

## Checklist of the mosses of sub-Saharan Africa

Brian O'Shea

141 Fawnbrake Avenue, London SE24 0BG, U.K.

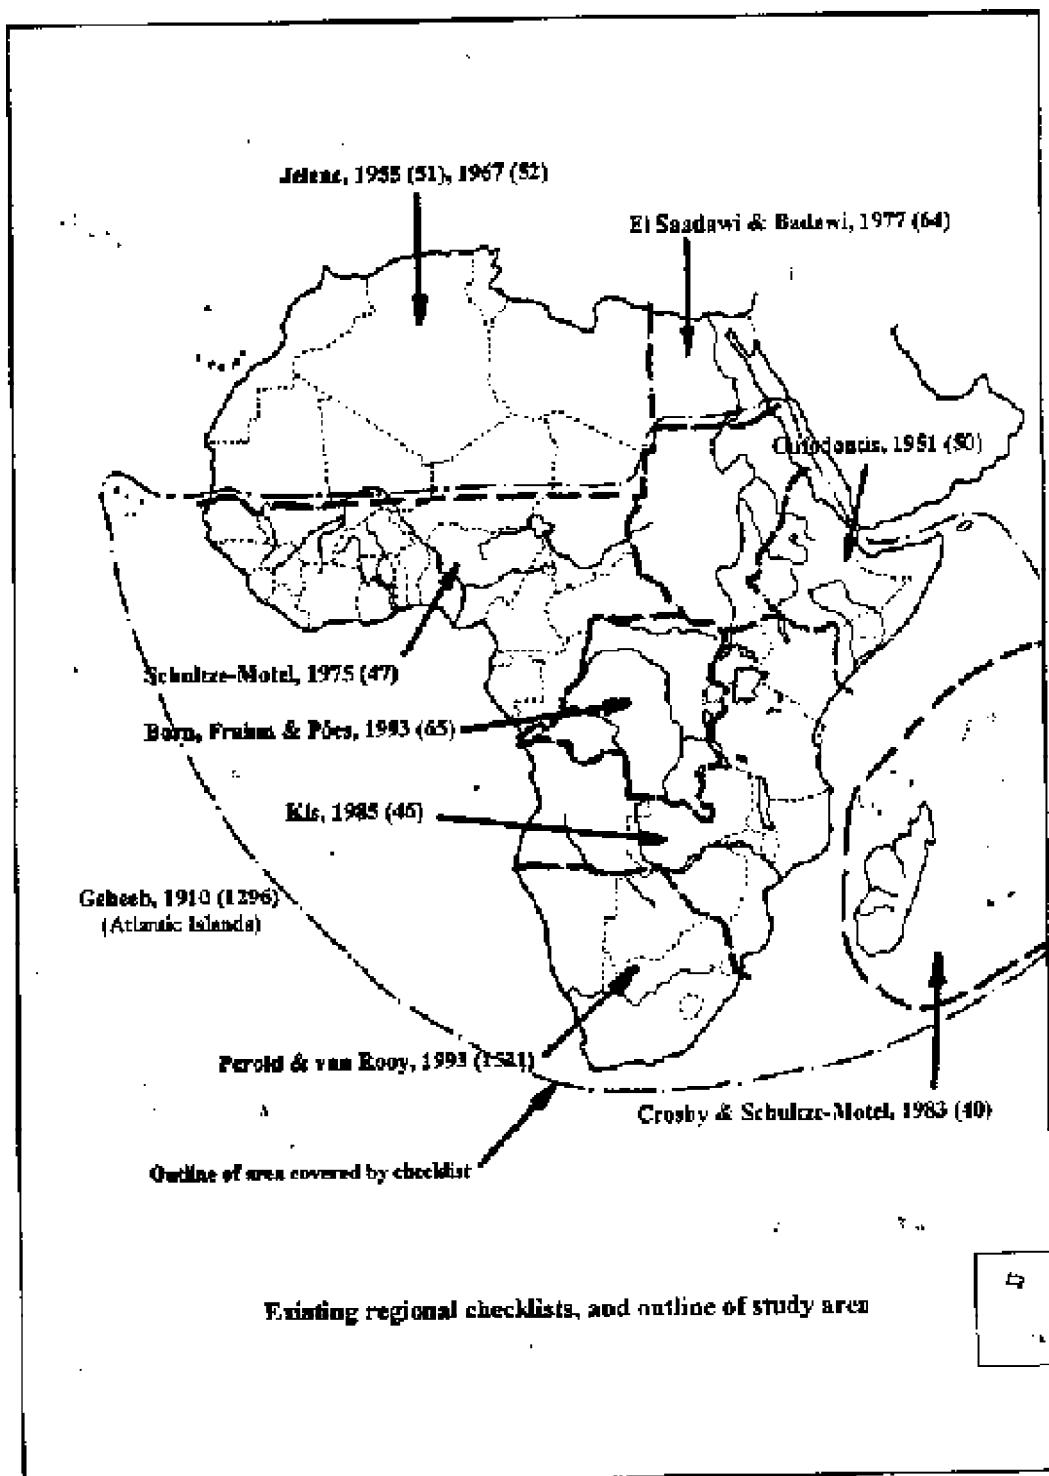

**Abstract.** 2939 moss taxa are listed for sub-Saharan Africa and adjacent islands, with distribution by country. Each distribution record is supported by a literature reference. The following new combinations are made: *Calyptrochaeta cristata* (Hedw.) O'Shea, *Groutiella elimbata* (Thér.) O'Shea, *Meiothecium undulatum* (Ren. & Card.) O'Shea, *Orthodontium ruwenzorensis* (Thér. & Nav.) O'Shea, *Pohlia lacouturei* (Thér.) O'Shea, *Sematophyllum corticolum* (Aongstr.) O'Shea, *Sematophyllum dixonii* (Thér.) O'Shea, *Sematophyllum nanopyxis* (Geh.) O'Shea, *Sematophyllum rigescens* (Card.) O'Shea, and *Thamnobryum malgachum* (Card.) O'Shea.

### ***Introduction***

Identifying mosses collected on the BBS Tropical Bryology Group expedition to Mulanje Mountain, Malawi, in 1991 proved difficult because the available literature was so diverse and it was difficult to know which taxa were worth pursuing in the literature as possible identifications for our material. Although there was a great deal of expertise available, there seemed no published view available of the recorded bryoflora. This checklist is intended to give an overall view of the distribution of tropical African mosses, and a list of sub-Saharan hepaticas is also being produced, which should be published shortly (84). [It should be noted that all references in this paper are given as numbers, but these are translated into

'author+year' references in the bibliography.]

The need for checklists containing "current names" (rather than just a list of all names ever created) has been identified as one of the most vital tools needed to progress conservation and ecological issues in botany (1639). Such checklists are seen as tactical steps towards a global plant species information system. There has also been debate about the most appropriate approach to putting together the taxonomic backbone of such an information system and what information should be stored, and the data in this checklist covers the basic requirement, common across all plant groups: species name, important synonyms, generic and family placement, geographical distribution and bibliographic citation.

The scope of the checklist is all of sub-Saharan Africa, together with the Atlantic and Indian Ocean islands in the tropics. This does not quite conform to the Index Muscorum divisions, as part of Africa-2 is excluded to the north (the Sahelian area within the tropics), and part of Africa-4 is excluded to the south (the islands in the southern Atlantic and Indian Oceans). For practical reasons it was necessary to draw a definite boundary round the region, even when this cut across existing affinities, such as the north Atlantic islands (Cape Verde is included, the Canaries, Madeira and Azores are excluded). This differs slightly from the combined *Bryologia Africana* and *Flora of Southern Africa* areas, by excluding Mauritania, and including the islands of Cape Verde, Ascension and St. Helena.

