on Argentine charts dating back to 1950, and honors the ship *Fournier* which took part in the Argentine Antarctic expedition of 1947. In 1948 the vessel was wrecked in the Strait of Magellan. Not: Ryswyck Island.

Fournier Ridge 69°34'S, 72°35'W

An E-W ridge, 9 mi long, rising to c. 1,000 m in the W part of Desko Mountains (q.v.), Rothschild Island. Named by US-ACAN for Cdr. James M. Fournier, USCG, Commanding Officer, USCGC *Burton Island*, Operation Deep Freeze, 1976 and 1977; Executive Officer, *Burton Island*, 1971.

Four Ramps 84°42'S, 177°35'E

A group of four small rock spurs, roughly parallel and projecting through the snow surface, forming the NE part of Sullivan Ridge on the W side of Ramsey Glacier. Discovered and photographed by USN OpHjp (1946–47) and given this descriptive name by US-ACAN.

Fowler Ice Rise 77°30'S, 78°00'W

A very large ice rise between Evans Ice Stream and Carlson Inlet, in the SW part of Ronne Ice Shelf. The feature appears to be completely ice covered except for Haag Nunataks which protrude above the surface in the NW portion. Mapped by USGS from Landsat imagery taken 1973–74. Named by US-ACAN for Capt. Alfred N. Fowler, USN (Ret.), Commander, U.S. Naval Support Force, Antarctica, 1972–74.

Fowler Islands 66°25'S, 66°26'W

A group of small islands lying between Bernal and Bragg Islands in Crystal Sound. Mapped from air photos obtained by RARE (1947–48) and FIDASE (1956–57) and surveys by FIDS (1958–59). Named by UK-APC for Sir Ralph H. Fowler (1889–1944), English physicist; joint author with J.D. Bernal of a classic paper on the structure of ice which suggested the location of the hydrogen atoms, in 1933.

Fowler Knoll 84°47'S, 99°14'W

A notable snow-covered knoll (2,465 m) with an abrupt south-facing cliff, in the west-central part of the Havola Escarpment. Mapped by the USGS from surveys and U.S. Navy air photos, 1958–61. Named by US-ACAN for Chief Warrant Officer George W. Fowler, USA, navigator on the 700 nautical mile tractor traverse from Byrd Station to South Pole Station, Dec. 8, 1960 to Jan. 11, 1961. The tractor party, led by Maj. Antero Havola, passed a few miles northward of this knoll on Dec. 25, 1960.

Fowlie Glacier 71°40'S, 168°04'E

A tributary glacier, 13 mi long, in the Admiralty Mountains, Victoria Land. From a common head with Dennistoun Glacier, it flows NW between Mount Ajax and Mount Faget, entering the main flow of the Dennistoun Glacier at the SE base of Lyttelton Range. Named after Walter Fowlie of the New Zealand Antarctic Division, field assistant with a NZARP geological party to this

area, 1981–82, led by R.H. Findlay. The original application of the name (NZ-APC, US-ACAN 1983) was revised in 1994 in relation to Dennistoun Glacier, q.v.

Fowlie Glacier: see Dennistoun Glacier 71°11'S, 168°00'E

Fox, Mount 83°38'S, 169°15'E

A mountain, 2,820 m, standing 1 mi SW of Mount F.L. Smith in the Queen Alexandra Range. Discovered and named by the BrAE (1907–09).

Fox Glacier 66°15'S, 114°20'E

A glacier draining the area northeastward of Law Dome. It terminates at the coast, 12 mi N of Williamson Glacier, where it forms a small glacier tongue. Delineated by G.D. Blodgett (1955) from aerial photographs taken by USN Operation Highjump (1946–47). Named by US-ACAN after Dr. J.L. Fox, Assistant Surgeon on the sloop *Vincennes* during the USEE (1838–42) under Lt. Charles Wilkes.

Fox Ridge 70°47'S, 67°53'E

A rock ridge on McLeod Massif, about 5 mi W of Beaver Lake, in the E part of Aramis Range, Prince Charles Mountains. Mapped from ANARE air photos. The feature was the site of a tellurometer station during the ANARE Prince Charles Mountains survey in 1969. Named by ANCA for J. Fox, technical officer (survey), the leader of one of the survey parties in the Prince Charles Mountains.

Foxtail Peak 54°14'S, 36°42'W

Peak, 455 m, on the N side of Neumayer Glacier, 2 mi W of Carlita Bay, South Georgia. Charted by the SwedAE, 1901–04, under Nordenskjöld. Surveyed by the SGS in the period 1951–56 and named by the UK-APC after the Antarctic foxtail grass (*Alopecurus antarcticus*), which is abundant on the lower slopes of the peak.

Foy Island: see Alexander, Cape 66°44'S, 62°37'W

Foy Coast 66°40'S, 64°20'W

That portion of the E coast of the Antarctic Peninsula between Cape Alexander and Cape Northrop. Discovered in 1893 by a Norwegian expedition under Capt. C.A. Larsen, who named it for Svend Foy, Norwegian whaler of Tønsberg whose invention of the grenade harpoon greatly facilitated modern whaling. Not: Foyland, Svend Foy Coast.

Foy Harbor 64°33'S, 62°01'W

An anchorage between Nansen and Enterprise Islands in Wilhelmina Bay, off the W coast of Graham Land. Surveyed by M.C. Lester and T.W. Bagshawe in 1921–22. Named by whalers in the area after the whaling factory *Svend Foy*, which was moored here during 1921–22. Not: Svend Foy Harbor.

Foy Island 71°56'S, 171°04'E

The second largest island in the Possession Islands, lying 4 mi SW of Possession Island. Named by a Norwegian expedition of 1894–95, led by Bull and Kristensen, for Svend Foy, primary financier of the expedition. Not: James Ross Island, Svend Foy Island.

Foy Island: see Foy Point 65°15'S, 61°38'W

Foyland: see Foy Coast 66°40'S, 64°20'W

Foyen Point 65°15'S, 61°38'W

Point, surmounted by a peak 525 m high, marking the N side of the entrance to Exasperation Inlet, on the E coast of Graham Land. Sir Hubert Wilkins on a flight of Dec. 20, 1928 photographed what appeared to be an island off the E coast, later charting it in 66°30'S, 62°30'W. Subsequent comparison of Wilkins' photographs of this feature with those taken by the FIDS, who charted the coast in 1947, indicate that this point, although considerably N of the position reported by Wilkins, is the feature named by him Foyen Island. The name Foyen Point is given to the SE extremity of this feature. Named for Svend Foyen. Not: Foyen Island.

Frakes, Mount 76°48'S, 117°42'W

A prominent mountain (3,675 m) marking the highest elevation in the Crary Mountains, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Lawrence A. Frakes, USARP geologist who worked three summer seasons in the Falkland Islands and Antarctica, 1964–65 through 1967–68.

Frame Ridge 78°05'S, 165°26'E

A small straight ridge in the central part of Brown Peninsula, Victoria Land. It is located just north of the small, central lake on the peninsula and extends northward down to Tuff Bluff. Named by NZ-APC for A.O. Frame, paleontology technician with the N.Z. Geological Survey and Victoria University Expedition to the area, 1964–65.

Framfjellet: see Fram Peak 68°04'S, 58°27'E

Fram Islands 66°38'S, 139°50'E

Small group of rocky islands and rocks in the W portion of Géologie Archipelago, 2 mi NNW of Cape Géodésie. Photographed from the air by USN OpHjp, 1946–47. Charted by the FrAE, 1949–51, and named by them for the Norwegian polar ship *Fram*, used by Fridtjof Nansen in the Arctic and Roald Amundsen in the Antarctic.

Fram Mesa 86°08'S, 156°28'W

A high, ice-capped mesa, 10 mi long and 1 to 3 mi wide, that forms the NE portion of Nilsen Plateau in the Queen Maud Mountains. The feature may have been seen by Amundsen in 1911, and it was observed and partially mapped by the ByrdAE of 1928–30 and 1933–35. It was mapped in detail by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN after the *Fram*, the ship used by Amundsen's expedition of 1910–12.

Framnaes, Cape: see Framnes, Cape 65°57'S, 60°33'W

Framnaesodden: see Framnes Head 68°47'S, 90°42'W

Framnaes Point 54°08'S, 36°39'W

Point 1 mi SW of Cape Saunders, on the N side of Stromness Bay, South Georgia. The name was given prior to 1920, probably by Norwegian whalers operating in the area.

Framnäs: see Framnes, Cape 65°57'S, 60°33'W

Framnes, Cape 65°57'S, 60°33'W

Cape which forms the NE end of Jason Peninsula, on the E coast of Graham Land. Discovered and named in 1893 by a Norwegian expedition under C.A. Larsen. The name is probably descriptive. Larsen reported that he gave the name Framnes (forward point) to the promontory which shoots off in an eastern direction from

Mount Jason (now Jason Peninsula). He said it appeared to be the most advanced point of land which his expedition saw here. Not: Cape Framnaes, Framnäs.

Framnes Head 68°47'S, 90°42'W

A small rock point in Sandefjord Cove on the west side of Peter I Island. Charted and named by a Norwegian expedition in the *Norvegia* under Nils Larsen, who made the first landing on Peter I Island at this point in February 1929. Not: Framnaesodden.

Framnes Mountains 67°50'S, 62°35'E

Group of mountains consisting of Casey, Masson, and David Ranges, and adjacent peaks and mountains. The three major ranges and other lesser features were sighted and named in February 1931 by the BANZARE under Mawson. This coast was also sighted by Norwegian whalers in the same season. The whole area was mapped in detail by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition in January 1937. This overall name for the several ranges was given by Christensen after Framnesfjellet, a hill near Sandefjord, Norway.

Fram Peak 68°04'S, 58°27'E

The northernmost peak in the Hansen Mountains. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition (1936–37) and named Framfjellet (the forward peak). Not: Framfjellet.

Framrabben Nunatak 72°29'S, 3°52'W

A nunatak about 3 mi WNW of Borg Mountain in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Framrabben (the forward nunatak).

Framranten Point 73°49'S, 5°13'W

A rocky point that extends northwestward from Kuvungen Hill, near the SW end of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and additional air photos (1958–59), and named Framranten.

Framryggen Ridge 72°30'S, 3°54'W

A small rock ridge about 3 mi W of Borg Mountain in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Framryggen (the forward ridge).

Framskotet Spur 72°30'S, 3°41'W

A rock spur forming the W extremity of Borg Mountain in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Framskotet (the forward bulkhead).

Franca Glacier 68°23'S, 65°34'W

A glacier flowing NE into the head of Solberg Inlet, Bowman Coast, to the S of Houser Peak. The glacier was photographed from the air by USAS, 1940, U.S. Navy, 1966, and was surveyed by FIDS, 1946–48. Named by US-ACAN in 1977 after Dr. Fernando E. Franca, Medical Officer and Station Manager, Palmer Station, 1974.

Français, Anse du: see Français Cove 65°04'S, 64°02'W

Français, Mount 64°38'S, 63°27'W

Majestic, snow-covered mountain, 2,760 m, which forms the summit of Anvers Island, standing SE of the center of the island and 6 mi N of Börger Bay, in the Palmer Archipelago. First seen by the BelgAE, who explored the SE coast of the island in 1898. Later sighted by the FrAE, 1903–05, under Charcot, who named it for the expedition ship *Français*. Not: Monte Teniente Ibáñez.

Français, Pasaje: see French Passage 65°10'S, 64°20'W

Français Bight: see Français Cove 65°04'S, 64°02'W

Français Cove 65°04'S, 64°02'W

Small cove at the W side of Port Charcot, which indents the N end of Booth Island, in the Wilhelm Archipelago. Discovered by the FrAE, 1903–05, under Charcot, and named by him after the ship *Français*, which was moored in the cove during the expedition's winter operations at Port Charcot in 1904. Not: Anse du Français, Français Bight.

Français Glacier 66°33'S, 138°15'E

Glacier 4 mi wide and 12 mi long, flowing NNE from the continental ice to the coast close W of Ravin Bay. Though no glaciers were noted on Capt. Jules Dumont d'Urville's chart of this coast, the close correlation of his "Baie des Ravins" feature and narrative description with the indentation of the coast near the mouth of this glacier suggests first sighting of this feature by the French expedition, 1837–40. During December 1912 members of the Main Base Party of the AAE camped on the upland slopes close E of the glacier, but no reference was made to the glacier in the AAE reports, though a clear view and unpublished sketch were obtained of the distant coast to the northwest. Delineated from air photos taken by USN OpHjp, 1946–47. The FrAE under Marret, 1952–53, sledged W on the sea ice to the ice cliffs close E of the glacier. Named after the *Français*, expedition ship of the FrAE under Dr. Jean B. Charcot, 1903–05. Not: Glacier Endurance.

Français Glacier Tongue 66°31'S, 138°15'E

Broad glacier tongue about 3 mi long extending seaward from Français Glacier. Charted in 1951 by the FrAE and named by them for the *Français*, expedition ship of the FrAE under Charcot, 1903–05.

Français Rocks 63°02'S, 56°00'W

A group of fringing rocks lying off the NE coast of D'Urville Island. The name "Pointe des Français" (point of the French) was given by Capt. Jules Dumont d'Urville (French expedition, 1837–40) to the NE point of the island which at that time was believed to be continuous with Joinville Island. Surveys by FIDS (1952–54) and aerial photographs by FIDASE (1956–57) have not revealed a definable point hereabout. For the sake of historical continuity in the area, the UK-APC (1978) applied the name Français Rocks to these fringing rocks.

Frances, Cape 67°30'S, 164°45'E

A cape on the E side of Sturge Island in the Balleny Islands. In 1841, Capt. James C. Ross, viewing Sturge Island from a considerable distance, thought it a group of three islands and named the center island, Frances. This error was discovered in 1904 by Capt. Robert F. Scott, who applied the name to this cape.

Francés, Paso: see French Passage 65°10'S, 64°20'W

Francey Hill 70°43'S, 67°02'E

A low, snow-covered rock feature about 3 mi S of Mount McKenzie in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named by ANCA for R.J. Francey, cosmic ray physicist at Mawson Station in 1964.

Francis, Mount 72°13'S, 168°45'E

A massive, ridgelike mountain (2,610 m) that overlooks Tucker Glacier from the north, standing between Tyler and Staircase Glaciers in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Henry S. Francis, Jr., Director, International Cooperation and Information Program, Office of Antarctic Programs, National Science Foundation. Francis wintered-over at Little America V Station in 1958 and made visits to Antarctica in other seasons.

Francis Island 67°37'S, 64°45'W

Island which is irregular in shape, 7 mi long and 5 mi wide, lying 12 mi ENE of Choyce Point, off the E coast of Graham Land. Discovered and photographed from the air by the USAS in 1940. Charted in 1947 by the FIDS, who named it for S.J. Francis, FIDS surveyor. Not: Robinson Island.

Francis Peaks 67°39'S, 50°25'E

Group of peaks and ridges 1 mi SE of Mount Gordon in the Scott Mountains, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for R.J. Francis, physicist at Mawson station in 1961.

Franck Nunataks 71°32'S, 72°23'W

Scattered group of small rock outcrops, 3 mi in extent, at the base of Beethoven Peninsula in the SW part of Alexander Island. First mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by the UK-APC after César Franck (1822–90), French composer.

Fran Inlet: see Nantucket Inlet 74°35'S, 61°45'W

Franke, Mount 84°37'S, 177°04'W

A prominent mountain (1,600 m) with much rock exposed on its N side, standing between Mount Wasko and Mount Cole along the W side of Shackleton Glacier. Discovered and photographed by the USAS, 1939–41. Surveyed by A.P. Crary in 1957–58 and named by him for Lt. Cdr. Willard J. Franke, USN, of USN Squadron VX-6, who wintered at Little America V, 1958.

Frankenfield Glacier 71°46'S, 98°18'W

Small glacier in the NE part of Noville Peninsula, Thurston Island. It flows ENE to Bellingshausen Sea between Mount Feury and Mulroy Island. First roughly delineated from air photos taken by USN OpHjp in December 1946. Named by US-ACAN for Lt. (j.g.) Chester Frankenfield, meteorologist on the USN Bellingshausen Sea Expedition, who established an automatic weather station on Thurston Island in February 1960.

Frank Houlder, Mount: see Houlder Bluff 61°06'S, 54°51'W

Franklin, Cape: see Franklin Point 63°57'S, 61°29'W

Franklin, Mount 78°05'S, 154°57'W

Peak standing between Breckinridge Peak and Washington Ridge in the S group of the Rockefeller Mountains, on Edward VII Peninsula in Marie Byrd Land. Discovered by the ByrdAE on Jan.

27, 1929. The name was applied by the USAS (1939–41), which established a seismic station camp on this peak.

Franklin D. Roosevelt Sea: see Amundsen Sea 73°00'S, 112°00'W

Franklin Island 76°05'S, 168°19'E

An island 7 mi long, lying in the Ross Sea about 80 mi E of Cape Hickey, Victoria Land. Discovered on Jan. 27, 1841 by Ross, and named for Sir John Franklin, the noted Arctic explorer, who as Governor of Van Diemen's Land (Tasmania) had royally entertained the expedition on its way south at Hobart in 1840.

Franklin Point 63°57'S, 61°29'W

Conspicuous rock point forming the W end of Intercurrence Island, in the Palmer Archipelago. First roughly charted and named Cape Franklin by Henry Foster in 1829. Not: Cape Franklin.

Frank Newnes Glacier 71°28'S, 169°19'E

A short glacier discharging into the head of Pressure Bay on the N coast of Victoria Land. First charted by the BrAE, 1898–1900, which named the feature for Frank Newnes, the only son of the expedition sponsor, Sir George Newnes.

Franko Escarpment 83°03'S, 49°05'W

A mostly snow-covered escarpment that runs N-S for 4 mi and forms the NE edge of Lexington Table in the Forrestal Range, Pensacola Mountains, q.v. Named by US-ACAN in 1979 for Stephen J. Franko, Grants and Contracts Officer, National Science Foundation, from 1967, with responsibility for all contracts in support of the USARP.

Fraser, Mount 54°37'S, 36°21'W

Mountain, 1,610 m, standing on the S coast of South Georgia immediately N of Novosilski Bay. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Francis C. Fraser, British zoologist; member of the scientific staff at the Discovery Investigations Marine Station, Grytviken, 1926–27, 1928–29, and 1930, who also worked on the *Discovery* in 1927 and on *Discovery II* between 1929 and 1931.

Fraser Point 60°41'S, 44°31'W

Point between Marr Bay and Mackintosh Cove on the N coast of Laurie Island, in the South Orkney Islands. Mapped by the ScotNAE in 1903, and in 1912–13 by Capt. Petter Sørille. Remapped in 1933 by DI personnel on the *Discovery II* who named it for Francis C. Fraser. Not: Frazier Point.

Frazier, Mount 77°52'S, 154°58'W

Northernmost peak of the Rockefeller Mountains, standing 1 mi N of Mount Jackling on Edward VII Peninsula in Marie Byrd Land. Discovered on Jan. 27, 1929, by the ByrdAE. Named for Russell G. Frazier, medical officer at West Base of the USAS (1939–41), and observer with the Rockefeller Mountains Geological Party, which visited this area in December 1940. Not: Mount Irene Frazier.

Frazier Glacier 77°05'S, 161°25'E

Glacier between the Clare Range and Detour Nunatak, flowing NE to join Mackay Glacier E of Pegtop Nunatak, in Victoria Land. Named by US-ACAN in 1964 for Lt. (j.g.) W.F. Frazier, officer in charge at Byrd Station, 1963.

Frazier Islands 66°13'S, 110°10'E

A group of four rocky islands in the eastern part of Vincennes Bay, 8 mi WNW of Clark Peninsula. The islands were first photographed from the air by USN OpHjp, 1946–47. Named by US-ACAN for Cdr. Paul W. Frazier, USN, navigator and projects officer with USN OpWml which visited this area in January 1948, who later served as operations officer with USN OpDFrz I at Little America V.

Frazier Point: see Fraser Point 60°41'S, 44°31'W

Frazier Ridge 79°09'S, 86°25'W

A sharp ridge on the W side of Webster Glacier, extending N from Founders Escarpment to Minnesota Glacier, in the Heritage Range. Named by the University of Minnesota geological party, 1963–64, for Sgt. Herbert J. Frazier, radioman with the 62nd Transportation Detachment who was of assistance to the party.

Freberg Rocks 54°30'S, 36°42'W

Small group of rocks lying off Rocky Bay, 1.5 mi WNW of Ducloz Head, South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Hjalmar Freberg, a gunner of Tønsberg Hvalfangeri, Husvik, 1946–54.

Frecker Ridge 70°49'S, 166°13'E

A ridge that rises abruptly along the W side of Kirkby Glacier in the Anare Mountains, Victoria Land. It is 5 mi long and terminates in the N at Mount Gale. Named by ANARE for Sgt. R. Frecker, RAAF, a member of the Antarctic Flight with the ANARE (*Thala Dan*) cruise that explored this coast, 1962.

Fredbotnen: see Fred Cirque 72°34'S, 0°25'E

Fred Cirque 72°34'S, 0°25'E

A large cirque in the W side of Roots Heights, Sverdrup Mountains, in Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59). Named for Ernest Fredrick Roots, chief geologist with the NBSAE. Not: Fredbotnen.

Frederick H. Rawson Mountains: see Rawson Mountains 86°43'S, 154°40'W

Frederick Rocks 62°32'S, 60°56'W

Group of rocks lying in Barclay Bay off the N coast of Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 after the brig *Frederick* (Capt. Benjamin Pendleton), one of the fleet of American sealers from Stonington, CT, which visited the South Shetland Islands in 1820–21 and 1821–22. Not: Rocas Campastri.

Fredriksen Island 60°44'S, 44°59'W

Island 2.5 mi long and 0.5 mi wide, lying 0.5 mi SE of Powell Island in the South Orkney Islands. Discovered by Capt. Nathaniel Palmer and Capt. George Powell on the occasion of their joint cruise in December 1821. Named by Norwegian whaling captain Petter Sørille, who made a running survey of the island in the 1912–13 season. Not: Fredriksen's Island.

Fredriksen's Island: see Fredriksen Island 60°44'S, 44°59'W

Freeborn Johnston Glacier: see Johnston Glacier 74°25'S, 62°20'W

Freed, Mount 71°29'S, 164°20'E

A mountain, 2,120 m, that surmounts the divide between the Champness and McCann Glaciers, in the S part of the Bowers Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Cdr. M.G. Freed, legal officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, 1966–68.

Freeman, Cape 67°20'S, 164°35'E

A cape forming the N end of Sturge Island in the Balleny Islands. Named for H. Freeman, commander of the cutter *Sabrina*, which sailed with the schooner *Eliza Scott*, resulting in the discovery of the Balleny Islands in 1839.

Freeman, Cape 67°59'S, 65°20'W

Cape marking the E end of the peninsula separating Seligman and Trail Inlets, on the E coast of Graham Land. The cape was photographed from the air in 1940 by the USAS. Charted in 1947 by the FIDS, who named it for R.L. Freeman, FIDS surveyor at the Stonington Island base. Not: Cape Engel.

Freeman, Mount 72°43'S, 168°21'E

A prominent mountain (2,880 m) surmounting the base of Walker Ridge, 2 mi NW of Mount Lepanto, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Lt. Elliot R. Freeman, USNR, helicopter aircraft commander during Operation Deep Freeze, 1968.

Freeman Glacier 66°10'S, 132°24'E

A channel glacier flowing to the W side of Perry Bay, immediately E of Freeman Point. Delineated from air photos taken by USN Operation Highjump (1946–47). Named by US-ACAN for J.D. Freeman, sailmaker on the sloop *Peacock* of the USEE (1838–42) under Wilkes.

Freeman Point 66°09'S, 132°06'E

An ice-covered point on the coast close west of Freeman Glacier. Delineated from air photos taken by USN Operation Highjump (1946–47), and named by US-ACAN for J.D. Freeman of the USEE (1838–42) under Lt. Charles Wilkes.

Freeth Bay 67°44'S, 45°39'E

Bay 5 mi wide on the coast of Enderby Land, lying 12 mi W of Spooner Bay in Alasheyev Bight. Plotted from air photos taken by ANARE in 1956. First visited by the ANARE (*Thala Dan*) under D.F. Styles in February 1961 and named for the Hon. Gordon Freeth, M.P., then Australian Minister for the Interior.

Freezland Peak: see Freezland Rock 59°03'S, 26°44'W

Freezland Rock: see Freezland Rock 59°03'S, 26°44'W

Freezland Rock 59°03'S, 26°44'W

Conspicuous sharp-pointed rock, 305 m, located 2 mi W of Bristol Island in the South Sandwich Islands. This feature was originally named Freezland Peak by Captain Cook, after Samuel Freezland, the seaman who first sighted it and so discovered the South Sandwich group in 1775. Cook's chart, showing the feature as an insular rock, was verified in 1930 by DI personnel on the *Discovery II* and the terminology has been altered accordingly. Not: Freezland Peak, Freezland Rock.

Frei, Bahia: see Recess Cove 64°30'S, 61°32'W

Freimanis Glacier 72°05'S, 168°15'E

Tributary glacier that flows WNW for 25 mi and enters Tucker Glacier between Mount Greene and Novasio Ridge, in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Harry Freimanis, aurora scientist, station scientific leader at Hallett Station, 1962–63.

Fremantle Peak 53°05'S, 73°30'E

A peak, 2,375 m, standing 0.4 mi NE of the Dome, near the summit of Heard Island. Surveyed in 1948 by ANARE, and named by them after the port of Fremantle, the final point of embarkation for the expedition.

Fremouw Peak 84°17'S, 164°20'E

A prominent peak, 2,550 m, forming the S side of the mouth of Prebble Glacier, in Queen Alexandra Range. Named by US-ACAN for Edward J. Fremouw, USARP aurora scientist at South Pole Station, 1959.

French Harbor: see Sitka Bay 53°59'S, 37°24'W

French Passage 65°10'S, 64°20'W

Passage through the Wilhelm Archipelago, extending in a NW-SE direction between Petermann Island, Stray Islands, Vedel Islands and Myriad Islands to the N and Argentine Islands, Anagram Islands, Roca Islands, and Cruls Islands to the south. So named by the BGLE, 1934–37, because the passage was navigated for the first time in 1909 by the *Pourquoi-Pas?*, the ship of the French Antarctic Expedition under Charcot. Not: Pasaje Français, Paso Francés.

Freshfield, Cape 68°20'S, 151°00'E

An ice-covered cape between Deakin Bay and Cook Ice Shelf. The coastline in this vicinity was first roughly charted by the USEE (1838–42) under Lt. Charles Wilkes, and for a period this cape was thought to be Wilkes' Cape Hudson (q.v.). The cape was mapped in 1912 by the Far Eastern Party of the AAE under Douglas Mawson, who named it for Douglas Freshfield, a long-time member of the Council of the Royal Geographical Society, and one time president of that organization.

Freshfield Nunatak 80°28'S, 24°53'W

An isolated nunatak rising to c. 1,450 m to the SE of Herbert Mountains in the Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. In association with the names of pioneers of polar life and exploration grouped in this area, named by the UK-APC in 1971 after Douglas W. Freshfield (1845–1934), English geographer and mountaineer in the Caucasus Mountains and the Himalayas.

Freshwater Bay: see Freshwater Inlet 54°00'S, 38°03'W

Freshwater Inlet 54°00'S, 38°03'W

Small eastern arm of Jordan Cove on the S side of Bird Island, South Georgia. Charted by the SGS in the period 1951–57. So named in 1956 by W.N. Bonner, British government biologist and sealing inspector, because the feature is fed by freshwater streams. Not: Freshwater Bay.

Fresia, Isla: see Mügge Island 66°55'S, 67°45'W

Freud Passage: see Pampa Passage 64°18'S, 62°10'W

Frostbite Spine 78°06'S, 163°00'E

A prominent ridge, 5 mi long, between Hooker Glacier and Salient Glacier on the E side of Royal Society Range, Victoria Land. Named by the NZ-APC from a proposal by R.H. Findlay, whose NZARP geological party worked in the area of the ridge in 1979–80. So named because a party member suffered frostbite injury here and had to be replaced.

Frost Cliff 75°13'S, 135°43'W

A steep, partly ice-covered cliff 2 mi E of Mount Steinfeld, on the S side of the divide between the upper reaches of Hull Glacier and Kirkpatrick Glacier, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Cdr. William L. Frost, USN, Officer-in-Charge of Antarctic Support Activities at McMurdo Station, 1970.

Frost Glacier 67°05'S, 129°00'E

A channel glacier flowing to the head of Porpoise Bay. Delineated from air photos taken by USN Operation Highjump (1946–47). Named by the US-ACAN for John Frost, boatswain on the brig *Porpoise* of the USEE (1838–42) under Wilkes.

Frostlendet Valley 72°46'S, 3°18'W

An ice-filled valley, about 15 mi long, draining northeastward along the south side of Høgfonna Mountain, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Frostlendet (the frost ground).

Frostman Glacier 75°08'S, 137°57'W

A broad, low gradient glacier discharging into the S side of Hull Bay just W of Kontor Cliffs, on the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Thomas O. Frostman, meteorologist at Plateau Station, 1968.

Frost Rocks 65°16'S, 64°20'W

A cluster of rocks situated SW of the southern Argentine Islands and 0.5 mi SW of Whiting Rocks, off the coast of Graham Land. Named by UK-APC for Richard Frost, survey asst. of the Hydrographic Survey Unit from HMS *Endurance* working in the area in February 1969.

Frost Spur 82°33'S, 51°59'W

A rock spur between Lewis Spur and Alley Spur on the N side of Dufek Massif Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Charles Frost, logistics specialist, Office of Antarctic Programs, National Science Foundation.

Fruitcake Bluff 71°33'S, 160°29'E

A steep rock outcrop in the form of a bluff 100 m high, extending in a NE-SW direction for 1 mi in the SE portion of Thompson Spur, Daniels Range. Recorded by USARP geologists C.C. Plummer and R.S. Babcock, who made a geological reconnaissance of Daniels Range in December 1981. Descriptively named from the prevalent intrusive rock on the bluff which has the appearance in color and texture of a fruitcake.

Frustration Dome 68°00'S, 64°33'E

A large crevassed ice dome about 38 mi SE of Mount Henderson in Mac. Robertson Land. The dome was the site of a tellurometer station established during an ANARE traverse from Mawson Station to Mount Kjerka in 1967. So named by ANARE because

the traverse party was delayed here by vehicle breakdown, delaying completion of the survey until the next spring.

Frustration Ridge 82°12'S, 158°38'E

Ridge forming the N end of the Cobham Range in the Churchill Mountains. So named by the Holyoake, Cobham, and Queen Elizabeth Ranges party of the NZGSAE (1964–65) because although from below it looked a simple climb, great difficulty was experienced in traversing it.

Frustrum, Mount: see Frustum, Mount 73°23'S, 162°55'E

Frustum, Mount 73°23'S, 162°55'E

A large pyramidal shaped table mountain, 3,100 m, standing between Mount Fazio and Scarab Peak in the S part of Tobin Mesa, in Victoria Land. Named by the northern party of NZGSAE, 1962–63, for its frustum-like shape. Not: Mount Frustrum.

Fryer Point 58°59'S, 26°30'W

Northern point of Bristol Island in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II* and named for Lt. Cdr. D.H. Fryer, RN, captain of H.M. Surveying Ship *Fitzroy*. Not: Punta Teniente Santi.

Fry Glacier 76°38'S, 162°18'W

A glacier draining the slopes at the NE corner of the Convoy Range and flowing along the S end of the Kirkwood Range into Tripp Bay, Victoria Land. First charted by the BrAE (1907–09) and named for A.M. Fry, a contributor to the expedition.

Fry Peak 71°03'S, 63°40'W

A sharp-pointed peak which is the southernmost peak in the Welch Mountains, in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Lt. Frederick M. Fry, USN, Flight Surgeon and member of the para-rescue team of USN Squadron VXE-6 during Operation Deep Freeze 1969 and 1970.

Fry Saddle 76°33'S, 161°05'E

Narrow ice saddle at the head of Fry Glacier, about 4 miles WSW of Mount Douglas in Victoria Land. Discovered in 1957 by the N.Z. Northern Survey Party of the CTAE (1956–58) and named by them in association with Fry Glacier.

Fry Strait: see Fyr Channel 60°44'S, 45°41'W

Fryxell, Lake 77°37'S, 163°11'E

Lake 3 mi long, between Canada and Commonwealth Glaciers at the lower end of Taylor Valley in Victoria Land. Mapped by the BrAE under Scott, 1910–13. The lake was visited by Prof. T.L. Péwé during USN OpDFrz, 1957–58, and was named by him for Dr. Fritiof M. Fryxell, glacial geologist of Augustana College, Illinois.

Fuchika, Gora: see Fučik, Mount 71°52'S, 14°26'E

Fuchs Dome 80°36'S, 27°50'W

Large ice-covered dome rising over 1,525 m, between Stratton and Gordon Glacier's in the central part of the Shackleton Range. First mapped in 1957 by the CTAE and named for Sir Vivian E. Fuchs, leader of the CTAE, 1955–58.

Fuchs Ice Piedmont 67°10'S, 68°40'W

Ice piedmont 70 mi long, extending in a NE-SW direction along the entire W coast of Adelaide Island. First mapped in 1909 by the

FrAE under Charcot. Named by the FIDS for Sir Vivian E. Fuchs, FIDS base leader and geologist at Stonington Island in 1948–49.

Fučík, Mount 71°52'S, 14°26'E

The central peak (2,305 m) of Kvaevfjellet Mountain, in the Payer Mountains of Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Julius Fučík (1903–43), Czechoslovakian journalist and author. Not: Gora Fuchika.

Fuelles de Neptuno, Canal: see Neptunes Bellows 63°00'S, 60°34'W

Fuente, Islote de la: see Fuente Rock 62°30'S, 59°41'W

Fuente Island: see Fuente Rock 62°30'S, 59°41'W

Fuente Rock 62°30'S, 59°41'W

A low rock surmounted by a navigational beacon, 0.4 mi NE of Ferrer Point in Discovery Bay, Greenwich Island, South Shetland Islands. The name derives from the form "Islote de la Fuente" appearing on a Chilean hydrographic chart of 1951. Not: Fuente Island, Islote de la Fuente.

Fuenzalida, Punta: see Borge Point 63°54'S, 60°45'W

Fuerte, Dorsal: see Ravelin Ridge 61°11'S, 54°05'W

Fuga, Islotes: see Runaway Island 68°12'S, 67°07'W

Fuglefjellet 72°17'S, 0°46'E

A mountain 7 mi E of Mount Roer in the Sverdrup Mountains, Queen Maud Land. Photographed from the air by the GerAE (193839). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Fuglefjellet (the bird mountain).

Fukuro Cove 69°12'S, 39°39'E

A cove, 1 mi SW of Mount Chōtō, which indents the Langhovde Hills along the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62. The name Fukuro-ura (Hukuro Ura), meaning "pouch cove," was approved by JARE Headquarters in 1972. Not: Hukuro Cove.

Fukushima, Mount 71°21'S, 35°37'E

The highest massif (2,470 m) in the Queen Fabiola Mountains, standing just north of Yamato Glacier. The rock massif rises 1,600 m above the local ice surface and has many ragged peaks. Discovered in 1960 by the BelgAE, under Guido Derom. Named by Derom after Shin Fukushima, geophysicist of the Japanese expedition, lost in a violent blizzard near the Japanese station on East Ongul Island in October 1960. Not: Fukushima Dake.

Fukushima Dake: see Fukushima, Mount 71°21'S, 35°37'E

Fulgham Ridge 84°54'S, 177°25'E

A narrow ice-free ridge, 4 mi long, forming the SE side of Bowin Glacier in the Queen Maud Mountains. Named by US-ACAN for Aviation Boatswain's Mate Donald R. Fulgham, USN, Antarctic Support Activity, who participated in USN OpDFrz, 1964.

Fullastern Rock 67°37'S, 69°26'W

Isolated submerged rock lying in the middle of Johnston Passage 7 mi WNW of Cape Adriasola, Adelaide Island. The rock is

potentially dangerous to ships and was so named when RRS *John Biscoe* was compelled to go full astern to avoid this hazard.

Fuller, Mount 77°52'S, 162°21'E

A peak in Cathedral Rocks, Royal Society Range, rising to 1,925 m between the lower portions of Zoller Glacier and Darkowski Glacier in Victoria Land. Named in 1992 by US-ACAN in association with Chaplains Tableland (q.v.) after Lt. Cdr. William C. Fuller, USN, chaplain with the 1964 winter party at McMurdo Station.

Fuller Dome 86°38'S, 156°18'W

A dome-shaped, ice-covered mountain, 2,850 m, at the NW end of the Rawson Mountains in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for C.E. Fuller, storekeeper with USN Squadron VX-6 on Operation Deep Freeze 1966 and 1967.

Fuller Island 66°12'S, 101°00'E

Island in the Highjump Archipelago, 4 mi long and 1.5 mi wide, lying 2 mi S of Thomas Island on the S side of Cacapon Inlet. Mapped from air photos taken by USN OpHjp, 1946–47, and named by the US-ACAN for H.F. Fuller, air crewman on the USN OpHjp seaplane commanded by D.E. Bunger which landed in this area in February 1947. Not: Ostrov Kashalot.

Fuller Rock 68°10'S, 68°54'W

A rock awash, one of the principal dangers to ships on the N side of Faure Passage, Marguerite Bay, about 4.2 mi SSW of Dismal Island. Charted by a RN Hydrographic Survey Unit from RRS *John Biscoe* in January 1973 and named after Lt. Andrew C. Fuller, RN, who directed the survey.

Fulmar, Ensenada: see Fulmar Bay 60°37'S, 46°01'W

Fulmar Bay 60°37'S, 46°01'W

Bay 1 mi wide between Moreton Point and Return Point at the W end of Coronation Island, in the South Orkney Islands. First sighted and roughly charted by Capt. George Powell and Capt. Nathaniel Palmer on their joint cruise in December 1821. It was surveyed in 1933 by DI personnel. So named in 1954 by the UK-APC because large numbers of Antarctic fulmars (*Fulmarus glacialisoides*) nest in this area. Not: Ensenada Fulmar.

Fulmar Crags 60°38'S, 45°11'W

Crags surmounting East Cape, the NE extremity of Coronation Island in the South Orkney Islands. The name arose from the Antarctic fulmars which breed on these crags and was given by the UK-APC following a 1956–58 survey by the FIDS.

Fulmar Island 66°32'S, 93°01'E

Small island just S of Zykov Island in the Haswell Islands. Discovered by the Western Base Party of the AAE (1911–14), who plotted this island and the present Zykov Island as a single island. They named it Fulmar Island because of its rookery of Southern Fulmars. The Soviet expedition of 1956 found there are two islands, retaining the name Fulmar for the southern one.

Fulton, Mount 76°53'S, 144°54'W

A mountain (900 m) between Mount Passel and Mount Gilmour in the Denfeld Mountains of the Ford Ranges in Marie Byrd Land. Mapped by USAS (1939–41) led by R. Admiral R.E. Byrd. Named for R. Arthur Fulton who was of great assistance in

arranging the insurance for the *Jacob Ruppert*, one of the ships used by the ByrdAE (1933–35).

Fumarola, Punta: see Fume Point 56°20'S, 27°33'W

Fumarole Bay: see Primero de Mayo Bay 62°58'S, 60°42'W

Fume Point 56°20'S, 27°33'W

A low-lying lava feature forming the S point of Zavodovski Island, South Sandwich Islands. The name applied by UK-APC in 1971 refers to the dangerous volcanic fumes emitted in this locality. Not: Punta Activa, Punta Fumarola.

Funes, Cabo: see Stranger Point 62°16'S, 58°37'W

Funk Glacier 65°34'S, 63°46'W

Glacier flowing into Beascochea Bay to the S of Frolich Peak, on the W coast of Graham Land. First charted by the FrAE under Charcot, 1908–10. Named by the UK-APC in 1959 for Casimir Funk, American (formerly Polish) biochemist who, while working at the Lister Institute in London in 1912, originated the theory of vitamins.

Furdesanden Moraine 71°48'S, 9°37'E

A moraine extending in a N-S direction for 17 mi along the W side of Conrad Mountains in the Orvin Mountains, Queen Maud Land. Discovered and photographed by the GerAE, 1938–39. Mapped by Norway from air photos and surveys by NorAE, 1956–60, and named Furdesanden (the furrow of sand).

Furlong Creek 77°39'S, 163°07'E

A glacial meltwater tributary stream, 1.6 mi long, flowing N from Howard Glacier into Delta Stream in Taylor Valley, Victoria Land. Spaulding Pond lies along this watercourse. The name was suggested by Diane McKnight, leader of a USGS team which made extensive studies of the hydrology and geochemistry of streams and ponds in the Lake Fryxell basin, 1987–94. Named after hydrologist Edward Furlong, a member of the field team that established stream gaging stations on streams flowing into Lake Fryxell in the 1990–91 season.

Furman Bluffs 74°06'S, 113°53'W

A line of steep ice bluffs that form the SE side of Philbin Inlet on Martin Peninsula, Marie Byrd Land. First delineated from aerial photographs taken by USN OpHjp in January 1947. Named by US-ACAN for Master Chief Quartermaster James L. Furman, USN, staff assistant assigned to Antarctic Task Force 43 from 1964–67.

Furness Glacier 61°06'S, 54°52'W

Small glacier flowing between Cape Belsham and Point Wild to the N coast of Elephant Island, South Shetland Islands. Charted and named by the Shackleton *Endurance* expedition 1914–16.

Furque, Islotes: see Wideopen Islands 63°00'S, 55°49'W

Fur Seal Cove 60°44'S, 45°36'W

A cove between Lenton Point and Gourlay Peninsula on the S side of Signy Island, South Orkney Islands. So named by the UK-APC

because a large number of fur seals frequent the cove and adjacent shore. Not: Cox Cove.

Fur Seal Peak: see Ferguson Peak 54°47'S, 35°50'W

Furse Peninsula 61°29'S, 55°28'W

The E part of Gibbs Island, E of The Spit, in the South Shetland Islands. The name Narrow Island was used by Capt. George Powell, 1822, with reference to the entire island; in subsequent use the reference was occasionally limited to this peninsula. Named in 1980 by UK-APC after Cdr. John R. (Chris) Furse, RN, leader of JSEEIG, 1976–77. Not: Narrow Island.

Fusco Nunatak 80°02'S, 80°09'W

The westernmost of the Wilson Nunataks, located just W of Hercules Inlet, at the SE extremity of the Heritage Range. Named by US-ACAN for aviation electrician Thomas A. Fusco, USN, air crewman on the first flight from McMurdo Station to Plateau Station, Dec. 13, 1965.

Fusilier Mountain 54°25'S, 36°15'W

A mountain rising to 810 m on the N side of Heaney Glacier, 2.7 mi W of Mount Skittle, on the N coast of South Georgia. The field name "Dome Mountain" was used by the SGS, 1951–52. Named by the UK-APC in 1991 after the Royal Regiment of Fusiliers, established in 1688, the oldest unit in the British Army. A detachment of the unit was stationed at Grytviken in 1988. Not: Dome Mountain.

Futago, Mount 69°12'S, 39°44'E

A small mountain with two peaks, the northern one being 240 m and the southern one 245 m, in the northern part of Langhovde Hills, Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62. The name Futago-yama (Hutago Yama), meaning "twin mountain," was given by JARE Headquarters in 1972. Not: Mount Hutago.

Fyfe, Mount 82°32'S, 155°10'E

Mountain, 2,260 m, standing 3 mi N of Quest Cliffs in the Geologists Range. Seen by the northern party of the NZGSAE (1961–62) and named for H.E. Fyfe, chief geologist of the New Zealand Geological Survey.

Fyfe Hills 67°22'S, 49°12'E

A group of low coastal hills lying S of Dingle Dome and immediately E of Hydrographer Islands. Sighted in October 1957 by an ANARE party led by B.H. Stinear. Named by ANCA for W.V. Fyfe, Surveyor General, West Australia.

Fyr Channel 60°44'S, 45°41'W

Channel 0.2 mi wide between the SW end of Signy Island and Moe Island, in the South Orkney Islands. The name Fyr Strait appears on a manuscript chart drawn by Capt. Petter Sørllie in 1912, and corrected by Hans Borge in 1913, but the generic term channel is approved because of the small size of this feature. The Corral Whaling Co. of Bergen, a subsidiary of Messrs. Christensen and Co., Corral, Chile, operated the steam whaler *Fyr* in the South Orkney Islands in 1912–13. Not: Fry Strait, Fyr Strait.

Fyr Strait: see Fyr Channel 60°44'S, 45°41'W

G

Gabbro Crest 83°28'S, 50°22'W

The crest (c. 1,750 m) of the mountain spur between Sheriff Cliffs and Vigen Cliffs on the SE edge of Saratoga Table, Forrestal Range, q.v. So named in 1979 by US-ACAN, at the suggestion of Arthur B. Ford, USGS geologist, from the dominant rock type of the Forrestal Range.

Gabbro Hills 84°42'S, 173°00'W

A group of rugged ridges and coastal hills which borders the Ross Ice Shelf between the Barrett and Gough Glaciers and extends S to Ropebrake Pass. So named by the Southern Party of NZGSAE (1963–64) because of the prevalence of gabbro, a dark, plutonic rock in the area.

Gaberlein, Mount 75°04'S, 162°04'E

A mountain, 1,210 m, standing 3.5 mi NNW of Mount Bellingshausen in the Prince Albert Mountains of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1957–62. Named by US-ACAN for William E. Gaberlein, Chief Construction Electrician, USN, who wintered over at McMurdo Station in 1962 and 1964.

Gabinete, Ensenada: see Cabinet Inlet 66°35'S, 63°10'W

Glablentz Range 72°00'S, 4°30'E

A mountain range, 13 mi long, including Skigarden Ridge, Mount Grytøyr and associated features. The range lies between the N part of Preuschoff Range and Luz Range in the Mühlig-Hofmann Mountains of Queen Maud Land. Discovered by the GerAE under Alfred Ritscher, 1938–39, and named after the director of the German Lufthansa Corporation.

Gabriel Peak 65°36'S, 62°39'W

A peak (1,220 m) at the confluence of Starbuck and Jeroboam Glaciers on the E side of Graham Land. The name is one of several in the vicinity applied by UK-APC from Herman Melville's *Moby Dick* Gabriel being the crewman of the ship *Jeroboam*.

Gadarene Lake 71°24'S, 67°35'W

A meltwater lake 1 mi long in the ice shelf of George VI Sound, lying below Swine Hill with its E shore bounding the exposed rocks of the W coast of Palmer Land. In summer a considerable volume of water enters the lake from the ravine immediately N of Swine Hill. First seen and surveyed in 1948 by the FIDS. The name arose at that time and results from the mad rush by the sledge dogs which attempted to throw themselves and their sledge down the steep ice slopes into the water, like the Gadarene swine.

Gadarene Ridge 76°42'S, 159°33'E

A ridge extending southward from Ship Cone in the Allan Hills of Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) who gave the name because of the swine-backed appearance of the feature in profile.

Gadsden Peaks 71°38'S, 167°24'E

A line of northeast-trending peaks on a ridge, 5 mi long. They rise over 2,500 m and stand 5 mi WSW of Lange Peak of Lyttelton Range, in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–63. Named by US-ACAN for Michael Gadsden, radioscience researcher at McMurdo Station, 1965–66 and 1967–68.

Gagarin Mountains 71°57'S, 9°23'E

A linear group of mountains, trending in a N-S direction for 10 mi between the Kurze and Conrad Mountains of the Orvin Mountains in Queen Maud Land. Mapped from air photos and surveys by NorAE, 1956–60. Remapped from surveys and air photos by the SovAE, 1960–61, and named for Soviet astronaut Yuriy A. Gagarin. Not: Khrebet Yuriya Gagarina, Kurzefjella.

Gage, Cape 64°10'S, 57°05'W

Rocky promontory forming the E extremity of James Ross Island and the W side of the N entrance to Admiralty Sound. Discovered by a British expedition 1839–43, under Ross, who named it for V. Admiral William Hall Gage, a Lord Commissioner of the Admiralty.

Gage Ridge 66°54'S, 51°16'E

A partially snow-covered ridge, 7 mi long, standing 2.5 mi W of Mount Selwood in the Tula Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for H.V. Gage, a member of the crew of the *Discovery* during the BANZARE, 1929–31.

Gagge Point 66°20'S, 66°54'W

The southern extremity of Lavoisier Island, Biscoe Islands. Mapped from air photos obtained by FIDASE (1956–57). Named by UK-APC for Adolph P. Gagge, American physiologist who has specialized in the reactions of the human body to cold environments.

Gain Glacier 71°01'S, 61°25'W

A large glacier on the E coast of Palmer Land, flowing NE from Cat Ridge and entering the Weddell Sea between Imshaug Peninsula and Morency Island. Mapped by USGS in 1974. Named by US-ACAN for Louis Gain, naturalist on the French Antarctic Expedition, 1908–10, author of several of the expedition reports on zoology and botany.

Gair Glacier 73°03'S, 166°32'E

A tributary glacier, 10 mi long, rising close SE of Mount Supernal in the Mountaineer Range and flowing ENE to enter Mariner Glacier just N of Bunker Bluff in Victoria Land. Named by the NZGSAE 1962–63, for H.S. Gair, geologist and leader that season of the NZGSAE northern field party.

Gair Mesa 73°28'S, 162°52'E

The southernmost mesa of the Mesa Range, in Victoria Land. Named by the northern party of NZGSAE, 1962–63, for H.S. Gair, geologist and leader of this party. Not: Gair Tableland.

Gair Tableland: see Gair Mesa 73°28'S, 162°52'E

Galan Ridge 73°10'S, 62°00'W

A prominent ridge which forms the NE rampart of the Dana Mountains in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Michael P. Galan, a member of the McMurdo Station winter party in 1967 and of the South Pole-Queen Maud Land Traverse III in 1967–68.

Galatos Peak 71°58'S, 163°43'E

A peak, 2,045 m, that marks the NW extremity of Salamander Range in the Freyberg Mountains. Named by the northern party of NZGSAE, 1963–64, after Galatos, a village in Crete associated with Lord Freyberg and the Second New Zealand Expeditionary Force during World War II.

Gale, Mount 70°46'S, 166°12'E

A promontory at the N end of Frecker Ridge in the Anare Mountains, Victoria Land. It stands at the S side of the confluence of Ludvig Glacier and Kirkby Glacier. Named by ANCA for Cdr. d'A.T. Gale, formerly of the RAN, hydrographic surveyor with the ANARE (*Thala Dan*) cruise that explored this coast, 1962.

Gale Escarpment 72°55'S, 75°23'E

A northwest-facing escarpment of rock and ice, standing eastward of Mount Harding and Wilson Ridge in the Grove Mountains. Mapped from air photos, 1956–60, by ANAPL. Named by ANCA for d'A.T. Gale, officer in charge of the Antarctic Mapping Branch, Australian Division of National Mapping, who has contributed substantially to Antarctic mapping.

Galen Peak 64°22'S, 62°26'W

Peak 3 mi W of Buls Bay, standing at the S side of Hippocrates Glacier in the S part of Brabant Island, in the Palmer Archipelago. First mapped by the BelgAE under Gerlache, 1897–99. Photographed by Hunting Aersurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for Galen (138–201), the most eminent Roman doctor of his time, author of numerous works on medicine, surgery and anatomy.

Gale Ridge 83°41'S, 56°27'W

A ridge, 12 mi long, extending northwestward from Mount Dover in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Phillip L. Gale, meteorologist at Ellsworth Station, winter 1962.

Galileo Cliffs 70°46'S, 68°45'W

A line of E-W cliffs, 5 mi long, standing between Grotto Glacier and Jupiter Glacier, 7 mi west of Ablation Point, in eastern Alexander Island. Mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. Named by UK-APC from association with Jupiter Glacier after Galileo Galilei (1564–1642). Italian astronomer who discovered the four named satellites of Jupiter.

Galindez Island 65°15'S, 64°15'W

Island 0.5 mi long, lying immediately E of Winter Island in the Argentine Islands, Wilhelm Archipelago. Discovered by the FrAE, 1903–05, under Charcot, who named it for Cdr. Ismael F. Galindez, Argentine Navy, who was dispatched in the *Uruguay* to search for Charcot, when the expedition was feared lost early in 1905. Rechartered by the BGLE under Rymill, 1934–37.

Galkin Nunatak 73°27'S, 65°55'W

An isolated nunatak about 35 mi NW of Mount Coman, surmounting the interior ice plateau near the base of Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for William L. Galkin, meteorologist at Byrd Station, summer 1965–66.

Galla, Mount 75°56'S, 125°52'W

Snow-capped mountain (2,520 m) which rises above the Usas Escarpment, 31 mi E of Mount Petras, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Lt. Edward J. Galla, USN, who was medical doctor and leader of support personnel at Byrd Station, 1959.

Gallaher Peak 85°27'S, 138°18'W

One of the Berry Peaks, 1,005 m, standing between the SE edge of the Ross Ice Shelf and Watson Escarpment. Named by US-ACAN after James T. Gallaher, electrician with the Byrd Station winter party, 1958.

Gallen Nunatak 75°48'S, 128°36'W

A nunatak on the S side of Balchunas Pass, 1.5 mi NW of Putzke Peak, in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–69. Named by US-SCAN for Lt. (j.g.) Kevin P. Gallen, CEC, USN, Officer-in-Charge of South Pole Station, 1971.

Gallipoli Heights 72°26'S, 163°48'E

A group of peaks and ridges centered 7.5 mi SSE of Monte Cassino, in the Freyberg Mountains, Victoria Land. Named for association with Lord Freyberg and Freyberg Mountains (q.v.) by the Northern Party of NZGSAE, 1963–64.

Gallows Point 64°20'S, 62°59'W

The northernmost of two low, parallel points which mark the extremity of Gamma Island in the Melchior Islands, Palmer Archipelago. The name was probably given by DI personnel who roughly surveyed the point in 1927. The point was resurveyed by Argentine expeditions in 1942, 1943 and 1948.

Gallup Glacier 85°09'S, 177°50'W

A broad glacier, about 12 mi long, flowing E between Mount Rosenwald and Mount Black to enter Shackleton Glacier just N of Matador Mountain. Named by US-ACAN after Cdr. F.S. Gallup, Jr., USN. Commanding Officer of Squadron VX-6 during OpDFrz 1965.

Galtefjellet 68°16'S, 58°35'E

The southeastern of two rock outliers on the S side of Purka Mountain in the Hansen Mountains. Mapped and named Galtefjellet (boar mountain) by Norwegian cartographers working from air photos taken by the Lars Christensen Expedition, 1936–37.

Galten Islands 66°23'S, 56°25'E

Small group of islands in the E part of Magnet Bay, 10 mi W of Cape Davis. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition, 1936–37, and called Galten (the boar). First visited in 1957 by an ANARE party led by B.H. Stinear.

Galysheva, Skala: see Galyshev Nunatak 71°36'S, 12°28'E

Galyshev Nunatak 71°36'S, 12°28'E

Nunatak at the SW foot of Store Svarthorn Peak in Mittlere Petermann Range, Wohlthat Mountains. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Soviet pilot V.L. Galyshev. Not: Skala Galysheva.

Gamage Point 64°46'S, 64°04'W

A rock point that marks the north side of the entrance to Hero Inlet on the southwest side of Anvers Island. The USARP Palmer Station is located on this point. The name, applied by US-ACAN, is in association with Hero Inlet inasmuch as it was the Harvey F. Gamage shipyard in South Bristol, Maine, that built the Research Vessel *Hero*.

Gamalei, Skala: see Gamaleya Rock 71°44'S, 10°43'E

Gamaleya Rock 71°44'S, 10°43'E

A rock 2 mi SE of Smirnov Peak, marking the extremity of a line of rocks that extend E from Shcherbakov Range, in the Orvin Mountains, Queen Maud Land. Roughly plotted from air photos by the GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Soviet navigation scientist P. Ya. Gamaleya. Not: Skala Gamalei.

Gambacorta Peak 84°02'S, 56°03'W

A peak, 1,840 m, standing 4 mi E of Mount Kaschak in southern Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Capt. Francis M. Gambacorta, captain of the USS *Wyandot* that transported the party which established Ellsworth Station at the outset of the International Geophysical Year. Unloading at the station site on the Filchner Ice Shelf began Jan. 29, 1957.

Gambone Peak 71°45'S, 164°14'E

A peak, 1,620 m, located 7 mi SW of Coronet Peak, at the junction of the Leap Year and Black Glaciers, in the Bowers Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Lt. (j.g.) J.C. Gambone, Operations Administrative Asst. on the staff of the Commander, U.S. Naval Support Force, Antarctica, 1967 and 1968.

Gamburtsev Subglacial Mountains 80°30'S, 76°00'E

A major group of subglacial mountains which underlie and extend beyond the area of Dome Argus in the central part of East Antarctica. Their existence was determined by a Soviet seismic party in 1958. Named after Grigoriy A. Gamburtsev (1903–55) Soviet geophysicist.

Gamma Hill 63°34'S, 56°47'W

A distinctive ice-covered hill on Tabarin Peninsula rising more than 300 m on the shore of Fridtjof Sound. The name arises from the intensive geophysical work carried out in this part of Tabarin Peninsula by FIDS in 1959–60.

Gamma Island 64°20'S, 63°00'W

Island, 1 mi long, which marks the SW extremity of the Melchior Islands in the Palmer Archipelago. This island was first roughly charted and named "Ile Gouts" by the FrAE under Charcot, 1903–05, but that name has not survived in usage. The name Gamma, derived from the third letter of the Greek alphabet, was probably given by DI personnel who roughly surveyed the island in 1927. The island was surveyed by Argentine expeditions in 1942, 1943 and 1948. Not: Ile Gouts, Isla Observatorio.

Gam Point 61°55'S, 58°00'W

Rocky point 2 mi SE of False Round Point on the N coast of King George Island, in the South Shetland Islands. The point is one of the features named Pyritic or Esther Islands by Scottish geologist David Ferguson in 1913–14. Although Ferguson represented the

point as a rocky island separated from the ice cliff of King George Island by a channel 400 ft wide, air photos show that there is no channel. Named by UK-APC in 1960. The word "gam" is an old sealers' and whalers' term for the occasions when groups of men from several vessels met in one of them for a gossip. Nearby Esther Harbor was an anchorage frequently used by sealers.

Gancedo, Cerro: see Levassor Nunatak 63°40'S, 58°07'W

Gándara, Isla: see Murray Island 64°22'S, 61°34'W

Gándara Island 63°19'S, 57°56'W

An island immediately SW of Kopaitic Island in the Duroch Islands. The name appears on a Chilean government chart of 1959. Presumably named for Comodoro Jorge Gándara, leader of the 1954–55 Chilean Antarctic expedition. Not: Isla Comandante Escuadrilla González Rojas, Isla González Rojas.

Gand Island 64°24'S, 62°51'W

Ice-covered island, 3 mi long and 1.5 mi wide, lying at the N end of Schollaert Channel, between Anvers and Brabant Islands in the Palmer Archipelago. Discovered by the BelgAE, 1897–99, and named by Gerlache after Gand, the French form of Ghent, a city in Belgium where subscription drives were held to help finance the expedition.

Gangbrekka Pass 72°15'S, 0°20'W

A mountain pass between Jutulrøra Mountain and Brekkerista Ridge in the Sverdrup Mountains of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Gangbrekka (the passage slope).

Gannon Nunataks 70°43'S, 69°28'W

A notable twin-peaked nunatak (c. 750 m) and several smaller rock outcrops, located between the N end of LeMay Range and Lully Foothills in Alexander Island. The feature was photographed from the air by RARE, 1947–48, and mapped from these photographs by D. Searle of FIDS, 1960. Named in 1977 by the UK-APC for Anthony E. Gannon, BAS meteorological observer, Halley Station, 1970–72, general assistant, Grytviken, 1972, and builder, Stonington Island, 1973–75, who participated in a plane-table survey of N Alexander Island, 1973.

Gannutz Glacier 70°24'S, 162°11'E

A smooth glacier which flows N from the Bowers Mountains and enters the E part of Rennick Bay between Weeder Rock and Stuhlinger Ice Piedmont. Mapped by USGS from surveys and U.S. Navy air photos, 1960–65. Named by US-ACAN for Theodore P. Gannutz, biologist at Hallett Station in the 1966–67 season; station scientific leader at Palmer Station in 1968.

Ganse Bukta: see Carlita Bay 54°14'S, 36°38'W

Ganymede Heights 70°52'S, 68°26'W

Heights consisting of rounded ridges with extensive rock outcrops rising to 600 m or more, located between Jupiter Glacier and Ablation Valley on the E side of Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. Named by UK-APC from association with Jupiter Glacier after Ganymede, one of the satellites of Jupiter.

Gap, The 77°51'S, 166°43'E

A pass between Crater Hill and Observation Hill at the S end of Hut Point Peninsula, on Ross Island. Charted and named by the BrNAE, 1901–04, under Scott. BrNAE sledge parties traversed the S end of the peninsula via this low level passage.

Gap, The: see Gateway, The 83°31'S, 170°58'E

Gap Nunatak 67°54'S, 62°29'E

Small nunatak, 1,030 m, standing in the center of Hordern Gap in the David Range, Framnes Mountains. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Metoppen (the middle peak). Renamed by ANARE for its location in Hordern Gap. Not: Metoppen.

Gara, Mount: see Cara, Mount 82°45'S, 161°06'E

Garan, Mount 67°32'S, 98°56'E

A mountain marked by a cluster of small peaks, rising 9 mi SW of Mount Strathcona near the head of Denman Glacier. Mapped from aerial photographs taken by USN Operation Highjump, 1946–47. Named by US-ACAN for E.M. Garan, aerial photographer on Operation Highjump flights over this and other coastal areas between 14° and 164° East.

Garay, Cabo: see Bottrill Head 67°42'S, 66°57'W

Garcia, Cap: see Loqui Point 65°55'S, 64°58'W

Garcia, Cape 65°44'S, 64°40'W

Cape at the N side of the entrance to Barilari Bay, on the W coast of Graham Land. The cape was discovered and named "Cap Loqui" by the FrAE, 1903–05, under Charcot. At the same time Charcot named the S entrance point to the bay "Cap Garcia," after Rear Admiral Garcia, Argentine Navy. The maps of Charcot's FrAE, 1908–10, showed "Cap Garcia" as the N cape of Barilari Bay and the name has since become established for this feature. Charcot did not use the name "Cap Loqui" on the maps of his second expedition but, for the sake of historical continuity, the name Loqui Point (q.v.) has been accepted for the S entrance point. Not: Cap Loqui.

Garcia, Mont: see Zdarsky, Mount 66°05'S, 64°58'W

García, Pico: see Pilot Peak 65°51'S, 65°16'W

Garcia Point 85°14'S, 170°16'W

A conspicuous point which forms the S side of the terminus of DeGanahl Glacier, where the latter enters Liv Glacier, in the Queen Maud Mountains. Named by US-ACAN for Leopoldo Garcia, USARP meteorologist at South Pole Station, winter 1965.

Garcie Peaks 69°32'S, 66°48'W

A group of three small peaks, the highest 960 m, located 5 mi SE of Mount Leo on the S side of Fleming Glacier, in west-central Antarctic Peninsula. Surveyed from the ground by FIDS in Dec. 1958. Named by UK-APC after Pierre Garcie, French sailor whose *Le grand routier et pilotage* (1483) was the first manual of sailing directions to include coastal recognition sketches.

Garczynski Nunatak 85°24'S, 124°48'W

A cone-shaped nunatak, the highest in a cluster of nunataks close W of Mount Brecher, lying at the N flank of Quonset Glacier in

the Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1959–60. Named by US-ACAN for Carl J. Garczynski, meteorologist, Byrd Station winter party, 1961.

Garde Islands 65°51'S, 66°22'W

Small group of islands lying 5 mi WNW of Lively Point, off the SW side of Renaud Island in the Biscoe Islands. First accurately shown on an Argentine government chart of 1957. Named by the UK-APC in 1959 for Vilhelm Garde (1859–1926), Danish oceanographer who in 1899 initiated the international scheme of sea ice reporting in the Arctic.

Garden Spur 84°33'S, 174°45'W

A spur on the W side of Longhorn Spurs, 3 mi S of Cape Surprise. So named by the Southern Party of NZGSAE (1963–64) because of the rich flora of mosses, algae and lichens found there.

Gardiner, Mount 86°19'S, 150°57'W

A ridge-like granitic mountain, 2,480 m, standing 3 mi E of Mount Ruth and just S of the junction of Bartlett and Scott Glaciers, in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for Joseph T. Gardiner of Wellington, New Zealand, agent for the ByrdAE of 1928–30 and 1933–35.

Gardiner Glacier 86°01'S, 131°48'W

A glacier at the S side of Quartz Hills, flowing E from Watson Escarpment into Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Richard D. Gardiner, construction electrician at Byrd Station in 1962.

Gardiner Ridge 75°39'S, 132°26'W

A ridge extending from Mount Kauffman to Mount Kosciusko in the Ames Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for James E. Gardiner, CD1, USN, Construction Driver and member of the Army-Navy Trail Party which blazed trail from Little America V to establish Byrd Station in 1956.

Gardner, Mount 78°23'S, 86°02'W

Mountain (4,685 m) standing 1.5 mi W of Mount Tyree in the W-central part of the Sentinel Range, Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse party, 1957–58, under C.R. Bentley. Named by US-ACAN for Lt. Harvey L. Gardner, USN, pilot in Antarctica in 1957–58 and 1958–59 seasons, who was killed in the crash of a UB-1 Otter airplane at Marble Point on Jan. 4, 1959.

Gardner Bay: see Gardner Inlet 74°58'S, 62°52'W

Gardner Glacier: see Ketchum Glacier 75°00'S, 63°45'W

Gardner Inlet 74°58'S, 62°52'W

Large, ice-filled inlet at the SW side of Bowman Peninsula, on the E coast of Palmer Land. Discovered by the RARE, 1947–48, under Ronne, who named it for Irvine C. Gardner, physicist at the National Bureau of Standards, and member of the American Antarctic Assn., Inc., the organization set up to make plans and preparations for the expedition. His work in the field of optics as applied to aerial photography has been an important contribution to this technique in polar exploration. Not: American Geographical Society Bay, Gardner Bay.

Gardner Island 68°35'S, 77°52'E

An island 0.75 mi long, lying off Breidnes Peninsula, Vestfold Hills, about 2 mi W of Heidemann Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition (1936–37) and named Breidneskollen (the broad point knoll). It was renamed by ANCA for Lionel G. Gardner, diesel mechanic at the nearby Davis Station in 1958. Not: Breidneskollen.

Gardner Nunatak 74°26'S, 72°46'W

A nunatak rising to c. 1,670 m, 5.5 mi WSW of Tollefson Nunatak in the Yee Nunataks (q.v.), Ellsworth Land. Mapped by USGS from surveys and USN aerial photographs, 1961–68, and from Landsat imagery taken 1973–74. Named in 1987 by US-ACAN after Robert N. Gardner, USGS cartographer, who participated in surveys at Cape Crozier (Ross Island), South Pole Station, and Palmer Station, 1973–74.

Gardner Ridge 86°57'S, 148°24'W

An ice-free ridge 4 mi SE of Davis Hills, lying at the S side of Klein Glacier in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960–63. Named by US-ACAN for Eric T. Gardner of USN Squadron VX-6, photographer on Operation Deep Freeze 1966 and 1967.

Gårekneet Ridge 72°04'S, 14°48'E

A rock ridge 3 mi S of Gårenevkalven Nunatak in the Payer Mountains of Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Gårekneet. Not: Gora Struve.

Gårenevkalven Nunatak 72°00'S, 14°47'E

A nunatak (2,250 m) located 3 mi north of Gårekneet Ridge in the eastern part of the Payer Mountains, in Queen Maud Land. Mapped and named by Norwegian cartographers from air photos taken by the NorAE, 1956–60. Not: Gora Mesyatseva.

Garfield Glacier 74°57'S, 136°35'W

A glacier, 6 mi long, flowing between Peden Cliffs and Cox Point to the E side of Hull Bay on the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Donald E. Garfield, who participated in deep core drilling activities at Byrd Station, 1967–68.

Garganta, Canal: see Gullet, The 67°10'S, 67°38'W

Gargoyle Ridge 82°24'S, 159°30'E

High rock ridge forming the S end of Cobham Range in the Churchill Mountains. So named by the Holyoake, Cobham, and Queen Elizabeth Ranges party of the NZGSAE (1964–65) because of the curiously wind-carved rock buttresses on top of the ridge.

Garibaldi, Caleta: see Spiller Cove 62°30'S, 60°43'W

Garibaldi, Caleta: see Shirreff Cove 62°28'S, 60°48'W

Garland Hersey Ridge: see Hershey Ridge 77°40'S, 147°10'W

Garland Hershey Ridge: see Hershey Ridge 77°40'S, 147°10'W

Garnerin Point 64°41'S, 62°10'W

Point on the W coast of Graham Land projecting into Wilhelmina Bay SE of Pelseener island. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for André J. Garnerin (1770–1825), French aeronaut, the first man to make a successful descent from a free balloon by parachute, in 1797. Not: Punta Z.

Garnet, Cape: see Garnet Point 66°56'S, 143°46'E

Garnet Hill 60°44'S, 45°38'W

Rocky hill, 230 m, rising above the E side of McLeod Glacier in the S part of Signy Island, in the South Orkney Islands. It forms the S end of a line of rock and ice cliffs which separate McLeod Glacier from Orwell Glacier. So named by the FIDS, following their survey of 1947, because of the abundance of garnets found there.

