Arquitetura, s/n - Cidade Universitária, Recife, Pernambuco, Brazil. E-mail: pacf@ufpe.br*

### **Abstract**

This study presents a list of 142 species collected on the outer continental shelf and seamounts from northeast Brazil at 24 oceanographic stations in May, 1998. References are provided from which all the present taxa identifications are based on.

**Key words:** checklist, Decapoda, Northeast of Brazil, REVIZEE Program

### **Introduction**

The Brazilian northeastern continental shelf is characterized by low depth (lesser than 60m), small input of continental drained material, coarse calcareous bottoms and predominance of warm waters (Kempf 1970; Summerhayes *et al.* 1975; Castro & Miranda 1998).

The study of marine decapod crustaceans in the northeast continental shelf of Brazil started in the 19<sup>th</sup> century with the collections of C. F. Hart (Smith 1869) in 1867 and the expeditions of “Challenger” between 1873 and 1876, and “Branner-Agassiz” in 1899 (Miers 1886; Bate 1888; Henderson 1888; Rathbun 1900). In the 20<sup>th</sup> century, the Oceanographic Ship “Calypso” carried out a set of samples between 1961 and 1962 (Crosnier & Forest 1966; Christoffersen 1979; Forest & de Saint-Laurent 1967; Haig 1966; Rodrigues da Costa 1968). Collections by the ships “Canopus” and “Akaroa”, between 1967 and 1969, and the “Almirante Saldanha” (Marinha do Brasil – DHN), with the commissions Norte/Nordeste I (1967), Norte/Nordeste II (1968), Geomar I (1969), Geomar II (1970), Geomar III (1971), Norte/Nordeste III (1986) and PAVASAS I (1987), were the basis for studies of Coelho and Koenig (1972), Coelho and Ramos (1972), Coelho *et al.* (1980), Calado (1990), Barreto *et al.* (1991) and Barreto and Coelho (1994).

Despite the fact that seamounts are numerous, there are few studies dealing with crustaceans at these environments due to the difficulty of sampling in these areas (Roger, 1994). At the Northeast Region there are the seamounts of Fernando de Noronha Chain (3°

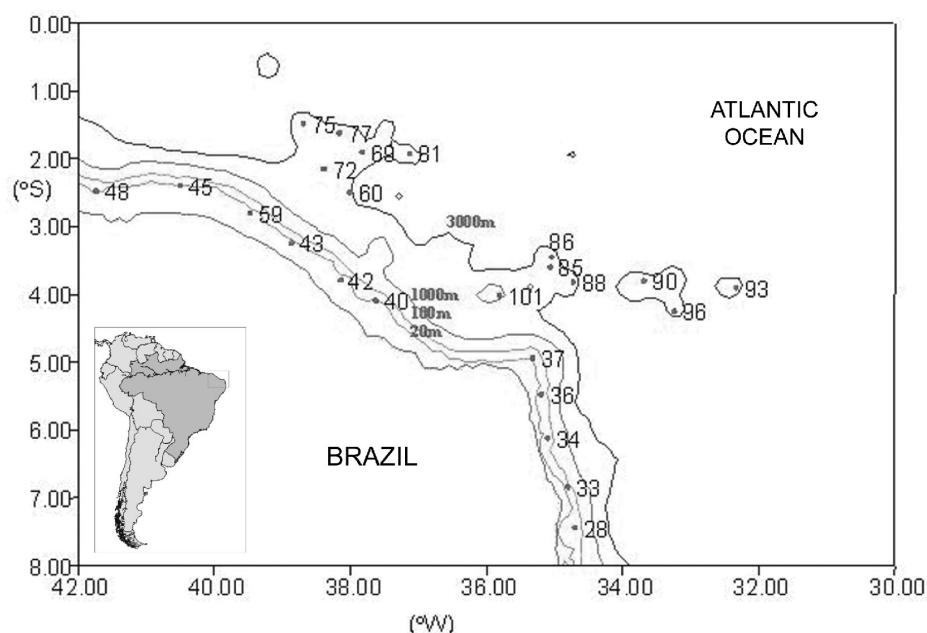

to 4°30'S and 32° to 37°W), where the Fernando de Noronha Island and Rocas Atoll are situated, and North of Brazil Chains (1° to 4°S and 31° to 39°W). Previous studies in these areas are those of Pocock (1890) and Fausto Filho (1974) in Fernando de Noronha, and Coelho (1965) in the Rocas Atoll.

