Natural Resource Program Center
Fort Collins, Colorado

The Natural Resource Publication series addresses natural resource topics that are of interest and applicability to a broad readership in the National Park Service and to others in the management of natural resources, including the scientific community, the public, and the NPS conservation and environmental constituencies. Manuscripts are peer-reviewed to ensure that the information is scientifically credible, technically accurate, appropriately written for the intended audience, and is designed and published in a professional manner.

The Natural Resource Technical Report series is used to disseminate the peer-reviewed results of scientific studies in the physical, biological, and social sciences for both the advancement of science and the achievement of the National Park Service's mission. The reports provide contributors with a forum for displaying comprehensive data that are often deleted from journals because of page limitations. Current examples of such reports include the results of research that addresses natural resource management issues; natural resource inventory and monitoring activities; resource assessment reports; scientific literature reviews; and peer-reviewed proceedings of technical workshops, conferences, or symposia.

Views, statements, findings, conclusions, recommendations, and data in this report are solely those of the author(s) and do not necessarily reflect views and policies of the U.S. Department of the Interior, National Park Service. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the National Park Service.

Printed copies of reports in this series may be produced in limited quantity, and are only available as long as the supply lasts. You may send a request to:

Northern Colorado Plateau Network

Abstract

In 2005–2006, the National Park Service’s Northern Colorado Plateau Network received funding to develop a revised checklist of the vascular plant flora of Zion National Park. This entailed a thorough review of existing literature, re-examination of specimens from the Zion National Park herbarium and other state and national museum collections, and additional field work to corroborate unverified species reports or locate new species. Based on this study, 991 vascular plant taxa have been confirmed or reliably reported as occurring in the park (943 are known from validated herbarium specimens and 48 from unvouchered literature reports). Another 112 species formerly considered part of the park flora have now been shown to be falsely reported. The current flora of Zion National Park represents 27.6% of the known flora of Utah, and 58.5% of the flora of the Colorado Plateau ecoregion within Utah. At least 9 of these species are federally listed as threatened, endangered, or sensitive, and 184 are considered species of concern by the state’s natural heritage program. Introduced plants make up 14.1% of the park flora (140 species), of which 10 species are considered noxious weeds by the State of Utah. Further surveys in Zion National Park are likely to find additional new species (203 are known from similar habitats outside the park boundary), especially among late season flowering, weedy, or wetland taxa.

Acknowledgements

We would like to thank the following individuals for their assistance with this project. Botanist Dr. Angela Evenden, former leader of the Northern Colorado Plateau Network in Moab, Utah, was an active proponent of this project and helped secure funding for field work and herbarium studies in 2006. Leslie Courtright, curator of museum collections for Zion National Park, provided access to herbarium specimens and park literature and assisted with research permits. Heather Karnes helped with field work and data entry in NPSpecies in 2004, and An Glorieux helped in these capacities in 2005. Cheryl Decker, Becca Leiberg, Rebecca Mann, and Laura Fertig assisted with field work in Parunuweap Canyon in 2007. Libby Nance, former database specialist with the NCPN, assisted with development and quality control of the park's NPSpecies database. Libby Nance, Janet Coles, and Helen Thomas also provided data from recent vegetation mapping and wetland inventories on the park. Drs. Stanley Welsh and Duane Atwood provided access to herbarium collections at Brigham Young University (BRY). Dr. Michael Piep provided access to collections at the Utah State University (Intermountain) herbarium. Dr. Ron Hartman and Ernie Nelson provided access and specimen loans from the Rocky Mountain Herbarium at the University of Wyoming. Thanks to the technical reviewers (Dr. Angela Evenden, Dr. Dusty Perkins, and Libby Nance) for their comments and suggestions. To any others whom we may have inadvertently forgotten, please accept our apologies (and thanks).

Research was conducted under permit # ZION-2006-SCI-0002 for study number ZION-00401. Funding was provided by the National Park Service through the Rocky Mountains Cooperative Ecosystem Studies Unit and the University of Wyoming.

1 Introduction

In 2006, the National Park Service (NPS) established a cooperative agreement with the University of Wyoming, through the Rocky Mountains Cooperative Ecosystem Studies Unit, to produce a series of technical reports summarizing the vascular plant flora of each of the 16 national park units of the Northern Colorado Plateau Network (NCPN). These reports are based on existing information in the park service's NPSpecies database system and augmented by further data mining, reviews of state and regional herbaria, and new field surveys to resolve the status of many reported and unconfirmed species. The objective of these reports is to summarize the current state of knowledge of the flora of each park for the benefit of NPS biologists and interpretive staff, outside researchers, and the general public. The following report addresses the vascular flora of Zion National Park (NP), in southwestern Utah. Other NCPN park units are addressed in separate reports.

1.1 Background and justification

One of the primary missions of the NPS is "to conserve unimpaired the natural and cultural resources and values of the national park system for the enjoyment of this and future generations" (NPS 2000). Due to their high degree of protection and distribution across a wide variety of habitat types, the nation's national park units make a significant contribution to the protection of biological diversity (Noss and Cooperrider 1994). Unfortunately, the full contribution of the NPS system is not known, as many park units have traditionally lacked comprehensive biological inventories or monitoring programs to identify the composition and condition of their biota. Knowing the status of park flora and fauna is critical for effective park management and for systematically identifying and filling gaps in the nation's protected area network (Margules and Pressey 2000).

To rectify this shortcoming, Congress passed the National Parks Omnibus Management Act in 1998 to provide guidance and funding for an inventory and monitoring program across the entire national park system. Since 2000, the NCPN Inventory and Monitoring Program has been developing and verifying species lists of vertebrates and vascular plants for each park unit in the network

(Evenden et al. 2002). This effort has entailed reviewing existing species checklists, corroborating the identification of specimens in park museum and herbarium collections, locating additional specimen records from other museums, mining relevant literature and datasets, and conducting field surveys to locate new taxa or confirm unsubstantiated reports.[†] All of these data have been synthesized in NPSpecies, the park service's standardized database for documenting park status (present, probably present, unconfirmed, falsely reported), abundance, residency, nativity, and rarity. With the production of a technical series of reports on the flora of each park, the NPSpecies data will now be available to a broader audience.

1.2 Objectives

The objectives of this project were to:

1. Document the current status (present, reported, potential, or falsely reported) of all vascular plant species that have been cited as occurring in Zion National Park based on a review of herbarium collections and past literature.
2. Develop an annotated checklist of the flora of Zion National Park with supplemental information on taxonomic synonyms, distribution, within-park abundance, flowering period, growth form, nativity, habitat, and sources for each record.

1.3 Study area

1.3.1 History and setting

Evidence of human habitation of the Zion National Park area (particularly along the East Fork of the Virgin River in Parunuweap Canyon) dates back nearly 8,000 years. Prior to A.D. 500, Native American groups subsisted primarily by hunting and gathering or cultivating small fields of maize and squash along perennial watercourses. More permanent habitations and farming occurred in the period from 500 to 1300 A.D., when the Zion area was inhabited by the Virgin Anasazi and Parowan Fremont cultures. These cultures disappeared following extended periods of drought in the 11th and 12th centuries, and were ultimately replaced by more transient hunter-gatherers (Allison 1996). European exploration of southwestern Utah began in the late 1700s, and was followed

[†]Taxa refer to all named species, subspecies, and varieties.

by establishment of small Mormon agricultural communities at Springdale, Grafton, Rockville, and Shunesburg in the late 1850s. These communities struggled for many years due to periodic catastrophic flooding, isolation from major markets, and a paucity of arable land.

Nephi Johnson, a young Mormon missionary and interpreter, was probably the first Anglo to explore Zion Canyon (with the help of Paiute guides), in 1858 (Clark 1954). John Wesley Powell explored Zion Canyon in 1872, and extolled the 2,000-foot, sheer cliffs of Navajo Sandstone and other scenic wonders of the area. Over time, interest developed in preserving the canyon as a destination for the nascent tourism industry in the West. President William Howard Taft designated Mukuntuweap National Monument by Executive Order in July 1909 to preserve the area around Zion Canyon. The monument was later renamed Zion National Monument and, in November 1919, became Zion National Park. Construction of the east entrance highway and Zion-Mt. Carmel Tunnel in 1927–1930 allowed for better access and greatly increased visitation to the park. In January 1937, President Franklin Roosevelt established a second Zion National Monument, to preserve Kolob Arch (the largest stone arch in the Western Hemisphere) and the Kolob area on the park's northwest boundary. The two park units were merged in 1956 (Evenden et al. 2002).

Zion National Park is located at the southern end of the Markagunt Plateau and the western edge of the Colorado Plateau in southeastern Iron, northeastern Washington, and western Kane counties, Utah (Figure 1.3.1). It is located about 45 road miles northeast of St. George, and 325 miles south of Salt Lake City. Following the most recent boundary change in 1996, the park covers 148,016 acres (59,900 hectares). Elevation within Zion NP ranges from 3,700 feet (1,128 m) in the Coalpits Wash area in the park's southwest corner to 8,726 feet (2,660 m) on the summit of Horse Ranch Mountain. Summer temperatures can vary from 45°F at night to over 100°F in mid-afternoon. Mean annual precipitation is 15 inches (381 mm), with 75% coming from October to May (Evenden et al. 2002).

1.3.2 Geology

Zion National Park is noted for its colorful cliffs and mesas, carved from nearly 7,000 feet of sedimentary strata and representing 275 million years of geologic time (Biek et al. 2003). The oldest rock

