ABSTRACT

In collections of hermit crabs from intertidal and shallow areas of the Sea of Japan, 54 species belonging to three families and 19 genera were found, with a new species of *Diogenes*. These specimens are mainly from the collection of the Toyama Science Museum and from personal collection by Hiroshi Motoh of the Kyoto Sea Farming Center supplemented by specimens in the collections of several other museums and institutions. This hermit crab fauna was primarily composed of species endemic to temperate Japanese and its adjacent waters; however several were widely distributed in Indo-west Pacific regions, and a few in northern Pacific areas.

Key words: hermit crab, Pylochelidae, Diogenidae, Paguridae, Sea of Japan, Toyama, Wakasa Bay, Tsushima Strait, Korea, Russia

和文要旨

これまで日本海の潮間帯および浅海域から採集されたヤドカリ類を調べ、3科19属54種を同定した。この中には、1種の新種のツノヤドカリ（イザナミツノヤドカリ）が含まれる。これらの標本は主として富山市科学文化センターの所蔵標本、および京都府栽培漁業センターの本尾洋氏のコレクションによるもので、これにさらに国内外のいくつかの博物館の所蔵標本も調べたものである。これらのヤドカリ類の大部分は日本およびその近隣の温帶域に分布する種であるが、少数のインド一西太平洋に分布する種、および北太平洋に広く分布する種を含む。

キーワード: ヤドカリ, ツノガイヤドカリ科, ヤドカリ科, ホンヤドカリ科, 日本海, 富山, 若狭湾, 対馬海峡, 韓国, ロシア

INTRODUCTION

The Sea of Japan is located between the Japanese Archipelago and Asian Continent. Because of its position in the Far East and because of its closeness, the Sea of Japan is of considerable zoogeographocal interest (e.g., Nishimura, 1965-1969). However, faunal information on marine invertebrates about the area is, to say the least, sparse. As far as hermit crab fauna is concerned, the existing literature provided only scattered records (Kikuchi, 1932, 1959; Miyake et al., 1962; Miyake, 1978, 1982; Honma and Kitami, 1978; Komai et al., 2002).

Recently, I examined specimens of hermit crabs housed in the Toyama Science Museum (TOYA) collected from Toyama Bay through the courtesy of Dr. Noboru Nunomura and a collection of hermit crabs made by Dr. Hiroshi Motoh of the Kyoto Sea Farming Center from Wakasa Bay through the courtesy of HM. Both of them represent the foundation of this report. The Motoh's collection was a part of the collection of decapod anomurans including the Lithodidae, Galatheidae, Porcellanidae and Albunidae, and the report based on these all anomurans will be published in Motoh (in press). This material has been supplemented by collections in the following museums or institutions;

Noto Marine Center, Ishikawa (NMCI)(= Noto Kaiyo Fureai Center, Noto-machi, Ishikawa-ken)

Osaka Museum of Natural History (OMNH)

Yamagata Prefectural Museum (YPM-SS)

Sado Marine Biological Station, Faculty of Science, Niigata University

(SMBL-NU)

The Museum of Yamagata University (MYU)

Natural History Museum and Institute, Chiba (CBM-ZC)

National Science Museum, Showa Memorial Institute, Tsukuba (NSMT-Cr R)

Kitakyushu Museum of Natural Historuy (ZLKU (KMNH))

Department of Geology, Kyushu University (DGKU)

National Museum of Natural History, Smithsonian Institution (USNM)

For a description of a new species of *Diogenes*, material housed in the following museums were examined for comparative purpose;

Muséum national d'Histoire naturelle, Paris (MNHN)

Western Australian Museum (WAM)

Museum of Zoology, Cambridge University (MZCU)

Australian Museum (AM)

These materials includes three families and 19 genera, which are reported here.

MATERIAL AND METHODS

Here, the Sea of Japan is defined as area surrounded by the Asia Continent, the Korean Peninsula, the Japanese Archipelago, and Sakhalin, with its northern boundary Mamiya (Tatar) Strait (=area between east coast of Russia and Sakhalin Island) and southern boundary Tsushima Strait (= area between Korean Peninsula and Kyushu) (Fig. 1). Area of the Sea of Japan is 978,000 km² and the mean depth is 1753 m with the maximum depth 3742 m. A cold ocean current, Liman Current, flow in its northern part, and a warm ocean current, Tsushima Current, flows in its southern part. Toyama Bay (Toyama-wan in Japanese) is the area formed with its boundaries of southern coast of Toyama-ken and eastern coast of Noto Peninsula (Ishikawa-ken). Wakasa Bay (Wakasa-wan in Japanese) is formed by coastal lines of Fukui-ken and Kyoto-fu (Fig. 2).

All of TOYA specimens have been returned to the Toyama Science Museum, and the specimens from Wakasa Bay have been deposited in CBM.

One measurement, shield length (SL), as measured from the tip of the rostrum or midpoint of the rounded rostral lobe to the posterior midpoint of the cephalothoracic shield, provides an indication of animal size. Other abbreviations are; coll., collector; NoNu, Noboru Nunomura.

For each species, the synonymies include only original descriptions, illustrated systematic accounts, or references to pertinent to the species in the region. Localities of previous as well as present collection records from the Sea of Japan are also provided.

In the specimen data, "-ken" and "-shi" mean Prefecture and City, respectively (e.g., "Toyama-shi, Toyama-ken" equal "Toyama City, Toyama Prefecture"). Toyama-shi, Himi-shi, Takaoka-shi and Shinminato-shi all belong to Toyama-ken. "Korea" means both/either Republic of Korea and/or Democratic People's Republic of Korea. Korea Strait is a region between the Korean Peninsula and Tsushima Islands in the Tsushima Strait.

One notice is about recent Sakai and Fukushima's (1998) record of a single specimen of a tropical Indo-Pacific water species, *Calcinus morgani* Rahayu and Forest, 1999 (as *Calcinus gaimardi*, not *Calcinus gaimardii* (H. Milne Edwards, 1848)), from Nanao Bay, Noto Peninsula (Ishikawa-ken), Sea of Japan. This is no doubt an intentional introduction, because it was found in a tropical water shell (*Trochus maculatus*), which has never been found in the Sea of Japan. Further, intertidal areas, its habitat, in that coast often suffer low temperature to nearly 0°C and often experience snow falling, to which this species never tolerate. Perhaps, it was kept as a pet animal and escaped or intentionally released.

SYSTEMATICS

Family Pylochelidae Bate, 1888

Pomatocheles jeffreysii Miers, 1879

Figs. 3, 4

Pomatocheles jeffreysii Miers, 1879: 49, pl. 3, fig. 2, 2a-d. - Terao, 1913: 390. - Kikuchi, 1932: 8. - Miyake, 1960: 47, 94, pl. 47, fig. 7. - Miyake et al., 1962: 125. - Miyake, 1975: 270, pl. 112, fig. 1. - Miyake, 1978: 4, text-fig. 1. - Miyake & Imafuku, 1980: 1. - Miyake, 1982: 95, pl. 32, fig. 1. - Forest, 1987: 119, figs. 4a, 5c, d, 7c, 32a-i, 33a-h, 34a-d, 35a-d; pls. 1.

Mixtopagurus jeffresii - Balss, 1913: 35, text-fig. 25, pl. 1, fig. 10, pl. 2, fig. 1. - Yokoya, 1933: 71. - Makarov, 1962: 115, fig. 42.

Material Examined

1♂, SL = 1.70 mm, off Amio-cho, Yosano-gun, Kyoto-fu, Aug. 1982, coll. Genji Kanemaru, OMNH Ar 2808 (Z82-53); 1 exs. (dried specimen, not measured due to damage), Nezugaseki, Shonaihama, Yamagata-ken, 1966, YPM-SS 0342, A-19.

Records from the Sea of Japan: Tsuyazaki (Fukuoka-ken), Tottori-ken, Nagato (Yamaguchi-ken), Toyama Bay, Korea (Kikuchi, 1932; Miyake et al, 1962; Miyake, 1978; Forest, 1987), and now Kyoto-fu and Yamagata-ken.

Distribution: From Kyushu northward to Sagami Bay (Pacific coast) or to Toyama Bay (Sea of Japan coast); Cheju, Korea.

Family Diogenidae Ortmann, 1892

Aniculus miyakei Forest, 1984

Pagurus aniculus - de Haan, 1849: 209. [Not *Pagurus aniculus* (Fabricius, 1787)]

Aniculus typicus - Ortmann, 1892: 289. - Stimpson, 1858: 247 (85). - Stimpson, 1907: 207. [Not *Aniculus typicus* Dana, 1852]

Aniculus aniculus - Balss, 1913: 49. - Kikuchi, 1932: 8. - Yokoya, 1933: 79. - Utinomi, 1956: 32, fig. 6. - Miyake et al., 1962: 125. - Miyake, 1965: 640, fig. 1067. - Suzuki, 1971: 93, pl. 32, fig. 4. - Miyake, 1975: 112, fig. - Miyake, 1978: 16, text-fig. 6. - Miyake, 1982: 98, pl. 33, fig. 5. [Not *Aniculus aniculus* (Fabricius, 1787)]

Aniculus miyakei Forest, 1984: 36, figs. 10, 18, 37-40. - Miyake, 1998: 98, pl. 33, fig. 5. - Yamaguchi & Baba, 1993: 268, figs. 68A, 68B.

Not *Aniculus aniculus* - Honma and Kitami, 1978: 43 (in part). [= *Pagurus rubrior* Komai, 2003]

Remarks: I reexamined one of the specimens reported as *Aniculus aniculus* from the Sado Island, Niigata-ken, by Honma and Kitami (1978) and found it is actually *Pagurus rubrior*.

Records from the Sea of Japan: Niigata-ken, Toyama-ken, Tottori-ken (Kikuchi, 1932; Miyake et al., 1962; Miyake, 1978).

Distribution: Kyushu northward to the Boso Peninsula (Pacific coast) or to Niigata-ken (Sea of Japan coast).

Clibanarius infraspinatus Hilgendorf, 1869

1978, coll. NoNu, TOYA AA-03; 2♂, SL = 10.70-16.20 mm, Toyama Bay, TOYA AA-05; 2♂, SL = 15.15-18.65 mm, Amaharashi, Takaoka-shi, 12 Aug. 1977, coll. NoNu, TOYA AA-06; 1♀, SL = 8.50 mm, Ao, Himi-shi, 17 Aug. 1979, coll. Toyama Fish. St., TOYA Z80-189-a; 1♂, SL = 4.90 mm, Amaharashi, Takaoka-shi, 2 Aug. 1990, coll. Hisao Nambu, TOYA Z90-34-b.

Remarks: Miyake et al. (1962) and Miyake (1978) recorded *Clibanarius striolatus* from the Toyama Bay and the Sagami Bay respectively, the latter of which was on the basis of the specimens collected by trawl nets for shrimps or prawns. However, *C. striolatus* is a tropical water species who inhabits intertidal areas of sand or mud flats in estuaries. *Clibanarius striolatus* and *C. infraspinatus* share many morphological characters including distinct stripes on the ambulatory pereopods. It is no doubt that the records by Miyake et al. (1962) and Miyake (1978) are incorrect and they actually reported the latter species.

Record from the Sea of Japan: Now Toyama Bay.

Distribution: Taiwan, Philippines, Vietnam, Singapore, Indonesia, Australia, Red Sea, Indian Ocean; Tosa Bay, Hyuganada, Tokyo Bay (Miyake, 1982; Asakura unpubl.), and now Toyama Bay.

Clibanarius virescens (Krauss, 1843)

Diogenes senex - Yajima & Yamaguchi, 1983: 1. - Matada et al., 1995: 36. - Tatsu, 2002: 43. [Not *Diogenes senex* Heller, 1865]

Material Examined

Type material: holotype: ♂, SL = 2.45 mm, Tsukumo Bay, Noto Peninsula, Ishikawa-ken, 3 Aug. 1979, coll. Yamaguchi, Rem. Z80-02, OMNH Ar 2137. Paratypes: 3♂, SL = 1.50-1.85 mm, 1 ov. ♀ (allotype), SL = 2.25 mm, Ossaka, Uchiura-cho, Housu-gun, Noto Peninsula, Ishikawa-ken, NMCI-AR-154 (I-40-284); 2♀, SL = 1.95-2.75 mm, 3 ov. ♀, SL = 2.05-2.10 mm, 4♂, SL = 1.95-2.95 mm, data same as NMCI-AR-154, NMCI-AR-162 (I-40-303); 1♂, SL = 1.70 mm, data same as holotype, OMNH Ar 2138.

Comparative material examined: *Diogenes pallescens* Whitelegge, 1897: syntypes, 3♂, 4♀, SL = 1.80-2.60 mm, Funafuti, Ellice Islands, coll. G. Hedley, AM G1402; 1♂, SL = 2.30 mm, Baie de Cauda, Vietnam, coll. R. Sérene, 11

Sept. 1953, Rte 1379, MNHN Pg 1502 (= lectotype of *Diogenes serenei* Forest, 1956); 2♂, SL = 1.70-1.80 mm, Mahlos, Maldives, coll. S. Gardiner, MZCU (= syntypes of *Diogenes gardineri* Alcock, 1905). *Diogenes leptocerus* Forest, 1956: syntype, 1♂, SL = 2.00 mm, Emboucheere due Cuobe, Vietnam, 14 Apr. 1954, Rte 1448, MNHN Pg 1416. *Diogenes tumidus* Rahayu and Forest, 1995: holotype, ♂, SL = 2.40 mm, Sorong, Irian, (= New Guinea), Indonesia, MNHN Pg 5061; 6♂, SL = 1.40-2.25 mm, 3♀, SL = 1.35-1.40 mm, Indonesia, Oct 1991, MNHN Pg. 5085. *Diogenes spinicarpus* Rahayu and Forest, 1995: holotype, ♂, SL = 1.80 mm, Tanjung Tiram, Amboine, Indonesia, MNIIN Pg 5071; paratype, 1♀, SL = 1.80 mm, Tanjung Tiram, Amboine, Indonesia, MNHN Pg. 5072; 1♂, SL = 2.00 mm, Marsegu, Cerum, Indonesia, 16 Sept. 1993, MNHN Pg. *Diogenes biramus* Morgan, 1987: holotype, ♂, SL = 3.10 mm, 4 m, Coral Bay near headland, Port Essington, Northern Territory, Australia, 12 Aug. 1986, WAM156-87; 1♀, SL = 2.5 mm, 4-12 m, Beagle Reef, Kimberleys, Australia, UMB 91#35, coll. Gary J. Morgan, 24 Aug. 1991, WAM 173.91. *Diogenes capricorneus* Grant and McCulloch, 1906: holotype, ♀, SL = 2.50 mm, Coral sand, Masthead Island, Queensland, Australia, 23°32'S, 151°44'E, coll. F. E. Grant, 1904, AM G5626.

Description

Shield (Fig. 15A, B) 1.0-1.2 times longer than wide; anterior margin between rostral process and lateral projections straight to slightly concave; anterior margins armed laterally with sharp or blunt spines or tubercles; lateral margins gently convex, often armed with few small spines or tubercles. Lateral projections obsolete. Intercalary rostral process simple, slightly shorter to slightly longer than ocular acicles.

Ocular peduncles (Fig. 15A) only very slightly swollen proximally; corneas not dilated or only slightly dilated. Ocular acicles with distal margins strongly oblique, armed with 3-5 spines.

Antennule peduncles (Fig. 15A) overreaching ocular peduncles by 0.2-0.5 length of ultimate segments; ultimate and penultimate segments unarmed.

Antennal peduncles (Fig. 15A, C) with fifth segment reaching only 0.5-0.7 length of ocular peduncles; fifth segment unarmed; fourth segment with strong subdistal spine on dorsal face; third segment protruded ventrodistally; second segment with dorsodistal lateral angle bearing strong spine, dorsodistal mesial angle with spine. Antennal acicle terminating in sharp spine; mesial margin with 1 or 2 sharp spines; lateral margin with 1-3 spines.

Third maxillipeds (Fig. 15D) with ischium without crista dentata, but with one very small spine (tooth) and row of very short, stiff setae along ventromesial margin; dactyl, propodus, carpus and merus unarmed.

Left cheliped (male, Fig. 16A-C; female, Fig. 16D, E) moderately setose; more ovate and armature stronger in females and smaller individuals of both sexes than in large males. Dactyl with upper face and upper portion of outer face armed with tubercles (large males) or upper face armed with 1 or 2 rows of spines and outer face with 1-3 irregular rows of spines (females and smaller individuals of both sexes). Palm with upper and outer faces armed with tubercles or blunt spines and lower face with numerous tubercles or blunt spine mainly distally (large males), or upper face armed with 1 or 2 rows of strong spines, outer face with scattered or numerous spines, and lower face armed with spines (females and smaller individuals of both sexes). Carpus with upper margin armed with row of spines and outer face with scattered spines or tubercles. Merus with ventrolateral margin bearing row of spines and ventromesial margin sometimes with few spines or tubercles.

Right cheliped (Fig. 17A-D) setose. Dactyl and fixed finger "duck-beak" like shape; distal margins rounded and armed with numerous sharp corneous spines (= corneous teeth on cutting edge), outer surface of fixed finger sometimes with few tubercles; carpus with 2 sharp and strong spines along distal margin of outer face; merus and ischium unarmed.

Second (Fig. 17E-H) and third (Fig. 18A-C) pereopods generally similar, third slightly longer and slightly slenderer than second; moderately setose, most of setae on dactyls and propodi simple. Dactyls 1.0-1.1 length of propodi, each terminating in strong half-transparent claw. Propodi 1.4-1.6 length of carpi, unarmed. Carpi 0.7-0.8 length of meri;

each with dorsodistal spine and, on second, additional spine in front of proximal margin of dorsal face.

Anterior lobe of sternite of third pereopods (Fig. 15E) with two protrusions bearing setae.

Fourth pereopods (Fig. 18D) with well-developed propodal rasp. Fifth pereopods chelate.

Telson (Fig. 15F) with small median cleft; terminal margins with row of tiny spines, terminal and lateral margins often armed with few strong spines.

Etymology: From the name of the primal female God in the Japanese mythology such as Koziki and Nihonshoki, *Izanami*, literally she-who-invites. There are several Shinto shrines dedicated to *Izanami* in Shimane-ken along the coast of the Sea of Japan.

Remarks: Among the species of the genus *Diogenes*, there is a small group of the species in which the antennal peduncles are slender and shorter than the ocular peduncles and the antennal flagella lack a pair of long setae for filter feeding (e.g., Haig and Ball, 1988). This group includes *D. pallescens*, Whitelegge, 1897, *D. leptocerus* Forest, 1956, *D. biramus* Morgan, 1987, *D. capricorneus* Grant and McCulloch, 1906, *D. viridis* Haig and Ball, 1988, *D. spinicarpus* Rahayu and Forest, 1995, and *D. tumidus* Rahayu and Forest, 1995. *Diogenes gardineri* Alcock, 1905b, and *D. serenei*, Forest, 1956, were once included in this group. However, McLaughlin (2002b) found that *D. pallescens*, *D. gardineri* and *D. serenei* were conspecific; *Diogenes pallescens* is the senior synonym. *Diogenes senex* was also once included in this group, for example, by Haig and Ball (1988). However, McLaughlin and Haig (1996) demonstrated that it was only because the species had been misinterpreted; true *D. senex* had well developed antennal flagella which articles each had a pair of long setae.

This new species was incorrectly identified as *Diogenes senex* and reported from the Noto Peninsula (see synonomies above). However, this species apparently was not *D. senex* in having the slender antennal peduncles shorter than the ocular peduncles and the antennal flagella lacking a pair of long setae, and by these characters, this species is quite similar to *D. pallescens* and other related six species mentioned above.

This species is very characteristic in having the "duck-beak" like dactyl and fixed finger of the left cheliped, which are armed distally with numerous very sharp spines. Among the species of *D. pallescens* and other related taxa mentioned above, this character is shared only by another species *D. tumidus*, known from Indonesia and Singapore, tropical west Pacific, inhabiting intertidal rock pools (Rahayu and Forest, 1995; Rahayu, 1996). Morphologically, these two species are quite similar. However, the two species is easily separated, as *D. tumidus* has very dense plumose setae on the carapace, the chelipeds, and ambulatory pereopods obscuring any armatures, which are mostly lacking in the new species. However, setation is sometimes subject to variation in hermit crabs, and density of plumose setae on the chelipeds, shield and ambulatory dactyls of this species also exhibit some variations. But, al least among the specimens that I examined, this character is not overlapped between the two species.

Distribution: Known only from coasts of the Noto Peninsula, Sea of Japan.

