Please follow these safety instructions for best performance, and long life for your monitor

Power Safety

- The AC plug isolates this equipment from the AC supply.
- The power supply cord serves as a power disconnect device for pluggable equipment. The socket outlet should be installed near the equipment and be easily accessible.
- This product should be operated from the type of power indicated on the marked label. If you are not sure of the type of power available, consult your dealer or local power company.

Care And Cleaning

- **Cleaning.** Always unplug your monitor from the wall outlet before cleaning. Clean the LCD monitor surface with a lint-free, non-abrasive cloth. Avoid using any liquid, aerosol or glass cleaners.
- Slots and openings on the back or top of the cabinet are for ventilation. They must not be blocked or covered. Your monitor should never be placed near or over a radiator or heat source, or in a built-in installation unless proper ventilation is provided.
- Never push objects or spill liquid of any kind into this product.

Servicing

- Do not attempt to service this product yourself, as opening or removing covers may expose you to dangerous voltages or other risks. If any of the above mentioned misuse or other accident such as dropping or mishandling occurs, contact qualified service personnel for servicing.

1. Getting started

When unpacking please check you have the following items. If any are missing or damaged, please contact the place of purchase for a replacement.

BenQ LCD Monitor	 A BenQ LCD monitor with a silver bezel and a black base. The BenQ logo is visible on the bottom left of the bezel.
Quick Start Guide	 A folded white paper document, likely the Quick Start Guide, with a small image of the monitor on the cover.
CD-ROM	 A CD-ROM disc with the BenQ logo and some text on the surface.
Power Cord (Picture may differ from product supplied for your region)	 A black power cord with a standard AC power plug on one end and a DC power connector on the other.
Signal Cable: D-Sub	 A black signal cable with D-Sub connectors on both ends.

2. Getting to know your monitor

Front View

Back View

1. Power AC input jack
2. D-Sub Connector

3. How to install your monitor hardware

☞ If the computer is turned on you must turn it off before continuing.
Do not plug-in or turn-on the power to the monitor until instructed to do so.

1. Attach the monitor base.

☞ Please be careful to prevent damage to the monitor. Placing the screen surface on an object like a stapler or a mouse will crack the glass or damage the LCD substrate voiding your warranty. Sliding or scraping the monitor around on your desk will scratch or damage the monitor surround and controls.

Protect the monitor and screen by clearing a flat open area on your desk and placing a soft item like the monitor packaging bag on the desk for padding.

Lay the screen face down on a flat clean padded surface.

Whilst holding the monitor firmly against the desk, pull the monitor stand arm upwards clear of the monitor.

Orient and align the stand base socket with the end of the stand arm, then push them together until they click and lock into place.

Gently attempt to pull them back apart to check that they have properly engaged.

Carefully lift the monitor, turn it over and place it upright on its stand on a flat even surface.

💡 You should position the monitor and angle the screen to minimize unwanted reflections from other light sources.

2. Connect the PC video cable.

Connect the plug of the D-Sub cable (at the end without the ferrite filter) to the monitor D-Sub socket. Connect the other plug of the D-Sub cable (at the end with the ferrite filter) to the computer video D-Sub socket.

Tighten all finger screws to prevent the plugs from accidentally falling out during use.

3. Connect the power cable to the monitor.

Plug one end of the power cord into the socket labelled 'POWER IN' on the rear of the monitor. Do not connect the other end to a power point just yet.

4. Route the cables via the loose bracket.

Release the cable retaining clip by squeezing the clip inwards as illustrated. Position the cables together and reinsert the clip over them to retain the cables neatly in place behind the monitor stand.

5. Connect-to and turn-on the power.

Plug the other end of the power cord into a power point and turn it on.

 Picture may differ from product supplied for your region.

Turn on the monitor by pressing the power button on the front of the monitor.

Turn on the computer too, and follow the instructions in Section 4: **Getting the most from your BenQ monitor on page 9** to install the monitor software.

How to detach the stand base

1. Prepare the monitor and area.

Turn off the monitor and the power before unplugging the power cable. Turn off the computer before unplugging the monitor signal cable.