All African countries apart from Sudan have been covered by checklists although some of these are now rather old (see map). All of these have been entered into a database, and updated with later publications. The publications on which the list is based are shown in the references. I would be grateful for pointers to any omitted publications, or monographs that include African taxa, that are not already included in the references. Where data has been taken from an existing checklist, I have not included all the individual references and have instead just given the name of the list - e.g. east African references will typically show (46) (=Kis, 1985) as the reference. It will be necessary to go to the source document quoted to get the detailed references. The resulting list contains 2939 taxa, with over 9000 taxon/country occurrences - an average of 3 countries (or part countries) per taxon. All taxa in the source lists should appear in the checklist as either accepted taxa, or as synonyms or excluded taxa.

This document is not intended as a taxonomic work. The quality of the data in this list is thus variable in its taxonomic quality, although it attempts to present the latest position for all taxa. Some difficult and complex families where revision is almost complete (e.g. Calymperaceae) are in a good state, and the list represents a useful synthesis of the current position. Where the process of revision is still underway (e.g. Fissidentaceae)

there are now large numbers of synonyms, but clearly a large number of taxa still to tackle. In other areas work has hardly begun, such as Sematophyllaceae and parts of Hypnaceae, and this will continue to cause problems for those attempting to identify plants in these groups. The list will at least indicate the scale of the problem.

Producing and maintaining the list would have been unmanageable without computer assistance, and all data used in the list is held on the TAXA system (115), and the main taxon distribution list and list of references was generated directly from TAXA. This system is available to anyone requiring it, but it is being continually enhanced, and so potential users should contact the author for the latest version.

Although I have checked this list back against the source documents, this project has taken some time, and has led to considerable manipulation of data to take account of synonyms and new publications, and what was once correct may no longer be so. Please let me know of any mistakes.

This checklist is expected to be a source and foundation for future work, rather than a final statement. Future updates are planned.

### **Assumptions, Comments & Compromises**

A list this size cannot be produced without taking a pragmatic view, and some will disagree with the approach I have taken in some areas. Listed below are some of the problems faced and assumptions taken.