Habitat and ecology: Yajima and Yamaguchi (1983) quantitatively investigated spatial distribution, abundance, and shell utilization of intertidal hermit crabs in Tsukumo Bay, Noto Peninsula, Ishikawa-ken. They found that this species was most abundant (568 individuals, 42.9% among the hermit crab individuals collected), followed by *Pagurus filiholi* (337 ind., 25.4%), *Pagurus minutus* (221 ind., 16.7%), *Paguristes ortmanni* (135 ind., 10.2%), and *Pagurus lanuginosus* (58 ind., 4.4%). This species was found under pebbles in intertidal zones of rocky shores or pebble beaches, mostly between MLW (mean water level) and ELWS (extreme low water of spring tide), or few were found in zones lower than those level until -50 cm under the datum level. Shell species used by this species were *Batillaria multiformis*, *Cerithium kobelti* and *Littorina brevisula*.

Paguristes digitalis* Stimpson, 1858*Figs. 19, 20**

Paguristes digitalis Stimpson, 1858: 247. - Stimpson, 1907: 212, pl. 25, fig. 1. - Balss, 1913: 37, figs. 26, 27. - Terao, 1913: 374. - Yokoya, 1933: 73. - Yokoya, 1939: 280. - Kamita, 1955: 30, text-fig. 10. - Yamaguchi & Yamada, 1955: 132. - Miyake, 1961a: 11. - Miyake et al., 1962: 125. - Miyake, 1965: 640, fig. 1066. - Igarashi, 1970: 3, pl. 2, fig. 4. - Miyake, 1978: 26 (key), 29, text-fig. 9. - Miyake, 1982: 97, pl. 33, fig. 2. - Komai et al., 1992: 196.

Paguristes kagoshimensis Ortmann, 1892: 281, pl. 12, fig. 8.

Material Examined

1♂, SL = 13.15 mm, Fukura, off Nishihama, Yamagata-ken, 9 June 1975, YPM-SS 1749, A-19.

Remarks: Miyake et al. (1962) recorded four species of *Paguristes* from the Sea of Japan, viz., *P. kagoshimensis* Ortmann, 1892, from Tsuyazaki and Toyama, *P. ortmanni* Miyake, 1978 (as *P. barbatus* Heller, 1862) from Tsuyazaki, Tottori-ken and Yamagata-ken, *P. digitalis* from Tottori-ken, and *P. japonicus* from Tsuyazaki and Tottori-ken.

However, it was found by a recent Komai's (2001) revisional study on *Paguristes* that the type material of *P. kagoshimensis* was conspecific with *P. digitalis*, viz., *P. kagoshimensis* was a junior subjective synonymy of *P. digitalis*. He provided a new name *P. versus* Komai, 2001, to the specimens of the species (other than the type of *P. kagoshimensis*) heretofore assigned to *P. kagoshimensis*. Komai (2001) also revealed that one male and one female among the specimens reported as *P. kagoshimensis* by Miyake (1978) were actually *P. palythophilus* Ortmann, 1892, and *P. acanthomerus* Ortmann, 1892, respectively. He further disclosed that the photographs of *P. kagoshimensis* in Baba (1986) and Yu and Foo (1990) were neither *P. palythophilus*, *P. acanthomerus* nor *P. versus*. So, he described a new species, *P. albimaculatus* Komai, 2001, for this taxon.

As a result, at least four species are confounded under the name of *P. kagoshimensis*. Thus, Miyake et al.'s (1962) record of *P. kagoshimensis* (now *P. versus*) from the Sea of Japan is very suspicious. Komai (2001) did not include Miyake et al.'s (1962) record of this species from the Sea of Japan into the synonymies under *P. versus*, when he described it as new. This is most probably because he could not locate the specimens used by Miyake et al. (1962), which means that he could not evaluate precisely species identities of this record. In this paper too, the record of *P. kagoshimensis* (now *P. versus*) in the region is excluded according to Komai (2001).

Similar problem occurred on the record of *Paguristes setosus* (H. Milne Edwards, 1848) from the Sea of Japan. According to Yokoya (1933) and Miyake (1978), this species was distributed in the Sea of Japan coasts and Sea of Genkai (southern boundary of the Sea of Japan). However, Forest and McLaughlin (1998) found that the Japanese species assigned to *P. setosus* was actually a different taxon and described it as *Paguristes miyakei* Forest and McLaughlin, 1998. They stated "it is not possible to ascertain the identities of the specimens reported by Yokoya (1933) from several Japanese localities" so that they restricted the geographical distribution of *P. miyakei* to Sagami Bay. Accordingly, in this paper too, the record of *P. miyakei* in the Sea of Japan is excluded.

Records from the Sea of Japan: Tottori-ken (Miyake et al., 1962), Oshoro (Igarashi, 1970), and now Yamagata-ken.

Distribution: Kyushu northward to southern Hokkaido; Korea (Komai, 2001).

Pagurus setifer - De Haan, 1849: 209. [Not *Pagurus setifer* H. Milne Edwards, 1836]

Pagurus sculptipes Stimpson, 1858: 287. - Ortmann, 1892: 287. - Doflein, 1902: 646. - Alcock, 1905a: 83, pl. 8, fig. 3. - Stimpson, 1907: 205. - Balss, 1913: 48.

Dardanus crassimanus - Utinomi, 1956: 64, pl. 32, fig. 6. - Miyake, 1961a: 11. - Miyake et al., 1962: 125. - Miyake, 1965: 643, fig. 1079. - Suzuki, 1971: 96, pl. 33, fig. 3. - Kim, 1973: 204, 596, fig. 37, pl. 4, fig. 20. - Miyake, 1975: 197, pl. 14, fig. 5. - Miyake, 1978: 61, text-fig. 22, pl. 1, fig. 1. - Miyake & Imafuku, 1980: 5. - Miyake, 1982: 110, pl. 37, fig. 5. - Yamaguchi & Baba, 1993: 274, fig. 73.

Material Examined

1♂, SL = 22.75 mm, Kanmuri-jima Island, Kyoto-fu, Wakasa Bay, 27 June 2004, coll. H. Motoh (A), diving, CBM-ZC 8458.

Records from the Sea of Japan: Now Wakasa Bay.

Distribution: Indo-west Pacific from east coast of Africa to Hong Kong, Taiwan; in Japan, to Boso Peninsula and now Sea of Japan.

***Dardanus impressus* (De Haan, 1849)**

Pagurus impressus De Haan, 1849: 204, 207, pl 49, fig. 3. - Balss, 1913: 46, figs. 30, 31. - Terao, 1913: 378. - Yokoya, 1933: 79.

Dardanus impressus - Rathbun, 1902: 34. - Miyake et al., 1962: 125. - Miyake, 1965: 645: fig. 1084. - Kim, 1973: 202, 595, text-fig. 36, pl. 4, fig. 19. - Miyake, 1978: 65, text-fig. 24. - Miyake & Imafuku, 1980: 7. - Miyake, 1982: 109, pl. 37, fig. 1. - Yamaguchi & Baba, 1993: 276, fig. 75.

Records from the Sea of Japan: South-east of Tsushima Islands (Yokoya, 1933) and Yamagata-ken (Miyake et al., 1962); Korea Strait (Kim, 1973).

Distribution: Kyushu northward to Boso Peninsula (Pacific coast) or to Yamagata-ken (sea of Japan coast); Korea; Taiwan.

***Dardanus pedunculatus* (Herbst, 1804)**

Cancer pedunculatus Herbst, 1804: 25, pl. 61, fig. 3.

Pagurus asper De Haan, 1849: 204, 208, pl. 49, fig. 4. - Stimpson, 1858: 233.

Dardanus haani Rathbun, 1902: 34. - Miyake et al., 1962: 125. - Miyake, 1965: 644, fig. 1083.

Dardanus pedunculatus - Miyake, 1978: 60, text-fig. 21. - Miyake & Imafuku, 1980: 6. - Miyake, 1982: 108, pl. 36, fig. 6.

Records from the Sea of Japan: Tottori-ken, Toyama-ken, and Niigata-ken (Miyake et al., 1962).

Distribution: Indo-West Pacific from east coast of Africa to Hawaii; in Japan, northward to the Boso Peninsula (Pacific coast) or to Niigata-ken (Sea of Japan coast).

Family Paguridae Latreille, 1802

***Pagurus ochotensis* Brandt, 1851**

Figs. 31, 32

Pagurus (Eupagurus) bernhardus var. *B. granulato-denticulata* Brandt, 1851: 107.

Pagurus (Eupagurus) bernhardus var. *C. spinimana* or sp. *ochotensis* Brandt, 1851: 108.

Eupagurus ochotensis - Stimpson, 1858: 278 (in part). - Stimpson, 1907: 218. - Balss, 1913: 60. - Yokoya, 1933: 82. - Yokoya, 1939: 284. - Urita, 1942: 43, fig. 13. - Kamita, 1954-58: 42, fig. 18, 60, 69.

Eupagurus (Eupagurus) alaskensis Benedict, 1892: 2.

Pagurus ochotensis - Makarov, 1962: 188, figs. 44, 69B, pl. 2, fig. 2. - Miyake et al., 1962: 125. - Kim, 1964: 8. - Igarashi, 1970: 5, pl. 4, fig. 12. - Kim, 1970: 7. - McLaughlin, 1974: 57, figs. 15, 16. - Miyake, 1975: 116, 221. - Miyake, 1982: 125, pl. 42, fig. 3. - Komai et al., 1992: 197.

Eupagurus ortmanni Balss, 1911: 7.

Eupagurus spinimanus - Terao, 1913: 372. [Not *Pagurus spinimanus* (H. Milne Edwards, 1848)].

Material Examined

2♀, SL = 12.80-21.00 mm, 228 m, Mogami-tai (Mogami Basin), 100-150 km off Yamagata-ken, 20 Sept. 1973, YPM-SS 1724, A-18; 1♂, SL = 19.35 mm, Nezugaseki, Shonaihama, Yamagata-ken, coll. Suzuki, 1969, MYU.

Records from the Sea of Japan: Off Sado Island (Yokoya, 1933), Oshoro (Igarashi, 1970), Korea (Kamita, 1955; Kim, 1973), continental coast of Sea of Japan (Makarov, 1962).

Distribution: Siberia, Kamchatka, Okhotsk Sea, Sakhalin, Kuril Islands, Peter the Great Bay, Sea of Japan, Avachinskaya Guva to Inubo-zaki (Honshu, Japan), Pribilof Islands, Bering Sea to Oregon (McLaughlin, 1974; Miyake, 1982).

***Pagurus middendorffii* Brandt, 1851**

Figs. 33, 34

Pagurus (Eupagurus) Middendorffii Brandt, 1851: 108, pl. 5, figs. 1-6.

Eupagurus middendorffii - Stimpson, 1858: 250. - Stimpson, 1907: 226. - Balss, 1913: 58. - Yokoya, 1939: 281, fig. 11. - Kamita, 1954-58: 38, fig. 15, 60.

Eupagurus middendorffii (sic) - Ortmann, 1892: 301. - Doflein, 1902: 646. - Terao, 1913: 371. - Urita, 1942: 45.

Pagurus middendorffii - Rathbun, 1904: 160. - Makarov, 1962: 165 (not pl. 5, fig. 6). - Kim, 1964: 8. - Kim, 1970: 7. - Kim, 1973: 218, text-fig. 46, pl. 5, fig. 26. - McLaughlin, 1974: 185, figs. 45-47. - Miyake, 1982: 127, pl. 43, fig. 1. - Komai et al., 1992: 197.

Material Examined

1♂, SL = 4.20 mm, intertidal, Tomari-mura, Shakotan Peninsula, west coast of Hokkaido, coll. Tadashi Kawai, 2 June 2005, CBM - ZC.

Records from the Sea of Japan: Yamagata-ken, Oshoro (Hokkaido) (Igarashi, 1970), east coast of Korea (Kamita, 1955; Kim, 1973).

Distribution: Russia, Bering Sea, Kuril Islands, Sakhalin, Okhotsk Sea, Hokkaido, Sea of Japan (McLaughlin, 1974; Miyake, 1982).

***Pagurus filholi* De Man, 1887**

Figs. 35, 36

Eupagurus samuelis - Stimpson, 1858: 250. - Ortmann, 1892: 301, pl. 12, fig. 12. - Doflein, 1902: 646. - Balss, 1913: 61. - Terao, 1913: 371. [Not *Eupagurus samuelis* Stimpson, 1857].

Pagurus filholi De Man, 1887: 707, fig. 3. - Sandberg & McLaughlin, 1993: 198, figs. 1, 3. - Kim, 1973: 228, text-fig. 51, pl. 70, fig. 32.

Pagurus samuelis - Makarov, 1962: 179 (in part; not pl. 3, fig. 6). - Miyake et al., 1962: 125. - Kim, 1964: 4. - Utinomi, 1956: 65, pl. 33, fig. 4. - Honma & Kitami, 1978: 43. [Not *Eupagurus samuelis* Stimpson, 1857]

Pagurus geminus McLaughlin, 1976: 16, figs. 1-3. - Miyake, 1978: 112, text-figs. 46, 47, pl. 1, fig. 3. - Miyake & Imafuku, 1980: 60. - Miyake, 1982: 126, pl. 42, fig. 6. - Komai et al., 1992: 197.

Material Examined

5♂, SL = 3.70-5.50 mm, Yokataminatomachi, Toyama-shi, 20 July 2000, coll. NoNu, TOYA Z2000-12; 1♂, SL = 5.90 mm, rocky shore, Kurosaki, Nanao-shi, Ishikawa-ken, 30 July 2000, coll. Hisao Nambu, TOYA Z90-34-a; 2♀, SL = 4.05-4.60 mm, Enome, Katsuozaiki, Notozima-machi, Ishikawa-ken, 30 July 1990, coll. Hisao Nambu TOYA Z90-39.

Records from the Sea of Japan: This species is very common in both the Pacific and Sea of Japan coasts in temperate Japan and continental coasts of the Sea of Japan.

Distribution: Kamchatka, Kuril Islands, Nahkodka, Olga Bay, Possjet Bay, Petra Velikogo Bay; Korea, Taiwan; Japan (Hokkaido, Honshu, Shikoku, Kyushu)(Miyake, 1978; Kim, 1973). Miyake's (1978) record of this species from the Ogasawara Islands should be for *Pagurus insulae* Asakura, 1991 (Asakura, 2003).

***Pagurus minutus* Hess, 1865**

Figs. 37, 38

Pagurus minutus Hess, 1865: 180 (part). - Sandberg & McLaughlin, 1993: 219, figs. 2, 4. - Komai & Mishima, 2003: 15, figs. 1-6.

Eupagurus dubius Ortmann, 1892: 307 (part), pl. 12, figs. 12, 14k. - Doflein, 1902: 646. - Balss, 1913: 55.

?*Eupagurus dubius* - Yokoya, 1939: 284.

Not *Eupagurus dubius*: Yokoya, 1933: 81. (species unknown)

Pagurus dubius - Miyake, 1961a: 12. - Miyake, 1961b: 169. - Kim, 1973: 227, text-fig. 51, pl. 70, fig. 31. - Miyake, 1975: 326, pl. 115 fig. 4. - Miyake, 1978: 99, text-fig. 38, pl. 1 fig. 6. - Miyake, 1982: 127, pl. 43, fig. 2. - Miyake & Imafuku, 1980: 60. - Komai et al., 1992: 197. - Asakura, 1995: 363, pl. 97, fig. 10.

?*Pagurus dubius* - Makarov, 1962: 178, pl. 3, fig. 5.

Not *Pagurus dubius*: Igarashi, 1970: pl. 3, fig. 10. [=?*Pagurus trigonochirus* Stimpson, 1858].

Material Examined

1♂, SL = 5.70 mm, intertidal, Asonoumi (Amanohashidate), Kyoto-fu, Wakasa Bay, 12 Aug. 2004, coll. H. Motoh (G), CBM-ZC 8464; 1♂, SL = 3.85 mm, Amaharashi, Takaoka-shi, 18 Apr. 1978, coll. NoNu, TOYA Z78-7; 1♀, SL = 3.30 mm, Amaharashi, Takaoka-shi, 30 Oct. 1981, coll. NoNu, TOYA Z81-52-s; 1♂, SL = 3.35 mm, Konoura, Notozima-machi, Ishikawa-ken, 29 June 1984, coll. NoNu, TOYA Z84-21-a; 1♂, SL = 3.50 mm, Konoura, Notozima-machi, Isikawa-ken, 29 June 1984, coll. NoNu, TOYA Z84-21-b; 2♂, SL = 2.80-3.30 mm, Konoura, Notozima-machi, Ishikawa-ken, 29 June 1984, coll. NoNu, TOYA Z84-21-c; 1♂, SL = 5.35 mm, Yoshitsuna-iwa, Amaharashi, Takaoka-shi, 24 July 1987, coll. NoNu, TOYA Z87-17-c; 1♂, SL = 3.10 mm, Koshinoe, Shinminato-shi, 14 Sept. 1987, coll. Shingo Nunomura, TOYA Z87-28; 2♂, SL = 3.50-4.90 mm, Ameharashi, Takaoka-shi, 2 Aug. 1990, coll. Hisao Nambu, TOYA Z90-34-c; 1 juv., SL = 1.60 mm, Kokubunhama, Takaoka-shi, Toyama-ken, 12 Aug. 1996, coll. NoNu, TOYA Z96-19; 1♂, SL = 6.35 mm, Otaki, Himi-shi, 06 June 1982, coll. NoNu, TOYA Z82-19-b.

Remarks: This species is one of the most common hermit crabs in Japan, and it was well known as *Pagurus dubius* prior to Komai & Mishima (2003).

Records from the Sea of Japan: Various localities in the region including Fukuoka, Wakasa Bay, Noto (Ishikawa-ken), Toyama Bay, Ishikari Bay as well as north of Olga Bay (Russia) and Korea Strait (Miyake, 1978; Komai and Mishima, 2003).

Distribution: Known from temperate waters in East Asia: southern Hokkaido to Kyushu, Okinawa; Primorye, Russia; Korea; north eastern coast of China; west coast of Taiwan (Komai and Mishima, 2003).

***Pagurus lanuginosus* De Haan, 1849**

Figs. 39, 40

Pagurus lanuginosus De Haan, 1849: 204, pl. 49, fig. 2. - Miyake, 1960: 93, pl. 46, fig. 3. - Miyake et al., 1962: 125. -

Makarov, 1962: 201 (part), pl. 5, fig. 2. - Kim, 1964: 9. - Kim, 1970: 7. - Kim, 1973: 237, 602, pl. 71, fig. 37a, b. -

Holthuis & Sakai, 1970: 96. - Igarashi, 1970: 7, pl. 5, fig. 15. - Miyake, 1978: 81 (part), text-figs. 29, 30. - Komai et al., 1992: 197.

?*Pagurus lanuginosus* - Honma & Kitami, 1978: 43.

Eupagurus lanuginosus: Ortmann, 1892: 312 (? part). - Doflein, 1902: 647 (?part). - Balss, 1913: 56 (?part), fig. 33. - Terao, 1913: 370 (?part).

Not *Pagurus lanuginosus* Miyake, 1975: pl. 115, fig. 2. - Miyake & Imafuku, 1980: 59. - Miyake, 1982: pl. 42, fig. 2. - Asakura, 1995: 363, pl. 97, fig. 11 [= *Pagurus maculosus* Komai and Imafuku, 1996]

Material Examined

1♂, SL = 5.90 mm, rocky shore, Kurosaki, Nanao-shi, Ishikawa-ken, 30 July 2000, coll. NoNu, TOYA Z2000-14-a; 2♂, SL = 6.65-7.55 mm, Nakanami, Himi-shi, 24 Aug. 1978, coll. Hisao Nambu, TOYA Z78-59-a; 2♂, SL = 5.10-5.50 mm, 1♀, SL = 4.95 mm, Amaharashi, Takaoka-shi, Toyaka-ken, 6 Sept. 1978, coll. NoNu, TOYA Z78-67; 1♀, SL = 4.05 mm, Ao, Himi-shi, 11 Sept. 1979, coll. Toyama Fish. St., TOYA Z80-189-d; 1♀, SL = 4.55 mm, Otaki, Himi-shi 6 June 1982, coll. NoNu, TOYA Z82-19-c; 2♀, SL = 4.40-5.05 mm, Oozakai, Himi-shi, 6 Sept. 1982, coll. NoNu, TOYA Z82-45; 1♂, SL = 7.90 mm, Ashiarai, Shinminato-shi, 17 Aug. 1984, coll. Hisayoshi Kuroda, TOYA Z84-44; 1♀, SL = 7.45 mm, 1 ov. ♀, SL = 9.40 mm, Kurosaki, Nanao-shi, 7 Aug. 1992, coll. NoNu, TOYA Z92-24-a; 1♂, SL = 7.00 mm, Amaharashi, Takaoka-shi, Toyama-ken, 22 July 1996, coll. NoNu, TOYA Z96-14-c.