 Please be careful to prevent damage to the monitor. Placing the screen surface on an object like a stapler or a mouse will crack the glass or damage the LCD substrate voiding your warranty. Sliding or scraping the monitor around on your desk will scratch or damage the monitor surround and controls.

Protect the monitor and screen by clearing a flat open area on your desk and placing a soft item like a towel on the desk for padding, before laying the screen face down on a flat clean padded surface.

2. Release the locking clip on one side of the stand base whilst pulling the edge of the base away from the stand arm.

3. Release the other locking clip to detach the stand base from the monitor stand arm.

4. Getting the most from your BenQ monitor

To gain the most benefit from your new BenQ color LCD flat screen monitor, you should install the custom BenQ LCD Monitor driver software as provided on the BenQ LCD Monitor CD-ROM.

The circumstances under which you connect and install your BenQ LCD Monitor will determine which process you need to follow to successfully install the BenQ LCD Monitor driver software. These circumstances relate to which version of Microsoft Windows you are using, and whether you are connecting the monitor and installing the software onto a new computer (without existing monitor driver software), or whether you are upgrading an existing installation (which already has existing monitor driver software) with a newer monitor.

In either case however, the very next time you turn on your computer (after connecting the monitor to your computer), Windows will automatically recognise the new (or different) hardware, and will launch its **Found New Hardware** wizard.

Follow the wizard instructions until it asks you to select a monitor model. At that point, click the **Have Disk** button, insert the BenQ LCD Monitor CD-ROM and select the appropriate monitor model. Further details and step-by-step instructions for both an automatic (new) or upgrade (existing) installation follow. See:

- [How to install the monitor on a new computer on page 10.](#)
- [How to upgrade the monitor on an existing computer on page 11](#)

 If you require a User Name and Password to login to your Windows computer, you must be logged on as an Administrator or as a member of the Administrators group in order to install the monitor driver software. Furthermore, if your computer is connected to a network which has security access requirements, network policy settings may prevent you from installing software on your computer.

How to install the monitor on a new computer

This instruction details the procedure for selecting and installing the BenQ LCD Monitor driver software on a new computer which has never had a monitor driver installed before. This instruction is only suitable for a computer which has never been used before, and for which the BenQ LCD Monitor is the first ever monitor to be connected to it.

 If you are adding the BenQ LCD Monitor to an existing computer that has already had another monitor connected to it (and has monitor driver software installed), you should not be following these instructions. You should instead be following the instructions for How to upgrade the monitor on an existing computer.

1. Follow the instructions in [How to install your monitor hardware on page 6](#).
When Windows starts, it will automatically detect the new monitor and launch the **Found New Hardware Wizard**. Follow the prompts until it displays the option to **Install Hardware Device drivers**.
2. Insert the BenQ LCD Monitor CD-ROM into a CD drive on the computer.
3. Check **Search for a suitable driver for my device** option, and click **Next**.
4. Check the option for **CD-ROM drives** (uncheck all others) and click **Next**.
5. Look to confirm that the wizard has selected the correct name of your monitor as “BenQ FP51G+” and click **Next**.
6. Click **Finish**.
7. Restart the computer.

How to upgrade the monitor on an existing computer

This instruction details the procedure for manually updating the existing monitor driver software on your Microsoft Windows computer. It is currently tested as compatible (and recommended only) for Windows XP and Windows Vista Operating System (OS).

 The BenQ LCD Monitor driver for your model may well function perfectly with other versions of Windows, however, as at the time of writing, BenQ has done no testing of this driver on other versions of Windows and cannot guarantee its operation on those systems.

Installing monitor driver software involves selecting an appropriate information file (.inf) on the BenQ LCD Monitor CD-ROM for the particular model monitor you have connected, and letting Windows install the corresponding driver files from the CD. You need only steer it in the right direction. Windows has an Upgrade Device Driver Wizard to automate the task and guide you through the file selection and installation process.

See:

- [How to install on Windows Vista systems on page 12.](#)
- [How to install on Windows XP system on page 13.](#)

How to install on Windows Vista systems

1. Open **Display Settings**.

Right-click the desktop and select **Personalize** from the popup menu.