- The basic list has been built from the latest 'authoritative' list for the country concerned - i.e. on lists that validate the occurrence in a country via earlier lists or collections, as shown on the map. Taxa mentioned in *Index Muscorum* as occurring in Africa-2, 3 or 4 are not included unless they have appeared in a country list. Records not localised to a country have been ignored, and taxa that are not identified at least to subspecies or variety level (i.e. forms) are marked as excluded. The basic list has then been enhanced by data

from references published since the original country lists.

- Where the source information does not provide sufficient detail, group names have been used (e.g. Senegambia, for Senegal + Gambia). Where there is sufficient detail, and the units are sufficiently large, intra-country divisions have been used (e.g. South Africa is divided into four regions), and also where the parts are particularly isolated (e.g. the two major islands belonging to Equatorial Guinea, Fernando Po (Bioko) and Annobon are recorded separately from mainland Rio Muni). When it is not clear where all the records are from, the group name may be used in conjunction with an island or 'part-country' name (e.g. MAS(40), REU(105)).
- Where there is more than one reference for the occurrence of a taxon in a country, I have not in all cases checked whether the specimens referred to are different. Where I have checked, I have chosen between duplicates by retaining those with: 1) more widely published references, 2) more authoritative/detailed references, 3) references with wider information.
- All references seen up to the end of February 1995 have been included.
- It has been assumed that if one plant is synonymised with another, then its distribution data can also be transferred. A situation where this approach could cause problems is exemplified by *Rhodobryum spathulatum*, where the type is actually *Bryum aubertii*, but the collections called *R. spathulatum* are in fact *R. ontariense*. I hope I have managed to identify most of such cases.
- Where names from the source lists have been synonymised, the original names under which taxa were collected have not been included in the distribution data; this data should be available in the source reference. Synonyms are only listed in alphabetic sequence with the rest of the names, and not under the valid taxa to which they apply. This means that it may not be possible to work back from a reference to the original names(s) under which it was collected, other than by working from the source document.
- No distinction has been made between

nomenclatural and taxonomic synonyms.

- I have found a number of taxa that do not appear in *Index Muscorum* (1521), or the *Index of Mosses* (80, 1644). The status of such taxa is not always clear (although usually *nomina nuda*), and they tend to get missed from taxonomic revisions.
- I have made no judgement on the age of records - all apparently valid records have been accepted.

### New combinations

During the compilation of this Checklist, a number of taxa were noticed that appeared to be in need of names in different genera. This situation has occurred for two reasons:

- nomenclatural changes have been made that leave 'orphaned' varieties or other sub-taxa, e.g. *Drepanocladus fluitans* has been transferred to the genus *Warnstorffia*, but its variety *monodii* was not included in the transfer, and nor was it synonymised;
- where taxa have been transferred *en bloc* from one genus to another (for instance because of the discovery of an earlier valid name for the genus) sometimes taxa have been left behind, e.g. *Eriopus cristata* was not transferred to *Calyptrochaeta* when *Eriopus* was made a synonym of *Calyptrochaeta*.

In the first case I have left the taxon in its original genus, with a note pointing to the correct location if the variety proves to be distinct. In the second case I have made new combinations.

There are a number of *nominanuda* on the checklist that also need a change of name, but these have been commented on in the checklist text, and are not covered here.

My intention is to leave the taxonomic problems (if any) clearer. I appreciate that these transfers may detract from the taxonomic purity of the receiving genus, but I feel it is better than leaving taxa in an 'invalid' genus. If they are not valid taxa they should have been synonymised or excluded as part of the original transfer. Keeping them visible in this way may help resolve their status.

*Calyptrochaeta cristata* (Hedw.) O'Shea, **comb. nov.**

Basionym: *Leskea cristata* Hedw., *Spec. Musc.* 2:211. 49. 1801.  
 [Subsequently recombined as *Eriopus cristatus* (Hedw.) Brid., *Bryol. Univ.* 2:788. 1827.]  
*Eriopus* C.Müll. nom. illeg. has been replaced by  
*Calyptrochaeta* Desvaux (1521).

*Groutiella elimbata* (Thér.) O'Shea, **comb. nov.**

Basionym: *Micromitrium elimbatum* Thér., *Recueil Publ. Soc. Havraise Étud. Div.* 1929:113. ic. 1930.  
*Micromitrium* Schimp. in Besch. is a synonym of  
*Groutiella* Steere (1521).

*Meiothecium undulatum* (Ren. & Card.) O'Shea, **comb. nov.**

Basionym: *Pterogoniella undulata* Ren. & Card., *Prodr. Fl. Bryol. Madag. Suppl.* 67. 1909.  
*Pterogoniella* Schimp. in Broth. has been replaced by *Meiothecium* Mitt. (1521)

*Orthodontium ruwenzorensis* (Thér. & Nav.) O'Shea, **comb. nov.**

Basionym: *Stableria ruwenzorense* Thér. & Nav., *Bull. Soc. R. Bot. Belg.* 60:34. 15. 1927.  
*Stableria* Lindb. ex Braithw. is a synonym of *Orthodontium* Schwaegr. sect. *Stableria* (Braithw.) Meijer (1521).