Due to concerns about the usage, exploration, conservation and management of the living resources in the Exclusive Economic Zone, the Brazilian government created the REVIZEE Program: "Evaluation of the Sustainable Potential of Life's Resources in the Exclusive Economic Zone Program". This study presents a list of decapod crustacean species collected during the "Nordeste III" Commission from the REVIZEE Program.

## Material and methods

The present material was collected at 24 stations (Table 1) by the Oceanographic Ship "Antares", between May and June, 1998, with 11 stations located at the outer continental shelf, between the mouth of Parnaíba River (Piauí) and Recife (Pernambuco), and 13 stations located at the seamounts of Fernando de Noronha and North Chains (Figure 1).

Collections were made using a modified Charcot grab (70 liters and inner mesh of 0,5mm) for a constant time and set velocity (Holme & McIntire 1984). Species followed the classification of Martin and Davis (2001), and their identification was determined by the literature presented under the item "diagnosis". The location where each species was found is presented in the item "locality". The number of specimens for each species is shown in parentheses, and were deposited in the Crustacean Collection (LABCARCI) of the Oceanographic Department of the Federal University of Pernambuco.

**FIGURE 1.** Map showing stations during REVIZEE Program between May and June, 1998.

TABLE 1 – Sample stations during REVIZEE Program's (NE III). CN= North Chain; FN= Fernando de Noronha Chain.

Station	Date	Latitude (°S)	Longitude (°W)	Depth (m)	Temperature (°C)	Bottom	Locality
28	12/5/1998	7.29	34.6	42.5	28.88	Biogenic gravel	Off Pernambuco
33	13/5/1998	6.51	34.7	35	28.86	Biogenic gravel	Off Paraíba
34	13/5/1998	6.09	34.8	50	28.92	Biogenic coarse sandy	Off Rio Grande do Norte
36	14/5/1998	5.3	35.04	24	28.64	Biogenic gravel	Rio Grande do Norte, Off São Roque Cape
37	14/5/1998	4.9	35.6	32	28.94	Biogenic coarse sandy	Off Rio Grande do Norte.
40	15/5/1998	4.6	37.23	50	28.98	Biogenic gravel	Ceará, Off Jaguaribe River
42	16/5/1998	3.8	38.08	19	28.88	Biogenic gravel	Off Ceará
43	16/5/1998	3.21	38.9	32	28.9	Coarse sandy	Off Ceará.
45	17/5/1998	2.6	40.29	22	29.1	Biogenic coarse sandy	Ceará, off Acaraú River
48	15/5/1998	2.7	41.38	25	28.91	Coarse sandy	Piauí, off Parnaíba River
59	16/5/1998	2.8	39.3	22	29.12	Biogenic coarse sandy	Off Ceará
60	27/5/1998	2.18	39.31	60	27.92	Biogenic coarse sandy	NC, Aracati's seamount
69	6/6/1998	1.65	37.48	55.05	28.08	Biogenic gravel	NC
72	8/6/1998	2.2	38.16	56	27.09	Biogenic coarse sandy	NC, Continental seamount
75	7/6/1998	1.29	39.32	54	28.21	Biogenic coarse sandy	NC, Mundau's seamounts
77	7/6/1998	1.45	37.06	56.7	28.26	Biogenic gravel	NC, Meio's seamount
81	6/6/1998	1.46	37.53	54.6	27.41	Biogenic gravel	NC
85	4/6/1998	3.4	35.03	61.8	28.31	Biogenic gravel	FN, Grande seamount
86	4/6/1998	3.3	35	58	26.15	Biogenic coarse sandy	FN, Grande seamount
88	4/6/1998	3.5	34.42	54.6	28.93	Biogenic gravel	FN, Pequeno seamount
90	3/6/1998	3.6	33.39	70	27.84	Biogenic coarse sandy	FN, Rocas Atoll
93	2/6/1998	3.5	32.28	70	23.63	Biogenic gravel	FN, Fernando de Noronha's island
96	1/6/1998	4.16	33.17	49.2	28.15	Biogenic gravel	FN, Sudeste seamount
101	5/6/1998	4.03	35.48	78	22.21	Biogenic gravel	FN, Sírius seamount