Garnet Point 66°56'S, 143°46'E

A rocky coastal point consisting of garnet gneiss, located at the west side of the entrance to Watt Bay. Discovered by the AAE (1911–14) under Douglas Mawson, and named by the AAE geological party led by Frank L. Stillwell. Not: Cape Garnet.

Garnet Rocks 68°21'S, 67°04'W

Group of three rocks lying 2 mi E of the Refuge Islands in the N part of Rymill Bay, off the W coast of Graham Land. First surveyed in 1948–49 by the FIDS and so named by them because of the occurrence of garnet in the rocks. Not: Rocas Granate.

Garrard Glacier 84°07'S, 169°35'E

A glacier in Queen Alexandra Range, draining eastward from the névé between Mount Lockwood and Mount Kirkpatrick and entering Beardmore Glacier S of Bell Bluff. It appears that BrAE (1910–13) applied the name "Garrard Glacier" to the feature which had been named Bingley Glacier by Shackleton in 1908. The area was surveyed by NZGSAE (1961–62), who retained Bingley Glacier on the basis of priority and reapplied the name Garrard Glacier to this previously unnamed feature. Named for Apsley Cherry-Garrard, zoologist with BrAE (1910–13).

Garry, Cape 63°21'S, 62°16'W

Cape forming the SW extremity of Low Island in the South Shetland Islands. Charted and named by a British expedition under Foster, 1828–31. More accurately mapped by the FIDS in 1959 from air photos taken by the FIDASE, 1955–57.

Garwood Glacier 78°01'S, 163°57'E

A glacier occupying the NW part of Garwood Valley, in Victoria Land. First Mapped by the BrNAE (1901–04), but not named until 1911. Named by Taylor of the BrAE (1910–13) for Edmund J. Garwood, professor of geology and mineralogy at the University of London.

Garwood Point 74°14'S, 110°36'W

Point marking the N extremity of Gurnon Peninsula, a NE arm of Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from aerial photographs taken by USN OpHjp in 1947. Named by US-ACAN after James W. Garwood, USN metalsmith; crew chief at Williams Field, McMurdo Sound, and Christchurch, N.Z.; maintenance shop supervisor in eight OpDFrz deployments.

Garwood Valley 78°02'S, 164°10'E

A valley opening on the coast of Victoria Land just S of Cape Chocolate. It is largely ice free, but is occupied near its head by the Garwood Glacier. Named by Taylor of the BrAE (1910–13) in association with Garwood Glacier.

Gary Peaks 70°54'S, 162°35'E

Two peaks which form a portion of the N wall of Sheehan Glacier, situated 4 mi WSW of Mount Hager in Explorers Range, Bowers Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–65. Named by US-ACAN for Gary F. Martin, USN, machinery repairman at the South Pole Station in 1965.

Garzón Point 64°55'S, 62°53'W

Point between Oscar Cove and Skontorp Cove in southern Paradise Harbor, Danco Coast, Graham Land. Following Argentine exploration in the area, named in 1956 by the Comisión de Coordinación Geográfica (Argentina) after General Eugenio Garzón, a hero of the Argentine War of Independence. Not: Punta Mariana.

Gass, Mount 80°27'S, 29°30'W

A conspicuous rock mountain on the E side of Blaiklock Glacier, 6 mi SE of Mount Provender, in the Shackleton Range. First mapped in 1957 by the CTAE and named for Sir Neville A. Gass, Chairman of the British Petroleum Company, a supporter of the CTAE, 1955–58.

Gaston, Mount 70°25'S, 65°47'E

A mountain 0.5 mi SE of Mount Tarr in the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for J. Gaston, aircraft engineer with the ANARE Prince Charles Mountains survey party in 1969.

Gaston de Gerlache, Mount 71°44'S, 35°49'E

The southernmost massif (2,400 m) in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960 by the BelgAE, 1960, under Guido Derom. Named by Derom for Gaston de Gerlache de Gomery, son of Adrien de Gerlache de Gomery (leader of the *Belgica* expedition, 1897–99). Gaston de Gerlache de Gomery led the BelgAE, 1957–58, which landed on Princess Ragnhild Coast and built the Roi Baudouin Station to carry out the scientific program of the IGY.

Gaston Islands 64°28'S, 61°50'W

Two islands and off-lying rocks 1 mi NW of the tip of Reclus Peninsula, off the W coast of Antarctic Peninsula. First charted in 1898 by the BelgAE under Lt. Adrien de Gerlache, who named one of the islands for his brother Gaston. The name was extended to apply to the entire group by the UK-APC in 1960.

Gates, Cape 73°35'S, 122°38'W

An ice-covered cape which marks the NW extremity of Carney Island along the coast of Marie Byrd Land. First mapped by USGS from aerial photographs taken by USN OPHjp in January 1947. Named by US-ACAN for Thomas S. Gates, Under Secretary of the Navy before and during the Navy's Deep Freeze expeditions.

Gateway, The 83°31'S, 170°58'E

A low snow-filled pass between Cape Allen and Mount Hope at the NE extremity of Queen Alexandra Range, affording passage from Ross Ice Shelf to the mouth of Beardmore Glacier westward of Mount Hope. Discovered by the Southern Polar Party of the BrAE (1907–09) and so named because the pass was used to enter

Beardmore Glacier. Not: The Gap.

Gateway Hills 71°40'S, 163°28'E

A prominent pair of hills (2,000 m) immediately W of Husky Pass at the head of Sledgers Glacier, Bowers Mountains (q.v.). So named by the NZ-APC in 1983 on a proposal by geologist M.G. Laird because the hills bound the southern entrance to Sledgers Glacier.

Gateway Nunatak 77°01'S, 160°15'E

Prominent nunatak near the head of Mackay Glacier, standing 9 mi W of Mount Gran, in Victoria Land. Surveyed in 1957 by the N.Z. Northern Survey Party of the CTAE (1956–58), and so named by them because it marks the most obvious gateway through the upper icefalls for parties traveling W up the Mackay Glacier.

Gateway Pass 71°40'S, 68°47'W

A pass about 5 mi long between Astarte Horn and Offset Ridge in eastern Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. So named by UK-APC because the feature serves as a "gateway" giving access to the interior of Alexander Island from the head of Venus Glacier.

Gateway Ridge 64°43'S, 63°33'W

A serrated rock ridge, over 715 m, situated southeast of Mount Rennie on Anvers Island, Palmer Archipelago. It separates Hooper Glacier from William Glacier where the two enter Børgen Bay. Surveyed by FIDS in 1944 and 1945. The name originated because the snow col at the northern end of the ridge provides the only sledging route between Hooper Glacier and William Glacier. Not: Orejas Negras.

Gatlin Glacier 85°10'S, 173°30'W

A tributary glacier 7 mi long, flowing NW between the Cumulus Hills and Red Raider Rampart to enter the S side of McGregor Glacier. Named by US-ACAN for Harold C. Gatlin, USARP meteorologist at the South Pole Station, winter 1964.

Gatlin Peak 70°47'S, 63°18'W

A prominent but somewhat detached snow-covered peak, rising 4.5 mi NE of Steel Peak at the NE end of the Welch Mountains, Palmer Land. Mapped by the USGS in 1974. Named by US-ACAN for Lt. Donald H. Gatlin, USNR, navigator on LC-130 aerial photographic flights during Operation Deep Freeze 1968 and 1969.

Gato, Isla: see Cat Island 65°47'S, 65°13'W

Gaudin Point 65°05'S, 63°22'W

The eastern entrance point of Lauzanne Cove, Flandres Bay, Danco Coast. First charted by the FrAE, 1903–05, under Charcot. In association with the names of pioneers of photography in this area, the point was named by UK-APC (1977) after Marc Antoine Gaudin (1804–80), French photographer who took the first instantaneous photographs of moving objects in 1841. Not: Punta Corcho, Punta Liniers.

Gaudry, Mount 67°32'S, 68°37'W

Mountain, 2,315 m, rising close SW of Mount Barre and 5 mi NNW of Mount Liotard in the S part of Adelaide Island. Discovered by the FrAE, 1903–05, under Charcot who named it

after Albert Gaudry, prominent French paleontologist. Not: Mount Goudry, Sommet A. Gaudry.

Gaul Cove 67°49'S, 67°11'W

A cove indenting the NE side of Horseshoe Island, off Graham Land. Named by UK-APC for Kenneth M. Gaul, first leader of the FIDS Horseshoe Island station in 1955. Not: Caleta Exley.

Gauntlet Ridge 73°25'S, 167°35'E

A flat-topped, mainly ice-covered ridge, or peninsula, which separates the mouths of Nascent and Ridgeway Glaciers where they discharge into Lady Newnes Bay, Victoria Land. The name suggests the appearance of the feature in plan and was applied by NZ-APC in 1966.

Gaunt Rocks 65°17'S, 64°20'W

Small group of rocks lying 2 mi W of Barros Rocks, in the Wilhelm Archipelago. Roughly charted by the BGLE under Rymill, 1934–37, and more accurately positioned by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. The name, given by the UK-APC in 1959, is descriptive of these desolate, grim-looking rocks.

Gauss, Mount 76°19'S, 162°02'E

The northernmost peak of the Kirkwood Range in Victoria Land. Discovered by the BrNAE (1901–04) which named this feature after Prof. Karl Friedrich Gauss (1775–1855), German mathematician and astronomer.

Gauss, Mount: see Gaussberg 66°48'S, 89°11'E

Gaussberg 66°48'S, 89°11'E

Extinct volcanic cone, 370 m, fronting on Davis Sea immediately W of Posadowsky Glacier. Discovered in February 1902 by the GerAE under Drygalski, who named it after the expedition ship Gauss. Not: Mount Gauss.

Gauss Glacier 77°58'S, 163°45'E

A steep glacier on the N side of Datum Peak, descending W from the SW extremity of Hobbs Ridge into Blue Glacier, in Victoria Land. Named by the NZGB in 1993 after German mathematician and astronomer Karl Friedrich Gauss.

Gauthier Point 64°50'S, 63°36'W

Point which forms the N extremity of Doumer Island in the Palmer Archipelago. Discovered by the FrAE, 1903–05, under Charcot, who named it for Monsieur Gauthier, builder of the expedition ships *Français* and *Pourquoi-Pas?*. Not: Punta Gautier.

Gautier, Punta: see Gauthier Point 64°50'S, 63°36'W

Gavaghan, Mount 70°26'S, 65°27'E

A mountain in the Porthos Range, Prince Charles Mountains, between Mount Kirkby and Mount Creighton. Plotted from ANARE air photos. Named for E.J. Gavaghan, radio operator at Mawson Station in 1963.

Gavin Ice Piedmont 63°44'S, 59°00'W

An ice piedmont in Trinity Peninsula, about 15 mi long and between 3 and 6 mi wide, extending from Charcot Bay to Russell West Glacier. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Christopher B. Gavin-Robinson, pilot of FIDASE (1956–57).

Gaviotín, Islote: see Gaviotín Rock 63°08'S, 56°01'W

Gaviotín Rock 63°08'S, 56°01'W

A rock lying in Larsen Channel, about 0.25 mi N of the coastal ice cliffs of Joinville Island and 2 mi N of Saxum Nunatak. The name Gaviotín (gull) appears on an Argentine government chart of 1957. Not: Gull Rock, Islote Gaviotín.

Gavlen Ridge 72°39'S, 0°27'E

A ridge forming the S extremity of Roots Heights, in the S part of the Sverdrup Mountains in Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Gavlen (the gable).

Gavlpiggen Peak 73°58'S, 5°47'W

A low, isolated peak 2 mi SW of Klakknabben Peak, just N of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and additional air photos (1958–59), and named Gavlpiggen (the gable peak).

Gawn, Mount 71°55'S, 165°11'E

A prominent peak (2,190 m) in the central part of King Range in northwest Victoria Land. Named by the northern party of the NZGSAE, 1963–64, for J.E. Gawn, radio operator at Scott Base, 1963–64, who maintained radio schedules with the party.

Gawne Nunatak 76°03'S, 135°24'W

A nunatak on the E side of Wells Saddle between Mount Berlin and Mount Moulton in the Flood Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Steven P. Gawne, a member of the USARP team that studied ice sheet dynamics in the area NE of Byrd Station in the 1971–72 season.

Gawn Ice Piedmont 79°58'S, 160°12'E

An ice piedmont and snow slope occupying the coastal platform between Darwin and Byrd Glaciers. Named by the Darwin Glacier Party of the CTAE (1956–58) for J.E. Gawn, radio operator at Scott Base who worked closely with the field parties.

Gaydara, Gora: see Cumulus Mountain 71°51'S, 5°23'E

Gaylord Nunatak 74°56'S, 72°08'W

A nunatak rising to c. 1,500 m, 1.5 mi NNE of Schmutzler Nunatak in the SE end of the Grossman Nunataks (q.v.), Ellsworth Land. Mapped by USGS from surveys and USN aerial photographs, 1961–68, and Landsat imagery, 1973–74. Named by US-ACAN in 1987 after Chauncey L. Gaylord, USGS cartographer, 1942–76, Chief of the Compilation Unit in the Branch of Special Maps, working for many years in the preparation of Antarctic maps.

Gazella Peak 54°00'S, 38°03'W

Peak rising over 120 m between Roché Peak and Cordall Stacks on the N side of Bird Island, South Georgia. Charted by the SGS in the period 1951–57. Named by the UK-APC in 1963 after the subspecific form of the fur seal (*Arctocapalus tropicalis gazella*), which breeds in considerable numbers on Bird Island.

Gazert, Cape 53°05'S, 73°21'E

Cape at the W end of the rocky promontory which forms the S side of South West Bay, on the W side of Heard Island. This feature was known to American sealers as "Green Point," as shown by

Capt. H.C. Chester's 1860 sketch map and other sealer maps of the period. The present name was applied by the GerAE when they landed at the feature in February 1902, after Dr. Hans Gazert, medical officer with the expedition, and it has become established in international usage. Not: Green Point.

Gburek Peaks 72°11'S, 0°15'W

A group of rocky elevations including Mount Straumsvola and Mount Jutulrøra, forming the western end of the Sverdrup Mountains in Queen Maud Land. Discovered by the GerAE under Ritscher, 1938–39, and named for Leo Gburek, geophysicist on the expedition. The name Gburek is here restricted to the westernmost peaks of those so named on maps of the GerAE, these being clearly recognizable on detailed maps by NBSAE, 1949–52, and subsequent Norwegian expeditions. Not: Gburektoppene.

Gburektoppene: see Gburek Peaks 72°11'S, 0°15'W

Gdynia Point 62°10'S, 58°33'W

The eastern point of Dufayel Island, lying in Ezcurra Inlet, Admiralty Bay, King George Island. Named in 1979 by the Polish Antarctic Expedition after Gdynia, Poland, a port city on the Baltic Sea.

Gealy Spur 84°38'S, 165°13'E

A high rock spur on the W side of Beardmore Glacier. The spur descends NE from Mount Marshall and terminates in Willey Point. This area was first sighted by Shackleton's Southern Journey Party in December 1908. Named by US-ACAN for William J. Gealy stratigrapher with the Ohio State University Geological Expedition of 1969–70, who worked the spur and found tetrapod fossils here.

Geddes, Cape 60°42'S, 44°35'W

Cape which forms the N end of Ferguslie Peninsula on the N coast of Laurie Island, in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for Prof. P. (later Sir Patrick) Geddes, noted Scottish biologist and sociologist.

Geddes Reef: see Geddes Rocks 65°20'S, 64°32'W

Geddes Rocks 65°20'S, 64°32'W

A group of rocks located 3 mi NNW of Grim Rock and 10 mi WSW of Cape Tuxen, off the W coast of Graham Land. Discovered by BGLE, 1934–37, and named "Geddes Reef" after The Geddes, a dangerous reef off the mouth of the Helford River in Cornwall, England. In 1971, UK-APC reported that the term rocks is more appropriate for this feature. Not: Geddes Reef.

Geier, Mount 71°34'S, 62°25'W

The dominant, largely snow-covered peak in the N part of Schirmacher Massif, near the E coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Frederick J. Geier, topographic engineer with the USGS geological and mapping party to Lassiter Coast, 1969–70.

Geikie Glacier 54°17'S, 36°41'W

Glacier which flows NE to Mercer Bay, at the SW end of Cumberland West Bay, South Georgia. First charted by the SwedAE, 1901–04, under Nordenskjöld, who named it after Sir Archibald Geikie (1835–1924), noted Scottish geologist and Director-General of the Geological Survey Great Britain, 1882–1901.

Geikie Inlet 75°30'S, 163°00'E

An inlet along the coast of Victoria Land, formed between the cliffs of the Drygalski Ice Tongue on the north and Lamplugh Island and the seaward extension of Clarke Glacier on the south. Discovered by the BrNAE, 1901–04, under Scott, who named it after Sir Archibald Geikie (Geikie Glacier q.v.), who gave much assistance in preparing the expedition.

Geikie Land: see Geikie Ridge 71°44'S, 169°36'E

Geikie Nunatak 80°24'S, 25°52'W

A nunatak 3 mi W of Mount Absalom in the SW end of the Herbert Mountains, Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by the BAS, 1968–71. In association with the names of glacial geologists grouped in this area, named by the UK-APC in 1971 after James Geikie (1839–1915), Professor of Geology, Edinburgh University from 1882, who was one of the first to recognize that multiple glaciations occurred during the Pleistocene period.

Geikie Point: see Geikie Ridge 71°44'S, 169°36'E

Geikie Ridge 71°44'S, 169°36'E

A massive mountain ridge, 20 mi long and 6 mi wide, forming the divide between Dugdale Glacier and Murray Glacier in the Admiralty Mountains of Victoria Land. First charted by the BrAE, 1898–1900, under C.E. Borchgrevink, who named the high land between these glaciers Geikie Land, after Sir Archibald Geikie (Geikie Glacier and Geikie Inlet, q.v.). The generic "Land" has been changed to "Ridge," since it was not appropriate for so small a feature, but Borchgrevink's intent in naming the whole mass has been respected. Not: Geikie Land, Geikie Point.

Geissel, Mount 80°25'S, 81°47'W

A mountain, 1,430 m, standing 3 mi S of Mount Simmons in the Independence Hills, Heritage Range. Named by US-ACAN for Robert H. Geissel, USARP geomagnetist/seismologist at Plateau Station in 1966.

Gemel Peaks 62°12'S, 58°59'W

Two peaks 1.3 mi NE of Horatio Stump on Fildes Peninsula, King George Island, in the South Shetland Islands. Charted and named Twin Peak or Twin Peaks by DI personnel on the *Discovery II* in 1935. To avoid duplication, this name was rejected by the UK-APC in 1960 and a new name substituted. "Gemel" means twin. Not: Twin Peaks.

Gémenis, Nunatak: see Gemini Nunatak 66°08'S, 62°30'W

Gemini Nunatak 66°08'S, 62°30'W

Nunatak consisting of two almost ice-free peaks, 465 and 490 m, which are connected by a narrow, rock ridge, standing 4 mi S of Borchgrevink Nunatak on Philippi Rise, on the E coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE in 1947. Named by the FIDS after the constellation Gemini, which contains the twin stars Castor and Pollux. Not: Nunatak Gémenis.

Gemini Nunataks 84°42'S, 176°38'W

Two nunataks of similar size and appearance in a prominent position near the W wall of Shackleton Glacier, just SE of Mount Cole. Named by F. Alton Wade, leader of the Texas Tech Shackleton Glacier Party (1962–63), after the constellation Gemini, which contains the twin stars Castor and Pollux.

Genecand, Mount 66°06'S, 64°39'W

Mountain at the head of Barilari Bay between Lawrie and Weir Glaciers, on the W coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955–57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for Félix Genecand (1874–1957), Swiss mountaineer who invented the Tricouni nail for climbing boots shortly before World War I.

General Alvarado, Cabo: see Shirreff, Cape 62°27'S, 60°47'W

General Arenales, Puerto: see Inverleith Harbor 64°32'S, 63°00'W

General Barrios, Meseta: see Laclavère Plateau 63°27'S, 57°47'W

General Cañas, Picacho: see Plymouth, Mount 62°28'S, 59°49'W

General Erskine Bay: see Erskine Iceport 69°56'S, 19°12'E

General Paz, Bahía: see Royal Bay 54°32'S, 36°00'W

Genghis Hills 80°44'S, 28°02'W

Hills rising to 1,305 m to the S of Fuchs Dome and 4 mi W of Stephenson Bastion, in the Shackleton Range. Photographed from the air by the U. S. Navy, 1967, and surveyed by BAS, 1968–71. Named by the UK-APC in 1971 after Graham K. (“Genghis”) Wright, BAS general assistant at Halley Station, 1968–71, who took part in the survey, 1969–70.

Gentile Point 81°07'S, 160°48'E

A rounded, ice-covered point 7 mi N of Cape Parr, extending seaward from Darley Hills on the W side of Ross Ice Shelf. Named by US-ACAN for Peter A. Gentile, Master of USNS *Alatna* in USN OpDFrz 1961, and of USNS *Chattahoochee* which made four fuel-carrying trips between New Zealand and McMurdo Sound in USN OpDFrz 1963.

Gentle Glacier 76°46'S, 161°15'E

A small glacier lobe, to the E and immediately below Forecastle Summit, which drains S into deglaciated Barnacle Valley in Convoy Range, Victoria Land. Though a part of the Northwind Glacier-Fry Glacier system, this diminished glacier flows back into Barnacle Valley. The name was proposed by New Zealand geologist Christopher J. Burgess and describes the glacier, but also the excellent helicopter support provided to his 1976–77 field party by U.S. Navy helicopters, “Gentle” being their code name.

Geode Nunataks 69°50'S, 70°05'W

A group of small nunataks on the W side of Sibelius Glacier, N of Finlandia Foothills, in NE Alexander Island. So named by the UK-APC in 1977; the nunataks are composed of lava flows with abundant geodes (cavities within the rock containing quartz and calcite crystals).

Géodésie, Cape 66°40'S, 139°51'E

Low, ice-covered point marked by prominent rock outcrops at its NE end, lying 3 mi NW of the mouth of Astrolabe Glacier. Photographed from the air by USN OpHjp, 1946–47. Charted by the FrAE, 1951–52, and so named by them because of the extensive geodetic program undertaken in this region, particularly in the Géologie Archipelago close offshore.

Geodetic Glacier 77°45'S, 163°48'E

A glacier flowing E from Bettle Peak along the N side of Thomas Heights into Bowers Piedmont Glacier, on Scott Coast, Victoria Land. The name is one of a group in the area associated with surveying applied in 1993 by NZGB. Named from geodesy, the branch of applied mathematics concerned with measuring, or determining the shape of the earth, and the precise location of points on its surface.

Geoffrey Bay 66°17'S, 110°32'E

A cove just E of Budnick Hill on the N side of Bailey Peninsula, Windmill Islands. First mapped from air photos taken by USN OpHjp, 1946–47. Named by ANCA for Geoffrey D.P. Smith, Senior Technical Officer (buildings) with the Antarctic Division, Melbourne, a member of the team that planned and supervised the construction of nearby Casey Station.

Geoffrey Hills 67°37'S, 48°36'E

Group of hills at the W end of the Raggatt Mountains, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for Geoffrey D.P. Smith, carpenter at Mawson Station in 1961.

Geographers Cove 62°13'S, 59°02'W

A cove between Flat Top Peninsula and Exotic Point on the SW side of Fildes Peninsula, King George Island. The approved name is a translation of the Russian “Bukhta Geografov” (geographers bay), applied in 1968 following SovAE surveys from nearby Bellingshausen Station.

Geoid Glacier 77°48'S, 163°47'E

A glacier flowing S from Thomas Heights, to the W of Ellipsoid Hill, into Blue Glacier, Victoria Land. The name is one of a group in the area associated with surveying applied in 1993 by NZGB. Named from geoid, the particular equipotential surface which coincides with mean sea level.

Géologie, Glacier: see Astrolabe Glacier 66°45'S, 139°55'E

Géologie, Point: see Géologie Archipelago 66°39'S, 139°55'E

Géologie Archipelago 66°39'S, 139°55'E

Small archipelago of rocky islands and rocks close N of Cape Géodésie and Astrolabe Glacier Tongue, extending from Hélène Island on the W to Dumoulin Islands on the east. The French expedition under Capt. Jules Dumont d'Urville landed on Débarquement Rock in the Dumoulin Islands in January 1840. Because rock samples were obtained, they gave the name “Pointe Géologie” to a coastal feature charted as lying S of Débarquement Rock. The archipelago was delineated, in part, from air photos taken by USN OpHjp, 1946–47. Following surveys by FrAE parties during the 1950–52 period, the French gave the name “Archipel de Pointe Géologie” to the entire archipelago, as d'Urville's coastal feature is believed to correlate with portions of the cluster of islands close N of Astrolabe Glacier Tongue. Not: Archipel de Pointe Géologie, Geology Archipelago, Point Géologie.

Geologists Island 62°13'S, 58°57'W

An island, 0.25 mi long, lying S of Ardley Island in the entrance of Hydrographers Cove, Fildes Peninsula, King George Island. The approved name is a translation of the Russian “Ostrov Geologov” (geologists island), applied in 1968 following SovAE surveys from Bellingshausen Station. Not: Ostrov Geologov.

Geologists Range 82°30'S, 155°30'E

A mountain range about 35 mi long, standing between the heads of Lucy and Nimrod Glaciers. Seen by the northern party of the NZGSAE (1961–62) and named to commemorate the work of geologists in Antarctic exploration.

Geologov, Ostrov: see Geologists Island 62°13'S, 58°57'W

Geology, Cape 77°00'S, 162°32'E

Low, gravel-covered point marking the W limit of Botany Bay, in the S part of Granite Harbor, Victoria Land. Charted and named by the Western Geological Party of the BrAE, 1910–13, who established their base here.

Geology Archipelago: see Géologie Archipelago 66°39'S, 139°55'E

George, Cape 54°17'S, 36°15'W

Cape 5.5 mi ESE of Barff Point, on the N coast of South Georgia. Discovered in 1775 by a British expedition under Cook, who named it for George III, King of Great Britain. Not: Cabo Jorge.

George, Mount 67°43'S, 50°00'E

Mountain, 1,555 m, close W of Simpson Peak in the Scott Mountains. Plotted from air photos taken by ANARE in 1956 and 1957. The name was first applied by John Biscoe (1830–31), probably after one of the Enderby Brothers, the owners of his vessel. As Biscoe's feature could not be identified among the many peaks in the area, the name was applied to this feature by ANCA in 1962.

George Bay: see Hound Bay 54°22'S, 36°13'W

George Bryan Coast: see Bryan Coast 73°35'S, 84°00'W

George Getz Shelf Ice: see Getz Ice Shelf 74°15'S, 125°00'W

George Glacier 70°41'S, 164°15'E

A valley glacier in the W part of Anare Mountains. It rises E of Mount Burch and flows NW past Mount Kelly to Lillie Glacier Tongue on the coast. Mapped by USGS from surveys and U.S. Navy air photos, 1960–65. Named by US-ACAN for Robert Y. George, zoologist at McMurdo Station, 1967–68.

George IV Sea: see Weddell Sea 72°00'S, 45°00'W

George Murray, Mount 75°54'S, 161°50'E

A flat-topped, mainly ice-covered mountain rising between the heads of Davis and Harbord Glaciers in the Prince Albert Mountains, Victoria Land. Discovered by the BrNAE, 1901–04, which named it for George R.M. Murray of the British Museum staff director of the scientific aims of Scott's expedition.

George Nunatak 85°35'S, 145°26'W

Nunatak, 1,050 m, located midway between the E part of Harold Byrd Mountains and Leverett Glacier. Named by US-ACAN for Paul George, a member of the U.S. Army helicopter unit which supported the USGS Topo West and Topo East surveys of 1962–63.

George Rayner Peak: see Rayner Peak 67°24'S, 55°56'E

George Rock 54°14'S, 36°31'W

Rock, 3 m high, lying at the W side of the entrance to Maiviken, Cumberland Bay, on the N coast of South Georgia. The name appears to be first used on a 1930 British Admiralty chart.

Georges, Cape: see Georges Point 64°40'S, 62°40'W

Georges Bay: see King George Bay 62°06'S, 58°05'W

Georges Island: see Penguin Island 62°06'S, 57°54'W

Georges Islands: see Patricia Islands 66°51'S, 56°47'E

Georges Point 64°40'S, 62°40'W

The N tip of Rongé Island, lying W of Arctowski Peninsula off the W coast of Graham Land. Discovered and named by the BelgAE, 1897–99, under Gerlache. Not: Cape Georges.

George V Coast 68°30'S, 148°00'E

That portion of the coast of Antarctica lying between Point Alden, in 142°02'E, and Cape Hudson, in 153°45'E. Explored by members of the Main Base party of the AAE (1911–14) under Douglas Mawson who named this feature for King George V of England. Not: King George V Coast, King George V Land, Kong George V-Land, König George V-Land.

George VI Ice Shelf 71°45'S, 68°00'W

An extensive ice shelf that occupies George VI Sound between Alexander Island and Palmer Land. The ice shelf extends from Ronne Entrance, at the SW end of the sound, to Niznik Island, about 30 mi S of the N entrance between Cape Brown and Cape Jeremy. Named by the UK-APC in association with George VI Sound.

George VI Sound 71°00'S, 68°00'W

A major fault depression, 300 mi long in the shape of the letter J, which skirts the L. and S shores of Alexander Island, separating it from Antarctic Peninsula and the English Coast. The sound is ice covered and varies from about 15 mi to more than 40 mi wide. Discovered by Lincoln Ellsworth who flew over it in 1935. Explored by the BGLE in 1936–37 and by the USAS in 1940. Named by Rymill, leader of BGLE, for George VI, King of England. Not: Canal Jorge VI, Canal Presidente Sarmiento, Canal Seaver, King George the Sixth Sound, King George VI Sound.

Georgia, Isle of: see South Georgia 54°15'S, 36°45'W

Georgian Cliff 71°15'S, 68°15'W

A prominent cliff along George VI Sound, located just N of the terminus of Eros Glacier on the E side of Alexander Island. The feature forms a bluff 550 m high at its northern end, but becomes a sharp ridge toward the south. The feature was mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. So named by UK-APC because it lies on George VI Sound.

Gerard Bluffs 83°37'S, 157°15'E

Prominent ice-free bluffs marking the southern extremity of the Miller Range. Mapped in December 1957, and named by the N.Z. southern party of the CTAE (1956–58) for V. Gerard, IGY scientist at Scott Base in 1957.

Gerasimou Glacier 84°42'S, 177°03'W

Steep-walled tributary glacier, 5 mi long, entering the W side of Shackleton Glacier opposite Gemini Nunataks, in the Queen Maud Mountains. Named by the Texas Tech-Shackleton Glacier Party, 1964–65, for Helen Gerasimou, polar personnel specialist with the Office of Antarctic Programs, National Science Foundation.

Gerber Peak 65°07'S, 63°17'W

Peak 2 mi SSW of Rahir Point, standing close S of Thomson Cove, Flandres Bay, on the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for Friedrich Gerber (1797–1872), Swiss veterinary surgeon who first suggested the use of photography for book illustration, in 1839.

Gerdel, Mount 85°59'S, 149°19'W

Mountain, 2,520 m, standing 2 mi SE of Mount Andrews at the S side of Albanus Glacier. Mapped by USGS from ground surveys and USN air photos, 1960–63. Named by US-ACAN for Lt. David H. Gerdel, USN, of the Byrd Station winter party, 1965.

Gerdholm: see Gerd Island 60°40'S, 45°44'W

Gerd Island 60°40'S, 45°44'W

Island 1 mi WSW of Stene Point at the E side of the entrance to Norway Bight, off the S coast of Coronation Island in the South Orkney Islands. Charted and named by Norwegian whaling captain Petter Sørille, who made a running survey of the South Orkney Islands in 1912–13. Not: Gerdholm.

Gerlache, Cape 66°30'S, 99°02'E

Cape which forms the NE tip of Davis Peninsula, 4 mi SE of David Island. Discovered in November 1912 by the AAE, 1911–14, under Mawson, who named it for Lt. Adrien de Gerlache, leader of the BelgAE, 1897–99. Not: Cape De Gerlache.

Gerlache, Mount 74°59'S, 162°26'E

A prominent mountain, 980 m, standing on the NE side of Larsen Glacier between Widowmaker Pass and Backstairs Passage Glacier, in Victoria Land. Discovered by the BrNAE, 1901–04, and named for Lt. Adrien de Gerlache. Not: Mount De Gerlache.

Gerlache Inlet 74°41'S, 164°06'E

An inlet 4 mi wide in the NW corner of Terra Nova Bay, indenting the Northern Foothills just S of Mount Browning, along the coast of Victoria Land. The name appears to have been applied by the BrNAE, 1901–04, and honors Belgian Antarctic explorer Lt. Adrien de Gerlache.

Gerlache Island 64°35'S, 64°16'W

Largest of the Rosenthal Islands lying off the W coast of Anvers Island, in the Palmer Archipelago. First roughly charted and named "Pointe de Gerlache" by the FrAE, 1903–05, under Charcot, for Lt. Adrien de Gerlache. As a result of FIDS surveys in 1956–58, this island is considered to be the feature named by Charcot; there is no prominent point in this vicinity which would be visible from seaward. Not: De Gerlache Point, Gerlache Point.

Gerlache Point: see Gerlache Island 64°35'S, 64°16'W

Gerlache Strait 64°30'S, 62°20'W

Strait separating the Palmer Archipelago from Antarctic Peninsula. The BelgAE, under Lt. Adrien de Gerlache, explored the strait in January and February 1898, naming it for the expedition ship *Belgica*. The name was later changed to honor the commander himself. Not: De Gerlache Strait, Détroit de la Belgica.

Gerontius Glacier 69°31'S, 70°34'W

A glacier flowing N from Elgar Uplands (q.v.) into Tufts Pass in N Alexander Island. So named in association with the uplands, from *The Dream of Gerontius* (1900), an oratorio by Elgar. Named by UK-APC in 1977.

Gerrish Peaks 74°40'S, 111°42'W

A line of eroded rock peaks standing 4 mi SE of Hunt Bluff on the W side of Bear Peninsula, Walgreen Coast, Marie Byrd Land. The feature was first photographed from the air by USN OpHjp in January 1947. Named by US-ACAN after Samuel D. Gerrish, ionospheric physics researcher at Byrd Station, 1966.

Gerry Glacier 77°24'S, 152°05'W

A glacier on Edward VII Peninsula, flowing N between Reeves Peninsula and Howard Heights to the head of Sulzberger Bay. Features in this area were photographed from the air and mapped by the ByrdAE, 1928–30 and 1933–35. This glacier was mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN (at the suggestion of R. Admiral R.E. Byrd) for U.S. Senator Peter G. Gerry of Rhode Island, long time friend of the Byrd family and contributor to the ByrdAE, 1933–35.

Gertrude: see Gertrude Rock 71°17'S, 170°13'E

Gertrude Rock 71°17'S, 170°13'E

The northern of two rocks called The Sisters, off the N extremity of Cape Adare. The Sisters were named by the BrAE, 1898–1900. Gertrude Rock was named by Campbell, leader of the Northern Party of the BrAE, 1910–13, at the suggestion of Levick, after Gertrude and Rose, two sisters mentioned in a favorite comic song of the time. Not: Gertrude.

Gervaise Rocks 63°21'S, 58°06'W

A group of rocks about 3 mi NNE of Cape Ducorps, Trinity Peninsula. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Charles Gervaise, French naval officer on the *Astrolabe* during her Antarctic voyage (1837–40).

Gessner Peak 71°46'S, 6°55'E

The highest peak (3,020 m) of Storkvarvet Mountain, standing 3 mi N of Habermehl Peak in the NE part of the Mühlig-Hofmann Mountains of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938–39, and named for the manager of the German Hansa-Luftbild, an aerial photographic corporation. Not: Gessnertind.

Gessnertind: see Gessner Peak 71°46'S, 6°55'E

Gester, Mount 75°01'S, 134°48'W

A flat-topped, ice-capped mountain (950 m) on the divide between Johnson Glacier and Venzke Glacier in Marie Byrd Land. It stands just S of Mount Kohnen and Bowyer Butte. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Lt. (j.g.) Ronald L. Gester, NOAA Corps, seismologist/geomagnetist at Byrd Station, 1971.

Gestlingen: see Gosling Islands 60°39'S, 45°55'W

Getman Ice Piedmont 68°06'S, 64°57'W

An ice piedmont between Reichle Mesa and Three Slice Nunatak at the E end of Joerg Peninsula, Bowman Coast. The feature was explored from the ground and photographed from the air by the USAS, 1939–41, RARE, 1947–48, and was surveyed by FIDS,

1946–48. Named by US-ACAN in 1977 for Cdr. Robert T. Getman, USCG, Executive Officer, USCGC *Southwind*, USN Operation Deep Freeze, 1969.

Getz, Mount 76°33'S, 145°13'W

A mountain (1,120 m) in the S part of the Fosdick Mountains, 5 mi ESE of Mount Ferranto, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939–41) led by R. Admiral R.L. Byrd. Named for George F. Getz, Jr., who, like his father, gave financial support toward the exploration efforts of Admiral Byrd.

Getz Ice Shelf 74°15'S, 125°00'W

An ice shelf, over 300 mi long and from 20 to 60 mi wide, bordering the Hobbs and Bakutis Coasts of Marie Byrd Land between McDonald Heights and Martin Peninsula. Several large islands are partially or wholly embedded in the ice shelf. The ice shelf westward of Siple Island was discovered by the USAS in December 1940. The portion eastward of Siple Island was first delineated from air photos taken by USN OpHjp, 1946–47. The entire feature was mapped by the USGS from U.S. Navy air photos of 1962–65. Named by the USAS (1939–41) for George F. Getz of Chicago, who helped furnish the seaplane for the expedition. Not: George Getz Shelf Ice, Getz Shelf Ice.

Getz Shelf Ice: see Getz Ice Shelf 74°15'S, 125°00'W

Gevers, Mount 85°50'S, 158°29'W

A rock peak, 1,480 m, in the Hays Mountains of the Queen Maud Mountains, standing at the N side of Cappellari Glacier at the point where it enters Amundsen Glacier. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for T.W. Gevers of the University of Witwatersrand (Johannesburg), geologist at McMurdo Station in 1964–65.

Geysen Glacier 73°31'S, 64°36'E

A large tributary to the Fisher Glacier, flowing NE between Mounts Bayliss and Ruker in the Prince Charles Mountains. Plotted from air photos taken by ANARE in 1956 and 1957. Named by ANCA for H. Geysen, officer in charge of Mawson Station, 1960.

Giaever Glacier 72°37'S, 31°08'E

Glacier flowing NW between Mount Kerckhove de Denterghem and Mount Lahaye in the Belgica Mountains. Discovered by the BelgAE, 1957–58, under G. de Gerlache, who named it for Norwegian explorer John S. Giaever (1901–70), counselor for the expedition; leader of NBSAE, 1949–52.

Giaever Ridge 72°00'S, 5°00'W

A broad, snow-covered ridge, about 70 mi long in a N-S direction, on the W side of Schytt Glacier in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named for John S. Giaever, leader of the expedition. Not: Förstefjellsryggen, Giaeverryggen.

Giaeverryggen: see Giaever Ridge 72°00'S, 5°00'W

Giannini Peak 71°00'S, 62°50'W

A peak 13 mi ESE of Mount Nordhill in the E part of Palmer Land. The peak stands on the N side of Dana Glacier at the point where the glacier makes a left (NE.) turn toward Lehrke Inlet. Mapped by USGS in 1974. Named by US-ACAN for Albert P. Giannini, USARP biologist at Palmer Station, 1973.

Giants Cirque 67°17'S, 67°17'W

A large cirque on the W side of Tyndall Mountains which opens to the SW to Vallot Glacier, on Arrowsmith Peninsula, Loubet Coast. The descriptive name was applied by UK-APC in 1983 following BAS geological work in the area.

Giard Point 64°26'S, 63°49'W

Point forming the S side of the entrance to Perrier Bay, on the NW coast of Anvers Island in the Palmer Archipelago. First charted by the FrAE, 1903–05, and named by Charcot for Alfred Giard, noted French zoologist and member of the Institut de France.

Gibb Island: see Gibbs Island 61°28'S, 55°34'W

Gibbney Island 67°33'S, 62°20'E

A small island on the W side of Holme Bay, off Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Bryggeholmen (the wharf island). Renamed by ANCA for L.F. Gibbney, officer in charge at Heard Island station in 1952. Not: Bryggeholmen.

Gibbon Bay 60°39'S, 45°11'W

Bay 1 mi long and wide, entered between Rayner Point and The Turret along the E coast of Coronation Island, in the South Orkney Islands. The bay was first observed in December 1821 by Capt. George Powell and Capt. Nathaniel Palmer, but was more accurately delineated on a 1912 chart by Capt. Petter Sørille. It was recharted in 1933 by DI personnel on the *Discovery II* and named for the ship's surgeon, Dr. G.M. Gibbon.

Gibbon Nunatak 85°31'S, 127°36'W

An isolated nunatak on the N side of Wisconsin Range, standing 8 mi N of Lentz Buttress on the W side of Davisville Glacier. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Thomas L. Gibbon, construction driver Byrd Station winter party, 1959.

Gibbous Rocks 61°03'S, 54°59'W

Group of rocks located 4 mi NW of Cape Belsham, Elephant Island, South Shetland Islands. So named by UK-APC following charting by the Joint Services Expedition, 1970–71. The name is descriptive of their rounded shapes (gibbous meaning humped). Not: Rocas Gibosas.

Gibbs, Mount 73°49'S, 162°56'E

A mountain (3,140 m) rising on the S side of Recoil Glacier in the Deep Freeze Range, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Lt. Maurice E. Gibbs, USN, meteorological officer at McMurdo Station, 1967.

Gibbs Glacier 68°28'S, 66°00'W

A glacier, 15 mi long, flowing SE into the N part of Mercator Ice Piedmont on the E side of Antarctic Peninsula. This feature together with Neny Glacier, which flows NW, occupy a transverse depression between Mercator Ice Piedmont and Neny Fjord on the W side of Antarctic Peninsula. Gibbs Glacier was photographed from the air and first mapped by the USAS, 1939–41, and RARE, 1947–48. Named by UK-APC for Peter M. Gibbs of FIDS, surveyor at Horseshoe Island, 1957, and leader at Stonington Island, 1958, who was responsible (with P. Forster) for the first ground survey of the glacier.

Gibbs Island 61°28'S, 55°34'W

Island which lies 14 mi SW of Elephant Island in the South Shetland Islands. James Weddell, Master, RN, whose chart of the islands appeared in 1825, seems first to have used the present name, which is now established in international usage. Not: Gibb Island, Gibbs Islands, Narrow Isle, Rainoff's Island.

Gibbs Islands: see Gibbs Island 61°28'S, 55°34'W

Gibney Reef 66°15'S, 110°30'E

An exposed reef lying 0.5 mi W of Clark Peninsula, in the Windmill Islands. First charted in February 1957 by a party from the USS *Glacier*. The name was suggested by Lt. Robert C. Newcomb, USN, navigator of the *Glacier*, after Seaman Joseph Gibney USN, a member of the survey party.

Gibosas, Rocas: see Gibbous Rocks 61°03'S, 54°59'W

Giboso, Islote: see Humps Island 63°59'S, 57°25'W

Gibraltar Peak 72°05'S, 164°59'E

A peak 1 mi SE of Lavallee Peak, in West Quartzite Range. Named by the NZGSAE, 1967–68, because it is shaped like the famous rock of the same name.

Gibson, Mount 71°20'S, 66°20'E

A small mountain about 2.5 mi W of Mount Cameron and 3 mi S of Schmitter Peak in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA after P.R. Gibson, plumber at Wilkes Station in 1965.

Gibson Bay 63°19'S, 55°53'W

Small bay on the S side of Joinville Island, lying just W of Mount Alexander at the junction of Active Sound and the Firth of Tay. Discovered and named on Jan. 8, 1893 by Thomas Robertson, master of the ship *Active*, one of the Dundee whalers.

Gibson Spur 77°20'S, 160°40'E

A high rocky spur just W of the mouth of Webb Glacier, in Victoria Land. Named by the VUWAE (1959–60) after G.W. Gibson, one of the party's geologists.

Giddings, Mount 67°25'S, 50°47'E

Mountain 6 mi SE of Debenham Peak in the Scott Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA after J.E. Giddings, cook at Mawson Station in 1961.

Giddings Peak 70°12'S, 64°44'E

A small peak just W of Mount Béchervaise in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA after A. Giddings, cook at Wilkes Station in 1959.

Gidrografov, Bukhta: see Hydrographers Cove 62°13'S, 58°57'W

Gidrografov, Ostrova: see Hydrographer Islands 67°23'S, 48°50'E

Gierloff Nunataks 85°31'S, 129°00'W

A group of nunataks lying 8 mi NW of Lentz Buttress, at the N side of Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN after George B. Gierloff, builder, Byrd Station winter party, 1961.

Giffard, Caleta: see Giffard Cove 64°37'S, 61°42'W

Giffard Cove 64°37'S, 61°42'W

Cove 1 mi wide in the W side of Charlotte Bay, along the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for Henri Giffard (1825–82), French engineer who constructed and flew the first truly navigable balloon (dirigible airship), in 1852. Not: Caleta Giffard, Gifford Cove.

Gifford Cove: see Giffard Cove 64°37'S, 61°42'W

Gifford Peaks 79°36'S, 84°48'W

A line of sharp peaks and ridges along the escarpment at the W side of the Heritage Range, located between Watlack Hills and Soholt Peaks. Named by the University of Minnesota Geological Party, 1963–64, for Chief Warrant Officer Leonard A. Gifford, pilot of the 62nd Transportation Detachment, who aided the party.

Giganteus Island 67°35'S, 62°30'E

Island just N of the Rookery Islands in the W part of Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. A giant petrel (*Macronectes Giganteus*) rookery was observed by ANARE on the island in December 1958, hence the name.

Gilbert, Mount 69°16'S, 66°17'W

A mountain (1,420 m) on the divide between Airy Glacier and Seller Glacier, 5 mi NW of Mount Castro, in west-central Antarctic Peninsula. Photographed from the air by BGLE in Feb. 1937, and RARE in Nov. 1947. Surveyed from the ground by FIDS in Dec. 1958. Named by UK-APC for William Gilbert (1540–1603), English physician whose pioneer work *De magnete, magneticisque corporibus* (1600) laid the foundations for an understanding of earth magnetism and the variation of the compass.

Gilbert Bluff 74°58'S, 136°37'W

A rock bluff with abrupt cliff faces on the N and E sides, located on the S side of Garfield Glacier and near the N margin of Erickson Bluffs in the McDonald Heights area of coastal Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for James R. Gilbert, member of the biological party that made population studies of seals, whales and birds in the pack ice of the Bellingshausen and Amundsen Seas using USCGC *Southwind* and its two helicopters, 1971–72.

Gilbert Glacier 70°00'S, 71°00'W

A glacier c. 20 mi long flowing S from Nichols Snowfield into Mozart Ice Piedmont, Alexander Island. Photographed from the air by RARE, 1947–48, and mapped from these photographs by D. Searle of FIDS, 1960. Named in association with Sullivan Glacier (q.v.), after Sir William S. Gilbert (1836–1911), British librettist. Named by UK-APC, 1977.

Gilbert Grosvenor Range: see Grosvenor Mountains 85°40'S, 175°00'E

Gilbert Strait 63°38'S, 60°16'W

Strait between Trinity and Tower Islands in the Palmer Archipelago. Named by a British expedition 1828–31, under Foster, for Davies Gilbert, President of the Royal Society, 1827–30, and of the committee which formulated the objectives of the expedition. The strait was mapped by the SwedAE, 1901–04, under Norden-skjöld. Not: Davies Gilbert Strait, Davis Gilbert Strait.

Gilchrist Aiguilles 53°01'S, 73°20'E

A series of sharp peaks close S of Mount Olsen on Laurens Peninsula, Heard Island. Surveyed by ANARE in 1948. Named by ANCA for Dr. A.R. Gilchrist, ANARE medical officer on Heard Island in 1948 and 1963.

Gilchrist Beach 53°02'S, 73°36'E

A rocky beach, 1 mi long, lying W of Compton Glacier on the N side of Heard Island. This feature was known to American sealers as Rocky Beach, as shown by an unpublished sealer's map of "Hurds Island" compiled during the 1860–70 period. The name Stoney Beach was also in use during this period. The name Gilchrist Beach, as applied by the ANARE during its 1948 survey of the island, is now established in usage. Dr. Alan R. Gilchrist served as medical officer with the ANARE party. Not: Rocky Beach, Stoney Beach.

Gilchrist Glacier 66°07'S, 114°06'E

A short channel glacier flowing to Budd Coast 9 mi NW of Fox Glacier. Delineated by G.D. Blodgett (1955) from aerial photographs taken by USN Operation Highjump (1946–47). Named by US-ACAN after Dr. Edward Gilchrist, Acting Surgeon on the sloop *Vincennes* during the USEE (1838–42) under Lt. Charles Wilkes.

Giles, Mount 75°09'S, 137°37'W

A mainly snow-covered mountain (820 m) located 5 mi SSE of Lynch Point on the coast of Marie Byrd Land. The mountain is the highest elevation on the divide between the seaward ends of Frostman Glacier and Hull Glacier. Discovered on aerial flights from the West Base of the USAS in 1940, and named for Walter R. Giles technical sergeant, USMC, copilot and radio operator on some of these flights. Not: Mount Carrol Kettering.

Gill Bluff 76°14'S, 112°33'W

A rock bluff on the NW side of Mount Takahe, in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Allan Gill, aurora researcher at Byrd Station in 1963.

Gillespie Glacier 85°11'S, 175°12'W

A small tributary glacier just SW of Mount Kenyon, descending the W slopes of the Cumulus Hills to enter Shackleton Glacier. Named by US-ACAN for Lester F. Gillespie, USARP meteorologist at South Pole Station, winter 1962.

Gillet, Mount 72°34'S, 31°23'E

Mountain, 2,460 m, standing close N of Mount Van der Essen in the Belgica Mountains. Discovered by the BelgAE, 1957–58, under G. de Gerlache, who named it for Charles Gillet, a patron of the expedition.

Gillett Ice Shelf 69°35'S, 159°42'E

A narrow ice shelf occupying an indentation of the coast off the Wilson Hills between the peninsula containing the Holladay Nunataks and the Anderson Peninsula. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Capt. Clarence R. Gillett, USCG, who served on the USCGC *Burton Island* and participated in several Deep Freeze operations, Dec. 1966 to May 1970.

Gillett Nunataks 75°48'S, 114°43'W

Two mainly snow-covered nunataks at the E end of Spitz Ridge and the Toney Mountain massif, Marie Byrd Land. Mapped by

USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Richard D. Gillett, RM1, USN, Radioman at South Pole Station, 1974.

Gilliamsen Peak 71°51'S, 70°20'W

A peak (c. 650 m) at the SE end of the Staccato Peaks (q.v.) in the S portion of Alexander Island. The peak was photographed from the air by Lincoln Ellsworth in 1935. Named by US-ACAN after Lt. Cdr. Donald A. Gilliamsen, USN, aircraft pilot, Squadron VXE-6, Operation Deep Freeze, 1969 and 1970.

Gillick Rock 75°36'S, 129°12'W

An isolated rock nunatak lying at the NW end of the McCuddin Mountains, 8 mi N of the summit of Mount Flint. Mapped by USGS from ground surveys and U.S. Navy tricamera aerial photographs, 1959–66. Named by US-ACAN for Lt. Thomas L. Gillick, USNR, helicopter pilot who flew close support for USARP scientists during Deep Freeze 1970 and 1971.

Gillies Islands 66°32'S, 96°25'E

Three small, rocky islands protruding above Shackleton Ice Shelf 3 mi N of Cape Moyes. Discovered by the Western Base Party of the AAE under Mawson, 1911–14, and named for F.J. Gillies, chief engineer of the ship *Aurora*. Astronomical control was established on the central island by USN OpWml personnel in January 1948. Not: Gillies Nunataks.

Gillies Nunataks: see Gillies Islands 66°32'S, 96°25'E

Gillies Rock 83°07'S, 54°45'W

An isolated rock lying 6 mi N of Mount Dasinger in northern Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Betty Gillies, ham radio operator of San Diego, CA, who for several seasons from 1960–70 arranged phone patches for members of USGS field parties in the Thiel Mountains, Pensacola Mountains, and elsewhere in Antarctica.

Gillmor, Mount 70°28'S, 159°46'E

A largely ice-free mountain (2,185 m) at the S side of the head of Svendsen Glacier, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–62. Named by US-ACAN for C. Stewart Gillmor, U.S. Exchange Scientist (ionospheric physics) at the Soviet Mirnyy Station in 1961.

Gillockbreen: see Gillock Glacier 72°00'S, 24°08'E

Gillock Glacier 72°00'S, 24°08'E

Glacier 5 mi long, flowing N from Mount Walnum to the W of Smalegga Ridge, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named for Lt. Robert A. Gillock, USN, navigator on USN OpHjp photographic flights in this area and other coastal areas between 14° and 164° East. Not: Gillockbreen.

Gillock Island 70°26'S, 71°52'E

An ice-covered island, 20 mi long and 2 to 6 mi wide, with numerous rock outcrops exposed along its flanks. It is aligned north-south and lies in the eastern part of Amery Ice Shelf. Delineated in 1952 by John H. Roscoe from air photos taken by USN Operation Highjump (1946–47). Named by him for Lt. Robert A. Gillock, USN, navigator on Operation Highjump

photographic flights over this and other coastal areas between 14° and 164° East longitude.

Gilmour, Mount 76°56'S, 144°40'W

Mountain 4 mi SE of Mount Passel in the Ford Ranges of Marie Byrd Land. Discovered in 1940 by members of West Base of the USAS. Named for Harold P. Gilmour, recorder, and subsequently historian and administrative assistant to the expedition commander.

Gilruth, Mount 71°44'S, 168°48'E

A mostly ice-covered mountain (3,160 m) 4.5 mi ENE of Mount Adam in the Admiralty Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Robert R. Gilruth of the National Aeronautics and Space Administration, a visitor at McMurdo Station, 1966–67.

Gin Cove 64°03'S, 58°25'W

A cove indenting the NW coast of James Ross Island to the N of Tumbledown Cliffs. In association with the names of other alcoholic spirits on this coast, named Gin Cove by the UK-APC in 1983. Not: Bahía Villar Fabre, Caleta Falcon.

Ginger Islands 67°45'S, 68°42'W

Group of islands lying W of Cape Alexandra, off the S end of Adelaide Island. Surveyed by the RN Hydrographic Survey Unit, 1962–63. Named by the UK-APC for Kenneth Ginger, Civil Hydrographic Officer responsible for British Admiralty charts of the Antarctic for a number of years beginning in 1958. The largest of the islands appears reddish when free of snow.

Giovanni Peak 70°02'S, 71°22'W

Peak rising to c. 500 m at the S end of Debussy Heights, above Mozart Ice Piedmont in the N part of Alexander Island. First mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by UK-APC in association with the ice piedmont after Mozart's opera *Don Giovanni*.

Giovinco Ice Piedmont 84°01'S, 176°10'E

An ice piedmont, 10 mi wide, between Canyon Glacier and Perez Glacier, gradually descending N to the Ross Ice Shelf. Named by US-ACAN for F.A. Giovinco, Master of the USNS *Pvt. John R. Towle* during USN OpDFrz 1965.

Giovinetto, Mount 78°16'S, 86°10'W

The summit of a buttress-type mountain (4,090 m) located 2 mi N of Mount Ostenson in the main ridge of the Sentinel Range, Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse party, 1957–58, and named for Mario B. Giovinetto, glaciologist at Byrd Station in 1957.

Gipps Ice Rise 68°46'S, 60°56'W

A roughly elliptical ice rise, 10 mi long and bounded by an ice cliff on all sides, lying at the edge of Larsen Ice Shelf about 35 mi NE of Hearst Island. The feature was discovered by William R. MacDonald of USGS, Dec. 18, 1966, while on a photographic mapping mission of this area aboard a Super Constellation aircraft crewed by the U.S. Navy VXE-6 Squadron. The ice rise was first mapped from these photos by USGS. The name was proposed by UK-APC for Derek R. Gipps, Senior Executive Officer with BAS, 1961–73.

Giralt, Cabo: see Shirreff, Cape 62°27'S, 60°47'W

Girard Bay 65°08'S, 64°00'W

Bay 2 mi long and 1 mi wide, indenting the W coast of Graham Land between Cape Cloos and Mount Scott. Discovered by the BelgAE, 1897–99. Named by the FrAE, 1903–05, under Charcot, for Jules Girard of the Paris Société de Géographie.

Girdler Island 66°00'S, 65°39'W

Small island at the S side of Mutton Cove, lying 0.1 mi SW of Cliff Island and 8 mi W of Prospect Point, off the W coast of Graham Land. Charted and named by the BGLE, 1934–37, under Rymill.

Giró Nunatak 82°13'S, 42°02'W

A nunatak 4 mi NW of Vaca Nunatak in the Panzarini Hills portion of the Argentina Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–67. Named by US-ACAN for Capt. G.A. Giró, Argentine officer in charge of General Belgrano Station, winter 1965.

Gist, Mount 67°21'S, 98°54'E

A mountain 8 mi NW of Mount Strathcona near the head of Denman Glacier. Mapped from aerial photographs taken by USN Operation Highjump (1946–47), and named by US-ACAN for Lt. Francis J. Gist, USN, co-pilot and navigator on Operation Highjump photographic flights over this and other coastal areas between 14° and 164° East.

Giza Peak 71°20'S, 68°16'W

A peak rising to c. 600 m on the E side of the Fossil Bluff massif, Alexander Island. For many years this peak was known to BAS workers as "Sphinx," a name already in use. To avoid duplication, the UK-APC in 1987 applied the name Giza Peak to this feature in reference to the site of the colossal statue at El Giza, Egypt.

Gjeita, Mount 68°12'S, 58°14'E

The highest peak in the Hansen Mountains, about 3 mi E of Brusen Nunatak. Mapped and named by Norwegian cartographers working from air photos taken by the Lars Christensen Expedition, 1936–37. Not: Banfield Mount.

Gjelbreen: see Gjel Glacier 71°53'S, 24°55'E

Gjel Glacier 71°53'S, 24°55'E

Glacier, 17 mi long, flowing N between the steep cliffs of Luncke Range and Meljell Mountain, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Gjelbreen (the ravine glacier). Not: Gjelbreen.

Gjelstad Pass 54°17'S, 36°57'W

Pass through the W part of the Allardyce Range of South Georgia, between Mount Corneliussen and Smillie Peak. It is the only pass yet discovered which gives access overland to the area S of the Allardyce Range. Surveyed by the SGS in the period 1951–57. Named by the UK-APC for A. Gjelstad, Norwegian engineer and factory owner, who between 1926 and 1932 invented various devices of great practical value to the whaling industry, including the "whale-claw," an apparatus for grasping the tails of whales for hauling them up the slipways of factory ships.

Gjelsvikfjella: see Gjelsvik Mountains 72°09'S, 2°36'E

Gjelsvik Mountains 72°09'S, 2°36'E

A group of mountains about 25 mi long, between the Sverdrup and Mühlig-Hofmann Mountains in Queen Maud Land. First photographed from the air and roughly plotted by the GerAE (1938–39). Mapped in detail by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59). Named for Tore Gjelsvik, Director of Norsk Polarinstittutt. Not: Gjelsvikfjella.

Gjelsvik Peak 85°19'S, 168°00'W

A peak, 3,660 m, standing 2.5 mi NW of Mount Fridtjof Nansen, in the Queen Maud Mountains. Named by the Southern Party of the NZGSAE (1961–62) for Tore Gjelsvik, Director of the Norsk Polarinstittutt, Oslo.

Gjertsen, Mount 86°40'S, 148°27'W

A mountain, 2,420 m, standing 2 mi NE of Mount Grier in the La Gorce Mountains, Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and so named in an attempt to reconcile Byrd's discoveries with the names applied by Roald Amundsen in 1911–12. Amundsen had named a mountain in the general vicinity for Lt. Hj.F. Gjertsen of the Norwegian Navy, who was second mate on Amundsen's ship *Fram* and later ice pilot for the ByrdAE, 1933–35. Not: Mount F. Gjertsen.

Gjertsen Promontory 86°38'S, 148°32'W

A low but sharply rising promontory at the extremity of the spur trending N from Mount Gjertsen, in the La Gorce Mountains. The feature was mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by NZGSAE, 1969–70, in association with Mount Gjertsen.

Gjeslingene: see Gosling Islands 60°39'S, 45°55'W

Glacial Bay: see Lednikov Bay 66°34'S, 92°22'E

Glaciar, Morro: see Glacier Bluff 62°32'S, 59°48'W

Glacier Bight 71°48'S, 99°45'W

An open embayment about 22 mi wide, indenting the N coast of Thurston Island between Hughes and Noville Peninsulas. First delineated from air photos taken by USN OpHjp in December 1946. Named by US-ACAN for the icebreaker USS *Glacier* the first ship ever to make its way to this coastal area, in February 1960. Not: Glacier Roads.

Glacier Bluff 62°32'S, 59°48'W

Ice cliff 30 m high, forming the N side of the entrance to Yankee Harbor, Greenwich Island, in the South Shetland Islands. Charted and named in 1935 by DI personnel on the *Discovery II*. Not: Morro Glaciar.

Glacier Bluff: see Trulla Bluff 59°02'S, 26°31'W

Glacier Dome: see McLeod Hill 68°05'S, 66°30'W

Glacier Point 54°07'S, 37°08'W

Point lying E of Assistance Bay at the head of Possession Bay, South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Glacier Roads: see Glacier Bight 71°48'S, 99°45'W

Glacier Strait 73°25'S, 169°24'E

A north-south trending strait off the coast of Victoria Land in the western Ross Sea, situated between Coulman Island on the east and Cape Jones, Borchgrevink Glacier Tongue and Mariner Glacier Tongue on the west. The name honors the USS *Glacier* which in February 1965 was the first vessel to navigate the strait, and is also in conjunction with the significant presence of the two large glacier tongues. The name was proposed by M.R.J. Ford, New Zealand surveyor who was aboard the *Glacier* in February 1965.

Glaciologist Bay 71°14'S, 5°30'W

An ice-filled bay about 25 mi long in the SW part of Jelbart Ice Shelf along the coast of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Glasiologbukta (the glaciologist bay). Not: Glasiologbukta.

Glade Bay 73°56'S, 115°20'W

An open triangular-shaped bay in Amundsen Sea, 30 mi wide at the broad N entrance and defined by the angle formed by the N part of Wright Island, the front of Getz Ice Shelf, and the NW side of Murray Foreland, Martin Peninsula, on the Bakutis Coast, Marie Byrd Land. Mapped by USGS from surveys and USN aerial photographs, 1959–67. Named by US-ACAN after Cdr. Gerald L. Glade, USN, helicopter pilot in USS *Atka* on USN OpDFrz, 1956–57; Deputy Commander, Naval Support Force, Antarctica, 1975–76.

Glandaz, Cape: see Glandaz Point 65°05'S, 63°59'W

Glandaz Point 65°05'S, 63°59'W

Point forming the S side of the entrance to Deloncle Bay, on the W coast of Graham Land. Discovered by the BelgAE, 1897–99. Charted by the FrAE, 1903–05, and named by Charcot for A. Glandaz. Not: Cape Glandaz.

Glasgal Island 66°12'S, 110°23'E

Small island which marks the SW extremity of Donovan Islands in Vincennes Bay. First mapped from air photos taken by USN OpHjp, 1946–47, and observed in 1957 by Wilkes Station personnel under C.R. Eklund. Named by Eklund for Ralph Glasgal, auroral scientist with the US-IGY wintering party of 1957 at Wilkes Station.

Glasgow, Mount 71°08'S, 162°55'E

A mountain, 2,490 m, standing 4 mi NW of Mount Webb in the Explorers Range of the Bowers Mountains. Named by NZGSAE, 1967–68, for J. Glasgow, field assistant with the expedition.

Glashaugen Hill 72°12'S, 27°24'E

Small rocky hill 2 mi N of Blektskoltane Rocks, near the head of Byrdreen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN. OpHjp, 1946–47, and named Glashaugen (the glass hill).

Glasiologbukta: see Glaciologist Bay 71°14'S, 5°30'W

Glass Point 61°56'S, 58°12'W

Point 4.5 mi SW of False Round Point on the N coast of King George Island, South Shetland Islands. Named by the UK-APC in 1960 for R.H. Glass, Master of the *Francis Allyn* from New London, CT, who visited the South Shetland Islands in 1873–75

and 1877–79. In 1877–78 he rescued from Potter Cove the sole survivor of the sealing crew from the *Florence*.

Gleadell, Mount 66°57'S, 50°27'E

A nearly conical ice-free peak, 560 m, the highest summit on the headland just N of Observation Island at the E side of Amundsen Bay. Sighted in October 1956 by an ANARE party under P.W. Crohn, and named for Geoffrey Gleadell, cook at Mawson Station in 1954.

Gleaner Heights 62°35'S, 60°15'W

A series of elevations extending SW from Leslie Hill in the E part of Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 after the American brig *Gleaner* (Capt. David Leslie), a whaler from New Bedford, MA, which was diverted to sealing in the South Shetland Islands in 1820–21.

Gleaton, Mount 72°11'S, 168°27'E

A mountain (2,130 m) that overlooks Tucker Glacier from the north, standing near the end of the ridge just north of Helman Glacier, in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Clarence E. Gleaton, Chief Warrant Officer, USA, helicopter pilot in support of the USGS Topo North-South survey of this area, 1961–62.

Glee Glacier 78°16'S, 163°00'E

A small glacier enclosed by the two arms of Dismal Ridge, flowing eastward to Roaring Valley. It was given this name because of the feeling inspired by occasional sightings of the glacier made through the mists of Dismal Ridge, as it afforded a means of orientation in conditions of otherwise blind navigation. Named by the New Zealand VUWAE, 1960–61.

Gleeson, Mount 71°15'S, 66°09'E

A mountain peak with a rock ridge extending SE for 2 mi, situated about 6 mi W of Mount Woinarski in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for T.K. Gleeson, weather observer at Wilkes Station in 1965.

Glen Glacier 80°44'S, 25°16'W

Glacier at least 7 mi long, flowing S in the Shackleton Range to join Recovery Glacier to the W of Read Mountains. First mapped in 1957 by the CTAE and named for Alexander R. Glen, member of the Committee of Management of the CTAE, 1955–58.

Glen Peak 66°46'S, 67°24'W

A peak on the N end of Liard Island in Hanusse Bay. Mapped from air photos obtained by RARE (1947–48) and FIDASE (1956–57). Named by UK-APC for John W. Glen, British physicist who has made laboratory investigations on the flow of single and polycrystalline ice.

Glenzer Glacier 65°58'S, 103°15'E

A glacier 5 mi W of Conger Glacier, draining northward from Knox Coast into the E part of Shackleton Ice Shelf. Mapped by G.D. Blodgett (1955) from air photos taken by USN Operation Highjump (1946–47). Named by US-ACAN for Lt. (j.g.) Hubert Glenzer, Jr., pilot with USN Operation Windmill (1947–48), who assisted in operations resulting in the establishment of astronomical control stations along the coast from Wilhelm II Coast to Budd Coast.

Gless Peak 72°12'S, 165°51'E

A peak, 2,630 m, standing 2 mi WSW of Cirque Peak, in the Millen Range. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Elmer E. Gless, biologist at Hallett Station, summers 1965–66, 1966–67 and 1967–68.

Gletcher-Joch: see Ross Pass 54°32'S, 36°15'W

Glimpse Glacier 78°16'S, 162°46'E

An alpine glacier composed of two segments, separated by an icefall, which flow NE from névé in the area between Mount Kempe and Mount Huggins. It joins the Pipecleaner Glacier 2 mi S of the confluence of the latter with the Radian Glacier. So named by the VUWAE, 1960–61, because it was up this glacier that the geologists traversed to the Koettlitz-Skelton divide at the ridge crest in order to gain their only glimpse of the polar plateau in January 1961.

Glinka Islands 69°23'S, 72°17'W

Small group of rocky islands in Lazarev Bay, immediately E of Rothschild Island. First photographed from the air by the USAS, 1939–41. Mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by the UK-APC for Michael Ivanovich Glinka (1803–57), Russian composer.

Gliozzi Peak 80°01'S, 81°31'W

A peak, 1,475 m, standing 3 mi S of Plummer Glacier in the Douglas Peaks, Heritage Range. Named by US-ACAN for James Gliozzi, glaciologist on the USARP South Pole-Queen Maud Land Traverse I, 1964–65.

Glitrefonna Glacier 71°57'S, 25°33'E

Glacier at the N side of Mount Bergersen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Glitrefonna (the glitter glacier).

Globus, Mount 54°19'S, 37°00'W

Mountain, 1,270 m, between Fanning Ridge and Mount Corneliusen at the W end of the Allardyce Range of South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Hvalfangerselskapet "Globus" A/S, a Norwegian whaling company founded in 1924, which first used the plan patented by Petter Sørille for processing whales in a factory ship fitted with a slipway.

Glopeflya Plain 72°07'S, 10°25'E

A narrow, ice-covered plain between the eastern part of the Orvin Mountains and the interior ice plateau which rises close southward, in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Glopeflya (the ravine plateau).