*Pohlia lacouturei* (Thér.) O'Shea, **comb. nov.**

Basionym: *Webera lacouturei* Thér., *Recueil Plub. Soc. Havraise Étud. Div.* 89:124. ic. 1922.  
*Webera* Hedw. hom. illeg. is replaced by *Pohlia* Hedw. (1521).

*Sematophyllum corticolum* (Aongstr.) O'Shea, **comb. nov.**

Basionym: *Plagiothecium corticola* Aongstr., *Defr. K. Vet. Ak. Foerh.* 30(5):143. 1873. [“*un*”].

This synonymisation was first suggested by Brotherus in 1908 (*Nat. Pfl.* 1(3):1087), and referred to subsequently in Wijk *et al.* (1521) and Crosby *et al.* (40).

*Sematophyllum dixonii* (Thér.) O'Shea, **comb. nov.**

Basionym: *Rhaphidostegium dixonii* Thér., *Recueil Publ. Soc. Havraise Étud. Div.* 1924(2):96. 1924. [“*-i*”] (*R. densirete* Thér., 1923 *hom. illeg.*).  
*Rhaphidostegium* (BS&G) De. Not. nom. illeg. incl. gen. prior. is replaced by *Sematophyllum* (1521).

*Sematophyllum nanopyxis* (Geh.) O'Shea, **comb. nov.**

Basionym: *Hypnum nanopyxis* C.Müll. ex Geh., *Abh. Naturw. Ver. Bremen* 7:212. 1881.  
 [Subsequently recombined as *Rhaphidostegium nanopyxis* (Geh.) Par., *Ind. Bryol.*:1100. 1897.]  
 See note under *Sematophyllum dixonii*.

*Sematophyllum rigescens* (Card.) O'Shea, **comb. nov.**

Basionym: *Rapidostegium rigescens* Card. in Grand., *Hist. Madag.* 39:499. 1915.  
 See note under *Sematophyllum dixonii*.

*Thamnobryum malgachum* (Card.) O'Shea, **comb. nov.**

Basionym: *Thamnium malgachum* Card. in Grand., *Hist. Madag.* 39:382. 1915.  
 De Sloover (15) (p. 148) lists this taxon as doubtful but gives no reason, and presumably had not seen a collection. Cardot gives a clear description of what he says is a very distinctive plant. Until the type is examined, I have transferred the plant to *Thamnobryum*.

**Checklist**

The list is in alphabetic order of the current version of taxon names, and any changes to earlier names (taxonomic and nomenclatural synonyms) are shown inset, in a smaller font, giving the new name, as are comments and excluded species.

Only synonyms that postdate the source list have been given: earlier synonyms can be found in the source list and its references. The assumed family of each taxon is shown in Appendix B.

The countries in which a taxon is recorded are shown by a three character abbreviation. These abbreviations are interpreted in Appendix A. Country abbreviations are listed for each taxon in alphabetic order of country name, not abbreviation, so, for example, CBS (Cape Province, South Africa) comes before CAR (Central African Republic). The numbers in brackets after each country (and after synonyms) are the literature references, which are translated to ‘author+year’ in the References section.

- Abietinella abietina* (Hedw.) Fleisch. = *Thuidium abietinum* (71).
- Acanthorrhynchium decolor* (Besch.) Fleisch. SEY(40).
- Acanthorrhynchium loucoubense* (Besch.) Fleisch. COM(40), MAD(40).
- Acanthorrhynchium serratum* (Ren. & Card.) Fleisch. COM(40), MAD(40).

- Caducella mariei* (Besch.) Enroth COM(40), TAN(1439).
- Callicostella* (C.Müll.) Mitt. Menzel (1750) summarises the position over the use of this name. Crosby pointed out the priority of *Schizomitrium* Schimp. over *Callicostella*, but Koponen and Isoviita proposed the conservation of *Callicostella*, to avoid the nomenclatural changes. This proposal was accepted by the Committee for Bryophyta of IAPT, for submission to the 1993 Tokyo Congress, and confirmed there. Nevertheless, in the interim, a large number of nomenclatural changes were made. These have been reversed in this checklist.

- Calymperopsis* (C.Müll.) Fleisch. The view of Reese & Orbán (132) was that this genus should be treated as a subgenus of *Syrrhopodon*, and Reese has now revised several of the taxa (1708, 1711), provided a synopsis of the subgenus (1909) and annotated all BM specimens with a name in *Syrrhopodon*. The annotations suggest that previous understanding of the subgenus has been highly suspect. All records have now been transferred to *Syrrhopodon*, but see reservations expressed under that genus regarding distribution data.
- Calymperopsis crenulata* Tixier = *Syrrhopodon crenulatus* (1909).

*Sphagnum laxirete* Thér. = *S. pappeanum* C.Müll. (1521) = *S. strictum* var. *pappeanum* (59).

