## Daffodils and Narcissi

The beauty of the Daffodil and the Narcissus is unquestioned and the fascination of the new varieties which appear each year gives proof of the ever growing interest and keen competition to obtain new varieties both by the professional grower and the amateur, many of whom spend a life-time in experimenting and hoping to raise new varieties. Some confusion sometimes arises when Daffodils are referred to as Narcissi. The term Narcissus is the correct botanical name of the whole genus and Daffodil is the popular name but nevertheless of considerable antiquity and acceptance. 'Daffodils' are generally understood to be that section of the genus which possess long trumpets and the commonly called Narcissi are the short-cupped and poeticus types. It is well to be clear as to the description of the bulbs offered in our Catalogue. A Mother bulb is composed of a number of old and young portions which will give three to four blooms, a Double-Nosed bulb has not less than two Flowering 'noses' enclosed in one outer skin and generally gives two and sometimes more flowers. A round bulb has no offsets and seldom gives more than one bloom. We handle only Double-Nosed and Mother Bulbs.

**Naturalizing Daffodils and Narcissi in Grass etc.** Most Daffodils and Narcissi are suitable for naturalizing but in very heavy soils, preference should be given to stronger growing kinds e.g. Trumpet varieties and many Large-Cupped. They are all admirably adaptable for grassy slopes and banks, where they should be freely planted. A splendid effect is obtained when Trumpet and other varieties are grouped separately, scattered on the ground and planted where they fall.

**Soil and its Treatment.** Daffodils and Narcissi will thrive in any well-cultivated and well-drained garden soil. In preparing the ground for planting, dig deeply and if well-rotted stable or cow manure is available this may advantageously be worked in 18 to 20 inches deep so as not to come into immediate contact with the bulbs. Never use fresh manure of any kind at planting time. On poor and dry sandy soils we recommend a dressing of bone meal at a rate of about 1 oz. per square yard to be sprinkled over the surface of the ground after planting.

**Growing Daffodils in the greenhouse or indoors.** Many Daffodils and Narcissi are suitable for this purpose some varieties responding better than others to forcing. Pot up the bulbs on arrival and if ordinary pots are used take a good loamy soil, adding sufficient sand and peat to keep the mixture open. A light dusting of bone meal is also useful. Pot firmly in well-crooked pots. For bowls without drainage holes use a good fibre. Plunge the pots and/or bowls in the coolest place of your garden and in the absence of garden space the pots may be placed in a cool cellar (35-40°F) where watering from time to time is necessary. When the shoots are about 4 inches long and the flower buds well out of the neck of the bulbs, the pots may be removed into a warm room. Heat should be gradually increased from 50° to max. 60°F.

It is advisable to remove the foliage of the sideshoots, if these do not show a flower bud. Just before the buds are open, water should be sprayed lightly over the buds, when they are in bloom less water should be applied.

## NATURALIZING BULBS PARTICULARLY SUITABLE FOR PLANTING IN WOODLANDS ORCHARDS, GRASS BANKS AND WILD GARDENS

The naturalizing of bulbs is a most fascinating and delightful form of gardening by which most artistic effects may be produced. A delightful sight is that produced by the brightness of spring flowers growing freely in woodland walks, orchards, hedgerows and ditches, nestling here and there at the foot of trees or establishing themselves on sloping banks. Spring flowering bulbs are especially suitable for naturalising in grass, as they bloom and finish flowering before the grass grows tall enough to hide their beauty. In order to obtain the finest effect, all formality of arrangement should be avoided, the bulbs being scattered and planted where they fall, preferably in large irregular groups of one kind of bulb.

Gardens of limited size can be made beautiful in Spring by planting the fringes of the lawns, any grassy banks or shady shrubbery walks with such Spring favourites as Daffodils, Anemones, Crocus, Winter Aconites, Alliums and Snowdrops reserving the borders for the choice Daffodils, Tulips and Lilies etc.