Select **Display Settings** from the **Personalize appearance and sounds** window.

The **Display Settings** window will display.

2. Click the **Advanced Settings** button.

The **Generic PnP Monitor Properties** window will display.

3. Click the **Monitor** tab and the **Properties** button.

4. Click **Continue** in the prompted **User Account Control** window.

5. Click the **Driver** tab and the **Update Driver** button.

6. Insert the BenQ LCD Monitor CD-ROM into a CD drive on the computer.

7. In the **Update Driver Software** window, select the option '**Browse my computer for driver software**'.

8. Click '**Browse**' and select **Driver>Windows Vista>FP51G+** from the CD, and click the **Next** button.

This will copy and install the appropriate monitor driver files to your computer.

9. Click **Close**.

You do not need to restart Windows Vista, as the BenQ LCD monitor drivers will operate immediately with no further action required by you.

How to install on Windows XP system

1. Open **Display Properties**.

The quickest shortcut to **Display Properties** is through the Windows desktop. Right-click the desktop and select **Properties** from the popup menu.

Alternatively, the Windows menu to **Display Properties** is located in **Control Panel**.

In Windows XP version, **Control Panel** is located directly under the main **Start** menu item. The menu options displayed will depend upon which type of view is selected for your system.

- Under the Classic view, click **Start | Control Panel | Display**.
- Under the Category view, click **Start | Control Panel | Appearance and Themes | Change the screen resolution**.

The **Display Properties** window will display.

2. Click the **Settings** tab and the **Advanced** button.

The **Advanced Display Properties** window will display.

3. Click the **Monitor** tab and select the 'Plug and Play Monitor' from the list.

If there is only one monitor in the list, it will already be selected for you.

4. Click the **Properties** button.

The **Monitor Properties** window will display.

If the driver provider is listed as BenQ, and the model matches that of your new monitor, the proper drivers are already installed, and you need do nothing further. Cancel out of these property windows. However, if BenQ is not listed as the manufacturer, or the correct model is not currently shown, you will need to continue with these instructions.

5. Click the **Driver** tab and the **Update Driver** button.

The **Hardware Update Wizard** will display. Follow the wizard instructions noting the steps below:

6. Insert the BenQ LCD Monitor CD-ROM into a CD drive on the computer you attached the monitor to.

7. Check the option '**Install from a list or specific location**' and click **Next**.

8. Check the option '**Search for the best driver in these locations**' and also check '**Search removable media**', then click **Next**.

Please wait while the wizard searches for drives and the BenQ LCD Monitor CD inserted in step 6. When complete, the wizard should have found and selected the BenQ driver on the CD appropriate to your monitor model, in this case 'BenQ FP51G+' in the location 'd:\Driver\Windows XP\FP51G+\FP51G+.inf' or similar.

 The drive letter for your CD drive may differ from the example above depending upon your system – it may be 'D:' or 'E:' or 'F:' etc.

9. Select (single-click) the file named '**FP51G+**' on the CD, and click the **Next** button.

This will copy and install the appropriate monitor driver files to your computer.

10. Click **Finish**.

This will close the wizard and return you to the **Monitor Properties** window, now renamed **BenQ FP51G+ Properties**.

11. Click **Close, OK, and OK**.

This will close the **Display Properties** windows. You do not need to restart Windows XP, as the BenQ LCD monitor drivers will operate immediately with no further action required by you.

5. How to adjust the screen resolution

Due to the nature of liquid crystal display (LCD) technology, the picture resolution is always fixed. The best possible picture for your FP51G⁺ is achieved with a resolution of 1024 x 768. This is called “Native Resolution” or maximal resolution – that is, the clearest picture. Lower resolutions are displayed on a full screen through an interpolation circuit. However flaws do occur with the interpolated resolution.

 To take full advantage of LCD technology you should select the native resolution setting of 1024 x 768.

1. Open **Display Properties** and select the **Settings** tab.

You can open **Display Properties** by right-clicking on the Windows desktop and selecting **Properties** from the pop-up menu.

