Species of Carabidae (Insecta: Coleoptera) in University of Arkansas

Insect Collection

By Robert T. Allen

Entomology Department

Since the early 1960's the University of Arkansas Insect Collection (UAIC) has had a formal curator and has enjoyed support from the Entomology Department of the Arkansas Agricultural Experiment Station. In recent years, 1967 to date, in addition to E. P. Rouse, the curator, two professional taxonomists, Rodney Kirkton (deceased) and Robert T. Allen, have served on the staff. The collection has grown rapidly and is now an important part of the research and teaching program in the Department of Entomology.

In 1969 a very valuable addition was made to the collection by the purchase of part of the private collection of Carabidae belonging to Dr. S. L. Straneo of Milano, Italy. This added to the UAIC approximately 4,000 species representing most of the major tribes of Carabidae from throughout the world. The purchase was made possible by a personal gift from Dr. David Rockefeller and matching funds from the Arkansas Agricultural Experiment Station.

In addition to the Straneo collection the author has donated his private collection. During the past five years the author has also been able to collect extensively in the Arkansas, Louisiana, and Mississippi area as well as in the Latin American countries of Bolivia and Panama. These collections have now been curated and tentatively assigned to taxa so that they are ready for more detailed study by specialists.

Two other rather large collections are in the UAIC. One collection is from South Vietnam and is pinned but not sorted, and the second is from Thailand. The specimens from Thailand have not been prepared for study.

In order to help specialists throughout the world ascertain what carabid material is available for study in the UAIC, this list of species has been prepared.

In using this list the following points should be noted:

1. The first list of species represents a collection that is curated by the author.
2. The second list of species represents a reference collection that is curated by Mr. E. P. Rouse.
3. Holotypes now in the collection of the UAIC are listed separately.

4. Paratype species. Series that contain paratype material are underlined.
5. NIC-The abbreviation NIC stands for Not In Catalogue indicating that the taxa in question could not be found in the Junk-Schenking Coleopterorum Catalogue.
6. ??-Question marks indicate that there is some question about the taxa. This could be spelling, nomenclature, status, etc.

Loan Policy for the UAIC

1. All holotypes and allotypes from the loaned material must be returned.
2. Permanent retention of material is permitted only on definite arrangement.
3. Unless otherwise stipulated loans are made for a period of one year.
4. Exchanges and other transactions are permitted only by definite arrangement.
5. Determination labels on all specimens will be greatly appreciated.
6. All specimens are sent in good condition, unless stated otherwise.

Acknowledgements

The author would like to acknowledge the tremendous amount of work done by the following students: Sharon Bacon, Phyllis Flanigan, and Clara Hunton. The author would also like to thank Petra Pershall for typing the stencils and checking the spelling of the taxa.