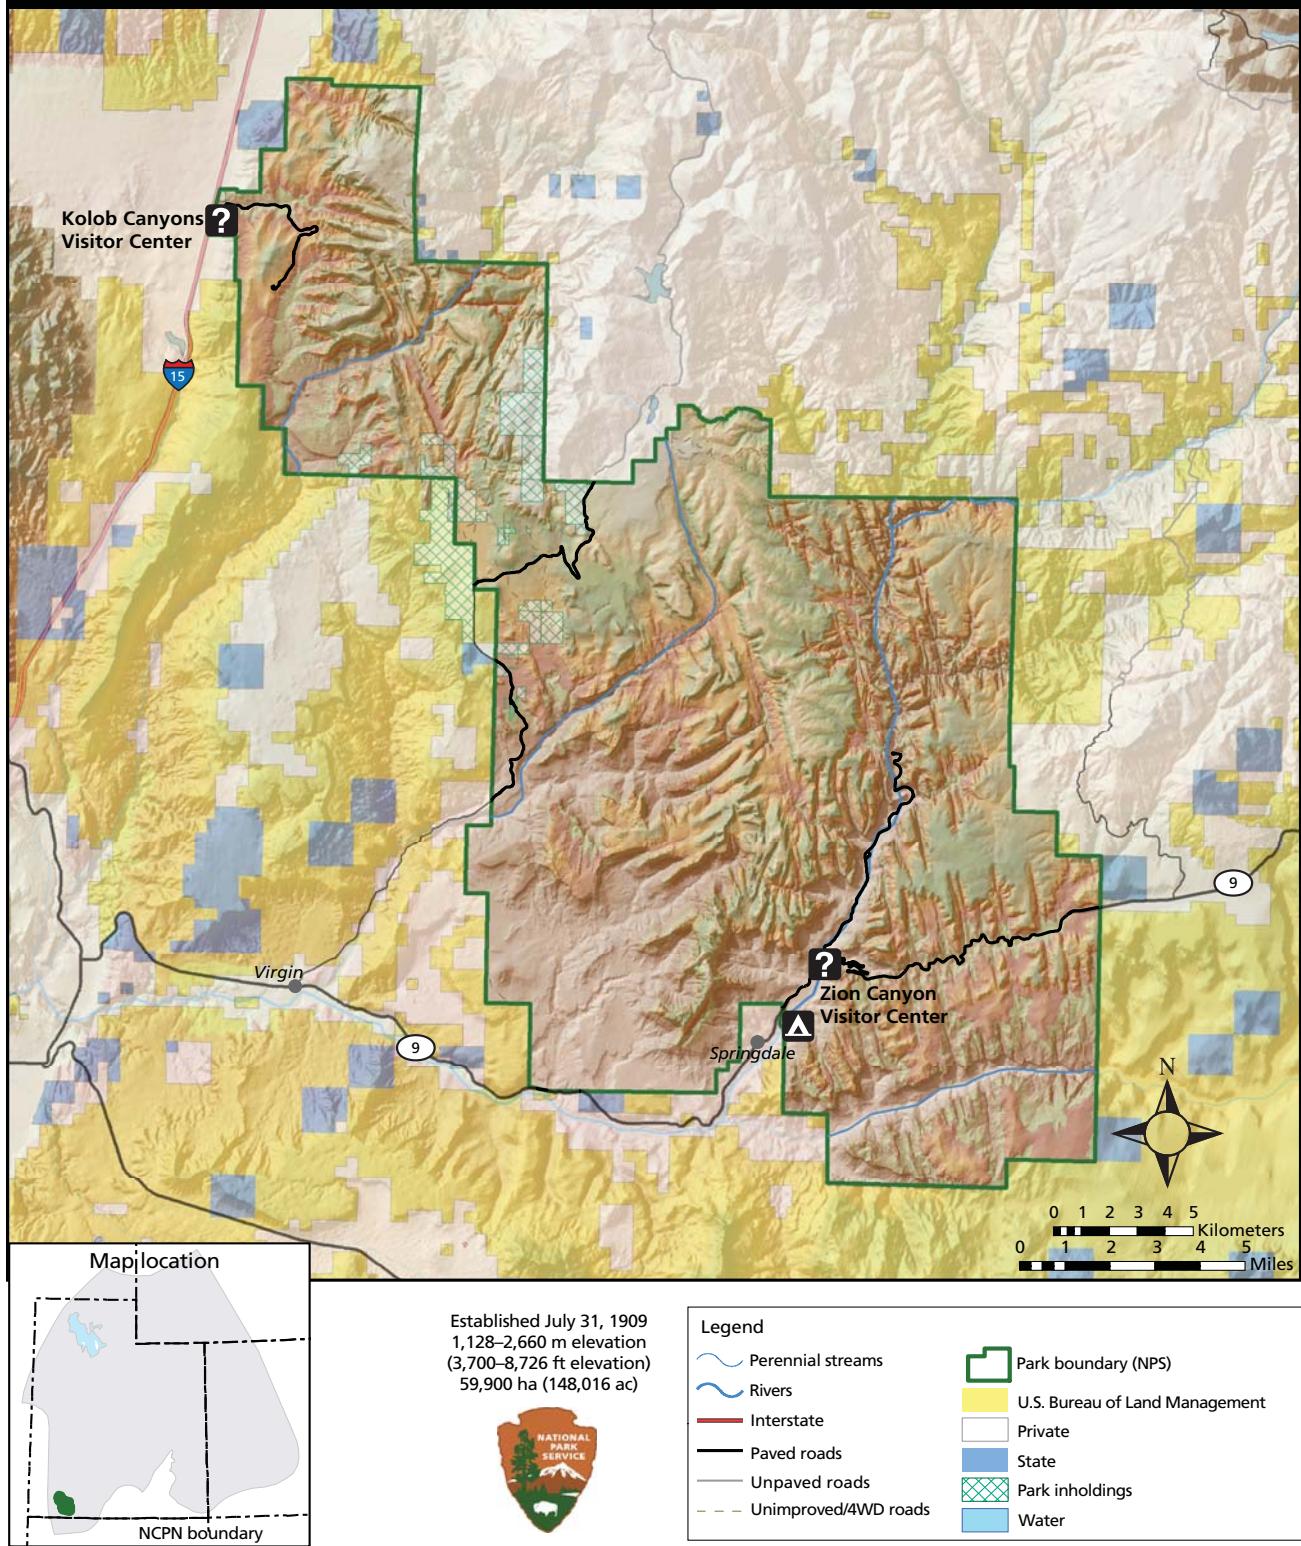

layers in the park are the Permian Toroweap and Kaibab formations, which are exposed along the western flank of the Kolob district. These limestone strata were deposited on the shallow continental shelf of the supercontinent, Pangaea, approximately 160 million years ago. During the early Triassic, marine waters periodically receded to expose a coastal floodplain with river-borne deposits of silt and mud, only to return and lay down limestone and gypsum beds. These alternating bands of marine and fluvial deposits comprise the Moenkopi Formation, which is best exposed in the Kolob area and the southwestern corner of the park. By the late Triassic, the ocean regressed westward for the last time, and the Zion area was covered by coarse debris eroding off the highlands of northern Arizona (Shinarump Conglomerate) and by the purplish to gray-green volcanic ash and mudflows of the Petrified Forest member of the Chinle Formation (named for the Petrified Forest area of southwestern Zion NP) (Biek et al. 2003; Chronic 1988).

During the early Jurassic, Zion NP was buried by the river, lake, and floodplain deposits that now comprise the Moenave and Kayenta formations. Later, in the mid-Jurassic, the Zion area was covered by a massive, Sahara-like sand-dune system that stretched from Nevada to southern Wyoming. The resulting Navajo Sandstone forms most of the cliffs and mesas of the park. Topping the Navajo Sandstone is a thin layer of siltstone of the Temple Cap Formation, and cross-bedded sandstones of the Carmel Formation, which were laid down during a brief return of marine waters (this time, coming from the interior North American seaway to the east). After a period in which southern Utah was above sea level (and eroding away its mantle of sediment), the seaway returned briefly in the late Cretaceous to leave beach and strand deposits of the Dakota and Cedar Mesa formations on Horse Ranch Mountain (Biek et al. 2003). No other Cretaceous sediments are present in Zion NP.

During the late Cretaceous and early Tertiary, the Colorado Plateau began its uplift by complex tectonic activity. Much of the area was inundated by a large lake during the Paleocene, but none of the resulting Claron Formation is still present in Zion NP (as it is in nearby Cedar Breaks National Monument and Bryce Canyon National Park). Lava flows and cinder cones occur along the west side of the park and cap the Kolob Terrace. These were derived from Oligocene or Miocene volcanic activity associated with the Pine Valley

Zion National Park

Figure 1.3.1. Location of Zion National Park, Washington, Kane, and Iron counties, Utah.

laccolith to the west.

Formation of Zion Canyon occurred during the past 2 million years, primarily through downcutting of the Virgin River. Although erosion was probably greater during the Pleistocene, when the area was wetter than today, downcutting has averaged 1 inch (2 cm) per century, or about 600 feet per million years (Chronic 1988). The canyon has also been widened as erosion of the softer Kayenta beds undermines their cap of Navajo Sandstone. Rock slides resulting from such erosion have periodically dammed the Virgin River to form short-lived lakes (Biek et al. 2003).

1.3.3 Vegetation

Since the first ecological study by Woodbury (1933), the vegetation of Zion National Park has been studied in detail by numerous researchers, including Cogan et al. (2004), Fowler et al. (2007), Harper et al. (1994, 2003), Madany and West (1983), and Springer et al. (2006). Recently, Cogan et al. (2004) described 96 plant associations within the park based on the National Vegetation Classification developed by The Nature Conservancy and NatureServe. For the sake of simplicity, Zion's vegetation can be aggregated into four general types following trends in elevation, temperature, and proximity to permanent water (Nelson 1976; Welsh 1990).

The vegetation of low-elevation desert areas below 4,200 feet (1,130 m) in the southwestern corner of the park is dominated by warm desert shrublands of blackbrush (*Coleogyne ramosissima*), fourwing saltbush (*Atriplex canescens*), honey mesquite (*Prosopis glandulosa*), and a mixture of grasses and forbs more typical of the Mohave Desert and Great Basin than the Colorado Plateau (Cogan et al. 2004). This vegetation type is also present on Chinle and Moenkopi badlands that may be locally dominated by crisp-leaf buckwheat (*Eriogonum corymbosum* var. *corymbosum*), fourwing saltbush, and Nevada ephedra (*Ephedra nevadensis*).

At elevations between 4,000 and 6,800 feet (1,220–2,080 m), Zion NP's vegetation consists primarily of woodlands of two-needle pinyon (*Pinus edulis*), singleleaf pinyon (*P. monophylla*), and Utah juniper (*Juniperus osteosperma*), intermixed with Gambel oak (*Quercus gambelii*) and basin big sagebrush (*Artemesia tridentata* var. *tridentata*). Single-leaf pinyon is predominant at lower elevations, but is replaced by two-needle pinyon (with

surprisingly little overlap) above 5,900 feet (1,800 m) (Harper et al. 2003). Barren Navajo Sandstone outcrops within this elevational zone may be locally dominated by dwarf mountain mahogany (*Cercocarpus intricatus*), ponderosa pine (*Pinus ponderosa*), or greenleaf manzanita (*Arctostaphylos patula*) (Cogan et al. 2004). Areas of deep sand at the base of sandstone cliffs often support sand sagebrush (*Artemesia filifolia*) stands.

At higher elevations or in shady canyons, the vegetation is typically characterized by montane forests consisting of ponderosa pine, Douglas-fir (*Pseudotsuga menziesii*), white fir (*Abies concolor*), or quaking aspen (*Populus tremuloides*). Shrublands may also develop within the montane zone and are frequently dominated by Utah serviceberry (*Amelanchier utahensis*), alder-leaf mountain mahogany (*Cercocarpus montanus*), Gambel oak, and greenleaf manzanita.

Wetland vegetation occurs across elevational zones but is associated with perennial streams, springs, or seeps. Lowland riparian forests of Fremont cottonwood (*Populus fremontii*), velvet ash (*Fraxinus velutina*), and box elder (*Acer negundo*) occur along the Virgin River and its main tributaries in the park. Open areas within these forests may be locally dominated by coyote willow (*Salix exigua*), Baltic rush (*Juncus arcticus*), or Rio Grande seepwillow (*Baccharis salicina*). Riparian floodplains were frequently converted to agricultural uses following pioneer settlement, and today often have a high cover of introduced species, including Russian olive (*Elaeagnus angustifolia*), five-stamen tamarisk (*Tamarix chinensis*), Kentucky bluegrass (*Poa pratensis*), smooth brome (*Bromus inermis*), and ripgut brome (*B. di-andrus*). Seeps and hanging gardens occur along the contact between the Navajo Sandstone and the less-permeable Kayenta Formation, and support unusual riparian communities of southern maidenhair fern (*Adiantum capillus-veneris*), columbines (*Aquilegia* spp.), cardinal monkeyflower (*Mimulus cardinalis*), and Zion shooting-star (*Dodecatheon pulchellum* var. *zionense*) (Welsh 1990).

1.3.4 Previous botanical studies

The earliest scientist to collect specimens within what is today Zion National Park was probably Marcus E. Jones (Alexander 2004). Jones collected at least 13 type specimens from "Springdale" in the spring and fall of 1894 (Table 1.3.4, Figure 1.3.4), 10 of which are still recognized as valid taxa (Welsh 1982). These include

Table 1.3.4. Chronology of plant-collecting efforts in Zion National Park.

Year	Collector(s)	# of new taxa	Comments
1894	M. E. Jones	13	Marcus E. Jones collected the holotypes of 13 species from "Springdale" during two visits in 1894. Based on the vagueness of 19 th -century labels and the habitat preferences of the species collected, Jones most likely took the specimens from the area of the future Zion National Park.
1922–1923	A. Nelson, M. E. Jones, & V. M. Tanner	5	Aven Nelson collected the types of <i>Chrysanthus oliganthus</i> (now considered a synonym of <i>C. nauseosus</i> var. <i>leiospermus</i>) and <i>Senecio incurvus</i> (now a synonym of <i>S. spartioides</i> var. <i>spartioides</i>) from Zion NP in 1922. Marcus E. Jones collected the types of <i>Draba asprella</i> var. <i>zionensis</i> and <i>Phlox austromontana</i> var. <i>jonesii</i> from Zion Canyon in 1923. Vasco Tanner collected <i>Philadelphus microphyllus</i> in 1923.
1925–1929	A. Woodbury, H. A. Pilsbry, & T. Craig	287	Over a six-year period, Angus Woodbury collected more than 500 specimens for the ZION herbarium, including first records for 286 taxa. Woodbury (1933) published one of the earliest ecological studies of Zion Canyon. H. A. Pilsbry is credited with the type collection of <i>Erigeron sionis</i> in 1925. T. Craig collected types of <i>Eriastrum eremicum</i> var. <i>zionis</i> and <i>Philadelphus microphyllus</i> ssp. <i>stramineus</i> f. <i>zionensis</i> (neither recognized today) in 1928.
1930–1934	W. P. Cottam, A. Eastwood, J. T. Howell, P. M. Patraw, C. C. Presnall, L. F. Keller, Mrs. F. M. Stone, M. C. Ferguson, & A. M. Ottley	16	Walter Cottam collected at least 2 new species for Zion NP in 1930–1931. Alice Eastwood and John T. Howell secured the type of <i>Dodecatheon pulchellum</i> var. <i>zionense</i> in 1933 (although Woodbury collected the species first in 1927). P. M. Patraw, C. C. Presnall, L. F. Keller, Mrs. F. M. Stone, M. C. Ferguson, and A. M. Ottley collected 13 new species in 1933–1934.
1935	K. E. Weight, G. Y. Croft, & L. F. Keller	114 + 5 reported	Kenneth Weight made nearly 300 collections for the ZION herbarium and documented 114 new species for the park. Weight (1937) published the first checklist of the park flora, which includes 5 additional unvouchered reports.
1936	M. Baker	1	Milo Baker collected the holotype of <i>Viola clauseniana</i> from Zion Canyon.
1938	W. S. Boyle, A. Eastwood, & J. T. Howell	19	W. S. Boyle made 119 collections for the ZION herbarium and documented 18 new species for the park flora. Eastwood and Howell first discovered <i>Erigeron religiosus</i> (making the type collection in Zion NP) and also collected the holotype of <i>Eriogonum racemosum</i> var. <i>zionis</i> (previously discovered by Woodbury in 1925).
1942	B. Maguire, O. Degener, & L. Peiler	3	Bassett Maguire, Otto Degener, and Leroy Peiler collected at least 3 new species for Zion NP (specimens are deposited at the New York Botanical Garden).
1946–1948	Booth, A. Black	2	Two new species were documented during this time period: <i>Bouteloua hirsuta</i> (collected by Booth in 1946, cited by Welsh et al. 2003), and <i>Hesperochiron pumilus</i> (Alden Black, specimen at BRY).
1951	S. Flowers	1	Seville Flowers made the first verified collection of <i>Selaginella utahensis</i> for Zion NP (the holotype collected by Walter Cottam in 1931 was once thought to have come from the park, but is now believed to be from St. George).
1954–1957	B. F. Harrison & L. Anderson	2	B. F. Harrison and Loran Anderson made the first collections of <i>Festuca myuros</i> and <i>Bromus japonicus</i> .
1962–1963	J. Bradbury & D. L. Carter	12	John Bradbury and D. L. Carter collected two dozen specimens for the ZION herbarium and added 12 new taxa to the park flora, including two rare ferns (<i>Asplenium adiantum-nigrum</i> and <i>Pityrogramma triangularis</i>).