2. Use the slider in the ‘Screen area’ section to adjust the screen resolution.

Select the recommended resolution of 1024 x 768 then click **Apply**.

If you select some other resolution, be aware that this other resolution is interpolated and may not accurately display the screen image as well as it could do at the native resolution setting.

3. Click **OK** then **Yes**.
4. Close the **Display Properties** window.

6. How to adjust the screen refresh rate

You don't have to choose the highest possible refresh rate on an LCD display, because it is not technically possible for an LCD display to flicker. The best results are obtained by using the factory modes already set in your computer. There is a table with the factory modes in the specification section of this User Manual.

You can choose 60, 70 and 75 Hertz, (but not 72Hz) for the native resolution of 1024x768.

1. Double click the **Display** icon in **Control Panel**.
2. From the **Display Properties** window, select the **Settings** tab and click the **Advanced** button.
3. Select the **Adapter** tab, and select an appropriate refresh rate to match one of the applicable factory modes as listed in the specification table.
4. Click **Change**, **OK**, then **Yes**.
5. Close the **Display Properties** window.

7. How to set the picture optimization

The easiest way to obtain an optimal display is to use the *i*key function. Press the *i*key to optimize and adjust the screen settings automatically for you. Refer to [How to adjust your monitor on page 17](#) for button locations and functionality.

If you wish to, you can always adjust the screen settings manually using the buttons on the monitor panel. To assist you in this endeavour, BenQ has provided a screen test image utility which you can use to check for screen color, grayscale and line gradient display.

1. Run the test program auto.exe from CD-ROM. You could also use any other image, such as the desktop of your operating system. However, we recommend that you use auto.exe. As you run auto.exe, a test pattern displays.
2. Press the **Enter** key to access the monitor On-Screen Display (OSD) menu.
3. If you notice a vertical noise, press the ◀ or ▶ keys to select **Geometry** and press the **Enter** key. Then press the ◀ or ▶ keys to select **Pixel Clock** and press the **Enter** key again. Then, press the ◀ or ▶ key to adjust the monitor until the noise disappears.
4. If you notice a horizontal noise, press the ◀ or ▶ keys to select **Geometry** and press the **Enter** key. Then press the ◀ or ▶ keys to select **Phase** and press the **Enter** key again. Then, press the ◀ or ▶ keys to adjust the monitor until the noise disappears.

To make sure the *i*key function performs well, you have to select one of the supported modes. If the *i*key does not work properly and the **NON PRESET MODE** message is on the OSD, it means you are not using one of the supported modes. Please set your monitor to use one of the supported modes as listed at the end of this manual.

8. How to adjust your monitor

A Look at the Control Panel

1. “*i*key”: Adjust vertical position, phase, horizontal position and pixel clock automatically.
2. “Exit” key: Back to previous menu or exit OSD.
3. ◀ (Left) key: For Left/Decrease adjustment. Left key is the hot key for Contrast.
4. ▶ (Right) key: For Right/Increase adjustment. Right key is the hot key for Brightness.
5. “Enter” key: Activate OSD, enter sub menu, select items, and confirm selection.
6. “Power”: Turn the power on or off.

Hot Key Mode

Brightness hot key and Contrast hot key

Press the ▶ key to enter the **Brightness** menu.
Further press the ◀ or ▶ keys to adjust the degree of screen brightness and press the **Exit** key to exit OSD.

