

A LIST OF THE KNOWN LICHENS OF TASMANIA.

BY JOHN SHIRLEY, B. SC., QUEENSLAND.

In preparing this paper the following works have been consulted:—Babington's "Lichens of Tasmania," in Hooker's flora of the island, by a most accurate and painstaking lichenologist, many of whose names are now obsolete from changes of classification: "Hooker's Journal of Botany for 1844 and 1847," containing descriptions of all lichens named by J. D. Hooker and T. Taylor, also the "Botany of the Antarctic Voyage of H.M. ships Erebus and Terror." Few of the names given by Hooker and Taylor are now employed, as they are mainly synonyms of lichens previously described by older collectors: the Rev. J. M. Crombie's paper on the lichens of Robert Brown's herbarium, published in the Journal of the Linnæan Society, Vol. xvii., 1879, pp. 390-401; a sound and valuable contribution: "Exotische Flechten aus dem Herbar des K. K. botanischen Hofkabinetes in Wien," and "Ein neuer Beitrag Zur Flechten Flora Australiens," by Dr. A. v. Krempelhuber, whose names, like those of Hooker and Taylor, have almost wholly lapsed: numerous "Lichenologische Beiträge," of Dr. Jean Müller, of Geneva, the most eminent lichenologist of the day; Dr. W. Nylander's "Synopsis Methodica Lichenum"; and Baron F. v. Müeller's lists of Australian lichens, in "Fragmenta Phytographiæ Australiæ," Vol. xi., and the Victorian Naturalist, Vol. iv., pp. 88-95.

The classification is that of Dr. Jean Müller, and the reference following the name of each species is the authority by which the plant is regarded as Tasmanian.

ORDER I.—EPHEBACEÆ (Nyl.) *Cromb.* (Epebacei in Grevillea.
Vol. , p.).

TRIBE I.—EPHEBEÆ (Nyl.) *Cromb.* (Ephebei in Grevellea,
Vol. p.).

Genus 1.—*Ephebe*, *Fries.*

1. *Ephebe tasmanica*, *Cromb.*, Lich., R. Brown's Herb.,
No. 522 (b).
 2. " *pubescens*, *Ach.* " " " "
- No. 522 (a).