**Results****Order Decapoda Latreille, 1802****Suborder Dendrobranchiata Bate, 1888****Superfamily Penaeoidea Rafinesque, 1815****Family Penaeidae Rafinesque, 1815*****Metapenaeopsis goodei* (Smith, 1885)**

Diagnosis. Pérez Farfante, 1971: 9, figs. 2–8, 13a.

Locality. Ceará: Sta. 40 (3).

***Metapenaeopsis martinella* Pérez Farfante, 1971**

Diagnosis. Pérez Farfante, 1971: 16, figs. 9, 10, 13b.

Locality. Fernando de Noronha Chain: Sta. 85 (1), Sta. 93 (1); Piauí: Sta. 48 (3); Ceará: Sta. 40 (1), Sta. 42 (16); Pernambuco: Sta. 28 (5).

**Family Sicyoniidae Ortmann, 1898*****Sicyonia laevigata* Stimpson, 1871**

Diagnosis. Williams, 1984: 47, fig. 29.

Locality. Piauí: Sta. 48 (3); Ceará: Sta. 40 (9), Sta. 42 (6), Sta. 43 (2).

***Sicyonia parri* (Burkenroad, 1934)**

Diagnosis. Williams, 1984: 48, fig. 30.

Locality. Ceará: Sta. 59 (2).

***Sicyonia typica* (Boeck, 1864)**

Diagnosis. Williams, 1984: 49, fig. 32.

Diagnosis. Melo, 1999: 316, fig. 214.

Locality. Fernando de Noronha Chain: Sta. 93 (3).

**Superfamily Callianassoidea Dana, 1852****Family Callianassidae Dana, 1852*****Cheramus marginatus* (Rathbun, 1901)**

Diagnosis. Melo, 1999: 360, fig. 240.

Locality. Piauí: Sta. 48 (1).

**Family Upogebiidae Borradaile, 1903*****Upogebia acanthura* (Coelho, 1973)**

Diagnosis. Melo, 1999: 406, fig. 272.

Locality. North Chain: Sta. 77 (12); Fernando de Noronha Chain: Sta. 101 (17).

***Upogebia marina* Coelho, 1973**

Diagnosis. Melo, 1999: 412, fig. 278.

Locality. Ceará: Sta. 42 (4), Sta. 59 (1).

***Upogebia vasquezi* Ngoc-Ho, 1989**

Diagnosis. Melo, 1999: 422, fig. 288.

Locality. Ceará: Sta. 42 (2).

**Infraorder Anomura MacLeay, 1838****Superfamily Galatheoidea Samouelle, 1819****Family Galatheidae Samouelle, 1819*****Munida angulata* (Benedict, 1902)**

Diagnosis. Melo, 1999: 176, fig. 106.

Locality. North Chain: Sta. 60 (4); Ceará: Sta. 40 (3).

***Munida spinifrons* Henderson, 1885**

Diagnosis. Melo, 1999: 202, fig. 132.

Locality. North Chain: Sta. 75 (26); Fernando de Noronha Chain: Sta. 85 (1).

**Family Porcellanidae Haworth, 1825*****Megalobrachium soriatum* (Say, 1818)**

Diagnosis. Melo, 1999: 222, fig. 146.