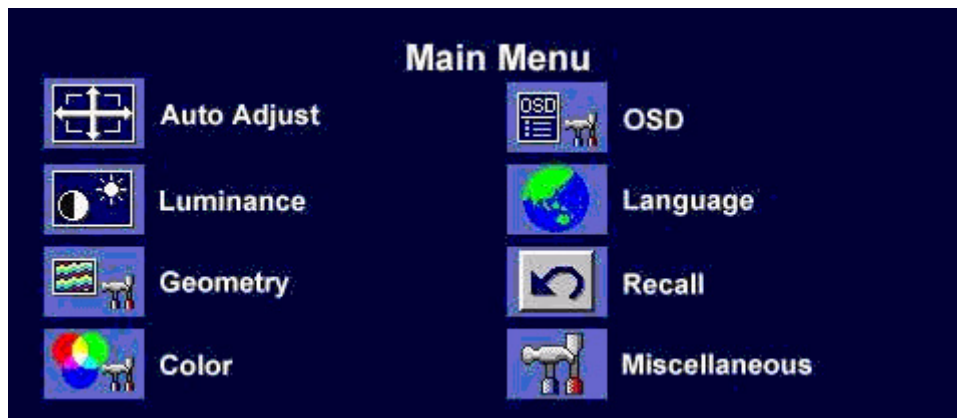

Press the ◀ key to enter the **Contrast** menu.
Further press the ◀ or ▶ keys to adjust the degree of screen contrast and press the **Exit** key to exit OSD.

Main Menu Mode

Control Functions Available in Main Menu

Main Menu

Luminance sub menu

Press the ◀ or ▶ keys to adjust the degree of **Brightness**.

Press the **Exit** key to return to previous menu.

Press the ◀ or ▶ keys to adjust the degree of **Contrast**.

Press the **Exit** to return to previous menu.

Geometry sub menu

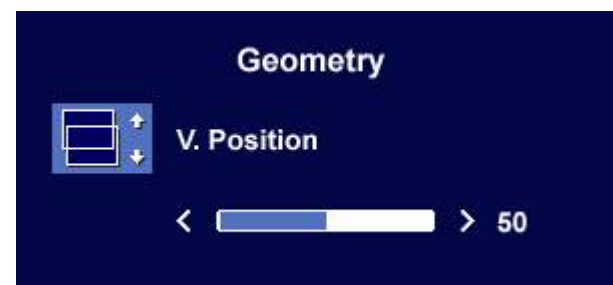

Press the ◀ or ▶ keys to adjust the display **Horizontal Position**.

Press the **Exit** key to return to previous menu.

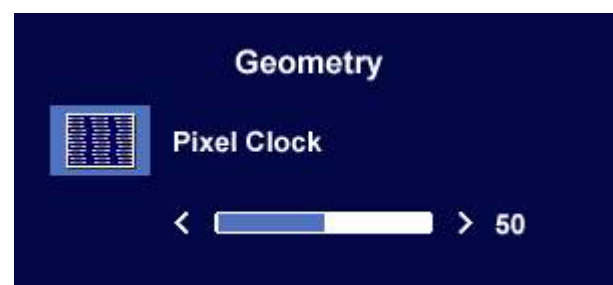

Press the ◀ or ▶ keys to adjust the display **Vertical Position**.

Press the **Exit** key to return to previous menu.

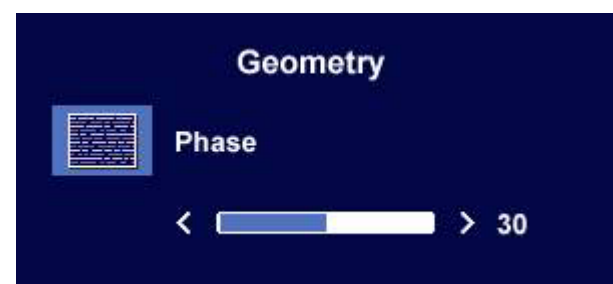

Press the ◀ or ▶ key to adjust the monitor **Pixel Clock**.

Press the **Exit** key to return to previous menu.

Press the ◀ or ▶ keys to adjust the degree of screen display **Phase**.

Press the **Exit** key to return to previous menu.

Color sub menu

Bluish - applies a cool tint to the image and is factory pre-set to the PC industry standard white color.

Reddish - applies a warm tint to the image and is factory pre-set to the news print standard white color.

Normal - allows video and still photographs to be viewed with natural coloring. This is the factory default color.