*Sphagnum madegassum* C.Müll. = *S. planifolium* var. *planifolium* (59).

*Sphagnum magellanicum* C. Müll. *auct. afr.* = *S. magellanicum* ssp. *grandirete* (59).

*Sphagnum magellanicum* ssp. *grandirete* (Warnst.) Eddy MAD(59).

*Sphagnum mathieui* var. *subsquarrosum* Warnst. Excluded. Not mentioned by Eddy (59).

*Sphagnum mathieui* Warnst. = *S. truncatum* var. *bordasii* (59).

*Sphagnum meridense* (Hampe) C.Müll. Excluded.

This is an American taxon, not known in Africa (59). The synonym of this name given in Crosby *et al.* (40) is *S. cymbifolium* var. *patens* (Brid.) Brid., *nom. illeg.*, but this is treated by Eddy (59) as *nomina ambigua*, as there is no specimen and the description is "inadequate for positive identification".

*Sphagnum nemoreum* Scop. REU(105).

*Sphagnum nemoreum* Scop. Not treated by Eddy

(59), but listed in Crosby *et al.* (40), and shown in *Index Muscorum* (1521) for Africa-3 and Africa-4.

*Sphagnum obovatum* Warnst. = *S. rutenbergii* (59).

*Sphagnum obtusifolium* Warnst. Excluded. This taxon is listed for Madagascar and the Mascarenes (40), but is not treated by Eddy (59). However, this is unlikely to be the correct name, as the only entry in *Index Muscorum* (1521) is *S. obtusifolium* Ehrh., which is a synonym of *S. palustre*. The two synonyms of *S. obtusifolium* Warnst. given in Crosby & Schultze-Motel (40) are both now synonyms of *S. violascens* (59) which belongs to a different section of the genus.

*Sphagnum pallidum* Warnst. = *S. rutenbergii* (59).

*Sphagnum palustre* L. Excluded. Omitted from Eddy (59), but included in Crosby *et al.* (40) for Réunion, although not shown in *Index Muscorum* (1521) for Africa.

*Sphagnum perichaetiale* Hampe ANG(59), CBS(1531), MAD(59), MAU(59), NAT(1531), REU(59).

*Sphagnum perrieri* Thér. MAD(40).

*Sphagnum perrieri* Thér. Not dealt with by Eddy (59), although shown as valid for Africa-3 in *Index Muscorum* (1521), and included in Crosby *et al.* (40).

### Acknowledgements

I have received assistance on this project from a large number of people, but I would particularly like to thank Len Ellis for the time he has spent in searching out specimens and references, and Martin Wigginton for discussions especially in the early days of the checklist, and many pointers to literature references. Thanks also go to those who have commented on the final family treatments: Ida Bruggeman-Nannenga (Fissidentaceae), Len Ellis (Calymperaceae), Johannes Enroth (Neckeraceae), Allan Fife (Funariaceae), Jan-Peter Frahm (Dicranaceae), Angela Newton (Pterobryaceae), Ryszard Ochyra (Amblystegiaceae, Brachytheciaceae, Grimmiaceae), Philip Sollman (Pottiaceae), Dries Touw (Thuidiaceae s.l.), and to Tamás Pócs, who gave thorough comments on the whole paper in a very short space of time. As I did not always accept the advice given, any mistakes are mine.

### References

Use this table to translate the numeric references given in the text of this paper to the 'author + year' equivalent. The alphabetic list of references follows the table.

## Appendix A - Country Abbreviations

There are 68 countries, part-countries or islands on the list.

Abb	Full name	Group/Index Muscorum
<b>zone</b>		
ALD	Aldabra	Africa-3
AMI	Amirante Islands	Africa-3
ANG	Angola	Africa-2
ANN	Annonbon Is.	Equatorial Guinea
ASC	Ascension Is.	Africa-2
BEN	Benin	Africa-2
BOT	Botswana	Africa-4
BUF	Burkina Faso	Africa-2
BUR	Burundi	Africa-2
CAB	Cabinda	Angola
CAM	Cameroon	Africa-2
CBS	Cape (of Good Hope)	South Africa
CAP	Cape Verde	Africa-2
CAR	Central African Rep.	Africa-2
CHA	Chad	Africa-2
CHG	Chagos Archipelago	Africa-3
COM	Comoros	Africa-3
CON	Congo	Africa-2
DIE	Diego Garcia	Africa-3
DJI	Djibouti	Africa-2
EGU	Equatorial Guinea	Africa-2
ERI	Eritrea	Africa-2
ETH	Ethiopia	Africa-2
FER	Fernando Po (Bioko)	Equatorial Guinea
GAB	Gabon	Africa-2
GAM	Gambia	Senegambia
GHA	Ghana	Africa-2
GUB	Guinea Bissau	Africa-2
GUI	Guinea	Africa-2
IVO	Ivory Coast	Africa-2
KEN	Kenya	Africa-2