Table 1.3.4. Chronology of plant collecting efforts in Zion National Park, cont.

Year	Collector(s)	# of new taxa	Comments
1964–1966	N. H. Holmgren, J. L. Reveal, C. LaFrance, B. Palmer, A. H. Barnum, & R. Wauer	47 + 2 reported	Noel Holmgren, James Reveal, and Charles LaFrance collected 10 new species for the Zion NP flora in 1964–1965. Brent Palmer and colleagues conducted a floristic survey of the Horse Ranch Mountain area (Palmer 1966) and vouchered or reported 33 new taxa. A. H. Barnum collected in the Kolob area and added 5 new species. Roland Wauer discovered one other species.
1967	C. Trapp & G. Trapp, J. Harrison, P. White, & R. Nelson	13 + 2 reported	Carolyn Trapp collected 9 new cacti species (and reported two others) for Zion NP (Trapp 1969). Ruth Nelson, Tom Blaue, J. Harrison, and P. White added 4 other new species.
1969	B. Lund & W. Rigby	10	Barbara Lund and W. Rigby documented the presence of 10 introduced and cultivated species from Zion NP.
1970	R. Nelson, S. E. Meyer, K. Moor, R. Stuart	48	Susan Meyer and Ken Moor collected several hundred specimens from Zion NP (mostly deposited at the University of Nevada–Las Vegas herbarium, but with duplicates at Zion NP and BRY), including first records for 32 species (Meyer 1979). Among their more noteworthy collections was the type specimen of <i>Erigeron ursinus</i> var. <i>meyerae</i> . Ruth Nelson collected about 100 specimens for the ZION herbarium, of which 14 represented new taxa. R. Stuart added two additional new species for the flora.
1971–1974	R. Nelson, W. R. Leverich, J. Reveal & C. Reveal, N. Holmgren, L. Shultz, and T. K. Lowrey	120	Ruth Nelson (with Tom Blaue) collected 850 specimens for the ZION herbarium from 1971 to 1973 and discovered 119 new taxa for the park (Nelson 1976). W. R. Leverich collected the holotype of <i>Haplopappus leverichii</i> in Zion NP in 1971. This species has not been relocated anywhere else in its narrow range (Washington County, UT) since. James Reveal collected the holotype of <i>Eriogonum jamesii</i> var. <i>rupicola</i> from Checkerboard Mesa in 1972 (this species was first vouchered in Zion NP by Woodbury in 1925). Noel Holmgren, Leila Shultz, and Tim Lowrey collected the type of <i>Sphaeromeria ruthiae</i> in Refrigerator Canyon in 1974 (this species was first collected by Weight in 1935).
1975–1980	K. Kertell, A. Lindahl, R. Scott, J. Haefner, R. Foster, D. Foster, M. H. Madany, L. M. Granskog, G. C. Williams, B. Ertter, J. Strachan, M. J. Williams, E. Neese, & V. Jackson	34	Eleven different teams of collectors documented 35 new species for the Zion NP flora. Among the more noteworthy collections were first reports of two troublesome exotics (<i>Elaeagnus angustifolia</i> and <i>Solanum elaeagnifolium</i>) by G. C. Williams and L. M. Granskog in 1979, and the first report of <i>Aralia racemosa</i> in 1980. Foster and Foster collected the type specimen of <i>Aquilegia fosteri</i> in 1977 (a species first collected by Woodbury in 1928).
1981–1984	S. Welsh, S. L. Clark, L. Hays, N. Holmgren, & P. Holmgren, M. Malm	6	Stan Welsh collected 5 new species for the Zion NP flora from 1981 to 1984, including the holotype of <i>Carex haysii</i> with S. L. Clark and Larry Hays in 1984. Noel and Pat Holmgren discovered <i>Physaria chambersii</i> var. <i>membranacea</i> in the park in 1984. Margaret Malm began 25 years of collecting specimens for the ZION herbarium in 1981.
1986–1989	B. Franklin, G. Baird, L. Higgins, S. Welsh, K. Thorne, S. L. Clark, L. Hays, M. Malm, F. Smith, K. Harper, S. Sanderson, C. Stewart, R. Nelson, R. Kass, D. McArthur, N. Charlesworth, J. Tuhy, S. Briggs, & J. Chandler	135	An unprecedented team of Utah's leading field botanists descended on Zion NP from 1986 to 1989 to document 135 new species (and contribute nearly 400 collections to the Zion herbarium). Among the new taxa were 38 species of concern tracked by the Utah Conservation Data Center. Larry Higgins collected the holotype of <i>Lomatium graveolens</i> var. <i>clarkii</i> in the park in 1989 (the species was first located in Zion NP by Weight in 1935). Stan Welsh and Larry Hays collected the type of <i>Aster welshii</i> in 1989 (this species was originally collected by Woodbury in 1927).
1991–1992	J. Fowler, C. L. May, & J. Hak	4 + 1 reported	Jim Fowler and colleagues surveyed hanging-garden vegetation in Zion NP and other national parks in the Colorado Plateau and vouchered or reported 5 new species for the park (Fowler et al. 2007).

Table 1.3.4. Chronology of plant collecting efforts in Zion National Park, cont.

Year	Collector(s)	# of new taxa	Comments
1994–1995	S. Welsh & A. M. Phillips III	2	Stan Welsh conducted a rare plant survey for Zion NP and added one new species to the flora (Welsh 1995). A. M. Phillips III made 31 collections for the ZION herbarium and discovered one new species (<i>Stipa speciosa</i>).
1996	K. Mason & L. Kurth	7	Karen Mason, Lori Kurth, and colleagues discovered 7 new weedy species in Zion NP, including three listed as noxious by the State of Utah.
1997–2002	V. Meretsky, S. Welsh, L. Kurth, M. Malm, J. Alexander, D. Louie, C. Paulsen, C. Decker, D. Atwood, L. Higgins, J. Welch	17 + 1 reported	Vicky Meretsky discovered 4 new species in a survey of seeps and springs in Zion NP. Jason Alexander, Margaret Malm, Lori Kurth, C. Paulsen, and Cheryl Decker added 11 species to the park flora. Stan Welsh reported <i>Prunus domestica</i> for the park during a survey of the park's bus facility. Duane Atwood and colleagues added two species, including the type of <i>Cirsium joannae</i> (named for co-discoverer Joanna Welch).
2003–2004	J. Alexander, H. Karnes, A. Glorieux, C. Crow, M. Malm, C. Decker, A. Rhoads, S. Dewey and K. Andersen, NPS/NatureServe vegetation mapping team	16 + 11 reported	Jason Alexander and colleagues vouchered or observed 19 new species, including the first record of <i>Astragalus ampullarius</i> during floristic and rare plant surveys for the park. Vegetation mappers from the National Park Service, Bureau of Reclamation, and NatureServe reported 7 new species for the park flora (Cogan et al. 2004). Dewey and Andersen (2005) added one new species report during their weed survey of Zion NP.
2005–2008	R. Harms, W. Fertig, L. Fertig, C. Decker, B. Leiberg, R. Mann, M. Miller, & W. Yates	9	Rebecca Harms discovered one new species during a survey of seeps and springs funded by the NCPN (Springer et al. 2006). Walter Fertig and colleagues discovered or relocated 8 new species in 2006–2008, including two rare species.

escarpment milkvetch (*Astragalus striatiflorus*), Zion milkvetch (*A. zionis*), Jones' reedgrass (*Calamagrostis scopulorum*), spindly goldenbush (*Haplopappus scopulorum*), shrubby gilia (*Ipomopsis congesta* var. *frutescens*), Zion penstemon (*Penstemon humilis* var. *obtusifolius*), smooth penstemon (*P. laevis*), fuschia penstemon (*P. x jonesii*), and Dixie rock-daisy (*Perityle tenella*). Label data from the late 19th and early 20th centuries are notoriously vague, but it is likely that Jones took the location, "Springdale" to encompass the Zion Canyon area. Additional collections by Jones from "Toquerville" in 1880 and "Rockville" and "Canaan Ranch" in 1894 are from the vicinity of modern Zion National Park, but are not included here (Welsh 1982).

Little additional botanical work occurred in Zion NP over the next three decades. Wyoming botanist Aven Nelson collected at least two types: smoothseed rabbitbrush (*Chrysothamnus oliganthus*, now a synonym of *C. nauseosus* var. *leiospermus*) and broom groundsel (*Senecio incurvus*, now synonymous with *S. spartioides* var. *spartioides*) from the park in 1922. Marcus E. Jones

returned to Zion NP in 1923, and discovered the types of Zion draba (*Draba asprella* var. *zionensis*) and Jones' phlox (*Phlox austromontana* var. *jonesii*).

The first major effort to document the Zion NP flora occurred from 1925 to 1938. Angus Woodbury studied vegetation succession in Zion Canyon (Woodbury 1933) and collected more than 500 specimens for the Zion National Park herbarium (ZION) from 1925 to 1930. Woodbury's collections resulted in the documentation of at least 286 new species for the Zion NP flora. Kenneth Weight built on Woodbury's foundation, adding 114 new species in the mid-1930s, depositing nearly 300 additional collections to the ZION herbarium, and producing the first checklist of the park flora (Weight 1937). Unfortunately, several additional species reported by Weight have not been relocated in the Zion NP collection and may have been de-accessioned and discarded in the past (Alexander 2004). Other collectors of note during this period included H. A. Pilsbry, who secured the holotype of Zion daisy (*Erigeron zionis*) from the park in 1925, Milo Baker (collector

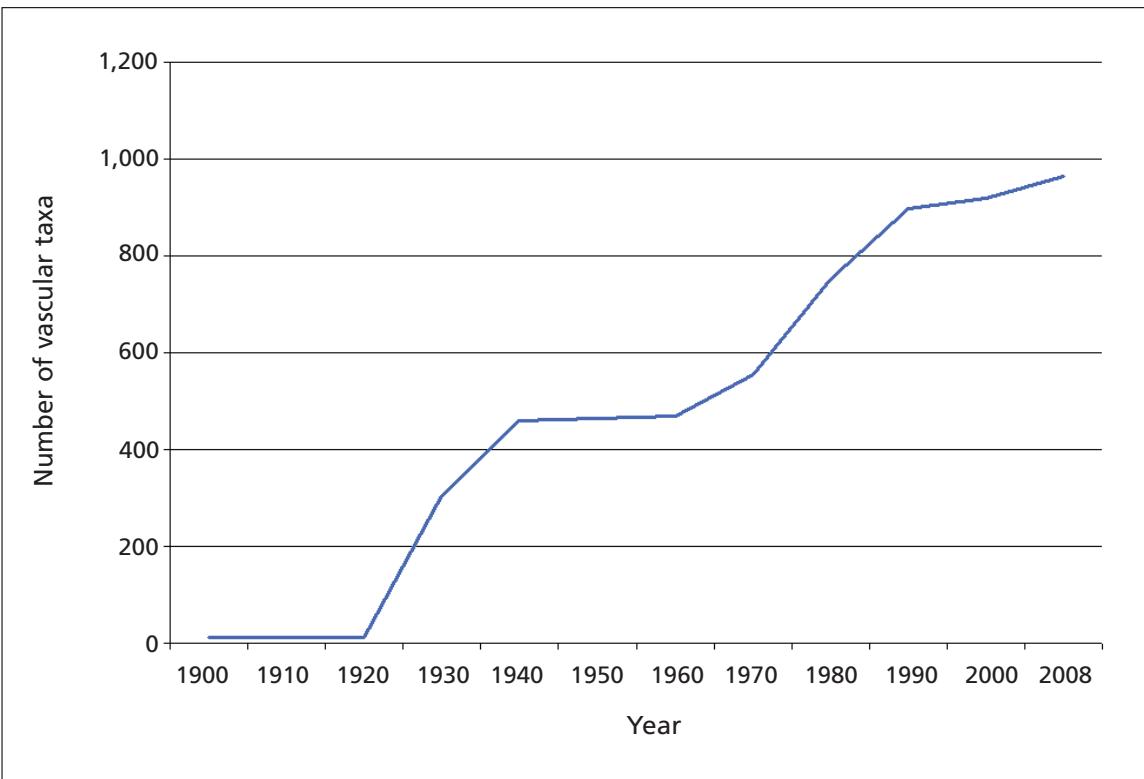

Figure 1.3.4. Increase in the number of plant taxa confirmed as present in Zion National Park by decade, 1900–2008.

of the holotype of Clausen's violet [*Viola clause-niana*] from Zion Canyon in 1936), Alice Eastwood and John T. Howell (who collected types of Zion shooting-star, Zion wild buckwheat [*Eriogonum racemosum* var. *zionis*], and religious daisy [*Erigeron religiosus*] from 1933 to 1938), Aven and Ruth Nelson, and Francis Pennell (Welsh 1982). W. Sidney Boyle closed out the 1930s by adding 18 new species and collecting 119 additional specimens for the ZION herbarium.

After a lull during the 1940s and 1950s, Zion NP experienced a second pulse of botanical study beginning in the early 1960s. John Bradley and D. L. Carter discovered 12 new species (including two rare ferns) for the park in 1962–1963. Noel Holmgren, James Reveal, and Charles LaFrance collected extensively in southern Utah for the New York Botanical Garden's *Intermountain Flora* project and added 10 new species to the park flora. A. H. Barnum and Brent Palmer collected in the Kolob and Horse Ranch Mountain areas in the mid-1960s and located 38 new species (Palmer 1966). Carolyn Trapp discovered 11 new cacti species in 1967, while researching her book on the cacti of Zion National Park (Trapp 1969). Susan Meyer and Ken Moor, of the University

of Nevada–Las Vegas, collected several hundred specimens in Zion NP in 1970 (including 32 first records and the holotype of an unusual *Erigeron* later named after Meyer by Stan Welsh in 2003) while studying the vascular plant flora of Washington County, Utah (Meyer 1979). Ruth Nelson, widow of Aven Nelson, collected more than 950 specimens for the ZION herbarium from 1970 to 1973, while researching *Plants of Zion National Park* (Nelson 1976).