Glopeneset 72°11'S, 10°00'E

A mainly ice-covered promontory at the S side of Glopeflya Plain and the Orvin Mountains in Queen Maud Land. First photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Glopeneset (the ravine promontory).

Glopenesranen Nunatak 72°08'S, 10°01'E

A nunatak surmounting the N end of Glopeneset at the S side of Glopeflya Plain in Queen Maud Land. Photographed from the air

by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Glopnesranen (the ravine promontory point). Not: Skaly Vitkovskogo.

Glossopteris, Mount 84°44'S, 113°43'W

A mainly ice-covered mountain (2,865 m), which may be identified by the exposed horizontal bedding on the N face, located at the NE end of Buckeye Table, Ohio Range. The name was proposed by USARP geologist William Long, a member of the Horlick Mountains Traverse party 1958–59, who, with Charles Bentley, Frederic Darling and Jack Long, climbed to the summit in Dec. 1958. *Glossopteris* is a prehistoric fernlike plant whose imprint was found on rocks of this mountain.

Glossopteris Gully 70°51'S, 68°06'E

A steep-sided, narrow gully on the E side of Bainmedart Cove, Radok Lake, in the Prince Charles Mountains. A three-man ANARE party camped near the mouth of the gully for a month in Jan.-Feb., 1969. Named by ANCA after the *glossopteris* fossil plant found in the upper part of the gully.

Glover Hills 76°41'S, 161°40'E

The prominent hills separating Atka Glacier and Baxter Glacier in the Convoy Range, Victoria Land. Named by the 1976–77 VUWAE, led by Christopher J. Burgess, after Dennis J.M. Glover (1912–82), New Zealand writer, publisher and poet.

Glover Rocks 67°46'S, 68°54'W

Group of rocks lying NW of Avian Island, off the S end of Adelaide Island. Named by the UK-APC for John F. Glover, 3rd Engineer of RRS *John Biscoe* (1962–63), the ship assisting the RN Hydrographic Survey Unit which charted the feature in 1963.

Glowa, Mount 75°27'S, 73°17'W

A prominent mountain 8 mi W of Mount Hirman in the Behrendt Mountains, Ellsworth Land. Discovered and photographed from the air by the RARE, 1947–48, under Finn Ronne. Named by Ronne for Col. L. William Glowa, aide to Gen. Curtis LeMay at the time RARE was organized, who assisted in obtaining support for the expedition.

Gløymdehorten Nunatak 72°07'S, 12°11'E

A nunatak on the W side of Horteriset Dome, just W of the Weyprecht Mountains in Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Gløymdehorten. Not: Gora Otdel'naya.

Glubokoye, Lake 67°40'S, 45°52'E

A small lake situated just E of Lake Lagernoye and Molodezhnaya Station in the Thala Hills, Enderby Land. Mapped and named "Ozero Glubokoye" (deep lake) by the SovAE, 1961–62.

Glubokoye, Ozero: see Profound Lake 62°11'S, 58°55'W

Gluck Peak 71°42'S, 72°41'W

Rock peak, 335 m, located 6.5 mi SSW of Mount Borodin on Beethoven Peninsula, Alexander Island. First mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by UK-APC after Christoph Willibald von Gluck (1714–87), Austrian composer.

Gluvreklettreen: see Gluvreklett Glacier 72°14'S, 2°35'E

Gluvrekletten Peak 72°12'S, 2°32'E

A peak, 2,200 m, between Terningskarvet Mountain and Nupskammen Ridge in the Gjelsvik Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and the Norwegian expedition (1958–59) and named Gluvrekletten.

Gluvreklett Glacier 72°14'S, 2°35'E

Glacier flowing NW between Von Essen Mountain and Terningskarvet Mountain in the Gjelsvik Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and photos by NBSAE (1949–52) and the Norwegian expedition (1958–59) and named Gluvreklettreen. Not: Gluvreklettreen.

Gneiskopf Peak 71°56'S, 12°07'E

A peak (2,930 m) rising 5 mi SW of Mount Neustruyev at the southern end of Südliche Petermann Range, in the Wohlthat Mountains of Queen Maud Land. Discovered and given the descriptive name Gneiskopf (gneiss peak) by the GerAE, 1938–39, under Ritscher. Not: Gneisskolten.

Gneiss Hills 60°44'S, 45°39'W

Two prominent hills, 270 m and 260 m, at the W side of McLeod Glacier in the S part of Signy Island, in the South Orkney Islands. So named by the FIDS, following their survey of 1947, because of a band of pink gneiss outcrops near the summits.

Gneisskolten: see Gneiskopf Peak 71°56'S, 12°07'E

Gneiss Lake 60°44'S, 45°39'W

Small lake on the W side of Gneiss Hills (q.v.) in the S portion of Signy Island, South Orkney Islands. The lake is permanently ice covered and is visible only in summer when melting occurs at the perimeter. Named in 1981 by the UK-APC in association with the hills.

Gneiss Point 77°24'S, 163°44'E

Rocky point 2 mi N of Marble Point, on the coast of Victoria Land. First mapped by the BrAE (1910–13) under Scott and so named because of gneissic granite found here.

Gneysovaya Peak 71°33'S, 12°10'E

A peak, 2,050 m, on the ridge connecting Krakken Mountain and Sandseten Mountain in the Westliche Petermann Range, Wohlthat Mountains. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named Gora Gneysovaya (gneiss mountain).

Gniewek, Mount 79°20'S, 158°55'E

Conspicuous ice-covered flat-topped mountain, 2,060 m, standing at the N side of Carlyon Glacier, 6 mi SW of Mount Keltie. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for John J. Gniewek, geomagnetician at Little America V, 1958.

Gnome Island 67°33'S, 66°50'W

Rocky island lying between the E end of Blaiklock Island and Thomson Head near the head of Bourgeois Fjord, off the W coast of Graham Land. First surveyed in 1949 by the FIDS, and so named by them because of the resemblance of the island to a small gnomelike creature rising from the sea. Not: Islote Gnomo.

Gnomo, Islote: see Gnome Island 67°33'S, 66°50'W

Gnomon Island 61°05'S, 54°52'W

Small rocky island lying just N of Point Wild, Elephant Island, South Shetland Islands. Charted and named by the Shackleton *Endurance* expedition, 1914–16. So named because when viewed from Point Wild the shape of the feature is suggestive of the elevated arm of a sundial.

Goat Hull Harbour: see Godthul 54°17'S, 36°18'W

Goat Mountain 77°55'S, 163°50'E

Peak, 1,640 m, standing W of Hobbs Glacier between Hobbs Peak and Mount Kowalczyk in Victoria Land. Climbed by the VUWAE, 1960–61, and so named by them because a balanced mass of gneiss with a goat-like silhouette protrudes 10 m above the general profile of the southern slope of the mountain.

Gobamme Rock 68°22'S, 41°56'E

An exposed rock standing on the coast between Kozō Rock and Byobu Rock in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, and named Gobamme-iwa (checker-board rock). Not: Gobamme Rock.

Gobamme Rock: see Gobamme Rock 68°22'S, 41°56'E

Gobey, Mount 72°58'S, 165°15'E

The highest mountain, 3,125 m, in the Retreat Hills, at the S margin of Evans Névé. Climbed on Dec. 26, 1966 by the Northern Party of NZGSAE, 1966–67, who named it for the party's field assistant, D.W. Gobey.

Gockel Ridge 72°42'S, 0°12'E

A ridge extending from Alan Peak to Nupskåpa Peak at the S end of the Sverdrup Mountains. The name "Gockel-Kamm" after Wilhelm Gockel, meteorological assistant on the expedition, was given to a ridge in the area by the GerAE (1938–39) under Alfred Ritscher. The correlation of the name with this ridge may be arbitrary but is recommended for the sake of international uniformity and historical continuity.

Goddard Hill: see Bynon Hill 62°55'S, 60°36'W

Godel Bay: see Godel Iceport 70°09'S, 21°45'E

Godel Iceport 70°09'S, 21°45'E

An iceport about 5 mi wide, which marks a more-or-less permanent indentation in the seaward front of the extensive ice shelf fringing the coast of Queen Maud Land. Named by USN OpDFrz I personnel on the USS *Glacier*, which made a running survey of this coast in March 1956, for William H. Godel, deputy director of the Office of Special Operations, Dept. of the Navy, who assisted in formulating expedition plans and policy. Not: Godel Bay.

Godfrey Upland 68°44'S, 66°23'W

A small remnant plateau with an undulating surface and a mean elevation of 1,500 m in south-central Graham Land. It is bounded by Clarke, Meridian, Lammers and Cole Glaciers. The existence of the feature was known to USAS, 1939–41, F. Ronne and C.R. Eklund having traveled along Meridian and Lammers Glaciers in Jan. 1941. It was photographed from the air by RARE in 1947 and surveyed from the ground by FIDS in 1958. Named by UK-APC after Thomas Godfrey (1704–49), American glassworker and mathematician who, at the same time as John Hadley, independ-

dently invented the quadrant (the forerunner of the sextant), in 1730.

Godfroy Point 65°10'S, 64°10'W

Point which marks the N extremity of Petermann Island, in the Wilhelm Archipelago. Discovered by the FrAE, 1908–10, and named by Charcot for René Godfroy, sub-lieutenant on the *Pourquoi-Pas?*, who was responsible for the expedition's study of tides and the atmosphere.

Godthul 54°17'S, 36°18'W

Bay 1 mi long entered between Cape George and Long Point, on the N coast of South Georgia. The name Godthul (Good Hollow) dates back to the period 1905–12, and was probably applied by Norwegian sealers and whalers working in the area. Not: Cape George Harbour, Goat Hull Harbour, Godt Hul Harbour, Godthul Bay, Godt Hull Harbour, Goothul.

Godthul Bay: see Godthul 54°17'S, 36°18'W

Godt Hul Harbour: see Godthul 54°17'S, 36°18'W

Godt Hull Harbour: see Godthul 54°17'S, 36°18'W

Goepfert Bluff 74°38'S, 110°19'W

A bluff at the E end of Grimes Ridge, Bear Peninsula, on the Walgreen Coast, Marie Byrd Land. Mapped by USGS from USN aerial photographs taken in 1966. Named by US-ACAN in 1977 after Lt. Eric R. Goepfert, USN, officer in charge of the NSFA winter detachment at McMurdo Station, 1976.

Goetschy Island 64°52'S, 63°31'W

Low rocky island lying near the middle of Peltier Channel in the Palmer Archipelago. First charted and named by the FrAE under Charcot, 1903–05. Not: Islote Grillete, Priest Island.

Goettel Escarpment 70°14'S, 66°55'W

A prominent escarpment buttressing the Dyer Plateau located 5 mi N of Orion Massif and near the head of Chapman Glacier in Palmer Land. Named by US-ACAN for Capt. Frederick A. Goettel, USCG, Commanding Officer of USCGC *Westwind*, in support of construction of the new Palmer Station, during Operation Deep Freeze, 1967.

Goldcrest Point 54°00'S, 38°05'W

The NW point of Bird Island, South Georgia. Charted by DI personnel on the *Discovery* in the period 1926–30 and by the SGS, 1951–57. The point is the site of a large colony of macaroni penguins (*Eudyptes chrysolophus*). The name, given by the UK-APC in 1963, refers to the golden crests of this species.

Goldenberg Ridge 66°28'S, 110°35'E

A linear rocky eminence, 0.8 mi long, which extends in a NW-SE direction along the E side of Browning Peninsula, at the S end of the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Burton D. Goldenberg, meteorologist and member of the Wilkes Station Party of 1962.

Golden Cap 84°20'S, 164°26'E

The highest peak, 2,870 m, on the ridge running NW from Mount Falla, about midway between the latter mountain and Fremouw Peak in Queen Alexandra Range. So named by the Ohio State University party to the Queen Alexandra Range (1966–67)

because the peak consists mainly of a buff-weathering massive sandstone.

Golden Pass 69°23'S, 70°47'W

A snow pass at c. 1,250 m on the N side of Care Heights, Rouen Mountains, Alexander Island. So named from the color of granite on either side of the pass, as reported by BAS parties. Named by UK-APC, 1977.

Gold Harbor 54°37'S, 35°56'W

Small bay 5 mi SSW of Cape Charlotte, with Bertrab Glacier at its head, along the E end of South Georgia. During the early 1900's the feature was variously called Anna's Bay, Gold-Hafen, or Sandwich Bay; the latter name has also been used for Iris Bay (q.v.). The approved name appears to have taken root through common usage by sealers and whalers and is now well established. Not: Anna's Bay, Puerto Oro, Sandwich Bay.

Gold Head 54°36'S, 35°55'W

Headland forming the N entrance point of Gold Harbor on the E coast of South Georgia. The name, which derives from Gold Harbor, was proposed by Cdr. C.J. Gratton, RN, following his survey of the harbor in 1958.

Goldie, Cape 82°38'S, 165°54'E

A cape at the S side of the mouth of Robb Glacier, overlooking the Ross Ice Shelf. Discovered by the BrNAE (1901–04) and named for Sir George Goldie, a member of the committee which made the final draft of the instructions for the expedition.

Goldman Glacier 77°42'S, 162°51'E

Glacier 2 mi E of Marr Glacier, flowing N from the Kukri Hills into Taylor Valley in Victoria Land. Named by the US-ACAN for USARP biologist Charles R. Goldman, who made studies in the area in the 1962–63 season.

Goldring, Mount 66°57'S, 66°01'W

A peak on the N side of Murphy Glacier, to the E of Lallemand Fjord in Graham Land. Mapped from air photos obtained by FIDASE, 1956–57. Named by UK-APC for Denis C. Goldring, FIDS geologist at nearby Detaille Island, 1957–59.

Goldschmidt, Cape 80°41'S, 161°12'E

A low ice-covered cape forming the eastern tip of Nicholson Peninsula, at the W side of the Ross Ice Shelf. Named by the NZGSAE (1960–61) for Donald R. Goldschmidt, a member of the NZGSAE parties of 1959–60 and 1960–61 which mapped this area.

Goldschmidt Cirque 80°44'S, 22°48'W

A cirque at the W side of Trueman Terraces in the E portion of the Read Mountains, Shackleton Range. Photographed from the air by the U.S. Navy, 1967. Surveyed by the BAS, 1968–71. In association with the names of geologists grouped in this area, named by the UK-APC after Victor M. Goldschmidt (1888–1947), Norwegian geochemist and pioneer in the field of crystal chemistry.

Goldsmith Glacier 78°56'S, 27°42'W

Glacier flowing WNW through the Theron Mountains 6 mi S of Tailend Nunatak. First mapped in 1956–57 by the CTAE and named for Rainer Goldsmith, medical officer with the advance party of the CTAE in 1955–56.

Goldstream Peak 86°41'S, 148°30'W

A peak rising to c. 2,800 m at the junction of ridges from Mount Gjertsen, Mount Grier, and Johansen Peak, in the La Gorce Mountains. The peak was geologically mapped by a USARP-Arizona State University field party, 1980–81, and named by Edmund Stump, leader of the party. The name derives from a contact between shallow intrusions on the W face of the peak, which has produced gold, yellow, and brown coloration along a meandering line.

Goldsworthy Ridge 67°41'S, 63°03'E

Ridge extending N from Mount Henderson in the NE part of the Framnes Mountains, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Named by ANCA for R.W. Goldsworthy, survey field assistant with ANARE (*Nella Dan*) in 1962.

Goldthwait, Mount 77°59'S, 86°03'W

Prominent mountain (3,815 m) located 2.5 mi S of Mount Dalrymple in the Sentinel Range, Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party, 1957–58, and named for Richard P. Goldthwait, consultant, Technical Panel on Glaciology, U.S. National Committee for the IGY, and later Director, Institute of Polar Studies, Ohio State University.

Golubaya Bay 69°58'S, 9°50'E

A bay in the SE extremity of Kamenev Bight, along the ice shelf fringing the coast of Queen Maud Land. The bay was photographed from the air by NorAE in 1958–59 and was mapped from these photos. It was also mapped in 1961 by the SovAE who named it Bukhta Golubaya (azure bay).

Goly, Ostrov: see Birkenhauer Island 66°29'S, 110°37'E

Gómez, Monte: see Buddington Peak 62°12'S, 58°49'W

Gomez Nunatak 73°57'S, 68°38'W

Isolated nunatak 40 mi SW of Mount Vang, surmounting the interior ice plateau near the base of Antarctic Peninsula. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Jose M. Gomez, mechanic with the Eights Station winter party in 1965.

Gommen Valley 73°53'S, 5°17'W

An ice-filled valley between Tunga Spur and Kuven Hill, near the SW end of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and additional air photos (1958–59), and named Gommen (the gum).

Gondola Nunakol: see Gondola Ridge 77°01'S, 161°45'E

Gondola Ridge 77°01'S, 161°45'E

High rocky ridge just S of Mackay Glacier, extending NE from Mount Suess for about 4 mi in Victoria Land. Charted by the Western Geological Party of the BrAE (1910–13) who so named it because Mount Suess, to which the ridge is joined, resembles a gondola in shape. Not: Gondola Nunakol.

Gonville and Caius Range 77°07'S, 162°15'E

A range of peaks, 1,000 to 1,500 m, between Mackay Glacier and Debenharn Glacier in Victoria Land. First mapped by the BrAE (1910–13) under Scott. Named for Gonville and Caius College, of

Cambridge University, the alma mater of several members of the expedition.

Gony Point 54°00'S, 38°01'W

High tussock-covered point 0.5 mi SW of Cardno Point, on the SE side of Bird Island, South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC in 1963. Gony (also spelled gooney) is an old sailors' name for the wandering albatross (*Diomedea exulans*), which breeds on Bird Island. Not: Cliff Point.

González, Mount 77°11'S, 144°33'W

A prominent mountain 1 mi E of Asman Ridge in the Sarnoff Mountains, Ford Ranges, Marie Byrd Land. Mapped by USAS (1939–41) and by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN after Oscar González, geologist, Universidad de Chile, a member of the USARP Marie Byrd Land Survey 11, 1967–68.

González Albarracín, Montaña: see Brading, Mount 64°17'S, 59°17'W

González Anchorage 63°19'S, 57°56'W

An anchorage in the Duroch Islands on the W side of Kopaitic Island. The anchorage was charted by the Chilean Antarctic Expedition of 1948, which gave the name after Capitán de Fragata Ernesto González Navarrete, the commander of the expedition. Not: Tenedero Gonzalez.

González Island 62°29'S, 59°40'W

Small island on the S side of the entrance to Iquique Cove, Discovery Bay, Greenwich Island, in the South Shetland Islands. On its W side this island is linked to a smaller island by a spit which is covered only at high tides. The island was charted by the Chilean Antarctic Expedition of 1947, commanded by Capitán de Navío Federico Guesalaga Toro, which named it after Ernesto González Navarrete, captain of the ship *Iquique* on the expedition.

Gonzalez Videla, Bahía: see Patagonia Bay 64°27'S, 63°12'W

Goodale, Mount 85°45'S, 157°43'W

A mountain with double summits, 2,420 m and 2,570 m, standing 6 mi SE of Mount Thorne in the Hays Mountains of the Queen Maud Mountains. Discovered in December 1929 by the ByrdAE geological party under Laurence Gould, and named by Byrd after Edward E. Goodale, a member of that party. From 1959 to 1968 Goodale served as USARP Representative in Christchurch, New Zealand, and facilitated the passage of thousands of researchers to Antarctica and return.

Goodale Glacier 85°35'S, 156°24'W

A glacier which flows N from Mount Goodale and Mount Armstrong along the W side of Medina Peaks, in the foothills of the Queen Maud Mountains. First seen and mapped by the ByrdAE, 1928–30. Named by US-ACAN in association with Mount Goodale.

Goodall Ridge 71°02'S, 66°50'E

A partly snow-covered rock ridge about 6 mi WSW Taylor Platform in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for A.W. Goodall, diesel mechanic at Macquarie Island in 1962 and Davis Station in 1964.

Goodenough, Cape 66°16'S, 126°10'E

An ice-covered cape marking the W side of the entrance to Porpoise Bay and forming the northernmost projection of Norths Highland. Discovered by BANZARE under Douglas Mawson on an airplane flight in January 1931. Named by Mawson for Admiral Sir William Goodenough, President of the Council, Royal Geographical Society, 1930–33.

Goodenough Glacier 72°00'S, 66°40'W

Broad sweeping glacier to the S of the Batterbee Mountains, flowing from the W shore of Palmer Land into George VI Sound. Discovered in 1936 by Stephenson, Fleming, and Bertram of the BGLE under Rymill, while exploring George VI Sound. Named by Rymill after Margaret Goodenough, wife of Admiral Sir William Goodenough, the latter one of Rymill's principal supporters in raising funds for the expedition. Not: Glaciér Quinteros, Margaret Goodenough Glacier.

Good Glacier 84°12'S, 177°50'E

A wide glacier draining the E slopes of Hughes Range between Mount Brennan and Mount Waterman and flowing NE to enter the Ross Ice Shelf to the E of Mount Reinhardt. Discovered by the USAS on Flight C of February 29–March 1, 1940, and named by US-ACAN, on the recommendation of R. Admiral Richard E. Byrd, for V. Admiral Roscoe F. Good, USN, who furnished assistance and support for USN OpHjp (1946–47).

Goodman, Mount 75°14'S, 72°14'W

A mountain marking the NE extremity of the Behrendt Mountains, in Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN after Alan L. Goodman, aurora scientist at Eights Station in 1963.

Goodman Hills 69°27'S, 158°43'E

A group of coastal hills of about 10 mi extent, rising directly S of Cape Kinsey and between the Paternostro Glacier and Tomilin Glacier. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960–63. Named for Cdr. Kelsey B. Goodman, USN, Plans Officer on the staff of the Commander, Naval Support Force Antarctica, 1969–72; Assistant for Polar Regions in the Office of the Secretary of Defense, 1972–74; Member of the Advisory Committee on Antarctic Names, U.S. Board on Geographic Names, 1973–76.

Goodspeed Glacier 77°29'S, 162°27'E

A small hanging glacier on the south wall of Wright Valley, Victoria Land, between the Hart and Denton Glaciers. Named by U.S. geologist Robert Nichols after Robert Goodspeed, geological assistant to Nichols at nearby Marble Point in the 1959–60 field season.

Goodspeed Nunataks 73°00'S, 61°10'E

A group of three rows of nunataks, oriented approximately E-W and 10 to 15 mi long, located at the W end of Fisher Glacier, about 30 mi WNW of Mount McCauley, in the Prince Charles Mountains. Sighted by an ANARE seismic party led by K.B. Mather in January 1958. Named by ANCA after M.J. Goodspeed, geophysicist at Mawson Station in 1957.

Goodwin, Mount 81°16'S, 85°33'W

A rock peak that is the second most prominent summit in the Pirrit Hills. Positioned by the U.S. Ellsworth-Byrd Traverse Party on

Dec. 10, 1958 and named for Robert J. Goodwin, glaciologist with the traverse party.

Goodwin Glacier 65°06'S, 62°57'W

Glacier flowing W into Flandres Bay southward of Pelletan Point on the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for Hannibal Goodwin (1822–1900), American pastor who invented the first transparent nitrocellulose flexible photographic roll-film in 1887.

Goodwin Nunataks 84°38'S, 161°31'E

A small group of isolated nunataks lying about 10 mi W of Marshall Mountains, at the S side of Walcott Névé. Named by US-ACAN after Michael L. Goodwin, USARP geomagnetist and seismologist at South Pole Station, 1960.

Goodwin Peak 85°54'S, 129°11'W

A peak, 2,770 m, standing 3 mi NE of Mount Bolton, at the W side of Haworth Mesa, in the Wisconsin Range. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN after Cdr. Edmund E. Goodwin, Public Affairs Officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, during Operation Deep Freeze 1965 and 1966.

Goorhigian, Mount 75°03'S, 133°46'W

The highest mountain (1,115 m) of the Demas Range, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN after Martin Goorhigian, USARP meteorologist at Byrd Station, 1961.

Goorkha Craters 79°45'S, 159°34'E

A line of snow-free coastal hills 5 mi long, standing 2 mi E of Cooper Nunatak between Carlyon and Darwin Glaciers. Discovered and named by the BrNAE (1901–04).

Goossens, Mount 71°19'S, 35°44'E

A largely bare rock massif (2,200 m) standing next south of Mount Pierre in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960 by the BelgAE, under Guido Derom, who named it for Leon Goossens, photographer of the Belgian party which made reconnoitering aircraft flights in this area.

Goothul: see Godthul 54°17'S, 36°18'W

Gopher Glacier 73°28'S, 94°00'W

A glacier descending from Christoffersen Heights and draining N between Bonnabeau and Anderson Domes, in the Jones Mountains. Mapped and named by the University of Minnesota-Jones Mountains Party, 1960–61. Gopher is the nickname of the University of Minnesota and of the State.

Gordon, Cape 63°51'S, 57°03'W

Jagged headland 330 m high, forming the E end of Vega. Island, lying S of the NE tip of Antarctic Peninsula. Discovered by a British expedition 1839–43, under Ross, and named by him for Capt. William Gordon, RN, a Lord Commissioner of the Admiralty.

Gordon, Mount 67°36'S, 50°17'E

Mountain 6 mi NE of Simpson Peak in the Scott Mountains, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. The name was first applied by John Biscoe in 1831, probably for Lt. Gen. Charles Gordon, brother-in-law of the Enderby Brothers, owners of his vessel. As Biscoe's

feature could not be identified among the many peaks in the area, ANCA applied the name to this feature.

Gordon Bennet, Monte: see Edgell, Mount 69°26'S, 68°16'W

Gordon Bennett, Ile: see Edgell, Mount 69°26'S, 68°16'W

Gordon Glacier 80°17'S, 26°09'W

Glacier at least 24 mi long, flowing N from Crossover Pass through the Shackleton Range to join Slessor Glacier. First mapped in 1957 by the CTAE and named after George P. Pirie-Gordon, member of the Committee of Management and treasurer of the CTAE, 1955–58.

Gordon Nunataks 72°53'S, 63°48'W

A group of nunataks on the S side of Mosby Glacier, near its head, in south-central Palmer Land. Mapped by the USGS from aerial photographs taken by the U.S. Navy, 1966–69. In association with the names of Antarctic oceanographers grouped in this area, named in 1977 by the UK-APC after Arnold L. Gordon, American oceanographer; Professor of Geology, Lamont-Doherty Geological Observatory, Columbia University, New York.

Gordonnuten: see Gordon Peak 72°26'S, 0°32'E

Gordon Peak 72°26'S, 0°32'E

A rock peak marking the NW end of Robin Heights in the Sverdrup Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59). Named for Gordon de Q. Robin, third in command and physicist with the NBSAE. Not: Gordonnuten.

Gordon Valley 84°23'S, 164°00'E

A small valley, the western half of which is occupied by a lobe of ice from Walcott Névé, lying W of Mount Falla in Queen Alexandra Range. Named by US-ACAN after Mark A. Gordon, USARP aurora scientist at Hallett Station, 1959.

Gorecki, Mount 83°20'S, 57°35'W

Mountain, 1,110 m, at the SE extremity of Schmidt Hills in the Neptune Range, Pensacola Mountains. Discovered and photographed on Jan. 13, 1956 on a USN transcontinental nonstop plane flight from McMurdo sound to Weddell Sea and return. Named by US-ACAN for aviation electronics technician Francis Gorecki, radioman of the P2V-2N aircraft making the flight.

Gorev Island 66°32'S, 92°59'E

Small island lying between Buromskiy Island and Poryadin Island in the Haswell Islands. Discovered and mapped by the AAE under Mawson, 1911–14. Remapped by the Soviet expedition of 1956, and named by them for D. Gorev, a member of BrAE, 1910–13, under Scott.

Gorgon Pool 57°04'S, 26°41'W

A lake, or perhaps lagoon, between Chimaera Flats and Kraken Cove in Candlemas Island, South Sandwich Islands. Named by UK-APC in association with nearby Medusa Pool. Gorgon is a mythical creature of Homer's *Illiad*, linked in other mythology with Medusa.

Gorham, Mount 74°03'S, 62°04'W

Mountain just SW of Mount Tricorn in the Hutton Mountains, Palmer Land. Mapped by USGS from ground surveys and USN air

photos, 1961–67. Named by US-ACAN after Charles E. Gorham, builder with the South Pole Station winter party in 1967.

Gorki Ridge 71°37'S, 11°37'E

A ridge about 8 mi long forming the E wall of Schüssel Cirque in the Humboldt Mountains, Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named after Soviet author A.M. Gorki. Not: Khrebet Gor'kogo.

Gor'kogo, Khrebet: see Gorki Ridge 71°37'S, 11°37'E

Gorman, Mount 70°29'S, 64°28'E

A mountain in the N part of Bennett Escarpment, situated just W of Mount Canham and 2 mi S of the W end of Corry Massif, in the Porthos Range of the Prince Charles Mountains. Plotted from ANARE air photos taken in 1965. Named by ANCA after C. Gorman, supervising technician (radio) at Wilkes Station in 1962.

Gorman Crags 71°01'S, 65°27'E

An east-west trending ridge marked by four craggy peaks, about 5 mi E of Husky Dome in the Prince Charles Mountains. Plotted from ANARE photos taken in 1960. Named after C.A.J. Gorman, supervising technician (radio) at Wilkes Station in 1962.

Gornykh Inzhenerov, Skaly: see Gornykh Inzhenerov Rocks 71°32'S, 12°44'E

Gornykh Inzhenerov Rocks 71°32'S, 12°44'E

A group of rocks just S of Deildegasten Ridge in the Östliche Petermann Range, Wohlthat Mountains. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60; remapped by SovAE, 1960–61, and named Skaly Gornykh Inzhenerov (mining engineers rocks). Not: Skaly Gornykh Inzhenerov.

Gorriti, Pico: see Janssen Peak 64°53'S, 63°31'W

Gorriti, Rocas: see Covey Rocks 67°33'S, 67°43'W

Gorochátegui, Cabo: see Wiman, Cape 64°13'S, 56°38'W

Gorton, Mount 70°01'S, 159°15'E

A prominent mountain (1,995 m) located 6 mi WSW of Mount Perez in southern Wilson Hills. Photographed by USN Operation Highjump, 1946–47. The mountain was sighted in 1961 by Phillip Law of ANARE and was positioned by observations from the ship *Magga Dan*. Named by ANCA after Senator J.G. Gorton, Australian Minister for the Navy at that time.

Gosling Islands 60°39'S, 45°55'W

Scattered group of islands and rocks lying close S and W of Meier Point, off the S coast of Coronation Island in the South Orkney Islands. First charted and named "Gestlingen" by Petter Sørille in 1912–13. This was corrected to "Gjeslingene" (the goslings) on a later chart by Sørille. The approved name is an Anglicized form recommended by the UK-APC. Not: Gestlingen, Gjeslingene, Islotes Ansar.

Gossard Channel 66°05'S, 101°13'E

Narrow channel extending in an E-W direction between the Mariner Islands and Booth Peninsula in the central portion of the Highjump Archipelago. Mapped from air photos taken by USN OpHjp, 1946–47, and named by the US-ACAN for G.C. Gossard,

Jr., air crewman on USN OpHjp photographic flights in this area and other coastal areas between 14° and 164° East longitude.

Gossler Islands 64°42'S, 64°22'W

Group of N-S trending islands 3 mi in extent, lying 1.5 mi W of Cape Monaco, Anvers Island, in the Palmer Archipelago. Discovered and named by a German expedition under Dallmann, 1873–74.

Gösta Peaks 72°06'S, 2°44'W

The northeastern peaks of the Liljequist Heights, in the S part of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59). Named for Gösta H. Liljequist, Swedish meteorologist with the NBSAE. Not: Göstapiggane.

Göstapiggane: see Gösta Peaks 72°06'S, 2°44'W

Gothic Mountains 86°00'S, 150°00'W

A group of mountains, 20 mi long, in the Queen Maud Mountains, located W of Watson Escarpment and bounded by Scott Glacier, Albanus Glacier, and Griffith Glacier. The mountains were first visited in December 1934 by the ByrdAE geological party led by Quin Blackburn. The name was proposed by Edmund Stump, leader of a USARP-Arizona State University geological party which made investigations here in the 1980–81 season. The mountains are composed of granites which have weathered to produce a series of spires and peaks reminiscent of a Gothic cathedral.

Gothic Peak 72°01'S, 164°48'E

A peak, 2,085 m, standing 4 mi NW of Lavallee Peak, in West Quartzite Range. Named by the Northern Party of NZFMC AE, 1962–63, for its likeness in profile to a Gothic cathedral.

Gotley, Cape 66°42'S, 57°19'E

Cape forming the eastern extremity of Austnes Peninsula at the N side of the entrance to Edward VIII Bay. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37, and called Austnestangen (the east cape tongue), a name derived from that of the peninsula. The area was remapped by ANARE and in 1958 the cape renamed by ANCA for A.V. Gotley, officer in charge of the ANARE party on Heard Island in 1948. Not: Austnestangen, Mys Eustnes.

Gotley Glacier 53°10'S, 73°27'E

A well-defined glacier, 5 mi long, descending from the ice-covered slopes of Big Ben to the SW side of Heard Island between Cape Arkona and Cape Labuan. Surveyed in 1948 by the ANARE, and named by them for Aubrey V. Gotley, meteorologist and officer-in-charge of the party.

Goudier Island 64°50'S, 63°30'W

Small island with an appearance of bare, polished rock, lying 0.05 mi N of Jougla Point in the harbor of Port Lockroy, Wiencke Island, in the Palmer Archipelago. Discovered by the FrAE, 1903–05, under Charcot, and named after E. Goudier, chief engineer of the expedition ship *Français*.

Goudry, Mount: see Gaudry, Mount 67°32'S, 68°37'W

Gough, Mount 81°38'S, 159°22'W

The prominent mountain that forms the eastern portion of Swithinbank Range in the Churchill Mountains. The feature rises more than 1,000 m above the west side of Starshot Glacier where it is joined by Donnally Glacier. Named by the U.S. Advisory Committee on Antarctic Names (1967) for R.P. Gough, Surveyor-General of New Zealand.

Gough Glacier 64°42'S, 171°35'W

A glacier about 25 mi long, flowing from the N slopes of Prince Olav Mountains and the base of Lillie Range and trending northward to the Ross Ice Shelf, between Gabbro Hills and Bravo Hills. Named by the Southern Party of the NZGSAE (1963–64) for A.L. Gough, surveyor of the party.

Gould, Mount 85°48'S, 148°40'W

A prominent mountain, 2,385 m, surmounting the central part of the Tapley Mountains, in the Queen Maud Mountains. Discovered in December 1929 by the ByrdAE geological party under Laurence Gould. Named by Byrd for president Laurence M. Gould of Carleton College, polar explorer, who served as geologist and second in command of the ByrdAE, 1928–30. From 1955–70, Gould was a leader in the planning of the U.S. Antarctic Research Program, and has served as chairman of the National Academy of Sciences Committee on Polar Research, and chairman of the international Scientific Committee on Antarctic Research.

Gould, Mount: see Gould Peak 78°07'S, 155°15'W

Gould Bay 78°00'S, 45°00'W

A bay located at the junction of Filchner Ice Shelf with the northeast corner of Berkner Island, in southern Weddell Sea. Discovered by the RARE, 1947–48, under the leadership of Cdr. Finn Ronne, USNR, who named this bay for Laurence M. Gould, geologist, geographer and second in command of the Byrd Antarctic Expedition, 1928–30. Not: Bahía Austral, Larry Gould Bay.

Gould Coast 84°30'S, 150°00'W

That portion of the coast along the E margin of the Ross Ice Shelf between the W side of Scott Glacier and the S end of Siple Coast (83°30'S, 153°00'W). Named by NZ-APC in 1961 for Laurence M. Gould, a geologist who was second-in-command of the ByrdAE, 1928–30. Gould led the Geological Party which in 1929 mapped 175 miles of this coast. While president of Carleton College, Northfield, Minnesota, he was appointed Chairman of the U.S. National Committee for the IGY and took a prominent part in planning the United States research program for Antarctica.

Goulden, Anse: see Goulden Cove 62°11'S, 58°38'W

Goulden Cove 62°11'S, 58°38'W

The southern of two coves at the head of Ezcurra Inlet, Admiralty Bay, on King George Island, in the South Shetland Islands. Probably named by the FrAE under Charcot, who surveyed Admiralty Bay in December 1909. Not: Anse Goulden.

Gould Glacier 66°47'S, 64°39'W

Glacier 12 mi long on the E coast of Graham Land, flowing SE into Mill Inlet, to the W of Aagaard Glacier. First surveyed by the FIDS in 1946–47, and named East Gould Glacier. With West Gould Glacier it was reported to fill a transverse depression across Graham Land, but further survey in 1957 showed that there is no close topographical alignment between the two. The name Gould,

for Rupert T. Gould (1890–1948), British polar historian and cartographer, has been limited to this glacier and an entirely new name (Erskine Glacier, q.v.) approved for the west glacier. Not: East Gould Glacier, Shelby Glacier.

Gould Island 77°08'S, 148°05'W

One of the ice-covered islands in Marshall Archipelago, located within Sulzberger Ice Shelf, coastal Marie Byrd Land. The feature is 2 mi long and lies just N of Spencer Island and 2 mi NE of Steventon Island. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Lt. Stuart S. Gould, USNR, dental officer at McMurdo Station, 1967.

Gould Nunatak: see Gould Nunataks 66°30'S, 51°42'E

Gould Nunataks 66°30'S, 51°42'E

A small group of nunataks about 18 mi SE of Mount Biscoe in Enderby Land. Discovered in Jan. 1930 by the BANZARE under Mawson, who named them Gould Nunatak after Lt. Cdr. R.T. Gould, RN, of the Hydrographic Dept., Admiralty, who worked on the British Admiralty South Polar Chart. Plotted as a group by ANARE from air photos in 1964. Not: Gould Nunatak.

Gould Peak 78°07'S, 155°15'W

Peak standing 1 mi N of Tennant Peak in the S group of the Rockefeller Mountains, on Edward VII Peninsula in Marie Byrd Land. Discovered by the ByrdAE in 1929, and named by Byrd for Charles ("Chips") Gould, carpenter on the expedition. Not: Charles Gould Peak, Mount Gould.

Goupil, Cape: see Legoupil, Cape 63°19'S, 57°54'W

Gourdin Island 63°12'S, 57°18'W

Largest island in a group of islands and rocks 1 mi N of Prime Head, the N tip of Antarctic Peninsula. Discovered by a French expedition, 1837–40, under Capt. Jules Dumont d'Urville, and named by him for Ens. Jean Gourdin of the expedition ship *Astrolabe*. The island was reidentified and charted by the FIDS in 1945–47. Not: Gourdin Rock.

Gourdin Rock: see Gourdin Island 63°12'S, 57°18'W

Gourdon, Mount: see Gourdon Peak 65°05'S, 64°00'W

Gourdon, Pointe: see Gourdon Peninsula 64°24'S, 63°12'W

Gourdon Glacier 64°15'S, 57°22'W

Glacier 4 mi long on the E side of James Ross Island, flowing SE into Markham Bay between Saint Rita and Rabot Points. It has a conspicuous rock wall at its head. First surveyed by the SwedAE under Nordenskjöld, 1901–04, who named it for Ernest Gourdon, geologist and glaciologist of the French Antarctic Expedition, 1903–05.

Gourdon Peak 65°05'S, 64°00'W

Peak 0.5 mi N of Wandel Peak, one of several high peaks on the N-S trending ridge of Booth Island, in the Wilhelm Archipelago. First charted by the FrAE, 1903–05, under Charcot, and named by him for Ernest Gourdon, geologist of the expedition. Not: Mount Gourdon.

Gourdon Peninsula 64°24'S, 63°12'W

A snow-covered peninsula 6 mi long, forming the SE side of Lapeyrère Bay on the NE coast of Anvers Island, in the Palmer Archipelago. The NE coast of Anvers Island was roughly surveyed

by the FrAE under Charcot in 1905 and the name "Pointe Gourdon," for Vice-Admiral Gourdon of the French Navy, was given to a point between Lapeyrere and Fournier Bays. The UK-APC in 1956 altered the name to Gourdon Peninsula and applied it to the peninsula described, which almost certainly is the feature Charcot had in mind when he gave the original name. Not: Pointe Gourdon.

Gourlay Peninsula 60°44'S, 45°36'W

Ice-free peninsula, which is 0.1 mi wide at its base and widens to 0.4 mi, forming the SE extremity of Signy Island in the South Orkney Islands. The seaward end of the peninsula divides into three arms, *Pantomime*, *Pageant*, and *Gourlay Points*. Surveyed in 1933 by DI personnel, and resurveyed in 1947 by the FIDS. Named by UK-APC, after Gourlay Point.

Gourlay Point 60°44'S, 45°36'W

Southernmost of three finger-like points which form the SE end of Signy Island, in the South Orkney Islands. Charted in 1933 by DI personnel on the *Discovery II*, who gave the name for R. Gourlay, third engineer of the ship.

Gouts, Ile: see Gamma Island 64°20'S, 63°00'W

Gouverneur Island 66°40'S, 139°57'E

Low rocky island 1.2 mi WSW of Pétrel Island and 2.4 mi E of Cape Géodésie in the S part of Géologie Archipelago. Photographed from the air by OpHjp, 1946–47. Charted and named by the FrAE under Liotard, 1949–51. Liotard was the first man to encamp on the island and, as leader of the FrAE, also held the honorary post of governor.

Gouvernøren Harbor 64°32'S, 62°00'W

Small harbor indenting the E side of Enterprise Island just W of Pythia Island in Wilhelmina Bay, off the W coast of Graham Land. The name was applied by whalers using the harbor because the whaling vessel *Gouvernøren I* was wrecked there in 1916.

Governor Islands 60°30'S, 45°56'W

Group of islands and rocks 0.5 mi N of Penguin Point, the NW extremity of Coronation Island, in the South Orkney Islands. Discovered by Capt. George Powell and Capt. Nathaniel Palmer during their joint cruise in December 1821. The name appears on a chart based upon a running survey of the South Orkney Islands in 1912–13 by Petter Sørille, Norwegian whaling captain. Not: *Governøren Islands*.

Governor Mountain 69°43'S, 158°43'E

A mainly ice-free mountain (1,550 m) at the W side of the head of Tomilin Glacier, in the Wilson Hills. Mapped by the USGS Topo West party, 1962–63. The mountain was occupied as a survey station by the Northern Party of the NZGSAE, 1963–64, which named it for Sir Bernard Fergusson, Governor-General of New Zealand, and because of the dominating aspect of this feature.

Gow, Mount 71°20'S, 162°40'E

Mountain, 1,770 m, on the E side of Rennick Glacier in the Bowers Mountains. It marks the W end of the rugged heights between the mouths of *Caryer* and *Sledgers* Glaciers where these two tributaries enter Rennick Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Anthony J. Gow, veteran Antarctic glaciologist, who carried on research at the Byrd, South Pole, and McMurdo Stations nearly every summer season from 1959 to 1969.

Gowan Glacier 79°07'S, 85°39'W

Glacier about 15 mi long in the Heritage Range of the Ellsworth Mountains, flowing N from the vicinity of Cunningham Peak in the Founders Escarpment to enter Minnesota Glacier just E of Welcome Nunatak. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Lt. Jimmy L. Gowan, (MC) USN, officer in charge and doctor at Plateau Station in 1966.

Goward Peak 69°36'S, 72°19'W

A sharp-pointed peak rising to c. 500 m just E of Fournier Ridge, Desko Mountains (q.v.), on Rothschild Island. Named by US-ACAN for Cdr. Richard F. Goward, USCG, Executive Officer, USCGC *Glacier*, Operation Deep Freeze, 1969.

Gowlett Peaks 69°53'S, 64°55'E

A small group of isolated peaks, consisting of tall, sharp twin peaks and two close outliers, about 8 mi NE of Anare Nunataks in Mac. Robertson Land. Sighted in November 1955 by an ANARE party led by J.M. Béchervaise. Named by ANCA for Alan Gowlett, engineer at Mawson Station in 1955.

Goyena, Monte: see Kirkwood, Mount 63°00'S, 60°39'W

Gozur, Mount 78°07'S, 85°30'W

A mountain (2,980 m) just NW of the head of Young Glacier and 9 mi E of Mount Bentley, in the central part of Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Capt. Alexander Gozur, USAF, who participated in establishing the South Pole Station in the 1956–57 season.

Graa, Holmen: see Grey Island 60°45'S, 45°02'W

Graae Glacier 54°48'S, 36°10'W

Glacier 2 mi long on the N side of Mount Sabatier, flowing WSW to Trollhul in the S part of South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Morgens E.W. Graae of Denmark, who developed sledges for the SGS, 1953–54 and 1955–56.

Graben Horn 71°48'S, 12°02'E

A prominent horn or cone-shaped peak (2,815 m) rising at the E side of Humboldt Graben. The peak is situated in the central part of Pieck Range in the Petermann Ranges of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938–39, who named it in association with Humboldt Graben. Graben, of German origin, is a term applied to a rift valley or a fault trough. Not: *Sökkhornet*.

Grace, Cape: see Grace Rocks 66°25'S, 100°33'E

Grace Glacier 54°04'S, 37°23'W

Glacier which flows N into Ample Bay at the Bay of Isles, South Georgia. Charted in 1912–13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*, who named it for his wife, Grace Barstow Murphy.

Grace McKinley, Mount: see McKinley Peak 77°54'S, 148°18'W

Grace Rock 62°22'S, 59°01'W

Rock lying nearly 1 mi off the S coast of Nelson Island, in the South Shetland Islands. Named by the UK-APC in 1961 after the

British sealing vessel *Grace* (Captain Rowe) from Plymouth, which visited the South Shetland Islands in 1821–22.

Grace Rocks 66°25'S, 100°33'E

Prominent rock outcrops situated at the S side of the mouth of Apfel Glacier at its junction with Scott Glacier. Mapped from air photos taken by USN OPHjp, 1946–47, and named by US-ACAN for Lt. Philip J. Grace, USN, pilot with USN OpWml, 1947–48, who assisted in operations which resulted in the establishment of astronomical control stations from Wilhelm II Coast to Budd Coast. Not: Cape Grace.

Graciela, Isla: see Lautaro Island 64°49'S, 63°06'W

Graduation Ridge 71°28'S, 161°44'E

A high rock ridge N of El Pulgar, forming the N extremity of Morozumi Range. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. The ridge was visited by NZGSAE, 1967–68, who gave the name because geologist J.A.S. Dow received his exam results here.

Graf Lerchenfeld Gletscher: see Lerchenfeld Glacier 77°55'S, 34°15'W

Graham, Mount 85°25'S, 146°45'W

Mountain 460 m, in the N part of the Harold Byrd Mountains. Named by US-ACAN for Lt. Cdr. R.E. Graham, officer in charge of the winter-over detachment of USN Squadron VX-6 at Little America V, 1956.

Graham Coast 65°45'S, 64°00'W

That portion of the W coast of the Antarctic Peninsula between Cape Renard and Cape Bellue. Named for Sir James R.G. Graham, First Lord of the Admiralty at the time John Biscoe explored along the W coast of Antarctic Peninsula in 1832.

Graham Land 66°00'S, 63°30'W

That portion of the Antarctic Peninsula which lies north of a line joining Cape Jeremy and Cape Agassiz. This application of Graham Land is consistent with the 1964 agreement between US-ACAN and UK-APC, in which the name Antarctic Peninsula was approved for the major peninsula of Antarctica, and the names Graham Land and Palmer Land for the northern and southern portions, respectively. This feature is named after Sir James R.G. Graham, First Lord of the Admiralty at the time of John Biscoe's exploration of the west side of Graham Land in 1832.

Graham Passage 64°24'S, 61°31'W

Passage separating Murray Island from the W coast of Graham Land. Named by Captain Skidsmo after his whale catcher *Graham*, which was the first to pass through it, on March 20, 1922. Not: Pasaje Correa, Paso Yelcho.

Graham Peak 66°46'S, 50°58'E

Peak about 7 mi E of Mount Riiser-Larsen in the NW part of the Tula Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for N. Graham, cook at Wilkes Station in 1960.

Graham Spur 70°06'S, 62°30'W

A mostly ice-covered spur, but with prominent bare rock exposures at the tip and near its center, located on the NW side of Hughes Ice Piedmont, 6 mi S of James Nunatak, on the E side of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN

for William L. Graham, USARP biologist and Station Scientific Leader at Palmer Station in 1972.

Gråhorna Peaks 71°36'S, 12°16'E

A cluster of peaks 5 mi W of Store Svarthorn Peak in Westliche Petermann Range, in the Wohlthat Mountains of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938–39, who gave the name "Graue Hörner" (gray peaks). The feature was remapped by the Norwegian Antarctic Expedition, 1956–60, who used the form Gråhorna. The Norwegian spelling has been recommended by US-ACAN to agree with associated features having the same root spelling. Not: Graue Hörner.

Graicie Point: see Craigie Point 54°00'S, 37°39'W

Grainger Valley 70°45'S, 67°52'E

A valley 12 mi long and up to 1 mi wide separating Manning Massif and McLeod Massif in the E part of Aramis Range, Prince Charles Mountains. Photographed from ANARE aircraft in 1956. The valley was crossed in Feb. 1969 by a survey party during the ANARE Prince Charles Mountains survey. Named by ANCA for D. Grainger, geologist with the party, who also took part in the ANARE Prince Charles Mountains survey in 1970.

Gråkammen Ridge 71°41'S, 12°20'E

A mountainous ridge that includes Tambovskaya Peak and Mount Solov'yev, rising between Gråhorna Peaks and Aurdalen Valley in Westliche Petermann Range, Wohlthat Mountains. Discovered and plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named Gråkammen (the gray ridge).

Gran, Mount 76°59'S, 160°58'E

Large flat-topped mountain, 2,235 m, standing at the N side of Mackay Glacier and immediately W of Gran Glacier in Victoria Land. Discovered by the BrAE (1910–13) which named it for Trygve Gran, Norwegian naval officer who was a ski expert with the expedition. Not: Mount Trygve Gran.

Granat, Cape 67°39'S, 45°51'E

A cape on the W part of the Thala Hills, 7 mi NE of Campbell Glacier, on the coast of Enderby Land. Molodezhnaya Station is just S of the cape. This feature was mapped and called "Mys Granat" (Cape Garnet) by the SovAE, 1961–62.

Granate, Rocas: see Garnet Rocks 68°21'S, 67°04'W

Grand Chasms 78°35'S, 39°30'W

Two or more deep crevasses in the Filchner Ice Shelf, extending W for an unknown distance from 37°W, close W of Touchdown Hills. The feature is the most notable crevassed area on the Filchner Ice Shelf, roughly 60 mi long and from 0.25 to 3 mi wide. Discovered by the CTAE, 1955–58. During 1957 it was examined by a U.S. party from Ellsworth Station led by Dr. Edward Thiel, who applied the descriptive name.

Grande, Bahía: see Cumberland West Bay 54°14'S, 36°35'W

Grande, Ensenada: see Ample Bay 54°03'S, 37°23'W

Grandidier Channel 65°35'S, 64°45'W

A navigable channel between the W coast of Graham Land and the N end of the Biscoe Islands, extending from Penola Strait southwestward to the vicinity of Larrouy Island. First charted by the FrAE, 1903–05, and named by Charcot for Alfred Grandidier,

President of the Paris Geographical Society. Charcot applied the name to the entire body of water between the mainland and the Biscoe Islands but the name has since been restricted to the navigable portion described.

Grand Pérez, Sommet du: see Pérez Peak 65°25'S, 64°05'W

Gran Glacier 76°56'S, 161°14'E

A glacier flowing S into Mackay Glacier between Mounts Gran and Woolnough. It rises from a snow divide with Benson Glacier to the northeast. Named after Mount Gran by the N.Z. Northern Survey Party of the CTAE (1956–58), which visited the area in November 1957.

Granhholm, Mount 71°34'S, 167°18'E

A mountain (2,440 m) 9 mi SE of Mount Pittard in the NW part of Admiralty Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–63. Named by US-ACAN for Nels H. Granhholm, USARP biologist at Hallett Station, 1967–68.

Gränicher Island 66°53'S, 67°43'W

A small island which is the northernmost of the Bennett Islands in Hanusse Bay. Mapped from air photos obtained by RARE (1947–48) and FIDASE (1956–57). Named by UK-APC for Walter H.H. Gränicher, Swiss physicist who from 1954 made important investigations of the electrical and mechanical properties of ice in relation to its molecular structure. Not: Isla Guacolda.

Granite Harbor 76°53'S, 162°44'E

A bay in the coast of Victoria Land, about 14 mi long, entered between Cape Archer and Cape Roberts. Discovered and named by the BrNAE (1901–04) in the *Discovery* in January 1902, while searching for safe winter quarters for the ship. The name derives from the great granite boulders found on its shores.

Granite Knob: see John Nunatak 81°12'S, 85°19'W

Granite Knolls 77°53'S, 163°29'E

Conspicuous rock outcrops on the NW flank of Blue Glacier, 5 mi W of Hobbs Peak in Victoria Land. This descriptive name was given by the BrAE under Scott, 1910–13.

Granite Pillars 83°36'S, 170°45'E

Conspicuous ice-free rock pillars at the W side of lower Beardmore Glacier, 2 mi E of Mount Ida in the Queen Alexandra Range. Discovered by BrAE (1907–09), and first named the “Cathedral Rocks,” but changed later to avoid confusion with a feature of that name in the Royal Society Range.

Granite Spur 73°30'S, 94°24'W

A rock spur along the N front of the Jones Mountains, 0.5 mi W of Avalanche Ridge. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61. So named by the party because the basement granite is well exposed here.

Granitnaya Mountain 72°08'S, 11°38'E

Mountain, 2,880 m, standing just E of Skeidshovden Mountain in the Wohlthat Mountains of Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938–39. Mapped from air photos and surveys by NorAE, 1956–60 remapped by SovAE, 1960–61, and named Gora Granitnaya (granite mountain).

Grant, Mount 54°15'S, 37°07'W

Mountain, 1,205 m, standing between Esmark and Keilhau Glaciers on the S side of South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Henry E.W. Grant, Colonial Secretary and Legal Adviser in the Falkland Islands, 1906–09, who contributed to the early development of the whaling industry and the conservation of whales in the area.

Grant Island 74°28'S, 131°35'W

An ice-covered island, 20 mi long and 10 mi wide, lying 5 mi E of the smaller Shepard Island off the coast of Marie Byrd Land. Like Shepard Island, this feature is surrounded by the Getz Ice Shelf on all but the N side. Discovered and charted by personnel on the USS *Glacier* on Feb. 4, 1962. Named US-ACAN for Cdr. E.G. Grant, Commanding Officer of the *Glacier* at the time of discovery.

Granville, Cabo: see Smith, Cape 62°52'S, 62°19'W

Graphite Peak 85°03'S, 172°45'E

A peak, 3,260 m, standing at the NE end of a ridge running 3 mi NE from Mount Clarke, just S of the head of Falkenhof Glacier. So named by the NZGSAE (1961–62) because of the graphite found on the peak.

Graptolite Island 60°44'S, 44°28'W

Island 0.5 mi long in the NE part of Fitchie Bay, lying off the SE portion of Laurie Island in the South Orkney Islands. Weddell's chart published in 1825 shows two islands in essentially this position. Existence of a single island was determined in 1903 by the ScotNAE under Bruce, who so named it because graptolite fossils were found there.

Graser Nunatak 74°55'S, 70°12'W

A nunatak which is isolated except for Hinely Nunatak 1 mi to the SE, located 16 mi E of Sky-Hi Nunataks (q.v.) in Ellsworth Land. Named in 1987 by US-ACAN after William F. Graser, USGS cartographer who, with John A. Hinely, formed the USGS satellite surveying team at South Pole Station, winter party 1976.

Grass Bluff 85°35'S, 177°14'W

A wedge-shaped rock bluff 4 mi NW of Fluted Peak, in the southern part of Roberts Massif. Named by US-ACAN for Robert D. Grass, USARP meteorologist at South Pole Station, winter 1964.

Grassholm 54°03'S, 37°56'W

Island 1 mi S of Frida Hole, along the S coast and near the W end of South Georgia. The name Em Island was given for this feature, probably by DI personnel who surveyed this coast in 1926. The SGS, 1951–52, reported that this feature is known to whalers and sealers as “Grassholmen,” and that Em Island is unknown locally. The indefinite form of the name has been approved. Not: Em Island, Grassholmen.

Grassholmen: see Grassholm 54°03'S, 37°56'W

Grass Island 54°09'S, 36°40'W

Conspicuous island lying across the entrance to Stromness Harbor in Stromness Bay, South Georgia. It was known as Mutton Island as early as 1912, but since 1920 the name Grass Island has been consistently used. Not: Isla Pasto, Mutton Island.

Grass Point: see Deschampsia Point 60°41'S, 45°38'W

Green Glacier 79°43'S, 156°10'E

Glacier on the W side of Haskell Ridge, flowing N from the Darwin Mountains into Darwin Glacier. Mapped by the Darwin Glacier Party of the CTAE, 1956–58, who named it because of the green color of its surface.

Green Ice Rises 66°21'S, 97°37'E

A local swelling of the ice surface 5 mi east of Henderson Island, where the Shackleton Ice Shelf overrides an underlying obstruction. Mapped by G.D. Blodgett (1955) from aerial photography taken by USN Operation Highjump (1946–47). Named by US-ACAN for Duane L. Green, radio operator and recorder with USN Operation Windmill parties which established astronomical control stations along Wilhelm II, Knox, and Budd Coasts in January and February, 1948.

Green Island 54°53'S, 36°06'W

Small, rounded, tussock-covered island which lies immediately SE of Cape Disappointment, the S tip of South Georgia. The name "Green Islands," derived from their covering of tussock grass, was given in 1775 by a British expedition under Cook to a group of three islands lying close off Cape Disappointment. The name "Grüne Insel" or "Grün-Insel," meaning Green Island, was used for this island by Kohl-Larsen in 1930, presumably because of local usage. The SGS, 1951–52, reported that whalers and sealers, in practice, use separate names for the three islands, limiting the name Green Island to the northernmost one. Brode Island is the central island and First Rock is southernmost of the three. The name "Green Islands" given by Cook for the three islands is apparently not needed and has dropped from use. Not: Grüne Insel, Grün-Insel, Islas Verdes, Isla Verde.

Green Island 65°19'S, 64°10'W

The northernmost island in the Berthelot Islands, lying just outside Collins Bay off the W coast of Graham Land. Discovered and first mapped by the FrAE, 1903–05, under Charcot. The name derives from the luxuriant growth of moss nearly 4 acres in extent on the northern slopes of the island. Not: Islote Verde.

Green Lake 77°33'S, 166°09'E

A small lake near the coast, about midway between Pony Lake and Coast Lake at Cape Royds, Ross Island. Named by BrAE (1907–09) because of its coloring.

Greenland, Cape: see Grönland, Cape 64°15'S, 63°19'W

Greenlee, Mount 84°51'S, 177°00'W

A steep-sided, jagged mountain (2,030 m) of metamorphic rock which overlooks the W side of Shackleton Glacier just E of Mount Butters. Named by F. Alton Wade, leader of the Texas Tech Shackleton Glacier Party (1962–63), for David W. Greenlee, a member of the party.

Green Point 67°19'S, 59°30'E

Rocky point forming the E extremity of Fold Island, at the W side of the entrance to William Scoresby Bay. Discovered and named by DI personnel on the *William Scoresby* in February 1936. Not: Rundneset.

Green Point: see Gazert, Cape 53°05'S, 73°21'E

Green Reef 64°44'S, 63°17'W

Group of low rocks in Neumayer Channel, lying close E of Green Spur, Anvers Island, in the Palmer Archipelago. Charted from

HMS *Snipe* in January 1948 and so named because of proximity to Green Spur.

Green Rocks 66°14'S, 110°38'E

Small cluster of rocks, 0.25 mi E of Honkala Island and an equal distance offshore, in the E part of Swain Islands. First mapped from air photos taken by USN OPHjp, 1946–47, and included in a 1957 survey of Swain Islands by Wilkes Station personnel under C.R. Eklund. Named by Eklund for Construction Driver 2d Class Sydney E. Green, USN, a Navy support force member of the 1957 wintering party at Wilkes Station during the IGY.

Greenshields Peak 65°40'S, 64°22'W

Peak between Leroux and Bigo Bays, rising 1 mi W of Magnier Peaks on the W coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. Named by the UK-APC for James N.H. Greenshields, pilot with the FIDASE in this area, 1955–56.

Green Spur 64°43'S, 63°20'W

Green colored spur extending from Copper Peak, on the SE side of Anvers Island, in the Palmer Archipelago. Probably first seen by the BelgAE under Gerlache, 1897–99. The name appears on a map based upon a 1927 survey by DI personnel on the *Discovery*, but may reflect an earlier naming. Not: Espolón Verde.

Greenstone Point 73°30'S, 94°19'W

High rock spur along the N front of the Jones Mountains, immediately E of Austin Valley. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61. So named by the party because of the greenish color of the rock.

Green Valley 85°04'S, 90°30'W

A steep-sided, ice-filled valley that indents the E side of Ford Massif just N of Janulis Spur, in the Thiel Mountains. The name was proposed by Arthur Ford and Peter Bermel, co-leaders of the USGS Thiel Mountains party that surveyed these mountains in 1960–61. Named for David H. Green, camp assistant with the party.

Greenville Hole 76°43'S, 160°58'E

A circular depression, 200 m deep, in the center of Greenville Valley, Convoy Range, Victoria Land. The feature is 1 mi in diameter, ice free and marks the lowest elevation in Convoy Range. Named in association with Greenville Valley, q.v.

Greenville Valley 76°44'S, 160°52'E

The large mainly ice-free valley lying S of Elkhorn Ridge in the Convoy Range of Victoria Land. A lobe of the Northwind Glacier flows a short distance W into the mouth of the valley. Near the head of the valley the S wall is breached by the entrance to Merrell Valley. Explored in 1957 by the N.Z. Northern Survey Part of the CTAE, 1956–58. Named by them after the USNS *Greenville Victory*, a freighter in the main American convoy into McMurdo Sound in the 1956–57 season.

Greenwell Glacier 71°20'S, 165°00'E

A major tributary glacier, 45 mi long, draining NW between Mirabito Range and Everett Range to enter Lillie Glacier below Mount Works, in northwest Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960–63. Named by US-ACAN for Cdr. Martin D. Greenwell, USN, Commander of Antarctic Squadron Six (VX-6), 1961–62.

Greenwich Island 62°31'S, 59°47'W

Island 15 mi long and from 0.5 to 6 mi wide, lying between Robert and Livingston Islands, in the South Shetland Islands. The name dates back to at least 1821 and is now established in international usage. Not: Beresino Island, Sartorius Island.

Greenwood Valley 77°21'S, 162°54'E

Ice-filled valley at the W side of Wilson Piedmont Glacier, lying between Staefler Ridge and Mount Doorly in Victoria Land. Named by the US-ACAN for Russell A. Greenwood, USN, who was in charge of heavy equipment maintenance at McMurdo Station, 1962.

Greer Peak 76°47'S, 144°25'W

A prominent peak, the northernmost of the Wiener Peaks, in the Denfeld Mountains of the Ford Ranges in Marie Byrd Land. Mapped by the USAS (1939-41) led by R. Admiral R.E. Byrd. Named for Dr. William E.R. Greer, personal physician to Admiral Byrd in the 1950's.

Gregor, Mount: see Brooker, Mount 54°30'S, 36°14'W

Gregores, Isla: see Jagged Island 61°54'S, 58°29'W

Gregorio, Cabo: see Gregory Point 62°55'S, 62°33'W

Gregory, Cape: see Gregory Point 62°55'S, 62°33'W

Gregory, Mount 82°52'S, 159°44'E

A mountain (2,940 m) at the south end of Hochstein Ridge in Queen Elizabeth Range. It is the only large elevation rising from Cotton Plateau. The name was suggested by the Holyoake, Cobham and Queen Elizabeth Ranges Part of the NZGSAE, 1964-65. Named for a geologist in the party, M. Gregory.

Gregory Bluffs 70°44'S, 165°49'E

High granite bluffs that form the E side of Nielsen Fjord on the N coast of Victoria Land. Named by ANARE for C. Gregory, geologist with the ANARE (*Thala Dan*) cruise. Pilot John Stanwix, with Gregory and party leader Phillip Law, landed a helicopter at the foot of these bluffs to examine them, Feb. 12, 1962.

Gregory Glacier 64°08'S, 60°48'W

Glacier flowing into Cierva Cove N of Breguet Glacier, on the W coast of Graham Land. Shown on an Argentine government chart of 1957. Named by the UK-APC in 1960 for H. Franklin Gregory, American pioneer in the development and use of helicopters.

Gregory Island 76°49'S, 162°58'E

A small island lying just off the E coast of Victoria Land, 2.5 mi NE of Cape Archer. Discovered by the BrNAE (1901-04), at which time it was thought to be a coastal point and was named "Gregory Point," for John W. Gregory, director of the civilian staff of the expedition. It was determined to be an island by the BrAE (1910-13). Not: Gregory Point.

Gregory Point 62°55'S, 62°33'W

Point on the W side of Smith Island, 7 mi SW of Cape Smith, in the South Shetland Islands. The name Cape Gregory appears on a chart based on work by a British expedition under Foster, 1828-31; air photos now show that point is a more suitable descriptive term. Not: Cabo Gregorio, Cape Gregory.

Gregory Point: see Gregory Island 76°49'S, 162°58'E

Gregory Ridge 86°03'S, 157°46'W

A narrow rock ridge descending westward from northern Fram Mesa in the Queen Maud Mountains and terminating at the E side of Amundsen Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. Cdr. N.B. Gregory, pilot on photographic flights during USN OpDFrz 1965.

Gregory Rock 77°40'S, 147°46'W

A rock that outcrops above the ice slopes of western Hershey Ridge, 7 mi WSW of Linwood Peak, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Elmer D. Gregory, aviation maintenance line crew supervisor at Williams Field, McMurdo Sound, during Operation Deep Freeze 1967.

Grekova, Gora: see Bakkesvodene Crags 71°56'S, 6°32'E

Gremlin Island 68°16'S, 67°12'W

Small rocky island which lies close NW of the tip of Red Rock Ridge, off the W coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. The island was used as a site for a depot by FIDS in 1948-49, and was so named by them because of the mysterious disappearance of a ration box left there by a FIDS sledging party.

Grendal, Mount 77°34'S, 162°00'E

A peak rising to 2,000 m between the heads of Valhalla Glacier and Conrow Glacier in the Asgard Range, Victoria Land. Mapped by the USGS in 1962 from U.S. Navy aerial photographs taken 1947-59. Named by the NZ-APC in 1983 from association with Mount Beowulf (q.v.) after Grendal (Grendel), the monster in the Old English epic poem *Beowulf*.

Gressitt Glacier 71°30'S, 161°15'E

A broad glacier, about 45 mi long, draining the area between Daniels Range and Emlen Peaks in the Usarp Mountains and flowing NE to enter the Rennick Glacier just N of Morozumi Range. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for biologist J. Linsley Gressitt, Program Director who made biological studies, particularly in the Ross Sea area, in six austral summers, 1959-60 to 1965-66.

Grew Peak 75°18'S, 110°37'W

A peak over 1,400 m, one of several named peaks on the Mount Murphy massif in Marie Byrd Land. The feature is located on the NE spur of the massif, between Benedict Peak and the loftier summit peaks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Edward Grew, U.S. Exchange Scientist to the Soviet Antarctic station Molodezhnaya in 1973.

Grey, Mount: see Gray, Mount 75°01'S, 136°42'W

Grey Island 60°45'S, 45°02'W

Island 0.6 mi S of Michelsen Island and 1 mi W of the S part of Fredriksen Island, in the South Orkney Islands. First charted and named "Holmen Graa" (The Grey Island) on a map by the Norwegian whaler Capt. Petter Sørille, who made a running survey of the South Orkney Islands in 1912-13. The anglicized form approved appears on the chart by DI personnel on the *Discovery II* who surveyed the islands in 1933. Not: Holmen Graa.

Grieg, Mount 71°34'S, 73°10'W

Snow-covered mountain, c. 800 m, with a rock-exposed W side, overlooking the SE part of Brahms Inlet on Beethoven Peninsula in the SW part of Alexander Island. A number of mountains in this vicinity first appear on maps by the RARE, 1947–48. This mountain, apparently one of these, was mapped from RARE air photos by Searle of the FIDS in 1960; remapped by USGS, 1988. Named by UK-APC after Edvard Grieg (1843–1907), Norwegian composer.

Grier, Mount 86°41'S, 148°57'W

A prominent mountain, 3,035 m, standing at the E side of the Scott Glacier where it forms the westernmost summit of the La Gorce Mountains, in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for Dr. G. Layton Grier, head of the L.D. Caulk Co. of Milford, DE, who contributed dental supplies to the ByrdAE of 1928–30 and 1933–35.

Grieta, Isote: see Cleft Point 60°37'S, 45°46'W

Griffin, Mount 71°11'S, 166°16'E

A mountain (1,760 m) which stands 13 mi ESE of Mount Bolt and marks the S limit of the Anare Mountains in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Chief Warrant Officer Joe R. Griffin, USA, helicopter pilot in support of the USGS Topo East and Topo West expeditions, 1962–63, which included a survey of this mountain.