Remarks: Komai and Imafuku (1996) disclosed that the two species were confounded under the name of *Pagurus lanuginosus*, viz., *P. lanuginosus* sense stricto and *P. maculosus* Komai and Imafuku, 1996. The latter was known from the Pacific coasts of Japan. However, the species was recently recorded from Noto, Sea of Japan (Myorin per. com), although I have had no opportunity to examine the specimen.

Records from the Sea of Japan: Tsuyazaki (Fukuoka-ken), Tottori-ken, Wakasa-Takayama (Fukui-ken), Toyama-ken, Niigata-ken, and Yamagata-ken; Korea; Peter the Great Bay (Russian coast of Sea of Japan) (Miyake et al., 1962; Komai and Imafuku, 1996).

Distribution: Temperate region of northwestern Pacific : Hokkaido to Kyushu; Peter the Great Bay ; Korea (Komai and Imafuku, 1996).

Pagurus nigrofascia Komai, 1996

Figs. 41, 42

Pagurus nigrofascia Komai, 1996: 60, figs. 1-6. - Mishima, 1997: 19, figs. 2, 3. - Mishima 1998: 9, fig. 2. - Mishima, 2003: 14, fig. 2.

Material Examined

2♂, SL = 4.45 - 5.55 mm, Tsukumo Bay, Noto Peninsula, coll. Yamaguchi, OMNH Ar 2135, 2136 (Z80-02).

Records from the Sea of Japan: Tsuyazaki (Fukuoka-ken)(Mishima, 1997, 1998, 2003) and now Noto Peninsula.

Distribution: Hakodate, Wakayama, Amakusa, and Fukuoka and Noto of Sea of Japan.

Pagurus conformis De Haan, 1849

Pagurus conformis De Haan, 1849: 204. - Holthuis & Sakai, 1970: 96, 295. - Miyake, 1978: 83. - Yamaguchi & Baba, 1993: 280, fig. 79. - Yamaguchi & Baba, 2003: 27.

Eupagurus conformis - Ortmann, 1892: 298, 305. - Doflein, 1902: 647. - Balss, 1913: 52 (key). - Terao, 1913: 366 (list).

Eupagurus megalops Stimpson, 1858: 248. - Alcock, 1905a: 176. - Stimpson, 1907: 216, pl. 24, fig. 2. - Terao, 1913:

370.

Pagurus megalops - Miyake, 1960: 93, pl. 46, fig. 1. - Miyake, 1961a: 12. - Miyake, 1961b: 169. - Miyake, 1962: 125. - Miyake, 1965: 646, fig. 1089. - Kim, 1973: 223, 599, fig. 49. - Miyake, 1978: 84, fig. 31. - Miyake & Imafuku, 1980: 59. - Miyake, 1982: 128, pl. 43, fig. 4. - Komai et al., 2002: 20.

Remarks: Komai's (2004) critical reexamination of specimens referred to *Pagurus conformis* or *P. megalops* (Stimpson, 1858) revealed that the two taxa were conspecific; the former was a senior synonym of the latter. See Komai (2004) for full synonymy.

Yokoya (1933) recorded this species (as *Eupagurus conformis*) from a few localities in the Sea of Japan, viz., south-west of Tsushima Islands and north of Nagato (Yamagata-ken). However, Komai (2004) remarked that Yokoya (1933) provided no morphological information so that it is impossible to determine whether Yokoya's material was actually *P. conformis*. In this paper too, the records by Yokoya (1933) is excluded according to Komai (2004).

Records from the Sea of Japan: north of Karatsu, Saga-ken (Genkai Nada) (Komai et al., 2002; Komai, 2004).

Distribution: Pacific coasts of Japan from Kyushu to Boso Peninsula, southern part of the Sea of Japan, and East China Sea (Komai et al., 2002; Komai, 2004).

***Pagurus constans* (Stimpson, 1858)**

Fig. 43

Eupagurus constans Stimpson, 1858: 248. - Henderson, 1888: 67, pl. 6, fig. 8. - Ortmann, 1892: 310. - Doflein, 1902: 647. - Stimpson, 1907: 218, pl. 24, fig. 3. - Balss, 1913: 55. - Terao, 1913: 366. - Yokoya, 1933: 81. - Yokoya, 1939: 285. - Kamita, 1941-1958: 33, fig. 12.

Pagurus constans - Miyake, 1960: 93, pl. 46, fig. 2. - Miyake, 1961a: 12. - Miyake, 1961b: 169. - Miyake, 1962: 125. - Miyake, 1965: 647, fig. 1094. - Igarashi, 1970: 8, pl. 5, fig. 18. - Suzuki, 1971: 96, pl. 33, fig. 7. - Kim, 1970: 7. - Kim, 1973: 244, 604, fig. 62, pl. 72, fig. 41a, b. - Miyake, 1978: 87, fig. 32. - Honma & Kitami, 1978: 43. - Miyake & Imafuku, 1980: 59. - Miyake, 1982: 132, pl. 44, fig. 4. - Komai et al., 1992: 197. - Asakura, 1995: 362, pl. 97, fig. 6.

Material Examined

2♀, SL = 4.95-5.10 mm, Fukura, off Nishihama, Yamagata-ken, 9 June 1975, YPM-SS 1546, A-16.

Records from the Sea of Japan: Sea of Japan from Korean Strait to Hokkaido, Russian coast of Sea of Japan (Komai, 1999); east coast of Korea.

Distribution: Hokkaido southward throughout the Pacific and Sea of Japan coasts to Kyushu; Russian coasts of Sea of Japan; Korea.

***Pagurus gracilipes* (Stimpson, 1858)**

Figs. 44, 45

Eupagurus gracilipes Stimpson, 1858: 248. - Alcock, 1905a: 177 (in part). - Stimpson, 1907: 217. - Yokoya, 1939: 281.

Pagurus gracilipes - Miyake, 1965: 647 (in part). - Makarov, 1962: 175 (in part), pl. 4, fig. 4. - Igarashi, 1970: 4, pl. 3, fig. 93. - Kim, 1973: 222, 598, fig. 48, pl. 5, fig. 28. - Miyake, 1975: 286 (in part). - Komai et al., 1992: 197.

Parapagurodes gracilipes - Komai, 1998: 268, figs. 1A, 2-5, 7.

Not *Eupagurus gracilipes* - Doflein, 1902: 647, pl. 6, figs. 6-8 - Balss, 1913: 56. - Terao, 1913: 368. [= *Pagurus nippensis* (Yokoya, 1933)]

Not *Eupagurus gracilipes* - Yokoya, 1933: 98, fig. 33 [= *Pagurus yokoyai* Makarov, 1938]

Material Examined

1♀, SL = 8.00 mm, off Iwase, Toyama-shi, 19 June 1990, coll. Nozomu Miyamoto, TOYA Z90-21-b.

Records from the Sea of Japan: Continental coast of Russia Far East and now Toyama-ken.

Distribution: Hokkaido, northeastern Honshu southward to Choshi, Chiba-ken, or to Toyama-ken, Russian coast of Sea of Japan, Sakhalin (Komai, 1998).

Pagurus nipponensis (Yokoya, 1933)

Figs. 46, 47

Eupagurus gracilipes - Doflein, 1902: 647, pl. 6, figs. 6-8. - Balss, 1913: 56. - Terao, 1913: 368. [Not *Eupagurus gracilipes* Stimpson, 1858]

Eupagurus nipponensis Yokoya, 1933: 87, fig. 32.

Pagurus gracilipes - Miyake, 1965: 647 (in part), fig. 1093. - Makarov, 1962: 175 (in part). - Miyake, 1975: 286 (in part), pl. 116, fig. 5. - Miyake, 1978: 89, text-fig. 33, pl. 2, fig. 8. - Miyake & Imafuku, 1980: 59. - Miyake, 1982: 126 (in part), pl. 42, fig. 5.- Baba, in Baba, Hayashi & Toriyama, 1986: fig. 149, 201, 303. [Not *Pagurus gracilipes* (Stimpson, 1858)].

Parapagurodes nipponensis - Komai, 1998: 275, figs. 1B, 6, 7.

Material Examined

1♂, SL = 7.45 mm, 30 m, Nezugaseki, Shonaihama, Yamagata-ken, Aug. 1973, YPM-SS 1700, A-18; 1♂, SL = 6.90 mm, Odajukuno, Miyazu-shi, Kyoto-fu, Wakasa Bay, 6 Sept. 2003, coll. H. Motoh (No. 4), gill net, CBM-ZC 8450.

Records from the Sea of Japan: Now Kyoto-fu and Yamagata-ken.

Distribution: Pacific coasts of Japan from Kashima (Ibaraki-ken) southward to Kagoshima-ken, Goto Islands, and Koshiki Islands; Taiwan (Komai, 1998).

Pagurus pectinatus (Stimpson, 1858)

Eupagurus pectinatus Stimpson, 1858: 249. - Stimpson, 1907: 220. - Balss, 1913: 60, fig. 35, pl. 1, fig. 8. - Terao, 1913: 371. - Yokoya, 1933: 83. - Yokoya, 1939: 280. - Urita, 1942: 42.

Eupagurus seriespinosus Thallwitz, 1891: 34. - Terao, 1913: 372.

Pagurus pectinatus - Igarashi, 1970: 7, pl. 5, fig. 17. - Kim, 1973: 242, text-figs. 60, 61, pl. 7, fig. 40. - Miyake, 1982: 131. - Komai et al., 1992: 197 - Komai, 2000a: 323, figs. 1-5.

Pagurus brachiomastus - Miyake, 1982: pl. 43, fig. 6 - Takeda, 1994: 228, fig. 4. [Not *Pagurus brachiomastus* (Thallwitz, 1891)]

?*Pagurus pectinatus* - Honma & Kitami, 1978: 43.

Records from the Sea of Japan: West and north-west of Tsushima Islands, Toyama Bay, north of the Sado Island,

and off the river mouth of the Mogami-gawa River (Yamagata-ken)(Yokoya, 1933), Oshoro (Igarashi, 1970), "Sea of Japan coast of Honshu mainland" (Komai, 2000a), Korea (Kim, 1973).

Distribution: Hokkaido, Pacific coast of northeastern Honshu mainland southward to Onagawa Bay (Miyagi-ken); Sea of Japan coasts of Honshu mainland; Sea of Japan coast of Russian Far East; East China Sea; Yellow Sea (Komai, 2000a); Korea.

***Pagurus trigonocheirus* (Stimpson, 1858)**

Figs. 48-50

Eupagurus trigonocheirus Stimpson, 1858: 249. - Stimpson, 1907: 211, pl. 26, fig. 2. - Terao, 1913: 373. -Yokoya, 1933: 83.

Pagurus trigonocheirus - Makarov, 1962: 109. - Miyake et al., 1962: 125. - Kim, 1964: 8. - Kim, 1973: 234, text-fig. 55, pl. 6, fig. 35. - McLaughlin, 1974: 233, figs. 59, 60, pl. 1, figs. 1, 2. - Miyake, 1982: 126, pl. 42, fig. 4. - Komai et al., 1992: 197.

?*Pagurus trigonocheirus* - Honma & Kitami, 1978: 43.

Material Examined

2♂, SL = 17.90-18.65 mm, Toyama Bay, 19 Nov. 1987, coll. Toyama Pref. Fish Res. Center, TOYA Z88-28-b; 2♂, SL = 5.95-6.40 mm, 1♀, SL = 4.10 mm, Toyama Bay, 25 Mar. 1988, coll. NoNu, TOYA Z88-1.

Comparative material examined: 2♂, SL = 12.80-13.30 mm, 55 m, Bering Sea, 57°20'N, 163°28'W, 27 Aug. 1960, coll. USFWS, SBL-H-8, identified by P. A. McLaughlin, acc. no. 282239, USNM; 2♂, 1♀, SL = 11.70, 80 m, Bering Sea, 55°40'N, 163°23'W, 9 July 1961, coll. USFWS, SBL-C-8, identified by P. A. McLaughlin, acc. no. 282239, USNM.

Remarks: This species is frequently recorded from northern part of Japan. However, my identification herein is tentative, because the specimens from the Sea of Japan are somewhat different in terms of armature of the dactyls of the second and third pereopods (Fig. 50B, G) from the specimens collected from the Bering Sea (Fig. 50J, USNM). Further detailed observation on geographical variation of this species is needed.

Records from the Sea of Japan: North of Mikuni (Fukui-ken), north and northeast of Noto (Yokoya, 1933), Oshoro (Igarashi, 1970), and now Toyama Bay; east coast of Korea (Kim, 1973).

Distribution: Arctic Ocean, Bering Sea, Chukchi Sea, Aleutian Islands, Kamtchatka, Kuril Islands, Sakhalin, Sea of Japan, Korea, Pacific coasts of northern Japan southward to Inubo-zaki (McLaughlin, 1974; Miyake, 1982).

***Pagurus undosus* (Benedict, 1892)**

Eupagurus (Trigonocheirus) undosus Benedict, 1892: 18.

Pagurus undosus - McLaughlin, 1974: 252, figs. 64-66. - Komai, 1994: 24, fig. 1.

Records from the Sea of Japan: Continental coast of the Sea of Japan (Makarov, 1962; McLaughlin, 1974; Komai, 1994).

Distribution: Bering Sea, Sea of Okhotsk, continental coast of the Sea of Japan, Chukchi Sea, Pacific coasts of Hokkaido (McLaughlin, 1974; Komai, 1994).

***Pagurus rathbuni* (Benedict, 1892)**

Figs. 51, 52

Eupagurus (Trigonocheirus) rathbuni Benedict, 1892: 14.

Pagurus rathbuni - Rathbun, 1904: 158, pl. 4, fig. 2. - Makarov, 1962: 193, pl. 3, fig. 3. - Miyake et al., 1962: 125. -

McLaughlin, 1974: 298, figs. 77-80. - Miyake, 1982: 225 (key). - Komai et al., 1992: 197.

Eupagurus rathbuni - Alcock, 1905a: 179. - Urita, 1942: 42, fig. 12 a, b.

Material Examined

1♂, SL = 13.50 mm, Yokata Fishery Harbor, Toyama-shi, 8 Nov. 1984, coll. Hisao Nambu, TOYA Z84-63; 7♂, SL = 4.00-6.60 mm, 1♀, SL = 5.50 mm, Namerikawa-shi and Iwase, 28 Sept., 1988, coll. Toyama Fish. St., TOYA Z88-28-a; 2♂, SL = 7.40-10.20 mm, 1♀, SL = 7.60 mm, 1 ov.♀, SL = 5.10 mm, off Mizuhashi, Toyama-shi, 08 Dec. 1990, coll. Nozomu Miyamoto, TOYA Z90-59; 7♂, SL = 5.05-9.70 mm, 1♀, SL = 6.20 mm, 2ov.♀, SL = 7.55-7.90 mm, off Mizuhashi, Toyama-shi, 16 Dec. 1990, coll. Nozomu Miyamoto, TOYA Z90-61; 4♂, SL = 7.65-13.65 mm, off Iwase, Toyama-shi, 26 Mar. 1991, coll. Nozomu Miyamoto, TOYA Z91-2; 2♂, SL = 6.15-6.90 mm, 1♀, SL = 7.35-9.00, 1ov.♀, SL = 6.60-7.90 mm, off Shinminato-shi, 19 Nov. 1991, coll. Isao Wada, TOYA Z91-54-b; 1♂, SL = 3.90 mm, off Shinminato-shi, 19 Nov. 1991, coll. Isao Wada, TOYA Z91-54-c; 1♂, SL = 12.20 mm, off Asahi-machi, Toyama-ken, 27 Nov. 1991, coll. NoNu, TOYA Z91-55; 1♂, SL = 7.80 mm, off Iwase, Toyama-shi, 6 Apr. 1993, coll. Nozomu Miyamoto, TOYA Z93-2-a; 4♂, SL = 4.40-6.05 mm, 2♀, SL = 5.20-6.00 mm, off Iwase, Toyama-shi, 6 Apr. 1993, coll. Nozomu Miyamoto TOYA Z93-2-b. **Comparative material examined:** 4♂, SL = 7.40-16.20 mm, 1♀, SL = 11.25 mm, 71 m, st. ABL-G6, Bering Sea, 56°58'N, 164°38'W, 09 July 1966, coll. USFWS, identified by P. A. McLaughlin, USNM.

Records from the Sea of Japan: Most of areas in the Sea of Japan (Takeda and Miyauchi, 1992), continental coast of the Sea of Japan.

Distribution: East Siberian Sea, Kamchatka, Okhotsk Sea, Kuril Islands, Sea of Japan, Chukchi Sea, Bering Sea, Arctic Ocean.

***Pagurus brachiomastus* (Thallwitz, 1891)**

Eupagurus brachiomastus Thallwitz, 1891: 35. - Ortmann, 1892: 312. - Terao, 1913: 365.

Pagurus brachiomastus - Igarashi, 1970: 7, pl. 5, fig. 16. - Makarov, 1962: 200, pl. 2, fig. 6. - Miyake, 1978: pl. 1, figs. 7, 8. - Komai et al., 1992: 197. - Komai, 2000b: 230, figs 1A, B, 2-6.

Pagurus pectinatus - Miyake, 1975: 116, 272, unnumbered fig. - Miyake, 1982: 132, pl. 44, fig. 3. - Takeda, 1994: 228, figs. 1, 2. [Not *Pagurus pectinatus* (Stimpson, 1858)]

Not *Eupagurus brachiomastus* - Kikuchi, 1932: 8. - Yokoya, 1939: 282 (part), fig. 12. [= *Pagurus proximus* Komai, 2000b]

Not *Pagurus brachiomastus* - Kim, 1970: 7. - Kim, 1973: 236, 601, pl. 70, fig. 30. [= *Pagurus proximus* Komai, 2000b]

Remarks. Regarding Kikuchi's (1932) record of this species from Toyama Bay, Komai (2000) mentioned "from the information on the geographical distribution of the three species (*P. brachiomastus*, *P. proximus* Komai, 2000b, and *P. simulans* Komai, 2000b), it is likely that Kikuchi was actually reporting *P. proximus*, instead of true *P. brachiomastus*".

Records from the Sea of Japan: Continental coasts of the Sea of Japan including Peter the Great Bay (Komai,

2000b).

Distribution: Continental coast of Sea of Japan, Sakhalin, and Hokkaido (Komai, 2000b).

***Pagurus proximus* Komai, 2000b**

Pagurus proximus Komai, 2000b: 241, figs. 1C, 7-10.

Eupagurus pectinatus - Balss, 1913: 60 (part)

Eupagurus brachiomastus - Kikuchi, 1932: 8. - Yokoya, 1939: 282 (part), fig. 12. [Not *Eupagurus brachiomastus* Thallwitz, 1891]

Pagurus brachiomastus - Kim, 1970: 7. - Kim, 1973: 236, 601, pl. 70, fig. 30. [Not *Pagurus brachiomastus* (Thallwitz, 1891)]

Records from the Sea of Japan: Korea (by implication by Komai, 2000b); Niigata-ken, the continental coast of the Sea of Japan (Komai, 2000b).

Distribution: "Peter the Great Bay, the continental coast of the Sea of Japan, Hakodate Bay, the Pacific coast of Honshu from Miyako Bay, Iwate Prefecture, southward to Boso Peninsula, and Niigata" (Komai, 2000b).

***Pagurus japonicus* (Stimpson, 1858)**

Figs. 53, 54

Eupagurus japonicus Stimpson, 1858: 250. - Stimpson, 1907: 226, pl. 25, fig. 2. - Terao, 1913: 369 (part).

Pagurus japonicus - Miyake, 1960: 90, pl. 45, fig. 4. - Miyake, 1965: 648, fig. 1096. - Suzuki, 1971: 97, pl. 34, fig. 3. - Kim, 1973: 239, 902, fig. 58, pl. 71, fig. 38. - Miyake, 1975: 323, pl. 115, figs. 7, 10. - Miyake, 1978: 94 (part), text-fig. 35, pl. 2, fig. 2. - Miyake & Imafuku, 1980: 60. - Miyake, 1982: 125, pl. 42, fig. 1.

?*Pagurus japonicus* - Honma & Kitami, 1978: 43.

Eupagurus barbatus Ortmann, 1892: 311. - Balss, 1913: 55. - Terao, 1913: 365. - Yokoya, 1933: 80.

Pagurus barbatus - Miyake et al., 1962: 125. - Miyake, 1978: 105, text-fig. 41. - Miyake & Imafuku, 1980: 60.