The last period of exhaustive botanical work in the park began in the early 1980s. Kimball Harper, Durant McArthur, Stewart Sanderson, Joel Tuhy, and colleagues discovered 18 new species while conducting research on park vegetation (Harper et al. 1992, 1994, 2003). Stan Welsh, of Brigham Young University, with a team of notable field botanists that included M. E. "Ben" Franklin, Gary Baird, Larry Higgins, Kaye Thorne, Steve Clark, Larry Hays, Frank Smith, N. Charlesworth, and Ron Kass, added nearly 120 new species to the park flora, including three taxa new to science and more than three dozen rare species (Welsh 1995). Jim Fowler and colleagues documented several new riparian species during a survey of hanging gardens in 1991–1992 (Fowler et al. 2007). Natu-

ralist Margaret Malm began her long association with the ZION herbarium in 1981, and collected several first records, including tarweed fiddleneck (*Amsinckia intermedia*) and mistaken penstemon (*Penstemon confusus*).

Despite more than a century of collecting work, new discoveries continue to be found in Zion NP. Karen Mason, Lori Kurth, Steve Dewey, and Kim Andersen initiated weed monitoring and mapping studies in 1996 and, in the process, discovered at least nine new invasive species (Dewey and Andersen 2005). Vicky Meretsky and Rebecca Harms continued research on the flora of seeps and springs and have added five new species (Springer et al. 2006). A vegetation mapping crew

from NPS and NatureServe reported 11 new taxa during their research (Cogan et al. 2004). Duane Atwood and colleagues discovered a new thistle species endemic to Zion NP in 2000, and named it Joanna's thistle (*Cirsium joannae*) in honor of co-discoverer Joanna Welch. Jason Alexander conducted several rare plant studies for the park beginning in 1998, and discovered 14 new species for the park (including the rare local endemic, gumbo milkvetch [*Astragalus ampullarius*]). In 2007, six new taxa were discovered in Parunuweap Canyon, suggesting that more discoveries remain to be made.

Additional details on plant-collecting efforts at Zion NP can be found in Table 1.3.4.

2 Methods

In 2004–2005, Jason Alexander reviewed all of the mounted specimens in the Zion National Park herbarium to determine whether each was correctly identified to species, subspecies, or variety following the nomenclature of Welsh et al. (2003). As necessary, he made corrections and annotations to each specimen and to the voucher records in the park’s Automated National Cataloging System (ANCS+) and NPSpecies database. Based on this herbarium work and our review of park references (Atwood et al. 1991; Cogan et al. 2004; Fowler et al. 2007; Nelson 1976; Palmer 1966; Springer et al. 2006; Trapp 1969; Weight 1937; Welsh 1995), we developed four lists:

1. A revised checklist of species that were present in the park (confirmed by an authenticated voucher; included in Appendices A and D);
2. A list of species that were reported in the literature but not corroborated with a voucher (equivalent to “probably present” in NPSpecies terminology; included in Appendices A and D);
3. A list of potential species (“unconfirmed” in NPSpecies) A list of potential species (“unconfirmed” in NPSpecies) known from the vicinity of Zion National Park, using an unpublished list generated by Dr. N. Duane Atwood of Brigham Young University and Albee et al. (1988) (Appendix B); and
4. A list of species that are now known to be misidentified or highly questionable (Appendix C).

Each list was annotated with supplemental information on life form, geographic range (within

the context of Utah), population size in the park (derived from Alexander’s NPSpecies database, Cogan et al. 2004 and field observations), flowering period, distribution across general vegetation types, nativity, data source (collector and collection number from a sample specimen or literature citation), year of earliest collection (from herbarium records), and relevant synonymy and taxonomic problems (based on review of Barkworth et al. 2003, 2007; Barneby 1989; Cronquist 1994; Cronquist et al. 1972, 1977, 1984, 1997; Dorn 2001; Flora of North America Editorial Committee 1993, 1997, 2000, 2002a, 2002b, 2003, 2005, 2006a, 2006b, 2006c; Holmgren et al. 2005; Weber and Wittmann 2001). The annotations to these lists and label data from the ZION herbarium review were then incorporated into the NPSpecies database for the park.

Work in 2006–2007 focused on confirmation of reported and potential species for the park flora through field surveys and review of collections from state and regional herbaria. We made three collecting trips to Zion NP in May 2006 and April and June 2007 to target missing species, emphasizing under-sampled wetland and weedy taxa. Herbarium studies were undertaken at Brigham Young University (BRY), Utah State University (USU), the University of Nevada Las Vegas (UNLV), and the University of Wyoming (RM) in summer 2005, March, June, and October 2006 and February and March 2007. We also documented park specimens from the Virtual Herbarium website of the New York Botanical Garden (<http://sciweb.nybg.org/science2/hcol/intf/index.asp>). Finally, we found additional new-species reports by reviewing specimens and plot data from recent vegetation mapping and wetland inventories (Cogan et al. 2004; Fowler et al. 2007; Springer et al. 2006).

3 Results

3.1 Summary of the flora of Zion National Park

From 2004 to 2005, Jason Alexander completed a thorough review of the 3,192 vascular plant specimens in the ZION herbarium. He found that 416 specimens were misidentified (13%), 277 were revised to a more-current name (8.7%), 430 had variety or subspecies names added (13.5%), and 2,069 were correctly determined (64.8%). Based solely on these collections, the confirmed flora of Zion National Park stood at 773 taxa. From 2005 to 2007, we located an additional 161 taxa from collections at Brigham Young University (mostly species reported in Welsh 1995, but without a duplicate voucher deposited in the ZION herbarium), the New York Botanical Garden Virtual

Herbarium, the University of Nevada–Las Vegas herbarium, and the University of Wyoming’s Rocky Mountain Herbarium. Field surveys in 2005–2008 netted another 9 new species (see Table 1.3.4). Overall, the documented flora of Zion NP has increased by 170 species (18.0%), bringing the total number of taxa to 943 (Table 3.1, Appendices A, D).

Currently, 48 additional taxa have been reported for Zion NP but have yet to be corroborated with a voucher specimen (Table 3.1, Appendix A). Most of these reports come from the literature (Atwood et al. 1991; Cogan et al. 2004; Fowler et al. 2007; Nelson 1976; Palmer 1966; Trapp 1969; Weight 1937; Welsh 1995) or unvouchered observations by Jason Alexander in 2003–2004. Taken together, the number of confirmed and reported vascular plant taxa in Zion National Park stands at 991 taxa (Table 3.1, Appendix A).

Table 3.1. Statistical summary of the flora of Zion National Park.

Category	Number confirmed in park	Number additionally reported for park	Total
Taxonomic diversity			
Total taxa (including varieties and subspecies)	943	48	991
Full species (excluding varieties and subspecies)	889	43	932
Families	98	0	98
Life form diversity			
Tree taxa	36	3	39
Shrub taxa	118	10	128
Perennial forb taxa	436	19	455
Annual forb taxa	179	9	188
Perennial graminoid taxa	117	6	123
Annual graminoid taxa	31	1	32
Fern taxa	26	0	26
Biogeographic diversity			
Introduced taxa	128	12	140
Native taxa			
Locally endemic taxa	42	2	44
Regionally endemic taxa	85	4	89
Disjunct taxa	4	1	5
Peripheral taxa	90	7	97
Sparse taxa	16	1	17
Widespread taxa	578	21	599
<i>Total native taxa</i>	<i>815</i>	<i>36</i>	<i>851</i>

The number of taxa and families is based on taxonomic concepts of Welsh et al. (2003). See Appendices, “Codes and Definitions”, for an explanation of the various categories.

At present, 38 species from Zion NP have not been relocated since 1970, and are considered historical (Appendix A). This group includes two species (common fig [*Ficus carica*] and beargrass [*Nolina microcarpa*]) that are thought to be extirpated.

At the start of the 2006 field season, we recognized 212 taxa as potentially occurring in Zion NP based on the proximity of the park to known populations (Albee et al. 1988). At least nine of these species were found to occur in the park based on field collections or relocated herbarium specimens in 2006–2007. The current number of potential species recognized for Zion NP is 203 (Appendix B).

Of the original pool of species documented or reported for Zion NP, we found that 98 taxa were falsely reported based on misidentified voucher specimens in the ZION and BRY herbaria. We consider an additional 14 species cited (but not vouchered) by Cogan et al. (2004), Fowler et al. (2007), Weight (1937) and Welsh (1995) to be questionable based on the absence of suitable habitat or the distance of Zion NP to the known or expected range of each species (Appendix C).

The confirmed and reported flora of Zion NP represents 27.6% of the 3,594 native and naturalized taxa documented for the state of Utah by Welsh et al. (2003) and 64.9% of the state's 151 plant families (Table 3.1). Within Washington, Kane, and Iron counties, the park flora captures 45.5% of the 2,178 taxa reported by Welsh et al. (2003). At the ecoregional scale, Zion NP contains 58.5% of the 1,694 species reported for the Utah portion of the Colorado Plateau (Shultz et al. 2006).

3.2 Life form and biogeographic diversity

Although ecologically dominant, tree and shrub species make up only 17% of the confirmed and reported plant taxa of Zion NP (see Table 3.1). Perennial forbs are the most species-rich life form in the park's flora, with 455 known and reported taxa (45.9% of the total flora). Annual forbs and grass-like plants comprise less than 23% of the flora. Like trees and shrubs, perennial graminoids are ecologically important but relatively species-poor, representing less than 12.4% of the total flora. The diversity of ferns and fern-allies in Zion NP is particularly low (2.6%) (see Table 3.1).

Of the park's 851 native taxa, 599 (70.4%) are

widespread across Utah and western North America. Of these, 44 species (5.2% of the park's flora) have extremely limited global distributions (local endemics found within an area of less than 1° of latitude × 2° of longitude; see Appendix A for complete definitions of biogeographic categories). Regional endemics (largely restricted to the Colorado Plateau) compose an additional 10.5% of the park flora. Species at the periphery of their range, that occur sparsely across the state, or that are widely isolated from the core of their global range (disjuncts) account for 14% of the native flora of Zion NP (Table 3.1).

3.3 Plants of special concern

Shivwits milkvetch (*Astragalus ampullarioides*) is the only plant species from Zion NP listed as threatened or endangered under the U.S. Endangered Species Act. At least 34 other park taxa were formerly candidates for potential listing (Category 2 or 3C) under the act (Table 3.3) (UDWR 1998). Eight species are presently listed as sensitive on adjacent national forest or Utah Bureau of Land Management lands. The Utah Division of Wildlife Resources Conservation Data Center (UTCDC) lists 184 species from Zion NP as species of concern (UDWR 1998) based on state or range-wide rarity or lack of sufficient data. Five other Zion NP endemics or near-endemics (all described as new taxa within the past decade by Welsh et al. 2003), currently are not tracked by UTCDC nor have federal protection, but may warrant extra management attention because of their apparent rarity: hairy-pod milkvetch (*Astragalus concordius*), Higgins' milkvetch (*A. flavus* var. *higginsii*), Joanna's thistle, Salina thistle (*C. wheeleri* var. *salinensis*), and Meyer's daisy (*Erigeron ursinus* var. *meyerae*).

A large number of rare plant surveys have been undertaken within Zion NP, including those by Alexander and Hughes (2002), Alexander et al. (1998), and Welsh (1988, 1989, 1995). Ongoing research on the life history, habitat, and management needs of Shivwits milkvetch is also occurring in the park (Miller et al. 2007; Tepedino 2005; Van Buren and Harper 2003).

3.4 Non-native and noxious weeds

Introduced plant species (not historically native to Utah or North America) make up 14.1% of the confirmed and reported flora of Zion National Park (Table 3.4). This figure is higher than the statewide average of 13.5% non-native species

(Fertig 2007; Welsh et al. 2003). Of the 140 introduced plant species confirmed or reported for Zion NP (Table 3.1), 10 are listed as noxious by the State of Utah (Table 3.4) (State of Utah Department of Agriculture and Food 2007). Recent weed monitoring and mapping studies have identified nine invasive species of especially high management priority for eradication: five-stamen tamarisk (*Tamarix*

chinensis), Russian olive (*Elaeagnus angustifolia*), Scotch thistle (*Onopordum acanthium*), bull thistle (*Cirsium vulgare*), whitetop (*Cardaria draba*), diffuse knapweed (*Centaura diffusa*), spotted knapweed (*C. maculosa*), yellow star-thistle (*C. solstitialis*), and squarrose knapweed (*C. virgata* var. *squarrosa*) (Dewey and Andersen 2005; Even-den et al. 2002).

List derived from Utah Division of Wildlife Resources (1998) and Welsh (1995). All species are confirmed as present and extant unless indicated "R" (reported) or "H" (historical or extirpated).

Codes: **TNC global rank** assesses abundance and conservation priority on a scale of 1–5 (1 being extremely vulnerable and 5 being secure) for full species (G) and varieties or subspecies (T) across their entire range. A "?" indicates uncertainty in the rank, Q = taxonomic questions, U = unknown, and NR = not ranked. A comparable scoring system is used to measure state abundance (S) in Utah under the column UTCDC status.