Griffin Nunatak 75°55'S, 158°20'E

A flat-topped nunatak about 2 mi long, standing between Ambalada Peak and Terminal Peak in the Prince Albert Mountains, Victoria Land. Mapped by USGS from surveys and USN air photos, 1956–62. Named by US-ACAN for Lt. William R. Griffin, (MC) USN, officer in charge at South Pole Station, winter party 1966.

Griffith, Mount 85°53'S, 155°30'W

A massive mountain, 3,095 m, standing 4 mi NNE of Mount Vaughan in the Hays Mountains of the Queen Maud Mountains. First observed and roughly mapped in December 1929 by the ByrdAE geological party under Laurence Gould. Remapped in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for Raymond Griffith, of Twentieth Century-Fox Pictures, who assisted in assembling motion-picture records of the expedition.

Griffith Glacier 86°11'S, 149°24'W

A tributary glacier draining westward from the California Plateau and Watson Escarpment to enter Scott Glacier between Mount McKercher and Mount Meeks. Mapped by USGS from surveys and USN air photos, 1960–63. Named by US-ACAN for Lt. Cdr. Philip G. Griffith, aircraft commander on photographic flights during Operation Deep Freeze 1966 and 1967.

Griffith Island 66°20'S, 110°29'E

Small island at the S entrance to Robertson Channel in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Chief Fire Patrolman Russell B. Griffith, USN, a member of the Wilkes Station party of 1958.

Griffith Nunataks 76°28'S, 143°45'W

Group of rock exposures on the S side of Balchen Glacier between O'Connor Nunataks and Mount Perkins, in the Ford Ranges of Marie Byrd Land. Discovered by the USAS in aerial flights over this area in 1940, and named for Clyde W. Griffith, machinist and tractor operator of this expedition.

Griffith Peak 85°47'S, 131°31'W

A rock peak rising over 1,800 m in western Wisconsin Range, standing at the N side of the mouth of Hueneme Glacier at the junction with Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Raymond E. Griffith, cook with the winter parties at Byrd Station in 1961 and 1963.

Griffith Ridge 71°22'S, 164°23'E

A rock ridge 5 mi long in the Bowers Mountains, located just within the mouth of Champness Glacier, where the latter joins the larger Lillie Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Lt. Harry G. Griffith, USN, public works officer at McMurdo Station, 1967.

Griffiths, Mount 66°29'S, 54°03'E

Elongated mountain with two prominent peaks of 1,650 and 1,680 m, standing 5 mi NW of Wilkinson Peaks in the Napier Mountains. Plotted by Norwegian cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37, and called Mefjell (middle mountain), a name used elsewhere in Antarctica. The mountain was visited in 1961 by an ANARE sledge party and named by ANCA for G.S. Griffiths, a member of the Australian Antarctic Exploration Committee of 1886. Not: Mefjell.

Grigg Peak 71°26'S, 167°09'E

A peak (2,130 m) located 7 mi W of the N tip of Lyttelton Range in the Admiralty Mountains of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Gordon C. Grigg, USARP biologist at McMurdo Station, 1966–67.

Grikurov Ridge 71°17'S, 69°00'W

A ridge that extends westward for about 6 mi from the south end of the LeMay Range, in Alexander Island. The feature was mapped from trimetrogon air Photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. Named by UK-APC for Garrik Grikurov, Russian exchange geologist with the British Antarctic Survey, who worked in this area in 1963–64.

Grillite, Isote: see Goetschy Island 64°52'S, 63°31'W

Grimes Glacier 79°12'S, 84°22'W

Steep glacier descending from the E side of Anderson Massif, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Master Chief Equipmentman Paul D. Grimes, USN, who supervised the construction crews during relocation of Williams Air Field at McMurdo Sound in the closing month of USN OpDFrz 1965.

Grimes Ridge 74°38'S, 110°30'W

A high, mostly ice-covered ridge at the N side of Holt Glacier on Bear Peninsula, Walgreen Coast, in Marie Byrd Land. First mapped by USGS from air photos obtained by USN OpHjp in January 1947. Named by US-ACAN after Capt. E.W. Grimes, a

member of the U.S. Army Aviation Detachment that provided Antarctic support during USN OpDFrz 1966.

Grimley Glacier 69°09'S, 64°40'W

A tributary glacier, 15 mi long and 3 mi wide. It lies 3 mi N of Sunfix Glacier and flows ENE into Casey Glacier in northern Palmer Land. The glacier was photographed from the air by the USAS on Sept. 28, 1940, and by RARE on Dec. 22, 1947. It was surveyed by FIDS in Dec. 1960. Named by UK-APC for Peter H. Grimley of FIDS, geologist at Horseshoe Island and Stonington Island in 1960.

Grimminger, Mount 73°18'S, 62°18'W

Cone-shaped, mostly ice-covered mountain, 1,680 m, standing on the N side of Meinardus Glacier, close E of its juncture with Haines Glacier, on the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by the USAS. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for George Grimminger, American meteorologist and joint author of the meteorological reports of the ByrdAE, 1928–30, and the ByrdAE, 1933–35, and a member of the latter expedition.

Grim Rock 65°23'S, 64°29'W

A rock swash 3 mi SSE of Geddes Reef and 10 mi WNW of Cape Pérez, lying in Grandidier Channel off the W coast of Graham Land. Chartered in February in 1936 by the BGLE under Rymill, and so named from its appearance.

Grimsley, Mount 70°36'S, 66°32'E

A small mountain 1 mi SW of Mount Abbs in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for S.W. Grimsley, technical officer (ionosphere) at Wilkes Station in 1963.

Grimsley Peaks 66°34'S, 53°40'E

Five linear peaks just S of Stor Hånakken Mountain in the Napier Mountains, Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Remapped from air photos taken by ANARE in 1956 and named by ANCA for S.W. Grimsley, technical officer (ionosphere) at Wilkes Station in 1961.

Grinda Ridge 71°56'S, 4°26'E

A rock ridge 1.5 mi long, immediately N of Mount Grytøyr in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956–60) and named Grinda (the gate).

Grinder Island 77°34'S, 149°20'W

One of the ice-covered islands in Marshall Archipelago, located within Sulzberger Ice Shelf, coastal Marie Byrd Land. The island is 7 mi long and 1 mi wide and lies 13 mi SW of Steventon Island. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Harry W. Grinder, aviation structural mechanic, USN, of McMurdo Station, 1967.

Grinder Rock 63°58'S, 61°26'W

The southernmost of a group of rocks extending from the SE end of Intercurrence Island, in the Palmer Archipelago. Shown on Argentine and Chilean government charts of 1957. The name, given by the UK-APC in 1960, is descriptive of this toothlike feature.

Grindle Rock 59°03'S, 26°37'W

Conspicuous rock, 215 m high, lying 0.7 mi W of Bristol Island in the South Sandwich Islands. Discovered by a British expedition under Cook in 1775. Recharted in 1930 by DI personnel on the *Discovery II* and named by them for Sir Gilbert E.A. Grindle, Permanent Under-Secretary of State for the British Colonies. Not: Roca Cerreti.

Grindley Plateau 84°09'S, 166°05'E

A high icecapped plateau in the central Queen Alexandra Range, bordered by the peaks of Mount Mackellar, Mount Bell and Mount Kirkpatrick. Named by the Northern Party of the NZGSAE (1961–62) for George Grindley, senior geologist of the party.

Grinnel Island: see Grinnell Island 66°11'S, 110°24'E

Grinnell Island 66°11'S, 110°24'E

Island 0.5 mi long, lying S of Chappel Island in the Donovan Islands. First mapped from air photos taken by USN OpHjp, 1946–47. Named by C.R. Eklund for Lt. Sheldon W. Grinnell, MC, USNR, medical officer at Wilkes Station, 1957. Not: Grinnel Island.

Grizzly Peak 85°58'S, 151°22'W

A peak rising to 2,200 m on the SW flank of Mount Zanuck, in the Gothic Mountains, Queen Maud Mountains. The feature was visited in December 1934 by the ByrdAE geological party and was included in "Darryl Zanuck Mountain." The granite of this peak is highly jointed and fairly bristles with small spires, suggestive of the coat of a grizzly bear.

Grob Ridge 83°29'S, 51°22'W

A narrow ridge, 3 mi long, located 3 mi S of Dyrdal Peak at the S end of Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Richard W. Grob, cook at Ellsworth Station, winter 1957.

Gromov Nunataks 67°45'S, 50°40'E

A group of nunataks lying 7 mi ESE of Mount Henry in the Scott Mountains of Enderby Land. Named by the SovAE, 1961–62, for M.M. Gromov, Soviet pilot.

Grönland, Cape 64°15'S, 63°19'W

Cape which forms the northern extremity of Anvers Island, in the Palmer Archipelago. Discovered by a German expedition 1873–74, under Dallmann, who named it for his expedition ship, the *Grönland*. It was later charted by the FrAE under Charcot, 1903–05. Not: Cape Greenland.

Grosse Brei-Schüssel: see Schüssel Cirque 71°34'S, 11°33'E

Grosse Eisebene: see Ross Ice Shelf 81°30'S, 175°00'W

Grossenbacher Nunatak 74°52'S, 74°01'W

A nunatak at the SW end of Lyon Nunataks (q.v.), Ellsworth Land, 2 mi SW of Holtet Nunatak. Named by US-ACAN after Ernest P. Grossenbacher, upper atmospheric physicist, Siple Station, 1970–71.

Grosses Schwarz-Horn: see Store Svarthorn Peak 71°35'S, 12°33'E

Gross Hills 79°18'S, 83°22'W

The line of rugged hills and peaks located E of Schmidt Glacier, in the Heritage Range. Named by the University of Minnesota

Geological Party, 1963–64, for Barton Gross, geologist with the party.

Gross Kari: see Store Kari Rock 54°24'S, 3°26'E

Grossman Nunataks 74°55'S, 72°40'W

A group of about a dozen nunataks in Ellsworth Land, rising 1,300–1,500 m in elevation and running NW-SE for 18 mi between Lyon Nunataks and Sky-Hj Nunataks. The group includes features from Smith Nunataks and Whitmill Nunatak in the NW to Gaylord Nunatak and Neff Nunatak in the southeast. Mapped by USGS from surveys and USN aerial photographs, 1961–68, and U.S. Landsat imagery, 1973–74. Named by US-ACAN in 1994 after Charles Grossman, formerly Chief, Shaded Relief and Special Graphics Unit, Branch of Special Maps, USGS, a specialist in the production of maps of Antarctica.

Grosvenor Mountains 85°40'S, 175°00'E

A group of widely scattered mountains and nunataks rising above the polar plateau E of the head of Mill Glacier, extending from Mount Pratt in the N to the Mount Raymond area in the S, and from Otway Massif in the NW to Larkman Nunatak in the SE. Discovered by R. Admiral Byrd on the ByrdAE flight to the South Pole in November 1929, and named by him for Gilbert Grosvenor, President of the National Geographic Society, which helped finance the expedition. Several peaks near Mount Raymond were apparently observed by Shackleton in 1908, although they were then considered to be a continuation of the Dominion Range. Not: Gilbert Grosvenor Range, Grosvenor Range.

Grosvenor Range: see Grosvenor Mountains 85°40'S, 175°00'E

Grotto Glacier 70°45'S, 68°35'W

Glacier on the E coast of Alexander Island which flows E to George VI Sound between Belemnite Point and Ablation Point. It is 25 mi long, 3 mi wide where it emerges from the coastal mountains, and 7 mi wide at its mouth. First photographed from the air on Nov. 23, 1935, by Lincoln Ellsworth and mapped from these photos by W.L.G. Joerg. Roughly surveyed in 1936 by the BGLE and resurveyed in 1949 by the FIDS. So named by FIDS because a sledge dog was rescued from a crystal-line crevasse in this glacier.

Grotto Island 65°14'S, 64°15'W

Narrow island 0.5 mi long with a serrated coastline, lying 0.1 mi N of Galindez Island in the Argentine Islands, Wilhelm Archipelago. Charted and named in 1935 by the BGLE under Rymill.

Groux Rock 76°13'S, 144°47'W

An isolated rock outcrop in the N part of the Phillips Mountains, 5 mi ENE of Mount June, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for Roger G. Groux, shipfitter, USN, Byrd Station winter party, 1967.

Grove Mountains 72°45'S, 75°00'E

A large, scattered group of mountains and nunataks extending over an area of approximately 40 by 20 mi, located 100 mi E of Mawson Escarpment. First photographed from the air by aircraft of USN OPHjp, 1946–47. Named by ANCA for Squadron Leader I.L. Grove, RAAF pilot with ANARE, who made a November 1958 landing in these mountains. Not: Grove Nunataks, South Eastern Mountains.

Grove Nunataks: see Grove Mountains 72°45'S, 75°00'E

Groves Island 75°30'S, 143°05'W

An ice-covered island 5 mi long, lying close off the coast of Marie Byrd Land between Siemiatkowski and Land Glaciers. Mapped from surveys by the USGS and U.S. Navy air photos (1959–65). Named by US-ACAN for Benjamin F. Groves, meteorologist at Byrd Station, 1964.

Growler Rock 62°07'S, 58°08'W

Rock 1 mi NW of Lions Rump in the W part of King George Bay, King George Island, in the South Shetland Islands. Charted and named during 1937 by DI personnel on the *Discovery II*. The term growler is used to denote small pieces of ice barely showing above water. Not: Roca Gruñon.

Grubb Glacier 64°56'S, 62°38'W

Glacier flowing into Lester Cove, Andvord Bay, to the W of Bagshawe Glacier, on the W coast of Graham Land. The glacier appears on an Argentine government chart of 1952. Named by the UK-APC in 1960 for Thomas Grubb (1800–78), Irish optician who designed and introduced the first aplanatic camera lens, in 1857.

Gruber, Gory: see Risemedet Mountain 72°03'S, 3°10'E

Gruberfjella: see Gruber Mountains 71°22'S, 13°25'E

Gruber Mountains 71°22'S, 13°25'E

A small group of mountains consisting of a main massif and several rocky outliers, forming the NE portion of the Wohlthat Mountains in Queen Maud Land. Discovered and plotted from air photos by the GerAE, 1938–39, under Ritscher. The mountains were remapped by NorAE, 1956–60, who named them for Otto von Gruber, the German cartographer who compiled maps of this area from air photos taken by GerAE, 1938–39. This feature is not to be confused with “Gruber-Berge,” an unidentified toponym applied by GerAE in northern Mühlig-Hofmann Mountains. Not: Gory Rikhtgofena, Gruberfjella, Otto v. Gruberfjella.

Gruendler Glacier 72°38'S, 167°28'E

A tributary glacier that drains the N slopes of Malta Plateau near Mount Hussey and flows N into Trainer Glacier, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for James D. Gruendler, member of the USARP glaciological party to Roosevelt Island, 1967–68.

Gruening, Mount: see Jackson, Mount 71°23'S, 63°22'W

Gruening Glacier 71°52'S, 61°55'W

Broad glacier descending SE between steep rock walls to the NW part of Hilton Inlet, on the E coast of Palmer Land. Discovered by the USAS in a flight down this glacier from East Base on Dec. 30, 1940. Named for Ernest H. Gruening, Director of the Division of Territories and Island Possessions, U.S. Dept. of the Interior, during the inception of the USAS, and member of the Executive Committee by which the USAS was directed, later U.S. Senator from Alaska.

Grumete Sánchez, Roca: see Burton Rocks 68°14'S, 67°02'W

Grunen Rock 63°24'S, 56°58'W

Rock 15 m high, surrounded by a group of smaller rocks, lying close E of Hut Cove along the S side of the entrance to Hope Bay,

at the NE end of Antarctic Peninsula. Discovered by the SwedAE under Nordenskjöld, 1901–04. The FIDS in 1945 named the entire group of rocks for Toralf Grunden, member of the SwedAE who wintered at Hope Bay in 1903, but in 1952 the name was restricted to the largest rock in this group for easier reference to the light beacon established on the main rock by the Argentine government during the previous season.

Gruehogna Peaks 72°03'S, 2°47'W

A group of peaks 2 mi N of Liljequist Heights, in the S part of Ahlmann Ridge in Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and the Norwegian expedition (1958–59) and named Gruehogna.

Grüne Insel: see Green Island 54°53'S, 36°06'W

Grün-Insel: see Green Island 54°53'S, 36°06'W

Grünon, Roca: see Growler Rock 62°07'S, 58°08'W

Gruvleflesa Knolls 71°44'S, 8°50'E

Two low rock knolls rising above the glacial moraine just W of Gruvletindane Crags, in the Kurze Mountains of Queen Maud Land. Mapped from surveys and air photos by NorAE (1956–60) and named Gruvleflesa.

Gruvletindane Crags 71°44'S, 8°59'E

Rock crags, rising to 2,255 m and forming the N end of the Kurze Mountains of Queen Maud Land. Mapped from surveys and air photos by NorAE (1956–60) and named Gruvletindane. The feature is bounded on the western side by a large and prominent glacial moraine.

Grytøyr, Mount 72°00'S, 4°31'E

A broad ice-topped mountain, 2,695 m, between Flogeken Glacier and Stuttflog Glacier in the Mühlig-Hofmann Mountains, in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named for B. Grytøyr, meteorologist with NorAE (1956–58). Not: Grytøyr-fjellet.

Grytøyrfjellet: see Grytøyr, Mount 72°00'S, 4°31'E

Guacolda, Isla: see Gränicher Island 66°53'S, 67°43'W

Guano Island 66°46'S, 141°36'E

Rocky island 0.2 mi long, lying 0.2 mi S of Chateau Island at the SE end of the Curzon Islands. Charted and named by the FrAE in 1951. The name derives from the considerable deposits of penguin excrement there.

Guarcello Peak 79°55'S, 83°10'W

A peak, 2,050 m, located 3.5 mi SSE of Mount Dolence in the Enterprise Hills, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Dominic Guarcello, meteorologist at Little America V Station in 1958.

Guard Glacier 71°01'S, 62°10'W

A broad tributary glacier that drains E along the S margin of Parmelee Massif to join Murrish Glacier, on the E side of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Charles L. Guard, USARP biologist who (with David E. Murrish) made investigations of peripheral vascular control mechanisms in birds in the Antarctic Peninsula region for three seasons, 1972–75.

Guardia Nacional, Bahía: see Cumberland East Bay 54°17'S, 36°26'W

Guardia Nacional, Bahía: see Maxwell Bay 62°15'S, 58°51'W

Guardián Gutiérrez, Bajo: see Gutiérrez Reef 63°18'S, 57°55'W

Guardian Islands: see Øygarden Group 66°58'S, 57°25'E

Guardian Nunatak 83°49'S, 173°14'E

A rock exposure (210 m) on the ice-covered spur that descends from Mount Robert Scott east-northeastward toward the western edge of Hood Glacier, near the juncture with Ross Ice Shelf. It is, as it were, guarding the entrance to the glacier, hence the name given by the N.Z. Alpine Club Antarctic Expedition, 1959–60.

Guardian Rock 67°33'S, 67°16'W

A low ice-free rock lying in Bigourdan Fjord, 1.5 mi N of Parvenu Point, Pourquoi Pas Island, close off the W coast of the Antarctic Peninsula. First surveyed in 1948–49 by the FIDS; so named by them because of the position of this rock which guards the NW entrance to The Narrows.

Gudmundson, Mount 79°13'S, 157°51'E

A mainly ice-free mountain, 2,040 m, standing 6 mi NE of Fault Bluff in the Cook Mountains. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for Julian P. Gudmundson (BUC), USN, explosive expert who wintered at Little America V in 1957. He blasted the foundation for the nuclear power plant at McMurdo Station during USN OpDFrz, 1961.

Guébriant Islands 67°48'S, 68°25'W

Two small islands in the N part of Marguerite Bay, lying 5 mi SE of the SE cape of Adelaide Island. Discovered by the FrAE, 1908–10, and named by Charcot for Father Guébriant, French missionary to China. Not: De Guebriant Islets.

Guéguen, Mount 65°04'S, 64°00'W

Sharp rocky peak, 365 m, standing 0.25 mi NW of Louise Peak in the N part of Booth Island, in the Wilhelm Archipelago. Discovered by the FrAE, 1903–05, under Charcot, who named it for F. Guéguen, stoker on the *Français*, and later the *Pourquoi Pas?*. Not: Guéguen Peak, Sommet F. Gueguen.

Guéguen Peak: see Guéguen, Mount 65°04'S, 64°00'W

Guéguen Point 65°09'S, 64°07'W

Point forming the S end of Hovgaard Island, in the Wilhelm Archipelago. Charted and named by the FrAE under Charcot, 1903–05, after J. Guéguen, one of the crew the ship *Français* and later, of the *Pourquoi-Pas?*, 1908–10.

Güemes, Ensenada: see Rockpepper Bay 63°08'S, 55°44'W

Guenter Bluff 70°40'S, 159°44'E

A prominent rock bluff on the west side of Pomerantz Tableland, Usarp Mountains. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–62. Named by US-ACAN for Clarence A. Guenter, USARP worker in the field of physiopsychology at South Pole Station, 1967–68.

Guépratte Island 64°30'S, 63°00'W

Ice-covered island 1.5 mi long, lying between Anvers and Brabant Islands at the E side of the entrance to Fournier Bay, Palmer Archipelago. This island was first shown on the Friederichsen map of 1895, embodying the 1873–74 explorations of a German expedition under Dallmann. It was later charted by the FrAE, 1903–05, under Charcot, who named it after Captain Guépratte, French Navy. The name Discovery Island, applied in 1927 by DI personnel on the *Discovery*, has been rejected in favor of the earlier name. Not: Discovery Island, Isla Descubrimiento.

Guernesey, Ile: see Guernsey, Mount 69°20'S, 68°14'W

Guernsey, Mount 69°20'S, 68°14'W

Isolated, mainly ice-covered mountain, 1,250 m, standing 6 mi N of the summit of Mount Edgell, on the W coast of Antarctic Peninsula. The name "Ile Guernesey" was given in 1909 by the FrAE under Charcot, after the island of Guernsey off the coast of France. The position of "Ile Guernesey" on the FrAE maps does not agree with that of the mountain described above, but from the FrAE narrative and sketches by Bongrain, FrAE surveyor, it has been determined that this mountain was the feature seen in 1909 by Charcot from a position near the center of the entrance to Marguerite Bay. The mountain was surveyed in 1936 by the BGLE, but no name was assigned. It was further surveyed by the FIDS in 1948. Not: Ile Guernesey, White Cross Mountain.

Guerrero Glacier 78°32'S, 84°15'W

A glacier about 7 mi long, draining from the SE slopes of Mount Havener to the S side of Taylor Spur, in the SE part of the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for John F. Guerrero, meteorologist at South Pole Station in 1957.

Guesalaga, Bahía: see Curtiss Bay 64°02'S, 60°47'W

Guesalaga Island 64°16'S, 61°59'W

The northern of two islands lying off the E side of Lecointe Island, in the Palmer Archipelago. Named by the Chilean Antarctic Expedition of 1947 for its commander, Capitán de Navío Federico Guesalaga Toro. Not: Bell Island.

Guesalaga Peninsula 62°29'S, 59°40'W

A small, low-lying shingle covered peninsula on the E side of Discovery Bay, Greenwich Island, South Shetland Islands. Named by Chile for Capt. Federico Guesalaga Toro, leader in 1947 of the Chilean expedition in *Iquique* and *Angamos* which established the permanent Arturo Prat scientific station on this peninsula.

Guest Island: see Guest Peninsula 76°18'S, 148°00'W

Guest Peninsula 76°18'S, 148°00'W

A snow-covered peninsula about 45 mi long between Sulzberger Ice Shelf and Block Bay in the NW part of Marie Byrd Land. Mitchell Peak, located on the peninsula, was sighted by the ByrdAE in 1929. This feature was defined and mapped as an island by the USAS in 1940. It was determined to be a peninsula by U.S. Geological Survey cartographers from air photos taken by the U.S. Navy, 1962–65. Named for Amy Guest, contributor to the ByrdAE, 1933–35. Not: Amy Guest Island, Guest Island.

Guettard Range 74°21'S, 63°27'W

A mountain range, 40 mi long and 10 mi wide, located NW of Bowman Peninsula and between the Johnston and Irvine Glaciers,

in the SE extremity of Palmer Land. The feature was photographed from the air by RARE, 1947–48. It was mapped from USGS surveys and USN air photos, 1961–67. Named by US-ACAN for French naturalist and geologist Jean Etienne Guettard, 1715–86. Not: Cordón Martín Fierro.

Guides, The 54°04'S, 36°52'W

Two tussock-covered islands lying off the E side of the entrance to Antarctic Bay along the N coast of South Georgia. Charted by the GerAE under Filchner, 1911–12. The name appears on a chart based upon surveys of South Georgia by DI personnel in the period 1926–30. Not: Islotes Los Guías, Los Guías.

Guido Island 64°55'S, 63°50'W

Island lying 1 mi NE of Prioress Island in the Wauwermans Islands, in the Wilhelm Archipelago. Shown on an Argentine government chart of 1950; the name "Isla Guido Spano" appears on a 1957 chart and is for Carlos Guido Spano (1829–1918), a famous Argentine poet. Not: Isla Guido Spano, Isla Ruy, Pardonier Island.

Guido Spano, Isla: see Guido Island 64°55'S, 63°50'W

Guijarro, Caleta: see Scree Cove 67°34'S, 67°08'W

Guile Island 65°44'S, 65°11'W

Island lying 1 mi SW of Duchaylard Island, in the Biscoe Islands. Charted by the BGLE under Rymill, 1934–37. So named by the UK-APC in 1959 because, while there appears to be a number of landing places on this island, numerous underwater rocks make approach dangerous.

Guillermína, Bahía: see Wilhelmina Bay 64°38'S, 62°10'W

Guillermo, Monte: see Banck, Mount 64°54'S, 63°03'W

Gulbrandsen Lake 54°12'S, 36°44'W

Lake 0.5 mi long lying N of Neumayer Glacier in South Georgia. Charted and named "White City" by the Br expedition under Shackleton, 1921–22, but this name is considered unsuitable and has never been used locally. Gulbrandsen Lake was named by the UK-APC in 1957 for Gunnar Gulbrandsen, pattern-maker at the Compañía Argentina de Pesca station at Grytviken, 1927–30, carpenter at Stromness, 1945–46, and variously carpenter, dock-foreman, dockmaster, and junior officer at the South Georgia Whaling Co. station, Leith Harbor, for several years beginning in 1946. Not: White City.

Gulch Island 63°59'S, 61°29'W

Island lying NW of Small Island in the Christiania Islands, in the Palmer Archipelago. Shown on an Argentine government chart of 1952. So named by the UK-APC in 1960 because the island is deeply indented. Not: Isla Aragay, Isla Barranco.

Gulfplataët: see Edward VIII Plateau 66°35'S, 56°50'E

Gull Channel 68°11'S, 67°00'W

Channel 0.1 mi wide between Dynamite Island and Stonington Island, along the W coast of Graham Land. First surveyed by the USAS, 1939–41, and so named by them because numerous sea gulls frequented the channel area.

Gullet, The 67°10'S, 67°38'W

Narrow channel between the E extremity of Adelaide Island and the W coast of Graham Land, separating Hansen and Day Islands

and connecting the heads of Hanusse Bay and Laubeuf Fjord. This area was first explored in 1909 by the FrAE under Charcot who, though uncertain of the existence of the channel, sketched its probable position on the charts of the expedition. The channel was first visited and roughly surveyed in 1936 by the BGLE under Rymill. It was resurveyed and given this descriptive name in 1948 by members of the FIDS. Not: Angostura Gullet, Canal Garganta, Charcot Strait, Loubet Strait.

Gulliver Nunatak 66°12'S, 62°40'W

Nunatak with a flat, ice-free summit, 575 m, at the N side of Adie Inlet, on the E coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE in 1947. Named by the FIDS for the fictional character in Jonathan Swift's *Gulliver's Travels*, because when viewed from the SE its appearance is suggestive of a man lying on his back with his head toward the south.

Gull Lake 54°17'S, 36°31'W

Lake, 0.15 mi in diameter, lying close to the SW shore of King Edward Cove, 0.5 mi S of the abandoned whaling station at Grytviken, South Georgia. First roughly surveyed and named "Möwensee" or "Möven See" (Gull Lake) by A. Szielasko, who visited South Georgia in 1906. The English form Gull Lake was used by Robert Cushman Murphy in 1947, in describing his visit to the lake in November 1912. This latter form, recommended by the UK-APC in 1954, is approved. Not: Möven See, Möwensee.

Gull Rock: see Gaviotín Rock 63°08'S, 56°01'W

Gunn, Mount 76°52'S, 160°42'E

Massive mountain, 2,465 m, standing in the Convoy Range about 7 mi NW of Mount Gran in Victoria Land. Photographed in 1957 by the N.Z. Northern Survey Party of the CTAE (1956–58) and named by them for Bernard M. Gunn, a member of the party.

Gunnar, Cape: see Kater, Cape 63°46'S, 59°54'W

Gunnar Isachsenfjellet: see Isachsen Mountain 72°11'S, 26°15'E

Gunnar Isachsen Mountain: see Isachsen Mountain 72°11'S, 26°15'E

Gunnel Channel 67°06'S, 67°33'W

Channel, 0.5 mi wide and 7 mi long, situated in the S part of Hanusse Bay and separating Hansen Island from the W coast of Graham Land. First observed from the air and roughly charted in 1936 by the BGLE under Rymill. Surveyed from the ground in 1948 by the FIDS who gave this descriptive name. The channel gives a false impression of such narrowness that a boat could not navigate it without scraping her gunnels (gunwales) on either side.

Gunner, Mount 83°32'S, 169°38'E

A partially snow-covered peak (1,430 m) that rises from the southern part of Morris Heights in Queen Alexandra Range. The peak was examined by the Ohio State University Geological Party, 1967–68. Named by US-ACAN for John D. Gunner, Ohio State University geologist and a member of the party to this and other Antarctic localities in three summer seasons, 1967–70.

Gunnestadbreen: see Gunnestad Glacier 72°03'S, 23°50'E

Gunnestad Glacier 72°03'S, 23°50'E

Glacier 13 mi long, flowing N between Mount Widerøe and Mount Walnum in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named for Lt. Alf Gunnestad, pilot with the Norwegian expedition under Lars Christensen, 1933–34. Not: Gunnestadbreen.

Gunn Peaks 73°25'S, 66°36'W

Isolated peaks 9 mi E of Mount Vang in southern Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Robert C. Gunn, glaciologist at Byrd Station, summer 1965–66.

Gunter, Mount 68°59'S, 66°34'W

A conspicuous mountain (1,970 m) with precipitous black rock cliffs on its W side, rising at the S side of Hariot Glacier, 3 mi E of Briggs Peak, on the W side of Antarctic Peninsula. First roughly surveyed by BGLE in 1936–37. Photographed by RARE in Nov. 1947 (trimetrogon air photography). Surveyed by FIDS in 1958. Named by UK-APC after Edmund Gunter (1581–1626), English mathematician whose "line of numbers" (1617) was the first step toward a slide rule; in 1620 he published tables of logarithm sines and tangents which revolutionized navigation.

Gurling Glacier 70°34'S, 62°20'W

A glacier draining between Krebs Ridge and Leininger Peak into the SW corner of Smith Inlet, on the E coast of Palmer Land. Named by UK-APC after P. Gurling, BAS surveyor who worked in the general vicinity of this feature.

Gurney Point 71°00'S, 67°27'W

Small rocky mass overlooking George VI Sound, rising to 610 m and marking the W extremity of the rock ridge separating Bertram and Ryder Glaciers on the W coast of Palmer Land. The point was first seen and photographed from the air on Nov. 23, 1935 by Lincoln Ellsworth, and was mapped from these photographs by W.L.G. Joerg. It was surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 for Norman A. Gurney, a member of the BGLE, 1934–37.

Gurnon Peninsula 74°22'S, 110°35'W

A completely ice-covered peninsula about 10 mi long, between Park and Bunner Glaciers in the NE part of Bear Peninsula, Walgreen Coast, Marie Byrd Land. First mapped by USGS from air photos obtained by USN OpHjp in January 1947. Named by US-ACAN after Lt. P.J. Gurnon, USN, a Hercules aircraft commander in Antarctica during Operation Deep Freeze 1965–67.

Gustav Bull, Mount: see Gustav Bull Mountains 67°51'S, 66°09'E

Gustav Bull Mountains 67°51'S, 66°09'E

A small group of bare, rugged mountain peaks and nunataks, lying 4 mi inland from the coast and 10 mi SW of Scullin Monolith in Mac. Robertson Land. In January and February 1931 several Norwegian whale catchers, exploring this coast, made sketches of the land from their vessels and named this group the Gustav Bull Mountains for Capt. Gustav B. Bull, at that time whaling manager of the *Thorshammer*. The BANZARE (1929–31), under Douglas Mawson, made an airplane flight over this area in January 1930, returning for further exploration in February 1931. They gave

names to individual features in the group. Not: Mount Gustav Bull.

Gusty Gully 77°54'S, 161°28'E

A small N-S valley, the upper portion of which is occupied by a glacier, between Mount Kuipers and Knobhead in Quartermain Mountains, Victoria Land. So named by Alan Sherwood, NZGS party leader to the area, 1987–88, from the strong winds observed here, similar to Windy Gully located 3 mi to the west.

Guten Begegnung, Vorgebirge der: see Well-met, Cape 63°47'S, 57°19'W

Gutenko Mountains 71°40'S, 64°45'W

A large, scattered group of hills, nunataks and small mountains at the south end of Dyer Plateau in central Palmer Land. The feature includes Elliott Hills, Rathbone Hills, Guthridge Nunataks and Blanchard Nunataks. These mountains were seen from the air during flights of Nov. 21 and Dec. 23, 1947, by the Ronne Antarctic Research Expedition and are named for Sigmund Gutenko, USN, chief commissary steward with the expedition. The mountains were mapped in detail by USGS in 1974. Not: Vincent Gutenko Mountains.

Gutenko Nunataks 76°53'S, 143°40'W

Small, elongated nunataks 1 mi W of Mount Morgan in the Ford Ranges of Marie Byrd Land. Discovered on aerial flights made from the West Base of the USAS in 1940, and named for Sigmund Gutenko, cook and steward at West Base.

Guthridge Nunataks 71°48'S, 64°33'W

A scattered group of sharp peaked nunataks and small mountains, about 22 mi long and 6 mi wide, midway between Rathbone Hills and Blanchard Nunataks in the Gutenko Mountains of central Palmer Land. Mapped by USGS in 1974. Named by US-ACAN after Guy G. Guthridge, Director, Polar Information Service, Division of Polar Programs, National Science Foundation; Editor, *Antarctic Journal of the United States*; member, U.S. Advisory Committee on Antarctic Names, from 1989 (Chairman from 1994).

Gutiérrez, Bajo: see Gutiérrez Reef 63°18'S, 57°55'W

Gutiérrez Reef 63°18'S, 57°55'W

A reef with 2 fathoms of water over it, located 0.2 mi NNE of the N end of Kopaitic Island in the Duroch Islands, Trinity Peninsula. Named by the second Chilean Antarctic Expedition (1948) after a boatswain by the name Gutiérrez. Not: Bajo Guardián Gutiérrez, Bajo Gutiérrez.

Gubernørens Islands: see Governor Islands 60°30'S, 45°56'W

Guyatt Ridge 80°38'S, 29°27'W

A ridge SW of Wedge Ridge in the S part of Haskard Highlands, Shackleton Range. Surveyed by the CTAE, 1957, photographed from the air by the U.S. Navy, 1967, and further surveyed by BAS, 1968–71. Named by the UK-APC after Malcolm J. Guyatt, BAS general assistant, Halley Station, 1969–71, who worked in Shackleton Range, 1969–70.

Guyer Rock 68°33'S, 69°01'W

Low rock lying 16 mi W of Flyspot Rocks, Marguerite Bay, off the W coast of Graham Land. Named in 1986 by the UK-APC after Lt. Simon T.G. Guyer, RN, Officer of the Watch at the time HMS *Endurance* grounded on the rock in the 1985–86 season.

Guyou Bay 64°05'S, 62°35'W

Bay 4 mi wide, which indents the W coast of Brabant Island between Claude Point and Metchnikoff Point, in the Palmer Archipelago. Discovered by the FrAE, 1903–05, under Charcot, who named it for Capt. Émile Guyou, French Navy, distinguished in the field of naval science and member of the commission which published the scientific results of the expedition. Not: Cuyou Bucht.

Guyou Island: see Ménier Island 64°59'S, 63°37'W

Guyou Islands 65°03'S, 63°24'W

Small group of islands lying 2 miles NE of Sonia Point in Flandres Bay, off the W coast of Graham Land. First charted by the BelgAE under Gerlache (1897–99), and named for Emile Guyou (1843–1915), French mathematician who prepared a report on the magnetic results of the expedition.

Guy Peaks 72°04'S, 99°04'W

A cluster of peaks located 3 mi NE of Mount Borgeson, overlooking Peale Inlet on Thurston Island. Mapped from air photos made by USN OpHjp in December 1946. Named by US-ACAN for Arthur W. Guy, electrical engineer at Byrd Station, 1964–65.

Gwynn Bay 67°05'S, 57°57'E

Bay close W of Hoseason Glacier along the coast of Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Breidvika (the broad bay). Renamed by ANCA for Dr. A.M. Gwynn, officer in charge at Macquarie Island station in 1949. Not: Breidvika.

Gygra Peak 71°58'S, 3°16'E

A rock peak, 1,980 m, just W of Risen Peak in the Gjelsvik Mountains of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956–60) and named Gygra (the giantess).

H

Haag, Mount: see Haag Nunataks 77°00'S, 78°18'W

Haag Nunataks 77°00'S, 78°18'W

Three low elevations aligned nearly N-S. The dominant central nunatak and the southern elevation have definite rock exposures; the minor northern elevation may be entirely snow covered. The feature was discovered by the RARE (1947–48), led by Finn Ronne, who named it “Mount Haag” for Joseph Haag, head of Todd Shipyards, New York, which worked on the expedition ship, *Aerial* photographs obtained by U.S. Navy Squadron VX-6 in 1966 show the feature to be a group of nunataks, not a mountain, and the name is amended accordingly by US-ACAN. Not: Mount Haag, Mount Joseph Haag.

Haakon Island: see Dufayel Island 62°10'S, 58°34'W

Haasen, Cape: see Hansen, Cape 60°40'S, 45°35'W

Haas Glacier 85°45'S, 164°55'W

A steep tributary glacier draining northward from Rawson Plateau to enter the S side of Bowman Glacier, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Charles G. Haas, meteorologist, South Pole Station winter party, 1960.

Haban Spur 73°18'S, 163°00'E

A bold rock spur 3 mi N of Scarab Peak, extending NE from the E central part of Tobin Mesa in the Mesa Range, Victoria Land. The feature was geologically studied by an Ohio State University field party during the 1982–83 season. Named by US-ACAN after Marta A. Haban, a geologist in the party.

Habermehl Peak 71°49'S, 6°55'E

A peak (2,945 m) 3 mi S of Gessner Peak in the NE part of the Mühlig-Hofmann Mountains of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938–39, and named for the director of the German Weather Service. Remapped from air photos taken by the NorAE, 1958–59. Not: Habermehltoppen.

Habermehltoppen: see Habermehl Peak 71°49'S, 6°55'E

Hachinosu Peak 69°01'S, 39°35'E

A small hill, 45 m high, standing 0.2 mi E of Nishino-ura Cove and marking the highest point on East Ongul Island. Mapped from surveys and air photos by JARE, 1957, and named Hachinosu-yama (beehive peak). Not: Hatinosu Peak.

Hackapike Bay 64°31'S, 62°55'W

Anchorage 4 mi NW of Ryswyck Point, entered W of False Island along the NE coast of Anvers Island, in the Palmer Archipelago. Charted and named by the BGLE, 1934–37, under Rymill.

Hackerman Ridge 72°39'S, 167°46'E

A large mountainous ridge trending N-S between the Gruendler and Rudolph Glaciers, in the Victory Mountains, of Victoria Land. Named by US-ACAN for Norman Hackerman, member of National Science Board, 1968–78; Chairman since 1974. He visited Antarctica in 1975 and 1977 as part of his official duties in support of the U.S. scientific program in Antarctica.

Haddington, Mount 64°13'S, 57°38'W

Mountain, 1,630 m, surmounting the central part of James Ross Island. Discovered by a British expedition under Ross, Dec. 31, 1842, and named by him for the Earl of Haddington, then First Lord of the Admiralty. Not: Mount Haddington, Mount Ross.

Haddon Bay 63°18'S, 55°44'W

Bay lying immediately E of Mount Alexander along the S coast of Joinville Island. Discovered in January 1893 by Thomas Robertson, master of the ship *Active*, one of the Dundee whalers. Surveyed by the FIDS in 1953 and named by the UK-APC in 1956 for Prof. Alfred C. Haddon (1855–1940), who helped Dr. W.S. Bruce with his preparations for scientific work with the Dundee whaling expedition.

Häderich, Mount 71°57'S, 6°12'E

A peak (2,885 m) which rises from the eastern part of Häheller-skarvet in the Mühlig-Hofmann Mountains of Queen Maud Land. The name “Häderich-Berg,” after the procurator of the former German Lufthansa Corporation, was applied in this area by the GerAE (1938–39) under Alfred Ritscher. The correlation of the name with this peak may be arbitrary but is recommended for the sake of international uniformity and historical continuity.

Hades Terrace 73°41'S, 163°30'E

A steep, mainly ice-covered bluff along the E side of Campbell Glacier, situated just W of Vulcan Hills in the Southern Cross Mountains of Victoria Land. Named by the northern party of NZGSAE, 1965–66, presumably from Greek mythology.

Haddington, Mount: see Haddington, Mount 64°13'S, 57°38'W

Hadley Peak 85°01'S, 90°40'W

A peak (2,660 m) surmounting the escarpment at the N edge of Ford Massif in the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party which surveyed these mountains in 1960–61. Named for Jarvis B. Hadley of USCS, then Chief of the Branch of Regional Geology in the Eastern U.S. and administrator of USGS geology programs in Antarctica.

Hadley Point 73°55'S, 113°58'W

The NE point of Murray Foreland, Martin Peninsula, on Bakutis Coast, Marie Byrd Land. The point lies 5 mi SE of Cape Herlacher. Mapped by USGS from surveys and USN aerial photographs, 1959–67. Named by US-ACAN after Richard C. Hadley, USN, who wintered at McMurdo Station in 1959 and other years through 1977; in charge of supply functions at McMurdo during last deployment.

Hadley Upland 68°29'S, 66°24'W

A triangular shaped remnant plateau with an undulating surface (1,500–1,900 m) in southern Graham Land. It is bounded by Windy Valley and the Martin, Gibbs and Lammers Glaciers. The existence of this upland was known to the USAS, 1939–41, F. Ronne and C.R. Eklund having travelled along Lammers and Gibbs Glaciers in Jan. 1941. Surveyed by FIDS in 1948–50 and 1958. Named by UK-APC after John Hadley (1682–1744), English mathematician who, at the same time as Thomas Godfrey,

independently invented the quadrant (the forerunner of the sextant), in 1730–31.

Haefeli Glacier 67°18'S, 66°23'W

Glacier, 2 mi wide and 6 mi long, situated at the NW side of Finsterwalder Glacier and flowing SSW toward the head of Lallemand Fjord on the W coast of Graham Land. With Finsterwalder and Klebelsberg Glaciers, its mouth merges with Sharp Glacier where the latter enters the fjord. First surveyed in 1946–47 by the FIDS and named by them for Robert Haefeli, Swiss glaciologist.

Haffner Glacier 71°28'S, 169°24'E

A small glacier discharging into Berg Bay along the N coast of Victoria Land. First charted by the BrAE, 1898–1900, under C.E. Borchgrevink, who named it for Col. Haffner, Director of the Government Survey of Norway.

Hageman Peak 71°43'S, 70°48'W

Peak rising to c. 940 m at the NW end of Staccato Peaks, Alexander Island. The peak was photographed from the air by Lincoln Ellsworth in 1935. Named by US-ACAN for Lt. Cdr. Roger H. Hageman, USN, LC-130 aircraft commander, USN OpDFrz, 1969.

Hager, Mount 70°53'S, 162°48'E

Mountain (2,420 m) located 6 mi W of Mount Cantello in Explorers Range, Bowers Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–65. Named by US-ACAN for Clarence L. Hager, geophysicist at the South Pole Station, 1967–68.

Hagerty Peak 75°17'S, 68°11'W

Peak in the SE extremity of the Sweeney Mountains in Ellsworth Land. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for Cornelius J. Hagerty, photographer with the McMurdo Station winter party in 1960.

Hagey Ridge 74°57'S, 134°56'W

High snow-covered ridge, between Björnert Cliffs and Johnson Glacier, forming the E end of McDonald Heights on the coast of Marie Byrd Land. The ridge was first photographed from aircraft of the U.S. Antarctic Service in December 1940. It was mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Lt. Donald W. Hagey, USN, Officer-in-Charge at Byrd Station in 1969.

Haggerty Hill 77°57'S, 164°12'E

A mostly ice-free peak, 1,100 m, standing 0.5 mi SE of Salmon Hill and immediately N of the snout of Salmon Glacier, on the Scott Coast, Victoria Land. Named in 1992 by US-ACAN after Patrick R. Haggerty of Holmes and Narver, Inc., who managed logistics and construction activities at McMurdo Station, South Pole Station, Siple Station and various field camps during the 1970's and 1990's. He introduced female construction workers to the U.S. Antarctic Program for the first time during the 1978–79 season, and implemented computer based construction scheduling in the 1990's.

Haggitts Pillar 67°24'S, 179°55'W

A column of rock (65 m) in the South Pacific Ocean, lying 0.1 mi W of Scott Island and some 315 mi NNE of Cape Adare, Victoria Land. Discovered in December 1902 by Capt. William R. Colbeck, RNR, commander of the *Morning*, relief ship to the BrNAE,

1901–04, under Scott. The name was used on official charts of the BrNAE drawn by Lt. George F.A. Mulock. Not: Haggitt's Pillar.

Haggitt's Pillar: see Haggitts Pillar 67°24'S, 179°55'W

Hag Pike 68°57'S, 66°59'W

A conspicuous rock column (710 m) on the N side of Wordie Ice Shelf near the W coast of Antarctic Peninsula. Together with the mountain to the N, it forms the W side of the mouth of Harlot Glacier. Photographed from the air by BGLE, 1937, and by RARE, 1947. Surveyed by FIDS, 1948–50, and 1958. The name by UK-APC is descriptive, "hag" being the stump of a tree which remains after felling.

Håhellerbotnen Cirque 71°54'S, 6°05'E

A large cirque on the E side of Håhellerregga Ridge in the Mühlig-Hofmann Mountains, Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956–60) and named Håhellerbotnen (the shark cave cirque).

Håhellerregga Ridge 71°52'S, 5°58'E

An irregular rock ridge just N of Håhellerskalvet in the Mühlig-Hofmann Mountains, Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956–60) and named Håhellerregga (the shark cave ridge).

Håhelleren Cove 71°55'S, 6°04'E

A cove indenting the N side of Håhellerskarvet in the Mühlig-Hofmann Mountains, Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956–60) and named Håhelleren (the shark cave).

Håhellerskarvet 71°57'S, 6°08'E

A broad, partially ice-covered mountain, 2,910 m, between Austreskorve and Lunde Glaciers in the Mühlig-Hofmann Mountains, Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956–60) and named Håhellerskarvet (the shark cave mountain).

Hahn, Mount 69°17'S, 70°09'W

A mountain (c. 1,100 m) between Walter Glacier and Hampton Glacier at the head of Schokalsky Bay, Alexander Island. Photographed from the air by RARE, 1947–48, and surveyed by FIDS, 1948–50. Named by US-ACAN for Lt. Cdr. Gerald L. Hahn, USN, LC-130 aircraft pilot, USN OpDFrz, 1975 and 1976.

Hahn Island 78°15'S, 164°58'E

Island 1 mi long, lying 7 mi N of Mount Discovery, on the E side of Koettlitz Glacier. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1963 for Cdr. James Hahn, USN, public information officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, for several years preceding 1963.

Haigh Nunatak 71°15'S, 71°13'E

A low peak 12 mi NE of Pickering Nunatak on the E side of the mouth of Lambert Glacier. Photographed from ANARE aircraft in 1957. Visited by a geological party of the SovAE in January 1966. Named by ANCA for J. Haigh, geophysicist at Mawson Station in 1965, who accompanied the SovAE party.

Haigh Point 64°55'S, 63°06'W

A point W of Mount Banck, Danco Coast, forming the N entrance point of Thomas Cove (q.v.). Named by UK-APC in association

with the cove after Dorothy Haigh, Head, Cartographic Section, Foreign and Commonwealth Office, 1948–70, with responsibility for preparing UK-APC maps.

Hailstorm Island 66°13'S, 110°37'E

Rocky island, 0.25 mi long, between Cameron Island and the E end of Burnett Island in the central part of Swain Islands. First roughly mapped from air photos taken by USN OpHjp, 1946–47, and included in a 1957 survey of Swain Islands by Wilkes Station personnel under C.R. Eklund. Named by Eklund for Radioman Kenneth J. Hailstorm, USN, a Naval support force member of the 1957 wintering party at Wilkes Station during the IGY.

Hainaut Island: see D'Hainaut Island 63°54'S, 60°47'W

Haines Glacier 73°21'S, 62°33'W

Glacier 4 mi wide, flowing in a SE direction and joining Meinardus Glacier immediately E of Mount Barkow, on the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by the USAS. During 1947 the glacier was photographed from the air by the RARE, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for William C. Haines, American meteorologist and member of the Byrd Antarctic Expeditions of 1928–30 and 1933–35, and joint author of the meteorological reports of these two expeditions.

Haines Mountains 77°34'S, 146°20'W

Range of ice-capped mountains trending NW-SE for about 25 mi and forming the SW wall of Hammond Glacier, in the Ford Ranges of Marie Byrd Land. Discovered by the ByrdAE in 1934, and named for William C. Haines, meteorologist of the ByrdAE (1928–30 and 1933–35).

Håkollen Island 67°00'S, 57°15'E

Island 1 mi long, rising to 100 m, lying in the SW part of the Øygarden Group. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37, and called Håkollen (the shark knoll). Not: Shark Island.

Håkonbandet: see Håkon Col 71°54'S, 8°52'E

Håkon Col 71°54'S, 8°52'E

A col at the S side of Saether Crags in the Kurze Mountains of Queen Maud Land. Mapped from surveys and air photos by NorAE (1956–60) and named for Håkon Saether, medical officer with NorAE (1956–57). Not: Håkonbandet.

Hale, Mount 78°04'S, 86°19'W

Mountain (3,595 m) standing 1.5 mi NW of Mount Davis in the main ridge of the Sentinel Range, Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse party, 1957–58, under C.R. Bentley, and named for Daniel P. Hale, auroral physicist at Byrd Station and member of the traverse party.

Hale Glacier 72°12'S, 100°48'W

Glacier about 6 mi long, located just E of Mount Simpson on Thurston Island and flowing SW to Abbot Ice Shelf in Peacock Sound. Delineated from air photos taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for Lt. (j.g.) Bill J. Hale, USN, helicopter pilot aboard USS *Burton Island* who made exploratory flights to Thurston Island in February 1960.

Hales Peak 64°08'S, 62°09'W

A peak rising from the northeast shoulder of Mount Cabeza in the northeast part of Brabant Island, Palmer Archipelago. Mapped

from air photos taken by Hunting Aerosurveys, Ltd., 1956–57. Named by UK-APC for Stephen Hales (1677–1761), English curate of Teddington, who first estimated blood pressure, and made important advances in hygiene.

Haley Glacier 71°33'S, 61°50'W

A glacier, 8 mi long, draining SE along the N side of Rowley Massif into Odom Inlet, on the E coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Philip H. Haley, USARP biologist at Palmer Station, 1973.

Half Black Peak 71°47'S, 163°40'E

A peak 2 mi NE of Mount Edixon, rising to over 2,000 m in the SE part of Lanterman Range, Bowers Mountains (q.v.). Descriptively named in 1983 by the NZ-APC on the proposal of M.G. Laird, because of the proximity of All Black Peak (q.v.) and from the color of this peak, half black rock and half snow.

Half Century Nunatak 85°22'S, 178°50'W

A prominent nunatak, displaying a high east-facing rock escarpment, located 4 mi N of Dismal Buttress at the W side of upper Shackleton Glacier. Named by the Southern Party of NZGSAE (1961–62) which, near this nunatak, celebrated the 50th anniversary of Amundsen reaching the South Pole.

Half Dome Nunatak 82°27'S, 159°14'E

Nunatak lying 2 mi S of Cobham Range, at the mouth of Lucy Glacier. So named by the northern party of the NZGSAE (1961–62) because it is rounded on one side and cut into sheer cliffs on the other side.

Hal Flood, Mount: see Berlin, Mount 76°03'S, 135°52'W

Hal Flood Bay: see Okuma Bay 77°50'S, 158°20'W

Hal Flood Range: see Flood Range 76°03'S, 134°30'W

Half Moon Beach 62°29'S, 60°47'W

Small beach lying 1 mi SE of Scarborough Castle on the N coast of Livingston Island, in the South Shetland Islands. This descriptive name was recorded by Robert Fildes, who had sealers working here in 1820–21 and 1821–22.

Halfmoon Bluff 85°13'S, 175°38'W

A rock bluff overlooking the E side of Shackleton Glacier, rising immediately N of the mouth of Brunner Glacier, in the Cumulus Hills. So named by the Texas Tech Shackleton Glacier Expedition (1964–65) because its sheer cliffs and crescent shaped top give it the appearance of a half moon.

Half Moon Island 62°36'S, 59°55'W

Crescent-shaped island 1.25 mi long, lying in the entrance to Moon Bay on the E side of Livingston Island, in the South Shetland Islands. This island was known to sealers in the area as early as 1821. The name, which suggests its shape, appears on a chart based upon a 1935 survey by DI personnel on the *Discovery II*. Not: Isla Media Luna, Johnsons Island.

Half-ration Névé 73°01'S, 163°30'E

A large névé at the head of Aviator Glacier in Victoria Land. It is largely enclosed on the W side by the Mesa Range. So named by the northern party of NZGSAE, 1962–63, because its resupply was delayed several days by blizzards and the party was limited to reduced rations.

Halfthree Point 62°14'S, 58°57'W

Point forming the SE end of Fildes Peninsula, King George Island, in the South Shetland Islands. Charted and named by DI personnel on the *Discovery II* in 1935.

Halfway Island 64°45'S, 64°12'W

Island lying 2.5 mi NW of Litchfield Island, off the SW coast of Anvers Island in the Palmer Archipelago. Surveyed by the British Naval Hydrographic Survey Unit in 1956–57. The name arose because the island lies halfway between Arthur Harbor and Cape Monaco, a route frequently traveled by boat by members of the FIDS at the Arthur Harbor station.

Halfway Nunatak 78°23'S, 161°06'E

An isolated nunatak on the W side of The Landing, and almost in the center of the upper Skelton Glacier. Surveyed and descriptively named in 1957 by the N.Z. party of the CTAE, 1956–58.

Hålisen Glacier 72°02'S, 8°51'E

A cirque glacier between Hålisrimen Peak and Hålisstonga Peak in the Kurze Mountains of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Hålisen (the slippery ice).

Hålishalsen Saddle 72°07'S, 9°04'E

An ice saddle between the Kurze Mountains and the interior ice plateau close southward, in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Hålishalsen (the slippery ice neck).

Hålisrimen Peak 72°01'S, 8°52'E

Peak, 2,655 m, rising 2 mi NW of Hålisstonga Peak in the Kurze Mountains of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Hålisrimen (the slippery ice frost).

Hålisstonga Peak 72°02'S, 8°57'E

Peak, 2,780 m, marking the S end of the Kurze Mountains in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Hålisstonga.

Hall, Mount 84°55'S, 170°22'W

A rock peak (2,430 m) standing 1.5 mi SW of Mount Daniel, surmounting the snow-covered, tabular mountain block which forms the S end of Lillie Range, in the foothills of the Prince Olav Mountains. Discovered and photographed by the U.S. Ross Ice Shelf Traverse Party (1957–38) under A.P. Crary, and named by him for Lt. Cdr. Ray E. Hall, USN, pilot of USN Squadron VX-6 during Deep Freeze Operations.

Hall Cliff 71°59'S, 68°37'W

A sandstone cliff 1 mi long, located along the S side of Saturn Glacier and 1 mi W of Citadel Bastion in eastern Alexander Island. The feature was mapped from trimetrogon air photography taken by RARE, 1947–48, and from survey by FIDS, 1948–50. Named by UK-APC from association with Saturn Glacier after Asaph Hall (1829–1907), the American astronomer who contributed toward the discovery of Saturn and also discovered the satellites of the planet Mars.

Halle Flat 76°40'S, 159°50'E

A relatively flat area just southward of Coxcomb Peak in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills

Expedition, 1964. They gave the name after Thore G. Halle whose pioneering work (1913) on Antarctic fossil plants forms part of the scientific reports on Otto Nordenskjöld's Swedish Antarctic Expedition of 1901–04.

Haller Rocks 64°04'S, 62°06'W

Small group of rocks in the E part of Bouquet Bay, lying 2 mi NW of the SW end of Liège Island, in the Palmer Archipelago. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for Albrecht von Haller (1708–77), Swiss physiologist who made important contributions to medical knowledge (e.g., mechanism of heartbeat, action of bile).

Hallet, Cape: see Hallett, Cape 72°19'S, 170°16'E

Hallett, Cape 72°19'S, 170°16'E

A bold rock cape forming the north tip of Hallett Peninsula, on the coast of Victoria Land. Discovered in 1841 by Sir James Clark Ross who named it for Thomas R. Hallett, purser on one of the expedition ships, the *Erebus*. Not: Cape Hallett.

Hallett Peninsula 72°30'S, 170°10'E

Triangular, dome-shaped peninsula, 20 mi long, with 1,500 m cliffs on its E. seaboard side and 300 m on its W side. The peninsula extends from Cape Hallett to Cape Wheatstone and is joined to the mainland by a narrow ridge between Tucker Glacier and Edisto Inlet. So named by the NZGSAE, 1957–58, because Hallett station on Seabee Hook was established at the N end of the peninsula.

Hallgren, Mount 73°23'S, 3°22'W

A mountain, largely ice-covered, with a steep, rocky northern face, situated 27 mi SW of Neumayer Cliffs in the Kirwan Escarpment, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and additional air photos (1958–59), and named for Stig E. Hallgren, photographer with NBSAE. Not: Hallgrenskarvet.

Hallgrenskarvet: see Hallgren, Mount 73°23'S, 3°22'W

Hall Island 54°00'S, 38°08'W

A small, steep-sided, tussock-covered island between Verdant Islands and Proud Island in the Willis Islands, South Georgia. Charted by DI personnel on the *Discovery* in the period 1926–30. Named by UK-APC after Cdr. Geoffrey P.D. Hall, RN, Commanding Officer of HMS *Owen* which surveyed the area in 1960–61.

Hall Nunatak 78°59'S, 87°24'W

A small nunatak about 2 mi southeastward of Thomas Nunatak, situated along the ice escarpment at the head of Minnesota Glacier, in the Ellsworth Mountains. Named by the University of Minnesota Geological Party to these mountains (1963–64) for George S. Hall, helicopter crew chief with the USA 62nd Transportation Corps Detachment, who assisted the party.

Hall Nunatak: see Neff Nunatak 74°58'S, 72°08'W

Hall Nunataks 70°48'S, 66°45'E

A group of four nunataks about 6 mi ESE of Mount Bunt in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named by ANCA for R.G. Hall, assistant diesel mechanic at Wilkes Station in 1964.

Hall Peak 79°29'S, 83°45'W

A peak, 2,170 m, in the Heritage Range, surmounting the dividing ridge at the upper reaches of Rennell Glacier, Schmidt Glacier and Larson Valley. Named by the University of Minnesota Geological Party to these mountains, 1963–64, for Walter D.M. (Mike) Hall, geologist with the party.

Hall Peninsula 62°46'S, 61°14'W

Small peninsula 2 mi SW of President Head on the E side of Snow Island, in the South Shetland Islands. The name Basil Halls Island was applied to Snow Island by James Weddell in 1820–23, for Capt. Basil Hall, RN (1788–1844). Hall Peninsula was given by the UK-APC in 1961 in order to preserve Weddell's name on the island.

Hall Ridge 70°42'S, 63°12'W

A low, snow-covered ridge 5 mi S of the Eland Mountains in Palmer Land. Mapped by the USGS in 1974. Named by US-ACAN for Capt. Phillip L. Hall, U.S. Army, Assistant Civil Engineering Officer on the staff of the Commander, Naval Support Force, Antarctica, during Operation Deep Freeze, 1969 and 1970.

Hall Rock 76°51'S, 159°20'E

A large rock located 2 mi NW of Carapace Nunatak at the edge of the polar plateau of Victoria Land. Named by US-ACAN for geologist Bradford A. Hall who, with Harold W. Borns, did research on the so-called Mawson Tillite in this vicinity, 1968–69.

Halpern Point 63°18'S, 57°50'W

A point on the northern coast of Trinity Peninsula directly south of the eastern part of the Duroch Islands. Named by US-ACAN for Martin Halpern of the Geophysical and Polar Research Center, University of Wisconsin, Madison, leader of the field party which geologically mapped this area, 1961–62.

Halsknappane Hills 72°04'S, 6°01'E

A group of low rock hills just W of Skorgehalsen Saddle in the E part of the Mühlig-Hofmann Mountains, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Halsknappane (the neck buttons).

Halverson Peak 71°47'S, 164°44'E

A peak (1,710 m) which marks the E side of the terminus of Rawle Glacier, in the King Range of the Concord Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Jack E. Halverson, USN, chief electronics technician and member of the McMurdo Station party, 1967.

Halvfarryggen Ridge 71°10'S, 6°40'W

A broad snow-covered ridge separating the Ekström and Jelbart Ice Shelves, on the coast of Queen Maud Land. First mapped by the NBSAE, 1949–52. They referred to the feature as "Isrygg" (ice ridge), but it was subsequently named Halvfarryggen (the half way ridge) by NorAE, 1956–60. Not: Isrugg, Plato Khal'vfarryggen.

Hamarglovene Crevasses 71°56'S, 5°05'E

A crevasse field in lower Vestreskorve Glacier just E of Hamarøya Mountain, in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956–60) and named Hamarglovene (the hammer clefts).

Hamarøya Mountain 71°56'S, 4°57'E

An isolated ice-free mountain in the middle of the mouth of Vestreskorve Glacier in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956–60) and named Hamarøya (the hammer island).

Hamaröygalten: see Sheehan Islands 67°22'S, 59°46'E

Hamarskaftet Nunataks 71°50'S, 4°58'E

A row of nunataks about 5 mi long, lying 2 mi NW of Swarthamaren Mountain in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956–60) and named Hamarskaftet (the hammer handle).

Hamarskorvene Bluff 72°01'S, 5°14'E

A rock and ice bluff just E of Kvithamaren Cliff in the Mühlig-Hofmann Mountains, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Hamarskorvene.

Hamartind Peak 72°33'S, 0°39'E

A peak at the E extremity of Hamrane Heights in the Sverdrup Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Hamartind (the crag peak).

Hamberg Fluss: see Penguin River 54°17'S, 36°30'W

Hamberg Glacier 54°21'S, 36°31'W

Glacier which flows in an ENE direction from the NE side of Mount Sugartop to the W side of the head of Moraine Fjord, South Georgia. Charted by the SwedAE, 1901–04, under Nordenskjöld, who named it for Axel Hamberg, Swedish geographer, mineralogist and Arctic explorer. Not: Hamburg Glacier.

Hamberg Lake: see Hamberg Lakes 54°19'S, 36°31'W

Hamberg Lakes 54°19'S, 36°31'W

Two adjoining lakes lying near the N outlet of Hamberg Glacier, 1 mi W of Moraine Fjord, Cumberland East Bay, South Georgia. First surveyed by the SwedAE, 1901–04, under Nordenskjöld. The name derives from nearby Hamberg Glacier, and was given by A. Szielasko who explored this vicinity in 1906. Not: Hamberg Lake, Hamberg See.

Hamberg See: see Hamberg Lakes 54°19'S, 36°31'W

Hamblin Glacier 66°24'S, 65°07'W

Glacier flowing to the SE side of Widmark Ice Piedmont, in Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955–57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for Theodore Hamblin (1890–1952), English optician who in the 1930's helped in the evolution of the first satisfactory snow goggle design.

Hambourg Bay: see Hamburg Bay 64°30'S, 63°57'W

Hamburg Bay 64°30'S, 63°57'W

Bay indenting the NW coast of Anvers Island immediately S of Bonnier Point, in the Palmer Archipelago. Discovered but incompletely defined by a German expedition 1873–74, under Dallmann, who named it for Hamburg, Germany, home port of the expedition. The bay was more accurately mapped by the FrAE, 1903–05, under Charcot. Not: Hambourg Bay.

Hamburg Glacier: see Hamberg Glacier 54°21'S, 36°31'W

Hamer Hill 64°32'S, 59°35'W

A hill (505 m) on the eastern edge of the central mountain mass of Sobral Peninsula, Nordenskjöld Coast, Graham Land. Named by the UK-APC for Richard D. Hamer, BAS geologist, Rothera Station, 1978–79 and 1980–81, who worked in the area.

Hamilton, Kap: see Hamilton Point 64°22'S, 57°18'W

Hamilton, Mount 80°40'S, 158°17'E

A mountain, 1,990 m, standing at the E edge of Kent Plateau, 7 mi S of Mount Tuatara, in the Churchill Mountains. Discovered by the BrNAE (1901–04) and named for Admiral Sir Richard Vesey Hamilton, who served on Arctic voyages (1850–54) and was a member of the Ship Committee for this expedition.

Hamilton, Mount 85°44'S, 151°53'W

A mountain 1,410 m, which marks the W end of the Tapley Mountains, standing at the E side of the lower reaches of Scott Glacier in the Queen Maud Mountains. First observed by the ByrdAE geological party under Laurence Gould in December 1929. Visited in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for G.C. Hamilton, general manager of the McClatchy Newspapers, of Sacramento, CA, who was a contributor to the expedition.

Hamilton Bay 54°48'S, 35°54'W

Small bay at the mouth of Salomon Glacier, indenting the SE coast of South Georgia 0.4 mi NE of the mouth of Drygalski Fjord. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for James E. Hamilton (1893–1957), Colonial Naturalist to the Falkland Islands, who was seconded for service with the Discovery Investigations, 1925–28.

Hamilton Bluff 69°44'S, 73°56'E

A rock bluff on the coast of Antarctica, about 2 mi W of Palmer Point and 10 mi W of Mount Caroline Mikkelsen. First mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Visited by I.R. McLeod, geologist with the ANARE Prince Charles Mountains survey party, 1969. Named by ANCA for R. Hamilton, helicopter pilot with ANARE (*Nella Dan*) in 1968.

Hamilton Cliff 85°01'S, 90°18'W

An imposing rock cliff that rises more than 600 m and forms the NE extremity of Ford Massif, in the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party which surveyed these mountains in 1960–61. Named for Warren B. Hamilton, USGS representative in charge of geologic studies in the McMurdo Sound dry valley area, 1958–59.

Hamilton Glacier 82°40'S, 160°15'E

A glacier about 12 mi long flowing from the NW slopes of Markham Plateau in the Queen Elizabeth Range into Nimrod Glacier. Named by the northern party of the NZGSAE (1960–61) for W.M. Hamilton, Sec. of the New Zealand Dept. of Scientific and Industrial Research.

Hamilton Ice Piedmont 74°30'S, 110°18'W

An ice piedmont, 8 mi wide, to the E of Wyatt Hill, Bear Peninsula, on the Walgreen Coast, Marie Byrd Land. Mapped by USGS from surveys and USN aerial photographs, 1959–66.

Named in 1977 by US-ACAN after Robert Hamilton, meteorologist, University of California, Davis; USARP Station Scientific Leader at South Pole Station, winter party 1975.

Hamilton Point 64°22'S, 57°18'W

Flat-topped point marking the S side of the entrance to Markham Bay on the SE side of James Ross Island. Discovered by a British expedition under Ross, 1839–43, who named it Cape Hamilton after Capt. W.A.B. Hamilton, RN, then private secretary to the Earl of Haddington, and later Second Secretary to the Admiralty. First surveyed by the SwedAE under Nordenskjöld, 1901–04, and resurveyed by the FIDS in 1953. Point is considered a more suitable descriptive term for the feature than cape. Not: Kap Hamilton.

Hammer Hill 61°04'S, 55°21'W

The most northerly hill on Elephant Island, South Shetland Islands, situated just S of Cape Yelcho. So named by the U.K. joint Services Expedition, 1970–71, as being descriptive of the appearance of the feature. Not: Colina Martillo.

Hammer Point 62°20'S, 59°39'W

A point 0.5 mi SW of Catharina Point, NW Robert Island, South Shetland Islands. Descriptively named by UK-APC following aerial photography of Robert Island by FIDASE, 1956, and BAS field work, 1975–76. Not: Punta Clothier.

Hammersly, Cape 66°28'S, 115°03'E

An ice-covered cape midway between Williamson and Totten Glaciers on Budd Coast. Delineated by G.D. Blodgett (1955) from aerial photographs taken by USN Operation Highjump (1946–47), and named by US-ACAN for George W. Hammersly, Midshipman on the sloop *Vincennes* during the USEE (1833–42) under Lt. Charles Wilkes.