Not *Eupagurus japonicus* - Ortmann, 1892: 309, pl. 12, fig. 16. [= *Pagurus rubrior* Komai, 2003]

Not *Eupagurus barbatus* - Balss, 1913: 55. [= *Pagurus similis* (Ortmann, 1892)]

Material Examined

1♀, SL = 15.60 mm, Odajyukuno, Miyazu-shi, Kyoto-fu, late Aug. 2003, coll. H. Motoh (No. 13), gill net, CBM-ZC 8456; 1♂, SL = 18.30 mm, Odajyukuno, Miyazu-shi, Kyoto-fu, Wakasa Bay, 15 Nov. 2003, coll. H. Motoh (B), crab catch cage, CBM-ZC 8459; 1♂, SL = 6.40 mm, 1♀, SL = 7.15 mm, 1 ov. ♀, SL = 6.15 mm, Odajyukuno, Miyazu-shi, Kyoto-fu, Wakasa Bay, late Aug. 2003, coll. H. Motoh (B'), diving, CBM-ZC 8460; 2♂, SL = 6.30 - 8.30 mm, 2♀, SL = 13.45 - 14.70 mm, Kanmuri-jima Island, Kyoto-fu, Wakasa Bay, 27 June 2004, coll. H. Motoh (B''), diving, CBM-ZC 8461; 1♂, SL = 12.15 mm, Amaharashi, Takaoka-shi, 30 Oct. 1981, coll. NoNu, TOYA Z81-52-d; 1♂, SL = 18.75 mm, Oozakai, Himi-shi, 21 Aug. 1982, coll. NoNu, TOYA Z82-37.

Records from the Sea of Japan: Various localities in the region including Tsuyazaki (Fukuoka-ken), Takasa and Sayu beaches of Echizen Kaigan (Fukui-ken), Yasujima of Mikuni (Fukui-ken), Tottori-ken, Toyama-ken, Niigata-ken, Yamagata-ken, and now Wakasa Bay (Kyoto-fu); Korea (Miyake et al., 1962; Miyake, 1978; Komai, 2003).

Distribution: Kyushu to Boso Peninsula (Pacific coast), Sea of Japan coast of Kyushu to Honshu, Korea, northern China, Taiwan (Komai, 2003).

***Pagurus similis* (Ortmann, 1892)**

Eupagurus similis Ortmann, 1892: 310. - Yokoya, 1933: 86.

Pagurus similis - Miyake, 1960: 90 (part). - Miyake, 1978: 103 (part) - Miyake & Imafuku, 1980: 60 (part). - Miyake, 1982: 125.

Not *Pagurus similis* - Miyake, 1960: pl. 45, fig. 5. - Suzuki, 1971: 97, pl. 34, fig. 4. - Kim, 1973: pl. 7, fig. 39. - Miyake, 1975: pl. 115, fig. 6, 9. - Miyake, 1978: text-fig. 40, pl. 2, fig. 3. - Miyake, 1982: pl. 42, fig. 2. - Takeda, 1994: 228, fig. 5. - Asakura, 1995: 362, pl. 97, fig. 4. [= *Pagurus rubrior* Komai, 2003]

?*Pagurus similis* - Kim, 1964: 9. - Kim, 1973: 240, 603, fig. 59. - Honma & Kitami, 1978: 43.

Remarks: Two species had been confused under the name of *Pagurus similis* prior to Komai (2003). Miyake et al. (1962) recorded "*Pagurus similis*" from Tsuyazaki, Tottori-ken and Niigata-ken in the Sea of Japan. But, Komai (2003) could not locate the specimens, so that these records could not be confirmed.

Records from the Sea of Japan: Sea of Japan coasts of southern part of Honshu mainland and Korea (Komai, 2003).

Distribution: Pacific coasts of Japan from Ohsumi Islands northward to Boso Peninsula, Sea of Japan coast of southern part of Honshu mainland, Korea and northeastern part of Taiwan (Komai, 2003).

***Pagurus rubrior* Komai, 2003**

Figs. 55, 56

Eupagurus japonicus - Ortmann, 1892: 309, pl. 12, fig. 16. [Not *Eupagurus japonicus* Stimpson, 1858]

Pagurus similis. - Miyake, 1960: 90 (part), pl. 45, fig. 5. - Suzuki, 1971: 97, pl. 34, fig. 4. - Kim, 1973: pl. 7, fig. 39. - Miyake, 1975: pl. 115, figs. 6, 9. - Miyake, 1978: 103 (part), text-fig. 40, pl. 2, fig. 3. - Miyake, 1982: 125 (part), pl. 42, fig. 2. - Takeda, 1994: 228, fig. 5. - Asakura, 1995: 362, pl. 97, fig. 4. [Not *Pagurus similis* (Ortmann, 1892)]

Pagurus rubrior Komai, 2003: 401, figs. 6B, 12, 13.

Aniculus aniculus - Honma & Kitami, 1978: 43. [In part. Not *Aniculus aniculus* (Fabricius, 1787)]

Material Examined

2♂, SL=15.50-19.05 mm, Tassha, Sado Island, Niigata-ken, 11 July 1954, coll. Yoshiharu Honma, SMBL-NU 22487 (reported as *Aniculus aniculus* by Honma and Kitami, 1978); 1♂, SL = 11.55 mm, rocky shore in front of the Kyoto Sea Farming Center, Odajyukuno, Miyazu-shi, Kyoto-fu, Wakasa Bay, 27 June 2003, coll. H. Motoh (No. 9), CBM-ZC 8454; 1♂, SL = 12.85 mm, Musow, Miyazu-shi, Kyoto-fu, Wakasa Bay, 16 Oct. 2003, coll. H. Motoh (No. 9'), gill net, CBM-ZC 8455; 1♂, SL = 16.10 mm, Amaharashi, Takaoka-shi, 30 Oct. 1981, coll. NoNu, TOYA Z81-52-b; 1♂, SL = 17.00 mm, Amaharashi, Takaoka-shi, 11 May 1982, coll. NoNu, TOYA Z82-9; 1♂, SL = 11.80 mm, 1♀, SL = 9.35 mm, Doumi, Nanao-shi, Ishikawa-ken, 14 Aug. 1977, coll. NoNu AA-02.

Remarks: I reexamined the specimen reported as *Aniculus aniculus* from the Sado Island by Honma and Kitami (1978) and found it is actually *Pagurus rubrior*.

Records from the Sea of Japan: Sea of Japan coasts including Takasa, Echizen, Fukui-ken (Komai, 2003), now Wakasa Bay and Sado Island of the Honshu mainland and Korea (Komai, 2003).

Distribution: Pacific coast of Japan from Kyushu northward to Boso Peninsula, Sea of Japan coast of southern part of Honshu mainland; Korea (Komai, 2003).

***Pagurus erythrogrammus* Komai, 2003**

Pagurus erythrogrammus Komai, 2003: 133, figs. 12-15, 24C, 25A.

Pagurus pilosipes - Miyake, 1978: 91 (part), fig. 34a. [Not *Pagurus pilosipes* (Stimpson, 1858)]

Material Examined

1♀, SL = 2.05 mm, Kanmuri-jima Island, Kyoto-fu, Wakasa Bay, 5 June 2004, coll. H. Motoh (+α), diving, CBM-ZC 8457.

Records from the Sea of Japan: Takasa of Echizen (Fukui-ken), Oaji Beach of Koshino (Fukui-ken), Saki, Yasu-jima, Kaji of Mikuni (Fukui-ken)(Komai, 2003), and now Wakasa Bay.

Distribution: Kii Peninsula northward to Boso Peninsula (Pacific coast), and Fukui-ken (Komai, 2003) and Wakasa Bay on Sea of Japan coast .

***Pagurus nigrivittatus* Komai, 2003**

Pagurus nigrivittatus Komai, 2003: 141, Figs. 16-19, 24D, 25B.

Pagurus pilosipes - Miyake & Imafuku, 1980: 60, pl. 2, fig. 5. - Miyake, 1982: 132, pl. 44, fig. 5. - Asakura, 1995: 363, pl. 97, fig. 9. [Not *Pagurus pilosipes* (Stimpson, 1858)]

Records from the Sea of Japan: Takasa and Sou of Echizen (Fukui-ken), Kaji of Mikuni (Fukui-ken)(Komai, 2003).

Distribution: Kyushu northward to Boso Peninsula, and Fukui-ken on Sea of Japan coast; northeast of Taiwan (Komai, 2003).

Pagurus cf. nigrivittatus

Fig. 57

Material Examined

1♀, SL = 2.75 mm, Kanmuri-jima Island, Kyoto-fu, Wakasa Bay, 27 June 2004, coll. H. Motoh (X"), diving, CBM-ZC 8468.

***Pagurus quinquelineatus* Komai, 2003**

Fig. 58

Pagurus quinquelineatus Komai, 2003: 149, figs. 20-23, 24B, 25A.

Pagurus pilosipes - Miyake, 1978: 91 (part), fig. 34d. [Not *Pagurus pilosipes* (Stimpson, 1858)]

Material Examined.

1♂, SL = 2.90 mm, Kanmuri-jima Island, Kyoto-fu, Wakasa Bay, summer 2004, coll. H. Motoh (X), diving, CBM-ZC 8467.

Records from the Sea of Japan: Sou of Echizen (Fukui-ken)(Komai, 2003) and now Wakasa Bay.

Distribution: Suruga Bay, Sagami Bay, Boso Peninsula (all, Pacific coasts), and Fukui-ken (Komai, 2003) and now

Wakasa Bay (Kyoto-fu) on the Sea of Japan coasts.

Other Species of *Pagurus*

According to McLaughlin (1974), *Pagurus aleuticus* (Benedict, 1892) and *Pagurus capillatus* (Benedict, 1892) were recorded from the Sea of Japan. However, these were based on information from the old literature, so further collection effort and direct reexamination of the specimens reported in the previous literature are necessary before final conclusion.

Diacanthurus ophthalmicus (Ortmann, 1892)

Eupagurus ophthalmicus Ortmann, 1892: 314, pl. 12, fig. 19. - Alcock, 1905a: 177. - Terao, 1913: 371. - Yokoya, 1933: 86.

Pagurus ophthalmicus - Miyake, 1975: 319, pl. 116, fig. 1. - Miyake, 1978: 107, text-fig. 42. - Miyake & Imafuku, 1980: 60. - Miyake, 1982: 127, pl. 43, fig. 3. - Baba in Baba, Hayashi, and Toriumi, 1986: 209, fig. 153, 305.

Diacanthurus ophthalmicus - McLaughlin & Forest, 1997: 244, fig. 4.

Records from the Sea of Japan: Oga Peninsula (Akita-ken)(Yokoya, 1933).

Distribution: Koshiki-jima Islands northward to Oga Peninsula (Sea of Japan coast) and Kyushu to Sagami Bay (Pacific coast)(McLaughlin and Forest, 1997).

Lophopagurus (Australeremus) triserratus (Ortmann, 1892)

Fig. 59

Eupagurus triserratus Ortmann, 1892: 308, pl. 12, fig. 15. - Alcock, 1905a: 177. - Balss, 1913: 52 (key). - Terao, 1913: 373.

?*Eupagurus tricarinatus* - Balss, 1913: 58. [Not *Eupagurus tricarinatus* Stimpson, 1858]

Eupagurus (Eupagurus) triserratus - Melin, 1939: 29, figs. 9, 10.

Pagurus tricarinatus - Miyake, 1982: 197 (list). [Not *Pagurus tricarinatus* (Stimpson, 1858)]

Pagurus triserratus - Kim, 1964: 5, pl. 1, fig. 6. - Kim, 1970: 8. - Kim, 1973: 225, 599, fig. 50, pl. 65, fig. 30.

Pylopagurus serpulophilus Miyake, 1978: 120, pl. 4, fig. 4. - Miyake, 1982: 120, pl. 40, fig. 5.

Australeremus triserratus - McLaughlin & Gunn, 1992: 87, fig. 14, pl. 1. - McLaughlin, 1997: 521, fig. 2 a, c, g.

Lophopagurus (Australeremus) triserratus - de Saint Laurent & McLaughlin, 2000: 177, fig. 57.

Material Examined

1♀, SL = 2.15 mm, Kanmuri-jima Island, Kyoto-fu, Wakasa Bay, 5 Nov. 2003, coll. H. Motoh (D), diving, CBM-ZC 8462.

Record from the Sea of Japan: Now Wakasa Bay.

Distribution: East China Sea, South China Sea, Indonesia, southwestern Australia, New Zealand; Cheju, Korea; Amakusa northward to Sagami Bay (Pacific coast), Ogasawara Islands (de Saint Laurent & McLaughlin, 2000; Komai, 1999; Kim, 1973), and now Sea of Japan.

Elassochirus cavimanus (Miers, 1879)

Figs. 60, 61

Eupagurus cavimanus Miers, 1879: 21, 48, pl. 3, fig. 1. - Alcock, 1905a: 178. - Yokoya, 1933: 81.

Eupagurus (Elassochirus) munitus Benedict, 1892: 19.

Eupagurus gotoi Terao, 1913: 366, fig. 2.

Pagurus cavimanus - Miyake et al., 1962: 125. - Kim, 1973: 220, text-fig. 47, pl. 5, fig. 27. - Honma & Kitami, 1978: 43.

Pagurus cavimanus? - Makarov, 1962: 146.

Pagurus cavimanus munitus - Makarov, 1962: 168.

Pagurus gilli cavimanus - Makarov, 1962: 168.

Not *Pagurus cavimanus* Balss, 1913: 58, fig. 34. [= *Elassochirus gilli* (Benedict, 1892)].

Not *Eupagurus munitus* - Balss, 1913: 58. [= *Elassochirus gilli* (Benedict, 1892)].

Not *Pagurus cavimanus* - Makarov, 1962: 147. [= *Elassochirus gilli* (Benedict, 1892)].

Elassochirus cavimanus - McLaughlin, 1974: 320, figs. 85-87. - Miyake, 1978: 124. - Miyake, 1982: 133, pl. 44, fig. 6. - Komai et al., 1992: 197.

Material Examined

1♂, SL = 6.35 mm, off Shinminato-shi, 19 Nov. 1991, coll. Isao Wada, TOYA Z91-54-a; 2♂, SL = 6.15-6.90 mm, 1♀, SL = 7.35 mm, 9 ov. ♀, SL = 6.60-7.90 mm, off Shinminato-shi, 19 Nov. 1991, coll. Isao Wada, TOYA Z91-54-b; 1♂, SL = 3.90 mm, off Shinminato-shi, 19 Nov. 1991, coll. Isao Wada, TOYA Z91-54-c; 1♂, SL = 12.20 mm, off Asahi-machi, Toyama-ken, 27 Nov. 1991, coll. NoNu, TOYA Z91-55; 1♀, SL = 7.45 mm, 1 ov. ♀, SL = 9.40 mm, Kuroasaki, Nanao-shi, 7 Aug. 1992, coll. NoNu, TOYA Z92-24-a; 1♂, SL = 6.45 mm, Kuroasaki, Nanao-shi, 7 Aug. 1992, coll. NoNu, TOYA Z92-24-b; 1♂, SL = 7.80 mm, off Iwase, Toyama-shi, 6 Apr. 1993, coll. Nozomu Miyamoto, TOYA Z93-2-a; 4♂, SL = 4.40-6.05 mm, 2♀, SL = 5.20-6.00 mm, off Iwase, Toyama-shi, 6 Apr. 1993, coll. Nozomu Miyamoto, TOYA Z93-2-b.

Records from the Sea of Japan: Tottori-ken, Sado Island, Niigata-ken, Hokkaido (Yokoya, 1933; Miyake et al., 1962, 1978; Honma and Kitami, 1978), and now Toyama Bay; east coast of Korea (Kim, 1973).

Distribution: Bering Sea, Okhotsk Sea, Gulf of Alaska, Aleutian, Pacific coast of Canada, Washington State; Hokkaido, both Pacific and Sea of Japan coasts of northern Honshu mainland.

Elassochirus gilli (Benedict, 1892)

Eupagurus (Elassochirus) gilli Benedict, 1892: 20.

Pagurus gilli - Rathbun, 1904. - Makarov, 1962: 166, fig. 68a, pl. 3, fig. 1.

Eupagurus cavimanus - Balss, 1913: 58, fig. 34. [Not *Eupagurus cavimanus* Miers, 1879]

Pagurus cavimanus - Makarov, 1962: 147. [Not *Pagurus cavimanus* Miers, 1879]

Elassochirus gilli - McLaughlin, 1974: 330, figs. 88-90.

Records from the Sea of Japan: Soviet Harbor, continental coasts of the Sea of Japan (McLaughlin, 1974).

Distribution: Bering Sea, Okhotsk Sea, Alaska, Aleutian, Kamchatka, Sea of Japan, Puget Sound(Washington State)(McLaughlin, 1974).

***Labidochirus splendescens* (Owen, 1839)**

Pagurus splendescens Owen, 1839: 81, pl. 25, figs. 1, 1a. - Rathbun, 1904: 161. - Makarov, 1962: 187, pl. 4, fig. 2.

Pagurus (Eupagurus) splendescens - Brandt, 1851: 111.

Eupagurus splendescens - Stimpson, 1858: 237. - Alcock, 1905a: 178. - Balss, 1913: 62, figs. 36, 37, pl. 2, fig. 2.

Eupagurus (Labidochirus) splendescens - Benedict, 1892: 2.

Labidochirus splendescens - McLaughlin, 1974: 342, figs. 91-95. - Miyake, 1978: 125, text-fig. 49. - Komai et al., 1992: 197.

Records from the Sea of Japan: Sea of Japan (McLaughlin, 1974).

Distribution: Arctic Ocean, Okhotsk, Sakhalin, Kuril Islands, Bering Sea, Commander Islands, Gulf of Alaska, Puget Sound (Washington State); northern Hokkaido (McLaughlin, 1974; Miyake, 1978).

***Labidochirus anomalous* (Balss, 1913)**

Figs. 62, 63

Eupagurus anomalous Balss, 1913: 53, fig. 32. - Yokoya, 1933: 80. - Makarov, 1962: 185, pl. 4, fig. 5.

Pagurus anomalous - Miyake et al., 1962: 125. - Kim, 1973: 230, text-fig. 53, pl. 6, fig. 33. - Honma & Kitami, 1978: 43.

Labidochirus anomalous - McLaughlin, 1974: 341, 342 (key). - Miyake, 1978: 125. - Miyake, 1982: 120, pl. 41, fig. 1. - Komai et al., 1992: 197.

Material Examined

1♂, SL = 17.45 mm, Ishikawa-ken, KMNH Cat No. 16801; 6♂, SL = 10.20-13.45 mm, 4♀, 10.35-11.35 mm, 1 ov.♀, SL = 11.55 mm, off Aziro, Tottori-ken, 13 Mar. 1963, coll. Takashi Kishida, KMNH Cat. No. 9371.

Records from the Sea of Japan: North of Sado Island (Yokoya, 1933); Iki Island (Nagasaki-ken), Tottori-ken, Ishikawa-ken, and Niigata-ken (Miyake et al., 1962; Miyake, 1982); east coast of Korea (Kim, 1973, as *Pagurus cavi-manus*); Russian coast (Makarov, 1962).

Distribution: Russian coast from De Kastri Gulf southward to Furuholm Island; east coast of Korea; in Japan, southern Hokkaido southward to Nagasaki along Sea of Japan coast.

***Pylopaguropsis zebra* (Henderson, 1893)**

Eupagurus zebra Henderson, 1893: 425, pl. 39, figs. 12-15. - Balss, 1912: 22.

Pagurus zebra - Miyake, 1975: 260, pl. 116, fig. 2. - Miyake, 1978: 108, fig. 43. - Miyake, 1982: 225.

Pylopaguropsis zebra - McLaughlin & Haig, 1989: 143, figs. 3b, 5b, 7b, 9b, 11b, 13b. - Asakura, 2000: 74, figs. 2, 3. - Asakura, 2002: 453, 454.

Record from the Sea of Japan: Off Tsutsuzaki, Tsushima Islands (Miyake, 1978; Asakura, 2000).

Distribution: Holothria Bank, Australia; Agulhas Bank, Africa; Andamans; Sagami Bay, Kii Peninsula, Tosa Bay, Tsushima Islands.

***Discorsopagurus maclaughlinae* Komai, 1995**

Fig. 64

Orthopagurus schmitti - Makarov, 1962: 217, pl. 2, fig. 1. [Not *Pylopagurus schmitti* Stevens, 1925]

Discorsopagurus schmitti - McLaughlin, 1974: 354 (part). - Takeda & Miyauchi, 1992: 144, fig. 2.

Discorsopagurus maclaughlinae Komai, 1995: 618, figs. 1-4.

Material Examined

1♂, SL = 4.75 mm, 2♀, SL = 3.45 - 3.75 mm, St. 19, 92 m, Sudzukhe Bay, Khabarovsk, Russian coast of Sea of Japan, identified as *Orthopagurus schmitti* by W.W. Makarov, Cat. no. 1942, acc. no. 137749, USNM 72366.

Record from the Sea of Japan: Russian coast of the Sea of Japan.