Under **legal status**, USFWS = US Fish and Wildlife Service. C2 = category 2 candidate (a former category used for taxa that might warrant being proposed for Threatened or Endangered status following additional research). 3C = category 3 candidates (species dropped from consideration for listing). USFS = U.S. Forest Service. BLM = U.S. Bureau of Land Management.

UTCDC status includes conservation categories adopted by the state natural heritage program to prioritize endemic and rare plant taxa (UDWR 1998). These categories include: Historical (presumed extinct or only known historically through their range), Rare (plants with rangewide viability concerns), Watch (regional endemics without rangewide viability concerns), Peripheral (rare or uncommon in Utah, but more common rangewide), Infrequent (plants occur infrequently over western US), Taxonomic Problems (validity of species, subspecies, or variety has been questioned), Additional Data (species appear rare, but more information needed before being assigned to a different category).

Table 3.4. Noxious weed species of Zion National Park.

Family	Species	Common name	Park status
Compositae (Asteraceae)	<i>Carduus nutans</i>	musk thistle	Reported
Compositae (Asteraceae)	<i>Centaurea diffusa</i>	diffuse knapweed	Present
Compositae (Asteraceae)	<i>Centaurea maculosa</i>	spotted knapweed	Present
Compositae (Asteraceae)	<i>Centaurea solstitialis</i>	yellow star-thistle	Present
Compositae (Asteraceae)	<i>Centaurea virgata</i> var. <i>squarrosa</i>	squarrose knapweed	Present
Compositae (Asteraceae)	<i>Onopordum acanthium</i>	Scotch thistle	Present
Convolvulaceae	<i>Convolvulus arvensis</i>	field bindweed	Present
Gramineae (Poaceae)	<i>Cynodon dactylon</i>	Bermuda grass	Present
Gramineae (Poaceae)	<i>Elymus repens</i>	quackgrass	Reported
Gramineae (Poaceae)	<i>Sorghum halepense</i>	Johnson-grass	Present

This list is derived from the State of Utah Department of Agriculture and Food (2007) and Dewey and Andersen (2005).

4 Discussion

The flora of Zion National Park is noteworthy for having the highest species richness of any NPS unit in Utah's Colorado Plateau region, and in having the greatest number of endemic and rare species. Much of this diversity can be attributed to the park's location at the confluence of three major floristic regions: the Colorado Plateau, Great Basin, and Mojave Desert. Microhabitats, such as shady cliff faces, hanging gardens, and Chinle barrens, have also contributed to the park's high degree of local endemism (the holotypes of more than two dozen vascular plant species have been collected in Zion—the highest number of any NPS unit in the state). Zion National Park's flora has been well documented, thanks to the efforts of Woodbury (1933), Weight (1937), Nelson (1976), Meyer (1979), Welsh (1990, 1995), and nearly 110 other collectors, starting with the pioneering work of Marcus E. Jones in 1894. Despite this long history, new discoveries continue to be made, with at least 25 species being documented

for the first time since 2003. Currently, the vascular plant flora of Zion NP consists of 991 vouchered or reported taxa (Table 1.3.4, Appendix A), with another 203 species known from similar habitats in proximity to the park (Appendix B). Should all of these potential species be found, the flora of the park would increase by nearly 17%. Many of the "missing" potential or reported taxa consist of cryptic species that flower late in the growing season or occur in undersampled, weedy habitats. Confirmation of reported species should remain a high priority, as some of these taxa may ultimately prove to be erroneous. Further herbarium reviews, especially of collections held at the University of Wyoming and New York Botanical Garden, would help resolve the status of many reported taxa. Additional field studies would also be useful to better refine the abundance and distribution of species of high management interest (especially rare plants and invasive non-natives) and to verify the status of the 38 species thought to be extirpated or known only from historical records.

Appendices

The following appendices contain annotated checklists of the vascular flora of Zion National Park. Appendix A lists all species that have been confirmed for the flora with an authenticated voucher specimen (including extant and historical records) or that have been reliably reported for the park in the literature (Cogan et al. 2004; Dewey and Andersen 2005; Nelson 1976; Weight 1937; Welsh 1995). Vouchers were examined from the Zion National Park herbarium (ZION) and collections from Brigham Young University (BRY), Utah State University (USU), the University of Nevada–Las Vegas (UNLV), the University of Wyoming (RM), and the digital museum database of the New York Botanical Garden (NY). Species entries in Appendix A are organized alphabetically by family and genus.

Appendix B includes species that may potentially occur within Zion National Park based on the proximity of the park to other populations or the presence of suitable habitat.

Appendix C lists species that have been previously reported for Zion National Park but are now considered erroneous because they were based on misidentified specimens or questionable literature records.

Appendix D contains the same confirmed, historical, and reported taxa as in Appendix A, but organized by life form rather than by family in order to better meet the needs of NPS interpretive specialists.

The codes and references for each field in the appropriate appendices are summarized below.

Family (Appendices A, B, C, and D)

Family concepts and nomenclature follow *A Utah Flora*, third edition (Welsh et al. 2003). Alternative family names and treatments from other regional floras (Dorn 2001, Flora of North America Editorial Committee 1993, 2002b, Holmgren et al. 2005, Weber and Wittman 2001) are listed in parentheses.

Species name (Appendices A, B, C, and D)

Nomenclature for scientific names and taxonomic concepts are derived from Welsh et al. (2003). Scientific names are listed in alphabetical rather than phylogenetic order.

Synonyms/Taxonomic notes (Appendices A, B, and C)

Pertinent synonyms are included for species with alternative scientific names in other recent state and regional floras (Barkworth et al. 2003, 2007; Barneby 1989; Cronquist 1994; Cronquist et al. 1972, 1977, 1984, 1997; Dorn 2001; Flora of North America Editorial Committee 1993, 1997, 2000, 2002a, 2002b, 2003, 2005, 2006a, 2006b, 2006c; Holmgren et al. 2005; Weber and Wittmann 2001). No effort has been made to identify additional synonyms from monographs and floras preceding the early 1970s.

Common name (Appendices A, B, C, and D)

Common names are derived primarily from Welsh et al. (2003) and the *Intermountain Flora* (Barneby 1989; Cronquist 1994; Cronquist et al. 1972, 1977, 1984, 1997; Holmgren et al. 2005).

Life form (Appendices A, B, C, and D)

Life form is based on the stature and growth habit of typical members of a species at reproductive maturity. Trees are woody perennials with a single stem or trunk and are typically over 3.5 m tall. Shrubs are woody perennials with one to many trunks arising from near the base of the plant and are usually less than 3.5 m tall. Perennial Forbs (PerF) are broad-leaved dicots or monocots with non-woody stems (at least above ground level) that live for multiple years. Annual Forbs (AnnF) are broad-leaved dicots or monocots with non-woody stems that complete their life cycle (mature, flower, and die) in one year. Perennial Graminoids (PerG) are linear-leaved, grass-like monocots that live for multiple years. Annual Graminoids (AnnG) are linear-leaved, grass-like monocots that complete their life cycle (mature, flower, and die) in one year. Ferns and fern-allies (Fern) are non-flowering vascular plants that reproduce by spores.

Range (Appendices A, B, and C)

Range represents the distribution of a species within Utah and the state's contribution to the plant's overall global range. Disjunct (Disj) taxa have their Utah distribution separated from the main, contiguous portion of their range by a gap of more than 800 km (ca 500 miles). Introduced (Intro) taxa are those that are not native to Utah or North America but have become naturalized (breeding on their own without human assistance). Local Endemics (LocEn) are taxa whose entire global range is restricted to an area of less than 16,500 km² (ca 6,370 mi², or 1° of latitude ×

2° of longitude). Peripheral (**Periph**) taxa have a widespread global distribution but occur at the margin of their contiguous range in Utah and occupy less than 5% of the state's area (usually only within a few miles of the state border). Regional Endemics (**RegEn**) are taxa with a global range of 16,500–250,000 km² (an area about the size of the state of Wyoming). Sparse taxa occur widely across Utah or North America but their range within Utah is small and patchy, with populations restricted to specialized or uncommon habitats. Widespread (**Wide**) taxa have global ranges exceeding 250,000 km² and occur over at least 10% of the state.

Park status (Appendices A, C, and D)

Park status identifies whether a species is Present (**Pres**), Historical (**Hist**), or Reported (**Rep**) for Zion National Park. Species are considered Present if a confirmed voucher or documented observation has been made within park boundaries since 1970. Historical species have been confirmed with a voucher from the park but have not been relocated since before 1970. Reported species are listed for the park in the literature (Cogan et al. 2004; Dewey and Andersen 2005; Nelson 1976; Weight 1937; Welsh 1995), but have not been corroborated with a voucher specimen. Species that may potentially occur in Zion NP are listed in Appendix B. Rejected taxa (listed in Appendix C) have either been falsely reported (**FalsRep**) in the literature based on misidentified herbarium specimens or are considered Questionable (**Ques?**) because park reports are from well outside their known or expected range.

Pop. size (Appendix A)

Population size refers to the abundance and frequency with which a species occurs within Zion National Park. Abundance data are derived from Cogan et al. (2004), the Zion National Park NPSpecies database, and personal observations. Abundant (**Abun**) taxa have large populations, have a broad ecological amplitude (often being dominant in one to several vegetation types), or occur extensively across the park. Common (**Com**) taxa have large local populations but may be restricted to a single vegetation type or do not occur across the entire park. Uncommon (**Unc**) taxa have low-to-medium-sized populations, typically have a narrow ecological amplitude (or at least contribute relatively little to total vegetative cover), or have a small range across the park. Rare taxa usually have low population numbers and are restricted to a single location within the

park. A “?” indicates that population size is unknown.

Source (Appendix A)

Sources are the evidence for the assigned park status. In the case of Present and Historical taxa, sources are herbarium records (with collector, collection number, and repository) that were corroborated during this study. For reported taxa, the source is a published or unpublished reference citing the species within the park. Specimen repositories include the Zion National Park herbarium (**ZION**), Brigham Young University (**BRY**), Utah State University (**USU**), New York Botanical Garden (**NY**), and the University of Wyoming's Rocky Mountain Herbarium (**RM**).

Year doc. (Appendix A)

Year documented indicates the first year in which a species was confirmed or reported to occur in Zion National Park. This year does not necessarily correspond with the date of the voucher specimen cited under Source. “NA” indicates that the first year is not known (used mostly for “reported” taxa).

Comments (Appendices A, B, C, and D)

This column includes additional comments on the status of a particular species in the park, the place of origin for introduced species, legal status, and other data.

Nativity (Appendix D)

Nativity indicates whether a species is native to Utah or Introduced (**Intro**) based on Fertig (2007).

Flower time (Appendix D)

Flower time refers to the months in which a species is most likely to be in flower. NA indicates a species that is a non-flowering fern or gymnosperm.

Habitat (Appendix D)

The distribution of species across generalized habitats in Zion National Park is indicated by an “x” in the columns Warm Des through Wet and is derived from the Zion NP vegetation classification (Cogan et al. 2004), and Welsh et al. (2003). **Warm Des**=Warm Desert shrublands dominated by blackbrush (*Coleogyne ramosissima*), four-wing saltbush (*Atriplex canescens*) and a variety of grasses and forbs more typical of the Mohave Desert ecoregion. **PJ/Oak/Sage**=Woodlands and openings dominated by two-needle pinyon (*Pinus*

edulis), singleleaf pinyon (*P. monophylla*), Utah juniper (*Juniperus osteosperma*), Gambel oak (*Quercus gambelii*), and big sagebrush (*Artemisia tridentata*). **Mtn Conif**=Montane conifer forests of Douglas-fir (*Pseudotsuga menziesii*), ponderosa pine (*Pinus ponderosa*), white fir (*Abies con-*

color), and Rocky Mountain juniper (*Juniperus scopulorum*). **Wet**=Wetlands (including hanging gardens). Additional comments are included for species that are restricted to a particular soil/geologic type or are found mostly in disturbed sites.

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Comments
Caryophyllaceae (Aisinaeae)	<i>Loeflingia squarrosa</i>	<i>L. squarroso</i> var. <i>artemisiarum</i> . Vars. not recognized in <i>Flora of North America</i> (2005)	loeflingia	AnnF	Periph	
Caryophyllaceae	<i>Sagina saginoides</i>		alpine pearlwort	PerF	Wide	
Caryophyllaceae	<i>Saponaria officinalis</i>		bouncing-bet	PerF	Intro	Native to Europe
Caryophyllaceae (Aisinaeae)	<i>Spergularia marina</i>	<i>S. salina</i>	salt sand-spurrey	AnnF	Intro	Native to Europe
Chenopodiaceae	<i>Atriplex heterosperma</i>	<i>A. micrantha</i>	two-seed orach	AnnF	Intro	Native to Eurasia
Chenopodiaceae	<i>Atriplex lentiformis</i>		big saltbush	Shrub	Periph	
Chenopodiaceae	<i>Atriplex prostrata</i>	<i>A. patula</i> var. <i>triangularis</i>	thinleaf orach	AnnF	Wide	
Chenopodiaceae	<i>Atriplex rosea</i>		tumbling orach	AnnF	Intro	Native to Eurasia
Chenopodiaceae	<i>Atriplex semibaccata</i>		Australia saltbush	PerF	Intro	Native to Australia
Chenopodiaceae	<i>Atriplex truncata</i>		wedge orach	AnnF	Wide	
Chenopodiaceae	<i>Chenopodium ambrosioides</i>	<i>Teloxys ambrosioides</i> , <i>Dysphania ambrosioides</i>	Mexican-tea	AnnF	Intro	Native to Mexico
Chenopodiaceae	<i>Chenopodium capitatum</i> var. <i>parvicapitatum</i>	<i>C. overi</i> , <i>C. foliosum</i>	smallhead goosefoot	AnnF	Wide	Type locality is Indian Creek, Tushar Mountains, Beaver Co, UT (Martin & Welsh 17148 BRY)
Chenopodiaceae	<i>Chenopodium murale</i>		nettle-leaf goosefoot	AnnF	Intro	Native to Eurasia
Chenopodiaceae	<i>Corispermum americanum</i>	Includes vars. <i>americanum</i> & <i>rydbergii</i>	American bugseed	AnnF	Wide	
Chenopodiaceae	<i>Salsola paulsenii</i>		barbwire Russian thistle	AnnF	Intro	Native to Eurasia
Chenopodiaceae (Sarcobataceae)	<i>Sarcobatus vermiculatus</i>		greasewood	Shrub	Wide	
Chenopodiaceae	<i>Suaeda calceoliformis</i>	<i>S. depressa</i>	broom seepweed	AnnF	Wide	
Compositae (Asteraceae)	<i>Acoutia wrightii</i>	<i>Perezia wrightii</i>	Wright's perezia	PerF	Periph	
Compositae	<i>Agoseris glauca</i> var. <i>dasycephala</i>		short agoseris	PerF	Wide	
Compositae (Asteraceae)	<i>Ambrosia artemisiifolia</i>	<i>A. artemisiifolia</i> var. <i>elatior</i>	common ragweed	AnnF	Wide	

Appendix B. Potential (unconfirmed) taxa of Zion National Park, cont.