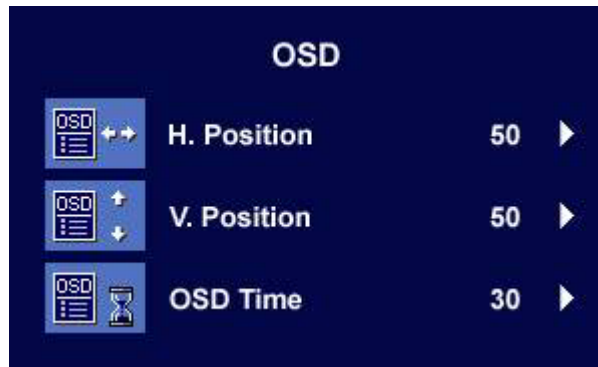

User Preset

User Preset is provided so you can tailor the image color tint to suit your liking. The blend of the Red, Green and Blue primary colors can be altered to change the color tint of the image. The default start setting is 50. Decreasing one or more of the colors will reduce their respective influence on the color tint of the image. e.g. if you reduce the Blue level the image will gradually take on a yellowish tint. If you reduce Green, the image will become a magenta tint.

☞ To reset the defaults, see [Recall sub menu on page 23](#) for details.

OSD sub menu

Press the ◀ or ▶ keys to adjust the **Horizontal Position** of the OSD.

Press the **Exit** key to return to previous menu.

Press the ◀ or ▶ keys to adjust the **Vertical Position** of the OSD.

Press the **Exit** key to return to previous menu.

Press the ◀ or ▶ keys to adjust the display time of the OSD.

Press the **Exit** key to return to previous menu.

Languages Sub menu

Press the ◀ or ▶ keys to select a language to have the OSD display menus in that language.
Press the **Exit** key to return to previous menu.

Recall sub menu

Press the ◀ or ▶ keys to select **Color Recall**. Press the **Enter** key to recall color settings, or press the **Exit** key to return to previous menu.

Press the ◀ or ▶ keys to select **Recall All**. Press the **Enter** key to recall position and color settings, or press the **Exit** key to return to previous menu.

Miscellaneous sub menu

Press the ◀ or ▶ keys to adjust the degree of Sharpness.

Press the **Exit** key to return to previous menu.

Select **Display Information** to display the current monitor property settings.

Press the **Exit** key to return to previous menu.

9. Troubleshooting

Frequently Asked Questions (FAQ)

② The image is blurred:

☞ Read the [How to adjust the screen resolution on page 14](#) section, and then select the correct resolution, refresh rate and make adjustments based on these instructions.

☞ How do you use a VGA extension cable?

Remove the extension cable for the test. Is the image now in focus? If not, optimize the image by working through the instructions in the [How to adjust the screen refresh rate on page 15](#) section. It is normal for blurring to occur due to conduction losses in extension cables. You can minimize these losses by using an extension cable with better conduction quality or with a built-in booster.

☞ Does the blurring only occur at resolutions lower than the native (maximum) resolution?

Read the [How to adjust the screen resolution on page 14](#) section. Select the native resolution.

② Pixel errors can be seen:

☞ One of several pixels is permanently black, one or more pixels are permanently white, one or more pixels are permanently red, green, blue or another color.

- Clean the LCD screen.
- Cycle power on-off.
- These are pixels that are permanently on or off and is a natural defect that occurs in LCD technology.

② The image has a faulty coloration:

☞ It has a yellow, blue or pink appearance.

On the monitor, press “Enter” key and press ◀ or ▶ key to move to the “Recall” icon and press “Enter” key to enter “Recall” sub menu. Press ◀ or ▶ key to select “Color Recall” and select “Yes” in “Color Recall” sub menu, then press “Enter” key to recall to factory settings. If the image is still not correct and the OSD also has faulty coloration, this means one of the three primary colors is missing in the signal input. Now check the signal cable connectors. If any pin is bent or broken off, please contact your dealer to get necessary support.

② No image can be seen:

☞ Is the prompt on the display illuminated in green?

If the LED is illuminated in green and there is a message “Out of Range” on the screen, this means you are using a display mode that this monitor does not support, please change the setting to one of the supported mode. Please read “[Supported operating modes on page 27](#)” section.

② Is the prompt on the display illuminated in orange?

If the LED is illuminated in orange, the power management mode is active. Press any button on the computer keyboard or move the mouse. If that does not help, check the signal cable connectors. If any pin is bent or broken off, please contact your dealer to get necessary support.