Distribution: Sakhalin, southern Kuril Islands, Hokkaido, Sea of Japan (Komai, 1995).

***Porcellanopagurus nihonkaiensis* Takeda, 1985**

Fig. 65

Porcellanopagurus nihonkaiensis Takeda, 1985: 141, figs. 1B, 2.

Porcellanopagurus japonicus - Miyake, 1978: 118 (part). [Not *Porcellanopagurus japonicus* Balss, 1913]

Material Examined

1♀, SL = 1.95 mm, 10 m, off Sone, Munakata-oshima Island, Fukuoka-ken, 11 Oct. 1958, coll. Yoshinori Motomatsu, ZLNU (KMNH) Cat no. 7028.

Remarks: Miyake (1978) reported *Porcellanopagurus japonicus* from various localities of Japan. I reexamined one of Miyake's material collected from Fukuoka-ken, Sea of Japan coast, and found it is actually *P. nihonkaiensis*.

Record from the Sea of Japan: Iida Bay, east of Noto Peninsula (Takeda, 1985), and now Munakata-oshima Island, Genkai-nada, Fukuoka-ken.

Distribution: Noto Peninsula and Fukuoka-ken.

***Porcellanopagurus japonicus* Balss, 1913**

Porcellanopagurus japonicus Balss, 1913: 66, fig. 40. - Miyake, 1960: 89, pl. 44, fig. 87. - Miyake, 1965: 649, fig. 1100. - Miyake, 1978: 118 (part), pl. 4, fig. 1.

Remarks: As wrote above, the record of this species from the Sea of Japan is somewhat suspicious. However, I could not locate all of the specimens collected from the Sea of Japan reported by Miyake (1978) as *Porcellanopagurus japonicus*. So, the record of *P. japonicus* is tentatively placed here.

Records from the Sea of Japan: Munakata-oshima Island in Genkai-Nada (Fukuoka-ken)(Miyake, 1978).

Distribution: Sagami Bay, Tosa Bay, Genkai-Nada, Amakusa-Nada, East China Sea.

***Anapagurus japonicus* Ortmann, 1892**

Figs. 66, 67

Anapagurus pusillus var. *japonica* Ortmann, 1892: 296, pl. 12, fig. 11.

Anapagurus japonicus - Miyake, 1961a: 24. - Miyake, 1965: 648, fig. 1099. - Miyake et al., 1962: 126. - Miyake, 1978: 139, text-fig. 55. - Miyake & Imafuku, 1980: 63. - Garcia-Goméz, 1994: 44, figs. 10-11. - Komai et al., 2002: 48, fig. 12.

Material Examined

2♂, SL = 1.85 - 2.00 mm, 36-41 m, sandy and muddy bottom, Sea of Genkai, off Tsuyazaki, Fukuoka-ken, 19 May 1961 - 23 June 1961, coll. T. Kikuchi, A. Taki, and Y. Ono, ZLKU (KMNH) Cat no. 9214-9288.

Record from the Sea of Japan: Off Tsuyazaki (Sea of Genkai, Fukuoka-ken), off Hagi (Yamaguchi-ken) (Miyake, 1978; Komai et al., 2002).

Distribution: Uraga Channel, Fukuoka-ken, Yamaguchi-ken (Garcia-Goméz, 1994; Komai et al., 2002).

***Catapaguroides japonicus* de Saint Laurent, 1968**

Catapaguroides japonicus de Saint Laurent, 1968: 952, figs. 8, 15, 32. - Miyake, 1978: 136 - Miyake, 1982: 198 (list), 230 (key). - Komai et al., 2002: table 1, 49, figs. 13-16.

Record from the Sea of Japan: Off Hagi (Yamaguchi-ken) (Komai et al., 2002).

Distribution: Suruga Bay, Sagami Bay, and Yamaguchi-ken (Miyake, 1978; Komai et al., 2002).

***Nematopagurus tricarinatus* (Stimpson, 1858)**

Fig. 68

Eupagurus tricarinatus Stimpson, 1858: 251. - Stimpson, 1907: 228. - Ortmann, 1892: 309. - Terao, 1913: 372.

Nematopagurus indicus : Miyake, 1961a: 12. - Miyake et al., 1962: 126. [Not *Nematopagurus indicus* Alcock, 1905a]

Nematopagurus vallatus - Miyake, 1978: 131, text-fig. 52. - Miyake & Imafuku, 1980: 63, pl. 2, fig. 8 - Miyake, 1982: 121, pl. 41, fig. 4. [Not *Nematopagurus vallatus* Melin, 1939]

Nematopagurus tricarinatus - McLaughlin and Sandberg, 1995: 579. - McLaughlin, 2004: 182, fig. 11.

Material Examined

1♂, SL = 1.85 mm, 36 m, muddy sand bottom, Sea of Genkai, off Tsuyazaki, Fukuoka-ken, 9 May 1961, coll. T. Kikuchi, Y. Ono, and A. Taki, ZLKU (KMNH) Cat no. 9294 (both chelipeds, both second pereopods and right third pereopod missing).

Records from the Sea of Japan: Tsuyazaki (Fukuoka-ken)(Miyake, 1978).

Distribution: Taiwan, South China Sea, Indonesia; Kagoshima, Amakusa, Tosa Bay, Sagami Bay, Fukuoka-ken and East Chine Sea (McLaughlin, 2004; Miyake, 1978).

***Spiropagurus spiriger* Ortmann, 1892**

Figs. 69, 70

Pagurus spiriger De Haan, 1849: 206, pl. 49, fig. 2.

Spiropagurus spiriger - Stimpson, 1858: 248. - Ortmann, 1892: 297. - Stimpson, 1907: 214. - Balss, 1913: 65. - Terao, 1913: 386. - Kikuchi, 1932: 8. - Yokoya, 1933: 91. - Miyake, 1960: 90, pl. 45, fig. 3. - Miyake, 1961a: 12. - Miyake, 1961b: 169. - Miyake et al., 1962: 126. - Miyake, 1965: 648, fig. 1098. - Miyake, 1978: 137, text-fig. 54. - Miyake & Imafuku, 1980: 63. - Miyake, 1982: 122, pl. 41, fig. 5. - Baba, in Baba, Hayashi & Toriyama, 1986: 210, 211, 306, fig. 155.

Material Examined

1 ov. ♀, SL = 9.55 mm, off Hamakurozaki, 2 Aug. 1979, coll. Toyama Pref. Fish Res. Center, TOYA Z80-189-b; 1♂, SL = 5.10 mm, Hamakurozaki, Toyama-shi, 10 Aug. 1979, coll. Toyama Pref. Fish Res. Center, TOYA Z80-189-c; 1♀, SL = 4.05 mm, Ao, Himi-shi, 11 Sept. 1979, coll. Toyama Pref. Fish Res. Center, TOYA Z80-189-d; 1♂, SL = 6.10 mm, Amaharashi, Takaoka-shi, 7 June 1981, coll. NoNu, TOYA Z81-13; 1♂, SL = 7.90 mm, off Iwase, Toyama-shi, 8 July 1991, coll. Nozomu Miyamoto, TOYA Z90-30; 20♂, SL = 3.95-5.10 mm, 5♀, SL = 3.20-6.00 mm, Amaharashi, Takaoka-shi, 2 Aug. 1990, coll. Hisao Nambu, TOYA Z90-34-a; 1♂, SL = 4.90 mm, Amaharashi, Takaoka-shi, 2 Aug. 1990, coll. Hisao Nambu, TOYA Z90-34-b; 2♂, SL = 3.50-4.90 mm, Amaharashi, Takaoka-shi, 2 Aug. 1990, coll. Hisao Nambu, TOYA Z90-34-c; 2 juv♂, SL = 2.00-2.10 mm, 1♀, SL = 2.60 mm, Yachigasaki, Notozima-machi, Ishikawa-ken, 24 July 1990, coll. Hisao Nambu, TOYA Z90-36; 2♀, SL = 4.05-4.60 mm, Enomekatsuozaiki, Notozima-machi, Ishikawa-ken, 30 July 1990, coll. Hisao Nambu, TOYA Z90-39; 2♂, SL = 7.40-10.20 mm, 1♀, SL = 7.60 mm, 1 ov. ♀, SL = 5.10 mm, off Mizuhashi, Toyama-shi, 8 Dec. 1990, coll. Nozomu Miyamoto, TOYA Z90-59; 7♂, SL = 5.05-9.70 mm, 1♀, SL = 6.20 mm, 2 ov. ♀, SL = 7.55-7.90 mm, off Mizuhashi, Toyama-shi, 16 Dec. 1990, coll. Nozomu Miyamoto, TOYA Z90-61; 4♂, SL = 7.65-13.65 mm, off Iwase, Toyama-shi, 26 Mar. 1991, coll. Nozomu Miyamoto, TOYA Z91-2; 2♀, SL = 5.05-6.30 mm, off Iwase, Toyama-shi, 7 June 1990, coll. Nozomu Miyamoto, TOYA Z90-19-c; 1♂, SL = 6.50, off Iwase, Toyama-shi, 9 June 1990, coll. Nozomu Miyamoto, TOYA Z90-21-a; 1♀, SL = 8.00 mm, off Iwase, Toyama-shi, 9 June 1990, Nozomu Miyamoto, TOYA Z90-21-b; 1♂, SL = 7.30 mm, 1 ov. ♀, SL = 9.30 mm, Odajukuno, Miyazu-shi, Kyoto-fu, Wakasa Bay, late Aug. 2003, coll. H. Motoh (No. 7), gill net, CBM-ZC 8452.

Records from the Sea of Japan: Tsuyazaki (Fukuoka-ken), Tottori-ken, and Toyama-ken (Miyake et al., 1962).

Distribution: Hong Kong, Bay of Bengal, East Indian Archipelago, northern Australia; From Kyushu northward to Toyama Bay (Sea of Japan coast) or Tokyo Bay (Pacific coast).

***Turleania similis* Komai, 1999**

Turleania similis Komai, 1999: 50, figs. 27-31. - Komai et al., 2002: 56.

Record from the Sea of Japan: South of Iki Island (Komai et al., 2002).

Distribution: Ogasawara Islands and Iki Island (Komai, 1999; Komai et al., 2002).

ACKNOWLEDGMENTS

I express my sincere appreciation to Drs. Noboru Nunomura, Hiroshi Motoh and staffs of the Noto Marine Center for making material collected from the Sea of Japan available for the study. I thank deeply the following persons who assisted by making material available on the loan; Rafael Lemaitre (USNM), Ryohei Yamanishi (OSMN), Katsumi Takahashi (MYU), Naoto Hanzawa (Dept. Biol., Fac. Sci., Yamagata Univ.), Takuji Yakuwa (YPM-SS), Michitaka Shimomura (KMNH), Masumi Nozaki (SMBL-NU), Toyokazu Shimotani(SMBL-NU), Yoshiharu Honma (SMBL-NU), Shoichi Shimoyama (DGKU), Hiroshi Namikawa (NSMT-Cr R), and Tadashi Kawai (Hokkaido Nuclear Energy Environmental Research Center). Special thanks are due to Dr. Patsy A. McLaughlin (Shannon Point Marine Center, Western Washington University) for her elaborate review of a descriptive part of a new species of *Diogenes* and to Mr. Shinji Mishima (Tohwa High School, Fukuda Educational Institution, Tohwa University) for allowing me to use his photograph of *Pagurus nigrofascia* (Fig. 41A). Thanks are also dues to the following persons for providing laboratory facilities and assistance during my stay in their respective museums to examine the comparative material of the new species of *Diogenes*; Ray Symonds (MZCU), Penny Berents (AM), Diana Jones (WAM), Régis Cleva (MNHN) and Nguyen Ngoc-Ho (MNHN).

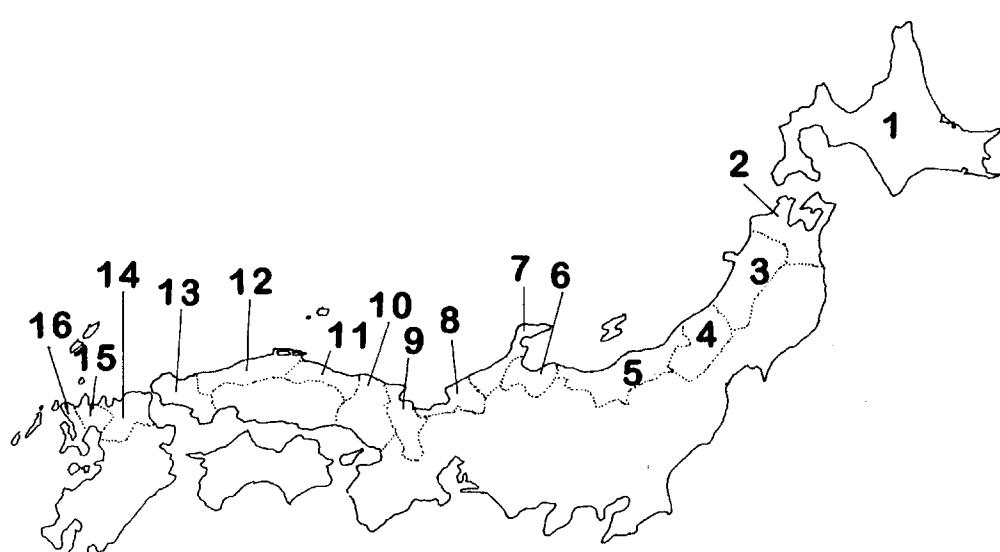

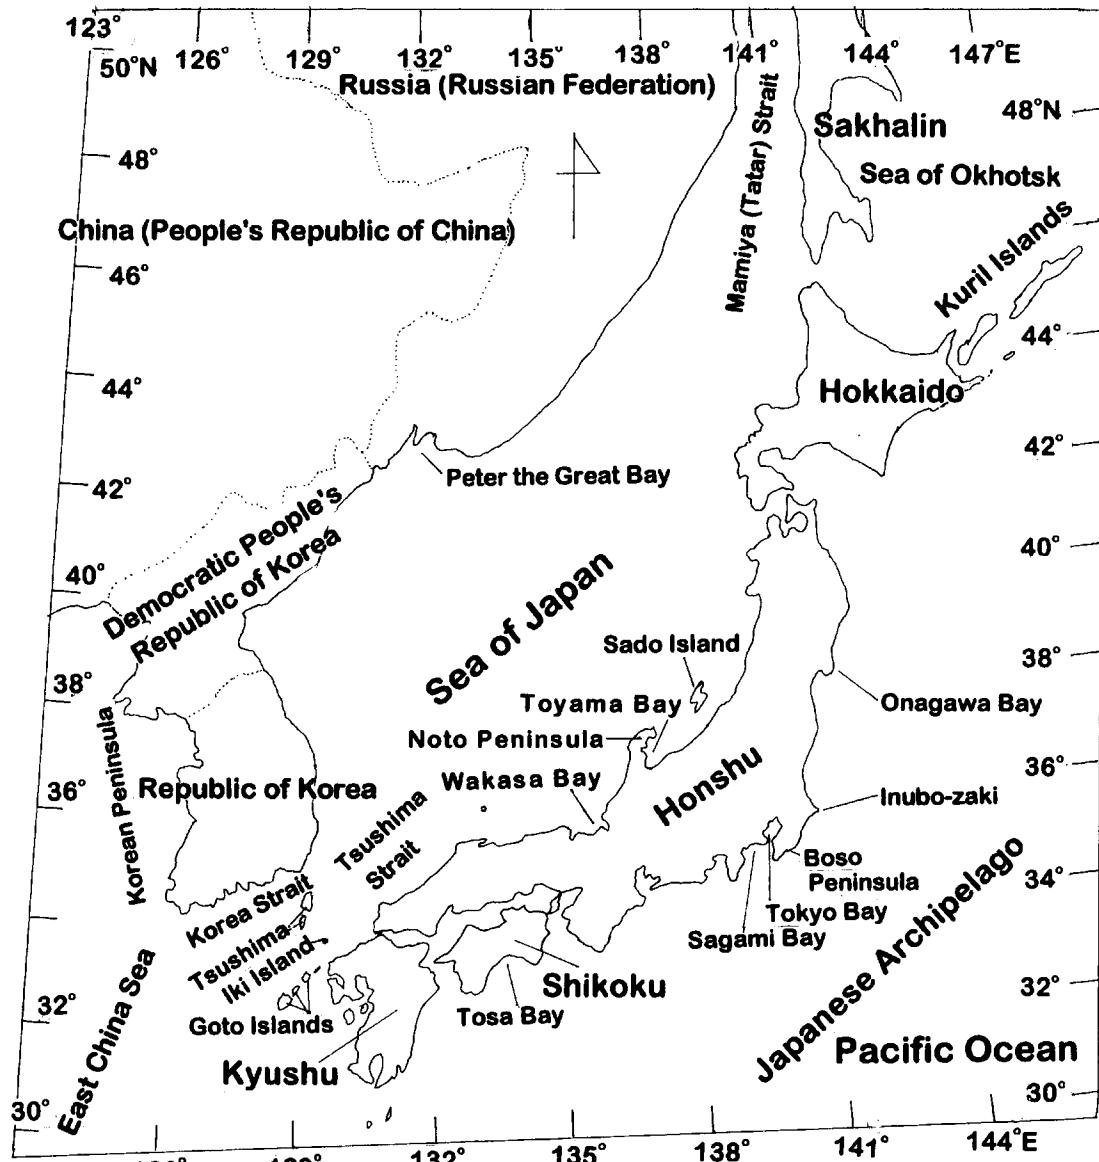

Fig. 1. Maps. Upper: Sea of Japan and its surrounding areas. Lower: Japanese prefectures along coasts of the Sea of Japan: 1, Hokkaido; 2, Aomori-ken; 3, Akita-ken; 4, Yamagata-ken; 5, Niigata-ken; 6, Toyama-ken; 7, Ishikawa-ken; 8, Fukui-ken; 9, Kyoto-fu; 10, Hyogo-ken; 11, Tottori-ken; 12, Shimane-ken; 13, Yamaguchi-ken; 14, Fukuoka-ken; 15, Saga-ken; 16, Nagasaki-ken.