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Comments
Compositae (Asteraceae)	<i>Amphipappus fremontii</i> var. <i>spinosus</i>		chaff-bush	Shrub	Periph	
Compositae (Asteraceae)	<i>Artemisia bigelovii</i>		Bigelow's sagebrush	Shrub	Wide	
Compositae (Asteraceae)	<i>Artemisia carruthii</i>		Carruth's wormwood	PerF	Wide	
Compositae (Asteraceae)	<i>Artemisia frigida</i>		fringed sagebrush	Shrub	Wide	
Compositae (Asteraceae)	<i>Aster frondosus</i>	<i>Symphyotrichum</i> <i>frondosum</i> , <i>Brachyactis</i> <i>frondosa</i>	leafy aster	AnnF	Wide	
Compositae (Asteraceae)	<i>Aster spathulatus</i>	<i>A. occidentalis</i> , <i>Symphyotrichum</i> <i>spathulatum</i>	western aster	PerF	Wide	
Compositae (Asteraceae)	<i>Baccharis sergiloides</i>		squaw waterweed	Shrub	Periph	
Compositae (Asteraceae)	<i>Bahia dissecta</i>	<i>Amauriopsis dissecta</i>	cutleaf	PerF	Wide	
Compositae (Asteraceae)	<i>Balsamorhiza hookeri</i> var. <i>hispidula</i>	<i>B. hispida</i>	hairy balsamroot	PerF	Wide	
Compositae (Asteraceae)	<i>Bidens frondosa</i>		devil's beggarsticks	PerF	Wide	
Compositae (Asteraceae)	<i>Brickellia oblongifolia</i> var. <i>linifolia</i>		Mohave brickellbush	Shrub	Wide	Type locality of var. <i>linifolia</i> is American Fork, Jordan Valley, Utah Co., UT (Watson 493 YU)
Compositae (Asteraceae)	<i>Chaenactis carphoclinia</i>		Gray's chaenactis	AnnF	Periph	
Compositae (Asteraceae)	<i>Chrysanthemus linifolius</i>	<i>Lorandersonia linifolia</i>	spear-leaf rabbitbrush	Shrub	Wide	
Compositae (Asteraceae)	<i>Chrysanthemus parryi</i> var. <i>parryi</i>	<i>Ericameria parryi</i> var. <i>parryi</i>	Parry's rabbitbrush	Shrub	Sparse	
Compositae (Asteraceae)	<i>Chrysanthemus viscidiflorus</i> var. <i>lanceolatus</i>		lanceleaf rabbitbrush	Shrub	Wide	
Compositae (Asteraceae)	<i>Cirsium arvense</i>	Includes vars. <i>horridum</i> & <i>integrifolium</i> , <i>Breva</i> <i>arvensis</i>	Canada thistle	PerF	Intro	Utah state noxious weed. Native to Eurasia

Appendix B. Potential (unconfirmed) taxa of Zion National Park, cont.

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Comments
Compositae (Asteraceae)	<i>Crepis acuminata</i>		mountain hawksbeard	PerF	Wide	
Compositae (Asteraceae)	<i>Crepis occidentalis</i> var. <i>costata</i>		basin hawksbeard	PerF	Wide	
Compositae (Asteraceae)	<i>Erigeron aphanactis</i> var. <i>aphanactis</i>	<i>E. concinnus</i> var. <i>aphanactis</i>	hairy daisy	PerF	Wide	
Compositae (Asteraceae)	<i>Erigeron bellidiastrum</i>	<i>E. bellidiastrum</i> var. <i>bellidiastrum</i>	pretty daisy	AnnF	Wide	
Compositae (Asteraceae)	<i>Erigeron compositus</i> var. <i>glabratus</i>		cut-leaved daisy	PerF	Wide	
Compositae (Asteraceae)	<i>Erigeron lonchophyllum</i>	<i>Trimorpha lonchophylla</i>	longleaf daisy	PerF	Wide	
Compositae (Asteraceae)	<i>Erigeron peregrinus</i> var. <i>callianthemus</i>	<i>E. peregrinus</i> var. <i>scaposus</i> , <i>E. glacialis</i> var. <i>glacialis</i>	wandering fleabane	PerF	Wide	
Compositae (Asteraceae)	<i>Erigeron ursinus</i> var. <i>ursinus</i>	Vars. not recognized in <i>Flora of North America</i> (2006)	bear daisy	PerF	Wide	
Compositae (Asteraceae)	<i>Gnaphalium exilifolium</i>	<i>G. uliginosum</i>	slender cudweed	AnnF	Wide	
Compositae (Asteraceae)	<i>Gnaphalium luteo-album</i>	<i>Pseudognaphalium luteo- album</i>	yellow-white cudweed	AnnF	Intro	Native to Europe
Compositae (Asteraceae)	<i>Grindelia squarrosa</i> var. <i>squarrosa</i>	Vars. not recognized in <i>Flora of North America</i> (2006)	curly-cup gumweed	PerF	Sparse	May be introduced from C USA
Compositae (Asteraceae)	<i>Haplopappus clementis</i>	<i>Pyrrocoma clementis</i> var. <i>clementis</i>	Clement's goldenweed	PerF	Wide	
Compositae (Asteraceae)	<i>Haplopappus crispus</i>	<i>Ericameria crista</i>	Pine Valley goldenbush	Shrub	LocEn	Type locality is Pine Valley Mountains, Washington Co, UT (Anderson 5504 BRY). USES: Region 4 Sensitive, UT BLM: Sensitive, USFWS: former C2 candidate
Compositae (Asteraceae)	<i>Haplopappus nanus</i>	<i>Ericameria nana</i>	low goldenbush	Shrub	Wide	

Appendix B. Potential (unconfirmed) taxa of Zion National Park, cont.

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Comments
Compositae (Asteraceae)	<i>Haplopappus spinulosus</i> var. <i>gooddingii</i>	<i>Machaeranthera pinnatifida</i> var. <i>gooddingii</i> , <i>M.</i> <i>spinulosa</i> ssp. <i>gooddingii</i> , <i>Xanthisma spinulosum</i> var. <i>gooddingii</i>	spiny goldenweed	PerF	Periph	
Compositae (Asteraceae)	<i>Helianthus anomalous</i>	Includes <i>H. deserticola</i>	sand sunflower	AnnF	RegEn	Type locality of <i>H.</i> <i>anomalus</i> is desert S of Hanksville, Wayne Co, UT (Stanton 328 US). Type locality of <i>H. deserticola</i> is 3.3 miles W of Hurricane, Washington Co, UT (Stoutamire 2574 US)
Compositae (Asteraceae)	<i>Helianthus nuttallii</i>		Nuttall's sunflower	PerF	Wide	
Compositae (Asteraceae)	<i>Hieracium fendleri</i>	<i>Chlorocrepis fendleri</i>	Fendler's hawkweed	PerF	Periph	
Compositae (Asteraceae)	<i>Hymenopappus filifolius</i> var. <i>nanus</i>		Great Basin halineherb	PerF	Wide	
Compositae (Asteraceae)	<i>Machaeranthera canescens</i> var. <i>canescens</i>	<i>Aster canescens</i> , <i>Dieteria</i> <i>canescens</i> var. <i>canescens</i>	hoary aster	PerF	Wide	
Compositae (Asteraceae)	<i>Machaeranthera commixta</i>	<i>M. bigelovii</i> var. <i>commixta</i> , <i>Dieteria bigelovii</i> var. <i>commixta</i>	Bigelow's aster	PerF	RegEn	Type locality is Bromide Pass, Henry Mountains, Garfield Co, UT (Jones 5695y US)
Compositae (Asteraceae)	<i>Malacothrix glabrata</i>	<i>M. californica</i>	filiform desert-dandelion	AnnF	Wide	
Compositae (Asteraceae)	<i>Malacothrix sonchoides</i>		sowthistle desert- dandelion	AnnF	Wide	
Compositae (Asteraceae)	<i>Oxytenia acerosa</i>	<i>Iva acerosa</i>	copperweed	Shrub	Wide	
Compositae (Asteraceae)	<i>Pluchea odorata</i>	<i>P. camphorata</i>	camphor-weed	AnnF	Periph	
Compositae (Asteraceae)	<i>Prenanthes exigua</i>	<i>Lygodesmia exigua</i>	prenanthesella	AnnF	Wide	
Compositae (Asteraceae)	<i>Rafinesquia californica</i>		California chicory	AnnF	Periph	

Appendix B. Potential (unconfirmed) taxa of Zion National Park, cont.

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Comments
Compositae (Asteraceae)	<i>Senecio douglasii</i> var. <i>monoensis</i>	<i>S. monoensis</i> , <i>S. flaccidus</i> var. <i>monoensis</i>	Mono groundsel	PerF	Periph	
Compositae (Asteraceae)	<i>Stylocline micropoides</i>		desert nest-straw	AnnF	Periph	
Compositae (Asteraceae)	<i>Thelesperma subnudum</i> var. <i>subnudum</i>	Vars. not recognized in <i>Flora of North America</i> (2006).	sapose greenthead	PerF	Wide	Type locality is "southern Utah" (Parry 109 GH)
Compositae (Asteraceae)	<i>Verbesina encelioides</i> var. <i>exauriculata</i>	<i>Ximenesia encelioides</i>	golden crownbeard	AnnF	Wide	
Convolvulaceae	<i>Calystegia longipes</i>		longstalk bindweed	PerF	RegEn	
Convolvulaceae	<i>Cuscuta denticulata</i>	<i>Grammica denticulata</i>	smalltooth dodder	AnnF	Wide	Type locality is St. George, Washington Co., UT (Parry 205 ISC)
Cruciferae (Brassicaceae)	<i>Arabis sellbyi</i>	<i>Boechera sellbyi</i>	Selby's rockcress	PerF	Wide	
Cruciferae (Brassicaceae)	<i>Barbara orthoceras</i>		northern wintercress	PerF	Wide	
Cruciferae (Brassicaceae)	<i>Barbara vulgaris</i>		European wintercress	PerF	Intro	Native to Eurasia
Cruciferae (Brassicaceae)	<i>Camelina microcarpa</i>		little-pod false flax	AnnF	Intro	Native to Asia
Cruciferae (Brassicaceae)	<i>Cardamine cordifolia</i> var. <i>cordifolia</i>		heartleaf bittercress	PerF	Wide	
Cruciferae (Brassicaceae)	<i>Draba stenoloba</i> var. <i>nana</i>	<i>Draba albertina</i>	slender whitlow-grass	PerF	Wide	
Cruciferae (Brassicaceae)	<i>Erysimum inconspicuum</i>		shy wallflower	PerF	Wide	
Cruciferae (Brassicaceae)	<i>Lepidium campestre</i>	<i>Neolepia campestris</i>	field pepperwort	AnnF	Intro	Native to Asia
Cruciferae (Brassicaceae)	<i>Lepidium densiflorum</i> var. <i>pubescens</i>	<i>L. densiflorum</i> var. <i>pubescens</i>	hairy pepperwort	AnnF	Wide	
Cruciferae (Brassicaceae)	<i>Physaria arizonica</i>	<i>Lesquerella arizonica</i>	Arizona bladderpod	PerF	RegEn	
Cruciferae (Brassicaceae)	<i>Schoenocrambe linifolia</i>	<i>Sisymbrium linifolium</i>	flax-leaved plainsmustard	PerF	Wide	

Appendix B. Potential (unconfirmed) taxa of Zion National Park, cont.