LES	Lesotho	Africa-4	<i>Sphagnum</i>
LIB	Liberia	Africa-2	
MAD	Madagascar	Africa-3	<b>Andreaeaceae</b>
MAL	Malawi	Africa-2	<i>Andreaea</i>
MAI	Mali	Africa-2	
MAS	Mascarene Islands	Africa-3	<b>Polytrichaceae</b>
MAU	Mauritius	Mascarenes	<i>Atrichum</i>
MOZ	Mozambique	Africa-2	<i>Oligotrichum</i>
NAM	Namibia	Africa-4	<i>Pogonatum</i>
NAT	Natal	South Africa	<i>Polytrichastrum</i>
NIR	Niger	Africa-2	<i>Polytrichum</i>
NIG	Nigeria	Africa-2	
OFS	Orange Free State	South Africa	<b>Archidiaceae</b>
PRI	Principe	Africa-2	<i>Archidium</i>
REU	Reunion	Mascarenes	
RIM	Rio Muni	Equatorial Guinea	<b>Funariaceae</b>
ROD	Rodrigues	Mascarenes	<i>Cygnicollum</i>
RWA	Rwanda	Africa-2	<i>Entosthodon</i>
SAF	South Africa	Africa-4	<i>Funaria</i>
SAO	Sao Tome	Africa-2	<i>Goniomitrium</i>
SEN	Senegal	Senegambia	<i>Loiseaubryum</i>
SEG	Senegambia	Africa-2	<i>Physcomitrella</i>
SEY	Seychelles	Africa-3	<i>Physcomitrellopsis</i>
SIL	Sierra Leone	Africa-2	<i>Physcomitrium</i>
SOC	Socotra	Africa-2	
SOM	Somalia	Africa-2	<b>Gigaspermaceae</b>
PAU	Sao Paulo	Africa-2	<i>Chamaebryum</i>
STH	St. Helena	Africa-2	<i>Gigaspermum</i>
SUD	Sudan	Africa-2	<i>Oedipodiella</i>
SWA	Swaziland	Africa-4	
TAN	Tanzania	Africa-2	<b>Ephemeraceae</b>
TOG	Togo	Africa-2	<i>Ephemerum</i>
TRV	Transvaal	South Africa	<b>Splachnaceae</b>
UGA	Uganda	Africa-2	<i>Brachymitrium</i>
ZAI	Zaire	Africa-2	<i>Splachnum</i>
ZAM	Zambia	Africa-2	<i>Tayloria</i>
ZIM	Zimbabwe	Africa-2	<i>Tetraplodon</i>

### **Splachnobryaceae**

*Splachnobryum*

<b>Orthotrichaceae</b>
<i>Amphidium</i>
<i>CardotIELLA</i>
<i>GroutiELLA</i>
<i>Kleioweisiopsis</i>
<i>Leiomitrium</i>
<i>Leptodontiopsis</i>
<i>Macrocoma</i>
<i>Macromitrium</i>

### **Appendix B - Family Placement**

There are 75 families and 353 genera on the checklist. Family placement is based on Crosby & Magill (ref. 1752), and family sequence on Vitt (1593) with later amendments from Buck & Ireland (719), Buck & Vitt (175), Buck (715) and Whittemore and Allen (1341).

### **Sphagnaceae**

<i>Orthotrichum</i>	<b>Rhizogoniaceae</b>
<i>Schlotheimia</i>	<i>Leptotheca</i>
<i>Stoneobryum</i>	<i>Pyrrhobryum</i>
<i>Ulota</i>	
<i>Zygodon</i>	
<b>Erpodiaceae</b>	<b>Racopilaceae</b>
<i>Aulacopilum</i>	<i>Racopilum</i>
<i>Erpodium</i>	
<b>Rhachitheciaceae</b>	<b>Hypopterygiaceae</b>
<i>Jonesiobryum</i>	<i>Hypopterygium</i>
<i>Rhachithecium</i>	<i>Lopidium</i>
<i>Tisserantiella</i>	
<b>Bryaceae</b>	<b>Buxbaumiaceae</b>
<i>Anomobryum</i>	<i>Diphyscium</i>
<i>Brachymenium</i>	
<i>Bryum</i>	
<i>Epipterygium</i>	<b>Encalyptaceae</b>
<i>Leptobryum</i>	<i>Encalypta</i>
<i>Mielichhoferia</i>	
<i>Mniobryum</i>	<b>Pottiaceae</b>
<i>Orthodontium</i>	<i>Acaulon</i>
<i>Plagiobryum</i>	<i>Aloina</i>
<i>Pohlia</i>	<i>Anoectangium</i>
<i>Pseudopohlia</i>	<i>Astomum</i>
<i>Rhodobryum</i>	<i>Barbula</i>
<i>Schizymenium</i>	<i>Bellibarbula</i>
<b>Mniaceae</b>	<i>Bryoceuthospora</i>
<i>Plagiomnium</i>	<i>Bryoerythrophyllum</i>
<b>Bartramiaceae</b>	<i>Chenia</i>
<i>Anacolia</i>	<i>Crossidium</i>
<i>Bartramia</i>	<i>Didymodon</i>
<i>Breutelia</i>	<i>Eucladium</i>
<i>Conostomum</i>	<i>Gymnostomiella</i>
<i>Flowersia</i>	<i>Gymnostomum</i>
<i>Leiomela</i>	<i>Hennediella</i>
<i>Philonotis</i>	<i>Husnotiella</i>
<i>Plagiopus</i>	<i>Hymenostomum</i>
<i>Quathlamba</i>	<i>Hymenostylium</i>
<b>Aulacomniaceae</b>	<i>Hyophila</i>
<i>Aulacomnium</i>	<i>Hypodontium</i>
<b>Meesiaceae</b>	<i>Leptodontium</i>
<i>Meesia</i>	<i>Microbryum</i>
	<i>Molendoa</i>
	<i>Phascum</i>
	<i>Pleurochaete</i>
	<i>Pottia</i>
	<i>Pseudocrossidium</i>
	<i>Pseudosymbelpharis</i>
	<i>Pterygoneurum</i>
	<i>Scopelophila</i>
	<i>Streptopogon</i>
	<i>Syntrichia</i>