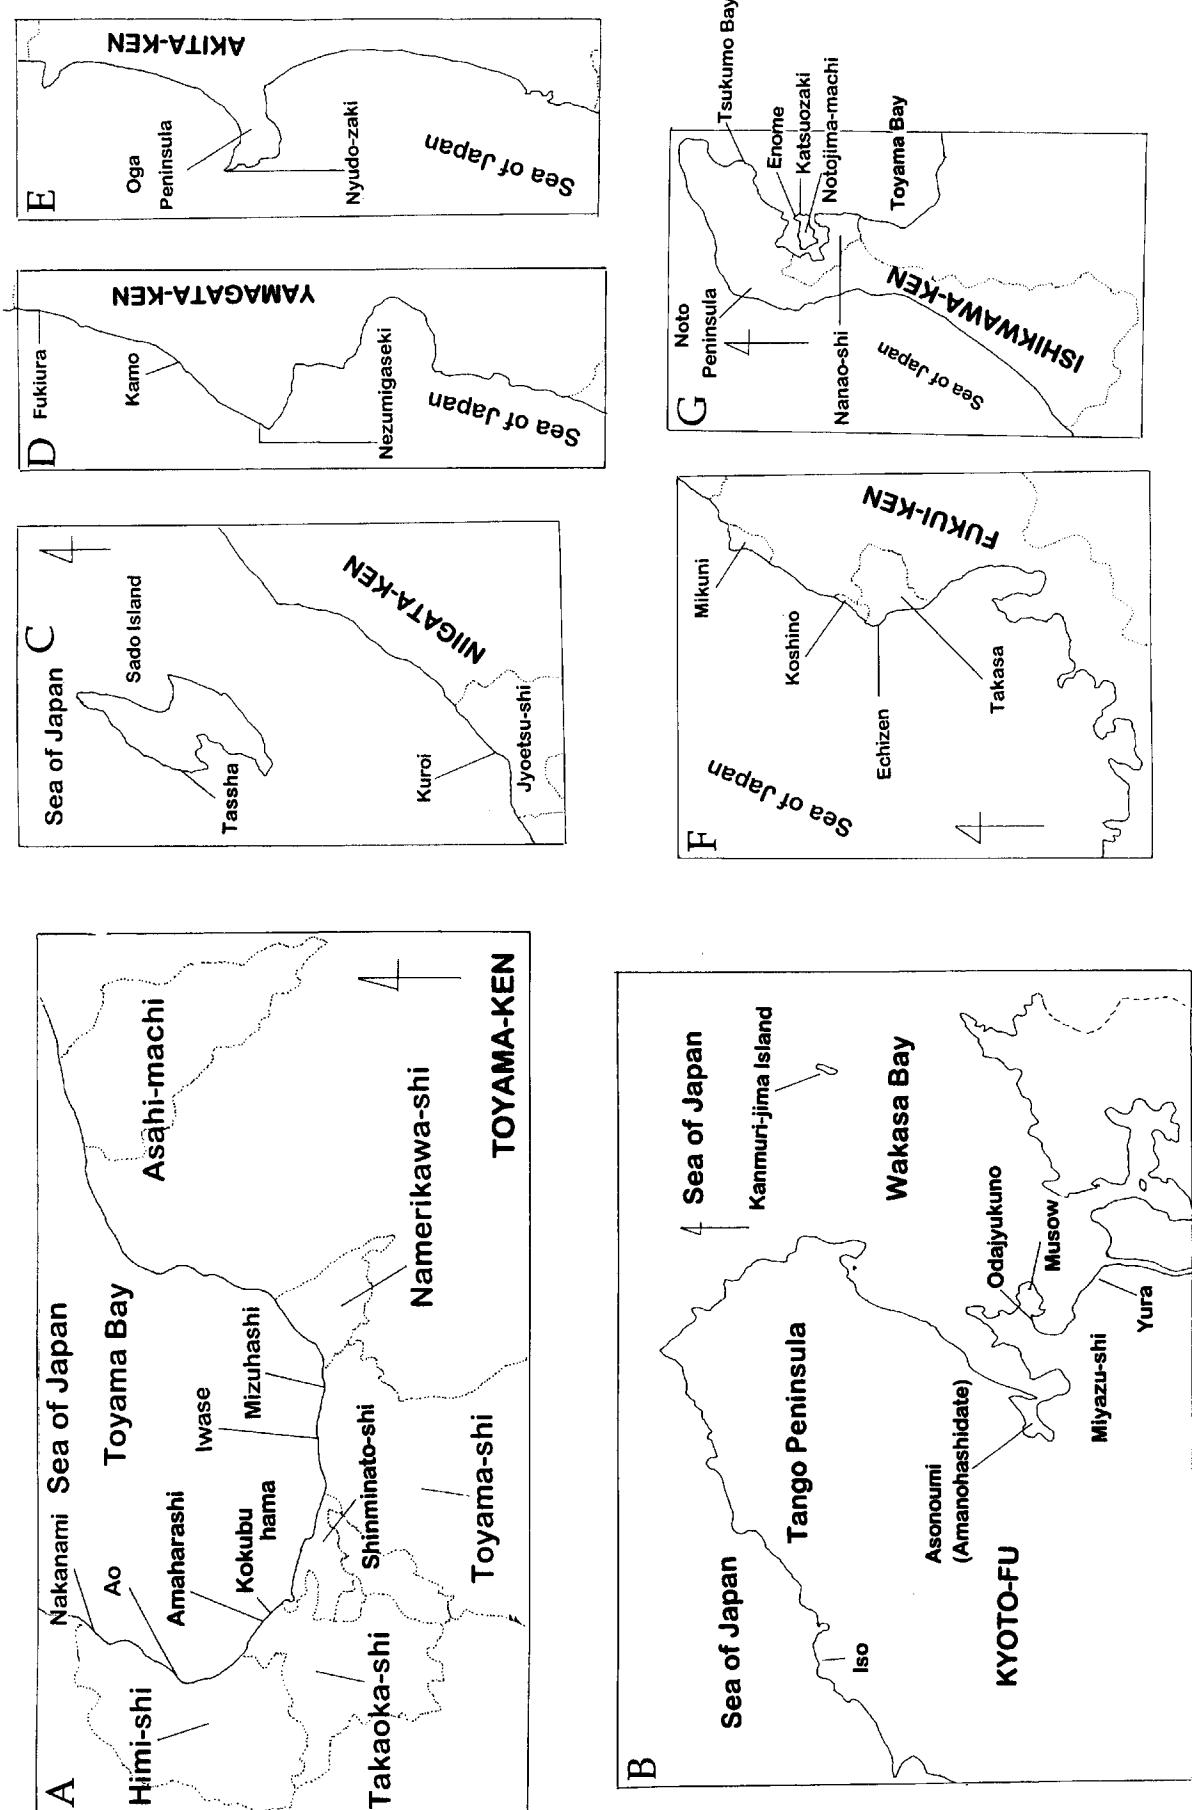

Fig. 2. Maps of selected prefectures along coasts of the Sea of Japan. A, Toyama-ken; B, Kyoto-fu; C, Niigata-ken; D, Yamagata-ken; E, Akita-ken; F, Fukui-ken; G, Ishikawa-ken.

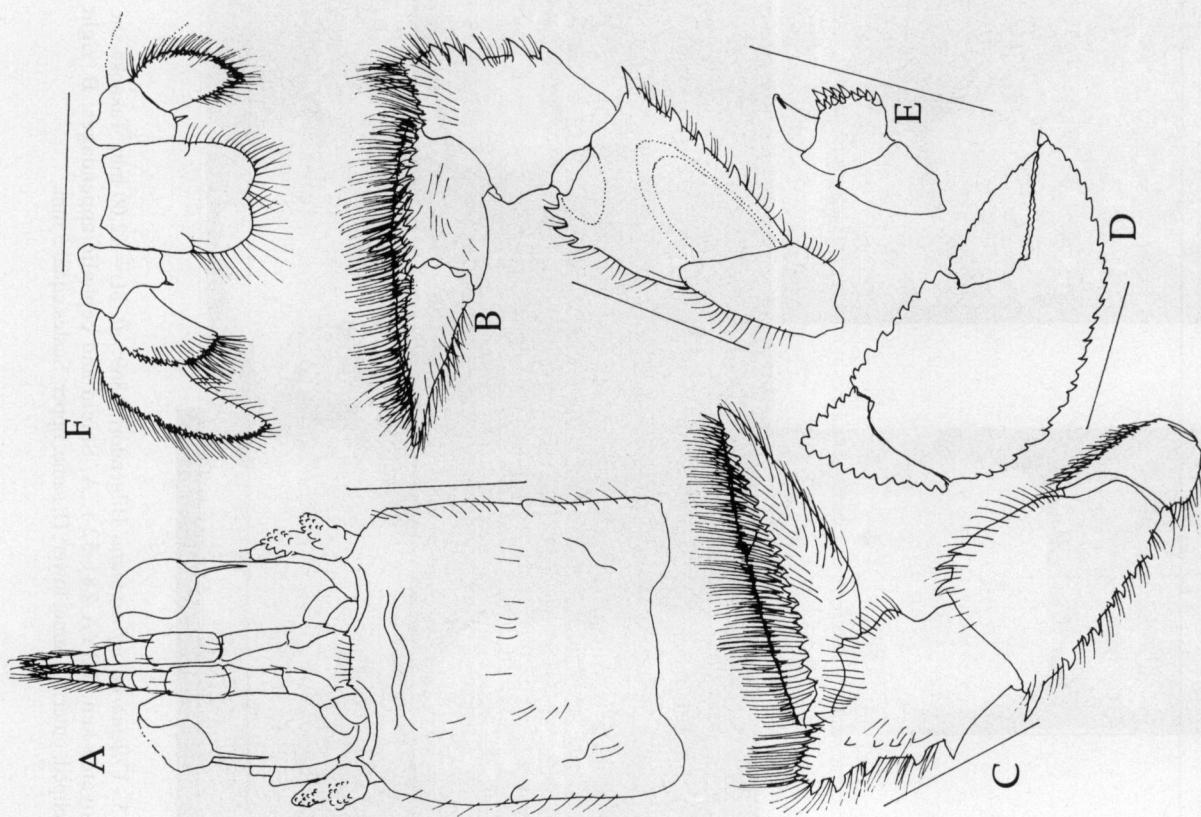

Fig. 3. *Pomatocheles jeffreysii* Miers, 1879; ♂, SL = 1.70 mm, Yosano-gun, Kyoto-fu, OMNH Ar 2808. A, shield and cephalic appendages, dorsal; B, right cheliped, mesial; C, same, lateral; D, same, carpus and distal portion of merus, mesial; E, right fourth pereopod, chela and carpus, lateral; F, uropods and telson, dorsal. Setae omitted in D and E. Scales equal 1 mm.

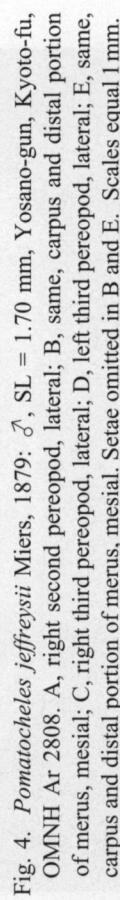

Fig. 4. *Pomatocheles jeffreysii* Miers, 1879; ♂, SL = 1.70 mm, Yosano-gun, Kyoto-fu, OMNH Ar 2808. A, right second pereopod, lateral; B, same, carpus and distal portion of merus, mesial; C, right third pereopod, lateral; D, left third pereopod, lateral; E, same, carpus and distal portion of merus, mesial. Setae omitted in B and E. Scales equal 1 mm.

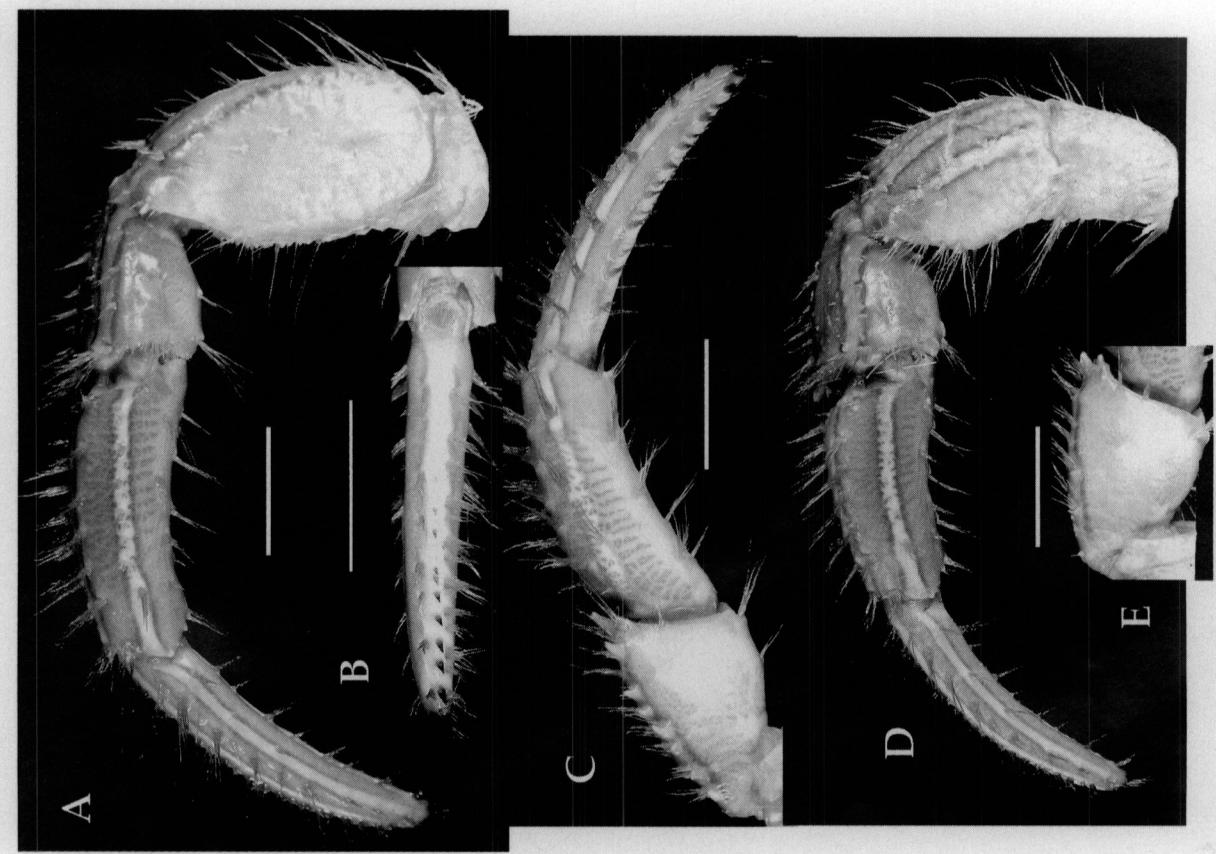

Fig. 6. *Clibanarius infraspinatus* Hilgendorf, 1869: ♂, SL = 12.00 mm, Takaoka-shi, Toyama-ken, TOYA Z81-52-r. A, left second pereopod, lateral; B, same, dactyl, ventral; C, same, dactyl, propodus and carpus, mesial; D, left third pereopod, lateral; E, same, carpus, mesial. Scales equal 5 mm.

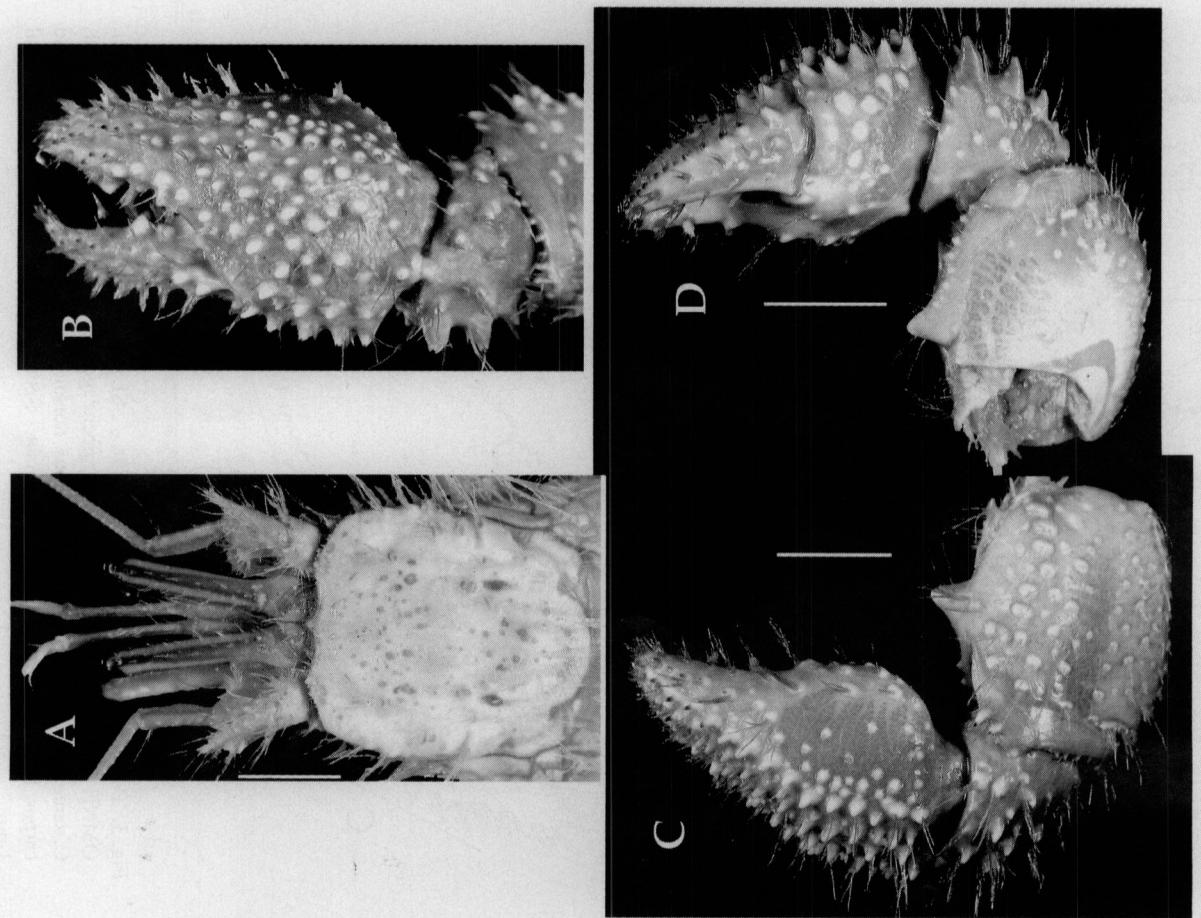

Fig. 5. *Clibanarius infraspinatus* Hilgendorf, 1869: ♂, SL = 12.00 mm, Takaoka-shi, Toyama-ken, TOYA Z81-52-r. A, Shield and cephalic appendages; B, right cheliped, outer; C, same, lower; D, same, upper. Scales equal 5 mm.

Fig. 8. *Diogenes edwardsii* (De Haan, 1849): ♂, SL = 9.35 mm, Toyama-shi, Toyama-ken, TOYA Z90-28-a. A, left cheliped, outer; B, left second pereopod, lateral; C, same, dactyl, propodus and carpus, mesial; D, left third pereopod, lateral. Scales equal 5 mm.

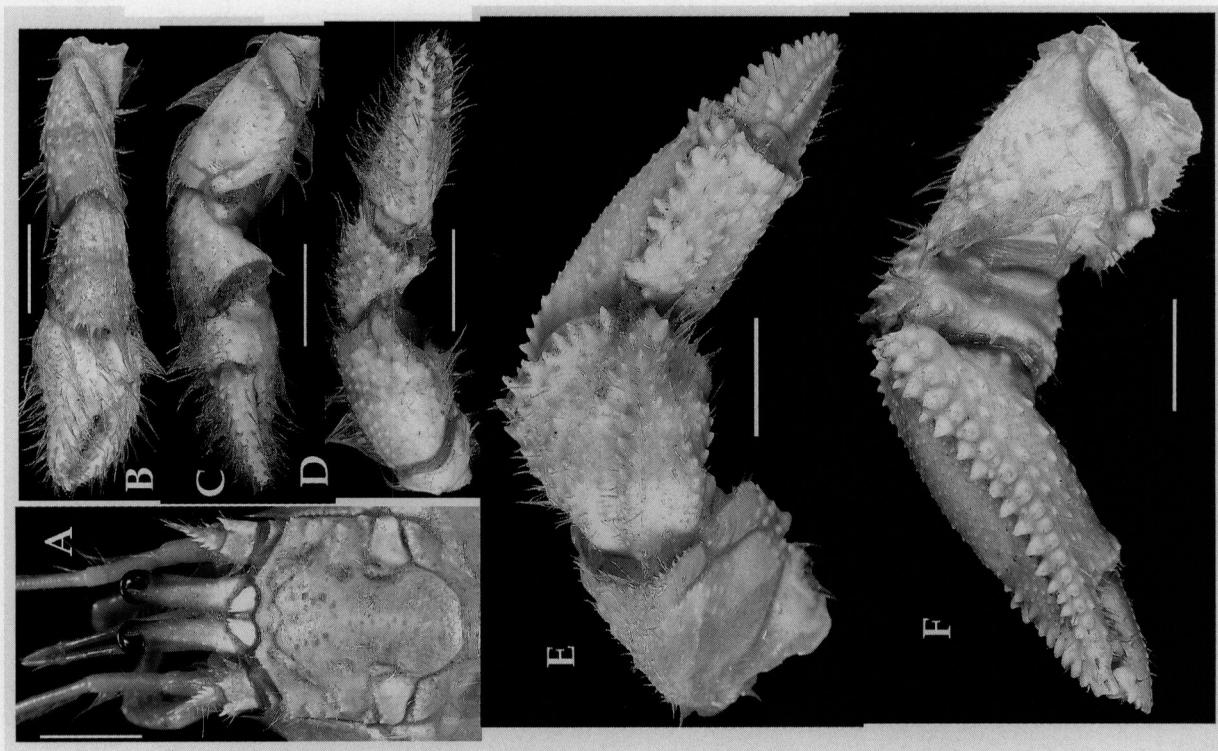

Fig. 7. *Diogenes edwardsii* (De Haan, 1849): ♂, SL = 9.35 mm, Toyama-shi, Toyama-ken, TOYA Z90-28-a. A, shield and cephalic appendages, dorsal; B, right cheliped, outer; C, same, upper; D, same, lower; E, left cheliped, upper; F, same, lower. Scales equal 5 mm.