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Comments
Cruciferae (Brassicaceae)	<i>Sisymbrium irio</i>		London mustard	AnnF	Intro	Native to Europe
Cyperaceae	<i>Carex bolanderi</i>	<i>C. deweyana</i> var. <i>bolanderi</i>	Bolander's sedge	PerG	Sparse	
Cyperaceae	<i>Cyperus erythrorhizos</i>		redroot flat-sedge	AnnG	Wide	
Cyperaceae	<i>Cyperus squarrosus</i>	<i>C. aristatus</i>	bearded flat-sedge	AnnG	Wide	
Cyperaceae	<i>Eleocharis parvula</i> var. <i>anachaeta</i>	<i>E. coloradensis</i>	dwarf spikerush	PerG	Wide	
Cyperaceae	<i>Fimbristylis spadicea</i>	<i>F. thermalis</i>	hot springs fimbriatilis	PerG	Sparse	
Elatinaceae	<i>Elatine triandra</i>	<i>E. brachysperma</i> , <i>E. rubella</i>	red-stem waterwort	AnnF	Sparse

Polypodiaceae (Adiantaceae)	<i>Cryptogramma crispa</i> var. <i>acrostichoides</i>	<i>C. acrostichoides</i>	parsley-fern	Fern	Wide	
Polypodiaceae (Adiantaceae)	<i>Pellaea jonesii</i>	<i>Argyrochosma jonesii</i> , <i>Notholaena jonesii</i>	Jones' cloak-fern	Fern	Periph	
Polypodiaceae (Aspleniaceae)	<i>Polystichum lonchitis</i>		holly-fern	Fern	Wide	
Portulacaceae	<i>Calyptidium monandrum</i>	<i>Cistanthe monandra</i>	roseate calyptidium	AnnF	Periph	
Portulacaceae	<i>Lewisia rediviva</i>	Includes vars. <i>minor</i> & <i>rediviva</i>	Oregon bitter-root	PerF	Wide	
Potamogetonaceae	<i>Potamogeton pectinatus</i>	<i>Stuckenia pectinata</i> , <i>Colegeton pectinatus</i>	fennel-leaf pondweed	PerF	Wide	
Ranunculaceae	<i>Ranunculus alismifolius</i> var. <i>montanus</i>		plantain buttercup	PerF	Wide	

Appendix B. Potential (unconfirmed) taxa of Zion National Park, cont.

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Comments
Ranunculaceae	<i>Ranunculus macounii</i>		Macoun's buttercup	PerF	Wide	
Ranunculaceae (Helleboraceae)	<i>Aquilegia elegantula</i>	elegant columbine		PerF	Wide	
Rhamnaceae	<i>Rhamnus betulifolia</i>	<i>Frangula betulifolia</i>	birchleaf buckthorn	Shrub	Wide	
Rosaceae	<i>Fragaria virginiana</i>	Includes ssp. <i>glauca</i> & <i>platypetala</i>	Virginia strawberry	PerF	Wide	
Rosaceae	<i>Geum triflorum</i> var. <i>ciliatum</i>	<i>Erythrocoma triflora</i>	prairie smoke	PerF	Wide	
Rosaceae	<i>Potentilla anserina</i>	<i>Argentina anserina</i>	silverweed	PerF	Wide	
Rosaceae	<i>Potentilla arguta</i> var. <i>convallaria</i>	<i>Drymocallis arguta</i> , includes ssp. <i>arguta</i>	tall cinquefoil	PerF	Wide	
Rosaceae	<i>Potentilla biennis</i>		biennial cinquefoil	AnnF	Wide	
Rosaceae	<i>Purpusia saxosa</i>	<i>Ivesia arizonica</i> var. <i>saxosa</i>	<i>purpusia</i>	PerF	RegEn	Kolob Reservoir, Wash Co
Scrophulariaceae	<i>Penstemon thompsoniae</i>		Thompson's penstemon	PerF	RegEn	Type locality is near Kanab, Kane Co, UT (Thompson s.n. GH)
Scrophulariaceae	<i>Scrophularia lanceolata</i>		lance-leaf figwort	PerF	Wide	
Scrophulariaceae	<i>Veronica biloba</i>	<i>Pocilla biloba</i>	two-lobe speedwell	AnnF	Intro	Native to Asia
Selaginellaceae	<i>Selaginella watsonii</i>		Watson's spike-moss	Fern	Wide	Type locality is Cottonwood Canyon, Salt Lake Co, UT (Watson 2370 US)
Solanaceae	<i>Lycium torreyi</i>		Torrey's wolfberry	Shrub	Wide	
Umbelliferae (Apiaceae)	<i>Lomatium parryi</i>		Parry's lomatium	PerF	Wide	Type locality is "Southern Utah" (Parry 85)
Umbelliferae (Apiaceae)	<i>Oreoxis alpina</i>	<i>Cymopterus alpinus</i>	matted spring-parsley	PerF	Wide	
Violaceae	<i>Viola adunca</i>		hook-spur violet	PerF	Wide	

The vascular plant species listed in this table are known from the vicinity of Zion National Park in Iron, Washington, and Kane counties, Utah, but have not previously been reported or confirmed for the park. Species on this list are derived from a checklist of potential species for NCPN parks prepared by Dr. N. Duane Atwood of Brigham Young University in 2001 and the *Atlas of the Vascular Flora of Utah* (Albee et al. 1988). Some species from Appendix C could be considered as potentially occurring in the park, but are not included here.

Appendix C. Rejected (falsely reported or questionable) taxa of Zion National Park.

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Park status	Comments
Asclepiadaceae	<i>Asclepias incarnata</i>	swamp milkweed	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>A. asperula</i> .	
Boraginaceae	<i>Amsinckia menziesii</i>	Includes <i>A. retrorsa</i> Menzies' fiddleneck	AnnF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified <i>Cryptantha</i> .	
Boraginaceae	<i>Cryptantha cinerea</i> var. <i>jamesii</i>	<i>C. jamesii</i> , <i>Oreocarya suffruticosa</i>	James' cryptanth	PerF	Wide	FalsRep	Reports from ZION herbarium are based on misidentified specimens of <i>C. cinerea</i> var. <i>arenicola</i> .
Boraginaceae	<i>Cryptantha cinerea</i> var. <i>pustulosa</i>	<i>C. pustulosa</i>	San Juan cryptanth	PerF	RegEn	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>C. cinerea</i> var. <i>arenicola</i> . Type locality is Elk Mts, San Juan Co, UT (Rydberg & Garrett 9320 NY).
Boraginaceae	<i>Cryptantha watsonii</i>		Watson's cryptanth	AnnF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>C. gracilis</i> .
Boraginaceae	<i>Mertensia ciliata</i>		streamside bluebell	PerF	Wide	FalsRep	Report from ZION is probably based on a misidentification of <i>M. arizonica</i> .
Cactaceae	<i>Opuntia basilaris</i> var. <i>basilaris</i>		beavertail cactus	PerF	Periph	FalsRep	Unvouched report from ZION based on a misidentified specimen of <i>O. erinacea</i> var. <i>aurea</i> .
Caprifoliaceae (Aldoxaceae)	<i>Sambucus canadensis</i>	<i>S. nigra</i> var. <i>canadensis</i> .	sweet elderberry	Shrub	Intro	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>S. caerulea</i> . Native to E North America.
Chenopodiaceae	<i>Chenopodium leptophyllum</i>		narrow-leaf goosefoot	AnnF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>C. desiccatum</i> .
Compositae (Asteraceae)	<i>Ambrosia psilostachya</i>	<i>A. coronopifolia</i> , <i>A. psilostachya</i> var. <i>coronopifolia</i>	western ragweed	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>A. acanthicarpa</i> .
Compositae (Asteraceae)	<i>Ambrosia tomentosa</i>	<i>Franseria tomentosa</i>	skeleton-leaf bursage	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>A. acanthicarpa</i> .
Compositae (Asteraceae)	<i>Arnica latifolia</i> var. <i>latifolia</i>		broadleaf arnica	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>A. cordifolia</i> var. <i>cordifolia</i> .
Compositae (Asteraceae)	<i>Artemisia cana</i> var. <i>viscidula</i>	<i>Seriphidium canum</i> ssp. <i>viscidulum</i>	silver sagebrush	Shrub	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>Chrysothamnus nauseosus</i> .

Appendix C. Rejected (falsely reported or questionable) taxa of Zion National Park, cont..

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Park status	Comments
Compositae (Asteraceae)	<i>Aster foliaceus</i> var. <i>parryi</i>	<i>Symphyotrichum foliaceum</i> var. <i>parryi</i>	Parry's aster	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>A. welshii</i> .
Compositae (Asteraceae)	<i>Aster hesperius</i>	<i>A. lanceolatus</i> var. <i>hesperius</i> , <i>Symphyotrichum lanceolatum</i> var. <i>hesperium</i>	Siskiyou aster	PerF	Wide	FalsRep	Reports from ZION herbarium are based on misidentified specimens of <i>A. welshii</i> . Also reported by Fowler et al. (2007), but specimen not seen.
Compositae (Asteraceae)	<i>Baileya pleniradiata</i>		woolly desert- marigold	AnnF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>B. multiradiata</i> .
Compositae (Asteraceae)	<i>Cirsium scariosum</i> var. <i>scariosum</i>	<i>C. scariosum</i>	elk thistle	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>C. arizonicum</i> .
Compositae (Asteraceae)	<i>Cirsium undulatum</i> var. <i>undulatum</i>	<i>C. undulatum</i>	wavy-leaved thistle	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>C. arizonicum</i> .
Compositae (Asteraceae)	<i>Eriogon acris</i>	<i>E. acris</i> var. <i>debilis</i> . Includes ssp. <i>debilis</i> , <i>politus</i> , & <i>kamtschaticus</i> , <i>Trimorpha elongata</i>	bitter fleabane	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>E. divergens</i> .
Compositae (Asteraceae)	<i>Eriogon elatior</i>		tall daisy	PerF	RegEn	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>E. speciosus</i> .
Compositae (Asteraceae)	<i>Eriogon engelmannii</i>		Engelmann's daisy	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>E. pumilus</i> .
Compositae (Asteraceae)	<i>Gaillardia spathulata</i>		basin blanketflower	PerF	RegEn	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>G. pinnatifida</i> . Type locality is Rabbit Valley, Wayne Co, UT (Ward 401 GH).
Compositae (Asteraceae)	<i>Geraea canescens</i>		desert sunflower	AnnF	Periph	Ques?	Reported by Cogan et al. (2004), but park is outside the expected range of this species.

Appendix C. Rejected (falsely reported or questionable) taxa of Zion National Park, cont..

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Park status	Comments
Compositae (Asteraceae)	<i>Grindelia nana</i>	Included in <i>G. hirsutula</i> in <i>Flora of North America</i> (2006)	low gumweed	PerF	Sparse	FalsRep	Report from ZION herbarium and Welsh (1995) is based on a misidentified specimen of <i>G. squarrosa</i> var. <i>serrulata</i> .
Compositae (Asteraceae)	<i>Hymenoxys richardsonii</i> var. <i>richardsonii</i>	<i>Picradenia richardsonii</i> var. <i>richardsonii</i>	Colorado rubber-plant	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>H. cooperi</i> .
Compositae (Asteraceae)	<i>Lactuca canadensis</i>		Canada lettuce	PerF	Periph	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>L. serriola</i> .
Compositae (Asteraceae)	<i>Lygodesmia juncea</i>		rush skeleton-plant	PerF	Periph	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>Stephanomeria exigua</i> .
Compositae (Asteraceae)	<i>Petradoria pumila</i> var. <i>graminea</i>		grassy rock-goldenrod	PerF	RegEn	FalsRep	Report's from ZION herbarium and Welsh (1995) are based on a misidentified specimen of <i>P. pumila</i> var. <i>pumila</i> .
Compositae (Asteraceae)	<i>Solidago missouriensis</i>	<i>S. missouriensis</i> var. <i>missouriensis</i> . Vars. not recognized in <i>Flora of North America</i> (2006).	Missouri goldenrod	PerF	Wide	FalsRep	Report from ZION herbarium and Welsh (1995) based on a misidentified specimen of <i>S. canadensis</i> . Also reported by Fowler et al. (2007), but Zion NP is well outside the known range of this species.
Compositae (Asteraceae)	<i>Solidago multiradiata</i> var. <i>scopulorum</i>	Vars. not recognized in <i>Flora of North America</i> (2006).	Rocky Mountain goldenrod	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>S. velutina</i> .
Compositae (Asteraceae)	<i>Solidago simplex</i>	<i>S. spathulata</i> , includes vars. <i>nana</i> & <i>simplex</i>	coast goldenrod	PerF	Wide	FalsRep	No specimens in ZION herbarium, park is outside of reported range by Welsh et al. (2003).
Compositae (Asteraceae)	<i>Townsendia montana</i> var. <i>montana</i>	<i>T. alpigena</i> var. <i>alpigena</i>	Wyoming townsendia	PerF	Periph	FalsRep	Report from ZION herbarium and Welsh (1995) based on a misidentified specimen of <i>T. incana</i> .
Compositae (Asteraceae)	<i>Tragopogon pratensis</i>	<i>T. lamottei</i>	meadow salsify	PerF	Intro	FalsRep	Report from ZION herbarium based on a misidentified specimen of <i>T. dubius</i> . Native to Europe.

Appendix C. Rejected (falsely reported or questionable) taxa of Zion National Park, cont..