<i>Tetrapherum</i>	<i>Ochrobryum</i>
<i>Timmella</i>	<i>Oreoweisia</i>
<i>Tortella</i>	<i>Paraleucobryum</i>
<i>Tortula</i>	<i>Pilopogon</i>
<i>Trachycarpidium</i>	<i>Pocsiella</i>
<i>Trichostomum</i>	<i>Pseudephemerum</i>
<i>Triquetrella</i>	<i>Rhabdoweisia</i>
<i>Weisiopsis</i>	<i>Sphaerothecium</i>
<i>Weissia</i>	<i>Symbblepharis</i>
<b>Cinclidotaceae</b>	<i>Wilsoniella</i>
<i>Cinclidotus</i>	
<b>Serpotortellaceae</b>	
<i>Serpotortella</i>	
<b>Calymperaceae</b>	
<i>Calymperes</i>	<b>Ditrichaceae</b>
<i>Calymperopsis</i>	<i>Astomiopsis</i>
<i>Chameleion</i>	<i>Ceratodon</i>
<i>Leucophanes</i>	<i>Cheilothela</i>
<i>Mitthyridium</i>	<i>Distichium</i>
<i>Octoblepharum</i>	<i>Ditrichum</i>
<i>Syrrhopodon</i>	<i>Eccremidium</i>
<b>Bryobartramiaceae</b>	<i>Garckea</i>
<i>Bryobartramia</i>	<i>Pleuridium</i>
<b>Dicranaceae</b>	<i>Saelania</i>
<i>Anisothecium</i>	<i>Trematodon</i>
<i>Aongstroemia</i>	<i>Tristichium</i>
<i>Aongstroemiopsis</i>	
<i>Atractylocarpus</i>	
<i>Brothera</i>	<b>Eustichiaceae</b>
<i>Bruchia</i>	<i>Eustichia</i>
<i>Bryohumbertia</i>	
<i>Bryotestua</i>	<b>Phyllodrepaniaceae</b>
<i>Campylopus</i>	<i>Phyllodrepanium</i>
<i>Chorisodontium</i>	
<i>Cladophascum</i>	<b>Nanobryaceae</b>
<i>Cynodontium</i>	<i>Nanobryum</i>
<i>Dicranella</i>	
<i>Dicranodontium</i>	<b>Fissidentaceae</b>
<i>Dicranoloma</i>	<i>Fissidens</i>
<i>Dicranoweisia</i>	<i>Moenkemeyera</i>
<i>Dicranum</i>	
<i>Holomitrium</i>	<b>Seligeriaceae</b>
<i>Leucoloma</i>	<i>Blindia</i>
<i>Microcampylopus</i>	<i>Brachydontium</i>
<i>Microdus</i>	
	<b>Ptychomitriaceae</b>
	<i>Ptychomitriopsis</i>
	<i>Ptychomitrium</i>
	<b>Grimmiaceae</b>
	<i>Grimmia</i>