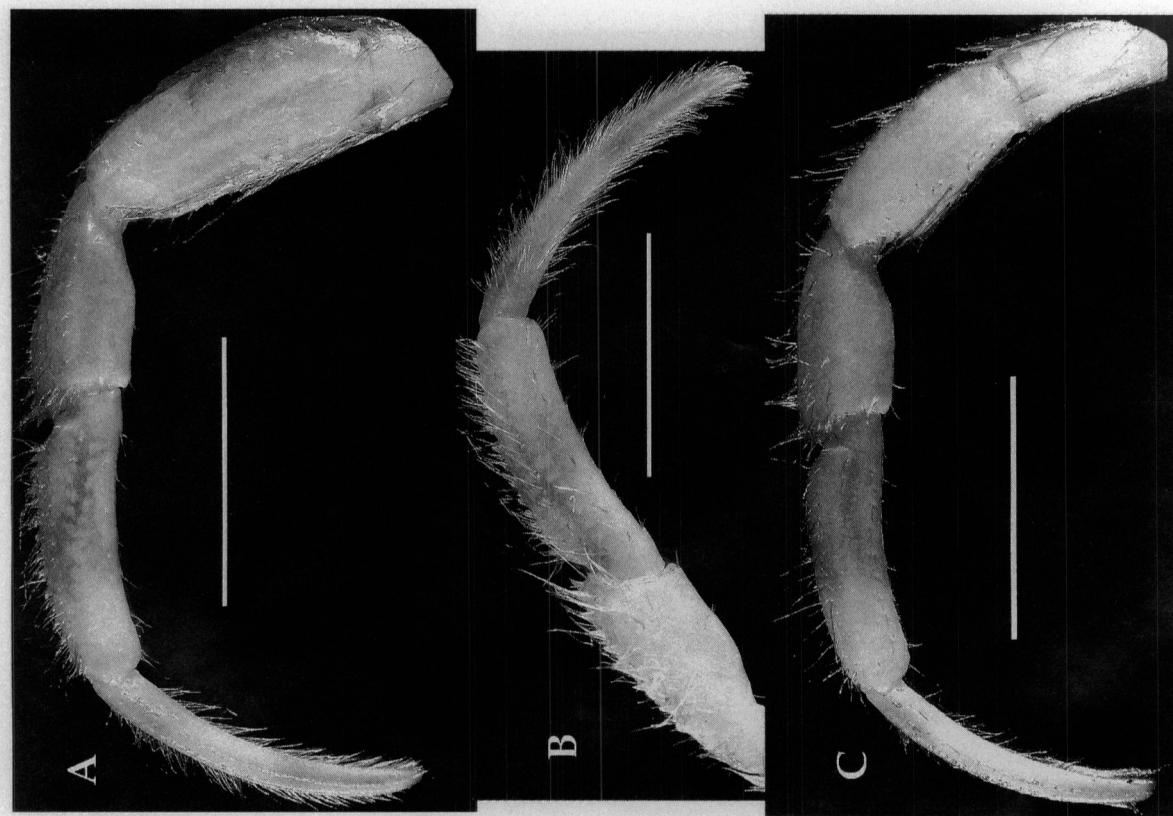

Fig. 10. *Diogenes nitidimanus* Terao, 1913: ♂, SL = 5.30 mm, Peter the Great Bay, Russia, CBM-ZC 8381. A, left second pereopod, lateral; B, same, dactyl, propodus and carpus, mesial; C, left third pereopod, lateral. Scales equal 5 mm.

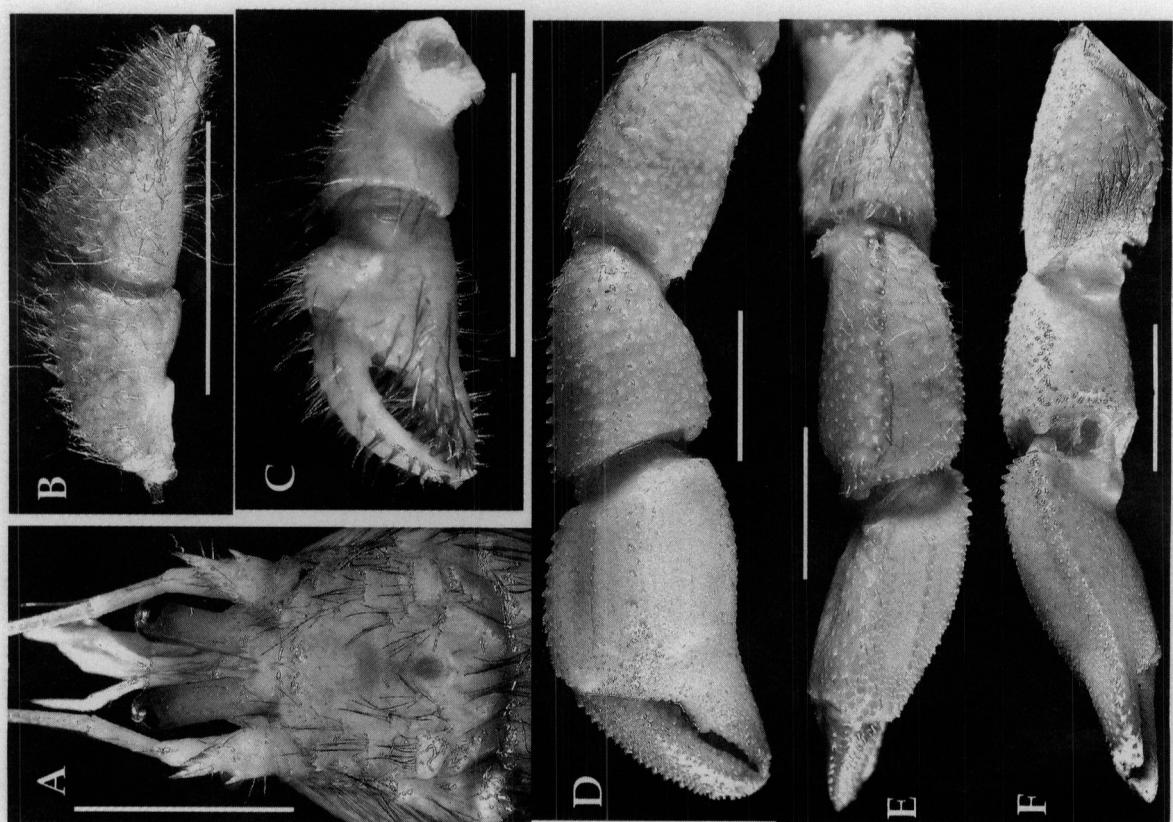

Fig. 9. *Diogenes nitidimanus* Terao, 1913: ♂, SL = 5.30 mm, Peter the Great Bay, Russia, CBM-ZC 8381. A, shield and cephalic appendages, dorsal; B, right cheliped, outer; C, same, inner; D, left cheliped, outer; E, same, upper; F, same, lower. Scales equal 5 mm.

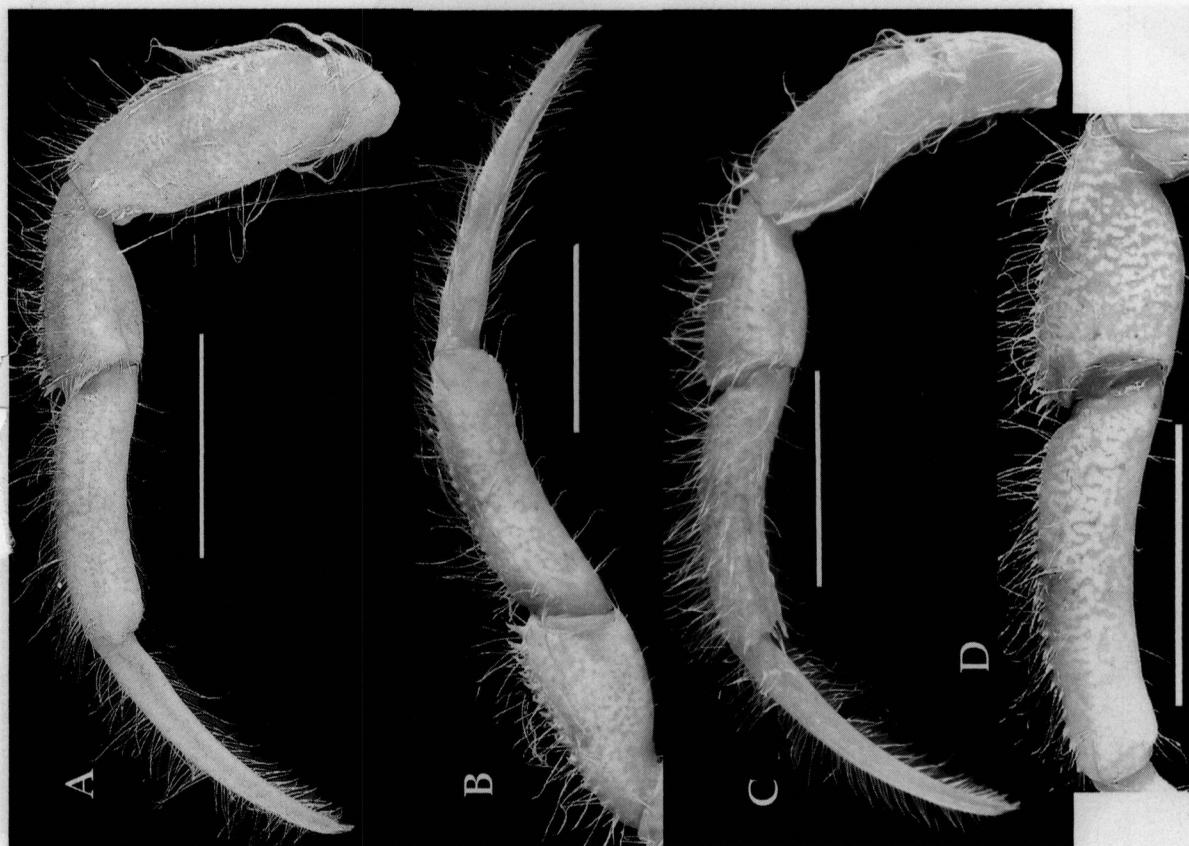

Fig. 12. *Diogenes penicillatus* Stimpson, 1858: ♂, SL = 5.60 mm, Toyama-shi, Toyama-ken, TOYA Z90-19-b. A, left second pereopod, lateral; B, same, dactyl, propodus and carpus, mesial; C, left third pereopod, lateral; D, same, propodus and carpus, lateral. Scales equal 5 mm.

Fig. 11. *Diogenes penicillatus* Stimpson, 1858: ♂, SL = 5.60 mm, Toyama-shi, Toyama-ken, TOYA Z90-19-b. A, shield and cephalic appendages, dorsal; B, right cheliped, outer; C, same, upper; D, left cheliped, outer; E, same, upper; F, same, lower. Scales equal 5 mm.

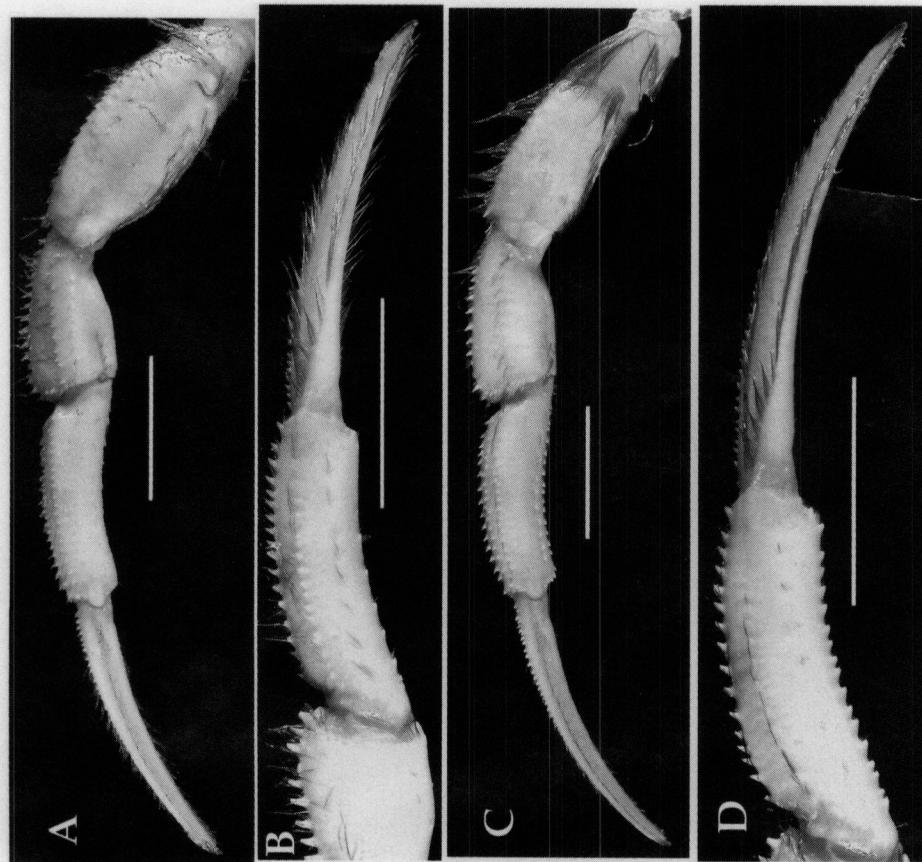

Fig. 14. *Diogenes spinifrons* (De Haan, 1849): ♂, SL = 6.60 mm, Jyoetsu-shi, Niigata-ken, CBM-ZC 8382. A, left second pereopod, lateral; B, same, dactyl, propodus and distal half of carpus, mesial; C, left third pereopod, lateral; D, same, dactyl and propodus, lateral. Scales equal 5 mm.

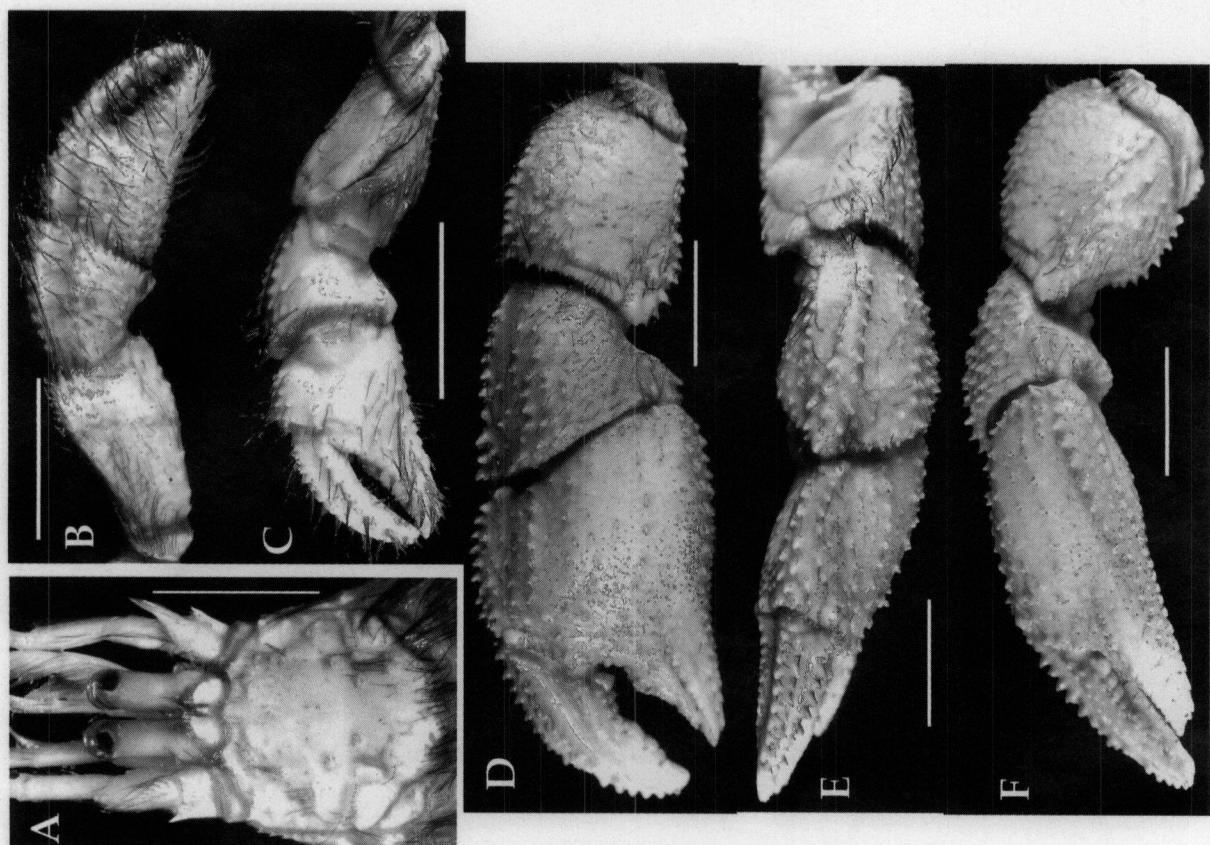

Fig. 13. *Diogenes spinifrons* (De Haan, 1849): ♂, SL = 7.10 mm, Jyoetsu-shi, Niigata-ken, CBM-ZC 8382. A, shield and cephalic appendages, dorsal; B, right cheliped, outer; C, same, inner; D, left cheliped, outer; E, same, lower; F, same, upper. Scales equal 5 mm.

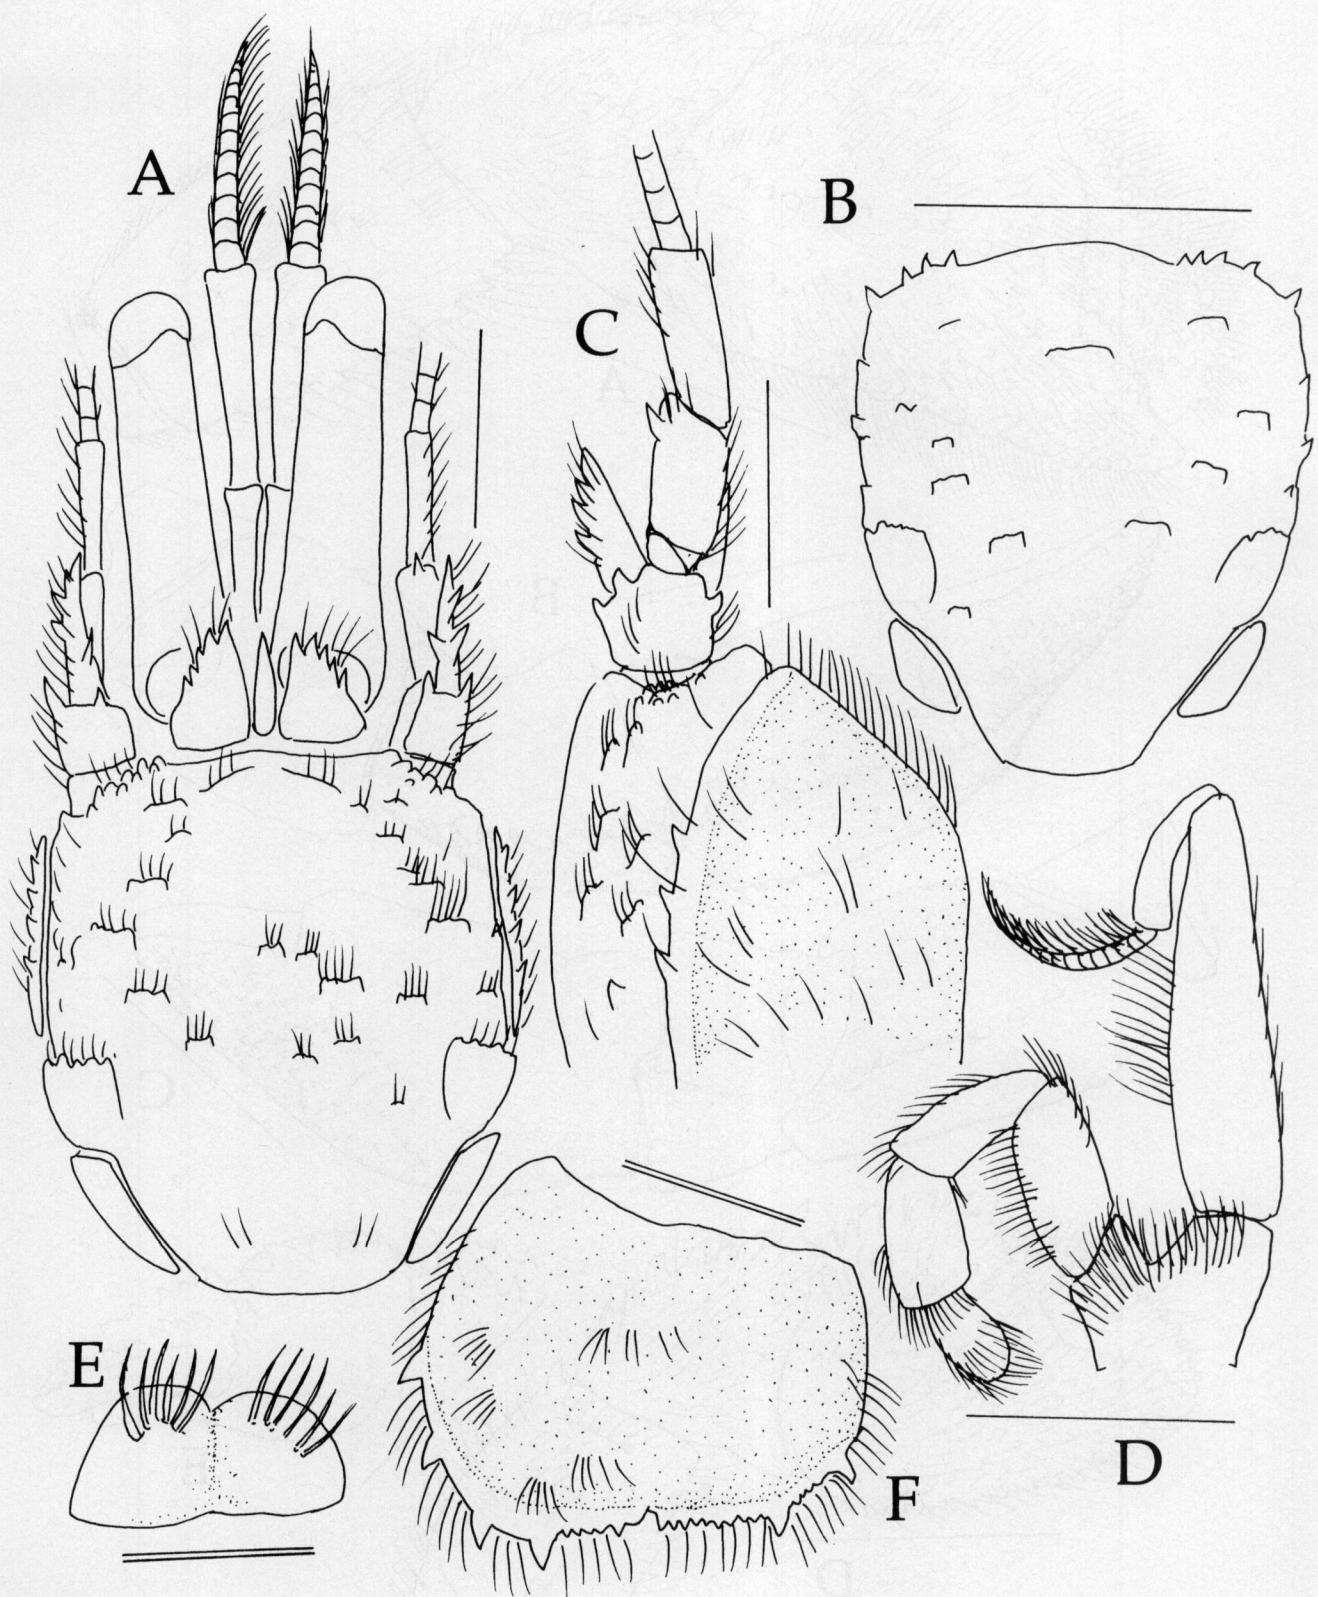

Fig. 15. *Diogenes izanamiae* new species: holotype, ♂, SL = 2.45 mm, Tsukumo Bay, Noto Peninsula, Ishikawa-ken, OMNH Ar 2137. A, shield and cephalic appendages, dorsal; B, shield and its lateral elements, dorsal; C, antennal peduncle and anterior portions of shield and branchiostegite, right lateral; D, right third maxilliped, inner; E, anterior lobe of sternite of third pereopods, ventral; F, telson, dorsal. Setae omitted in B. Scales equal 1 mm for A - D and 0.5 mm for E and F.