Hammerstad Reef 54°13'S, 37°25'W

Reef 1.5 mi S of Cape Rosa, lying in the N part of the entrance to Queen Maud Bay off the S coast of South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Thorleif Hammerstad, a sealer of the *Compañía Argentina de Pesca*, Grytviken, for several years beginning in 1946.

Hammond Glacier 77°25'S, 146°00'W

Glacier on the NE side of the Haines Mountains, flowing NW for about 40 mi to Sulzberger Ice Shelf in the Ford Ranges, Marie Byrd Land. Discovered in 1934 by the ByrdAE, and named by Byrd for John Hays Hammond, American mining engineer and philanthropist. Not: Hammond Inlet, John Hayes Hammond Inlet, John Hays Hammond Glacier.

Hammond Inlet: see Hammond Glacier 77°25'S, 146°00'W

Hamm Peak 69°43'S, 74°08'E

A small rock peak just back from the coast, standing close S of Strover Peak and 6 mi WNW of Mount Caroline Mikkelsen. First mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Named by ANCA for G.F. Hamm, officer in charge at Mawson Station in 1968, who established a survey station on the feature.

Hamna Bay 69°16'S, 39°41'E

A sheltered bay that indents the W side of Langhovde Hills on the E side of Lützow-Holm Bay. Mapped by Norwegian cartographers

from air photos taken by the Lars Christensen Expedition, 1936–37, and named Hamna (the harbor).

Hamna Icefall 69°17'S, 39°43'E

An icefall which descends to the S end of Hamna Bay immediately E of Hamnenabben Head, on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62. The name was adopted by JARE Headquarters in 1963 in association with Hamna Bay.

Hamnenabben Head 69°17'S, 39°41'E

A bare rock headland which forms the S shore of Hamna Bay along the E side of Lützw-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Hamnenabben (the harbor crag) in association with Hamna Bay.

Hamner Nunatak 78°33'S, 157°56'E

Nunatak lying W of the Warren Range, 5 mi WNW of Wise Peak. Named by US-ACAN in 1964 for Karl C. Hamner, biologist at McMurdo Station, 1960–61.

Hampson, Mount 66°48'S, 51°11'E

Mountain 1 mi N of Mount Rhodes, in the N part of the Tula Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for R.V. Hampson, a member of the crew of the *Discovery* during the BANZARE, 1929–31.

Hampton, Mount 76°29'S, 125°48'W

An impressive mountain (3,325 m) with a circular ice-filled crater occupying much of the summit area. It is the northernmost of the extinct volcanoes which comprise the Executive Committee Range in Marie Byrd Land. Discovered by the USAS on a flight, Dec. 15, 1940, and named for Ruth Hampton, Dept. of the Interior member of the USAS Executive Committee. Mapped in detail by USGS from surveys and U.S. Navy trimetrogon photography, 1958–60.

Hampton Bluffs 64°25'S, 59°18'W

A group of three rock bluffs on the E side of Larsen Inlet, Graham Land. Mapped from surveys by FIDS (1960–61). Named by UK-APC for Ian F.G. Hampton, FIDS physiologist at Hope Bay in 1959 and 1960.

Hampton Glacier 69°20'S, 70°05'W

Glacier in the NE part of Alexander Island, 25 mi long and 5 mi wide, which flows NNE along the W wall of Douglas Range to Schokalsky Bay. First photographed from the air during a flight up this glacier in 1937 by the BGLE. The mouth of the glacier was surveyed in 1948 by the FIDS and later named for Wilfred E. Hampton of the BGLE, 1934–37, who piloted the airplane that made the above mentioned flight in 1937.

Hampton Ridge 83°52'S, 167°02'E

A ridge about 10 mi long in Queen Alexandra Range, running N from Pagoda Peak between Montgomerie and Mackellar Glaciers. Named by US-ACAN for Maj. William C. Hampton, commanding officer of the U.S. Army Aviation Detachment which supported the Texas Tech-Shackleton Glacier Expedition, 1964–65.

Hamrane Heights 72°32'S, 0°36'E

Ice-free heights between Skarsdalen Valley and Hei Glacier in the Sverdrup Mountains, Queen Maud Land. Photographed from the

air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Hamrane (the crags).

Hamrehovden: see Trethewry Point 67°23'S, 59°47'E

Hamreneset: see Bertha Island 67°23'S, 59°39'E

Hanchild Beach: see Fairchild Beach 53°04'S, 73°39'E

Hancox, Mount 72°38'S, 166°59'E

A prominent mountain (3,245 m) about 6 mi SE of Mount Burton, rising above the north margin of Malta Plateau in the Victory Mountains, Victoria Land. Named by the Mariner Glacier geology party of NZGSAE, 1966–67, for G.T. Hancox, senior geologist with the party in this area.

Handel Ice Piedmont 70°20'S, 71°00'W

Large ice piedmont lying N and W of Colbert Mountains, between Haydn and Schubert Inlets on the W-central coast of Alexander Island. Apparently first seen from the air by the USAS in 1940 but not separately mapped. First mapped from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by the UK-APC for George Frederick Handel (1685–1759), German composer.

Hand Glacier 72°58'S, 168°05'E

A deeply entrenched valley glacier that drains the E slopes of Malta Plateau and flows E along the S side of Clapp Ridge into the Borchgrevink Glacier, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Cadet H. Hand, biologist at McMurdo Station, 1967–68.

Handle, The 78°00'S, 161°59'E

An elongated massif 1.5 mi SW of Table Mountain in the NW part of Royal Society Range, Victoria Land. The feature was descriptively named by Alan Sherwood, NZGS field party leader in the area, 1987–88. Its size and position in relation to an associated ridge suggest a handle to a sickle.

Handler Ridge 72°30'S, 167°00'E

A prominent ridge about 10 mi long which serves as a divide between Croll Glacier and the upper portion of Trafalgar Glacier, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN in 1969 for Dr. Philip Handler, then Chairman, National Science Board and President of the National Academy of Sciences.

Handsley, Mount 77°56'S, 161°33'E

A subsidiary rock peak on the Knobhead massif in Victoria Land. It rises 1.5 mi SSE of Knobhead and overlooks the upper part of Ferrar Glacier from the northwest. Named in 1969 by the NZ-APC after Jesse Handsley, member of the *Discovery* crew of Capt. Robert Scott's expedition, who accompanied Scott, Evans, Feather, Skelton and Lashly on the major sledging journey up the Ferrar and Taylor Glaciers in 1903.

Handsley Valley 77°55'S, 161°36'E

A small ice-free valley between Knobhead and Mount Handsley in Quartermain Mountains, Victoria Land. Named by NZGB in 1993 in association with Mount Handsley.

Hanessian Foreland 74°42'S, 135°15'W

A relatively low, snow-covered foreland or peninsula, over 20 mi long and 10 mi wide, on the coast of Marie Byrd Land. It extends seaward between Siniff Bay and the western end of Getz Ice Shelf. Mapped by USGS from surveys and U.S. Navy aerial photography, 1959–65. Named by US-ACAN after John Hanessian, Jr. (1925–74), of George Washington University, Washington DC, noted authority on political science and international affairs. At the time of his death he was on leave to the National Science Foundation. From 1954–58, he served on the National Academy of Sciences staff and made substantial contribution to the Committee on Polar Research in the planning and carrying out of the US-IGY program.

Hanka Island 64°51'S, 62°49'W

Small island lying near the head of Leith Cove, Paradise Harbor, off the W coast of Graham Land. The name was applied by Scottish geologist David Ferguson, who visited this area in the whaler *Hanka* in 1913–14.

Hannah Island 76°39'S, 148°48'W

An ice-covered island in Marshall Archipelago, lying between Hutchinson Island and Guest Peninsula within Sulzberger Ice Shelf. Mapped by USGS from surveys and U.S. Navy air photos (1959–65). Named by US-ACAN for J.P. Hannah, USARP ionospheric physicist at Byrd Station in 1968.

Hannah Peak 82°36'S, 53°10'W

A sharp peak at the SW end of Dufek Massif 2 mi NNE of Walker Peak, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for James L. Hannah, construction electrician, who wintered-over at Ellsworth Station in 1957 and McMurdo Station in 1961.

Hannah Point 62°39'S, 60°37'W

Point forming the E side of the entrance to Walker Bay on the S coast of Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 after the sealer *Hannah* of Liverpool, which visited the South Shetland Islands and was wrecked there on Dec. 25, 1820. Not: Punta Ribes, Punta Suboficial Ribes.

Hannah Ridge 83°36'S, 55°10'W

A narrow, arc-shaped rock ridge, 5 mi long, extending westward from Washington Escarpment just north of Brown Ridge, in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Edward L. Hannah, aviation structural mechanic at Ellsworth Station, winter 1958.

Hannam Islands 66°55'S, 142°58'E

Three small islands lying in the eastern part of Commonwealth Bay, midway between Cape Denison and Cape Gray. Discovered by the AAE (1911–14) under Douglas Mawson, who named them for Walter H. Hannam, wireless telegrapher with the expedition.

Hannan Glacier: see Molle Glacier 67°31'S, 47°10'E

Hannan Ice Shelf 67°36'S, 47°35'E

An ice shelf 18 mi wide on the coast of Enderby Land. The ice shelf is nourished by Molle and Kichenside Glaciers and borders McKinnon Island on all but its N side. Photographed from ANARE aircraft in 1956. First visited in October 1957 by an ANARE party led by B.H. Stinear. Named by ANCA for F.T. Hannan, meteorologist at Mawson Station in 1957.

Hannon Hill 77°50'S, 163°38'E

A bare rock hill (1,110 m) on the W side of the terminus of Amos Glacier, at the juncture with Blue Glacier, in Victoria Land. Named in 1992 by US-ACAN after Timothy J. Hannon, cartographer, USGS; leader of the two man USGS team working jointly out of Vanda Station with a N.Z. team in the 1988–89 season to establish new geodetic controls and observe old stations in the McMurdo Dry Valleys; relocated the position of the Geographic South Pole.

Hansen, Cape 60°40'S, 45°35'W

Cape which separates Marshall and Iceberg Bays on the S coast of Coronation Island, in the South Orkney Islands. The name appears on a chart based upon a running survey of the islands in 1912–13 by Petter Sørllle, Norwegian whaling captain. Not: Cape Haasen, Cape H. Hansen.

Hansen, Mount 71°28'S, 12°09'E

Mountain, 1,895 m, standing 1 mi N of Kare Bench and just NW of Daykovaya Peak at the N extremity of Westliche Petermann Range, Wohlthat Mountains. Discovered and plotted from air photos by GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named for Kåre Hansen, a meteorologist with NorAE, 1958–59. Not: Hansenhovden.

Hansen, Mount: see Henson, Mount 84°50'S, 168°21'W

Hansenbreen 72°06'S, 22°45'E

Glacier 15 mi long, flowing N along the W side of Mount Nils Larsen in the Sør Rondane Mountains. Roughly mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and remapped by them in greater detail in 1957 from air photos taken by USN OPHjp, 1946–47. Named for H.E. Hansen, Norwegian cartographer who compiled these and other maps for Norwegian Antarctic expeditions. Not: Hansen Glacier, H.E. Hansenbreen.

Hansen Glacier 78°21'S, 84°33'W

A tributary glacier 10 mi long, flowing NE from Mount Tuck to join Dater Glacier, in the Sentinet Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Herbert L. Hansen, meteorologist at South Pole Station in 1957.

Hansen Glacier: see Hansenbreen 72°06'S, 22°45'E

Hansenhovden: see Hansen, Mount 71°28'S, 12°09'E

Hansen Inlet 75°15'S, 63°40'W

Ice-filled inlet between Capes Schlossbach and Cox, along the E coast and near the base of Antarctic Peninsula. Mapped by USGS from ground surveys and USN air photos, 1961–67. Named by US-ACAN for B. Lyle Hansen who, with Herbert T. Ueda, was in charge of the deep-core drilling program at Byrd Station for several seasons, 1966–69.

Hansen Island 67°06'S, 67°37'W

Island 6 mi long and 3 mi wide, lying immediately N of The Gullet at the head of Hanusse Bay, off the W coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill, who used the provisional name North Island for this feature. The island was resurveyed in 1948 by the FIDS, and was renamed in 1954 by the UK-APC for Leganger H. Hansen, manager at Messrs. Chr.

Salvesen's whaling station at Leith Harbor, South Georgia, 1916–37, who gave great assistance to the BGLE, 1934–37. Not: Isla Tegualda, North Island.

Hansen Mountains 68°16'S, 58°47'E

A large group of nunataks lying 55 mi S of Stefansson Bay and extending 25 mi in a NW-SE direction. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Named for H.E. Hansen, Norwegian cartographer who compiled the maps for this and other Norwegian Antarctic expeditions. Not: Gora Khansen.

Hansen Nunatak 74°48'S, 162°20'E

A prominent beehive-shaped nunatak, 965 m, near the terminus of Reeves Glacier, rising above the middle of the glacier about 3 mi NE of Mount Larsen and 3 mi NW of Teall Nunatak, in Victoria Land. Discovered by the BrNAE, 1901–04, the area was more fully explored by the BrAE, 1907–09, which named this feature.

Hansen Point 54°08'S, 36°41'W

Point lying between Factory and Harbour Points on the W side of Leith Harbor, Stromness Bay, on the N coast of South Georgia. The name appears on a chart showing the results of surveys by DI personnel in 1927 and 1929, and is probably for Leganger Hansen, manager of the whaling station at Leith Harbor at that time.

Hansen Rocks 67°30'S, 62°54'E

A group of five small islands lying just N of Holme Bay and the coast of Mac. Robertson Land, about 1 mi NE of Sawert Rocks. Plotted from ANARE air photographs. Named by ANCA for Capt. B.T. Hansen, master of the *Nella Dan* for ANARE relief voyages in 1968, 1969, 1970 and 1972.

Hansen Spur 86°13'S, 159°33'W

A spur, 8 mi long, descending from the NW side of Nilsen Plateau of the Queen Maud Mountains and terminating at the edge of Amundsen Glacier just E of Olsen Crags. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Ludvig Hansen, a member of the sea party aboard the *Fram* on Amundsen's Norwegian expedition of 1910–12. This naming preserves the spirit of Amundsen's 1911 commemoration of "Mount L. Hansen," a name applied for an unidentified mountain in the general area. Not: Mount L. Hansen, Mount Ludwig Hansen.

Hans-Martin Nunatak 71°37'S, 8°56'E

An isolated nunatak about 3 mi S of Henriksen Nunataks in Queen Maud Land. Mapped from surveys and air photos by NorAE (1956–60) and named for Hans-Martin Henriksen, meteorological assistant with NorAE (1956–58). Not: Hans-Martinsteinen.

Hans-Martinsteinen: see Hans-Martin Nunatak 71°37'S, 8°56'E

Hanson, Mount 85°28'S, 147°26'W

A mountain rising to 800 m, standing 1 mi SE of Supporting Party Mountain in the Harold Byrd Mountains. Discovered in December 1929 by the ByrdAE geological party under Laurence Gould, and named by R. Admiral Byrd for Malcolm P. Hanson, chief radio engineer of the expedition, and a pioneer in the development of radio communication apparatus for polar regions.

Hanson, Mount: see Hanson Peak 71°21'S, 170°18'E

Hanson Hill 63°35'S, 58°49'W

A snow-covered hill (900 m) with two lower summits, one to the N and one to the S, standing 4 mi SE of Cape Roquemaurel on Trinity Peninsula. This hill was roughly charted but left unnamed by the French expedition under Capt. Jules Dumont d'Urville in March 1838. In 1948, the UK-APC gave the name "Thanaron Hill" to the feature. Their action followed a 1946 search by the FIDS which failed to identify a coastal point in the vicinity to which d'Urville had given the name "Cap Thanaron." The latter feature (now Thanaron Point) was subsequently identified. In 1963, the UK-APC renamed the hill described after Thomas A. Hanson, FIDS surveyor at Hope Bay, 1957–59. Not: Thanaron Hill.

Hanson Peak 71°21'S, 170°18'E

A small peak (1,255 m) 4 mi S of Cape Adare in the N part of Adare Peninsula. Named by the NZ-APC after Nikolai Hanson, member of the BrAE, 1898–1900, under C.E. Borchgrevink, who was the first man known to have died on the Antarctic mainland (at Cape Adare, Oct. 14, 1899). Hanson's grave surmounts nearby Cape Adare. Not: Mount Hanson.

Hanson Ridge 77°17'S, 163°19'E

Prominent ice-free ridge situated 3 mi NW of Spike Cape, near the center of Wilson Piedmont Glacier in Victoria Land. The feature was "Black Ridge" on maps of the BrAE under Scott, 1910–13, but that name is already in use in Victoria Land. In order to avoid identical names it was renamed in 1964 by the US-ACAN for Kirby J. Hanson, meteorologist at the South Pole Station, 1958. Not: Black Ridge.

Hanssen, Mount 85°59'S, 164°28'W

An ice-covered mountain distinguished by a sharp peak, 3,280 m, standing at the southernmost point of Rawson Plateau in the Queen Maud Mountains. Discovered by Capt. Roald Amundsen while enroute to the South Pole in November 1911, and named by him for Helmer Hanssen, deputy leader of the South Pole Party. Not: Mount Helmer Hanssen.

Hanusse Bay 66°57'S, 67°30'W

Broad bay, 20 mi long in a general N-S direction, lying between the northern portions of Adelaide Island and Arrowsmith Peninsula. Discovered and first charted by the FrAE, 1908–10, under Charcot, and named by him for the Dir. of the Hydrographic Service of the French Navy. Not: Hanusse Fiord.

Hanusse Fiord: see Hanusse Bay 66°57'S, 67°30'W

Hånuten: see Shark Peak 68°03'S, 62°41'E

Håppetvik: see Hope Bay 63°23'S, 57°00'W

Happy Valley 75°22'S, 72°40'W

An ice-filled valley, 3 mi wide and over 10 mi long, lying within the horseshoe-shaped confines of the Behrendt Mountains, in Ellsworth Land. The name originated as a field name of the University of Wisconsin Traverse Party, 1965–66, which surveyed this area.

Harald Bay 69°12'S, 157°45'E

A bay about 4 mi wide indenting the coast between Archer Point and Williamson Head. Photographed from the air by USN Operation Highjump in 1947. Sketched and photographed by Phillip Law, leader of ANARE (*Magga Dan*) on Feb. 20, 1959. Named

by ANCA for Capt. Harald Møller Pederson, master of the *Magga Dan* during the expedition. Not: Harold Bay.

Harbord Glacier 75°55'S, 162°24'E

A glacier flowing along the S side of Mount George Murray. It enters the Ross Sea S of Whitmer Peninsula where it forms Harbord Glacier Tongue. The name derives from the glacier tongue, which was named by Ernest Shackleton for A.E. Harbord, second officer of the *Nimrod* during the last year of the BrAE, 1907–09.

Harbord Glacier Tongue 75°55'S, 162°50'E

A glacier tongue forming the seaward extension of Harbord Glacier on the coast of Victoria Land. First charted by the BrAE under Shackleton, 1907–09, at which time it extended about 5 mi into the Ross Sea. Named by Shackleton for A.E. Harbord, second officer of the *Nimrod* for the last year of the expedition. Not: Harbord Ice Barrier Tongue, Harbord Ice Tongue.

Harbord Ice Barrier Tongue: see Harbord Glacier Tongue 75°55'S, 162°50'E

Harbord Ice Tongue: see Harbord Glacier Tongue 75°55'S, 162°50'E

Harbor Point: see Harbour Point 54°09'S, 36°41'W

Harbour Glacier 64°49'S, 63°26'W

A through glacier 3 mi long and 1.5 mi wide, lying on the NW side of Wiencke Island and extending in a NE direction from Port Lockroy to the cove 1 mi E of Noble Peak, in the Palmer Archipelago. Probably first seen by the BeigAE, 1897–99, under Gerlache. Charted in 1944 by the FIDS, who so named it because of its proximity to the harbor of Port Lockroy.

Harbour Heights: see Arrival Heights 77°49'S, 166°39'E

Harbour Point 54°09'S, 36°41'W

Point separating Leith and Stromness Harbors, in Stromness Bay, South Georgia. This descriptive name was in use as early as 1920 and was probably applied by whalers operating from Stromness Bay. Not: Harbor Point, Punta Puerto.

Harcourt, Cape 54°29'S, 35°58'W

The E extremity of Harcourt Island on the N coast of South Georgia, forming the N side of the entrance to Royal Bay. The name dates back to at least 1920 and is now well established. Not: Cape Royal.

Harcourt, Mount 83°49'S, 172°25'E

A mountain, 1,535 m, standing 5 mi E of Mount Kyffin at the N end of Commonwealth Range. Discovered and named by the BrAE, 1907–09.

Harcourt, Mount: see Vernon Harcourt, Mount 72°32'S, 169°55'E

Harcourt Island 54°29'S, 35°58'W

A small island at the N side of the entrance to Royal Bay, South Georgia. Named by UK-APC in 1971 after Cape Harcourt, the easternmost point of this island.

Hard Head 54°03'S, 37°58'W

High tussock-topped headland 0.2 mi S of Matthews Point on the W side of the approach to Undine Harbor, South Georgia.

Surveyed by personnel on HMS *Owen* in 1960–61 and given this descriptive name by the UK-APC.

Hardiman Peak 85°01'S, 169°23'W

A peak, 1,210 m, forming the E extremity of the ridge along the N side of Zotikov Glacier, in the Prince Olav Mountains. Named by US-ACAN for Terrance L. Hardiman, USARP geomagnetist-seismologist at South Pole Station, 1965.

Harding, Mount 72°53'S, 75°02'E

The largest mountain in the Grove Mountains, located in the south-central part of the group and about 4 mi W of Gale Escarpment. Mapped by ANARE from air photos, 1956–60. Named by ANCA for N.E. Harding, topographic draftsman with the Division of National Mapping, Dept. of National Development, who has contributed substantially to the production of Antarctic maps.

Hardley, Peninsula: see Ardley Island 62°13'S, 58°56'W

Hardy, Mount 66°49'S, 50°43'E

Mountain standing close E of Mount Oldfield in the NW part of the Tula Mountains, in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for K. Hardy, weather observer at Wilkes Station in 1959.

Hardy, Point: see Sartorius Point 62°34'S, 59°39'W

Hardy, Punta: see Fort Point 62°34'S, 59°34'W

Hardy Cove 62°32'S, 59°35'W

Cove on the E side of Greenwich Island, in the South Shetland Islands. The name Hardy, for Admiral Sir Thomas Hardy (1769–1839), was originally given by British sealer Robert Fildes in 1820–22 to what is now Sartorius Point (q.v.). Hardy Cove was applied by the UK-APC in 1961 to preserve Fildes' name on Greenwich Island.

Hardy Point 59°25'S, 27°04'W

Western point of Bellingshausen Island in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II*, who named it for Alister C. Hardy, member of the zoological staff of the Discovery Committee, 1924–28, and professor of zoology at University College of Hull.

Hardy Rocks 66°16'S, 67°17'W

Insular rocks lying 2 mi W of DuBois Island, Biscoe Islands. Mapped from air photos taken by FIDASE (1956–57). Named by UK-APC for James D. Hardy, American physiologist who has studied the reactions of the human body to cold environments.

Hare Peak 84°59'S, 174°17'E

An ice-free peak, 2,970 m, at the N end of the ridge forming the E side of Leigh Hunt Glacier, in the Queen Maud Mountains. Named by the NZGSAE (1961–62) for C.H. Hare, a member of the BrNAE (1901–04).

Hargrave Hill 64°01'S, 60°11'W

A hill at the S side of Wright Ice Piedmont, 2 mi NE of the mouth of Henson Glacier, in Graham Land. Mapped from air photos taken by Hunting Aerosurveys (1955–57). Named by UK-APC for Lawrence Hargrave (1850–1915), Australian inventor of the box-kite and other fixed wing flying machines, pioneer of rotary aero engines (1884–1909).

Hargreavesbreen 72°11'S, 23°13'E

A short, steep glacier flowing NW between Mount Nils Larsen and Mount Widerøe in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named for R.B. Hargreaves, aerial photographer on USN OpHjp photographic flights in this area and other coastal areas between 14° and 164° East.

Hargreaves Glacier 69°46'S, 74°20'E

A glacier 2 mi W of Mount Caroline Mikkelsen on Ingrid Christensen Coast. It drains into the central part of the head of Sandefjord Ice Bay. Delineated in 1952 by John H. Roscoe from aerial photographs taken by USN Operation Highjump, 1946–47. Named by Roscoe for R.B. Hargreaves, aerial photographer on Operation Highjump flights in the area.

Hariholm: see Mariholm 60°45'S, 45°42'W

Hariot Glacier 69°00'S, 66°20'W

A glacier flowing NW along the S side of Morgan Upland before turning W into the N portion of Wordie Ice Shelf, along the W coast of Antarctic Peninsula. Roughly surveyed by BGLE, 1936–37. The upper reaches were photographed from the air by RARE, 1947. Surveyed from the ground by members of FIDS who travelled along it in Dec. 1958. Named by UK-APC after Thomas Hariot (1560–1621), English mathematician who pioneered new methods of navigation under the patronage of Sir Walter Raleigh.

Harker, Mount 77°18'S, 162°05'E

A peak at the E side of Willis Glacier in Saint Johns Range, in Victoria Land. Charted by the BrAE under Scott, 1910–13, and named for Dr. Alfred Harker, noted British petrologist.

Harker Glacier 54°22'S, 36°32'W

Glacier which flows ENE to the SW end of Moraine Fjord, in Cumberland East Bay, South Georgia. The feature was mapped and named De Geer Glacier by the AwedAE, 1901–04. It was remapped in 1912 by David Ferguson and named after Alfred Harker (Mount Harker, q.v.). Not: De Geer Glacier.

Harker Point 59°04'S, 26°31'W

Point which forms the S end of Bristol Island in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II*, who named it for A. Harker, naval architect on the staff of the Discovery Committee.

Harkness, Mount 86°04'S, 150°36'W

A mountain, 1,900 m, standing 1.5 mi S of Organ Pipe Peaks and forming part of the E wall of Scott Glacier, in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named at that time by R. Admiral Byrd for Bruce Harkness, friend of Richard S. Russell, Jr., a member of that party. Not: Mount Bruce Harkness.

Harlin Glacier 70°53'S, 160°50'E

A broad sweeping glacier that descends from the polar plateau in the vicinity of Mount Nero on the northwest side of Daniels Range. It flows northeast between Sample Nunataks and the north end of Daniels Range and then eastward to join the lower part of Rennick Glacier. Lovejoy Glacier merges with the north side of this feature east of Sample Nunataks but eventually loses its individual characteristics. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–62. Named by US-ACAN

for Ben W. Harlin, meteorologist-in-charge at Little America V, 1957, and Scientific Leader at South Pole Station, 1961.

Harmer, Mount 59°26'S, 27°09'W

Ice-covered peak, 1,115 m, in the north-central portion of Cook Island, in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II*, who named it for Sir Sidney F. Harmer, Vice-Chairman of the Discovery Committee.

Harmer Glacier 54°46'S, 36°15'W

Glacier 3 mi long, flowing SW from Starbuck Peak to the sea close N of Ranvik, on the S coast of South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Sir Sidney F. Harmer.

Harmon Bay 74°15'S, 110°52'W

An embayment at the N end of Bear Peninsula, c. 7 mi wide, defined by the NE shore of Moore Dome, the terminus of Park Glacier and the NW end of Gurnon Peninsula, on Walgreen Coast, Marie Byrd Land. Mapped by USGS from surveys and USN aerial photographs, 1959–66. Named by US-ACAN after Cdr. Robert H. Harmon, USCG, Executive Officer, USCGC *Burton Island*, USN OpDFrz, 1969.

Harmony Cove 62°19'S, 59°12'W

Cove entered between Harmony Point and The Toe on the W side of Nelson Island, in the South Shetland Islands. Named by American sealers in about 1820 after the sealing vessel *Harmony*, under Capt. Thomas Ray, one of several American sealing vessels headquartered at Harmony Cove during the 1820–21 season. Not: Caleta Armonía.

Harmony Point 62°19'S, 59°15'W

Point which lies close W of Harmony Cove and forms the W extremity of Nelson Island, in the South Shetland Islands. Charted in 1935 by DI personnel on the *Discovery II*. Named from association with Harmony Cove. Not: Punta Armonía.

Harmony Strait: see Nelson Strait 62°20'S, 59°18'W

Harmsworth, Mount 78°41'S, 160°56'E

A prominent ice-covered peak, 2,765 m, at the NW side of the head of Delta Glacier in the Worcester Range. Discovered by the BrNAE (1901–04) and named for Sir Alfred Harmsworth, later Viscount Northcliffe, a generous contributor to the expedition.

Harnasie Hill 62°11'S, 58°16'W

A steep-sided hill rising to 250 m between Vauréal Peak and Martins Head in the S portion of Kraków Peninsula, King George Island. Named “Wierch Harnasie” (Harnasie Hill) by the Polish Antarctic Expedition, 1980, after the *Harnasie* opera by Karol Szymanowski.

Harnish Creek 77°37'S, 163°13'E

A meltwater stream, 3 mi long, which flows N from the unnamed glacier E of Crescent Glacier into the E part of Lake Fryxell, Taylor Valley, in Victoria Land. The name was suggested by hydrologist Diane McKnight, leader of a USGS team that made extensive studies of the hydrology and geochemistry of streams and ponds in the Lake Fryxell basin, 1987–94. Named after USGS hydrologist Richard A. Harnish, a member of the field team in the 1988–89 and 1990–91 seasons; during latter season assisted in establishing stream gaging stations on streams flowing into Lake Fryxell.

Harold Bay: see Harald Bay 69°12'S, 157°45'E

Harold Byrd Mountains 85°26'S, 146°30'W

A group of exposed mountains and nunataks which extend in an E-W direction between the lower part of Leverett Glacier and the head of the Ross Ice Shelf. Discovered in December 1929 by the ByrdAE geological party under Laurence Gould, and named by R. Admiral Byrd for D. Harold Byrd, a cousin and a contributor towards the purchase of furs for the expedition. Not: Byrd Mountains.

Harold June, Mount: see June, Mount 76°16'S, 145°07'W

Harper, Mount 84°03'S, 57°03'W

Peak, 1,405 m, standing 2 mi W of Mount Kaschak in southern Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Ronald B. Harper, electronics technician at Ellsworth Station, winter 1958.

Harper Glacier 73°52'S, 163°05'E

A small tributary glacier which descends NE between Mount Gibbs and Mount Adamson of the Deep Freeze Range to enter Campbell Glacier, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Wayne M. Harper, satellite geodesist at McMurdo Station, 1964–65.

Harper Peak 54°07'S, 36°45'W

Peak, 785 m, standing E of Fortuna Peak and Fortuna Bay on the N coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Harper Point 57°45'S, 26°29'W

Point forming the N end of Saunders Island in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II* and named for F.H. Harper, Sec. to the Discovery Committee.

Harp Island 66°00'S, 65°40'W

Small island between Beer and Upper Islands, lying 8 mi W of Prospect Point, off the W coast of Graham Land. Charted by the BGLE under Rymill, 1934–37, and so named because of its distinctive shape.

Harpon Bay 54°16'S, 36°37'W

Bay 1 mi wide, lying just E of Mercer Bay in the S part of Cumberland West Bay, South Georgia. First mapped by the SwedAE, 1901–04, under Nordenskjöld. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for the cargo vessel *Harpon*, built in 1897, which has been used by the Compañía Argentina de Pesca, Grytviken, since 1922. Not: Caleta Arpón.

Harpun Rocks 64°19'S, 62°59'W

Submerged rocks lying 0.1 mi SE of Bills Point, Delta Island, in the Melchior Islands, Palmer Archipelago. The name appears on a chart based upon a 1927 survey by DI personnel, but may reflect an earlier naming by whalers. Harpun is a Norwegian word meaning harpoon. Not: Roca Arpun.

Harrigan Hill 66°19'S, 110°29'E

Rocky hill in the NW part of Mitchell Peninsula, just E of Pidgeon Island of the Windmill Islands. First mapped from air photos taken

by USN OPHjp, 1946–47. Named by US-ACAN for Edward C. Harrigan, meteorologist at Wilkes Station in 1961.

Harrington, Mount 72°45'S, 168°57'E

One of the highest peaks in the E end of the Victory Mountains, Victoria Land, rising to 2,610 m on the W side of Whitehall Glacier and 5 mi SW of Mount Northampton. Named in 1960 by NZ-APC after geologist Hilary J. Harrington, who led the NZGSAE in exploring this region, 1957–58, and also led NZGSAE in the McMurdo Sound region, 1958–59; USARP investigator (with Russell J. Korsch) in the McMurdo Sound region, 1968–69.

Harrington, Mount 85°34'S, 164°00'W

A mountain, 2,550 m, standing 4 mi NE of Mount Ruth Gade in the Quarles Range, Queen Maud Mountains. Mapped by the ByrdAE, 1928–30, and by the USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for John R. Harrington, meteorologist with the South Pole Station winter party, 1962.

Harris Hill 77°48'S, 163°17'E

A bare rock hill, 900 m, which is a SW outlier of Stratton Hills, standing at the head of Overflow Glacier and overlooking Ferrar Glacier just northward, in Victoria Land. Named by US-ACAN in 1992 after William M. Harris, cartographer, USGS, from 1971; field team leader of the USGS Royal Society Range Survey, 1983–84 season; at the South Pole the team repositioned the marker at the Geographic South Pole, completed the site survey plan for the new South Pole Station, and site surveys for the Clean Air Facility; working from USCGC *Polar Sea* at the end of the season, obtained new position for Siple Island.

Harrison, Cape: see Harrison, Cape 66°43'S, 99°03'E

Harrison, Mount 70°23'S, 159°46'E

A large mountain (1,955 m) which dominates the ridge separating the Robilliard and Svendsen Glaciers, in the Usarp Mountains. Named by US-ACAN for Louis J. Harrison, USA, helicopter mechanic in the field in support of the USGS surveys Topo North-South (1961–62) and Topo East-West (1962–63), the latter including the survey of this mountain.

Harrison, Paso: see Harrison Passage 65°53'S, 65°11'W

Harrison Bluff 77°17'S, 166°23'E

A pale-colored trachyte headland forming the seaward termination of Trachyte Hill and marking the southern end of McDonald Beach on the western side of Mount Bird, Ross Island. Many skuas nest on the bluff. A survey station marked by a rock cairn was placed on the top of the northwest corner of the bluff by E.B. Fitzgerald of the Cape Bird Party of the NZGSAE, 1958–59. Named by the NZ-APC for J. Harrison, mountaineer-assistant with the expedition.

Harrison Glacier 66°14'S, 131°15'E

A channel glacier flowing to the Clarie Coast about 12 mi E of Cape Carr. Delineated from air photos taken by USN Operation Highjump (1946–47). Named by US-ACAN for George W. Harrison, Passed Midshipman on the tender *Flying Fish* of the USEE (1838–42) under Wilkes.

Harrison Nunatak 72°29'S, 96°05'W

A snow-covered nunatak, with rock exposure to the SE, located 4 mi S of Savage Glacier in the extreme SE part of Thurston Island. Discovered on helicopter flights from the USS *Burton Island* and

Glacier during the USN Bellinghousen Sea Expedition in February 1960. Named by US-ACAN for Henry T. Harrison, Jr., U.S. Weather Bureau meteorologist with the ByrdAE in 1928–30.

Harrison Passage 65°53'S, 65°11'W

A passage between Larrouy and Tadpole Islands to the W, and Llanquihue Islands and the W coast of Graham Land to the east. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for John Harrison (1693–1776), English horologist who first definitely solved the problem of determining longitude at sea. Not: Paso Harrison.

Harrison Peak 72°24'S, 166°39'E

A peak (2,830 m) along the N side of Wood Glacier, about 5 mi N of Mount McDonald, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for William R. Harrison, biologist at McMurdo Station, 1967–68.

Harrison Point 54°10'S, 36°36'W

Point marked by a string of off-lying rocks, lying 1.5 mi W of Busen Point on the S side of Stromness Bay, South Georgia. Charted in 1927 by DI personnel and named Matthews Point for L. Harrison Matthews, British zoologist and member of the staff of the Discovery Investigations, 1924–35, who worked at South Georgia in 1924–27. In 1954, the UK-APC recommended that this name be altered to *Harrison Point* to avoid duplication with Matthews Point (also named for L. Harrison Matthews), a better known feature in Undine Harbor, South Georgia. This change allows Harrison Matthews' name to be retained for this feature, while the confusing duplication of names is avoided. Not: Matthews Point.

Harrison Stream 77°17'S, 166°24'E

Small stream flowing W between Trachyte and Cinder Hills to the N end of Romanes Beach on Ross Island. Mapped by the NZGSAE, 1958–59. Named by the NZ-APC for J. Harrison, mountaineer-assistant with the expedition.

Harris Peak 64°36'S, 61°47'W

Peak, 1,005 m, surmounting the base of Reclus Peninsula on the W coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. Named by the UK-APC in 1960 for Leslie Harris, FIDS carpenter and general assistant at the Danco Island station in 1956, who participated in the reconnaissance journeys from that station and from the nearby Portal Point hut.

Harris Peninsula 71°31'S, 74°06'W

A broad snow-covered peninsula surmounted by Mount Lee, between Verdi Inlet and Brahms Inlet on the N side of Beethoven Peninsula, Alexander Island. Photographed from the air by RARE, 1947–48, and mapped from these photographs by D. Searle of FIDS, 1960. Named by US-ACAN for Cdr. Michael J. Harris, USN, Commanding Officer, Squadron VXE-6, from May 1982 to May 1983.

Harris Point 81°35'S, 161°32'E

A rocky coastal point along the W side of the Ross Ice Shelf, located 6 mi S of Young Head at the S side of Beaumont Bay. Named by US-ACAN for Herman D. Harris, a chief hospital

corpsman with USN Squadron VX-6. Harris built a sick bay at South Pole Station during USN OpDFrz 1961.

Harris Rock 62°57'S, 56°21'W

The largest and southernmost of a group of three rocks lying N of Montrol Rock and D'Urville Island, in the Joinville Island group. The name appears on an Argentine government chart of 1960. Named after Capitán de Navío Santiago Harris, Argentine Navy.

Harrisson, Cape 66°43'S, 99°03'E

A point just northward of Possession Rocks at the junction of the Northcliffe and Denman Glaciers. Discovered by the AAE (1911–14) under Sir Douglas Mawson, who named the feature for Charles T. Harrisson, biologist and artist at the expedition's Western Base. The spelling *Harrisson* (not Harrison) is approved in this toponym, and also in Harrisson Ice Rises, on the basis of the honoree's signature on several of his paintings included in Mawson's *The Home of the Blizzard*. Not: Cape Harrison.

Harrisson Ice Rises 66°27'S, 96°39'E

A local swelling of the ice surface 12 mi WSW of Henderson Island, where the Shackleton Ice Shelf overrides an underlying obstruction. Discovered by the Eastern Sledge Party of the AAE (1911–14) under Douglas Mawson, who named the feature for Charles T. Harrisson, biologist with the expedition.

Harriss Ridge 70°08'S, 65°08'E

An E-W ridge with two small outliers off its W end, located 2 mi NE of Mount Dovers in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1965. Named by ANCA for B. Harriss, helicopter pilot with the Prince Charles Mountains survey party in 1969.

Harris Valley 76°38'S, 159°52'E

A valley just east of Coxcomb Peak in the Allan Hills of Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964), who gave the name after Prof. T.M. Harris who has made outstanding contributions to Mesozoic paleobotany.

Harrop Island 67°16'S, 46°52'E

Small island lying close to the coast and 3 mi NW of Felton Head, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for J.R. Harrop, weather observer at Wilkes Station in 1960.

Harrow Peaks 74°04'S, 164°45'E

A group of rugged peaks in the E part of Random Hills, bounded on the N by Clausnitzer Glacier and on the E by Tinker Glacier, overlooking the NW extremity of Wood Bay on the coast of Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for Geoffrey N. Harrow, biologist at McMurdo Station, 1965–66 season.

Harry, Mount 74°14'S, 76°32'W

A mountain 14 mi southeast of FitzGerald Bluffs, Ellsworth Land. It is westernmost in a chain of small summits lying southeastward of the bluffs. The feature lies within a group of nunataks photographed by Lincoln Ellsworth on Nov. 23, 1935. It was mapped by USGS from surveys and U.S. Navy aerial photographs, 1961–66. Named by US-ACAN for Jack L. Harry, USGS Topographic Engineer, a member of the Marie Byrd Land Survey Party, 1967–68.

Harry, Punta: see Spallanzani Point 64°08'S, 61°59'W

Harry Dodson Island: see Dodson Peninsula 75°32'S, 64°12'W

Harry Island 64°08'S, 61°59'W

Icecapped island dominated by a truncated pyramidal peak, lying at the SE entrance to the channel between Brabant Island and Liège Island, in the Palmer Archipelago. Discovered by the BelgAE under Gerlache, 1897–99, and named for a supporter of the expedition. Not: Isla Enrique.

Hart, Mount 72°05'S, 169°05'E

A mountain over 3,000 m, standing 2 mi NW of Mount Chider in the Admiralty Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Lt. Vemon D. Hart, officer in charge of the USN Squadron VX-6 winter party at McMurdo Station, 1968.

Harter Nunatak 81°14'S, 84°54'W

A small, relatively isolated nunatak lying 4 mi NE of Mount Tidd at the NE side of Pirrit Hills. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1958–61. Named by US-ACAN for Gene L. Harter, meteorologist at Little America V in 1957.

Hart Glacier 77°30'S, 162°23'E

A small hanging glacier on the south wall of Wright Valley, Victoria Land, between the Meserve and Goodspeed Glaciers. Named by U.S. geologist Robert Nichols for Roger Hart, geological assistant to Nichols at nearby Marble Point in the 1959–60 field season.

Hart Hills 83°43'S, 89°05'W

A line of low, mainly snow-covered hills, 4 mi long, trending east-west. The hills are isolated, lying 8 mi W of Pagano Nunatak and 77 mi N of Ford Massif of the Thiel Mountains. Observed by Edward Thiel and Campbell Craddock in the course of an airlifted geophysical traverse along the 88th meridian West, Dec. 13, 1959. The name was proposed by them for Pembroke Hart, National Academy of Sciences staff, member of the technical panel on seismology and gravity on the U.S. National Committee for the IGY.

Hartigan, Mount 76°52'S, 126°00'W

A broad, mostly snow-covered mountain with several individually named peaks which rise up to 2,800 meters. It is situated immediately north of Mount Sidley in the Executive Committee Range, Marie Byrd Land. Discovered by the United States Antarctic Service expedition on a flight, Dec. 15, 1940, and named for R. Admiral Charles C. Hartigan, USN, Navy Department member of the Antarctic Service Executive Committee.

Hartkopf, Mount 75°59'S, 140°45'W

A mountain, 1,110 m, rising along the E side of the upper reaches of Land Glacier, 11 mi SE of Mount McCoy, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Kenneth W. Hartkopf USARP ionospheric physicist at Byrd Station, 1963.

Hartree, Cape 60°48'S, 44°44'W

Cape which forms the SW tip of Mossman Peninsula on the S coast of Laurie Island, in the South Orkney Islands. Discovered on the occasion of the joint cruise in December 1821 by Capt. George Powell, a British sealer in the sloop *Dove*, and Capt. Nathaniel Palmer, an American sealer in the sloop *James Monroe*. The name

appears on Powell's map published in 1822. Not: Cabo Vitie, Cape McVitie.

Hart Rock 60°41'S, 44°22'W

Rock, 10 m high, lying 1.5 mi NW of Herdman Rocks and 3 mi NNE of the E extremity of Laurie Island, in the South Orkney Islands. First charted in 1838 by a French expedition under d'Urville. Named in 1933 by DI personnel on the *Discovery II*, for T. John Hart, member of the zoological staff of the Discovery Committee.

Hartshorne Island 64°47'S, 64°23'W

Island between Dakers Island and Howard Island in eastern Joubin Islands. Named by U S-ACAN for Sidney G. Hartshorne, Master of R.V. *Hero* on her first Antarctic voyage to Palmer Station in 1968.

Harvey, Mount 66°55'S, 50°48'E

A snow-free peak E of Amundsen Bay, standing in the Tula Mountains, about 6 mi ENE of Mount Gleadell. Sighted in 1955 by an ANARE party led by P.W. Crohn. Named by ANCA for William Harvey, carpenter at Mawson Station in 1954.

Harvey Heights 64°14'S, 62°24'W

A series of elevations close N of Mount Parry and W of the head of Malpighi Glacier in central Brabant Island, in the Palmer Archipelago. Shown on an Argentine government chart in 1953, but not named. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for William Harvey (1578–1657), English physician who first demonstrated the circulation of the blood.

Harvey Islands 67°43'S, 45°33'E

Two islands in the W part of Freeth Bay, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for R. Harvey, radio officer at Wilkes Station in 1959.

Harvey Johnston, Mount: see Johnston Peak 66°16'S, 52°06'E

Harvey Johnston Peak: see Johnston Peak 66°16'S, 52°06'E

Harvey Nunataks 66°58'S, 52°00'E

Four nunataks standing 4 mi W of Mount Ryder, in the E part of the Tula Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1936 and 1957. Named by ANCA for D.J. Harvey, electronics engineer at Mawson Station in 1961.

Harvey Peak 79°13'S, 157°01'E

An ice-free peak, 2,120 m, standing 2 mi S of the Finger Ridges in the Cook Mountains. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for Paul Harvey, a member of the U.S. Army aviation support unit for Topo North and Topo South (1961–62) which conducted the tellurometer surveys.

Harvey Ridge 70°59'S, 65°18'E

A ridge, elongated in a N-S direction, lying 2 mi E of Husky Massif in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos. Named by ANCA for S.T. Harvey, senior technician (electronics) at Wilkes Station in 1965.

Harvey Shoals 68°11'S, 67°09'W

Three shoal patches with least depths of 3 fathoms, located between Miller and Northstar Islands in Marguerite Bay. Charted by the Hydrographic Survey Unit from RRS *John Biscoe* in 1966.

Named for Petty Officer Brian E. Harvey, surveying recorder who carried out all the sounding for this survey.

Harwell Glacier 84°57'S, 171°29'W

A steep-walled tributary glacier, 3 mi long, descending the N slopes of the Prince Olav Mountains just E of Mount Smithson to enter the upper part of Gough Glacier. Named by US-ACAN for Lt. Thomas W. Harwell, CEC, USN, who participated in Naval Support Activity during Operation Deep Freeze 1964.

Harwood, Mount 70°44'S, 165°49'E

Peak (1,040 m) which surmounts Gregory Bluffs on the N coast of Victoria Land. Named by ANARE for T.R. Harwood, second-in-charge of the ANARE cruise (*Thala Dan*), 1962, which explored this area.

Haselton Icefall 77°21'S, 160°46'E

An icefall descending from the Willett Range between Gibson Spur and Apocalypse Peaks toward Webb Lake in Barwick Valley, in Victoria Land. Named by Parker E. Calkin for fellow USARP geologist George M. Haselton, who assisted Calkin in the field in this area in the 1961–62 season.

Hash Island 54°49'S, 35°59'W

Island lying in the entrance to Larsen Harbor, on the SE coast of South Georgia. Roughly surveyed by the GerAE, 1911–12, under Filchner. Probably named by DI personnel who resurveyed the feature in 1927.

Haskard Highlands 80°30'S, 29°15'W

A range of peaks and ridges between Blaiklock Glacier and Stratton Glacier in NW Shackleton Range, rising to 1,210 m at Mount Weston and including features between Mount Provender and Pointer Nunatak. The feature was first mapped in 1957 by the CTAE. It was photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. Named by the UK-APC in 1971 after Sir Cosmo D.P.T. Haskard, Governor of the Falkland Islands, 1964–70.

Haskell, Mount 66°45'S, 64°16'W

Buttress-type mountain, 1,480 m, standing at the SW side of Cabinet Inlet between Mounts Denucé and Holmes, on the E coast of Graham Land. Charted in 1947 by the FIDS, who named it for Daniel C. Haskell, American bibliographer of the New York Public Library and author of the bibliography, *The United States Exploring Expedition, 1838–42, and its Publications, 1844–1874*.

Haskell Glacier 73°34'S, 94°13'W

A small glacier descending from Christoffersen Heights and draining W between Prism Ridge and Forbidden Rocks, in the Jones Mountains. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61. Named by US-ACAN for Lt. Hugh B. Haskell, USN, co-pilot on a pioneer flight of Nov. 25, 1961 from Byrd Station to establish Sky-High Camp (later Eights Station) at 75°14'S, 77°06'W.

Haskell Ridge 79°44'S, 156°10'E

A rocky ridge 2 mi W of Colosseum Ridge in the Darwin Mountains. Mapped by the VUWAE (1962–63) and named after T.R. Haskell, a member of the expedition.

Haskill Nunatak 83°24'S, 51°45'W

An elongate nunatak, 1,710 m, standing 2.5 mi W of Dyrdal Peak in southern Forrester Range, Pensacola Mountains. Mapped by

USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Robert E. Haskill, radioman at Ellsworth Station, winter 1957.

Haslam Heights 67°25'S, 67°30'W

A line of peaks trending NNE-SSW, rising to c. 1,000 m to the W of Vallot Glacier and Nye Glacier in Arrowsmith Peninsula, Graham Land. Probably first seen by the FrAE, 1908–10; roughly mapped by the FIDS, 1948. Named in 1985 by the UK-APC after R. Adm. Sir David W. Haslam, RN, Hydrographer of the Navy, 1975–85.

Haslop, Mount 80°36'S, 30°16'W

Mountain, 760 m, which stands 2 mi S of Mount Lowe at the W extremity of Shackleton Range. First mapped in 1957 by the CTAE and named for Flight Lt. Gordon M. Haslop, RNZAF (1922–61), New Zealand second pilot of the RAF contingent of the CTAE in 1956–58.

Haslum Crag 64°22'S, 56°59'W

Prominent rock crag close to the N coast of Snow Hill Island, James Ross Island group. It stands 2 mi NE of Station Nunatak. First seen by members of SwedAE, 1901–04, under Nordenskjöld, who gave the descriptive name “Basaltspitze.” Concerned that the name could be mistaken for descriptive information, the UK-APC changed it to Haslum Crag, honoring H.J. Haslum, second mate on the *Antarctic*, the ship of the SwedAE, 1901–04. The crag was surveyed by FIDS in 1952. Not: Basaltspitze.

Hassage, Mount 75°51'S, 72°29'W

A prominent isolated mountain (1,120 m) located 12 mi SW of Mount Horne in eastern Ellsworth Land. The feature was discovered by the RARE under Ronne, and marks the SW extremity and turnabout point of the RARE plane flight of Nov. 21, 1947. Named by Ronne for Charles Hassage, ship's chief engineer on the expedition.

Hassel, Mount 86°28'S, 164°28'W

A rock peak (2,390 m), the northeasternmost summit of the massif at the head of Amundsen Glacier, in the Queen Maud Mountains. In November 1911, a number of mountain peaks in this general vicinity were observed and rudely positioned by the South Pole Party under Roald Amundsen. Amundsen named one of them for Sverre Hassel, a member of the party. The peak described was mapped by USGS from surveys and U.S. Navy aerial photography, 1960–64. For the sake of historical continuity and to commemorate the Norwegian exploration in this area, the US-ACAN has selected this feature to be designated Mount Hassel. Other peaks in the massif have been named for members of Amundsen's South Pole Party. Not: Mount Sverre Hassel.

Haste Cove: see Cairns Cove 54°00'S, 36°42'W

Hastings, Mount 85°34'S, 154°10'W

A low mountain 2 mi SE of Mount Rigby in the Karo Hills, at the W side of Scott Glacier. First sighted by the ByrdAE, 1928–30. Named by US-ACAN for James V. Hastings who carried out geomagnetic studies at McMurdo Station, summer 1964–65.

Haswell Island 66°31'S, 93°00'E

The largest of the Haswell Islands, lying off the coast of Antarctica, about 1.5 mi N of Mabus Point. Discovered by the Western Base Party of the AAE, 1911–14, under Mawson, and

named by him for Prof. William A. Haswell, zoologist at Sydney University and member of the AAE Advisory Committee.

Haswell Islands 66°32'S, 93°00'E

Group of rocky coastal islands lying off Mabus Point and extending about 1.5 mi seaward. Charted by the AAE under Mawson (1911–14), who applied the name Rookery Islands because of a large emperor penguin rookery on Haswell Island, the largest and seaward island in the group. ANCA proposed in 1955 that the name Haswell be extended to the entire group. Not: Rookery Islands.

Hatcher Bluffs 86°20'S, 125°36'W

A line of bluffs facing NW, located 5 mi S of Metavolcanic Mountain, at the E side of Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Julius O. Hatcher, construction mechanic at Byrd Station in 1962.

Hatch Islands 66°53'S, 109°16'E

A small group of rocky islands lying 3 mi E of Ivanoff Head at the head of Vincennes Bay. The islands mark the division between Knox Coast and Budd Coast. First mapped from air photos taken by USN Operation Highjump (1946–47). Named by US-ACAN for Ernest B. Hatch, tractor driver with USN Operation Windmill (1947–48), who assisted in transporting shore parties that established astronomical control stations from Wilhelm II Coast to Budd Coast.

Hatch Outcrop 72°34'S, 93°20'W

An outcropping of rocks close northward of Peeler Bluff in the western part of McNamara Island. The island lies within the northern part of Abbot Ice Shelf. Named by US-ACAN for Lt. Ross Hatch, USN, who assisted in obtaining position data at this outcrop, February 7, 1961.

Hatch Plain 80°44'S, 25°36'W

A small debris-covered area (elevation c. 1,350 m) on the E margin of Du Toit Nunataks, Read Mountains, in the Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. In association with the names of geologists grouped in this area, named by the UK-APC in 1971 after Frederick H. Hatch (1864–1932), British consulting geologist; author of standard textbooks on igneous and sedimentary petrology.

Hatherton Glacier 79°55'S, 157°35'E

A large glacier flowing from the polar plateau generally eastward along the south side of the Darwin Mountains and entering Darwin Glacier at Junction Spur. Mapped by the Darwin Glacier Party of the CTAE (1956–58). Named for Trevor Hatherton, Scientific Officer in Charge of Antarctic Activities, Dept. of Scientific and Industrial Research, Wellington, New Zealand.

Hatinosu Peak: see Hachinosu Peak 69°01'S, 39°35'E

Hatten Peak 72°34'S, 4°10'W

An isolated rock peak 6 mi NW of Vetten Mountain, rising above the ice at the NW side of Borg Massif in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Hatten (the hat).

Hattersley-Smith, Cape 71°51'S, 61°04'W

A cape marked by a triangular rock peak at the SE end of Condor Peninsula, 5 mi SW of Cape Knowles, on the Black Coast, Palmer

Land. The cape was photographed from the air by the USAS on Dec. 30, 1940. It was surveyed by the FIDS-RARE party from Stonington Island in Nov. 1947 and was rephotographed by the U.S. Navy in 1966. Named by US-ACAN in 1984 after Geoffrey Francis Hattersley-Smith, with BAS from 1973 (Secretary, UK-APC, 1975–91); FIDS Base Leader and glaciologist, Admiralty Bay, 1948–49; with Defense Research Board, Canada, 1951–73 (field research in the Arctic); author of *The History of Place-names in the Falkland Islands Dependencies (South Georgia and the South Sandwich Islands)*, Cambridge, 1980, and *The History of Place-names in the British Antarctic Territory*, Cambridge, 1991.

Hauberg Mountains 75°52'S, 69°15'W

A group of mountains of about 35 mi extent, located 12 mi N of Cape Zumberge and 30 mi S of Sweeney Mountains in eastern Ellsworth Land. Discovered by the RARE, 1947–48, led by Ronne, and named by him for John Hauberg, of Rock Island, IL, a contributor to the expedition.

Hauge Reef 54°28'S, 36°57'W

Chain of islands and rocks extending in an ENE direction from the E extremity of Annenkov Island to a point about 3 mi WSW of Cape Darnley, South Georgia. First charted in 1819 by a Russian expedition under Bellingshausen. Surveyed by the SGS, 1951–52, and named for Capt. Ole Hauge, of the sealer *Albatros*, whose knowledge of the coasts of South Georgia was of great assistance to the SGS, 1951–52.

Hauge Strait 54°28'S, 36°53'W

Strait 3 mi wide between Cape Darnley and the NE end of Hauge Reef, off the S coast of South Georgia. Surveyed by the SGS in the period 1951–57. Named by the UK-APC for its association with Hauge Reef.

Hauken Rock 62°01'S, 57°33'W

Rock lying nearly 1 mi E of Ørnen Rocks and 2 mi NE of Cape Melville, the E extremity of King George Island, in the South Shetland Islands. Named by the UK-APC in 1960 from association with Ørnen Rocks. *Hauken* and *Ørnen*, the first two modern whale catchers, accompanied the floating factory ship *Admiralen* to the South Shetland Islands in January-February 1906.

Haulaway Point 68°11'S, 67°00'W

Small rocky point midway along the NE side of Stonington Island, close off the W coast of Graham Land. First surveyed by the USAS, 1939–41. Resurveyed in 1946–47 by the FIDS, who so named the point because it is one of the best places for hauling stores ashore. Not: Punta Desembarco.

Haunn Bluff 66°23'S, 110°33'E

Steep rock bluff which surmounts the E part of the S shore of Odbert Island, in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Marvin G. Haunn, meteorologist and member of the Wilkes Station party of 1962.

Haupt Nunatak 66°35'S, 110°41'E

Small nunatak 5 mi S of Alexander Nunatak, at the E side of the lower reaches of Vanderford Glacier. Mapped from aerial photographs taken by USN OpHjp, 1946–47, and named by the US-ACAN for Ens. Richard W. Haupt, USN, assistant hydrographic officer with USN OpWml 1947–48, who assisted the

shore parties which established astronomical control stations from Wilhelm II Coast to Budd Coast.

Hauron Peak 64°56'S, 62°59'W

Peak, 1,350 m, rising 3 mi SE of Mount Banck on the W coast of Graham Land. The peak appears on an Argentine government chart of 1952. Named by the UK-APC in 1960 for Louis-Arthur D. du Hauron (1837–1920), French pioneer of cinematography, the first man to lay down the fundamental principles of color photography, in 1869.

Havener, Mount 78°27'S, 84°37'W

A mountain rising to 2,800 m directly at the head of Guerrero Glacier, in the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Melvin C. Havener, mechanic at the South Pole Station in 1957.

Haven Hill 82°53'S, 162°36'E

Hill 2 mi W of Mount Tedrow, on the S side of Kent Glacier in the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Stoner B. Haven, USARP biologist at McMurdo Sound, 1960.

Haven Mountain 80°02'S, 155°12'E

A prominent mountain, 2,470 m, with a level razor-back snow ridge at its highest (eastern) part, standing 2 mi NE of Three Nunataks in the NW part of Britannia Range. So named by the Darwin Glacier Party of the CTAE (1956–58), who sheltered for five days in the largely snow-free area below the N side of the summit ridge.

Haverly Peak 65°06'S, 63°33'W

A peak rising to 960 m, 1 mi E of the head of Azure Cove, Flandres Bay, on the W coast of Graham Land. In association with the names of cartographers grouped near this area, named by the UK-APC in 1986 after William R. Haverly, of the Cartographic Section, Foreign and Commonwealth Office, from 1970, (Head from 1986), with responsibility for preparing UK-APC maps.

Haver Peak 73°09'S, 114°35'W

A small peak 4 mi S of Morrison Bluff in the Kohler Range of Marie Byrd Land. First photographed by USN OpHjp, 1946–47. Mapped by USGS from surveys and USN air photos, 1959–66. Named by US-ACAN after Lt. D.J. Haver, USN, Asst. Officer in Charge, Supply Dept., during USN OpDFrz 1965 and 1966.

Havfruen Peak 59°02'S, 26°32'W

A peak in the east part of Bristol Island, South Sandwich Islands. This peak (365 m) is conspicuous from both north and south. Named by UK-APC in 1971 after the Norwegian barque *Havfruen* which was damaged by ice and sank off the South Sandwich Islands on Dec. 1, 1911.

Havilland Point 63°55'S, 60°14'W

Point 2 mi E of Cape Page on the W coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955–57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Sir Geoffrey de Havilland, English pioneer aircraft designer.

Havola Escarpment 84°45'S, 98°40'W

An isolated, snow-covered escarpment about 30 mi NW of Thiel Mountains. The escarpment is arc shaped, 30 mi long, and faces

south. It was observed and mapped by the USARP Horlick Mountains Traverse party, 1958–59. Named by US-ACAN for Maj. Antero Havola, USA, leader of the 700 nautical mile tractor traverse from Byrd Station to South Pole Station, Dec. 8, 1960 to Jan. 11, 1961. On Dec. 25, 1960, the Havola party passed a few miles northward of this escarpment.

Havre Mountains 69°08'S, 71°40'W

Mountains forming the NW extremity of Alexander Island, extending 20 mi in an E-W direction between Cape Vostok and Russian Gap. First seen in 1821 by a Russian expedition under Bellingshausen and resighted by the BelgAE, 1897–99. They were roughly charted by the FrAE, 1908–10, under Charcot, who named them for Le Havre, French port from which the *Pourquol Pas?* sailed in 1908. The mountains were mapped in detail from air photos taken by the RARE, 1947–48, by Searle of the FIDS in 1960. Not: Massif Le Hâvre.

Havsbotn 69°50'S, 38°45'E

A bay comprising the narrow southernmost, or “bottom,” portion of Lützw-Holm Bay, marking its head. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Havsbotn (sea bottom).

Havstein Island 67°07'S, 58°45'E

Rocky island, 3 mi long and 2 mi wide, situated 1.5 mi N of Law Promontory and 1 mi E of Broka Island. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition, 1936–37, and named Havstein (sea stone), probably because of its rocky nature and its seaward position.

Hawea, Mount 82°50'S, 161°52'E

Peak, 3,080 m, standing 4 mi E of Mount Markham in the Frigate Range. Named by the northern party of the NZGSAE (1961–62) for the New Zealand frigate, *Hawea*.

Hawker Island 68°38'S, 77°51'E

An irregular-shaped island c. 1 mi long, lying between Mule Island and Mule Peninsula, Vestfold Hills, in the E part of Prydz Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Remapped by ANARE (1957–58) and named after A.C. Hawker, radio supervisor at Davis Station in 1957.

Hawkes, Mount 83°55'S, 56°05'W

The highest mountain (1,975 m) along the Washington Escarpment, standing at the E side of Jones Valley in the Neptune Range, Pensacola Mountains. Discovered and photographed on Jan. 13, 1956 in the course of the trans-Antarctic nonstop plane flight by personnel of USN Operation Deep Freeze I from McMurdo Sound to the Weddell Sea and return. Named by US-ACAN for Cdr. William M. Hawkes, USN, co-pilot of the P2V-2N Neptune aircraft making this flight.

Hawkes, Mount: see Hawkes Heights 73°32'S, 169°42'E

Hawkes Heights 73°32'S, 169°42'E

The heights (an ice-filled crater rising to 2,000 m) that dominate the S part of Coulman Island and mark the island's summit, in the Ross Sea. Named by NZGSAE, 1958–59, for Capt. William M. Hawkes, USN, who took a leading part in early air operations from Williams Field near McMurdo Station, including long range photo reconnaissance and supply flights, and the first air landing at the South Pole. He was commander of one of the two planes which

made the historic first flight from Christchurch to McMurdo Sound on Dec. 17, 1955. His air photos proved of great value to two NZGSAE parties to this part of Victoria Land. Not: Mount Hawkes.

Hawkins Glacier 66°34'S, 107°31'E

A channel glacier flowing to the Antarctic coast 4 mi W of Snyder Rocks. Mapped (1955) by G.D. Blodgett from air photos taken by USN Operation Highjump (1947). Named by US-ACAN after Samuel N. Hawkins, sailmaker on the sloop *Vincennes* of the USEE (1838–42) under Lt. Charles Wilkes.

Hawkins Peak 75°24'S, 110°29'W

A small summit peak on a mostly ice covered and rounded mass located 7 mi SE of Mount Murphy, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Maj. Billy R. Hawkins, a member of the U.S. Army Aviation Detachment in Antarctica, 1966–67.

Haworth Mesa 85°54'S, 128°18'W

An ice-capped mesa with steep rock walls whose summit area is 5 mi long and 3 mi wide and rises to 3,610 m, standing between Sisco Mesa and Mount McNaughton where it forms part of the divide between Norfolk and Olenyok Glaciers in western Wisconsin Range. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Leland J. Haworth, Director of the National Science Foundation and a member of the Antarctic Policy Group.

Hawthorne, Mount 72°10'S, 98°39'W

A prominent mountain in the Walker Mountains, rising directly S of the base of Noville Peninsula on Thurston Island. Discovered by R. Admiral Byrd and members of the USAS in a flight from the *Bear* on Feb. 27, 1940. Named by Byrd for Roger Hawthorne, field representative for the USAS, 1939–41. Not: Mount Mark.

Hay, Mount 71°06'S, 65°39'E

A mountain about 11 mi SE of Husky Dome in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named for Dr. M. Hay, medical officer and officer in charge at Davis Station in 1961.

Hayden Peak 74°41'S, 111°41'W

The southernmost of the rock summits in Gerrish Peaks, Bear Peninsula, on Walgreen Coast, Marie Byrd Land. Mapped by USGS from surveys and USN aerial photographs, 1959–66. Named by US-ACAN after Dennis J. Hayden, USN, radioman in three deployments of Squadron VXE-6 to McMurdo Sound up to the 1975–76 season.

Haydn Inlet 70°13'S, 70°45'W

Ice-filled inlet indenting the W coast of Alexander Island between Mozart and Handel Ice Piedmonts. It is 27 mi long and 12 mi wide at the mouth, narrowing toward the head. First seen from the air and roughly mapped by the USAS, 1939–41. Resighted from the air and photographed by the RARE, 1947–48, and remapped from these photos by Searle of the FIDS in 1960. Named by the UK-APC for Franz Joseph Haydn (1732–1808), Austrian composer.

Hayes, Mount 66°50'S, 64°10'W

Plateau-type mountain, 1,140 m, situated at the base of Cole Peninsula on the E coast of Graham Land. Charted in 1947 by the FIDS, who named it for Rev. James Gordon Hayes, Antarctic

historian and author of *Antarctica: A Treatise on the Southern Continent* and *The Conquest of the South Pole*.

Hayes Glacier 76°16'S, 27°54'W

A glacier entering the SE part of Weddell Sea about 17 mi WSW of Dawson-Lambton Glacier. The glacier was discovered in the course of a U.S. Navy LC-130 plane flight over Caird Coast, Nov. 5, 1967, and was plotted by USGS from photographs obtained at that time. Named by US-ACAN for Lt. Cdr. Winston R. Hayes, USNR, pilot on that flight.

Hayes Head 74°01'S, 165°17'E

A prominent headland, 850 m, overlooking the N extremity of Wood Bay, standing 3 mi N of Kay Island on the coast of Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for Miles O. Hayes, geologist at McMurdo Station, 1965–66 season.

Hayes Peak 67°28'S, 60°46'E

Conical peak, 340 m, rising through the ice slopes 2 mi S of Cape Bruce and Oom Bay. Discovered in February 1931 by the BANZARE under Mawson, who named it for Rev. James Gordon Hayes. Not: Veslekulten.

Hayes Peak 85°20'S, 89°18'W

An isolated, low rock peak (2,060 m) rising above the ice surface just S of Bermel Escarpment, in the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party which surveyed these mountains in 1960–61. Named for Philip T. Hayes, USGS geologist in the McMurdo Sound dry valley area, 1958–59.

Hayman Nunataks 85°40'S, 179°30'E

A small group of isolated nunataks at the E end of the Grosvenor Mountains, 6 mi N of Larkman Nunatak. Named by US-ACAN for Noel R. Hayman, USARP aurora scientist at Hallett Station, 1962.

Hayne, Mount 70°16'S, 65°02'E

A mountain 2 mi NW of Moore Pyramid on the N side of Scylla Glacier, in the Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for J.R. Hayne, photographic officer with the Antarctic Division, Melbourne, a member of the Prince Charles Mountains survey party in 1969.

Haynes Glacier 75°25'S, 109°30'W

A broad glacier flowing to Walgreen Coast, to the E of Mount Murphy, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN after Maj. John W. Haynes, USMC, aircraft pilot on Operation Deep Freeze 1967 and 1968, who made a photographic flight over this glacier on Jan. 1, 1967.

Haynes Table 84°49'S, 174°35'E

A high, snow-covered mesa, some 8 mi across and rising to 3,390 m, located S of Mount Odishaw in the Hughes Range, between the heads of Keltie Glacier and Brandau Glacier. Discovered and photographed by USN Squadron VX-6 on the flight of Jan. 12–13, 1956. Named by US-ACAN for B.C. Haynes, meteorologist of the U.S. Weather Bureau on USN OPHjp 1946–47.

Hay Peak 54°04'S, 37°10'W

A peak rising to 660 m at the head of Prince Olav Harbor in Cook Bay, South Georgia. Charted and descriptively named "The Snow

Pap" by DI in 1929, but subsequently deleted. Renamed Hay Peak by the UK-APC in 1990 after Arthur E. Hay of Somerset, England, who was Technical Engineer with the Southern Whaling and Sealing Company at its whaling station at Prince Olav Harbor, 1924–35. Not: The Snow Pap.