<i>Leucoperichaetium</i>	
<i>Racomitrium</i>	<b>Stereophyllaceae</b>
<i>Schistidium</i>	<i>Entodontopsis</i>
<b>Fontinalaceae</b>	<i>Juratzkaea</i>
<i>Fontinalis</i>	<i>Stereophyllum</i>
<b>Echinodiaceae</b>	<b>Fabroniaceae</b>
<i>Isothecium</i>	<i>Anacamptodon</i>
<b>Thuidiaceae</b>	<i>Campylodontium</i>
<i>Haplocladium</i>	<i>Dimerodontium</i>
<i>Pelekium</i>	<i>Fabronia</i>
<i>Rauiella</i>	<i>Ischyrodon</i>
<i>Thuidium</i>	<i>Leptoischyrodon</i>
<i>Trachypodium</i>	<i>Levierella</i>
<b>Rigodiaceae</b>	<i>Rhizofabronia</i>
<i>Rigodium</i>	<i>Schwetschkea</i>
<b>Leskeaceae</b>	<b>Brachytheciaceae</b>
<i>Hylocomiopsis</i>	<i>Aerolindigia</i>
<i>Leptopterigynandrum</i>	<i>Brachythecium</i>
<i>Leskea</i>	<i>Eurhynchiella</i>
<i>Leskeella</i>	<i>Eurhynchium</i>
<i>Lindbergia</i>	<i>Homalothecium</i>
<i>Pseudoleskea</i>	<i>Kindbergia</i>
<i>Pseudoleskeopsis</i>	<i>Oxyrrhynchium</i>
<b>Rhytidaceae</b>	<i>Palamocladium</i>
<i>Chryso-hypnum</i>	<i>Platyhypnidium</i>
<i>Gollania</i>	<i>Pseudoscleropodium</i>
<i>Rhytidium</i>	<i>Rhynchostegiella</i>
<b>Amblystegiaceae</b>	<i>Rhynchostegium</i>
<i>Amblystegium</i>	<i>Schimparella</i>
<i>Campyliadelphus</i>	<i>Scorpiurium</i>
<i>Campylium</i>	<i>Stenocarpidiopsis</i>
<i>Cratoneuron</i>	<b>Myrinaceae</b>
<i>Drepanocladus</i>	<i>Helicodontium</i>
<i>Hygrohypnum</i>	<b>Regmatodontaceae</b>
<i>Sanionia</i>	<i>Regmatodon</i>
<i>Sarmentypnum</i>	<b>Entodontaceae</b>
<i>Warnstorffia</i>	<i>Entodon</i>
<b>Vittiacae</b>	<i>Erythrodontium</i>
<i>Vittia</i>	<i>Mesonodon</i>
<b>Lembophyllaceae</b>	<i>Pylaisiobryum</i>
<i>Camptochaete</i>	<b>Sematophyllaceae</b>
<i>Orthostichella</i>	<i>Acanthorrhynchium</i>
	<i>Acporium</i>
	<i>Clastobryella</i>
	<i>Clastobryophilum</i>

<i>Donnellia</i>	<i>Pilotrichum</i>
<i>Gammiella</i>	<i>Pinnatella</i>
<i>Glossadelphus</i>	<i>Porothamnium</i>
<i>Heterophyllum</i>	<i>Porotrichum</i>
<i>Macrohymenium</i>	<i>Thamnobryum</i>
<i>Meiothecopsis</i>	
<i>Meiothecium</i>	
<i>Potamium</i>	<b>Cryphaeaceae</b>
<i>Radulina</i>	<i>Cryphaea</i>
<i>Rhaphidorrhynchium</i>	<i>Schoenobryum</i>
<i>Rhaphidostichum</i>	
<i>Sematophyllum</i>	<b>Leptodontaceae</b>
<i>Taxithelium</i>	<i>Caduciella</i>
<i>Trichosteleum</i>	<i>Cryptoleptodon</i>
<i>Trismegistia</i>	<i>Forsstroemia</i>
<i>Warburgiella</i>	<i>Leptodon</i>
<i>Wijkia</i>	
<i>Wijkia</i>	<b>Anomodontaceae</b>
	<i>Haplohymenium</i>
<b>Hylocomiaceae</b>	<i>Herpetineuron</i>
<i>Hylocomium</i>	
<i>Leptohymenium</i>	<b>Hedwigiaceae</b>
	<i>Braunia</i>
<b>Catagoniaceae</b>	<i>Hedwigia</i>
<i>Catagonium</i>	<i>Hedwigidium</i>
<b>Plagiotheciaceae</b>	<b>Leucodontaceae</b>
<i>Plagiothecium</i>	<i>Antitrichia</i>
	<i>Leucodon</i>
	<i>Pterogonium</i>
<b>Hypnaceae</b>	
<i>Bryosedgwickia</i>	<b>Ptychomniaceae</b>
<i>Ctenidium</i>	<i>Ptychomnion</i>
<i>Ectropothecium</i>	
<i>Entodontella</i>	<b>Wardiaceae</b>
<i>Herzogiella</i>	<i>Wardia</i>
<i>Hypnum</i>	
<i>Isopterygium</i>	<b>Rhacocarpaceae</b>
<i>Mittenothamnium</i>	<i>Rhacocarpus</i>
<i>Pylaisiella</i>	
<i>Rhacopilopsis</i>	<b>Rutenbergiaceae</b>
<i>Taxiphyllum</i>	<i>Neorutenbergia</i>
<i>Trachythecium</i>	<i>Rutenbergia</i>
<i>Vesicularia</i>	
<b>Neckeraceae</b>	<b>Prionodontaceae</b>
<i>Himantocladium</i>	<i>Prionodon</i>