Locality. Ceará: Sta. 59 (4).

***Pachycheles ackleianus* A. Milne Edwards, 1880**

Diagnosis. Melo, 1999: 228, fig. 150.

Locality. Ceará: Sta. 59 (2); Pernambuco: Sta. 28 (3).

***Pachycheles greeleyi* (Rathbun, 1900)**

Diagnosis. Melo, 1999: 234, fig. 156.

Locality. Ceará: Sta. 42 (4), Sta. 59 (4); Rio Grande do Norte: Sta. 34 (1).

***Petrolisthes amoenus* (Guérin-Méneville, 1855)**

Diagnosis. Melo, 1999: 224, fig. 148.

Locality. Ceará: Sta. 59 (2).

**Superfamily Paguroidea Latreille, 1802****Family Diogenidae Ortmann, 1892**

***Calcinus tibicen* (Herbst, 1791)**

Diagnosis. Melo, 1999: 42, fig. 2.

Locality. Paraíba: Sta. 33 (5).

***Dardanus venosus* (H. Milne Edwards, 1848)**

Diagnosis. Melo, 1999: 64, fig. 20.

Locality. North Chain: Sta. 60 (4), Sta. 81 (1); Fernando de Noronha Chain: Sta. 85 (4), Sta. 88 (5); Rocas Atoll: Sta. 90 (4); Piauí: Sta. 48 (1); Ceará: Sta. 40 (1), Sta. 42 (6); Paraíba: Sta. 33 (1).

***Paguristes spinipes* A. Milne Edwards, 1880**

Diagnosis. Melo, 1999: 86, fig. 40.

Locality. Ceará: Sta. 42 (4); Paraíba: Sta. 33 (1).

***Paguristes tortugae* Schmitt, 1933**

Diagnosis. Melo, 1999: 88, fig. 42.

Locality. Fernando de Noronha Chain: Sta. 88 (1); Rocas Atoll: Sta. 90 (4).

**Family Paguridae Latreille, 1802*****Iridopagurus violaceus* de Saint Laurent Dechance, 1966**

Diagnosis. Melo, 1999: 112, fig. 60.

Locality. Fernando de Noronha Chain: Sta. 86 (2); Rocas Atoll: Sta. 90 (36).

***Pagurus brevidactylus* (Stimpson, 1859)**

Diagnosis. Melo, 1999: 122, fig. 66.

Locality. North Chain: Sta. 77 (4); Fernando de Noronha Chain: Sta. 85 (3), Sta. 93 (3).

***Pagurus criniticornis* (Dana, 1852)**

Diagnosis. Melo, 1999: 124, fig. 68.

Locality. Fernando de Noronha Chain: Sta. 93 (28); Ceará: Sta. 43 (8), Sta. 45 (4), Sta. 59 (1).

Diagnosis. Melo, 1999: 136, fig. 80.

Locality. Fernando de Noronha Chain: Sta. 101 (1); Rio Grande do Norte: Sta. 34 (3), Sta. 36 (2); Paraíba: Sta. 33 (5); Pernambuco: Sta. 28 (3).

**Infraorder Brachyura Latreille, 1802**

**Superfamily Dromioidea de Haan, 1833**

**Family Dromiidae de Haan, 1833**

*Hypoconcha parasitica* (Linnaeus, 1763)

Diagnosis. Melo, 1996: 72.

Locality. Rio Grande do Norte: Sta. 34 (1).

**Superfamily Homoloidea de Hann, 1839**

**Family Homolidae de Haan, 1839**

*Homola barbata* (Fabricius, 1793)

Diagnosis. Melo, 1996: 75.

Locality. Fernando de Noronha Chain: Sta. 101 (1).

**Superfamily Raninoidea de Haan, 1839**

**Family Symethidae Goeke, 1981**

*Symethis variolosa* (Fabricius, 1793)

Diagnosis. Melo, 1996: 117.

Locality. Fernando de Noronha Chain: Sta. 93 (1); Ceará: Sta. 40 (1).