Hayrick Island 68°42'S, 67°32'W

Small prominent rock mass, more than 150 m high, between Lodge Rock and Twig Rock in the Terra Firma Islands, off the W coast of Graham Land. The Terra Firma Islands were first visited and surveyed in 1936 by the BGLE under Rymill. This island was surveyed in 1948 by the FIDS and so named by them because, when seen from the E, its high mass has an appearance suggesting a hayrick.

Hays Glacier 67°40'S, 46°18'E

Glacier flowing N into the head of Spooner Bay, Enderby Land. Plotted from air photos taken by ANARE in 1956. Named for J. Hays, United States observer with the ANARE (*Thala Dan*, 1961) which made a landing nearby.

Hays Mountains 86°00'S, 155°00'W

A large group of mountains and peaks of the Queen Maud Mountains, surmounting the divide between the lower portions of Amundsen and Scott Glaciers and extending from the vicinity of Mount Thorne on the northwest to Mount Dietz on the southeast. Discovered by R. Admiral Byrd on the South Pole flight of November 28–29, 1929, and mapped in part by the ByrdAE geological parties to this area in 1929 and 1934. Named by Byrd for Will Hays, former head of Motion Picture Producers and Distributors. Not: Will Hays Mountains.

Haystack, The: see Haystack Mountain 77°03'S, 162°41'E

Haystack Mountain 77°03'S, 162°41'E

Mountain over 1,000 m with a rounded summit suggestive of a mound or haystack, standing 1.5 mi E of Mount England in the NE part of the Gonville and Caius Range, in Victoria Land. Charted and named by the BrAE under Scott, 1910–13. Not: The Haystack.

Hayter, Mount 82°02'S, 157°26'E

Peak, 2,690 m, standing 1 mi SE of Laird Plateau on the W side of Olson Névé. Seen by the NZGSAE (1964–65) and named for Adrian Hayter, leader at Scott Base in 1965.

Hayter Peak 53°01'S, 73°20'E

A peak, 565 m, standing 0.2 mi W of Mount Olsen along the backbone of Laurens Peninsula, at the NW end of Heard Island. The peak was surveyed in 1948 by the ANARE, and named by them for Alfred J. Hayter, warrant officer on the expedition ship HMAS *Labuan*.

Hayton, Mount 72°03'S, 165°12'E

A peak, 2,240 m, in the S portion of East Quartzite Range. Named by the NZFMCAE, 1962–63, for J.S. Hayton, field assistant in the party. The peak was climbed on Dec. 18, 1962.

Hayward, Mount 78°07'S, 167°21'E

A hill 2 mi SW of Mount Heine on White Island, in the Ross Archipelago. Named by the NZGSAE (1958–59) for V. Hayward, a Canadian member of the Imperial Trans-Antarctic Expedition (1914–17), who lost his life in a blizzard on May 8, 1916 when the sea ice in McMurdo Sound went out.

Hazard Rock 64°59'S, 63°44'W

Small isolated rock, 1 m high, lying on the E side of Butler Passage, 2.5 mi NE of Cape Renard, off the W coast of Graham Land. Named by Lt. Cdr. F.W. Hunt, RN, following his survey in 1952. This feature is a hazard to navigation in the low visibility which is frequent in this vicinity. Not: Roca Azar.

Hazlett, Mount 72°06'S, 167°35'E

A mountain (2,080 m) at the S side of the mouth of Montecchi Glacier where the latter enters Tucker Glacier, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Paul C. Hazlett, member of the USN Squadron VX-6 winter party at McMurdo Station, 1968.

Head Island 64°31'S, 62°55'W

A small island that lies 0.6 mi S of Andrews Point and close to the NE side of Anvers Island. The feature is situated at the SE side of Hackapike Bay and is not to be confused with Pear Island and False Island which are just northeastward. Charted from the *Penola* by the BGLE (1934–37) under John Rymill. The name is presumed to be descriptive and dates back to about 1952. Not: Isla Cabeza.

Headland Peak 54°16'S, 36°43'W

A peak rising to 875 m on the N side of Geikie Glacier, at the head of Cumberland West Bay, South Georgia. Named by the UK-APC for Robert K. Headland, BAS biological assistant, Grytviken, 1977–80 and 1981–82; Curator, Scott Polar Research Institute, from 1987.

Head Peak 72°10'S, 166°11'E

A peak 3.5 mi E of Le Couteur Peak, situated on a projecting ridge of Millen Range in the névé area of Pearl Harbor Glacier. So named by the Southern Party of NZFMCAE, 1962–63, due to its likeness to a head and to its position at the head of Pearl Harbor Glacier.

Heald Island 78°15'S, 163°49'E

An island, 3 mi long and 555 m high, which projects through the ice of the Koettlitz Glacier just E of Walcott Bay, in Victoria Land. Discovered and named by the BrNAE (1901–04) for Seaman William L. Heald, a member of the expedition who saved the life of Ferrar when the latter was suffering from scurvy in 1902.

Heale Peak 81°35'S, 160°04'E

A rock peak (1,340 m) at the E side of Starshot Glacier, 2 mi N of Adams Peak in the Surveyors Range. Named by the NZGSAE (1960–61) for Theophilus Heale of New Zealand, an early exponent of the use of triangulation in survey (1868), and later Inspector of Survey for New Zealand.

Healey, Cape: see Healy, Cape 71°22'S, 60°58'W

Healy, Cape 71°22'S, 60°58'W

Prominent, square-shaped rock cape forming the N side of the entrance to Lamplugh Inlet, on the E coast of Palmer Land. Discovered by members of the USAS who explored this coast by land and from the air in 1940. Named for Joseph D. Healy, member of the ByrdAE, 1933–35, and dog driver at the USAS East Base, 1939–41. Not: Cape Healey.

Heaney Glacier 54°25'S, 36°12'W

Glacier, 4 mi long, which lies close NW of Cook Glacier and flows NE and then E toward Saint Andrews Bay on the N coast of South Georgia. Surveyed by the SGS, 1951–52, and named by the UK-APC for John B. Heaney, surveyor with that expedition.

Heap Glacier 79°03'S, 159°20'E

Glacier 10 mi long flowing northeastward to Mulock Glacier, to the east of Henry Mesa. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for John A. Heap, a member of the University of Michigan-Ross Ice Shelf Studies party, 1962–63.

Heaphy Spur 77°14'S, 161°15'E

A prominent, curved, rock spur, 4 mi long, which descends from the southern side of Clare Range and divides the head of Victoria Upper Glacier, in Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photography, 1947–62. Named by US-ACAN (1974) after William Heaphy, a New Zealand citizen who, over the past 10 years, participated in the U.S. Antarctic Research Program.

Heap Island 65°50'S, 65°43'W

An island off the SE coast of Renaud Island, Biscoe Islands, Graham Coast, between Jurva Point and Bates Island. In association with the names of sea-ice specialists grouped in this area, named by the UK-APC in 1985 after John A. Heap, sea-ice specialist with FIDS, 1955–62, who worked in the Antarctic with FIDS, 1955–56, with CTAE, 1956–57, and with USARP, 1962–63; Head, Polar Regions Section, Foreign and Commonwealth Office, and member of the UK-APC from 1976.

Heaps Rock 76°00'S, 132°46'W

A rock exposure above Bursey Icefalls and 2 mi WNW of Hutt Peak on the Mount Bursey massif, in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Kenneth L. Heaps, meteorologist at South Pole Station, 1970.

Heard Island 53°06'S, 73°30'E

An island, 23 mi long and 10 mi wide, lying southeastward of Îles Kerguelen in the Indian Ocean. Although it has numerous areas of exposed rock, the feature is surmounted by an ice-covered volcanic dome (Big Ben) rising to 2,745 meters. The island was discovered on Nov. 25, 1853 by Capt. John J. Heard of the merchant ship *Oriental* of New London, CT. It was named for Captain Heard by American sealers who began sealing operations at the island soon after word of its discovery. Not: Herd's Island, Hurds Island.

Hearfield Glacier 72°26'S, 167°42'E

A tributary glacier which flows ESE along the S side of Cartographers Range and enters Trafalgar Glacier just E of Aldridge Peak, in the Victory Mountains of Victoria Land. Named by the northern party of NZFMCAE, 1962–63, for B. Hearfield, a leading N.Z. alpinist and a member of NZGSAE, 1957–58, which also worked in the Tucker Glacier area.

Hearst, Cape: see Wilkins, Cape 67°15'S, 59°18'E

Hearst Island 69°25'S, 62°10'W

Ice-covered, dome-shaped island lying 4 mi E of Cape Rymill, off the E coast of Palmer Land. The island is 36 mi long, in a N-S direction, 7 mi wide, and rises to 365 m. First sighted on a flight

on Dec. 20, 1928 by Sir Hubert Wilkins. Thinking it was part of the mainland of Antarctica, he named it Hearst Land for William Randolph Hearst, who helped finance the expedition. It was resighted and its insularity ascertained in 1940 by members of the USAS who explored this coast by land and from the air. They named it Wilkins Island. Examination of aerial photographs have shown, however, that this large island is what Wilkins considered Hearst Land. Not: Hearst Land, Wilkins Island.

Hearst Land: see Hearst Island 69°25'S, 62°10'W

Heart Lake 77°34'S, 166°14'E

One of the several small lakes on Cape Barne, Ross Island, located 0.2 mi NW of Terrace Lake. The name is descriptive of the outline of the lake and was given by the BrAE, 1907–09, under Shackleton.

Heathcock Peak 86°07'S, 130°40'W

A peak, 2,310 m, located in the E part of Caloplaca Hills and overlooking the W edge of Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Joe D. Heathcock, builder at Byrd Station in 1962.

Heave-ho Slope 72°32'S, 170°10'E

A slope falling 450 m from Quarterdeck Ridge to a saddle at the SW end of Hallett Peninsula. The slope must be traversed by parties moving overland from Hallett station to Tucker Glacier, after the bay ice in Edisto Inlet has broken out. The NZGSAE, 1957–58, met deep soft new snow in this area and sledges had to be man-hauled up the slope in relays, hence the name.

Hecate Rock 54°02'S, 37°12'W

A submerged rock with a least depth of 4.2 m, lying off the entrance to Beckmann Fjord, Bay of Isles, South Georgia. Named by the UK-APC in 1984 after HMS *Hecate*, which came very close to grounding on the rock during a hydrographic survey of the Bay of Isles in January-February, 1983.

Heckmann Island 67°20'S, 61°03'E

The largest island in the E part of the Thorfinn Islands, lying 7 mi N of Byrd Head, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Remapped by ANARE and named by ANCA for B. Heckmann, chief officer on the *Nella Dan* in 1965.

Hector, Mount 64°36'S, 63°25'W

Snow-covered mountain, 2,225 m, between Mount Français and Mount Priam in the S part of the Trojan Range, Anvers Island, in the Palmer Archipelago. Surveyed by the FIDS in 1955. Named by the UK-APC for Hector, son of Priam and Commander in Chief of the Trojan and allied armies against the Achaeans in Homer's *Iliad*.

Hedden, Mount 72°05'S, 1°25'E

A nunatak (1,515 m) lying 1 mi N of Brattskarvet Mountain in the Sverdrup Mountains of Queen Maud Land. The "Hedden-Berg" after Karl Hedden, a sailor with the expedition, was applied in the area by the GerAE (1938–39) under Alfred Ritscher. The correlation of the name with this nunatak may be arbitrary but is recommended for the sake of international uniformity and historical continuity.

Hedgehog Island 72°12'S, 170°00'E

Small, bare granite island, or stack, in Moubray Bay, 1 mi S of Heim Point. It was first visited in 1957 by a small party from Hallett station. So named by the NZGSAE, 1957–58, because of its shape. Not: One Day Islet.

Hedgpeth Heights 71°07'S, 167°30'E

Mainly snow-covered heights, 14 mi long and with peaks rising to 1,300 m, located 2 mi SW of Quam Heights in the Anare Mountains of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Joel W. Hedgpeth, USARP biologist at McMurdo Station, 1967–68, and Palmer Station, 1968–69.

Hedin Nunatak 75°19'S, 111°18'W

A conspicuous nunatak with a flat top capped with ice and steep bare rock walls, standing 9 mi WNW of the summit of Mount Murphy, on Walgreen Coast, Marie Byrd Land. First roughly mapped from air photos taken in January 1947 by U.S. Navy Operation Highjump. Named by US-ACAN after Alan E. Hedin, aurora researcher at Byrd Station in 1962.

Hedionda, Punta: see Stinker Point 61°13'S, 55°23'W

Hedley Glacier 77°49'S, 162°07'E

A small glacier from Mount Coates in the Kukri Hills, Victoria Land, flowing S into Ferrar Glacier. Named by the Western Journey Party of BrAE, 1910–13, probably for Charles Hedley, of the Australian Museum, whose studies and reports on the Mollusca contributed to Scott's BrAE, 1910–13, and to BrAE, 1907–09, led by Shackleton.

Heed Rock 64°59'S, 63°47'W

A very small rock, awash at high water and virtually hidden from sight, lying 1 mi S of Brown Island in the Wauwermans Islands in the Wilhelm Archipelago. Shown on an Argentine government chart of 1950, but not named. Surveyed by the British Naval Hydrographic Survey Unit in 1956–57, and so named by the UK-APC as a caution to mariners.

Heekin, Mount 85°03'S, 177°16'W

A large, ice-free mountain overlooking the N side of the mouth of Baldwin Glacier where the latter enters Shackleton Glacier. Discovered and photographed by USN OpHjp (1946–47) on the flights of Feb. 16, 1947, and named by US-ACAN for Lt. (j.g.) Robert P. Heekin, USN, navigator of Flight 8.

Heer, Mount 73°18'S, 62°58'W

Mountain on the S side of Haines Glacier, 3 mi N of Mount Barkow, in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Ray R. Heer, Jr., Program Director (Atmospheric Physics), Office of Antarctic Programs, National Science Foundation.

Heezen Glacier 72°45'S, 61°18'W

A glacier flowing NE from the E portion of Wegener Range and entering Violante Inlet E of Mount Reynolds, on the Black Coast, Palmer Land. Mapped by USGS from aerial photographs taken by the U.S. Navy, 1966–69. In association with the names of oceanographers grouped in this area, named by the UK-APC in 1977 after Bruce C. Heezen (1924–77), American marine geologist and oceanographer; Professor of Geology, Lamont-Doherty Geological Observatory, Columbia University, 1964–77.

Heftye Island 71°59'S, 171°06'E

Small island which is the southernmost of the Possession Islands, lying E of the S end of Adare Peninsula. Named by a Norwegian expedition of 1894–95, led by Bull and Kristensen, for Messrs. Thos. Joh. Heftye and Son of Christiania (now Oslo), shareholders in the expedition ship *Antarctic*. Not: Heftye's Island.

Heftye's Island: see Heftye Island 71°59'S, 171°06'E

Heg, Mount 72°57'S, 166°45'E

Massive ice-covered mountain forming the S end of a promontory on the W side of Malta Plateau in Victoria Land. It is bounded on the W, S, and E sides by the Seafarer, Mariner and Potts Glaciers. The mountain first appears on a 1960 New Zealand map compiled from U.S. Navy aerial photographs. Named by US-ACAN in 1972 for James E. Heg, Chief of the Polar Planning and Coordination Staff in the Office of Polar Programs, National Science Foundation.

H. E. Hansenbreen: see Hansenbreen 72°06'S, 22°45'E

Heibreen: see Hei Glacier 72°29'S, 0°35'E

Heidemann Bay 68°35'S, 77°58'E

A bay, 1 mi long, indenting the seaward end of Breidnes Peninsula, Vestfold Hills, just S of Davis Station. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. First visited by an ANARE party from the *Kista Dan* on Jan. 11, 1957. Named for Frank Heidemann, second mate of the *Kista Dan* in 1957.

Heidemann Glacier 82°33'S, 162°50'E

Glacier, 5 mi long, originating close NW of Mount Damm in the Queen Elizabeth Range and flowing E into Lowery Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Richard P. Heidemann, USARP glaciologist at Roosevelt Island, 1962–63. Not: Heidemann Glacier.

Hei Glacier 72°29'S, 0°35'E

A glacier flowing NW between Hamrane Heights and Robin Heights in the Sverdrup Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Heibreen (the upland glacier). Not: Heibreen.

Heikampen Peak 72°28'S, 0°41'E

Peak at the SE end of Robin Heights in the Sverdrup Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Heikampen (the upland mountain top).

Heilman Glacier 82°37'S, 160°46'E

A glacier in the N part of Queen Elizabeth Range, flowing NW from Mount Sandved into Nimrod Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for William L. Heilman, USARP glaciologist at Roosevelt Island, 1961–62.

Heil Peak: see Neill Peak 67°50'S, 66°37'E

Heimdall Glacier 77°35'S, 161°50'E

A small glacier just E of Siegfried Peak and Siegmund Peak on the S side of Wright Valley in the Asgard Range, Victoria Land. The name, given by NZ-APC, is one in a group derived from Norse mythology, Heimdall being the warden of Asgard.

Heimefront Range 74°35'S, 11°00'W

A range of mountains in three groups trending NE-SW for 65 mi, situated 50 mi WSW of Kirwan Escarpment in Queen Maud Land. The range was observed and photographed by the Norwegian-British-Swedish Antarctic Expedition in the course of air reconnaissance from Maudheim in January 1952. The name "Heimefrontfjella" (homefront range) was applied the place name authority in the Norwegian government. This range may include the rudely mapped mountains identified as "Kottas Berge" on the map of the GerAE of 1938–39. Not: Gory Kottas.

Heim Glacier 67°28'S, 66°55'W

Glacier 8 mi long in the SE part of Arrowsmith Peninsula, which flows S to merge with the ice in Jones Channel, on the W coast of Graham Land. With Antevs Glacier, to the N, it forms a transverse depression extending to the SW part of Lallemand Fjord. First sighted from the air in 1936 by the BGLE under Rymill. Its lower reaches were surveyed in 1949 by the FIDS, and the glacier named by them for Albert Heim, Swiss glaciologist and author in 1885 of *Handbuch der Gletscherkunde*.

Heidemann Glacier: see Heidemann Glacier 82°33'S, 162°50'E

Heine, Mount 78°05'S, 167°27'E

A hill, 760 m, in the N part of White Island, in the Ross Archipelago. Named by the NZGSAE (1958–59) for A.J. Heine, leader of their party who visited White Island. Heine, who climbed this hill, spent four summers and one winter in Antarctica, mostly in the McMurdo Sound area.

Heinous Peak 85°59'S, 154°55'W

A prominent peak rising to c. 3,300 m, 1 mi NNE of Mount Crockett and 6 mi SE of Mount Vaughan in the Hays Mountains of the Queen Maud Mountains. The peak was climbed on Nov. 28, 1987, by four members of the USARP-Arizona State University geological party led by Edmund Stump. So named because the ascent was a 20-hour ordeal in technical ice climbing on very steep terrain.

Heintz Peak 70°56'S, 63°42'W

The summit at the N end of the W ridge of the Welch Mountains, about 2 mi N of Mount Acton, in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Lt. Cdr. Harvey L. Heintz, USN, Commander of LC-130 aircraft during Operation Deep Freeze, 1969 and 1970.

Heirtzler Highland: see Heirtzler Ice Piedmont 72°34'S, 61°25'W

Heirtzler Ice Piedmont 72°34'S, 61°25'W

A relatively low, triangular-shaped, ice-covered area of about 7 mi extent, located at the W side of Violante Inlet and N of Maury Glacier, on Black Coast, Palmer Land. The feature was first seen and photographed from the air by the USAS on Dec. 30, 1940, and was mapped by USGS from USN aerial photographs taken 1966–69. In association with the names of continental drift scientists grouped in this area, named by US-ACAN after James

R. Heirtzler, American physicist; Research Scientist, Lamont-Doherty Geological Observatory, Columbia University, 1960–64 (Senior Research Scientist, 1964–67); Senior Scientist, Woods Hole Oceanographic Institute, 1969–86; Geophysicist and Head, Geophysics Branch, NASA Goddard Space Flight Center, from 1986. Not: Heirtzler Highland.

Heiser, Mount 82°40'S, 162°56'E

Mountain just N of Dorrer Glacier in the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Paul W. Heiser, Jr., USARP aurora scientist Scott Base, 1959.

Heiser Ridge 83°50'S, 57°09'W

A narrow rock ridge, 5 mi long, midway between West Prongs and Hudson Ridge in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for James R. Heiser, topographic engineer with the Neptune Range field party, summer 1963–64.

Heitō, Mount 69°16'S, 39°49'E

A flat-topped mountain (495 m) on the SE end of Langhovde Hills, Queen Maud Land. Mapped from surveys and air photos taken by JARE, 1957–62. The name Heitō-zan (flat-top mountain) was approved by JARE Headquarters in 1972.

Heitō Glacier 69°16'S, 39°48'E

A small glacier draining westward along the south side of Mount Heitō in the southern part of Langhovde Hills, Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62. Named Heitō-hyōga (flat-top glacier) for its proximity to Mount Heitō by JARE Headquarters in 1973.

Heke Peak 77°58'S, 162°53'E

A peak (2,175 m) on the ridge that forms the S wall of Mitchell Glacier near the glacier head, in the Royal Society Range, Victoria Land. Named in 1993 by the NZGB after Randal Heke, foreman of the construction unit which built the N.Z. Scott Station in 1957. He remained in a supervisory role for the management of the buildings for many years until his retirement.

Heksegryta Peaks 73°31'S, 3°48'W

A group of peaks rising between Belgen Valley and Tverregg Glacier, in the Kirwan Escarpment of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and additional air photos (1958–59), and named Heksegryta (the witch's cauldron). Not: Gory Shneyder.

Hektoria Glacier 65°03'S, 61°31'W

A glacier flowing S from the area around Mount Johnson into Larsen Ice Shelf just W of Shiver Point, on the E coast of the Antarctic Peninsula. The name "Hektoria Fiords" was given by Sir Hubert Wilkins during his flight of Dec. 20, 1928, after the S.S. *Hektoria*, which had brought him to Deception Island. Following survey by FIDS in 1947, the feature could not be identified; however, during further survey by FIDS in 1955, Wilkins' "long ice-filled fiords" were found to be this glacier and two short unnamed ones.

Hektor Icefall 62°00'S, 57°48'W

Icefall extending in an arc about 5 mi long at the head of Sherratt Bay, on the S coast of King George Island in the South Shetland Islands. Named by the UK-APC in 1960 for the Hektor Whaling Company which operated the land station at Deception Island from

1912 to 1931, and worked chiefly in the waters of the South Shetland Islands.

Helado, Fiord: see Ice Fjord 54°03'S, 37°41'W

Held Glacier 84°47'S, 177°00'W

A tributary glacier, 3 mi long, flowing E from Anderson Heights to enter Shackleton Glacier just S of Epidote Peak, in the Queen Maud Mountains. Named by US-ACAN for Lt. George B. Held, CEC, USN, Public Works Officer at McMurdo Station during 1964.

Helen, Mount 64°32'S, 63°38'W

Mountain, 1,370 m, which rises 2 mi SW of Mount Achilles in the Achaean Range of central Anvers Island, in the Palmer Archipelago. It is snow covered except for a steep rock scarp on its E side. Surveyed by the FIDS in 1955 and named by the UK-APC for Helen, wife of Menelaus, whose abduction by Paris was the cause of the Trojan War in Homer's *Iliad*.

Helena Island: see Bridgeman Island 62°04'S, 56°44'W

Hélène, Iles: see Hélène Island 66°37'S, 139°44'E

Helene Gletscher: see Helen Glacier 66°40'S, 93°55'E

Hélène Island 66°37'S, 139°44'E

Small rocky island 0.2 mi NW of Ifo Island marking the W end of Géologie Archipelago. Photographed from the air by USN OPHj, 1946–47. Charted by the FrAE, 1949–51, and named by them for one of the French expedition's dogs. Not: Iles Hélène.

Helen Glacier 66°40'S, 93°55'E

Glacier marked by a series of heavy, broken, crevassed icefalls, terminating in the sea in Helen Glacier Tongue. Discovered in November 1912 by the Western Base Party of the AAE under Mawson, who named it for Lady Helen, wife of Sir Lucas Tooth of Sydney, a patron of the expedition. Not: Helene Gletscher.

Helen Glacier Tongue 66°33'S, 94°00'E

Glacier tongue which extends seaward from Helen Glacier on the coast of Antarctica. Discovered in November 1912 by the Western Base Party of the AAE under Mawson. Named after Helen Glacier.

Helen Washington, Mount: see Washington Ridge 78°06'S, 154°48'W

Helen Washington Bay: see Kainan Bay 78°10'S, 162°30'W

Helfert Nunatak 77°53'S, 87°25'W

Prominent rock nunatak standing 15 mi W of Mount Sharp of the Sentinel Range, Ellsworth Mountains. Discovered and visited by the Marie Byrd Land Traverse party, 1957–58, under C.R. Bentley. Named for Norbert F. Helfert, meteorologist at Byrd Station in 1957.

Helfferich Glacier 70°35'S, 160°12'E

A glacier about 8 mi long which drains the east slopes of Pomerantz Tableland southward of Armstrong Platform, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Merritt R. Helfferich, USARP worker in the field of ionospheric physics at South Pole Station, 1967–68.

Helicopter Hills: see Stansbury Peninsula 62°14'S, 59°00'W

Helikoptera, Wzgórze: see Stansbury Peninsula 62°14'S, 59°00'W

Helix Pass 71°18'S, 163°18'E

A small north-south pass 4 mi ENE of Mount Jamroga in the central Bowers Mountains. The pass lies between unnamed peaks and permits passage from the area at the head of Carryer Glacier to areas in the southern part of Bowers Mountains. So named by NZGSAE, 1967–68, because ascent of the pass required an all night trip with much zigzagging and climbing; thus named after the genus of land snail, Helix.

Helland Glacier 54°29'S, 36°37'W

Glacier 4 mi long flowing SW from Mount Paget to Rocky Bay, on the S side of South Georgia. Mapped by Olaf Holtedahl during his visit to South Georgia in 1927–28, and named by him for Amund Helland (1846–1918), Norwegian mining geologist and glaciologist.

Helland Hansen, Mount: see Helland-Hansen Shoulder 85°26'S, 168°10'W

Helland-Hansen Shoulder 85°26'S, 168°10'W

A mainly ice-covered ridge which extends southward from the west portion of Mount Fridtjof Nansen and overlooks the northern side of the head of Axel Heiberg Glacier. Discovered in 1911 by Roald Amundsen and named by him for Prof. B. Helland-Hansen, of the University of Oslo, Norway. Not: Mount Helland Hansen.

Hellehallet: see Helle Slope 71°25'S, 5°15'E

Hellerman Rocks 64°48'S, 64°01'W

A group of seven small islets and rocks connected by a shoal, located 0.4 mi E of Hermit Island, off the SW coast of Anvers Island. Named by US-ACAN for Lt. (j.g.) Lance W. Hellerman, USNR, Officer-in-Charge of Palmer Station in 1969.

Helle Slope 71°25'S, 5°15'E

A large ice piedmont along the coast of Queen Maud Land, lying E of Jutulstraumen Glacier and N of the Mühlig-Hofmann Mountains. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59). Named for Sigurd Helle, leader of the 1957 Norwegian expedition to Queen Maud Land. Not: Hellehallet.

Hell Gates 62°40'S, 61°11'W

Narrow boat passage between the rocks off Devils Point, the SW end of Livingston Island, in the South Shetland Islands. The name dates back to about 1821 and was applied by early sealers in the area because many lives and ships were lost here. Not: Paso Puertas del Infierno.

Helliwell Hills 71°50'S, 161°12'5

A group of rocky hills and low mountains about 18 mi long and 9 mi wide. The hills lie S of Gressitt Glacier and midway between Emlen Peaks and the Morozumi Range. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Robert A. Helliwell of Stanford University, Program Director for the USARP study of very low frequency (VLF) radio noise phenomena.

Hells Gate 74°51'S, 163°48'E

A narrows located near the E edge of the Nansen Ice Sheet, lying just N of Evans Cove between Inexpressible Island and the Northern Foothills, Victoria Land. First explored and mapped by the Northern Party of the BrAE, 1910–13, who gave the feature this expressive name.

Hells Gate Moraine 74°52'S, 163°48'E

The glacial moraine at Hells Gate, at the head of Evans Cove on the coast of Victoria Land. The moraine extends southward to Hells Gate from nearby Vegetation Island and Cape Confusion. Mapped and named by the Northern Party of BrAE, 1910–13, in association with Hells Gate.

Helman Glacier 72°12'S, 168°28'E

A small tributary glacier in the Admiralty Mountains, flowing southward between Mount Gleaton and Taylor Peak into Tucker Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Terry N. Helman, USN, radioman at McMurdo Station, 1967.

Helmer Hanssen, Mount: see Hanssen, Mount 85°59'S, 164°28'W

Helmet Peak 62°39'S, 60°01'W

Peak, 1,040 m, rising just southward of the mouth of Huron Glacier in the eastern part of Livingston Island, in the South Shetland Islands. Named by DI personnel during the period 1926–32. Not: Pico Falsa Aguja.

Helm Glacier 83°07'S, 162°30'E

Glacier 15 mi long, flowing N to enter Lowery Glacier just W of Fazekas Hills, in the Queen Elizabeth Range. Named for Arthur S. Helm, former Secretary of the Ross Sea Committee, by the NZGSAE (1961–62).

Helm Peak 69°29'S, 67°50'W

A peak of 930 m, the highest elevation in the Relay Hills, on the W side of Antarctic Peninsula. The area was photographed from the air by the U.S. Navy, 1966, and was surveyed by BAS, 1970–73. Named in 1977 by the UK-APC in association with other wind names in the area. The helm wind is an E gale in the lee of the northern Pennines of England.

Helm Point 72°11'S, 170°00'E

Point which marks the SE tip of Honeycomb Ridge on the W side of Moubray Bay. It consists of brown granodiorite and supports a relatively luxuriant vegetation of lichens and mosses, along with nests of snow petrels and Wilson's petrel. Two Japanese whale-chasers, apparently familiar with the site, dropped anchor there for two nights early in Feb. 1958. Named by the NZGSAE, 1957–58, for Arthur S. Helm, Sec., Ross Sea Committee, who gave much assistance to the expedition. Helm was Secretary of the New Zealand Antarctic Place Names Committee, 1957–64.

Helms, Mount 82°04'S, 87°58'W

A rounded, partly snow-covered peak rising between Mount Semprebou and Mount Oldenburg in central Martin Hills. The peak was positioned by a USARP party led by J. Campbell Craddock in January 1963. Named by US-ACAN for Ward J. Helms, radioscience researcher at Byrd Station in 1962.

Helms Bluff 78°29'S, 164°25'E

A prominent north-facing bluff 10 mi E of Mount Morning in Victoria Land. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1963 for Lt. Cdr. Louis L. Helms, USN, officer in charge of the Squadron VX-6 wintering-over detachment at McMurdo Station, 1961.

Hemmen Ice Rise 77°57'S, 49°46'W

An ice rise 11 mi long, located off the northwest corner of Berkner Island in Ronne Ice Shelf. The feature appears for the first time on a chart prepared at Ellsworth Station in 1957 by Capt. Finn Ronne, USNR. The ice rise was subsequently noted in U.S. Earth Resources Technology Satellite imagery. Named by UK-APC for George E. Hemmen, Executive Secretary of the Scientific Committee on Antarctic Research, 1972; he served with FIDS as meteorological observer at Admiralty Bay, 1952–53, and Base Leader at Deception Island, 1953–54, and with the Royal Society Antarctic Expedition, 1956.

Hemmestad Nunataks 71°40'S, 8°26'E

A group of about 20 nunataks extending over about 7 miles, forming the NE portion of the Drygalski Mountains in Queen Maud Land. Plotted from air photos by the GerAE (1938–39). Mapped from surveys and air photos by NorAE (1956–60) and named for Arne Hemmestad, mechanic with NorAE (1956–57). Not: Hemmestadskjera.

Hemmestadskjera: see Hemmestad Nunataks 71°40'S, 8°26'E

Hemmingsen, Mount 73°25'S, 61°50'W

Mountain at the NE end of the Werner Mountains, located on the S side of Meinardus Glacier, 5 mi SW of Court Nunatak, in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Edvard A. Hemmingsen, biologist at McMurdo Station, summer 1966–67, and Palmer Station, 1967–68.

Hemphill, Mount 70°59'S, 165°06'E

A snow-covered mountain that rises above 1,800 m in the S part of Anare Mountains. It stands between the head of McLean Glacier and Ebbe Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Lt. (j.g.) Harold S. Hemphill, USN, photographic officer with Squadron VX-6 in Antarctica, 1962–63 and 1963–64.

Hemphill Island 66°23'S, 110°34'E

Small, mainly ice-covered island lying between Robinson Ridge and Odbert Island, in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for George R. Hemphill, meteorologist and member of the Wilkes Station party of 1961.

Hendersin Knob 72°08'S, 101°26'W

An ice-covered knob rising between the heads of Craft and Rochray Glaciers in the SW part of Thurston Island. First plotted from air photos taken by USN Operation Highjump, 1946–47. Named by US-ACAN for aviation radioman Wendell K. Hendersin, USN, a member of the expedition who lost his life in a seaplane crash at Thurston Island on Dec. 30, 1946. Not: Henderson Knob.

Henderson, Cape 66°11'S, 100°44'E

Ice-free cape, overlain by morainic drift, marking the NW end of the Bunger Hills. Mapped from air photos taken by USN OpHjp in

February 1947. Named by the US-ACAN for the USS *Henderson*, destroyer escort of the western task group of the USN OpHjp, Task Force 68, 1946–47.

Henderson, Mount 67°42'S, 63°04'E

Massive mountain, 970 m, rising through the ice sheet 5 mi SE of Holme Bay and a like distance NE of the N end of the Masson Range. Discovered in February 1931 by the BANZARE under Mawson, who named it after W. Henderson, Director of the Australian Department of External Affairs, a member of the Australian Antarctic Committee, 1929.

Henderson, Mount 78°11'S, 167°20'E

A hill 2 mi WNW of Isolation Point in the south-central part of White Island, in the Ross Archipelago. Named by the NZGSAE (1958–59) for G.B. Henderson, a member of that expedition.

Henderson, Mount 80°12'S, 156°13'E

A prominent mountain, 2,660 m, standing 5 mi W of Mount Olympus, in the Britannia Range. Discovered and named by the BrNAE, 1901–04.

Henderson Bluff 53°07'S, 73°23'E

A rock bluff close S of the mouth of Abbotsmith Glacier on the W side of Heard Island. Surveyed by ANARE in 1948. Named by ANCA for M.W. Henderson, ANARE weather observer on Heard Island in 1954.

Henderson Bluff 83°05'S, 50°35'W

A rock bluff, 1,660 m, along the W side of Lexington Table 9 mi N of Mount Lechner, in the Forrester Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for John R. Henderson, geophysicist in the Pensacola Mountains, 1965–66.

Henderson Glacier 79°47'S, 82°25'W

A glacier about 7 mi long in the Enterprise Hills, Heritage Range, flowing NE from Schoeck and Hoinkes Peaks to enter Union Glacier just E of Mount Rossman. Mapped by USGS from surveys and USN air photos 1961–66. Named by US-ACAN for Felix E. Henderson, USARP meteorologist at Eights Station in 1965.

Henderson Island 66°22'S, 97°10'E

Ice-covered island 9 mi long and rising to 240 m, lying 9 mi SE of Masson Island, within the Shackleton Ice Shelf Discovered in August 1912 by the Western Base Party of the AAE under Mawson, and named by him for Prof. G.C. Henderson of Adelaide, a member of the AAE Advisory Committee.

Henderson Knob: see Hendersin Knob 72°08'S, 101°26'W

Henderson Pyramid 78°06'S, 161°27'E

A pointed, mostly ice-covered mountain, 2,450 m, located 4 mi SSW of Ugolini Peak on the W side of Royal Society Range, Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1956–61. Named by US-ACAN in 1994 after Thomas E. Henderson, cartographer, USGS; field team member on Ellsworth Mountains Geodetic Control Project, 1979–80; leader, USGS, northern Victoria Land Geodetic Team, 1981–82; USGS satellite surveying team at South Pole Station, winter party 1982.

Henderson Ridge: see Craw Ridge 78°01'S, 163°00'E

Hendrickson Peak 85°56'S, 132°49'W

A rock peak rising over 2,000 m at the W side of Reedy Glacier, standing 2 mi W of May Peak in the Quartz Hills. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for George Hendrickson, glaciologist at Byrd Station, 1962–63 and 1963–64.

Henfield Rock 62°19'S, 59°35'W

Rock lying 2 mi NW of Newell Point, Robert Island, in the South Shetland Islands. Named by the UK-APC in 1961 for Joseph Henfield, Master of the American sealing vessel *Catharina* from Stonington, CT, who visited the South Shetland Islands in 1820–21.

Hengist Nunatak 69°00'S, 70°14'W

Isolated flat-topped nunatak, more than 610 m, which rises above Roberts Ice Piedmont 10 mi N of Mount Calais in the NE part of Alexander Island. First photographed from the air in 1936 by the BGLE under Rymill. Surveyed from the ground in 1948 by the FIDS. The names for this feature and for the group of nunataks to the N are for the brother chieftains, Hengist and Horsa, who led the first Saxon bands which settled England in the fifth century.

Henkes Islands 67°48'S, 68°56'W

Group of small islands and rocks 2 mi in extent, lying 1 mi SW of Avian Island, close off the S extremity of Adelaide Island. Discovered by the FrAE, 1908–10, under Charcot, and named by him for one of the Norwegian directors of the Magellan Whaling Co. at Punta Arenas. Charcot applied the name to the scattered rocks and islands between Cape Adriasola and Cape Alexandra. The name was restricted to the group described by the UK-APC following definitive mapping by the BAS in 1961 and the British Royal Navy Hydrographic Survey in 1963. Not: Grupo Blanco Encalada.

Henkle Peak 74°39'S, 75°50'W

A peak about 15 mi N of Mount Rex in Ellsworth Land. It lies among a group of nunataks that were first sighted and photographed by Lincoln Ellsworth on Nov. 23, 1935. The peak was mapped by USGS from surveys and U.S. Navy air photos, 1961–66. Named by US-ACAN for Charles R. Henkle of USGS, topographic engineer with the Marie Byrd Land Survey Party, 1967–68.

Henksen, Mount 66°46'S, 51°04'E

An elongated mountain with several peaks, standing between Peacock Ridge and Mount Parviainen in the N part of the Tula Mountains in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for H. Henksen, a member of the crew of the *Discovery* during the BANZARE, 1929–31.

Hennequin, Point 62°08'S, 58°24'W

Point forming the E side of the entrance to Martel and Mackellar Inlets, on the E side of Admiralty Bay, King George Island, in the South Shetland Islands. Named by the FrAE under Charcot, who surveyed Admiralty Bay in 1909.

Hennessey, Mount 72°14'S, 164°45'E

A mountain 2 mi N of Mount Tukotok in Salamander Range, Freyberg Mountains. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Raymond W. Hennessey, aerographer at Hallett Station in 1957.

Hennessy Islands 65°53'S, 65°43'W

Group of small islands 2 mi in extent, lying 4 mi SE of Jurva Point, the SE end of Renaud Island, in the Biscoe Islands. The main islands in the group were first accurately shown on an Argentine government chart of 1957. Named by the UK-APC in 1959 for Jack Hennessy (1885–1954), Deputy Marine Superintendent of the (British) Meteorological Office, 1940–54, who collected and published reports on sea ice observations in Antarctic waters, 1902–53. Not: Islas Cabrales.

Henningsen Glacier 54°27'S, 36°42'W

Glacier 3 mi long, flowing SW to the S coast of South Georgia between Cape Darnley and Rocky Bay. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Leonard Henningsen, Manager of Tønsberg Hvalfangeri, Husvik, 1945–50.

Henriksen Buttress 54°23'S, 36°33'W

Prominent rock buttress, 1,970 m, standing 2 mi SE of Mount Sugartop in the central part of the Allardyce Range of South Georgia. Surveyed by the SGS in the period 1951–57, and named by the UK-APC for Henrik N. Henriksen who, in 1909, built the South Georgia Whaling Co. station at Leith Harbor, and was manager there from 1909 until 1920.

Henriksen Nunataks 71°30'S, 9°00'E

A group of scattered nunataks about 10 mi N of the Kurze Mountains in Queen Maud Land. Plotted from air photos by the GerAE (1938–39). Mapped from surveys and air photos by NorAE (1956–60) and named for Hans-Martin Henriksen, meteorological assistant with NorAE (1956–58). Not: Henriksenskjera, Skaly Yunyye.

Henriksenskjera: see Henriksen Nunataks 71°30'S, 9°00'E

Henry, Mount 67°43'S, 50°17'E

Mountain, 1,500 m, standing 1 mi E of Simpson Peak in the Scott Mountains, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. The name was first applied by John Biscoe in 1831 to a feature which cannot now be identified. It was probably named after one of the Enderby Brothers, owners of Biscoe's vessel.

Henry, Mount 83°52'S, 172°04'E

A sharp peak (1,675 m) in the Commonwealth Range, standing 4 mi SE of Mount Kyffin on the E side of Beardmore Glacier. Discovered and named by the BrAE, 1907–09.

Henry Bay 66°52'S, 120°45'E

A small bay at the eastern end of Sabrina Coast. The Henry Islands lie in the western part of the bay. Delineated from aerial photographs taken by USN Operation Highjump (1946–47), and named by the US-ACAN for Wilkes Henry, Midshipman on the sloop *Vincennes* during the USEE (1838–42) under Lt. Charles Wilkes.

Henry Bluff 62°41'S, 60°25'W

A bluff rising to c. 120 m on the W side of Hurd Peninsula, 1.5 mi SW of Johnsons Dock, on Livingston Island in the South Shetland Islands. Named in 1990 by the UK-APC after the schooner *Henry*, one of James Byers' fleet of sealing ships from New York, which worked in the South Shetland Islands in 1820–21.

Henry Ice Rise 80°35'S, 62°00'W

A triangular-shaped ice rise about 70 mi long located between Korff Ice Rise and the southern portion of Berkner Island in the Ronne Ice Shelf First visited by the US-IGY geophysical traverse party from Ellsworth Station, 1957–58. Named by US-ACAN after Capt. Clifford D. Henry, Military Sealift Command, a veteran American polar sea captain and master of USNS *Private John R. Towle*. Henry died aboard his ship, Feb. 16, 1975, while returning from his fourteenth voyage to Antarctica in support of the U.S. Antarctic Research Program.

Henry Inlet 71°54'S, 100°20'W

Narrow, ice-filled inlet about 12 mi long, indenting the N coast of Thurston Island immediately E of Hughes Peninsula. First plotted from air photos taken by USN OpHjp, 1946–47. Named by US-ACAN for Robert Henry, photographer's mate with the USN Bellingshausen Sea Expedition, who in February 1960 recorded features along Eights Coast from helicopters.

Henry Islands 66°53'S, 120°38'E

A group of four small islands in the western part of Henry Bay. Delineated from air photos taken by USN Operation Highjump (1946–47), and named by US-ACAN after Wilkes Henry, Midshipman on the sloop *Vincennes* during the USEE (1838–42) under Lt. Charles Wilkes.

Henry Lucy, Mount 85°11'S, 170°26'E

A prominent peak, 3,020 m, standing 2.5 mi SSE of Mount White at the S end of Supporters Range. Discovered by the BrAE (1907–09) and named for Sir Henry Lucy, M.P., who publicized Shackleton's expedition and assisted in obtaining a financial grant from Parliament for the expedition. Not: Mount Lucy.

Henry Mesa 79°05'S, 159°04'E

A distinctive wedge-shaped mesa 2 mi in extent, standing 4 mi S of Mulock Glacier on the W side of Heap Glacier. The ice-covered summit, 1,430 m, is flat except for a cirque which indents the N side. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for Capt. B.R. Henry, USCG, commander of the *Eastwind* USN OpDFrz, 1964, and commander of the U.S. ship group, OpDFrz, 1965.

Henry Moraine 71°57'S, 9°38'E

A small moraine on the NW side of Mount Bjerke in the Conrad Mountains of Queen Maud Land. Mapped by Norway from air photos and surveys by NorAE, 1956–60, and named for Henry Bjerke, mechanic with NorAE, 1957–59. Not: Henrysanden.

Henry Nunataks 75°08'S, 72°36'W

A cluster of nunataks located 6 mi W of the Merrick Mountains in eastern Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for K.C. Henry, engineman with the Eights Station winter party in 1963.

Henrysanden: see Henry Moraine 71°57'S, 9°38'E

Henson, Mount 84°50'S, 168°21'W

An ice free summit (905 m) standing at the NE extremity of Mayer Crags, forming the NW portal to Liv Glacier where the latter enters Ross Ice Shelf Discovered and photographed by the ByrdAE (1928–30), in November 1929, and named for Matthew Henson, a member of R. Admiral Peary's party which reached the North Pole in 1909. Not: Mount Hansen.

Henson Glacier 64°06'S, 60°11'W

A glacier flowing northward from the Detroit Plateau, Graham Land, and merging with Wright Ice Piedmont about 2 mi SW of Hargrave Hill. Mapped from air photos taken by Hunting Aero-surveys (1955–57). Named by UK-APC for William S. Henson (1805–88), English designer of a powered model airplane (1842–43) which led to widespread aeronautical research and development.

Herald Reef 65°11'S, 64°11'W

Reef 1 mi SW of Petermann Island, lying on the N side of French Passage in the Wilhelm Archipelago. First charted by the FrAE under Charcot, 1908–10. So named by the UK-APC in 1959 because this reef heralds the approach to French Passage from the east. Not: Arrecife Baeza.

Herbert Mountains 80°20'S, 25°30'W

Conspicuous group of rock summits on the E side of Gordon Glacier in the Shackleton Range. First mapped in 1957 by the CTAE and named for Sir Edwin S. Herbert, Chairman of the Finance Committee and Member of the Committee of Management of the CTAE, 1955–58.

Herbert Plateau 64°32'S, 61°15'W

A portion of the central plateau of Graham Land, lying between Blériot and Drygalski Glaciers. Photographed by the FIDASE in 1956–57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Walter W. Herbert, FIDS asst. surveyor at the Hope Bay station in 1956 and 1957.

Herbert Range 85°22'S, 165°30'W

A range in the Queen Maud Mountains, extending from the edge of the polar plateau to the Ross Ice Shelf between the Axel Heiberg and Strom Glaciers. Named by the NZ-APC for Walter W. Herbert, leader of the Southern Party of the NZGSAE (1961–62) which explored the Axel Heiberg Glacier area.

Herbertson Glacier 77°42'S, 163°48'E

Small alpine glacier which drains from the cliff that forms the S margin of New Harbor, about 5 mi WSW of Butter Point, Victoria Land. Named by the BrAE (1910–13), presumably for British geographer A.J. Herbertson of Oxford University.

Herbert Sound 63°55'S, 57°40'W

A sound extending from Cape Lachman and Keltie Head on the NW to the narrows between The Naze and False Island Point on the SE, separating Vega Island from James Ross Island and connecting Prince Gustav Channel with Erebus and Terror Gulf. On Jan. 6, 1843 Capt. James Clark Ross discovered a broad embayment E of the sound, which he named Sidney Herbert Bay after the Hon. Sidney Herbert, M.P., First Secretary to the Admiralty, 1841–45. The sound proper was discovered and charted by the SwedAE, 1901–04, under Nordenskjöld, who included it with the broad embayment under the name Sidney Herbert Sound. The recommended application restricts Herbert Sound to the area W of the narrows between The Naze and False Island Point; the embayment discovered by Ross forms the W margin of Erebus and Terror Gulf. Not: Estrecho Azopardo, Sidney Herbert Sound, Sydney Herbert Sound.

Herbst Glacier 75°40'S, 132°07'W

The eastern glacier of two that drain the N slopes of Mount Kosciusko and reach Brown Valley, in the Ames Range, Marie

Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Emmett L. Herbst of Holmes and Narver, Inc., who participated in the drilling program at Byrd Station, 1968–69. He worked at McMurdo Station and other Antarctic areas in several seasons, 1971–76.

Hercules, Mount 77°29'S, 161°27'E

Large, flat-topped, elevated feature between Mounts Aeolus and Jason in the Olympus Range of Victoria Land. Named by the VUWAE (1958–59) for a figure in Greek mythology.

Hercules Bay 54°07'S, 36°40'W

Bay 0.5 mi wide, which lies 1 mi WNW of Cape Saunders along the N coast of South Georgia. Named by Norwegian whalers after the *Hercules* (or *Herkules*), a whale catcher which had visited the bay. Not: Herkules Bucht.

Hercules Dome 86°00'S, 105°00'W

A large ice dome between Thiel Mountains and Horlick Mountains. The feature was first mapped by the USGS from USN aerial photographs taken 1959–60. It was further delineated by the SPRI-NSF-TUD airborne aerial radio echo sounding program, 1967–79, and named after the Lockheed LC-130 Hercules aircraft which was used on all echo sounding flights from 1969.

Hercules Inlet 80°05'S, 78°30'W

A large, narrow, ice-filled inlet which forms a part of the SW margin of Ronne Ice Shelf. It is bounded on the W by the SE flank of the Heritage Range, and on the N by Skytrain Ice Rise. Named by US-ACAN for the LC-130 Hercules aircraft used by the U.S. Naval Support Force, Antarctica, as a photographic and load carrying plane.

Hercules Névé 73°04'S, 165°15'E

A névé at the N margin of Mountaineer Range in Victoria Land. It is bounded by Deception Plateau, Astronaut Glacier, Retreat Hills, and by such western tributaries to the Mariner Glacier as Meander and Gair Glaciers. Named by the northern party of NZGSAE, 1966–67, in appreciation of the party's transport into the field by U.S. Navy C-130 Hercules aircraft, also as an indication to future parties of a possible C-130 landing place.

Hercules Point 54°07'S, 36°40'W

Point forming the W side of the entrance to Hercules Bay on the N coast of South Georgia. Probably first surveyed by DI personnel in 1927. The name, which derives from nearby Hercules Bay, was used by a German expedition under Kohl-Larsen, 1928–29, but is known to have been used earlier by whalers. Not: Herkules-Odden.

Herdman, Cape 72°36'S, 60°36'W

A broad ice-covered cape forming the S entrance point to Violante Inlet, on the Black Coast, Palmer Land. The cape was photographed from the air in 1940 by USAS; rephotographed from the air in 1947 by RARE and, in conjunction with FIDS surveyed from the ground. Named by UK-APC after Henry F.P. Herdman (1901–67), British oceanographer and member of the scientific staff of DI, 1924–49; with the National Institute of Oceanography, 1949–67.

Herdman Rocks 60°42'S, 44°20'W

Two rocks, 15 m high, lying 1.5 mi SE of Hart Rock and 3 mi NE of Cape Dundas, Laurie Island, in the South Orkney Islands. First charted in 1838 by a French expedition under Capt. Jules Dumont

d'Urville. Recharted in 1933 by DI and named after H.F.P. Herdman (Cape Herdman, q.v.).

Herd Point 59°28'S, 27°17'W

Point which forms the W side of Ferguson Bay at the S end of Thule Island, in the South Sandwich Islands. It was roughly charted by a Russian expedition under Bellingshausen in 1819–20. Recharted in 1930 by DI personnel on the *Discovery II* and named for R.D. Herd of Messrs. Ferguson Brothers, Port Glasgow, Scotland, builders of the *Discovery II*.

Herd's Island: see Heard Island 53°06'S, 73°30'E

Heritage Range 79°45'S, 83°00'W

A major mountain range, 100 mi long and 30 mi wide, situated southward of Minnesota Glacier and forming the southern half of the Ellsworth Mountains. The range is complex, consisting of scattered ridges and peaks of moderate height, escarpments, hills and nunataks, the various units of relief set off by numerous intervening glaciers. The northern portion of the range was probably first sighted by Lincoln Ellsworth in the course of his trans-Antarctic flight of Nov. 23, 1935. In Dec. 1959, E.C. Thiel, J.C. Craddock and E.S. Robinson conducted an aerial reconnaissance of the area, landing on a glacier in the northern part of the range. During the 1962–63 and 1963–64 seasons, the University of Minnesota expeditions made geologic and cartographic surveys of the range. The entire range was mapped by USGS from aerial photographs taken by the U.S. Navy, 1961–66. So named by US-ACAN because topographic units within the range have received names relating to the theme of American heritage. Not: Wexler Mountains.

Herkules Bucht: see Hercules Bay 54°07'S, 36°40'W

Herkules-Odden: see Hercules Point 54°07'S, 36°40'W

Herlacher, Cape 73°52'S, 114°12'W

A bold, ice-covered cape forming the N end of Martin Peninsula in Marie Byrd Land. Delineated from aerial photographs taken by USN OpHjp in January 1947. Named by US-ACAN in 1955 after Carl J. Herlacher, principal Antarctic cartographer with the U.S. Navy Hydrographic Office 1937.

Hermannfjella: see Herrmann Mountains 72°33'S, 0°30'E

Hermanos, Rocas: see Brothers Rocks 57°46'S, 26°25'W

Hermanson, Mount 84°23'S, 173°32'E

An ice-covered mountain in the Queen Maud Mountains, 3,140 m, standing at the head of Cunningham Glacier, 4 mi SW of Gray Peak. Named by US-ACAN for Capt. J.M. Hermanson, USN, air operations officer, McMurdo Station, 1957–58; Chief of Staff to the U.S. Antarctic Projects Officer, 1959.

Hermelo, Isla: see Delta Island 64°19'S, 62°59'W

Hermes Glacier 68°59'S, 65°15'W

A glacier 8 mi long, flowing W into Weyerhaeuser Glacier in northern Graham Land. Surveyed in Jan. 1960 by FIDS who discovered the glacier after several fruitless attempts to find a route out of the mountains east of Earnshaw Glacier. It provided an ideal "road" back to known country and was therefore named after Hermes, the god of roads in Greek mythology. This name by UK-APC initiated the idea of naming other features in this area after Greek gods.

Hermes Point 73°35'S, 166°13'E

The seaward end of a ridge from the Mountaineer Range, situated at the confluence of the Icebreaker and Fitzgerald Glaciers along the coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos 1960–64. Named by US-ACAN for Agustive A. Hermes, Jr., USN, aviation structural mechanic at Williams Field, McMurdo Sound, on USN OpDFrz, 1967 and 1968.

Hermitage Peak 81°26'S, 160°29'E

A peak, 750 m, standing 4 mi N of Mount Ubique, in the Surveyors Range. Named by the NZGS (1960–61) for the Military School of Surveying in England.

Hermit Island 64°48'S, 64°02'W

Island nearly 1 mi long, lying 1.5 mi SE of Bonaparte Point, off the SW coast of Anvers Island in the Palmer Archipelago. So named by the UK-APC in 1958 because a member of the FIDS at the Arthur Harbor station spent some time on this island alone in January 1957, making survey observations.

Hero Bay 62°31'S, 60°27'W

Bay 17 mi wide which indents for 6 mi the N side of Livingston Island between Cape Shirreff and Williams Point, in the South Shetland Islands. The name Blythe Bay (q.v.), originally applied to a small bay on the SE side of Desolation Island on Powell's chart of 1822 published by Laurie, was erroneously transferred to this bay in the 1930's. This error has now been rectified and a new name approved for the feature here described. Hero Bay is named for the American sloop *Hero*, under Capt. Nathaniel B. Palmer, which was one of the vessels of the Pendleton sealing fleet from Stonington which visited the South Shetland Islands in 1820–21. Not: Blythe Bay.

Heroína, Islote: see Heroína Island 63°24'S, 54°36'W

Heroína Island 63°24'S, 54°36'W

Small island marking the NE end of Danger Islands (q.v.), ESE of Joinville Island. Named by the Argentine Antarctic Expedition, 1948–49, after the expedition ship *Heroína*. Approved by US-ACAN in 1993. Not: Heroine Island, Islote Ercilla, Islote Heroína.

Heroine Island: see Heroína Island 63°24'S, 54°36'W

Hero Inlet 64°46'S, 64°04'W

A narrow inlet at the south side of Palmer Station between Gamage Point and Bonaparte Point, along the southwest side of Anvers Island. Named by US-ACAN after the Research Vessel *Hero* which, during the 1960's and 1970's, used the inlet as a turning basin when docking at Palmer Station.

Heron Passage 54°00'S, 38°11'W

Channel between Vaughan Island and Trinity Island in the Willis Islands at South Georgia. The existence of this passage, reported in the 1930's, was confirmed by HMS Owen during a hydrographic survey of the area in 1961. Named by the UK-APC after one of the *Owen's* survey motor boats, the *Heron*.

Herr, Mount 85°45'S, 149°32'W

A peak, 1,730 m, located 5 mi NW of Mount Gould in the Tapley Mountains. Named by US-ACAN after Lt. Arthur L. Herr, Jr., aircraft commander with USN Squadron VX-6 at McMurdo Station, 1962–63 and 1963–64.

Herraadura, Caleta: see Lystad Bay 67°50'S, 67°17'W

Herradura, Isla: see Horseshoe Island 67°51'S, 67°12'W

Herradura, Islas: see Forge Islands 65°14'S, 64°17'W

Herring Island 66°24'S, 110°38'E

Rocky island, 2 mi long, lying 1 mi E of Cloyd Island in the S part of the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Lt. Charles C. Herring, USN, photographic officer with USN OpWml parties which obtained air and ground photos of the area in January 1948. Not: Ostrov Kherring.

Herring Nunataks 83°12'S, 51°22'W

Two prominent nunataks standing 3 mi NW of Mount Lechner in western Forrester Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Earl F. Herring, aviation storekeeper at Ellsworth Station, winter 1957.

Herrington Hill 66°15'S, 66°42'W

A hill on the E side of Lavoisier Island, Biscoe Islands, about 5 mi southward of Benedict Point. Mapped from air photos taken by FIDASE (1956–57). Named by UK-APC for Lovic P. Herrington, American physiologist who has specialized in the reactions of the human body to cold environments.

Herrin Peak 79°16'S, 85°45'W

A large snow-covered peak, 1,755 m, standing 6 mi S of Landmark Peak on the E side of Gowan Glacier, in the Heritage Range. Named by the University of Minnesota Geological Party, 1963–64, for John M. Herrin, helicopter crew chief with the 62nd Transportation Detachment, who assisted the party.

Herrmann Mountains 72°33'S, 0°30'E

A group of rocky elevations including Hamrane Heights and Roots Heights, rising between Reece Valley and Kvitsvodene Valley in the Sverdrup Mountains of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938–39, and named for Ernst Herrmann, geographer of the expedition. Surveyed by NBSAE, 1949–52. Not: Hermannfjella.

Herrmann Nunatak 76°15'S, 143°47'W

A nunatak 4 mi NE of the E end of the Phillips Mountains, in Marie Byrd Land. Discovered and mapped by the USAS (1939–41). Named by US-ACAN for John Herrmann, photographer with the ByrdAE (1933–35).

Herschel, Cape: see Sterneck, Cape 64°04'S, 61°02'W

Herschel, Mount 72°12'S, 169°31'E

A conspicuous peak (3,335 m) standing 1.6 mi NE of Mount Peacock and overlooking the terminus of Ironside Glacier from the S, in the Admiralty Mountains, Victoria Land. Discovered in 1841 by Sir James Clark Ross, who named this feature for Sir John F.W. Herschel, noted English astronomer. Not: Mount Herschell.

Herschel Heights 71°53'S, 69°38'W

A complex of nunataks of which Mimas Peak on the east is the highest, located SW of Enceladus Nunataks and near the head of Saturn Glacier in southeastern Alexander Island. The eastern part of this feature was photographed by Lincoln Ellsworth, Nov. 23, 1935, in the course of his trans-Antarctic flight and was plotted

from the air photos by W.L.G. Joerg. Named by UK-APC from association with Mimas and Enceladus, after Sir Frederick W. Herschel (1738–1822), the British astronomer who discovered these two satellites.

Herschell, Mount: see Herschel, Mount 72°12'S, 169°31'E

Hershey Ridge 77°40'S, 147°10'W

Low, ice-covered ridge trending in a NW-SE direction for about 30 mi between McKinley Peak and the Haines Mountains, in the Ford Ranges, Marie Byrd Land. Discovered in 1934 by the ByrdAE, and named for Garland Hershey, Asst. State Geologist of the Iowa Geological Survey (1939–47) and Director of the Iowa Geological Survey after 1947. Not: Garland Hersey Ridge, Garland Hershey Ridge.

Hersilia Cove 62°38'S, 61°13'W

Cove indenting the N side of Rugged Island near its E end, in the South Shetland Islands. Named in February 1820 by James P. Sheffield, Master of the brig *Hersilia* of Stonington, CT, in 1819–20 and 1820–21, the first American sealer known to have visited the South Shetland Islands.

Hertha, Roca: see Hertha Nunatak 65°09'S, 59°59'W

Hertha Insel: see Hertha Nunatak 65°09'S, 59°59'W

Hertha Nunatak 65°09'S, 59°59'W

Nunatak 1 mi NW of Castor Nunatak in the Seal Nunataks group, off the E coast of Antarctic Peninsula. First seen and mapped as an island in December 1893 by Capt. C.A. Larsen, who named it after the *Hertha*, a ship which combined sealing and exploring activities along the W coast of Antarctic Peninsula under Capt. C.J. Evensen in 1893–94. It was determined to be a nunatak by the SwedAE under Nordenskjöld during a sledge journey in 1902. Not: Hertha Insel, Roca Hertha.

Hertug Ernst Bay: see Vahsel Bay 77°49'S, 35°07'W

Hervé, Anse: see Hervé Cove 62°11'S, 58°33'W

Hervé Cove 62°11'S, 58°33'W

Small cove 2 mi SW of Point Thomas, along the S side of Ezcurra Inlet, Admiralty Bay, on King George Island in the South Shetland Islands. Charted by the FrAE, 1908–10, under Charcot, and named by him for a member of the expedition. Not: Anse Hervé.

Hervéou Point 65°04'S, 64°03'W

Point forming the W extremity of the rocky peninsula between Port Charcot and Salpêtrière Bay, on the W side of Booth Island in the Wilhelm Archipelago. First charted by the FrAE, 1903–05, under Charcot, and named by him for F. Hervéou, a seaman on the *Français*.

Herz Glacier 54°41'S, 35°58'W

Glacier flowing SE from the vicinity of Mount Paterson to the E coast of South Georgia. Named by the GerAE under Filchner, 1911–12.

Herzog Ernst Bucht: see Vahsel Bay 77°49'S, 35°07'W

Hesperus Nunatak 71°31'S, 69°21'W

A sharp-pointed nunatak lying 2 mi SW of Titania Peak and about 18 mi W of Venus Glacier in southeastern Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration

in cooperation with U.S. Geological Survey. Named by UK-APC from association with Venus Glacier, Hesperus being a variant name for the “evening star,” Venus.

Hesse, Mount: see Hesse Peak 54°02'S, 38°00'W

Hessegipfel: see Hesse Peak 54°02'S, 38°00'W

Hesse Peak 54°02'S, 38°00'W

The highest (515 m) peak on Paryadin Ridge, lying midway between Cape Alexandra and Cape Paryadin at the W end of South Georgia. Charted and named by a German expedition under Kohl-Larsen in 1928–29. Not: Hessegipfel, Mount Hesse.

Hess Glacier 67°13'S, 65°05'W

Glacier 5 mi long, flowing ENE between steep rock walls to its terminus 10 mi SW of Monnier Point, on the E coast of Graham Land. Charted in 1947 by the FIDS, who named it for Hans Hess, German glaciologist.

Hessler Peak 79°37'S, 84°02'W

A sharp peak, 1,670 m, at the S end of Dunbar Ridge in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Victor P. Hessler, ionospheric physicist, USARP scientist at the Soviet Vostok Station in the 1965–66 and 1966–67 summer seasons.

Hess Mesa 77°38'S, 160°47'E

A small mesa that surmounts the divide between Koenig Valley and Mudrey Cirque in the Asgard Range, Victoria Land. Named by US-ACAN for L.O. Hess, Master of USNS *Maumee* in the Ross Sea Ship Group during Operation Deep Freeze 1970 and 1971.

Hess Mountains 72°00'S, 62°30'W

A group of mountains rising to c. 1,500 m at the head of Hilton Inlet, Black Coast, to the W of Dietz Bluff and bounded to N by Gruening Glacier, to W by Runcorn Glacier and to S by Beaumont Glacier. First photographed from the air by the USAS, 1940. Mapped by USGS from aerial photographs taken by the U.S. Navy, 1966–69. Surveyed by BAS, 1972–73. In association with the names of continental drift scientists grouped in this area, named by US-ACAN, 1978, after Harry H. Hess (1906–69), American geologist, Professor of Geology, Princeton University, 1948–69.

Hestes Hode: see Horse Head 54°17'S, 36°30'W

Hesteskoen Nunatak 71°52'S, 27°15'E

Horseshoe-shaped nunatak, 2,350 m, standing 4 mi N of Balchen Mountain in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photo taken by the Laws Christensen Expedition, 1936–37, and in 1957 from air photos taken by USN OpHjp, 1946–47. Named Hesteskoen (the horseshoe) by the Norwegians.

Hestesletten 54°18'S, 36°31'W

Glacial plain between Hamberg Lakes and Cumberland East Bay, South Georgia. It is covered with tussock and is almost 2 mi long in a NE-SW direction and 0.75 mi wide. The name Hestesletten (Norwegian word meaning horse plain) arose because a small herd of horses, introduced by the South Georgia Exploration Co. in 1905, survived here for a number of years. Not: Moraine Plain.

Heth Ridge 69°58'S, 159°45'E

A ridge 3 mi long, located 4 mi S of Hornblende Bluffs and near the head of Suvorov Glacier, in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Samuel R. Heth, USARP biologist at Hallett Station, 1968–69.

Hettebreen: see Hette Glacier 71°43'S, 26°35'E

Hette Glacier 71°43'S, 26°35'E

Glacier, 6 mi long, flowing N between Hettene Nunataks and Austhamaren Peak in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Hettebreen (the cap glacier). Not: Hettebreen.

Hettene Nunataks 71°45'S, 26°25'E

Group of nunataks at the W side of Hette Glacier in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN OpHjp, 1946–47, and named Hettene (the caps).

Hetty Rock 62°40'S, 60°44'W

The largest of several rocks off John Beach, Walker Bay, Livingston Island, in the South Shetland Islands. Charted by DI in 1935 and named descriptively Low Rock. Renamed by UK-APC in 1958 after the sealer *Hetty* (Capt. Ralph Bond) of London, which was sealing in the South Shetland Islands in 1820–21. Not: Low Rock.

Heuser Nunatak 72°02'S, 160°38'E

A small nunatak that lies 3 mi S of Mount Phelen and marks the S extremity of the Emlen Peaks in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1959–64. Named by US-ACAN for Charles M. Heuser, biolab technician at McMurdo Station, 1966–67.

Heverley Nunataks 75°33'S, 128°34'W

Small, relatively isolated nunataks protruding through the ice 14 mi NE of the summit of Mount Flint in the McCuddin Mountains, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959–69. Named by US-ACAN for Harry W. Heverley, BU1, USN, Builder and member of the winter party at South Pole Station in 1971, and at McMurdo Station in 1962 and 1966.

Hewison Point 59°28'S, 27°15'W

Point which forms the E side of Ferguson Bay and the SE end of Thule Island, in the South Sandwich Islands. First charted by a Russian expedition under Bellingshausen in 1819–20. Recharted in 1930 by DI personnel on the *Discovery II* who named it for Lt. Col. Hewison of Messrs. Ferguson Brothers, Port Glasgow, Scotland, builders of the *Discovery II*.

Hewitt Glacier 83°17'S, 167°50'E

A glacier, 15 mi long, descending the E slopes of Holland Range between Lewis Ridge and Mount Tripp to enter Richards Inlet. Named by the NZGSAE (1959–60) for Leonard R. Hewitt, leader at Scott Base, 1959.

Hewson, Mount 73°58'S, 162°38'E

A bluff-type mountain (3,720 m) standing 6.5 mi WSW of Mount Adamson in the Deep Freeze Range of Victoria Land. Named by the southern party of NZGSAE, 1962–63, for R.W. Hewson,

leader and surveyor of this party; also a surveyor for the northern party of NZGSAE, 1961–62.

Hewson Glacier 84°12'S, 169°45'E

A glacier in the Queen Alexandra Range, 15 mi long, flowing NE to enter Beardmore Glacier just N of The Cloudmaker. Named by the NZGSAE (1961–62) for Ronald Hewson, surveyor with the expedition.

Heywood Island 62°20'S, 59°41'W

Rocky, crescent-shaped island lying 1.5 mi WNW of the N tip of Robert Island, in the South Shetland Islands. The name Heywood's Isles, for Capt. Peter Heywood, RN, was given by George Powell in 1821–22 to a group of islands off the NW coast of Robert Island. In 1935, DI personnel on the *Discovery II* charted these islands, giving the name Hummock Island to the feature here described. Air photos now show that a group name for the islands is not required and the name Heywood Islands has been vacated. The alteration of Hummock Island to Heywood Island retains Powell's original naming in the area and eliminates a duplicate name. Not: Hummock Island, Isla de la Colina.

Heywood Lake 60°41'S, 45°37'W

The northernmost lake in Three Lakes Valley in northeastern Signy Island. Named by UK-APC after Ronald B. Heywood, limnologist with Life Sciences Division, BAS, who worked on Signy Island in 1962–63 and 1970–71.