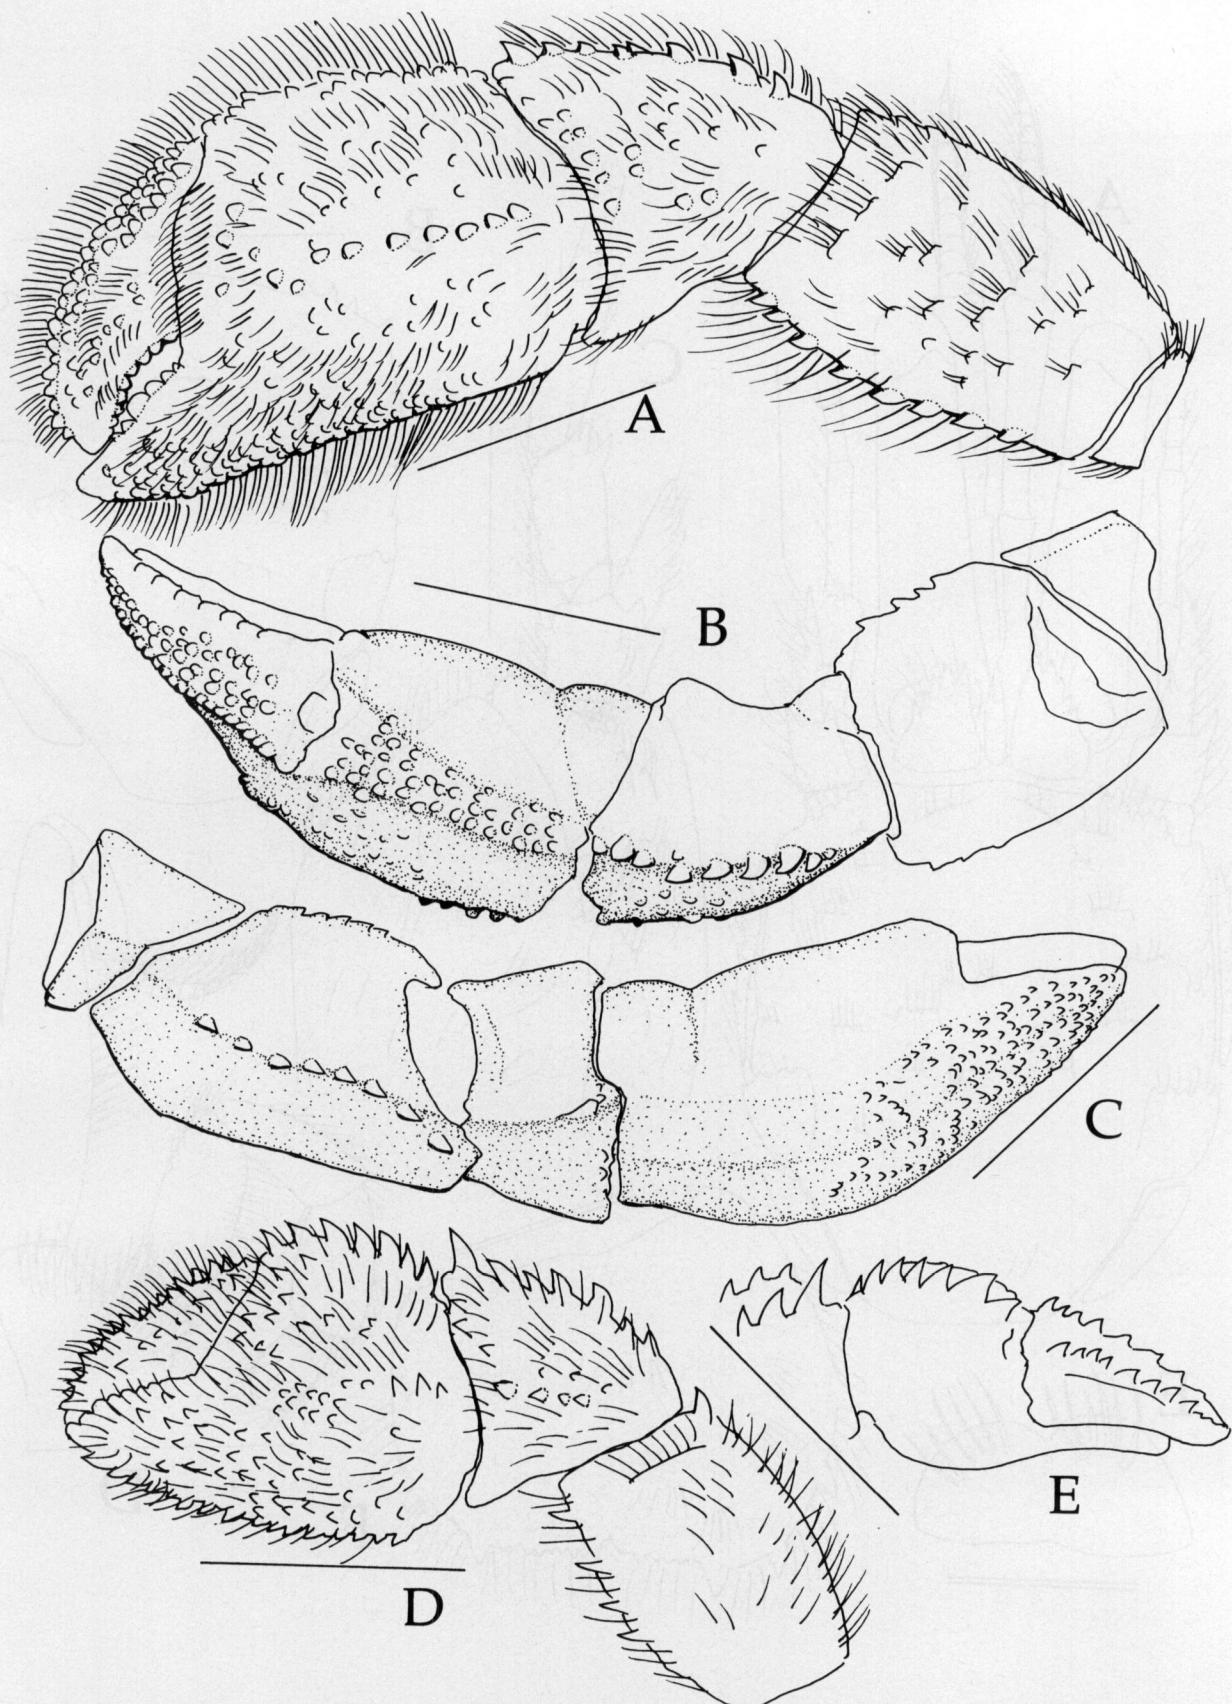

Fig. 16. *Diogenes izanamiae* new species: A-C, holotype ♂, SL = 2.45 mm, Tsukumo Bay, Noto Peninsula, Ishikawa-ken, OMNH Ar 2137; D-E, paratype (allotype), ov. ♀, SL = 2.25 mm, Ossaka, Noto Peninsula, Ishikawa-ken, NMCI-AR-154. A, D, left cheliped, outer; B, same, upper; C, same, lower; E, chela and distal portion of carpus, upper. Setae omitted in B, C and E. Scales equal 1 mm.

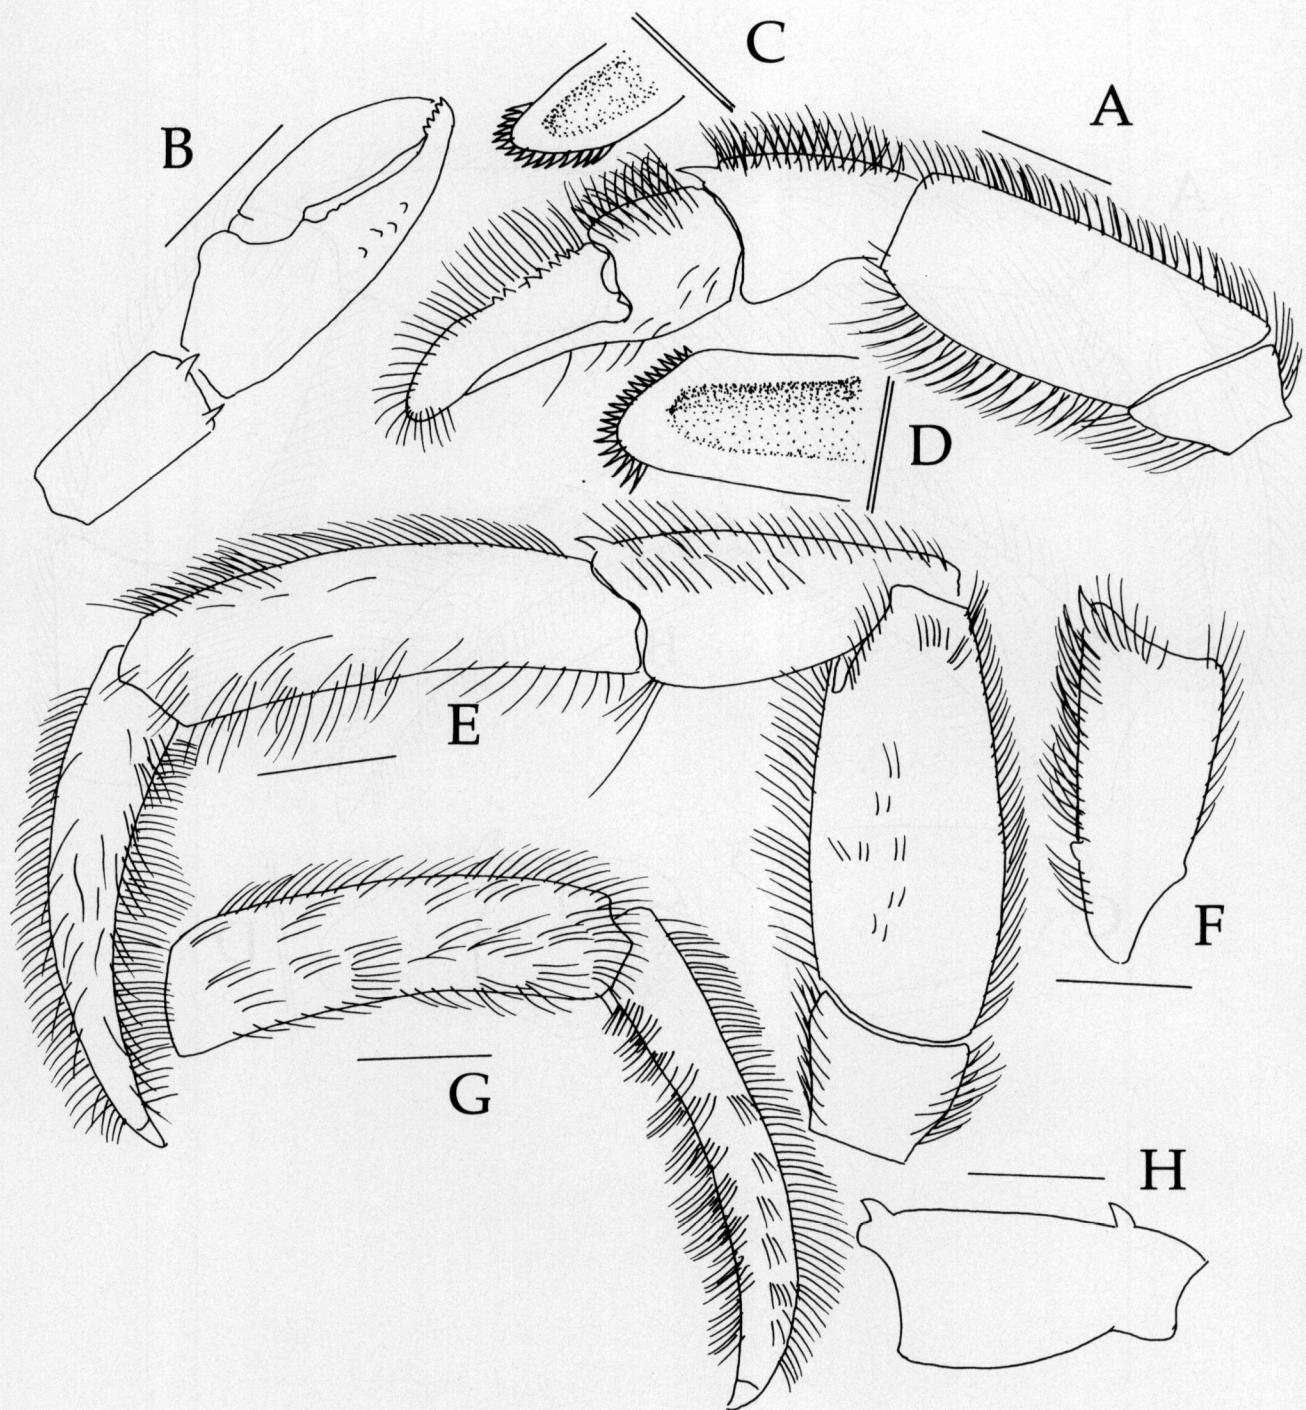

Fig. 17. *Diogenes izanamiae* new species: holotype, ♂, SL = 2.45 mm, Tsukumo Bay, Noto Peninsula, Ishikawa-ken, OMNH Ar 2137. A, right cheliped, upper; B, same, chela and carpus, outer; C, same, distal portion of lower face of dactyl; D, same, distal portion of upper face of fixed finger; E, left second pereopod, lateral; F, same, carpus, mesial; G, same, dactyl and propodus, mesial; H, carpus of right second pereopod, mesial. Setae omitted in B, C, D, and H. Scales equal 1 mm for A, B - H and 0.5 mm for C, D.

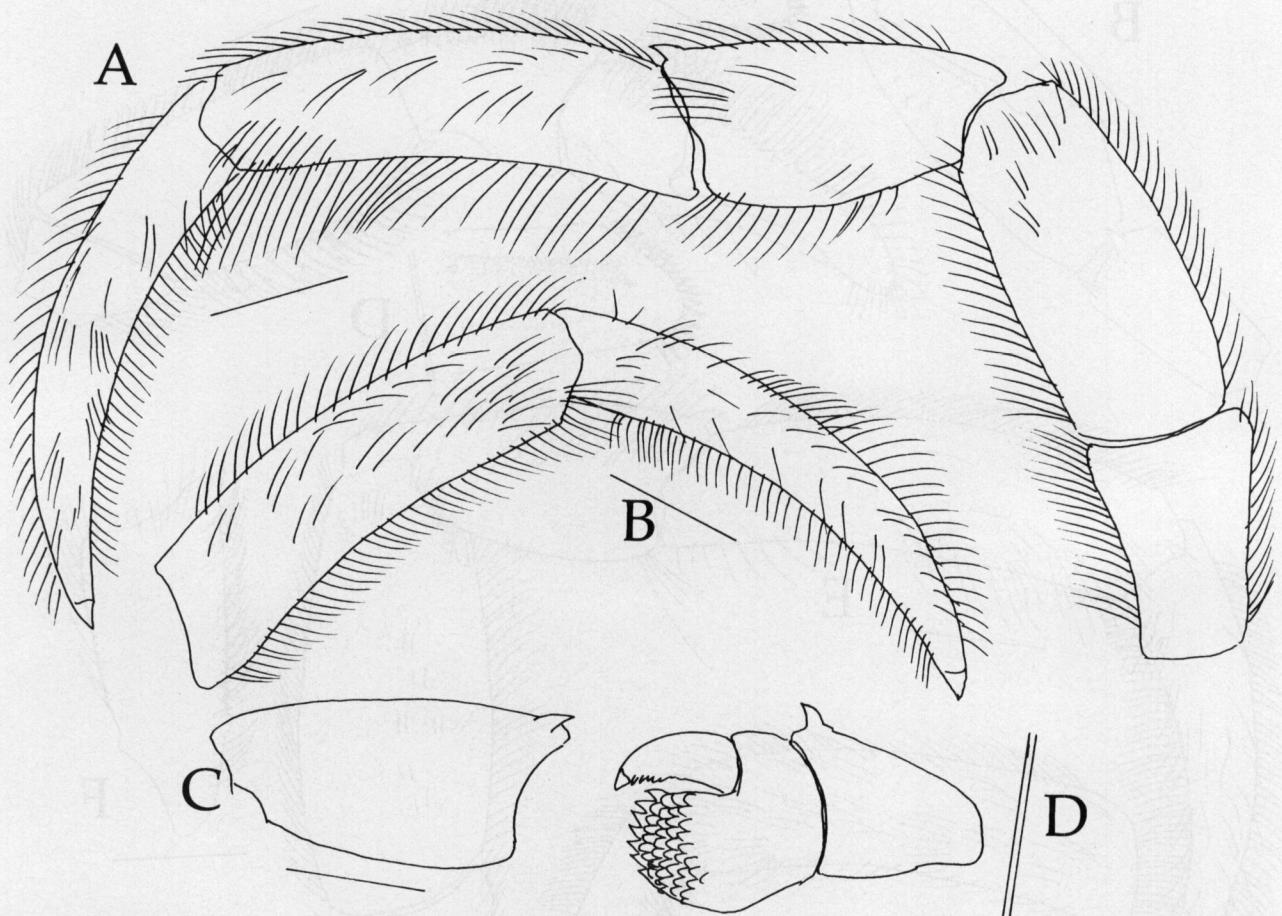

Fig. 18. *Diogenes izanamiae* new species: holotype, ♂, SL = 2.45 mm, Tsukumo Bay, Noto Peninsula, Ishikawa-ken, OMNH Ar 2137. A, left third pereopod, lateral; B, same, dactyl and propodus, mesial; C, same, carpus, mesial; D, chela and carpus of left fourth pereopod, lateral. Setae omitted in C and D. Scales equal 1 mm for A - C and 0.5 mm for D.