**Superfamily Cyclodorippoidea Ortmann, 1892**

**Family Cyclodoripidae Ortmann, 1892**

***Clythrocerus carinatus* Coelho, 1973**

Diagnosis. Melo, 1996: 86.

Locality. Fernando de Noronha Chain: Sta. 85 (9); Ceará: Sta. 42 (2).

***Deilocerus analogus* (Coelho, 1973)**

Diagnosis. Melo, 1996: 93.

Locality. North Chain: Sta. 60 (4); Fernando de Noronha Chain: Sta. 88 (6).

***Deilocerus perpusillus* (Rathbun, 1901)**

Diagnosis. Melo, 1996: 94.

Locality. North Chain: Sta. 72 (4).

**Superfamily Calappoidea Mine Edwards, 1837****Family Calappidae Milne Edwards, 1837*****Calappa galloides* Stimpson, 1859**

Diagnosis. Melo, 1996: 124 [as *Calappa gallus* (Herbst, 1803)].

Locality. Rocas Atoll: Sta. 90 (4).

***Calappa tortugae* Rathbun, 1933**

Diagnosis. Melo, 1996: 123 (as *Calappa angusta* A. Milne Edwards, 1880).

Locality. Ceará: Sta. 42 (4).

***Cryptosoma balguerii* (Desbonne, 1867)**

Diagnosis. Melo 1996: 128 (as *Cycloës bairdii* Stimpson, 1860).

Locality. North Chain: Sta. 60 (4); Fernando de Noronha Chain: Sta. 88 (1); Ceará: Sta. 42 (2); Rio Grande do Norte: Sta. 34 (3), Sta. 37 (8).

Diagnosis. Melo, 1996: 347.

Locality. North Chain: Sta. 77 (3); Fernando de Noronha Chain: Sta. 85 (1).

***Paractaea ruffopunctata nodosa* (Stimpson, 1860).**

Diagnosis. Melo, 1996: 376.

Locality. North Chain: Sta. 69 (1), Sta. 72 (2), Sta. 75 (8), Sta. 81 (2); Fernando de Noronha Chain: Sta. 85 (9), Sta. 86 (22), Sta. 88 (15), Sta. 93 (23), Sta. 96 (2); Ceará: Sta. 40 (1), Sta. 42 (2); Paraíba: Sta. 33 (1); Pernambuco: Sta. 28 (3).

**Comments**

In the present study, 142 species were identified in the following Infraorders: Anomura (15 species), Astacidea (1 species), Brachyura (63 species), Caridea (52 species), Penaeidea (5 species), Stenopodidea (1 species) and Thalassinidea (5 species). Except for the new records presented in this work, all of the species were both observed on the continental shelf and seamounts, being in agreement with Roger (1994) who stated that biota from the oceanic banks tend to be dominated by species from the continental shelf.

The composition and number of species observed in this study are similar to those found by Soto (1980) in the Northeast of Gulf of Mexico (64 species), however, poorer than those observed by Barreto *et al.* (1993) studying the Brachyura from the Continental Shelf in the north and northeast of Brazil (133 species), and richer than the continental shelf of Rio Grande do Sul and adjacent areas (45 species) (Bordin, 1987).

New records of caridean shrimps for Brazilian Coast (*Alpheopsis labis*, *Alpheopsis trigonus*, *Alpheus beanii*, *Alpheus candei*, *Synalpheus paraneptunus*, *Synalpheus rathbunae*, *Periclimenaeus caraibicus*, *Periclimenes anthophilus* and *Thor amboinensis*), and of decapods for Northeast Brazilian Coast (*Discis serratirostris*, *Leptocheila bermudensis*, *Macrocoeloma campocerum*, *Palicus dentatus*), are presented in this study.

**Acknowledgements**

To REVIZEE Program and Navy of Brazil for the logistic support, CAPES for providing a scholarship and to Prof. Petrônio Coelho for the suggestions.