H. Hansen, Cape: see Hansen, Cape 60°40'S, 45°35'W

Hibbert Rock 67°47'S, 69°02'W

A drying rock lying SE of League Rock, off the S end of Adelaide Island. Named by the UK-APC for William Hibbert, 2nd Engineer of RRS *John Biscoe* (1957–63), the ship which assisted the RN Hydrographic Survey Unit which surveyed the area in 1962–63.

Hickey, Cape 76°05'S, 162°38'E

Cape on the coast of Victoria Land, just E of Charcot Cove and Marin Glacier. It forms the outer, north portal of the re-entrant through which Mawson Glacier flows to the Ross Sea. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1964 for Lt. John Hickey, USN, pilot with Navy Squadron VX-6, who participated in Topo North and South surveys in 1962.

Hicks, Mount 71°08'S, 64°39'E

A ridgelike mountain with two peaks, about 12 mi SW of Husky Dome in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named for Dr. K.E. Hicks, medical officer at Wilkes Station in 1963 and 1965.

Hicks Ridge 71°09'S, 162°40'E

A rugged ridge located between Mount Soza and Morley Glacier in the Explorers Range, Bowers Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Thomas Hicks, USN, cook with the McMurdo Station winter party, 1967.

Hidden Bay 65°02'S, 63°46'W

Bay 3 mi long, lying between Cape Renard and Aguda Point on the W coast of Graham Land. First charted by the BelgAE under Gerlache 1897–99. So named by the UK-APC in 1958 because from the north the bay is hidden by the Screen Islands. Not: Bahía Escondida.

Hidden Col 85°32'S, 156°00'W

A col in the N part of Medina Peaks, about 3.5 mi SW of Marks Point, that allows a quick sledging route between the lower Amundsen and Scott Glaciers. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. The col was explored by NZGSAE, 1969–70, and so named because it is hidden behind ridges and spurs of the peaks to the NE and SW of it.

Hidden Lake 64°02'S, 58°18'W

Lake, 1.5 mi long, lying midway between Lagrelius Point and Cape Obelisk in the W part of James Ross Island. It drains by a small stream into the deep bay 4 mi S of Lagrelius Point. Discovered in 1945 by the FIDS, who so named it because it is obscured by surrounding highlands. Not: Lago Escondido.

Hidden Valley 78°10'S, 163°52'E

The ice-free valley next south of Miers Valley through which an alpine glacier formerly moved to coalesce with Koettlitz Glacier. The mouth of the valley is completely blocked by the Koettlitz moraine, the only one of the numerous valleys tributary to the Koettlitz isolated in this fashion. The main valley is hidden not only from the coast but from most of the surrounding ridges. The valley was traversed during December and January by the New Zealand VUWAE 1960–61 who applied the name.

Hiegel Passage 66°23'S, 110°27'E

The water passage between Ardery Island on the N and Holl and Ford Islands on the S, in the Windmill Islands. First mapped from air photos taken by USN OpHjp and OpWml in 1947 and 1948. Named by the US-ACAN for Cdr. James A. Hiegel, USN, leader of Mobile Construction Battalion Number One, who supervised the construction of Wilkes Station in February 1957.

Higashi-naga-iwa Glacier 68°27'S, 41°38'E

A wide glacier flowing to the sea at the eastern side of Naga-iwa Rock in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, and, in association with nearby Naga-iwa Rock, named Higashi-naga-iwa-hyōga (eastern long rock glacier). Not: Higasi-naga-iwa Glacier.

Higasi-naga-iwa Glacier: see Higashi-naga-iwa Glacier 68°27'S, 41°38'E

Higgins Canyon 84°47'S, 114°41'W

A steep-sided, ice-filled canyon immediately E of Schulthess Buttress, on the N side of Buckeye Table in the Ohio Range, Horlick Mountains. Named by US-ACAN for Merwyn D. Higgins, geologist with the Ohio State University expedition to the Horlick Mountains in 1961–62.

Higgins Nunatak 79°39'S, 82°27'W

The largest of the Samuel Nunataks, lying near the S end of this group in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for utilitiesman John C. Higgins, USN, a member of the McMurdo Station party during Deep Freeze 1966.

High, Mount 73°34'S, 62°05'W

A mountain on the S side of Douglas Glacier in the central Werner Mountains, in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Harvey W. High, cook with the South Pole Station winter party in 1967.

Highjump Archipelago 66°05'S, 101°00'E

Group of rocky islands, rocks and ice rises about 50 mi long and from 5 to 15 mi wide, lying generally N of the Bunger Hills and extending from the Taylor Islands, close NW of Cape Hordern, to a prominent group of ice rises which terminate close W of Cape Elliott. Delineated from aerial photographs taken by USN OpHjp 1946–47 and so named by the US-ACAN. The codeword “highjump” was used for identifying the U.S. Navy Task Force 68, 1946–47. This task force was divided into three groups which completed photographic flights covering approximately 70 per cent of the coastal areas of Antarctica, excluding Antarctic Peninsula, as well as significant portions of the interior.

High Nunatak 80°03'S, 82°35'W

An isolated nunatak 4 mi E of Liberty Hills in the Heritage Range, Ellsworth Mountains. Named by US-ACAN for Elmer High, helicopter crew chief with the 62nd Transportation Detachment, who assisted the University of Minnesota geological party in this area in 1963–64.

High Peak: see Camber, Mount 64°41'S, 63°16'W

High Point: see Edinburgh Hill 62°33'S, 60°01'W

High Rock 53°58'S, 37°29'W

Rock, 30 m high, situated at the N end of the Welcome Islands, 4.5 mi WNW of Cape Buller, off the N coast of South Georgia. Named by DI personnel who made surveys at South Georgia during 1926–30. Not: Roca Alta.

High Stile 60°35'S, 45°30'W

Pass at the head of Sunshine Glacier at 455 m elevation situated at the junction of the SW ridge of Mount Nivea and the E end of Brisbane Heights in the central part of Coronation Island, in the South Orkney Islands. The name arises from the general appearance and situation of the feature and was applied by the FIDS following their survey of 1948–49.

Highton Glacier 61°14'S, 54°03'W

Glacier on E coast of Clarence Island, S of Sugarloaf Island, flowing NE to the sea. Called Stamina Glacier from the stamina needed to cross it by JSEEIG, 1976–77; named by UK-APC in 1980 after Cdr. John E. Highton, RN, Deputy Leader of the expedition and in charge of the group on Clarence Island. Not: Stamina Glacier.

Hikae Rock 68°00'S, 43°58'E

A rock exposure of 1 mi along the ice coast, lying 1 mi E of Rakuda Glacier in Queen Maud Land. Mapped from air photos and surveys by JARE, 1957–62, and named Hikae-iwa.

Hill, Cape: see Hill, Mount 70°56'S, 61°42'W

Hill, Mount 70°56'S, 61°42'W

Mountain, 945 m, standing 8 mi SW of Cape Sharbonneau at the E side of the head of Lehrke Inlet, on the E coast of Palmer Land. Discovered by members of the East Base of the USAS who explored this coast by land and from the air in 1940. They named it Cape Hill for Archie C. Hill, cook at East Base. In 1947 it was determined to be a mountain distinct from Cape Sharbonneau to the NE by a joint sledge party consisting of members of the RARE and the FIDS. Not: Cape Hill.

Hillary Coast 79°20'S, 161°00'E

That portion of the coast along the W margin of the Ross Ice Shelf between Minna Bluff and Cape Selborne. Named by NZ-APC in 1961 for Sir Edmund Hillary, leader of the New Zealand Party of the CTAE, 1956–58. Various New Zealand parties carried out detailed surveys of portions of this coast and pioneered routes up the Skelton Glacier and Darwin Glacier to the polar plateau.

Hill Bay 64°11'S, 62°08'W

A bay, 5 mi long and 2 mi wide, which indents eastern Anvers Island between Spallanzani Point and Mitchell Point. The bay was roughly surveyed by the Admiralty Hydrographic Unit, 1951–52. Named by UK-APC for Leonard C. Hill of the Discovery Investigations, who served as an officer on RRS *William Scoresby* in Jan.-Feb. 1931, and on every Antarctic commission of RRS *Discovery II* between 1931–39.

Hill Glacier 73°03'S, 75°40'W

A broad glacier that drains the west-central part of Spaatz Island, at the south side of Ronne Entrance. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1961–66. Named by US-ACAN for Lennie J. Hill, USGS Topographic Engineer, a member of the Marie Byrd Land Survey Party, 1967–68.

Hillier Moss 60°43'S, 45°36'W

A wet, level, low-lying area, which has several small pools and extensive moss carpets, located 0.2 mi north of Lenton Point in southeastern Signy Island. Named by UK-APC after Edward R. Hillier, BAS medical officer and leader at Signy Island station, 1967.

Hill Nunatak 84°00'S, 54°45'W

A prominent nunatak rising above the ice at the SE end of the Neptune Range, Pensacola Mountains, 8 mi ENE of Gambacorta Peak. Discovered and photographed on Jan. 13, 1956 during a USN transcontinental plane flight from McMurdo Sound to the Weddell Sea and return. Named by US-ACAN for Jack O. Hill, aerial photographer on this flight.

Hill Peaks 76°54'S, 146°42'W

A small group of peaks 2 mi SW of Mount Dane in the W part of Radford Island, lying in Sulzberger Ice Shelf off the coast of Marie Byrd Land. The peaks were probably first observed by the ByrdAE (1928–30) on an aerial flight of Dec. 5, 1929. Named by US-ACAN for Joseph Hill, Jr., mechanic and driver with the ByrdAE (1933–35).

Hilton Bay: see Hilton Inlet 71°57'S, 61°20'W

Hilton Inlet 71°57'S, 61°20'W

Ice-filled inlet, 12 mi wide, which recedes about 22 mi W from its entrance between Capes Darlington and Knowles, along the E coast of Palmer Land. Discovered by the USAS in 1940, and named for Donald C. Hilton, member of the East Base sledge party that charted this coast as far S as this inlet. Not: Hilton Bay.

Himalia Ridge 70°50'S, 68°27'W

A ridge running E-W on the N side of Ganymede Heights, NE of Jupiter Glacier, E Alexander Island. Photographed from the air by RARE in 1947 and mapped from these photographs by D. Searle of FIDS in 1960. Named by UK-APC following BAS geological work, 1983–84, after Himalia, a satellite of Jupiter, in association with the glacier.

Hinckley Rock 83°04'S, 55°14'W

A rock 4 mi NW of Gillies Rock in northern Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Neil Hinckley, a member of the Electronic Test Unit in the Pensacola Mountains, 1957–58.

Hindle Glacier 54°34'S, 36°05'W

Glacier 6 mi long, flowing N from the vicinity of Mount Paterson into Royal Bay on the N coast of South Georgia. Surveyed by the SGS, 1951–52. The name Bruce Glacier was used unofficially by the British South Georgia Expedition, 1954–55, but a number of Antarctic features are named for Dr. William S. Bruce. The UK-APC recommended in 1957 that the glacier be named for Dr. Edward Hindle, British zoologist who, as Honorary Secretary of the Royal Geographical Society, was of great assistance to the South Georgia Survey expeditions. Not: Bruce Glacier.

Hindson, Mount: see Ancla, Mount 64°49'S, 63°41'W

Hind Turret 77°38'S, 161°37'E

A descriptive name that is suggestive of the appearance and position of this peak at the south (hind) side of Obelisk Mountain in the Asgard Range, Victoria Land. The name was recommended by the US-ACAN in consultation with the NZ-APC.

Hinely Nunatak 74°56'S, 70°15'W

A small nunatak, isolated except for Graser Nunatak 1 mi to the NE, located 16 mi E of Sky-Hi Nunataks in Ellsworth Land. Named in 1987 by US-ACAN after John A. Hinely, Jr., USGS civil engineer who, with William F. Graser, formed the USGS satellite surveying team at South Pole Station, winter party 1976. Not: Hinely Nunatak.

Hinks, Cape 69°10'S, 63°10'W

Bold headland surmounted by a high ice-covered dome, marking the N extremity of Finley Heights on the E coast of Palmer Land. Discovered and photographed by Sir Hubert Wilkins on his flight of Dec. 20, 1928. Later photographed from the air by Lincoln Ellsworth in 1935, and by the USAS in 1940. Named by the US-SCAN for Arthur R. Hinks, Secretary of the Royal Geographical Society, 1915–45, who undertook in his published studies to reconcile the explorations of Wilkins, Ellsworth, Rymill and the USAS in this general area. Not: Cape Cross.

Hinks, Mount 67°53'S, 66°03'E

A rock peak (595 m) rising 0.2 mi S of Mount Marsden in the Gustav Bull Mountains of Mac. Robertson Land. On February 13, 1931, the BANZARE (1929–31) under Douglas Mawson made a landing on nearby Scullin Monolith. They named this peak after Arthur R. Hinks, Secretary of the Royal Geographical Society, 1915–45.

Hinks Channel 67°16'S, 67°37'W

Arc-shaped channel in the N part of Laubeuf Fjord, 2 mi wide and 11 mi long, which extends from The Gullet and separates Day Island on the W from Arrowsmith Peninsula and Wyatt Island on the E, off the W coast of Graham Land. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS who named it for Arthur R. Hinks.

Hinely Nunatak: see Hinely Nunatak 74°56'S, 70°15'W

Hinode, Cape 68°07'S, 42°38'E

Rock cape 3 mi W of Akebono Glacier on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, and named Hinode-misaki (sunrise cape).

Hinode Peak 69°10'S, 42°35'E

A small coastal peak (120 m) located 3 mi SW of Cape Hinode on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957–62, and named Hinode-yama (sunrise mountain).

Hinton Glacier 80°03'S, 157°10'E

A tributary glacier in the Britannia Range, flowing N between Forbes and Dusky Ridges into Hatherton Glacier. Named by US-ACAN for Chief Construction Mechanic Clarence C. Hinton, Jr., USN. Hinton wintered at McMurdo Station, 1963, and headed a team charged with the maintenance of mechanical equipment at the outlying U.S. stations.

Hippocrates Glacier 64°22'S, 62°22'W

Glacier at least 3 mi long and 2 mi wide, flowing SE into Buls Bay on the E side of Brabant Island, in the Palmer Archipelago. Shown on an Argentine government chart in 1953, but not named. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for Hippocrates (460-ca. 355 B.C.), Greek physician and author of numerous works on medicine, who also established a professional code of medical conduct.

Hippo Island 66°25'S, 98°10'E

Steep, rocky island, 0.5 mi long, which rises above Shackleton Ice Shelf 1.5 mi N of Delay Point. Discovered by the Western Base Party of the AAE under Mawson, 1911-14, who so named it because of its shape. Not: Hippo Nunatak.

Hippolyte, Cape: see Hippolyte Point 64°41'S, 63°07'W

Hippolyte Point 64°41'S, 63°07'W

Point which marks the NE end of Lion Island, lying immediately E of Anvers Island in the Palmer Archipelago. Charted and named by the BelgAE under Gerlache, 1897–99. Not: Cape Hippolyte.

Hippo Nunatak: see Hippo Island 66°25'S, 98°10'E

Hiram, Mount: see Hirman, Mount 75°28'S, 72°46'W

Hirman, Mount 75°28'S, 72°46'W

A prominent mountain marking the S end of the Behrendt Mountains, in Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Joseph W. Hirman, scientific leader at Eights Station in 1965. Not: Mount Hiram.

Hiroe, Mount 69°21'S, 39°47'E

A rocky mountain (316 m) situated 0.5 mi NW of Breidvågnipa Peak and 1.3 mi NE of Hiroe Point, on the coast of Queen Maud Land. First mapped by H.E. Hansen from air photos taken by the Lars Christensen Expedition, 1936–37. The name "Hiroe-yama" (broad bay mountain) was applied by JARE Headquarters in 1973 and follows Japanese research in this area.

Hiroe Point 69°22'S, 39°44'E

A rock point situated 1.3 mi SW of Mount Hiroe on the coast of Queen Maud Land. The point marks the S end Breidvåg Bight. First mapped by H.E. Hansen from air photos taken by the Lars

Christensen Expedition, 1936–37. The name “Hiroe-misaki” (broad bay point) was applied by JARE Headquarters in 1973 and follows Japanese research in the area.

Hitchcock, Mount: see Hitchcock Heights 68°46'S, 64°51'W

Hitchcock Heights 68°46'S, 64°51'W

A mostly ice-covered mountain mass, 1,800 m, between Maitland and Apollo Glaciers at the S side of Mobiloil Inlet, on the E coast of Antarctic Peninsula. Discovered and photographed by Sir Hubert Wilkins on his flight of Dec. 20, 1928, and rephotographed by Lincoln Ellsworth in 1935. Named by the US-ACAN in 1952 for Charles B. Hitchcock of the American Geographical Society, who by utilizing these photographs assisted in constructing the first reconnaissance map of this area. Not: Mount Hitchcock.

Hiyoko Island 69°00'S, 39°33'E

An island lying 0.6 mi SW of Nesøya in the NE part of Lützow-Holm Bay. It is the easternmost of three small islands which lie 0.5 mi NW of the strait separating Ongul Island and East Ongul Island. Mapped from surveys and air photos by JARE, 1957–62. The name “Hiyoko-jima” (baby chick island) was given by JARE Headquarters in 1972.

Hjalmar Johansen, Mount: see Johansen Peak 86°43'S, 148°11'W

Hjart Island 69°38'S, 39°16'E

Island lying 2 mi W of Skallen Hills in the E part of Lützow-Holm Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Hjartøy (heart island) because of its shape.

Hjelmkalven Point 71°40'S, 26°22'E

Rocky point on the N side of Vesthjelmen Peak, at the E side of the mouth of Byrdbreen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Expedition, 1936–37, and in 1957 from air photos taken by USN OpHjp, 1946–47. Named Hjelmkalven by the Norwegians.

Hjörnehorna: see Eckhörner Peaks 71°31'S, 11°27'E

Hjorth Hill 77°31'S, 163°37'E

A rounded, ice-free mountain 760 m, standing just N of New Harbor and 2 mi S of Hogback Hill, in Victoria Land. Charted by the BrAE, 1910–13, led by Scott, and named for the maker of the primus lamps used by the expedition. The name is spelled Hjort's Hill in the popular narrative of Scott's expedition, but Hjorth's Hill is used on the map accompanying the narrative. The recommended spelling is based upon the form consistently used on the maps accompanying the BrAE scientific reports. Not: Hjort's Hill.

Hjort Massif 72°08'S, 61°25'W

A salient mountain rising to c. 1,000 m at the NE end of the Wilson Mountains, on the S side of Hilton Inlet, Bowman Coast, Palmer Land. Photographed from the air by USAS, 1940. Mapped by USGS from aerial photographs taken by the U.S. Navy, 1966–69. Surveyed by BAS, 1974–75. Named by the UK-APC in 1977 after Johan Hjort (1869–1948), Professor of Marine Biology, University of Oslo, 1920–39; Chairman of the International Whaling Committee, 1926–39.

Hjort's Hill: see Hjorth Hill 77°31'S, 163°37'E

H. J. Sjögren Fiord: see Sjögren Glacier 64°14'S, 59°00'W

Hj. Sjögren Fiord: see Sjögren Glacier 64°14'S, 59°00'W

Hoadky, Cape: see Hoadley, Cape 66°28'S, 99°56'E

Hoadley, Cape 66°28'S, 99°56'E

Prominent rock coastal outcrop forming the W portal of the valley occupied by Scott Glacier. Discovered by the Western Base Party of the AAE under Mawson in November 1912, and named by him for C.A. Hoadley, geologist with the Western Base Party. Not: Cape Hoadky.

Hoare, Lake 77°38'S, 162°51'E

A lake about 2 mi long between Lake Chad and Canada Glacier in Taylor Valley, Victoria Land. Named by the 8th VUWAE, 1963–64, for physicist R.A. Hoare, a member of VUWAE that examined lakes in Taylor, Wright, and Victoria Valleys.

Hobart Rock 54°17'S, 36°30'W

Low rock lying at the S side of the entrance to King Edward Cove, Cumberland East Bay, South Georgia. The name appears on a chart based upon a survey of King Edward Cove by personnel on HMS *Sappho* in 1906.

Hobbie Ridge 73°09'S, 165°41'E

A bold ridge that projects from the middle of the head of Meander Glacier, 5 mi S of Mount Supernal, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for John E. Hobbie, biologist at McMurdo Station 1962–63.

Hobbs, Cape: see Hobbs Islands 67°19'S, 59°58'E

Hobbs, Mount 83°45'S, 58°50'W

A mountain, 1,135 m, the highest summit of Williams Hills in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Ens. James W. Hobbs, USN, of the Ellsworth Station winter party, 1958.

Hobbs Coast 74°50'S, 132°00'W

That portion of the coast of Marie Byrd Land extending from Cape Burks to a point on the coast opposite eastern Dean Island, at 74°42'S, 127°05'W. Discovered by the USAS (1939–41) and named for Prof. William H. Hobbs of the University of Michigan, glaciologist specializing in polar geography and history. The USGS completely mapped the coast from ground surveys and U.S. Navy air photos, 1959–65.

Hobbs Glacier 64°18'S, 57°26'W

A glacier situated in a steep, rock-walled cirque at the NW side of Hamilton Point, and flowing SE into the S part of Markham Bay on the E coast of James Ross Island. First seen and surveyed by SwedAE, 1901–04, under Nordenskjöld, who named it for Prof. William H. Hobbs (1864–1953), American geologist and glaciologist.

Hobbs Glacier 77°54'S, 164°24'E

Eastward flowing glacier, about 7 mi long, lying 2 mi S of Blue Glacier on the coast of Victoria Land. First explored by the BrNAE (1901–04) under Scott. Scott's second expedition, the BrAE (1910–13), explored the area more thoroughly and named

the glacier for Prof. William H. Hobbs of the University of Michigan, an authority on glaciology.

Hobbs Islands 67°19'S, 59°58'E

A group of islands 10 mi NE of William Scoresby Bay. The largest island of this group was discovered on Feb. 18, 1931 by BANZARE under Mawson who thought it to be a cape and called it Cape Hobbs. Later exploration by the *William Scoresby* expedition (1936) and the Lars Christensen Expedition (1936–37) showed it to be part of an island group. Named by Mawson for Prof. William H. Hobbs. Not: Cape Hobbs, Kringholmene.

Hobbs Peak 77°53'S, 163°56'E

Prominent peak, 1,510 m, on the divide between the Hobbs and Blue Glaciers in Victoria Land. It is the highest point on the E-W section of this dividing ridge. Climbed by members of the VUWAE (1960–61), who gave it this name from its nearness to Hobbs Glacier.

Hobbs Point 64°37'S, 62°03'W

The NE end of Brooklyn Island in Wilhelmina Bay, off the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for Graham J. Hobbs, FIDS geologist at the Danco Island station in 1957 and 1958 who made a geologic reconnaissance survey of the coast between Cape Murray and Cape Willems. Not: Punta Manchada.

Hobbs Ridge 77°52'S, 164°00'E

A prominent arc-shaped ridge which circumscribes the Hobbs Glacier to the N and NW and forms the divide with lower Blue Glacier, on Scott Coast, Victoria Land. Named in association with Hobbs Glacier (q.v.).

Hobbs Stream 77°55'S, 164°30'E

Seasonal meltwater stream flowing from the mouth of Hobbs Glacier into Salmon Bay on the coast of Victoria Land. Referred to, but not named in publications of the BrAE (1910–13) under Scott. Named after Hobbs Glacier by the NZGSAE, 1958–59.

Hobby Rocks 68°35'S, 77°54'E

Three small islands lying off the Vestfold Hills, marking the western side of Davis Anchorage. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. They were remapped from ANARE air photos and named for D. Hobby, diesel mechanic at Davis Station in 1960.

Hobnail Peak 78°32'S, 161°53'E

Triangular rock bluff immediately S of Mount Tricouni, on the E side of Skelton Glacier in Victoria Land. Explored in 1957 by the N.Z. party, of the CTAE (1956–58), and named in association with Clinker Bluff and Mount Tricouni.

Hochlin, Mount 72°05'S, 4°03'E

A large ice-topped mountain, 2,760 m, standing E of Festninga Mountain in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named for L. Hochlin, radio operator and dog driver with NorAE (1956–58).

Hochstein Ridge 82°45'S, 159°47'E

Ridge 12 mi long, extending N from Cotton Plateau between Prince Edward Glacier and Prince of Wales Glacier in the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Manfred

Hochstein, USARP glaciologist at Roosevelt Island, 1961–62, 1962–63 and 1963–64.

Hockey Cirque 83°17'S, 156°30'E

A glacial cirque 0.5 mi wide along the E wall of Ascent Glacier in the Miller Range. So named by the Ohio State University Geological Party, 1967–68, because the cirque was the scene of a game of ice hockey.

Hodge Escarpment 83°03'S, 50°11'W

An escarpment to the NE of Henderson Bluff on the NW side of Lexington Table, Forrestral Range, in the Pensacola Mountains (q.v.). Named by US-ACAN for Steven M. Hodge, USGS geophysicist, who worked in the Dufek Massif and Forrestral Range, 1978–79.

Hodgeman Islands 67°01'S, 144°14'E

A group of small islands lying close to the coast, 4 mi WSW of Cape De la Motte, in the E part of the entrance to Watt Bay. Discovered by the AAE (1911–14) under Douglas Mawson, who named the islands for Alfred J. Hodgeman, cartographer and assistant meteorologist with the expedition.

Hodges, Mount 54°16'S, 36°32'W

Mountain, 605 m, standing 1 mi W of Mount Duse, close NW of the head of King Edward Cove, Cumberland East Bay, South Georgia. First roughly surveyed by the SwedAE, 1901–04, under Nordenskjöld. "Moldaenke Berg" was used for this mountain on a 1907 map by A. Szielasko, but the name has not survived on later general charts of this area. The name Mount Hodges appears to have been applied some years later and is now well established. Probably named for Capt. M.H. Hodges, RN, of the *Sappho*, who visited and mapped portions of Cumberland Bay in 1906. Not: Moldaenke Berg, Mount Skottsberg.

Hodges Glacier 54°16'S, 36°32'W

Small glacier 1 mi W of Grytviken, South Georgia, flowing from the S side of Petrel Peak to the foot of Mount Hodges. The name was recommended by the UK-APC and derives from association with Mount Hodges.

Hodges Point 67°21'S, 65°03'W

A rocky point terminating in an impressive black cliff, lying 6 mi ENE of Cape Northrop on the E coast of Graham Land. Twin summits on the point rise to 940 m and 960 m. The feature was photographed by the USAS, 1939–41. Mapped by FIDS 1947–48. Named by UK-APC for Ben Hodges, General Assistant with the BAS Larsen Ice Shelf party, 1963–64.

Hodgson, Cape 78°07'S, 166°05'E

The northernmost cape of Black Island, in the Ross Archipelago. Named by the NZGSAE (1958–59) for Thomas V. Hodgson, biologist of the BrNAE (1901–04), who with Koettlitz, Ferrar and Bernacchi was first to visit the island.

Hodgson Nunatak 74°17'S, 100°04'W

A nunatak which lies 5 mi S of Teeters Nunatak and 20 mi NW of Mount Moses in the Hudson Mountains. Mapped by USGS from surveys and USN air photos, 1960–66. Named by US-ACAN for Ronald A. Hodgson, USN, builder with the Byrd Station party, 1966.

Hodson, Mount 56°42'S, 27°13'W

Volcanic mountain, 915 m, forming the summit of Visokoi Island in the South Sandwich Islands. Discovered in 1819 by a Russian expedition under Bellingshausen. Charted in 1930 by DI personnel on the *Discovery II* who named it for Arnold Hodson, then Gov. of the Falkland Islands.

Hodson Point 54°08'S, 36°47'W

Point lying 1 mi S of Small Bay, on the E side of Fortuna Bay, South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Hoegh, Mount 64°50'S, 62°48'W

Mountain, 890 m, standing 1.5 mi SSE of Duthiers Point on the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for Emil von Hoegh (1865–1915), German mathematical optician who designed the first double anastigmatic camera lens in 1893.

Hoek Glacier 66°00'S, 65°04'W

Glacier flowing to the W coast of Graham Land southward of Llanquihue Islands. Charted by the BGLE under Rymill, 1934–37. Named by the UK-APC in 1959 for Henry W. Hoek (1878–1951), pioneer Swiss (formerly German) ski-mountaineer and author of one of the earliest skiing manuals.

Hoel Mountains 72°00'S, 14°00'E

A group of mountains including the Weyprecht and Payer Mountains in Queen Maud Land. First photographed from the air and plotted by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named for Adolf Hoel, Norwegian geologist and Arctic explorer, leader and member of many expeditions to Greenland and Spitsbergen since 1907.

Hoffman, Mount 81°19'S, 85°15'W

A distinctive rock peak 1.5 mi SSW of Mount Tidd, in the southern flank of the Pirrit Hills. The peak was positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 7, 1958. Named for Daniel Hoffman, mechanic with the traverse party.

Hoffman Glacier 83°22'S, 167°40'E

A narrow glacier, 10 mi long, flowing eastward from Mount Miller in the Holland Range to enter Lennox-King Glacier south of Rhodes Peak. Named by US-ACAN for Lt. Cdr. Robert D. Hoffman, USN, commanding officer of the USS *Mills* during OpDFrz, 1965.

Hoffman Point 79°20'S, 160°30'E

An ice-covered coastal point at the S side of the mouth of Bertoglio Glacier, where the latter flows into Ross Ice Shelf. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959–63. Named by US-ACAN for Cdr. G.L. Hoffman, CEC, USN, commander of Mobile Construction Battalion Eight at McMurdo Station in USN OpDFrz 1964.

Hofman Hill 77°55'S, 164°13'E

An ice-free peak, 1,065 m, standing at the N side of the terminus of Blackwelder Glacier, on the Scott Coast, Victoria Land. Named by US-ACAN in 1992 after Robert J. Hofman, biologist, Marine Mammal Commission, Washington, DC, from 1975; conducted seal studies in 12 visits to Antarctica in the 1960's and 1970's; U.S. Representative to the Scientific Committee for the Conservation of Antarctic Marine Living Resources, 1983–86.

Hofmann, Mount 82°40'S, 160°36'E

Snow-covered mountain, 2,000 m, between the mouths of Hamilton and Heilman Glaciers in the N part of the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960–62. Named by US-ACAN for Walther F. Hofmann, USARP glaciologist on the Ross Ice Shelf, 1962–63.

Hogan, Mount: see Loweth, Mount 73°26'S, 93°31'W

Hogback, The: see Hogback Hill 77°29'S, 163°36'E

Hogback Hill 77°29'S, 163°36'E

Rounded mountain, 735 m, rising just N of Hjorth Hill and 4 mi W of Cape Bernacchi, in Victoria Land. Charted and given this descriptive name by the BrAE under Scott 1910–13. Not: The Hogback.

Högbom Outcrops 80°15'S, 24°52'W

Rocks rising to c. 1,000 m at the E side of the terminus of Schimper Glacier in the Herbert Mountains, Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. In association with the names of glacial geologists grouped in this area, named in 1971 by the UK-APC after Arvid Gustaf Högbom (1857–1940), Swedish geologist who made important contributions to the glacial geology of northern Sweden.

Hoge, Mount 72°35'S, 31°25'E

Mountain, 2,480 m, between Mount Van der Essen and Mount Brouwer in the Belgica Mountains. Discovered by the BelgAE, 1957–58, under G. de Gerlache, who named it for Edmond Hoge, member of the scientific committee of the expedition.

Høgfonnaksla Ridge 72°44'S, 3°34'W

A high rock ridge forming the N end of Høgfonna Mountain, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Høgfonnaksla (the high snowfield shoulder).

Høgfonna Mountain 72°45'S, 3°33'W

A high, flat, snow-topped mountain with sheer rock sides, standing 3 mi SE of Høgskavlen Mountain in the Borg Massif, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Høgfonna (the high snowfield). Not: Gory Shuberta.

Høgfonnhornet Peak 72°46'S, 3°37'W

A peak surmounting the S extremity of Høgfonna Mountain, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Høgfonnhornet (the high snowfield horn).

Hoggestabben Butte 72°00'S, 3°58'E

Prominent butte, 2,410 m, standing 3 mi N of Mount Hochlin and being its highest northern outlier, in the Mühlig-Hofmann Mountains, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Hoggestabben (the chopping block).

Hogg Islands 67°31'S, 61°37'E

A group of small islands lying 0.5 mi S of Kamelen Island in the N part of the Stanton Group. These small islands were mapped from air photos taken by the Lars Christensen Expedition, 1936–37, and later by ANARE. They were visited in 1969 by an

ANARE dog-sledge party to the Taylor Glacier area. Named by ANCA for Dr. J. Hogg, medical officer at Mawson Station in 1969. The central island in the group affords the best camp site in the area.

Høghamaren Crag 72°34'S, 0°36'E

A rock crag 1 mi SW of Hamartind Peak in the Sverdrup Mountains, Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Høghamaren (the high crag).

Hogmanay Pass 69°15'S, 64°07'W

A pass 1,230 m high, immediately SW of Scripps Heights, leading from the head of Casey Glacier to the middle of Lurabee Glacier, in northeastern Palmer Land. The feature was first photographed from the air by Lincoln Ellsworth in Nov. 1935, and its southern portion was plotted from these photos by W.L.G. Joerg. It was rephotographed by USAS, 1940, and by RARE, 1947. This pass was used by a FIDS survey party in Dec. 1960 and provided a good sledge route. So named because the pass was approached on the last day of 1960, the Scottish feast of Hogmanay.

Høgsaetet Mountain 72°35'S, 3°23'W

A mountain just NE of Raudberget in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Høgsaetet (the high seat).

Høgsenga Crags 71°53'S, 5°23'E

High rock crags which form the N extremity of Breplogen Mountain in the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956–60) and named Høgsenga (the high bed).

Høgskavlen Mountain 72°40'S, 3°43'W

A prominent, flattish, snow-topped mountain just NE of Domen Butte in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Høgskavlen (the high snowdrift).

Høgskavlnasen Point 72°42'S, 3°45'W

Point which forms the S extremity of Høgskavlen Mountain in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Høgskavlnasen (the high snowdrift point.).

Høgskavlnebbet Spur 72°38'S, 3°39'W

A spur extending N from Høgskavlen Mountain in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Høgskavlnebbet (the high snowdrift spur).

Høgskavlpiggen Peak 72°39'S, 3°45'W

A peak rising from the W part of Høgskavlen Mountain, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Høgskavlpiggen (the high snowdrift peak).

Høgskotet Spur 72°31'S, 3°30'W

A high rock spur on the N side of Borg Mountain, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartogra-

phers from surveys and air photos by NBSAE (1949–52) and named Høgskotet (the high bulkhead).

Hogs Mouth Rocks 54°01'S, 37°19'W

Chain of rocks which extend S from Invisible Island in the Bay of Isles, South Georgia. First roughly charted in 1912–13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*. Probably named by DI personnel who surveyed Bay of Isles in 1929–30.

Hoinkes Peak 79°52'S, 82°58'W

A sharp rock peak, 1,840 m, standing at the head of Henderson Glacier where it forms part of the W wall of the glacier, in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Herfried C. Hoinkes, meteorologist at Little America V Station in 1957.

Holane Nunataks 71°58'S, 0°29'E

Two isolated nunataks lying about 20 mi W of the N extremity of the Sverdrup Mountains, in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Holane.

Holcomb Glacier 75°35'S, 142°48'W

A glacier which drains northward to the coast of Marie Byrd Land 9 mi southeast of Groves Island. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1959–65. Named by US-ACAN for Leroy G. Holcomb, ionospheric physicist at Byrd Station, 1971.

Holden Nunataks 72°51'S, 65°00'W

A group of about four nunataks rising to 1,500 m near the head of Mosby Glacier, to the S of Journal Peaks in south-central Palmer Land. Mapped by USGS from aerial photographs taken by the U.S. Navy, 1966–69. Surveyed by BAS, 1974–75. Named by UK-APC after Godfrey A. Holden, BAS general assistant who took part in the survey; later, Station Commander, Rothera, 1977–78.

Holder, Mount: see Houlder Bluff 61°06'S, 54°51'W

Holder Peak 69°45'S, 74°31'E

A low peak near the Antarctic coast, standing just N of Young Peak and 2 mi E of Mount Caroline Mikkelsen. First plotted from air photos taken by the Lars Christensen Expedition, 1936–37, and with Young Peak called "Tvillingfjell" (twin mountain) by Norwegian cartographers. This peak was named by ANCA for J. Holder, weather observer at Davis Station in 1963 and a member of the ANARE party that surveyed the area.

Holdfast Point 66°48'S, 66°36'W

A point at the E side of Lallemand Fjord, about 12 mi SW of Cape Rey, Graham Land. Mapped from air photos taken by FIDASE (1956–57). So named because when the pack ice breaks out to the N of Lallemand Fjord, it usually continues to hold fast for some time longer S of this point.

Holdgate, Mount 59°28'S, 27°11'W

A prominent mountain (960 m) with steep icefalls and rock buttresses which provides a clear landmark at the SE end of Cook Island, South Sandwich Islands. Named by UK-APC for Martin W. Holdgate, organizer and senior scientist of the survey of the South Sandwich Islands from HMS *Protector* in 1964.

Holdsworth, Mount 72°08'S, 166°35'E

A granite peak (2,360 m) in the E part of Monteath Hills, Victory Mountains, Victoria Land. Named by NZFMCAE, 1962–63, after Gerald Holdsworth, leader of the northern party of this expedition.

Holdsworth Glacier 86°30'S, 154°00'W

A tributary glacier about 8 mi long, flowing NE from Fuller Dome to enter the SE side of Bartlett Glacier, in the Queen Maud Mountains. Named by US-ACAN for Gerald Holdsworth, involved in geological studies at McMurdo Station, summer of 1965–66.

Hole Rock 61°53'S, 57°44'W

The largest of several rocks lying close N of North Foreland, the NE cape of King George Island, in the South Shetland Islands. Charted in 1937 by DI personnel on the *Discovery II* and so named because a conspicuous hole extends through it. Not: Roca del la Ventana, Roca Perforada.

Holgate Shoal 53°59'S, 38°16'W

An area of shoals lying E of Ramp Rock and 1.5 mi NW of Main Island in the Willis Islands, South Georgia. Named by the UK-APC for Able Seaman Ralph A. Holgate of HMS *Owen*, which first charted the shoal in 1961.

Holiday Peak 78°06'S, 163°36'E

A peak over 800 m high standing between the lower ends of Miers and Adams Glaciers. So named by the New Zealand VUWAE, 1960–61, because of its prominent position overlooking the expedition's Christmas camp.

Holladay Nunataks 69°31'S, 159°19'E

A cluster of nunataks 3 mi in extent, occupying the central part of the peninsula between the terminus of Tomilin Glacier and the Gillett Ice Shelf. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Billy W. Holladay, Chief Aviation Electronics Technician, USN, who was Maintenance Control Chief at McMurdo Station during Operation Deep Freeze, 1968.

Holland Range 83°10'S, 166°00'E

A rugged coastal range, about 60 mi long, lying just W of the Ross Ice Shelf and extending from the Robb Glacier to Lennox-King Glacier. Named by the Ross Sea Committee for Sir Sidney Holland, who as Prime Minister of New Zealand supported that nation's participation in the CTAE (1956–58).

Hollick-Kenyon Peninsula 68°35'S, 63°50'W

The peninsula, an ice-covered spur from the main mountain mass of the Antarctic Peninsula, projects over 40 mi in a NE arc from its base between Mobiloil and Casey Inlets. Discovered and partially photographed from the air by Lincoln Ellsworth on his 1935 trans-Antarctic flight from Dundee Island to the Ross Sea. Photographed from the air and charted from the ground by the USAS in 1940. Named for Herbert Hollick-Kenyon, pilot on Ellsworth's flight in 1935, whose demonstration of the practicability of landing and taking off an airplane in isolated areas constitutes a distinct contribution to the technique of Antarctic exploration. Not: Kenyon Peninsula.

Hollick-Kenyon Plateau 78°00'S, 105°00'W

A large, relatively featureless snow plateau, 1,200 m to 1,800 m above sea level, located between the northern portion of the Ellsworth Mountains, to the east, and Mount Takahe and Cray

Mountains, to the west. Discovered by Lincoln Ellsworth on his trans-Antarctic airplane flight during November–December 1935, and named by Ellsworth for his pilot, Herbert Hollick-Kenyon.

Hollingshead, Mount 70°41'S, 66°10'E

A large peak about 3 mi E of Mount Dowie in the Aramis Range, Prince Charles Mountains. Visited in January 1957 by the ANARE southern party led by W.G. Bewsher, and named for John A. Hollingshead, radio supervisor at Mawson Station in 1956.

Hollingsworth, Mount 67°15'S, 50°21'E

Mountain 1 mi S of Priestley Peak, close S of Amundsen Bay in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for R.J.T. Hollingsworth, geophysicist at Mawson Station in 1961.

Hollingsworth Glacier 75°33'S, 159°57'E

A broad glacier of low gradient, draining the vicinity E of the Ricker Hills and flowing NE to enter David Glacier just E of Trio Nunataks, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1956–62. Named by US-ACAN for Jerry L. Hollingsworth, meteorologist with the South Pole Station winter party, 1966.

Hollingworth Cliffs 80°26'S, 25°33'W

A line of cliffs to the S of Mount Absalom in the Herbert Mountains, Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. In association with the names of glacial geologists grouped in this area, named by the UK-APC after Sydney E. Hollingworth (1899–1966), British geologist who specialized in the Pleistocene geology of NW England; Professor of Geology, University College, London University, 1946–66.

Hollin Island 66°19'S, 110°24'E

An island about 1 mi long, lying N of Midgley Island, in the Windmill Islands. First mapped from air photos taken by USN OpHjp, 1946–47. Named by US-ACAN for John T. Hollin, glaciologist at Wilkes Station in 1958.

Holl Island 66°25'S, 110°25'E

Rocky, triangular-shaped island, 1.7 mi long, marking the SW end of the Windmill Islands. Mapped from aerial photographs taken by USN OpHjp, 1946–47, and USN OpWml, 1947–48. Named by the US-ACAN for Lt. Richard C. Holl, USNR, photogrammetrist with the Navy Hydrographic Office, who served as surveyor with the USN OpWml parties which established astronomical control stations on Holl Island and along Queen Mary and Knox Coasts.

Holloway, Mount 84°45'S, 163°36'E

A mountain, 2,650 m, standing between Swinford Glacier and Table Bay, in Queen Alexandra Range. Named by US-ACAN for Harry L. Holloway, USARP biologist at McMurdo Station, 1964–65.

Hollow Point: see Hueca Point 58°26'S, 26°26'W

Holluschickie Bay 63°59'S, 58°16'W

A bay on the W coast of James Ross Island, entered between Matkah and Kotick Points. Probably first seen by Nordenskjöld in 1903. Surveyed by FIDS in 1945. The name arose during a subsequent visit by a FIDS party in 1952, when a large number of young seals was observed near the mouth of the bay. The holluschickie were the young seals in Rudyard Kipling's story "The White Seal" in the *Jungle Book*. Not: Caleta San Servando.

Holman Dome 66°27'S, 98°54'E

Dome-shaped nunatak 2 mi SW of Watson Bluff, on the E side of David Island. Discovered by the AAE under Mawson 1911–14 who named it for William A. Holman, Premier of New South Wales in 1911.

Holmboe, Mount 77°20'S, 86°35'W

Mountain, 1,730 m, standing 1 mi N of Mount Liavaag and 7 mi NW of Mount Weems near the extreme N end of the Sentinel Range in the Ellsworth Mountains. Discovered by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for Dr. Jorgen Holmboe, meteorologist on Ellsworth's Antarctic expedition, 1933–34.

Holme Bay 67°35'S, 62°42'E

Bay, 22 mi wide, containing many islands, indenting the coast 5 mi N of the Framnes Mountains. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition in January–February 1937, and so named because of its island-studded character.

Holmes, Mount 66°47'S, 64°16'W

Buttress-type mountain, 1,440 m, standing 3 mi NW of Mount Hayes on the E coast of Graham Land. Charted in 1947 by the FIDS, and photographed from the air by the RARE under Ronne. Named by the FIDS for Maurice Holmes, author of *An Introduction to the Bibliography of Captain James Cook R.N.* (London, 1936).

Holmes Block 78°13'S, 161°35'E

A blocklike bluff, rising to 1,855 m at the W side of Ruecroft Glacier, 2 mi W of Cooke Bluff, in Victoria Land. Named by US-ACAN in 1994 after John W. Holmes, cartographer, USGS Branch of Special Maps, 1951–77, a specialist in Antarctic mapping; from 1977, assigned to USGS Mapping Applications Center.

Holmes Bluff 74°59'S, 133°43'W

A bluff marking the N end of Demas Range on the coast of Marie Byrd Land. The feature was observed from aircraft of the U.S. Antarctic Service, 1939–41, but was first mapped in detail by the USGS, 1959–65. Named by US-ACAN for Thomas J. Holmes, USARP meteorologist at Byrd Station, 1961.

Holmes Glacier 66°46'S, 126°54'E

A broad glacier debouching into the western part of Porpoise Bay about 10 mi S of Cape Spieden. Delineated from aerial photographs taken by USN Operation Highjump (1946–47). Named by US-ACAN after Dr. Silas Holmes, Assistant Surgeon on the brig *Porpoise* during the USEE (1838–42) under Lt. Charles Wilkes.

Holmes Hills 72°08'S, 63°25'W

A group of ridges and nunataks rising to c. 1,700 m between Runcorn Glacier and Beaumont Glacier, bounded to SW by Brennecke Nunataks in south-central Palmer Land. Mapped by the USGS from aerial photographs taken by the U.S. Navy, 1966–69. Surveyed by BAS, 1972–73. In association with the names of continental drift scientists grouped in this area, named by the US-ACAN in 1978 after Arthur Holmes (1890–1965), Scottish geologist, Professor of Geology, Edinburgh University, 1943–56.

Holmes Island 65°41'S, 65°15'W

Island 1.5 mi long, lying S of Vieugué Island, in the Biscoe Islands. Charted by the BGLE under Rymill, 1934–37. Named by

the UK-APC for Bryan Holmes, FIDS surveyor at Prospect Point in 1957, who was attached to the British Naval Hydrographic Survey Unit in this area, 1957–58.

Holmes Rock 62°23'S, 59°50'W

Rock lying 1 mi NW of Emeline Island, Aitcho Islands, in the South Shetland Islands. Named by UK-APC in 1961 for Jeremiah Holmes, Master of the American sealing vessel *Emeline* from Stonington, CT, who visited the South Shetland Islands in 1820–21.

Holmes Summit 80°40'S, 24°40'W

Peak rising to 1,875 m, the highest elevation in the Read Mountains, Shackleton Range. Photographed from the air by the U.S. Navy, 1967, and surveyed by BAS, 1968–71. In association with the names of geologists grouped in this area, named by the UK-APC in 1971 after Professor Arthur Holmes (Holmes Hills, q.v.).

Holmestrand 54°15'S, 37°16'W

Point at the W side of Jossac Bight, on the S coast of South Georgia. The name appears on a chart based on surveys by DI personnel during 1925–30, but was probably applied earlier by Norwegian whalers operating from South Georgia.

Holmestrand, Bahía: see Jossac Bight 54°16'S, 37°11'W

Holmestrand-Hortenbucht: see Jossac Bight 54°16'S, 37°11'W

Holoviak Glacier 71°22'S, 72°09'W

Glacier flowing W into the head of Mendelssohn Inlet, Beethoven Peninsula, SW Alexander Island. Mapped by USGS from U.S. Navy aerial photographs taken 1967–68 and from Landsat imagery taken 1972–73. Named by US-ACAN for Judy C. Holoviak, technical editor, 1964–77, of the *Antarctic Research Series*, published by the American Geophysical Union; director of publications for the Union from 1978.

Holst Peak 71°20'S, 70°06'W

Rocky pyramidal peak, 1,000 m, midway between the S end of the Walton Mountains and LeMay Range in the central part of Alexander Island. First mapped from air photos obtained by the RARE, 1947–48, by Searle of the FIDS in 1960. Named by the UK-APC for Gustav Holst (1874–1934), English composer.

Holst Point 65°32'S, 63°50'W

Point at the head of Beascochea Bay which divides it into two arms, on the W coast of Graham Land. First charted by the BGLE under Rymill, 1934–37. Named by the UK-APC in 1959 for Axel Holst (1860–1931), Norwegian biochemist who in 1907, with Theodor C.B. Frolich, first produced experimental scurvy and laid the foundations for later work on vitamins.

Holt, Mount 69°25'S, 71°43'W

Mountain rising to c. 750 m at the terminus of Palestrina Glacier, Lazarev Bay, Alexander Island. The mountain was photographed from the air by RARE, 1947–48, and was mapped from the photos by D. Searle of FIDS in 1960. Named by US-ACAN for Cdr. Fred C. Holt, USN, Commanding Officer, Squadron VXE-6, OpDFrz, 1976; LC-130 aircraft commander, 1975.

Holtanna Peak 71°55'S, 8°22'E

A peak, 2,650 m, whose E portion is occupied by a small cirque glacier, standing 1 mi N of Mundlauga Crags in the E part of

Fenriskjeften Mountain in Queen Maud Land. Mapped from surveys and air photos by NorAE (1956–60) and named Holtanna (the hollow tooth).

Holtedahl Bay 66°07'S, 65°20'W

Bay, 10 mi long in NW-SE direction and averaging 6 mi wide, between Prospect Point and Black Head along the W coast of Graham land. Discovered by the BGLE, 1934–37, and named by Rymill for Prof. Olaf Holtedahl, Norwegian geologist who conducted geologic research during 1927–28 in the South Shetland Islands and the Palmer Archipelago, to which he was transported by various whaling vessels.

Holtedahlfjella: see Kurze Mountains 71°53'S, 8°55'E

Holtedahl Mountains: see Kurze Mountains 71°53'S, 8°55'E

Holtedahl Peaks 71°47'S, 8°58'E

A group of peaks and ridges lying northward of Steinskaret Gap and forming the northern portion of the Kurze Mountains, in Queen Maud Land. The name "Holtedahlfjella" was applied to the entire extent of the Kurze Mountains on a Norsk Polarinstitut map of 1966, but the name Kurze has priority, having been given by the GerAE under Ritscher, 1938–39. For the sake of historical continuity, Kurze Mountains has been retained as applied by Ritscher; the name Holtedahl Peaks is recommended for the elevations northward of Steinskaret Gap in these mountains. Named for Prof. Olaf Holtedahl, noted Norwegian geologist who worked in the South Shetland Islands and Palmer Archipelago area, 1927–28.

Holtet Nunatak 74°50'S, 73°56'W

A nunatak rising to c. 1,300 m, 2 mi NE of Grossenbacher Nunatak in the Lyon Nunataks, Ellsworth Land. Mapped by USGS from aerial photographs taken by the U.S. Navy, 1965–68, and from Landsat imagery taken 1973–74. Named in 1987 by US-ACAN after Jan A. Holtet of the Norwegian Institute of Cosmic Physics, upper atmospheric physicist at Siple Station, 1970–71.

Holt Glacier 74°40'S, 110°36'W

A broad glacier on Bear Peninsula that flows E to the sea between Grimes Ridge and Jones Bluffs, in Marie Byrd Land. First delineated by USGS from air photos taken by USN OpHjp in January 1947. Named by US-ACAN after Joseph V. Holt, a member of the U.S. Army Aviation Detachment in Antarctica, 1965–66.

Holth Peaks 77°25'S, 86°43'W

A group of peaks which rises to 1,820 m in the form of a short NE-SW ridge, 2 mi NW of Mount Lymburner near the N end of the Sentinel Range in the Ellsworth Mountains. Discovered by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for Baard Holth, captain of the *Wyatt Earp* on Ellsworth's first expedition to Antarctica, 1933–34.

Holt Nunatak 64°17'S, 59°21'W

A prominent nunatak lying at the NE corner of Larsen Inlet in Graham Land. Mapped from surveys by FIDS (1960–61). Named by UK-APC after the Holt Mfg. Co. of Stockton, CA, which, in 1906, began commercial production of chain-track tractors, and the Holt Caterpillar Tractor Co. of New York, founded two years later.

Holt Peak 79°45'S, 81°04'W

A bare rock peak, 850 m, surmounting the NE end of the Meyer Hills in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for William C. Holt, USARP auroral scientist at Ellsworth Station, 1961.

Holt Point 66°17'S, 110°30'E

Point marking the W extremity of Bailey Peninsula, at the E side of the Windmill Islands. First mapped from air photos taken by USN OpHjp, 1946–47. Named by US-ACAN for photographer's mate James R. Holt, USN, a member of the Wilkes Station party of 1958.

Holyoake Range 82°13'S, 160°00'E

A range in the S part of the Churchill Mountains, extending in a NW-SE direction for about 25 mi between Prince Philip and Errant Glaciers. Named by the NZ-APC for the Rt. Hon. K.J. Holyoake who, as Minister of Agriculture, then Prime Minister and later as Leader of the Opposition, gave strong support to N.Z. participation in CTAE, 1956–58.

Holzrichter Glacier 84°50'S, 172°30'W

A broad tributary glacier which drains the NE slopes of the Prince Olav Mountains between Mount Wade and Mount Oliver and enters the Gough Glacier just N of Mount Dodge. Named by US-ACAN for Capt. Max A. Holzrichter, USN, Deputy Commander and Chief of Staff, U.S. Naval Support Force, Antarctica, 1964 and 1965.

Homard, Mount 80°40'S, 29°50'W

Mountain, 1,200 m, near the head of Blaiklock Glacier, 2 mi S of Trey Peaks in the W part of the Shackleton Range. First mapped in 1957 by the CTAE and named for Sgt. Major Desmond E.L. Homard, engineer with the advance party and transpolar party of the CTAE, 1955–58.

Hombron Rocks 63°28'S, 58°42'W

Rocks awash lying off Thanaron Point, Trinity Peninsula. Discovered by a French expedition, 1837–40, under Capt. Jules Dumont d'Urville, and named by him for Jacques Hombron, a surgeon with the expedition. The rocks were surveyed by the FIDS in 1946. Not: Honabron Rock.

Home Lake: see Pony Lake 77°33'S, 166°09'E

Homerun Range 71°40'S, 166°35'E

A northwest-trending range, 28 mi long and 2 to 7 mi wide, located E of Everett Range at the heads of the Ebbe and Tucker Glaciers in Victoria Land. The name derives from "Homerun Bluff," a field name of the southern party of NZFMCAE, 1962–63, used to denote a turning point in their traverse at this range to the airlift point and the return to Scott Base. The entire range was mapped by USGS from surveys and U.S. Navy air photos, 1960–63.

Homeward Point 64°51'S, 63°37'W

Point forming the W side of the entrance to Security Bay, on Doumer Island in the Palmer Archipelago. First charted by the FrAE under Charcot 1903–05. So named by the British Naval Hydrographic Survey Unit in 1956–57 because the point was sighted as a prominent landmark almost daily by the crew of their motor-launch when homeward bound for Port Lockroy at the end of a day's survey work in Bismarck Strait.

Homing Head 67°48'S, 67°16'W

Headland at the NE side of Sally Cove on Horseshoe Island, off Graham Land. Named by UK-APC in 1958. The name arose because this conspicuous black headland, formed by sheer cliffs 60 m high, was treated as an objective by FIDS sledging parties returning to the Horseshoe Island station.

Homresund: see Macfie Sound 67°22'S, 59°43'E

Honabron Rock: see Hombron Rocks 63°28'S, 58°42'W

Honeycomb Glacier 72°07'S, 169°52'E

Glacier which drains the N and E sides of the mountainous mass surmounted by Mount Whewell, then flows S between that feature and Honeycomb Ridge to Moubray Bay. Named by the NZGSAE, 1957–58, for its proximity to Honeycomb Ridge.

Honeycomb Ridge 72°05'S, 169°58'E

Ridge which extends N from the mouth of Ironside Glacier on the W side of Moubray Bay. So named by the NZGSAE, 1957–58, because it consists mainly of a granitic rock which in many places is honeycombed on exposed surfaces by holes and cavities.

Hongo, Isla: see Mushroom Island 68°53'S, 67°53'W

Honkala Island 66°14'S, 110°37'E

Rocky island, 0.75 mi long, at the SE side of Burnett Island, in the Swain Islands. First mapped from air photos taken by USN OpHjp, 1946–47, and observed by Wilkes Station personnel who conducted a 1957 survey of Swain Islands under C.R. Eklund. Named by Eklund for Rudolf A. Honkala, chief meteorologist with the US-IGY wintering party of 1957 at Wilkes Station.

Honnør Glacier 69°23'S, 39°50'E

A glacier flowing to the E side of Lützw-Holm Bay, to the N of Byvågåsane Peaks. A glacier tongue extending seaward from this feature was mapped by the Lars Christensen Exp 1936–37 and named Honnørbrygga (the honor wharf). The JARE, 1957–62, found the glacier tongue had broken off but amended the original naming to apply to the glacier.

Honnywill Peak 80°31'S, 29°08'W

Rock peak, 1,220 m, immediately SE of Williams Ridge on the W side of Stratton Glacier in the Shackleton Range. First mapped in 1957 by the CTAE and named for Eleanor Honnywill, Assistant Secretary to the CTAE in 1955–59, and later Secretary and Editor.

Honores, Islote: see Honores Rock 62°30'S, 59°43'W

Honores Rock 62°30'S, 59°43'W

A rock lying 0.5 mi SW of Ferrer Point in Discovery Bay, Greenwich Island, South Shetland Islands. The name derives from the forms "Islote Honores" and "Islote Cocinero Honores" given by the Chilean Antarctic Expedition (1947) after the cook of the expedition ship *Iquique*. Not: Islote Cocinero Honores, Islote Honores.

Hood Glacier 83°55'S, 173°10'E

A glacier about 25 mi long draining northward from Siege Dome in the Commonwealth Range. It enters Ross Ice Shelf between that range and Separation Range. Discovered by the Southern Polar Party of BrAE (1907–09) under Ernest Shackleton. Named for Admiral Sir Horace Hood, under whom J.B. Adams, a member of the party had served in HMS *Berwick*.

Hoodwink Island 67°01'S, 66°52'W

Island lying 1 mi E of Arrowsmith Peninsula in Lallemand Fjord, Graham Land. Mapped by FIDS from surveys and air photos, 1955–57. So named by UK-APC because the island hoodwinked FIDS geologists and surveyors who misinterpreted the island's geological composition and incorrectly identified a nearby survey station during a local triangulation.

Hook, Mount 83°20'S, 50°00'W

A mountainous snow-covered projection from the E side of Saratoga Table, 5 mi SE of Sorna Bluff, in the Forrestal Range, Pensacola Mountains (q.v.). Named by US-ACAN in 1979 after Lt. Richard M. Hook, USN, Medical Officer at South Pole Station, winter party 1969.

Hooke Point 67°11'S, 66°42'W

A point near the head of Lallemand Fjord, in Graham Land. Mapped by FIDS from surveys and air photos, 1946–59. Named by UK-APC for Robert Hooke (1635–1703), English experimental physicist and author of *Micrographia*, which contains one of the earliest known descriptions of ice crystals.

Hooker, Cape 63°18'S, 61°56'W

The SE point of Low Island, in the South Shetland Islands. The feature was roughly charted by the nineteenth century sealers; further charted by Cdr. Henry Foster in 1829 but shown as the NE point of the island. Following air photography by FIDASE in 1956, the charted shape of the island was drastically altered and the name Cape Hooker was applied to its SE point as described. Not: Punta Asconapé.

Hooker, Cape 70°38'S, 166°45'E

Cape on the NE portion of the peninsula which includes Davis Ice Piedmont, on the N coast of Victoria Land. With Cape Dayman to the ESE, it forms an outer entrance point to Yule Bay. Discovered by Capt. James Clark Ross, 1841, who named it for Joseph Dalton Hooker (later Sir Joseph), naturalist and assistant surgeon on the *Erebus* who became internationally famous as a botanist.

Hooker, Mount 78°06'S, 162°42'E

Rounded summit over 3,800 m, standing immediately S of Mount Lister in the Royal Society Range of Victoria Land. Discovered by the BrNAE (1901–04) which named it for Sir Joseph Hooker.

Hooker Glacier 78°04'S, 163°06'E

A glacier on the E side of the Royal Society Range, draining NE into Blue Glacier from the slopes of Mount Hooker. Surveyed in 1957 by the N.Z. Blue Glacier Party of the CTAE (1956–58) and named after Mount Hooker.

Hook Island 65°38'S, 65°10'W

Island lying 1 mi NE of Vieugué Island, in the Biscoe Islands. Charted by the BGLE under Rymill, 1934–37. The name, given by the UK-APC in 1959, is descriptive of the island's shape when seen from the air.

Hooper Crags 78°25'S, 162°43'E

A rocky spur 3 mi long, lying at the S side of Foster Glacier in the Royal Society Range. Named by US-ACAN in 1963 for Lt. Benjamin F. Hooper, helicopter pilot with U.S. Navy Squadron VX-6, who wintered at McMurdo Station in 1960.

Hooper Glacier 64°44'S, 63°37'W

Glacier 3 mi long, flowing from the col N of Mount William into the W side of Børgen Bay, Anvers Island, in the Palmer Archipelago. Surveyed by the FIDS in 1955. Named by the UK-APC for Peter R. Hooper of FIDS, leader and geologist at the Arthur Harbor station in 1955 and 1956.

Hoopers Shoulder 77°32'S, 166°53'E

An independent cone at an elevation of 1,800 m on the W slopes of Mount Erebus on Ross Island. From McMurdo Sound it appears as a perfect pyramid of black rock, standing out as a splendid mark against the background of the ice and almost on a line from Cape Royds to the crater of Mount Erebus. The cone itself is about 100 m high and is surrounded by a deep moat or ditch, caused by the sweeping action of strong winds. It was named by F. Debenham on the second ascent of Mount Erebus for F.J. Hooper, a steward of the BrAE, 1910–13. Hooper was one of the party making the second ascent.

Hopalong Nunatak 81°33'S, 28°45'W

Westernmost and highest of the Whichaway Nunataks. First mapped in 1957 by the CTAE and so named to mark the work in this area of the Australian geologist of the CTAE in 1956–58.

Hope, Lake 63°25'S, 57°01'W

A small lake lying 0.5 mi N of Mount Flora, close E of the head of Hope Bay, Trinity Peninsula. Named after nearby Hope Bay by Argentine parties working in the area. Not: Lago Esperanza.

Hope, Mount 69°46'S, 64°34'W

A massive mountain rising to 2,860 m, forming the central and highest peak of Eternity Range, northern Palmer Land. First seen from the air and named Mount Hope by Lincoln Ellsworth during his flights of Nov. 21 and 23, 1935. The mountain was surveyed and given the name Mount Wakefield by J.R. Rymill of BGLE in Nov. 1936. The feature was subsequently photographed from the air by the USAS in Sept. 1940, and by RARE in Dec. 1947. A careful study of the reports, maps, and photographs of these expeditions, as well as additional survey of the area by FIDS in 1960, has led to the conclusion that Ellsworth's Mount Hope and Rymill's Mount Wakefield are synonymous. For the sake of historical continuity the name Mount Hope has been retained for this mountain (the name Wakefield has been transferred to Wakefield Highland located close northwestward). This mountain is one of three major mountains in Ellsworth's Eternity Range to which he gave the names Faith, Hope and Charity. Not: Mount Wakefield.

Hope, Mount 83°31'S, 171°16'E

A low but conspicuous mountain, 835 m, marking the W side of the terminus of Beardmore Glacier, at its confluence with the Ross Ice Shelf. Discovered by the BrAE (1907–09) and so named because the Polar Party, after ascending this mountain in the hope of finding a route to the South Pole, saw the great Beardmore Glacier stretching to the south as far as they could see.

Hope, Mount: see Bransfield, Mount 63°17'S, 57°05'W

Hope Bay 63°23'S, 57°00'W

Bay 3 mi long and 2 mi wide, indenting the tip of Antarctic Peninsula and opening on Antarctic Sound. Discovered on Jan. 15, 1902, by the SwedAE under Nordenskjöld, who named it in commemoration of the winter spent there by J. Gunnar Andersson,

S.A. Duse, and Toralf Grunden of his expedition. Not: Bahía Esperanza, Håppetvik.

Hopeful, Mount 62°02'S, 58°06'W

Peak standing 1.5 mi N of the head of King George Bay and 1.5 mi SE of Rea Peak on King George Island, in the South Shetland Islands. Named by the UK-APC in 1960 for the Enderby Brothers' schooner *Hopeful* (Capt. Henry Rea), which sailed from London in 1833 in company with the tender *Rose* in order to continue John Biscoe's Antarctic researches. The Antarctic voyage was abandoned after the *Rose* had been crushed in the pack ice at 60°17'S, 53°26'W, December 1833 or January 1834.

Hopeful, Mount: see Brooker, Mount 54°30'S, 36°14'W

Hope Island 63°03'S, 56°50'W

Largest of a group of small islands lying 6 mi W of Turnbull Point, D'Urville Island, off the NE tip of Antarctic Peninsula. The name appears on Powell's map published by Laurie in 1822. A French expedition under Capt. Jules Dumont d'Urville, 1837–40, charted an island in essentially the same position which was named Daussy Island. Not: Dausay Island, Daussy Island, Hope Isle, Isla Esperanza.

Hope Isle: see Hope Island 63°03'S, 56°50'W

Hope Point 54°17'S, 36°29'W

Rocky bluff, 20 m, forming the N side of the entrance to King Edward Cove, on the W side of Cumberland East Bay, South Georgia. Charted by the SwedAE under Nordenskjöld, 1901–04. Named for H.W.W. Hope, who directed a 1920 survey of King Edward Cove by personnel on HMS *Dartmouth*. Hope Point is the site of a monument in commemoration of Sir Ernest Shackleton. Not: Punta Carcelles, Punta Esperanza.

Hope Point 67°23'S, 59°36'E

A point the western end of Bertha Island in the William Scoresby Archipelago. The name appears to have been applied by personnel of the *William Scoresby* who landed on Bertha Island and roughly charted these islands in February 1936.

Hope Valley 54°01'S, 37°56'W

Valley extending ENE for nearly 3 mi from the head of Undine Harbor near the W end of South Georgia. Charted and named "Tal der Hoffnung" by a German expedition under Kohl-Larsen 1928–29; an English form of the original name is approved. Not: Tal der Guten Hoffnung, Tal der Hoffnung.

Hop Island 68°50'S, 77°43'E

One of the largest of the Rauer Islands, about 3 mi long, lying 1 mi WSW of Filla Island. Charted by Norwegian cartographers from air photos taken by the Lars Christensen Expedition (1936–37), who gave the name Hopøy. They charted the feature as being even larger, including a southern arm enclosing a cove. The feature was more accurately delineated by John H. Roscoe in 1952 from air photos taken by USN Operation Highjump (1946–47). The name Hop Island has been retained for the largest segment of the feature as suggested by Roscoe. Not: Hopøy.

Hopkins Glacier 66°36'S, 65°42'W

Glacier flowing into Darbel Bay S of Erskine Glacier, on the W coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955–57, and mapped from these photos by the FIDS. Named by the UK-APC in 1958 for Sir Frederick Hopkins

(1861–1947), founder of the School of Biochemistry at Cambridge, who made pioneer investigations on synthetic diets and vitamins which contributed greatly to the development of present ideas on concentrated rations.

Hopöy: see Hop Island 68°50'S, 77°43'E

Horatio Stump 62°13'S, 59°01'W

Flat-topped hill, 165 m, lying immediately E of Flat Top Peninsula at the SW end of King George Island, South Shetland Islands. Named by the UK-APC in 1960 for the sealing vessel *Horatio* (Capt. Weeks) from London, which visited the South Shetland Islands in 1820–21. Not: Mushroom Hill.

Hordern, Cape 66°15'S, 100°31'E

Ice-free cape, overlain by morainic drift, at the NW end of the Bunger Hills. Probably sighted from Watson Bluff (66°25'S, 98°57'E) by A.L. Kennedy and other members of the Western Base Party of the AAE under Mawson, 1911–14, who charted the W wall of what appeared to be two small islands lying N of Cape Hoadley in about 100°35'E. Named "Hordern Island" by Mawson for Sir Samuel Hordern of Sydney, a patron of the AAE. Renamed Cape Hordern by the US-ACAN following correlation of Kennedy's map with the US-ACAN map of 1955 compiled from aerial photographs taken by USN OPHjp, 1946–47. Not: Hordern Island, Hordern Peninsula.

Hordern, Mount 67°56'S, 62°29'E

Peak, 1,510 m, standing 4 mi S of Mount Coates in the David Range. Discovered in February 1931 by the BANZARE under Mawson, and named for Sir Samuel Horden, a patron of this expedition and the AAE under Mawson, 1911–14.

Hordern Gap 67°53'S, 62°30'E

Gap, 3 mi wide, between Mount Coates and Mount Hordern in the David Range of the Framnes Mountains. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Expedition, 1936–37. This gap was used by ANARE parties in 1957 and 1958 as a route through the range. Named by ANARE for its proximity to Mount Hordern.

Hordern Island: see Hordern, Cape 66°15'S, 100°31'E

Hordern Peninsula: see Hordern, Cape 66°15'S, 100°31'E

Horgebest Peak 72°34'S, 0°27'E

Peak just E of Fred Cirque in Roots Heights, Sverdrup Mountains in Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and air photos by the Norwegian expedition (1958–59) and named Horgebest (mountain beast).