☞ Is the prompt on the display not illuminated at all?

Check the power supply mains socket, the external power supply and the mains switch.

② The image is distorted, flashes or flickers:

☞ Read the [How to adjust the screen resolution on page 14](#) section and then select the correct resolution, refresh rate and make adjustments based on these instructions.

② The image is displaced in one direction:

☞ Read the [How to adjust the screen resolution on page 14](#) section and then select the correct resolution, refresh rate and make adjustments based on these instructions.

Need More Help?

If your problems remain after checking this manual, please contact your place of purchase or e-mail us at: Support@BenQ.com

10. Supported operating modes

Incoming display mode (Input timing)				
Resolution	Horizontal Frequency (KHz)	Vertical Frequency (Hz)	Pixel Frequency (MHz)	Comment
640 x 350	31.47(P)	70.08(N)	25.17	DOS
720 x 400	31.47(N)	70.08(P)	28.32	DOS
640 x 480	31.47(N)	60.00(N)	25.18	DOS
640 x 480	35.00(N)	61.00(N)	30.24	Macintosh
640 x 480	37.86(N)	72.80(N)	31.50	VESA
640 x 480	37.50(N)	75.00(N)	31.50	VESA
800 x 600	37.88(P)	60.32(P)	40.00	VESA
800 x 600	48.08(P)	72.19(P)	50.00	VESA
800 x 600	46.87(P)	75.00(P)	49.50	VESA
832 x 624	49.72(N)	74.55(N)	57.29	Macintosh
1024 x 768	48.36(N)	60.00(N)	65.00	VESA
1024 x 768	56.48(N)	70.10(N)	75.00	VESA
1024 x 768	60.02(P)	75.00(P)	78.75	VESA
1024 x 768	60.24(N)	74.93(N)	80.00	Macintosh

- Modes not listed in the table may not be supported. For an optimal picture, we recommended you choose a mode listed in the table above.
- There are 14 available modes that are compatible with Windows.
- Image disruption may occur as a result of signal frequency differences from VGA cards which do not correspond with the usual standard. This is not, however, an error. You may improve this situation by altering an automatic setting or by manually changing the phase setting and the pixel frequency from the “Geometry” menu.
- If you switch off the monitor, interference lines can occur on your screen. But do not be concerned about this, as it is normal.
- To extend the service life of the product, we recommend that you use your computer's power management function.

11. Specifications

Model	FP51G ⁺
Display type	15.0", active, TFT
Viewable diagonal	38.1 cm
Native (maximum) resolution	1,024 x 768
Colors	16.2 million
Contrast / Brightness	700:1 / 250 cd/m ²
Response time	8 ms
Viewing angle (left/right, up/down)	140, 130 (CR=10)
Line frequency	31 - 83 kHz Multi- frequency monitor
Image frequency	56 - 76 Hz modes within these parameters
Image checks	Analog, OSD Technology, <i>i</i> key (automatic image setting)
Controls	5 buttons and <i>i</i> key.
Functions	Contrast, brightness, vert. & hor. image position, phase, pixel clock, color balance, color palette, choice of language (8 language OSD), OSD position, status indicator
Power management	VESA DPMS, EPA
Max. power consumption	30 Watt
Power saving mode	< 1 Watt
	 This product comply with ENERGY STAR® Program Requirements Computer Monitors. Version 4.0
Input signal	RGB analog 0.7 Vpp/75 Ohm positive
Synchronization	TTL separate signal connection 15-pin mini D-sub cable
Temperature (operating)	0 °C - 40 °C
Air humidity (operating)	10% - 90%
Certifications	TCO 99/03, TÜV/Ergonomics, TÜV/ GS, FCC Class B, ISO 13406-2, VCCI, CB Report, CE, C-Tick, BSMI, Fimko, GOST, CSAus, CCC, SASO, PSB, Green Mark, MIC, EPA
Operating voltage	Automatic switched mode power supply, 100-240 V, 50-60 Hz
Dimensions (H x W x D)	338 x 331 x 136 mm
Weight	3.7 kg