Horizon Bluff 77°54'S, 160°26'E

A steep bluff at the head of Beacon Valley, rising to 2,275 m to the W of Friedmann Valley in Quartermain Mountains, Victoria Land. One of a group of names in the area associated with surveying applied in 1993 by NZGB; horizon being the line of sight described by level line of theodolite or level.

Horlick Ice Stream 85°17'S, 132°00'W

A large ice stream on the featureless ice surface to the north of the main mass of the Horlick Mountains, draining west-southwestward, paralleling these mountains, to enter the lower portion of the Reedy Glacier. Mapped by USGS from surveys and USN air

photos, 1960–64. Named by US-ACAN in association with Horlick Mountains.

Horlick Mountains 85°23'S, 121°00'W

A mountain group in the Transantarctic Mountains, lying eastward of Reedy Glacier and including the Wisconsin Range, Long Hills and Ohio Range. The mountains were discovered in two observations by the ByrdAE, 1933–35, one by Kennett L. Rawson from a position in about 83°05'S, 105°19'W, at the end of his SE flight of Nov. 22, 1934, and another by Quin Blackburn in Dec. 1934, from positions looking up Leverett and Albanus Glaciers. Portions of the Wisconsin Range are recorded in aerial photography obtained by USN Operation Highjump, 1946–47. The entire mountain group was surveyed by USARP parties and was mapped from U.S. Navy aerial photographs, 1959–64. Named by Admiral Byrd for William Horlick, of the Horlick's Malted Milk Corp., a supporter of the Byrd expedition of 1933–35.

Horn, Isla: see Largo Island 63°18'S, 57°53'W

Horn, The 63°39'S, 57°34'W

A hill, 220 m, with a sheer cliff of reddish rock on its W side, surmounting the NW point of Eagle Island, which lies in Prince Gustav Channel between Trinity Peninsula and Vega Island. Surveyed and named descriptively by the FIDS in 1945.

Hornaday Rock 54°01'S, 38°01'W

Rock lying in Bird Sound, 0.6 mi WSW of Cape Alexandra at the W end of South Georgia. The feature appears on charts dating back to the 1930's. It was recharted by the SGS in the period 1951–57, and named by the UK-APC for William T. Hornaday (1854–1937), American zoologist and Director of the New York Zoological Park, 1896–1926. After 1907 he was a leader in the fight to introduce protective legislation for fur seals. Fur seals breed on nearby Bird Island.

Hornblende Bluffs 69°54'S, 159°45'E

Prominent bluffs that rise to 1,050 m, located 2 mi SE of Mount Ellery and near the head of Suvorov Glacier, in Wilson Hills. So named by the northern party of NZGSAE, 1963–64, who found the rock here contains the mineral hornblende.

Horn Bluff 68°21'S, 149°45'E

A prominent rocky headland on the northern side of the coastal island at the western side of Deakin Bay. The feature rises to 325 m and is marked by the columnar structure of the dolerite forming the upper part of it. Discovered and mapped as part of the mainland by the AAE (1911–14) under Douglas Mawson, who applied the name for W.A. Horn of Adelaide, a patron of the expedition. The headland was shown to be on an island by ANARE air photos taken in 1962.

Horne, Mount 75°46'S, 71°44'W

Highest (1,165 m) and most prominent mountain in the Quilty Nunataks, standing 12 mi ENE of Mount Hassage in eastern Ellsworth Land. Discovered by the RARE, 1947–48, under Ronne, who named it for Bernard Horne of Pittsburgh, PA, who furnished wind-proofs and other clothing for the expedition. Not: Mount Bernard Horne.

Horne, Rocas: see Ørnen Rocks 62°01'S, 57°35'W

Horne Glacier 71°17'S, 164°56'E

A valley glacier, 6 mi long, draining SW from the Everett Range between Mount Works and Mount Calvin and entering the lower part of Greenwell Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Lt. Robert P. Horne, USNR, pilot of C-130 aircraft on photographic flights in Operation Deep Freeze 1968 and 1969.

Horne Nunataks 71°42'S, 66°46'W

A group of six nunataks in relative isolation, located on the N side of Goodenough Glacier, about 7 mi inland from the W coast of Palmer Land. Named by UK-APC for Ralph R. Horne, BAS geologist at the Adelaide and Stonington Island stations in 1964–65.

Horner Nunatak 74°16'S, 72°45'W

A nunatak 1 mi E of Staack Nunatak, in eastern Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Stanley Horner, radioscience researcher at Byrd Station, summer 1962–63.

Hornet: see Kemp Peak 67°26'S, 59°24'E

Hornet Peak 72°12'S, 2°59'W

A sharp peak 3 mi W of Snøhetta Dome, near the S end of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1959–52) and air photos by the Norwegian expedition (1958–59) and named Hornet (the horn).

Horney Bluff 80°09'S, 159°40'E

A conspicuous ice-free bluff about 15 mi long, extending eastward along the north side of Byrd Glacier from Merrick Glacier toward Cape Kerr. Named by US-ACAN for Capt. Harry R. Horney, Admiral Byrd's chief of staff on USN Operation Highjump, 1946–47.

Horn Peak: see Kemp Peak 67°26'S, 59°24'E

Hornpipe Heights 69°51'S, 70°36'W

A group of partly exposed ridges rising to c. 1,200 m between Sullivan Glacier, Mikado Glacier, and Clarsach Glacier in N Alexander Island. Whistle Pass is adjacent to the NE part of the heights. So named by UK-APC, 1977, in association with Whistle Pass.

Horn Reef 54°28'S, 3°22'E

Submerged rocks which extend 0.3 mi SW from Lars Island, off the SW extremity of Bouvetøya. Charted and named in December 1927 from the *Norvegia* by a Norwegian expedition under Capt. Harald Horntvedt. Not: Horns-revet.

Hornsby, Mount 64°14'S, 59°15'W

A prominent snow-capped mountain on the S side of the middle reaches of Sjøgren Glacier, Trinity Peninsula. Mapped from surveys by FIDS (1960–61). Named by UK-APC after Richard Hornsby and Sons of Grantham, who designed and constructed several highly successful chain-track vehicles for the British War Office, the first "caterpillar tractors," 1904–10.

Horns-revet: see Horn Reef 54°28'S, 3°22'E

Horntind: see Branson Nunatak 67°55'S, 62°46'E

Horntvedtbreen: see Horntvedt Glacier 54°25'S, 3°21'E

Horntvedt Glacier 54°25'S, 3°21'E

A small glacier flowing to the north coast of Bouvetøya immediately east of Cape Circoncision. First charted in 1898 by a German expedition under Karl Chun. Recharted in December 1927 by a Norwegian expedition which named it for Harald Horntvedt, captain of the expedition ship *Norvegia*. Not: Horntvedtbreen, Horntvedts Bre.

Horntvedts Bre: see Horntvedt Glacier 54°25'S, 3°21'E

Horowitz Ridge 77°37'S, 162°05'E

A rock ridge between David and King Valleys in the Asgard Range, Victoria Land. Named for Prof. Norman Horowitz, California Institute of Technology, whose interest in the analogy of Antarctica to Mars led him to suggest the value of Victoria Land dry valley studies in regard to Martian life detection. The studies were undertaken (1966–68) by a USARP biological party led by Roy E. Cameron, who suggested the naming.

Horrall Glacier 75°00'S, 114°28'W

A tributary glacier in the Kohler Range of Marie Byrd Land. It flows ENE from Faulkender Ridge to join Kohler Glacier at Klimov Bluff. Mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN for Thomas R. Horrall, USARP glaciologist with the Marie Byrd Land Survey party, 1966–67.

Horrocks Block 71°35'S, 68°22'W

A large rectangular outcrop of mainly sandstone, lying on the N side of Venus Glacier, 2 mi SW of Keystone Cliffs, on the E side of Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. Named by UK-APC from association with Venus Glacier after Jeremiah Horrocks, the British astronomer who predicted and first observed a transit of Venus, in 1639.

Horror Rock 54°31'S, 37°11'W

A rock lying 3.5 mi west of South West Point, Annenkov Island, South Georgia. Named by UK-APC from the circumstances of the rock's discovery by HMS *Owen* on Feb. 21, 1961. The ship avoided striking the rock in rough weather and low visibility, passing within 1 mile of heavy breakers.

Horsa Nunataks 68°56'S, 70°18'W

Isolated group of about five partly snow-covered nunataks, more than 610 m, which rise above Roberts Ice Piedmont, 14 mi N of Mount Calais, in the NE part of Alexander Island. First photographed from the air in 1936 by the BGLE under Rymill. Surveyed from the ground in 1948 by the FIDS. The names for these nunataks and for the isolated nunatak to the S are for the brother chieftains, Hengist and Horsa, who led the first Saxon bands which settled England in the fifth century.

Horsburgh Point 58°26'S, 26°26'W

Point, 3.4 mi NW of Scarlett Point, on the SW side of Montagu Island in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II*, who named it for H. Horsburgh, technical officer to the Discovery Committee.

Horse Bluff 71°18'S, 67°34'W

A coastal bluff at the W side of Tindley Peaks, Rymill Coast, Palmer Land, overlooking George VI Sound. Surveyed by BAS

from 1970, and so named from a distinctive feature on the bluff resembling a horse's head.

Horse Head 54°17'S, 36°30'W

Jagged, rocky point with conspicuous cliffs 10 m high, situated 0.3 mi N of the mouth of Penguin River, in Cumberland East Bay, South Georgia. The profile of the cliff is said to resemble a horse's head. First surveyed by the SwedAE, 1901–04, under Norden-skjöld. The name Horse Head, recommended by the UK-APC in 1954, is an English form of "Hestes Hode," applied by sealers and whalers. Not: Hestes Hode.

Horseshoe Bay 54°17'S, 36°16'W

Bay 0.5 mi wide at the S side of Cape George, along the N coast of South Georgia. The name appears on a chart based upon a 1929 sketch survey by DI personnel.

Horseshoe Bay 77°32'S, 166°12'E

Cove just N of Cape Royds on the W side of Ross Island. Discovered and named by the BrNAE (1901–04) under Scott. The name suggests the shape of the cove.

Horseshoe Bay: see Carlita Bay 54°14'S, 36°38'W

Horseshoe Bay: see Lystad Bay 67°50'S, 67°17'W

Horseshoe Harbor 67°36'S, 62°52'E

Harbor in Holme Bay, Mac. Robertson Land, formed by the horseshoe-shaped rock projections of West Arm and East Arm. Mawson Station is at the head of this harbor. Roughly mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Rephotographed by USN OpHjp, 1946–47. First visited by an ANARE party under Phillip Law, who selected this site for Mawson Station, established on Feb. 13, 1954.

Horseshoe Island 67°51'S, 67°12'W

Island 6.5 mi long and 3 mi wide occupying most of the entrance to Square Bay, along the W coast of Graham Land. Discovered and named by the BGLE under Rymill who mapped this area by land and from the air in 1936–37. Its name is indicative of the crescentic alignment of the 600 to 900 m peaks which give a comparable shape to the island. Not: Isla Herradura.

Horseshoe Island Cove: see Lystad Bay 67°50'S, 67°17'W

Horseshoe Islands: see Forge Islands 65°14'S, 64°17'W

Horseshoe Mountain 77°34'S, 159°57'E

Mountain just W of Mount Fleming, standing on the N side of the head of Taylor Glacier, near the edge of the polar plateau in Victoria Land. Discovered by the BrNAE (1901–04) and so named because of its shape.

Horseshoe Nunatak 81°52'S, 158°25'E

A horseshoe-shaped nunatak in the Churchill Mountains, located 5 mi W of Mount Hoskins on the N side of the upper portion of Starshot Glacier. The nunatak was charted and descriptively named by the NZGSAE, 1964–65.

Horseshoe Valley 80°05'S, 82°00'W

A large ice-filled valley in the southern Heritage Range, Ellsworth Mountains, outlined by the semicircular arrangement of the Independence, Marble, Liberty and Enterprise Hills. Approval of the descriptive name was suggested by the University of Minne-

sota Ellsworth Mountains Party, 1962–63, who reported the name was in wide use by U.S. Navy flyers in the area.

Hortebrekka Slope 72°07'S, 12°34'E

A crevassed ice slope which marks the E edge of Horteriset Dome, just W of the Weyprecht Mountains in Queen Maud Land. Photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Hortebrekka.

Horteflaket Névé 71°56'S, 12°45'E

A névé at the head of Musketov Glacier, between the Petermann Ranges and the Weyprecht Mountains in Queen Maud Land. First plotted from air photos by, GerAE, 1938–39. Replotted from air photos and surveys by NorAE, 1956–60, and named Horteflaket.

Horten 54°17'S, 37°07'W

Cove in the W part of Jossac Bight along the S coast of South Georgia. The names "Horten or Betsey Cove" and "Horten Bay" were recorded by L.H. Matthews in 1931 as names in local use for this cove at that time. The SGS reported in 1957 that Horten is well established in local use. Not: Betsy Cove, Horten Bay.

Horten Bay: see Horten 54°17'S, 37°07'W

Horten Peak 72°04'S, 3°11'E

Small rock peak, 2,470 m, rising S of the summit of Risemedet Mountain in the Gjelsvik Mountains, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Horten.

Horteriset Dome 72°05'S, 12°22'E

A broad ice covered hill about 13 mi W of the S part of the Weyprecht Mountains in Queen Maud Land. First photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Horteriset.

Horton Glacier 67°33'S, 68°30'W

A glacier at the E side of Mount Barré and Mount Gaudry, flowing SE from Adelaide Island into Ryder Bay. Named by the UK-APC in 1977 for Colin P. Horton, BAS builder at the nearby Rothera Station, 1976–77.

Horton Ledge 85°41'S, 69°05'W

A flat rock ledge that caps the SW extremity of Pecora Escarpment, at the SW end of the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Edward C. Horton, Jr., electronics technician at Plateau Station, winter 1966.

Horvath Island 66°19'S, 67°08'W

A small island close N of Watkins Island, Biscoe Islands. Mapped from air photos taken by FIDASE (1956–57). Named by UK-APC for Stephen M. Horvath, American physiologist who has specialized in the peripheral circulation of man in climatic extremes.

Hoseason Glacier 67°06'S, 58°07'E

Glacier 12 mi long, flowing N into the sea between West Stack and East Stack, 15 mi E of Edward VIII Bay. Roughly mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Expedition, 1936–37. Visited in 1954 by an ANARE sledging party and named by ANCA for Richard Hoseason of ANARE, who perished on a field trip at Heard Island in 1952.

Hoseason Harbor: see Mikkelsen Harbor 63°54'S, 60°47'W

Hoseason Island 63°44'S, 61°41'W

Island 6 mi long and 3 mi wide, lying 20 mi W of Trinity Island in the Palmer Archipelago. This name, which has appeared on charts for over 100 years, commemorates James Hoseason, first mate on the *Sprightly*, an Enderby Brothers sealing ship which operated in these waters in 1824.-25.

Hoshka Glacier: see Hoshko Glacier 71°49'S, 163°24'E

Hoshko Glacier 71°49'S, 163°24'E

A cirque-type glacier in the Lanterman Range, Bowers Mountains, draining SW from between Bowers Peak and Mount Edixon into the lower part of Canham Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Lt. John Hoshko, Jr., USNR, public affairs officer on the staff of the Commander, USN Support Force, Antarctica, 1966-68. Not: Hoshka Glacier.

Hoskins, Mount 81°50'S, 159°03'E

A mountain, 2,030 m, standing on the W side of Starshot Glacier, 4 mi S of Mount Lindley. Discovered by the BrNAE (1901-04) and named for Sir Anthony Hoskins, a former Lord of the Admiralty and a member of the expedition Ship Committee.

Hoskins Peak 67°46'S, 67°36'W

A peak 3 mi W of Contact Peak in southern Pourquoi Pas Island, Graham Land. Mapped by FIDS from surveys, 1956-59. Named by UK-APC for Arthur K. Hoskins, FIDS geologist at Stonington Island in 1958 and Horseshoe Island in 1959.

Hospital Cove: see Yankee Harbor 62°32'S, 59°47'W

Hospital Point 62°32'S, 59°47'W

Point formed by an ice cliff with a small amount of rock exposed at its base, lying at the N side of Yankee Harbor immediately E of Glacier Bluff, Greenwich Island, in the South Shetland Islands. Charted and named Rocky Point by DI personnel on the *Discovery II* in 1935. In order to avoid duplication the UK-APC rejected this name in 1961 and substituted a new one. Hospital Point derives from Hospital Cove, a name for Yankee Harbor in common use among British sealers in the 1820's and British whalers in the 1920's. Not: Punta Alfaro, Punta Rocosa, Rocky Point.

Host Island 64°56'S, 63°55'W

Island lying immediately SE of Manciple Island in the Wauwermans Islands, in the Wilhelm Archipelago. Shown on an Argentine government chart of 1950. Named by the UK-APC in 1958 after one of the characters in Chaucer's *Canterbury Tales*.

Hotine, Mount 81°43'S, 160°00'E

A peak 2 mi NE of Mount McKerrow, in the Surveyors Range. Named by the NZGSAE (1960-61) for Brigadier Martin Hotine, British Director of Overseas Surveys at the time.

Hotine Glacier 65°08'S, 63°52'W

Glacier 10 mi long which is divided at its mouth by Mount Cloos, flowing W into both Deloncle and Girard Bays, on the W coast of Graham Land. First charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1959 for Brigadier Martin Hotine, Director of Overseas Surveys.

Hough Glacier 78°32'S, 84°20'W

A glacier in the SE portion of the Sentinel Range of the Ellsworth Mountains, rising just S of Mount Tuck and flowing ESE for 10 mi between the Guerrero and Remington Glaciers. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for William S. Hough, who made ionosphere studies at the South Pole Station in 1957.

Houk Spur 85°01'S, 64°45'W

A bare rock spur extending from the SW side of Mackin Table, 1 mi N of Mount Dumais, in southern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Lt. Vernon N. Houk (MC) USN, officer in charge of South Pole Station, winter 1958.

Houlder, Mount: see Houlder Bluff 61°06'S, 54°51'W

Houlder Bluff 61°06'S, 54°51'W

A bluff overlooking Point Wild on the N coast of Elephant Island, South Shetland Islands. This feature was named "Mount Frank Houlder" by the Shackleton expedition 1914-16, after Frank Houlder of the Houlder Steamship line, who assisted that expedition. Originally regarded as a distinct mountain from northward, it is now known to be backed inland by higher ground. Not: Mount Frank Houlder, Mount Holder, Mount Houlder.

Houle Island 66°42'S, 141°12'E

Low rocky island 1 mi W of Ressac Island and about 3.5 mi NNE of Zélee Glacier Tongue. Photographed from the air by USN OPHj, 1946-47. Charted by the FrAE, 1949-51, and so named by them because the surf breaks over this low-lying island. "Houle" is the French word for surge or swell.

Houliston Glacier 72°00'S, 164°34'E

A tributary glacier between Neall Massif and West Quartzite Range, flowing NW into Black Glacier. Named by the NZGSAE, 1967-68, for R. Houliston, electrician at Scott Base, 1967-68.

Hound Bay 54°22'S, 36°13'W

Bay, which is 2.5 mi wide at its mouth and recedes 3 mi, entered between Tijuca Point and Cape Vakop along the N coast of South Georgia. The names George Bay and Hundebugten have appeared on charts for this feature. The SGS, 1951-52, reported that this bay is better known to whalers and sealers as Bikjebugten (the word Bikje implying any low type canine). The name Hound Bay, proposed by the UK-APC is an English form of this name. Not: Bahía Jorge, Bikjebugten, George Bay, Hundebugten, St. George Bay.

Hourglass Buttress 86°40'S, 146°28'W

A rock buttress, rising to 2,790 m, 3.5 mi W of Beard Peak in the La Gorce Mountains, Queen Maud Mountains. Mapped by the USGS from surveys and USN aerial photographs, 1960-64. Geologically mapped by a USARP-Arizona State University geological party, 1980-81. The name derives from a long snow chute up the face of the buttress.

Hourglass Lake 77°21'S, 161°04'E

Small meltwater lake midway between Webb Lake and Lake Vashka in Barwick Valley, Victoria Land. The descriptive name was given in 1964 by American geologist Parker E. Calkin and alludes to the outline of the lake.

House, Lake 77°42'S, 161°24'E

A lake in the extreme west end of Pearse Valley, north of Friis Hills in Victoria Land. Named by the eighth VUWAE, 1963–64, for D.A. House, chemist and member of the VUWAE party that explored lakes in Taylor, Wright, and Victoria Valleys.

House Nunatak 74°56'S, 72°57'W

One of the Grossman Nunataks (q.v.) in Ellsworth Land, located 4 mi SE of Whitmill Nunatak. Named by US-ACAN after John R. House, USGS cartographer, who worked in the field at South Pole Station and Byrd Station, 1972–73.

Houser Peak 68°22'S, 65°33'W

A peak (1,080 m) between Tofani Glacier and Franca Glacier at the head of Solberg Inlet, Bowman Coast. The peak was photographed from the air by the USAS, 1940, the U.S. Navy, 1966, and was surveyed by FIDS, 1946–48. Named by US-ACAN, 1977, for Elaine Houser, administrative officer with Holmes and Narver, Inc., which from the 1968–69 season through 1979–80, provided engineering, construction, and general support services to USARP stations in Antarctica.

Houston Glacier 70°34'S, 62°03'W

A small glacier that drains N from Eielson Peninsula into Smith Inlet, on the E coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Robert B. Houston, RM1, USN, radioman at Palmer Station in 1973.

Houzeau de Lehaie, Cap: see Lehaie Point 64°30'S, 62°47'W

Houzeau de Lehaie, Cape: see Lehaie Point 64°30'S, 62°47'W

Hovde Bay 69°10'S, 39°45'E

A bay along the E shore of Lützow-Holm Bay, just N of Langhovde Hills. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37, and named Hovdebukta (the knoll bay) in association with the name Langhovde Hills. Not: Hovdebukta.

Hovde Bay: see Hovde Cove 69°15'S, 76°50'E

Hovdebrekka Slope 72°03'S, 11°48'E

A crevassed ice slope several mi long which trends northeastward from Skeidshovden Mountain in the Wohlthat Mountains, Queen Maud Land. First photographed from the air by the GerAE (1938–39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Hovdebrekka (the knoll slope). Not: Ledolom Suslova.

Hovdebukta: see Hovde Bay 69°10'S, 39°45'E

Hovde Cove 69°15'S, 76°50'E

A small coastal reentrant within Prydz Bay, lying immediately E of Flatnes Ice Tongue. Mapped and named Hovdevika by Norwegian cartographers working from air photos taken by the Lars Christensen Expedition, 1936–37. Not: Amanda Bay, Hovde Bay, Hovdevika.

Hovde Glacier 69°15'S, 76°55'E

A small glacier just W of Brattstrand Bluffs on the SE shore of Prydz Bay. A short tongue from this glacier extends seaward to nearby Hovde Island. First mapped by the Lars Christensen Expedition, 1936–37, which named the island. This glacier was named “Hovde Ice Tongue” by John H. Roscoe in 1952 following

his study of aerial photographs of the area taken by USN Operation Highjump, 1946–47, but the term glacier is considered appropriate to this small feature. Not: Hovde Ice Tongue.

Hovde Ice Tongue: see Hovde Glacier 69°15'S, 76°55'E

Hovde Island 69°15'S, 76°52'E

A small, rounded, rocky island in Prydz Bay, lying at the extremity of the small glacier tongue from Hovde Glacier. Mapped from air photographs by the Lars Christensen Expedition (1936) and named Hovden (the knoll). The recommended form and generic term takes into account the offshore nature of the feature. Not: Hovden.

Hovdeknattane Rocks 72°07'S, 11°39'E

Rocky crags projecting from the SW part of Hovdebrekka Slope, just N of Skeidshovden Mountain in the Wohlthat Mountains, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Hovdeknattane (the knoll rocks).

Hovden: see Hovde Island 69°15'S, 76°52'E

Hovdeøyane: see Stanton Group 67°32'S, 61°38'E

Hovdeskar Gap 71°47'S, 11°39'E

A gap just E of Mount Skarshovden at the head of Skarsbrotet Glacier, in the Humboldt Mountains of Queen Maud Land. Discovered and photographed by the GerAE, 1938–39. Mapped by Norway from air photos and surveys by NorAE, 1956–60, and named Hovdeskar (knoll gap).

Hovdevika: see Hovde Cove 69°15'S, 76°50'E

Hovgaard Island 65°08'S, 64°08'W

Island 3 mi long, lying 1.5 mi SW of Booth Island in the Wilhelm Archipelago. Discovered and named Krogmann Island by a German expedition under Dallmann, 1873–74, but the name Hovgaard, applied by the BelgAE, 1897–99, under Gerlache, has overtaken the original name in usage. The name Krogmann Point (q.v.) has been given to the W extremity of Hovgaard Island. Not: Ile Howgaard, Krogmann Island.

Howard, Cape 71°25'S, 61°08'W

High, flat-topped, snow-covered cape at the extremity of the peninsula separating Lamplugh and Odom Inlets, on the E coast of Palmer Land. Discovered by members of the USAS who explored along this coast by land and from the air in 1940. Named by the US-ACAN for August Howard, founder of the American Polar Society and editor of the *Polar Times*. Not: Cape Rusty.

Howard, Mount 75°40'S, 161°16'E

A dark, rounded mountain, 1,460 m, standing 8 mi SE of Mount Joyce in the Prince Albert Mountains, Victoria Land. Discovered by the BrNAE, 1901–04, which named it for Lord Howard de Walden who assisted Capt. R.F. Scott in his experiments with sledges.

Howard Bay 67°28'S, 61°04'E

Bay, 2 mi wide, between Byrd Head and Ufs Island. Discovered in February 1931 by the BANZARE under Mawson, and named by him for A. Howard, hydrologist with the expedition. Not: Ufsøyvågen.

Howard Glacier 77°40'S, 163°05'E

Small alpine glacier just W of Crescent Glacier, flowing into Taylor Valley on the N from the Kukri Hills, in Victoria Land. The glacier was studied in December 1957 by U.S. geologist T.L. Péwé, who named it for Arthur D. Howard, geomorphologist of Stanford University, and glaciologist in Antarctica during USN OpHjp, 1946–47.

Howard Heights 77°27'S, 151°40'W

A snow covered coastal promontory (515 m) between Stewart and Gerry Glaciers on the N side of Edward VII Peninsula. Features in this area were explored by the ByrdAE, 1928–30 and 1933–35. These heights were mapped by USGS from surveys and U.S. Navy air photos, 1959–65. Named by US-ACAN (at the suggestion of Admiral R.E. Byrd) for Roy W. Howard of the Scripps-Howard newspapers, who made financial contributions to the ByrdAE, 1933–35.

Howard Hills 67°06'S, 51°09'E

An area of low hills and meltwater lakes S of Beaver Glacier in NE part of the Scott Mountains, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA after W.E. Howard, a member of the crew of the *Discovery* during the BANZARE, 1929–31.

Howard Island 64°47'S, 64°23'W

Island directly south of Hartshorne Island in eastern Joubin Islands. Named by US-ACAN for Judson R. Howard, Mate in the R.V. *Hero* on her first voyage to Antarctica in 1968.

Howard Nunataks 77°30'S, 87°00'W

Group of some 15 nunataks lying off the extremity of the mountainous ridge at the NW corner of the Sentinel Range. Discovered by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for Patrick Howard, engine mechanic on Ellsworth's expedition.

Howard Peaks 74°15'S, 163°42'E

A line of E-W trending peaks at the S side of Tourmaline Plateau, extending transversely across Deep Freeze Range, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955–63. Named by US-ACAN for Hugh C. Howard, cook at McMurdo Station for four summer seasons, 1963–64 to 1966–67.

Howchin Glacier 78°12'S, 163°22'E

Glacier between the Ward and Walcott Glaciers, on the E side of the Royal Society Range in Victoria Land. Discovered by a party led by Taylor of the BrAE (1910–13) and named for Prof. W. Howchin, geologist of Adelaide.

Howe, Mount 87°22'S, 149°30'W

An elongated mountain (2,930 m) comprising low connecting ridges and gable-shaped nunataks. It rises at the E side of Scott Glacier, near the head, directly opposite Mount McIntyre. This mountain, including its small southern outlier, apparently is the southernmost mountain in the world. Discovered in December 1934 by the ByrdAE geological party led by Quin Blackburn. Named by Admiral Byrd for Louis McHenry Howe, secretary to the President of the United States at that time, Franklin D. Roosevelt. Not: Mount Louis McHenry Howe.

Howe Glacier 86°14'S, 149°12'W

A short tributary glacier draining W into Scott Glacier immediately N of Mount Russell, in the Queen Maud Mountains. Mapped

by USGS from surveys and USN air photos, 1960–63. Named by US-ACAN for Robert C. Howe of USN Squadron VX-6, photographer on Operation Deep Freeze 1966 and 1967.

Howell Peak 70°58'S, 160°00'E

A small rock peak (1,750 m) on the NW end of Daniels Range, Usarp Mountains. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960–62. Named by US-ACAN for Kenneth R. Howell, USARP meteorologist at the South Pole Station, 1967–68.

Howgaard, Ile: see Hovgaard Island 65°08'S, 64°08'W

Howkins Inlet 73°40'S, 60°54'W

Ice-filled inlet which recedes SW 6 mi between Cape Brooks and Lamb Point, along the E coast of Palmer Land. Discovered and photographed from the air in December 1940 by the USAS. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for G. Howkins, meteorologist with the FIDS base at Deception Island in 1944–45.

Hoxley, Mount: see Huxley, Mount 77°51'S, 162°52'E

Hoyt Head 74°59'S, 134°36'W

High rock headland forming the NE end of Bowyer Butte, located at the W side of Venzke Glacier on the coast of Marie Byrd Land. The headland was first seen and photographed from aircraft of the U.S. Antarctic Service in December 1940. It was mapped by USGS from surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Lt. Ronnie A. Hoyt, CEC, USNR, Officer-in-Charge at Byrd Station, 1971.

Hub, The: see Hub Nunatak 68°37'S, 66°05'W

Hubbard, Mount 72°08'S, 99°45'W

A peak in the Walker Mountains, standing 6 mi E of Mount Noxon in Thurston Island. First plotted from air photos taken by USN OpHjp in December 1946. Named by US-ACAN for Harold A. Hubbard, USGS geologist aboard the icebreaker *Burton Island*, who made investigations in the area in February 1960 during the USN Bellingshausen Sea Expedition.

Huble, Mount 78°05'S, 86°46'W

A prominent, snow-covered, outlying mountain to the W of Mount Hale, in the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Richard C. Hubley, member, Technical Panel on Glaciology, U.S. National Committee for the IGY.

Huble, Glacier: see Joyce Glacier 78°01'S, 163°42'E.

Huble, Island: see Berkner Island 79°30'S, 47°30'W

Hübl Peak 64°43'S, 62°29'W

Peak W of Stolze Peak on Arctowski Peninsula, on the W coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. Named by the UK-APC in 1960 for Artur Freiherr von Hübl (1853–1932), Austrian surveyor, head of the topographic section of the Militargeographische Institut, Vienna, who in 1894 designed a stereocomparator which was developed independently by Dr. Carl Pulfrich in 1901.

Hub Nunatak 68°37'S, 66°05'W

A beehive-shaped nunatak in the lower part of Lammers Glacier on Antarctic Peninsula. The feature is conspicuously located near the center of the Traffic Circle, a glacial depression which is notable for the series of prominent glaciers which flow toward, or emanate from it in a radial pattern. Discovered in 1940 by members of the East Base party of the U.S. Antarctic Service, 1939–41, who so named the nunatak because of its unique location in the Traffic Circle. Not: The Hub.

Huckaby, Mount 85°54'S, 127°03'W

An ice-free, wedge-shaped mountain in western Wisconsin Range, 2,620 m, surmounting the E wall of Olentangy Glacier just E of Haworth Mesa. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Cdr. Donnie W. Huckaby, maintenance officer at McMurdo Station for USN Squadron VX-6 during 1962–63 and 1963–64.

Huckle, Mount 69°38'S, 69°48'W

Mainly ice-covered mountain, 2,500 m, near the N end of Douglas Range in E Alexander Island. It rises 7 mi SSE of Mount Spivey on the W side of Toynbee Glacier and is 9 mi inland from George VI Sound. Possibly first seen in 1909 by the FrAE under Charcot, but not recognized as part of Alexander Island. Photographed from the air in 1936–37 by the BGLE under Rymill. Surveyed from the ground in 1948 by the FIDS and named for Sydney R. Huckle, general assistant at Stonington Island, who aided in the FIDS survey of the W side of George VI Sound in 1949.

Huddle Rocks 65°25'S, 64°59'W

Group of rocks lying 1.5 mi NW of Symington Islands, in the Biscoe Islands. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956–57. So named by the UK-APC because of the compact nature of the group.

Hudman Glacier 78°54'S, 84°12'W

Glacier between Marze Peak and Miller Peak at the S end of Sentinel Range, Ellsworth Mountains, flowing SSE to Minnesota Glacier. Mapped by USGS from surveys and USN air photos, 1957–59. Named by US-ACAN for Capt. Rayburn A. Hudman, USMC, who died in the crash of a P2V Neptune airplane at McMurdo Sound on Oct. 18, 1956.

Hudson, Cape 68°20'S, 153°45'E

The N cape of Mawson Peninsula, George V Coast. Land was sighted in this area, Jan. 19, 1840, by Lt. William L. Hudson in the USS *Peacock* of the USEE (1838–42) under Wilkes, who applied the name Cape Hudson. An analysis by B.P. Lambert and P.G. Law of the USEE chart, and of the photographs taken by USN Operation Highjump (1946–47) and ANARE (1959), suggests that the N cape of Mawson Peninsula is Wilkes' Cape Hudson. Not: Mys Voronina.

Hudson Island 66°39'S, 108°26'E

The largest of the Davis Islands, lying in the western portion of Vincennes Bay. Photographed by USN Operation Highjump, 1946–47, and first mapped from these photographs by G.D. Blodgett. First visited by Phillip Law and members of ANARE (*Magga Dan*), Feb. 19, 1960. Named by ANCA for Captain R. Hudson, leader of the helicopter team with ANARE.

Hudson Mountains 74°25'S, 99°30'W

A large group of low scattered mountains and nunataks of about 70 mi extent in W Ellsworth Land. They lie just E of Cranton Bay and Pine Island Bay at the E extremity of Amundsen Sea, and are bounded on the N by Cosgrove Ice Shelf and on the S by Pine Island Glacier. Discovered by members of the USAS in flights from the USS *Bear* in February 1940, and further delineated from air photos taken by USN OPHjp in December 1946. The full extent of the group was mapped by USGS from USN air photos of 1966. Named by US-SCAN after Capt. William L. Hudson, commander of the *Peacock* during USEE, 1838–42. The *Peacock*, accompanied by the *Flying Fish* under Lt. Walker, cruised along the edge of the pack to the N of this area for several days during the latter part of March 1839. Not: Noville Mountains.

Hudson Nunatak 70°54'S, 65°17'E

A nunatak 2.5 mi W of Mount Bewsher in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos. Named by ANCA for Dr. J.W. Hudson, medical officer at Mawson Station in 1966.

Hudson Ridge 83°47'S, 56°39'W

A narrow rock ridge 5 mi long, lying 4 mi N of Heiser Ridge in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956–66. Named by US-ACAN for Peter M. Hudson, aviation machinist at Ellsworth Station, winter 1958.

Hueca Point 58°26'S, 26°26'W

The westernmost point of Montagu Island, South Sandwich Islands. The name Punta Hueca (hollow point) was first used in Argentine hydrographic publications of 1953. Not: Hollow Point, Punta Roca.

Huemul Island 63°40'S, 60°50'W

Island lying off the N end of Trinity Island, in the Palmer Archipelago. Charted by the FrAE under Charcot, 1908–10. Named by the Chilean Antarctic Expedition of 1946–47 under Federico Guesalaga Toro. The Huemul, a South American deer, is one of the animals that appears on the national shield of Chile. Not: Islote Clavo, Megaptera Island.

Hueneme Glacier 85°49'S, 131°15'W

A glacier, 8 mi long, draining westward from Wisconsin Range to enter Reedy Glacier between Griffith Peak and Mickler Spur. Mapped by USGS from surveys and USN air photos, 1960–64. Named by US-ACAN for Port Hueneme, CA, location of the Construction Battalion Center which handles west coast cargo for USN Deep Freeze Operations.

Huevo, Isla: see Egg Island 63°41'S, 57°42'W

Huey Creek 77°36'S, 163°06'E

A glacial meltwater stream, 1.2 mi long, flowing S from an ice field W of Mount Falconer to the north-central shore of Lake Fryxell, in Taylor Valley, Victoria Land. The name was suggested by hydrologist Diane McKnight, leader of a USGS team that made extensive hydrological studies in the Lake Fryxell basin, 1987–94. The name acknowledges support received by the USGS field team in Taylor Valley from U.S. Navy Squadron VXE-6 and its twin engine UH-1N "Huey" helicopters.

Huffman, Mount 75°19'S, 72°16'W

A prominent mountain 4 mi NE of Mount Abrams, in the Behrendt Mountains, Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN for Jerry W. Huffman, scientific leader at Eights Station in 1963.

Hugershoff Cove 64°38'S, 62°23'W

Cove lying 2 mi NW of Beaupre Cove in Withelmina Bay, along the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1960 for Carl R. Hugershoff (1882–1941), German geodesist who designed the autcartograph, an instrument which first applied the principles of photogrammetry to air photos, in about 1921.

Huggins, Mount 78°17'S, 162°29'E

A large conical mountain, 3,735 m, surmounting the heads of Allison, Dale, and Potter Glaciers in the Royal Society Range. Discovered by the BrNAE (1901–04) which named it for Sir William Huggins, President of the Royal Society, 1900–05.

Hugger Peak 79°07'S, 84°41'W

A sharp snow-covered peak, 1,580 m, in the N part of Anderson Massif, in the Heritage Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for John Q. Hugger, storekeeper USNR, who assisted in various construction projects at McMurdo Station during USN OpDFrz 1966.

Hughes, Mount 79°31'S, 157°23'E

A mountain, 2,250 m, midway between Mount Longhurst and Tentacle Ridge in the Cook Mountains. Discovered by the BrNAE (1901–04) and named for J.F. Hughes, an Honorary Secretary of the Royal Geographical Society, who helped in the preparation for the expedition.

Hughes Bay 64°13'S, 61°20'W

A bay lying between Cape Sterneck and Cape Murray along the W coast of Antarctic Peninsula. The name has appeared on maps for over 100 years, and commemorates Edward Hughes, master of the *Sprightly*, an Enderby Brothers sealing vessel which explored in this area in 1824–25. Not: Hughes Gulf.

Hughes Bluff 75°24'S, 162°12'E

A conspicuous rock and ice bluff (310 m) along the S side of David Glacier, 6 mi W of Cape Reynolds, in Victoria Land. Mapped by USGS from surveys and U.S. Navy tricamera aerial photography, 1957–62. Named by US-ACAN for Garrett A. Hughes, USARP researcher (cosmic radiation) at McMurdo Station in 1966.

Hughes Glacier 77°44'S, 162°27'E

Small alpine glacier flowing toward Lake Bonney in Taylor Valley from the Kukri Hills on the south, in Victoria Land. Mapped by the Western Geological Party led by Taylor of the BrAE (1910–13) and named for Prof. McKenny Hughes, geologist, of Cambridge.

Hughes Gulf: see Hughes Bay 64°13'S, 61°20'W

Hughes Ice Piedmont 70°12'S, 62°15'W

The ice piedmont between Cordini Glacier and Smith Inlet on the east coast of Palmer Land. Named by US-ACAN for Terence J. Hughes, USARP glaciologist at Deception Island and McMurdo Sound during 1970–71, and Deception Island, 1973–74.

Hughes Island 70°44'S, 167°39'E

Small ice-covered island, the easternmost of the Lyall Islands, lying just outside the E part of the entrance to Yule Bay, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–63. Named by US-ACAN for Lt. Ronald M. Hughes, USN, Medical Officer at McMurdo Station, 1966.

Hughes Peninsula 71°52'S, 100°35'W

Ice-covered peninsula about 18 mi long, lying W of Henry Inlet on the N side of Thurston Island. Plotted from air photos taken by USN OpHjp in December 1946. Named by US-ACAN for Jerry Hughes, photographer's mate with the USN Bellingshausen Sea Expedition in February 1960, who took aerial photographs of Thurston Island from helicopters.

Hughes Point 73°30'S, 94°16'W

Steep rock point on the W side of the terminus of Exum Glacier, in the Jones Mountains. Mapped by the University of Minnesota-Jones Mountains Party, 1960–61, and named by them for Wayne B. Hughes, Asst. USARP Representative at McMurdo Station, 1960–61.

Hughes Range 84°30'S, 175°30'E

A high massive N-S trending range surmounted by six prominent summits, of which Mount Kaplan (4,230 m) is the highest, located E of Canyon Glacier in the Queen Maud Mountains and extending 45 mi from the confluence of Brandau and Keltie Glaciers in the S, to the Giovinco Ice Piedmont in the north. Discovered and photographed by R. Admiral Byrd on the Baselaying Flight of Nov. 18, 1929, and named by US-ACAN, on the recommendation of R. Admiral Byrd, for Charles Evans Hughes, Secretary of State and Chief Justice of the U.S., and adviser and counselor of Byrd.

Hugh Mitchell Peak: see Mitchell Peak 76°25'S, 147°22'W

Hugi Glacier 66°11'S, 65°07'W

Glacier flowing northward into the head of Holtedahl Bay, on the W coast of Graham Land. Charted by the BGLE under Rymill, 1934–37. Named by the UK-APC in 1959 for Franz J. Hugi (1796–1855), Swiss teacher, the “father of winter mountaineering,” and author of two pioneer works on glacier phenomena.

Hugo Island 64°57'S, 65°45'W

An isolated ice-covered island 1 mi long, with several rocky islets and pinnacles off its E side, located off the W side of Antarctic Peninsula, c. 40 mi SW of Cape Monaco, Anvers Island. Probably discovered by C.J. Evensen, captain of the *Hertha*, who explored along the W coast of Antarctic Peninsula in 1893, because an unnamed island of similar extent and location first appeared on the charts at that time. The island was charted by the FrAE, 1903–05, under Dr. J.B. Charcot, who named it for the French poet and novelist Victor Hugo, grandfather of Charcot's first wife, nee Jeanne Hugo. Not: Victor Hugo Island.

Huidobro, Isla: see Alpha Island 64°19'S, 63°00'W

Huie Cliffs 83°19'S, 51°03'W

Steep rock cliffs rising above May Valley and forming the NW edge of Saratoga Table, Forrestal Range, in the Pensacola Mountains (q.v.). Named by US-ACAN for Carl Huie, technician in Antarctica, 1976–77, and geologist with USGS in the Pensacola Mountains, 1978–79.

Huinca, Isla: see Wyatt Island 67°20'S, 67°40'W

Huinga, Cape 82°31'S, 165°10'E

A bold cape overlooking the Ross Ice Shelf, at the N side of the mouth of Robb Glacier. The Southern Party of the NZGSAE (1959–60) assembled near the cape in November 1959, thus suggesting the name. Huinga is the Maori word for a gathering.

Huisvik Hafen: see Husvik Harbor 54°10'S, 36°40'W

Huitfeldt Point 65°59'S, 64°44'W

Point SE of Vorweg Point on the SW side of Barilari Bay, on the W coast of Graham Land. Charted by the BGLE under Rymill, 1934–37. Named by the UK-APC in 1959 for Fritz Huitfeldt, Norwegian pioneer ski exponent, author of one of the earliest skiing manuals, and designer of the Huitfeldt ski binding, for long the standard binding.

Hukuro Cove: see Fukuro Cove 69°12'S, 39°39'E

Hulcombe Ridge 70°24'S, 66°15'E

A rock ridge, extending 1.5 mi in a N-S direction, situated 3 mi W of Wignall Peak in the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1956. Named by ANCA for G.C. Hulcombe, diesel mechanic at Davis Station in 1962.

Huldreskorvene Peaks 72°00'S, 6°05'E

A group of summit peaks and crags just N of Skorvehalsen Saddle and W of Tussenobba Peak in the Mühlig-Hofmann Mountains, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956–60) and named Huldreskorvene.

Huldreslottet Mountain 72°58'S, 3°48'W

A prominent ice-free mountain that is the southernmost summit in the Borg Massif, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949–52) and named Huldreslottet (the fairy castle). Not: Pik Shpis.

Hull Bay 74°55'S, 137°40'W

An ice-filled bay, about 25 mi wide, fed by Hull Glacier, which descends into it between Lynch Point and Cape Burks, on the coast of Marie Byrd Land. Discovered by the USAS, 1939–41. The bay derives its name from Hull Glacier, which is named for Secretary of State Cordell Hull. Not: Cordell Hull Bay.

Hull Glacier 75°05'S, 137°15'W

A glacier, about 35 mi long, flowing NW between Mount Giles and Mount Gray into Hull Bay, in Marie Byrd Land. Discovered by the USAS (1939–41) and named for Secretary of State Cordell Hull. Not: Cordell Hull Glacier.

Hulot, Presqu'île: see Hulot Peninsula 64°29'S, 62°44'W

Hulot Peninsula 64°29'S, 62°44'W

Rugged peninsula forming the SW extremity of Brabant Island, in the Palmer Archipelago. First charted by the FrAE, 1903–05, and named by Charcot for Baron Hulot. Not: Presqu'île Hulot.

Hulshagen, Mount 72°31'S, 31°16'E

Mountain, 2,100 m, standing 1 mi NW of Mount Bastin on the N side of the Belgica Mountains. Discovered by the BelgAE, 1957–58, under G. de Gerlache, who named it for Charles Hulshagen, vehicle mechanic with the expedition.

Hulth, Mount 66°41'S, 64°11'W

Peak, 1,470 m, with precipitous black cliffs on its SE side, standing at the W side of Cabinet Inlet and S of the mouth of Friederichsen Glacier on the E coast of Graham Land. During 1947 it was charted by the FIDS and photographed from the air by the RARE under Ronne. Named by the FIDS for J.M. Hulth, Swedish polar bibliographer.

Humann Point 64°24'S, 62°41'W

Point forming the N side of the entrance to Duperré Bay on the W side of Brabant Island, in the Palmer Archipelago. First charted by the FrAE, 1903–05, and named by Charcot for Vice-Admiral Humann, French Navy.

Humble, Mount 67°40'S, 49°29'E

Highest mountain, 1,450 m, in the Raggatt Mountains. Plotted from air photos taken by ANARE in 1956. Named by ANCA for J. Humble, cosmic ray physicist at Mawson in 1960.

Humble Island 64°46'S, 64°06'W

Small rocky island lying 0.4 mi SE of Norsel Point in Arthur Harbor, off the SW coast of Anvers Island in the Palmer Archipelago. Surveyed by the FIDS in 1955. So named by the UK-APC in 1956 because the island seems to be squeezed insignificantly between Litchfield Island and the coast of Anvers Island.

Humble Point 61°11'S, 54°08'W

Low point 5 mi SW of Cape Lloyd on the W coast of Clarence Island, South Shetland Islands. The feature is called "Punta Baja" (low point) on Argentine government charts of the 1950's, but that descriptive name is repetitive. The UK-APC recommended translation of "Punta Baja" to Humble Point in 1971. That form has been approved to avoid duplication. Not: Punta Baja.

Humboldt Graben 71°45'S, 11°55'E

A glacier-filled valley, 20 mi long, trending N-S between the Humboldt Mountains and the Petermann Ranges in Queen Maud Land. The feature was discovered and mapped by the GerAE under Ritscher, 1938–39, who named it in association with the adjacent Humboldt Mountains. Not: Humboldtsökket.

Humboldt Mountains 71°45'S, 11°30'E

A group of mountains immediately W of the Petermann Ranges, forming the westernmost portion of the Wohlthat Mountains in Queen Maud Land. Discovered and mapped by the GerAE under Ritscher, 1938–39, who named them for Alexander von Humboldt, famed German naturalist and geographer of the first half of the nineteenth century. Not: Alexander Humboldt Mountains, Alexander v. Humboldt-Gebirge.

Humboldtsökket: see Humboldt Graben 71°45'S, 11°55'E

Humic Lake 54°15'S, 36°30'W

A small relatively shallow lake located SE of Burnet Cove on the E side of Maiviken, South Georgia. Named by the UK-APC from the dark-stained water caused by humic acid derived from the leaching of decaying peat on nearby slopes.

Hum Island 67°21'S, 59°38'E

Small island in the William Scoresby Archipelago, lying between the W extremities of Bertha Island and Islay. Discovered and named by DI personnel on the *William Scoresby* in February 1936. Not: Sundholmen.

Hummel, Mount 74°28'S, 131°19'W

A snow-capped summit that rises above the east-central portion of Grant Island, off the coast of Marie Byrd Land. Discovered and first charted from the USS *Glacier* on Feb. 4, 1962. Named by US-ACAN for Lt. (j.g.) William T. Hummel, USNR, helicopter pilot aboard *Glacier* at the time of discovery.

Hummer, Mount 83°17'S, 50°06'W

A snow-covered, bluff-type mountain on the SW side of the head of Chambers Glacier, NE Saratoga Table, in the Forrestal Range, Pensacola Mountains (q.v.). Named by US-ACAN in 1979 after Dr. Michael G. Hummer, M.D., Oklahoma Medical Research Foundation, a researcher in biomedicine and the physician at South Pole Station, winter party 1975.

Hummer Point 74°22'S, 110°15'W

The E point of ice-covered Gurnon Peninsula, an eastern arm of Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from surveys and USN aerial photographs, 1959–66. Named by US-ACAN in 1977 after Dr. Michael G. Hummer.

Hummock Island 65°53'S, 65°29'W

Island 1 mi long, lying 4 mi W of Larrouy Island and 5.5 mi NW of Ferin Head, off the W coast of Graham Land. Discovered and named by the BGLE, 1934–37, under Rymill. Not: Isla Mogote.

Hummock Island: see Heywood Island 62°20'S, 59°41'W

Hump, The 64°21'S, 63°15'W

Conspicuous dome-shaped summit on the N shore of Lapeyrère Bay, northern Anvers Island, in the Palmer Archipelago. The name appears on a chart based on a 1927 survey by DI personnel on the *Discovery*, but may reflect an earlier naming. Not: Monte Joroba, Pico Joroba.

Humpback Rocks 54°07'S, 36°38'W

Small group of rocks lying 0.25 mi N of Cape Saunders, off the N coast of South Georgia. The SGS, 1951–52, reported that the descriptive name Knølrokset (humpback rocks) has been used for this feature by the whalers and sealers at South Georgia. An English form of the name, Humpback Rocks, was recommended by the UK-APC in 1954. Not: Knølrokset.

Humphrey Lloyd, Mount 72°19'S, 169°27'E

A conspicuous mountain (2,975 m) which forms a substantial part of the divide between the heads of Towles and Manhaul Glaciers, in the Admiralty Mountains, Victoria Land. Discovered in 1841 by Sir James Clark Ross. He named this feature for the Rev. Dr. Humphrey Lloyd of Trinity College, Dublin, an active member of the British Association which promoted interest in magnetic and meteorological research in the Antarctic. Not: Mount Lloyd.

Humphreys Hill: see Humphreys Ice Rise 67°14'S, 66°50'W

Humphreys Ice Rise 67°14'S, 66°50'W

An ice rise in Müller Ice Shelf in the SW part of Lallemand Fjord, Loubet Coast. Photographed from the air by FIDASE, 1956–57, and surveyed by FIDS, 1956–59. In association with the names of glaciologists grouped in this area, named "Humphreys Hill" by UK-APC after William J. Humphreys (1862–1949), an American meteorologist and specialist on the effects of ice in the atmosphere; joint author with W.A. Bently (Bently Crag, q.v.) of *Snow Crystals*, New York, 1931. Renamed Humphreys Ice Rise to

reflect the true nature of the feature. Not: Humphreys Hill.

Humphries Glacier 72°51'S, 168°50'E

Steep tributary glacier just east of Ingham Glacier, flowing generally southwestward to join Borchgrevink Glacier northwestward of Mount Prior, in the Victory Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for John G. Humphries, New Zealand ionospheric scientist at Hallett Station, 1957.

Humphries Heights 65°03'S, 63°52'W

Series of elevations extending SW from False Cape Renard to Deloncle Bay, on the W coast of Graham Land. Charted by the BelgAE under Gerlache, 1897–99. Named by the UK-APC in 1959 for Col. G.J. Humphries, Deputy Director of Overseas Surveys.

Hump Island 67°36'S, 62°53'E

Island just E of the East Arm of Horseshoe Harbor in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition, 1936–37. Rephotographed by USN OPHjp, 1946–47. So named by ANARE because of its humped appearance from ground level.

Hump Passage 85°27'S, 170°12'W

A wide gap just SE of Barnum Peak, through which Liv Glacier emerges from the polar plateau. It was originally referred to as the "Hump" by R. Admiral Richard E. Byrd and is the pass over which he made his historic South Pole flight of 1929. The feature was observed by the Southern Party of NZGSAE (1961–62) who recommended perpetuation of a form of the original name.

Humps Island 63°59'S, 57°25'W

Island 0.5 mi long with two summits near the W end, situated 4 mi SSE of the tip of The Naze, a peninsula of N James Ross Island, which lies S of the NE end of Antarctic Peninsula. Discovered by the SwedAE under Nordenskjöld, 1901–04. This descriptive name was recommended by the UK-APC in 1948 following a survey of the area by the FIDS in 1945. Not: Isote Giboso.

Hundebugten: see Hound Bay 54°22'S, 36°13'W

Hunt, Mount 67°07'S, 144°18'E

A dome-shaped mountain about 520 m high, surmounting the promontory which terminates in Cape De la Motte. Discovered by the AAE (1911–14) under Douglas Mawson, who named it for H.A. Hunt, Dir. of the Commonwealth Bureau of Meteorology.

Hunt, Mount: see Hunt Mountain 82°05'S, 159°16'E

Hunt Bluff 74°36'S, 111°52'W

A steep rock and ice bluff about 3 mi long, standing 2 mi S of Jeffrey Head on the W side of Bear Peninsula, Walgreen Coast, Marie Byrd Land. First photographed from the air by USN OPHjp in January 1947. Named by US-ACAN after Lt. Robert B. Hunt, USNR, medical officer with the Byrd Station winter party, 1966.

Hunter, Cape 66°57'S, 142°21'E

A rocky promontory on the W shore of Commonwealth Bay, 8 mi W of Cape Denison. Discovered in 1912 and explored the following year by the AAE under Douglas Mawson, who named it for John G. Hunter, chief biologist of the expedition.

Hunter, Mount 64°05'S, 62°24'W

Mountain, 1,410 m, standing 4 mi WSW of Duclaux Point on Pasteur Peninsula, Brabant Island, in the Palmer Archipelago. Shown on an Argentine government chart in 1953, but not named. Photographed by Hunting Aerosurveys Ltd. in 1956–57, and mapped from these photos in 1959. Named by the UK-APC for John Hunter (1728–93), British surgeon, comparative anatomist and physiologist, who revolutionized the approach to surgery as an exact science in relation to other aspects of medicine.

Hunter Glacier 71°44'S, 163°00'E

A tributary glacier, 7 mi long, draining westward from central Lanterman Range in the Bowers Mountains and entering Rennick Glacier at Mount Lugering. Mapped by USGS from surveys and U.S. Navy air photos, 1960–62. Named by US-ACAN for Lt. Cdr. William G. Hunter, executive and operations officer with the McMurdo Station winter party in 1964.

Hunt Glacier 76°52'S, 162°25'E

A small, deeply entrenched glacier on the E coast of Victoria Land, entering Granite Harbor N of Dreikanter Head. Mapped by the BrAE, 1910–13. Probably named for H.A. Hunt, Australian meteorologist who assisted in writing the scientific reports of the BrAE, 1907–09.

Hunt Island: see Pampa Island 64°20'S, 62°10'W

Hunt Mountain 82°05'S, 159°16'E

Mountain, 3,240 m, which stands in the N part of the Holyoake Range and is its highest point. Mapped by the southern party of the NZGSAE (1960–61) and named for Capt. P.J. Hunt, RE, leader of the party. Not: Mount Hunt.

Hunt Nunataks 70°11'S, 64°53'E

A linear group of nunataks, 2 mi long, lying just E of Mount Béchervaise in the Athos Range, Prince Charles Mountains. Plotted by ANARE from air photos obtained in 1965. Named by ANCA for P. Hunt, senior helicopter pilot with the Prince Charles Mountains survey party in 1969.

Hunt Peak 67°18'S, 68°02'W

Triangular rock peak, 610 m, marking the N side of the entrance to Stonehouse Bay on the E coast of Adelaide Island. Discovered and first roughly surveyed in 1909 by the FrAE under Charcot. Resurveyed in 1948 by the FIDS, who named the point marked by this peak for Sgt. Kenneth D. Hunt, mechanic for the expedition's Norseman airplane in 1950. Further survey in 1957–58 by the FIDS showed no definable point in the vicinity and the name was transferred to the peak. Not: Hunt Point.

Hunt Point: see Hunt Peak 67°18'S, 68°02'W

Huntress Glacier 62°41'S, 60°17'W

Glacier flowing into the head of False Bay, Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 after the American schooner *Huntress* (Capt. Christopher Burdick) from Nantucket, which visited the South Shetland Islands in 1820–21 in company with the *Huron* of New Haven, CT.

Hunt Spur 85°59'S, 146°50'W

A rugged spur descending from Mount Warden along the NW face of Watson Escarpment. Mapped by USGS from ground surveys and USN air photos, 1960–63. Named by US-ACAN for Glenn C.

Hunt, aviation electronics technician of USN Squadron VX-6 who participated in Operation Deep Freeze for 5 years.

Huon Bay 63°23'S, 58°00'W

Bay about 8 mi wide between Cape Ducorps and Cape Legoupil, along the N coast of Trinity Peninsula. A French expedition under Capt. Jules Dumont d'Urville, 1837–40, originally gave the name Huon to a cape in this area after Félix Huon de Kermadec, a member of the expedition. A survey by the FIDS in 1946 did not identify the cape but applied the name to this bay which lies in the same area.

Hurd Peninsula 62°41'S, 60°23'W

Peninsula between South Bay and False Bay on the S coast of Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1961 for Capt. Thomas Hurd, RN, second Hydrographer to the British Admiralty, 1808–23, who instituted a regular system of nautical surveys, and under whose authority Lt. E. Bransfield's 1820 survey of the Bransfield Strait area was published in November 1822.

Hurds Island: see Heard Island 53°06'S, 73°30'E

Hurley, Cape 67°36'S, 145°18'E

An ice-covered coastal point marking on the east the mouth of the depression occupied by the Mertz Glacier. Discovered by the AAE (1911–14) under Douglas Mawson, who named it for James F. Hurley, official photographer of the expedition.

Hurley, Mount 66°17'S, 51°21'E

Snow-covered massif with steep bare slopes on the W side, standing 7 mi S of Cape Ann and 3 mi S of Mount Bischoe. Discovered in January 1930 by the BANZARE, 1929–31, under Mawson, who named it for Capt. James Francis (Frank) Hurley, photographer with the expedition. Hurley also served with the AAE under Mawson, 1911–14, and a British expedition under Shackleton, 1914–17.

Hurley Glacier 67°34'S, 68°32'W

A glacier between Mount Gaudry and Mount Liotard, flowing E into Ryder Bay, Adelaide Island. Named by the UK-APC in 1977 after Alec J. Hurley, BAS mechanic, Halley Station, 1975–76, and Rothera Station, 1976–77.

Huron Glacier 62°38'S, 60°02'W

Glacier flowing into Moon Bay, Livingston Island, in the South Shetland Islands. Named by the UK-APC in 1958 after the American ship *Huron* (Capt. John Davis) of New Haven, CT, which visited the South Shetland Islands in 1820–21 and 1821–22.

Hurricane Heights 76°44'S, 160°40'E

The irregular, mainly ice-free heights which rise to c. 2,000 m at the S side of the head of Towle Valley, in the Convoy Range, Victoria Land. The name was applied by a 1989–90 NZARP field party to describe the windy aspect of this upland area.

Hurst Bay 63°57'S, 57°28'W

A small bay on the E side of The Naze, James Ross Island. Following hydrographic work in the area from HMS *Endurance*, 1981–82, named by the UK-APC after Cdr. William E. Hurst, RN, the ship's navigating officer.

Hurst Peak 79°34'S, 84°35'W

A prominent rock peak, 1,790 m, at the S end of Webers Peaks in the Heritage Range. Named by the University of Minnesota Geological Party, 1963–64, for aviation machinist James E. Hurst, crew member aboard the LC-47 which made the first 1963–64 flight to the Ellsworth Mountains.

Husdal 54°11'S, 36°43'W

A short valley running WSW from the head of Husvik Harbor, South Georgia. Named by UK-APC in the Norwegian form "Husdal" (house valley) in association with the disused Husvik whaling station at the head of Husvik Harbor.

Hushen Glacier 71°26'S, 72°52'W

A glacier on the N side of Beethoven Peninsula, Alexander Island, flowing NE and joining Reuning Glacier in discharging into S Mendelssohn Inlet. Mapped by USGS from U.S. Navy aerial photographs taken 1967–68 and from Landsat imagery taken 1972–73. Named by US-ACAN for W. Timothy Hushen, Director, Polar Research Board, National Academy of Sciences, 1981–88.

Husky Dome 84°54'S, 176°17'E

A snow dome rising to 3,580 m, marking the highest point of Husky Heights, between the heads of Brandau Glacier and Ramsey Glacier in the Queen Maud Mountains. Named by NZGSAE, 1961–62, after their Husky dogs which they drove to the summit of this feature.

Husky Dome: see Husky Massif 71°00'S, 65°09'E

Husky Heights 84°53'S, 176°00'E

Relatively flat, ice-covered heights 4 mi SE of Haynes Table, overlooking the head of Brandau Glacier in the Queen Maud Mountains. Named by US-ACAN in association with Husky Dome (q.v.), the highest point on these heights.

Husky Massif 71°00'S, 65°09'E

A rock outcrop (2,100 m) about 2.5 mi long, standing 6.5 mi SW of Mount Bewsher in the Aramis Range, Prince Charles Mountains. First sighted from Mount Bewsher by an ANARE field party in January 1957 and named "Husky Dome" to commemorate the sledge dogs used by the party. The earlier name was amended to Husky Massif by ANCA in 1970 and is considered more descriptive. Not: Husky Dome.

Husky Pass 71°40'S, 163°34'E

A pass between Lanterman Range and Molar Massif in the Bowers Mountains, located at the head of Sledgers Glacier and an unnamed tributary, leading to Leap Year Glacier. Named by the NZGSAE, 1963–64, for the great efforts made here by dog teams in hauling out of the Rennick Glacier watershed into that of the Lillie Glacier.

Hussey, Mount 72°46'S, 167°31'E

A mountain (2,790 m) rising from the spur at the head of Gruendler Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960–64. Named by US-ACAN for Keith M. Hussey, geologist at McMurdo Station, 1966–67.

H. U. Sverdrupfjella: see Sverdrup Mountains 72°20'S, 1°00'E

Husvik Harbor 54°10'S, 36°40'W

The southernmost of three harbors at the head of Stromness Bay, along the N coast of South Georgia. The name dates back to about 1912, and was probably given by Norwegian whalers who frequented the harbor and established a whaling station at its head. Not: Busen Fjord, Huisvik Hafen.

Hutago, Mount: see Futago, Mount 69°12'S, 39°44'E

Hutcheson Nunataks 76°17'S, 143°27'W

A small group of nunataks along the N side of Balchen Glacier, about midway between the Phillips Mountains and Abele Nunatak, in Marie Byrd Land. Discovered and mapped by the USAS, 1939–41. Named by US-ACAN for Guy Hutcheson, radio engineer with the ByrdAE 1933–35.

Hutchins Nunataks 75°39'S, 68°10'W

A group of nunataks rising to c. 1,200 m, 12 mi NNE of Mount Leek, Hauberg Mountains, in eastern Ellsworth Land. Mapped by USGS from surveys and USN aerial photographs, 1961–67. Visited in December 1977 by a USGS geological party, led by P.D. Rowley, and named after Lt. Cdr. John R. Hutchins, USN, command pilot of an LC-130 aircraft in support of the party.

Hutchinson Island 76°47'S, 148°53'W

An ice-covered island 15 mi long, lying 10 mi E of Vollmer Island in Marshall Archipelago. Mapped by USGS from surveys and U.S. Navy, air photos, 1959–65. Named by US-ACAN for Lt. (j.g.) Peter A. Hutchinson, USN, Operations Officer aboard USS *Glacier* along this coast, 1961–62.

Hutchison Hill 66°56'S, 65°42'W

Hill 1.5 mi NE of Lampitt Nunatak on Avery Plateau, Graham Land. This hill is one of the few features on the plateau that is readily visible from Darbel Bay. Named by the UK-APC in 1960 for Sir Robert Hutchison, English physician who made outstanding contributions to knowledge of the scientific principles of nutrition.

Hut Cove 63°24'S, 56°59'W

Small cove in the E part of Hope Bay between Seal Point and Grunden Rock, at the NE end of Antarctic Peninsula. Discovered by a party under J. Gunnar Andersson of the SwedAE, 1901–04, who wintered at Hope Bay in 1903. So named in 1945 by the FIDS because they, like the SwedAE, established a base hut on the S shore of this cove. Not: Caleta Choza.

Hut Point 77°51'S, 166°38'E

Small point lying 1 mi NW of Cape Armitage, at the S end of Hut Point Peninsula, Ross Island. Discovered and named by the BrNAE (1901–04) under Scott, who established their hut on the point.

Hut Point Peninsula 77°46'S, 166°51'E

Long narrow peninsula from 2 to 3 mi wide and 15 mi long, projecting SW from the slopes of Mount Erebus on Ross Island. The BrNAE (1901–04) under Scott built its hut on Hut Point at the S end of the peninsula. Members of the BrAE (1910–13) under Scott, wintering on Cape Evans and often using the hut during their journeys, came to refer to this feature as Hut Point Peninsula. Not: Cape Armitage Promontory, Winter Quarters Peninsula.

Hutton Cliffs 77°44'S, 166°51'E

Cliffs on the W side of Hut Point Peninsula on Ross Island, about 2 mi N of Ford Rock. Discovered by the BrNAE (1901–04) and named for Captain Hutton of the Canterbury Museum, Christchurch, New Zealand.

Hutton Mountains 74°12'S, 62°20'W

A group of mountains in SE Palmer Land, bounded on the SW by Johnston Glacier, on the NW by Squires Glacier, on the N by Swann Glacier, and on the E by Keller Inlet. The mountains were observed and photographed from the air by RARE, 1947–48. They were mapped by USGS from surveys and USN air photos, 1961–67. Named by US-ACAN after James Hutton (1726–97), Scottish geologist. Not: Cordón Trenque Lauquen.

Hutto Peak 79°17'S, 85°53'W

A sharp peak, 1,620 m, standing just below the Founders Escarpment on the ridge separating the upper portions of Gowan and Spletstoesser Glaciers, in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961–66. Named by US-ACAN for Chief Yoeman Grey H. Hutto, USN, a participant in Deep Freeze operations in two austral seasons in Antarctica, 1964–66.

Hutt Peak 76°01'S, 132°39'W

A small but sharply rising snow-covered peak that rises above the general level of the central part of the Mount Bursey massif, in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959–66. Named by US-ACAN for Charles R. Hutt of the U.S. Coast and Geodetic Survey, a geomagnetist-seismologist at South Pole Station, 1970.

Huxley, Mount 77°51'S, 162°52'E

A mountain (1,155 m) between lower Condit Glacier and Descent Glacier, marginal to Ferrar Glacier, at the N end of Royal Society Range, Victoria Land. Named in 1992 by US-ACAN after Leonard Huxley, editor of *Scott's Last Expedition*, two volumes, London, 1913; Volume I being the journals of Capt. R.F. Scott, RN; Volume II being the reports of journeys and scientific work undertaken by E.A. Wilson and the surviving members of the expedition. The work has long been acclaimed among narrative reports to come out of the heroic era. Not: Mount Hoxley.

Hvalbugten: see Whale Bay 60°44'S, 45°11'W

Hval Bukta: see Whales, Bay of 78°30'S, 164°20'W

Hvit Öya: see White Island 66°44'S, 48°35'E

Hyatt, Isla: see Laktionov Island 65°46'S, 65°46'W

Hyatt, Mount 74°53'S, 64°47'W

Mountain in the southern part of the Latady Mountains, about 5 mi NW of Schmitt Mesa, in Palmer Land. Mapped by USGS from

surveys and USN air photos, 1961–67. Named by US-ACAN for Gerson Hyatt, builder with the McMurdo Station winter party in 1967, who assisted in building the USARP Plateau Station at 79°15'S, 40°30'E.

Hyatt Cove 65°05'S, 63°32'W

A cove at the W side of Sonia Point in Flandres Bay, Danco Coast, Graham Land. Discovered and roughly mapped by the BelgAE, 1897–99. Mapped in greater detail in the 1950's by Argentine, British and Chilean expeditions. Named by the UK-APC in 1986 after Raymond H. Hyatt of the Cartographic Section, Foreign and Commonwealth Office, 1949–85 (Head, 1970–85), with responsibility for preparing UK-APC maps.

Hyde Glacier 79°48'S, 83°42'W