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Park status	Comments
Compositae (Asteraceae)	<i>Xylohriza glabriuscula</i> var. <i>glabriuscula</i>	<i>Machaeranthera</i> <i>glabriuscula</i> . Includes vars. <i>glabriuscula</i> & <i>villosa</i> .	smooth woody-aster	PerF	Periph	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>Erigeron utahensis</i> .
Cruciferae (Brassicaceae)	<i>Cardamine</i> <i>pensylvanica</i>	Quaker bittercress	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>Lepidium montanum</i> var. <i>jonesii</i> .	
Cruciferae (Brassicaceae)	<i>Caulanthus</i> <i>lasiosiphyllos</i>	<i>Guillenia lasiophylla</i>	hairyleaf wild cabbage	AnnF	Periph	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>Thelypodium laxiflorum</i> .
Cruciferae (Brassicaceae)	<i>Descurainia obtusa</i>	blunt tansy mustard	AnnF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>D.</i> <i>incana</i> .	
Cruciferae (Brassicaceae)	<i>Descurainia pinnata</i> var. <i>filipes</i>	western tansy- mustard	AnnF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>D.</i> <i>pinnata</i> var. <i>osmiarum</i> .	
Cruciferae (Brassicaceae)	<i>Draba rectiflucta</i>	mountain draba	AnnF	RegEn	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>D.</i> <i>cuneifolia</i> var. <i>cuneifolia</i> .	
Cruciferae (Brassicaceae)	<i>Draba verna</i>	spring whitlow-grass	AnnF	Intro	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>D.</i> <i>Reptans</i> . Native to Asia.	
Cruciferae (Brassicaceae)	<i>Physaria acutifolia</i> var. <i>acutifolia</i>	sharp-leaf twinpod	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>P.</i> <i>newberryi</i> .	
Cruciferae (Brassicaceae)	<i>Physaria tenella</i>	<i>Lesquerella tenella</i>	slender bladderpod	AnnF	Periph	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>Lesquerella luteoviridis</i> .
Cruciferae (Brassicaceae)	<i>Physaria utahensis</i>	<i>Lesquerella utahensis</i>	Utah bladderpod	PerF	RegEn	FalsRep	Report from ZION herbarium and Welsh (1995) is based on a misidentified specimen of <i>P. wardii</i> . Type locality is American Fork Canyon, Utah Co., UT (Jones 1354 NY).
Cruciferae (Brassicaceae)	<i>Rorippa sinuata</i>	spreading yellowcress	PerF	Sparse	FalsRep	Report from ZION herbarium and Welsh (1995) is based on an unidentifiable immature specimen.	

Appendix C. Rejected (falsely reported or questionable) taxa of Zion National Park, cont..

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Park status	Comments
Cruciferae (Brassicaceae)	<i>Thelypodium integrifolium</i> var. <i>integrifolium</i>	entire-leaf thelypody	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>T. laxiflorum</i> .	
Cyperaceae	<i>Carex aquatilis</i>	<i>C. aquatilis</i> var. <i>aquatilis</i>	water sedge	PerG	Wide	FalsRep	Report from ZION based on misidentified specimen of <i>C. nebrascensis</i> .
Cyperaceae	<i>Carex curatorum</i>	<i>C. scirpoidea</i> var. <i>curatorum</i>	Canyonlands sedge	PerG	RegEn	Ques?	Reported by Fowler et al. (2007), but ZION is well outside the known range of this species. Report may be based on <i>C. haysii</i> . USFWS: 3C.
Cyperaceae	<i>Carex geyeri</i>	elk sedge	PerG	Wide	Ques?	Reported by Cogan et al. (2004), but park is outside the expected range of this species.	
Cyperaceae	<i>Carex phaeocephala</i>	dunhead sedge	PerG	Wide	FalsRep	Report from ZION herbarium based on misidentified specimens of <i>C. scoparia</i> and <i>C. tahoensis</i> .	
Cyperaceae	<i>Carex utriculata</i>	<i>C. rostrata</i> (<i>sensu lato</i>)	beaked sedge	PerG	Wide	FalsRep	Report from ZION herbarium based on misidentified specimen of <i>C. hystericina</i> . Also reported by Cogan et al. (2004).
Cyperaceae	<i>Scirpus americanus</i>	<i>Scirpus olneyi</i> , <i>Schoenoplectus americanus</i>	American bulrush	PerG	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>S. microcarpus</i> . Also reported by Cogan et al. (2004).
Euphorbiaceae	<i>Chamaesyce ocellata</i> var. <i>arenicola</i>	<i>Euphorbia ocellata</i>	eyed spurge	AnnF	Sparse	FalsRep	Report from ZION herbarium based on a misidentified specimen of <i>C. fendleri</i> .
Euphorbiaceae	<i>Chamaesyce revoluta</i>	<i>Euphorbia revoluta</i>	revolute spurge	AnnF	Sparse	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>C. parryi</i> .
Gramineae (Poaceae)	<i>Danthonia californica</i>	California oatgrass	PerG	Wide	Ques?	Reported by Fowler et al. (2007), but ZION NP is well outside the known range of this species. Report may be based on <i>D. intermedia</i> .	
Gramineae (Poaceae)	<i>Elymus smithii</i>	<i>Agropyron smithii</i> , <i>Pascopyrum smithii</i> , includes vars. <i>smithii</i> & <i>palmieri</i>	western wheatgrass	PerG	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>E. lanceolatus</i> . Also reported by Cogan et al. (2004) but without a voucher.

Appendix C. Rejected (falsely reported or questionable) taxa of Zion National Park, cont..

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Park status	Comments
Gramineae (Poaceae)	<i>Hordeum marinum</i>	<i>H. geniculatum</i>	Mediterranean barley	AnnG	Intro	FalsRep	Incorrectly reported for ZION based on a typographic error for <i>H. murinum</i> according to J. Alexander. Native to Eurasia.
Gramineae (Poaceae)	<i>Muhlenbergia wrightii</i>		spike muhly	PerG	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>M. racemosa</i> . Also reported by Cogan et al. (2004) but without a voucher.
Gramineae (Poaceae)	<i>Puccinellia nuttalliana</i>	<i>P. airoides</i>	Nuttall's alkali-grass	PerG	Wide	FalsRep	Reported by Weight (1937), but probably based on a misidentified specimen of <i>P. distans</i> .
Gramineae (Poaceae)	<i>Stipa comata</i> var. <i>intermedia</i>	<i>Hesperostipa comata</i> var. <i>intermedia</i>	needle-and-thread	PerG	Wide	FalsRep	Reports from ZION herbarium are based on misidentified specimens of <i>S. comata</i> var. <i>comata</i> .
Hydrophyllaceae	<i>Phacelia affinis</i>		twin phacelia	AnnF	Periph	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>P. ivesiana</i> .
Hydrophyllaceae	<i>Phacelia crenulata</i> var. <i>crenulata</i>		crenulate phacelia	AnnF	Wide	FalsRep	Report from ZION herbarium and Welsh (1995) is based on a misidentified specimen of <i>P. ambigua</i> .
Juncaceae	<i>Juncus regelii</i>		Regel's rush	PerG	Periph	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>J. ensifolius</i> .
Juncaceae	<i>Luzula parviflora</i>		small-flowered woodrush	PerG	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>Juncus ensifolius</i> . Also reported by Cogan et al. (2004) without a voucher.
Labiateae (Lamiaceae)	<i>Agastache palliiflora</i>		Bill Williams' mountain giant hyssop	PerF	Wide	FalsRep	Report from ZION herbarium based on a misidentified specimen of <i>A. urticifolia</i>
Labiateae (Lamiaceae)	<i>Satureja vulgaris</i>	<i>Clinopodium vulgare</i>	savory	PerF	Intro*	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>Monardella odoratissima</i> . Native to E North America and Eurasia

Appendix C. Rejected (falsely reported or questionable) taxa of Zion National Park, cont..

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Park status	Comments
Leguminosae (Fabaceae)	<i>Astragalus beckwithii</i> var. <i>beckwithii</i>	Includes reports of <i>var. weiserensis</i>	Beckwith's milkvetch	PerF	RegEn	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>A. oophorus</i> . Type locality is Cedar Mountains west of Lone Rock, Tooele Co., UT (Beckwith s.n. GH).
Leguminosae (Fabaceae)	<i>Astragalus convallarius</i> var. <i>finitimus</i>		enterprise milkvetch	PerF	RegEn	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>A. lancearius</i> . Type locality is 3 miles S of Enterprise, Washington Co., UT (Ripley & Barneby 4967 RSA). USFWS: 3C.
Leguminosae (Fabaceae)	<i>Astragalus eremicus</i>	<i>A. eremicus</i> var. <i>eremicus</i> . Includes <i>Astragalus ampullarioides</i> in <i>Intermountain Flora</i> (1989)	hermit milkvetch	PerF	Wide	FalsRep	Reports from ZION are based on <i>A. ampullarioides</i> (formerly considered part of this species) and <i>A. ensiformis</i> . Type locality is Beaver Dam Mountains, Washington Co., UT (Parry 45 MINN).
Leguminosae (Fabaceae)	<i>Astragalus flavus</i> var. <i>flavus</i>	<i>A. flavus</i> var. <i>candidans</i>	yellow milkvetch	PerF	Wide	FalsRep	Reports from ZION all appear to be based on misidentified specimens of <i>A. flavus</i> var. <i>higginsii</i> .
Leguminosae (Fabaceae)	<i>Astragalus miser</i> var. <i>oblongifolius</i>		Rydberg's weedy milkvetch	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>A. ceramicus</i> .
Leguminosae (Fabaceae)	<i>Astragalus purshii</i> var. <i>glareosus</i>		Pursh's milkvetch	PerF	Periph	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>A. zionis</i> .
Leguminosae (Fabaceae)	<i>Astragalus sabulonum</i>		gravel milkvetch	AnnF	Wide	Ques?	Report by Welsh (1995) is well out of the known range of this species.
Leguminosae (Fabaceae)	<i>Lathyrus eucommus</i>	<i>L. brachycalyx</i> var. <i>eucommus</i>	seemly sweetpea	PerF	Sparse	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>L. brachycalyx</i> var. <i>zionis</i> .
Leguminosae (Fabaceae)	<i>Lotus wrightii</i>		Wright's trefoil	PerF	RegEn	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>L. plebeius</i> .
Leguminosae (Fabaceae)	<i>Lupinus flavoculatus</i>		yellow-eye lupine	AnnF	RegEn	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>L. pusillus</i> .

Appendix C. Rejected (falsely reported or questionable) taxa of Zion National Park, cont..

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Park status	Comments
Leguminosae (Fabaceae)	<i>Pediomelum epipsilum</i>	<i>Psoralea epipsila</i> , <i>Pediomelum megalanthum</i> var. <i>epipsilum</i>	Kane breadroot	PerF	LocEn	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>P. pariente</i> . Type locality is 17 mi E of Kanab towards Jepson Spring, Kane Co., UT (Ripley & Barney 4832 CAS). UT BLM Sensitive, USFWS former C2 candidate.
Leguminosae (Fabaceae)	<i>Trifolium parryi</i> var. <i>montanense</i> (Fabaceae)	Vars. not recognized in Barneby (1989)	Parry's clover	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>T. macilentum</i> .
Loasaceae	<i>Mentzelia pumila</i> var. <i>pumila</i>	<i>M. pumila</i>	Wyoming stickleaf	PerF	RegEn	FalsRep	Report from ZION herbarium and Welsh (1995) is based on a misidentified specimen of <i>M. integra</i> .
Malvaceae	<i>Sphaeralcea coccinea</i>	Includes ssp. <i>coccinea</i> , <i>elata</i> , & <i>dissecta</i>	scarlet globe-mallow	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>S. grossularifolia</i> . Also reported by Cogan et al. (2004) without a voucher.
Nyctaginaceae	<i>Abromia nana</i>	<i>A. nana</i> var. <i>nana</i>	low sand-verbena	PerF	RegEn	FalsRep	Specimens from ZION herbarium represent misidentified <i>A. fragrans</i> . Type locality is near Beaver City, Beaver Co., UT (Palmer 404).
Onagraceae	<i>Camissonia brevipes</i>		showy camissonia	AnnF	Periph	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>C. walkeri</i> .
Papaveraceae	<i>Argemone corymbosa</i> var. <i>arenicola</i>		San Rafael prickly- poppy	PerF	RegEn	Ques?	Reported by UT CDC from 1965 collection (Stemitz 4) from UTC—confirmation needed as ZION is well outside the known range of this species (more likely to be <i>A. munita</i>). Type locality is 37.9 miles SW of Green River, Emery Co., UT (Ownbey & Ownbey 2146).
Polemoniaceae	<i>Gilia scopulorum</i>		rock gilia	AnnF	Periph	FalsRep	Reports from ZION herbarium are based on misidentified specimens of <i>G. inconspicua</i> . Type locality is St. George, Washington Co., UT (Jones 1659 POM).

Appendix C. Rejected (falsely reported or questionable) taxa of Zion National Park, cont..

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Park status	Comments
Polemoniaceae	<i>Phlox hoodii</i> var. <i>canescens</i>	Includes ssp. <i>glabrata</i> , <i>hoodii</i> , & <i>viscidula</i>	carpet phlox	PerF	Wide	FalsRep	Report from ZION herbarium and Welsh (1995) is based on a misidentified specimen of <i>P.</i> <i>austromontana</i> var. <i>prostrata</i> . Also reported by Cogan et al. (2004) without a voucher.
Polygonaceae	<i>Eriogonum flavum</i>	yellow wild buckwheat	bird-foot cliffbrake	Fern	Wide	Ques?	Reported by Cogan et al. (2004), but park is outside the expected range of this species. Report probably based on <i>E. jamesii</i> var. <i>rupicola</i> .
Polypodiaceae (Adiantaceae)	<i>Pellaea mucronata</i>		Rocky Mountain woodisia	Fern	Wide	FalsRep	Report from Weight (1937) lacks a corroborating voucher. <i>P. mucronata</i> is not known from Utah.
Polypodiaceae (Aspleniaceae)	<i>Woodsia scopulina</i>	<i>W. scopulina</i> ssp. <i>scopulina</i>	Chamisso's candy- flower	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>Cystopteris fragilis</i> .
Portulacaceae	<i>Montia chamissoi</i>		leafy pondweed	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>M.</i> <i>perfoliata</i> .
Potamogeton- aceae	<i>Potamogeton foliosus</i> var. <i>foliosus</i>		Nootka rose	Shrub	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>P.</i> <i>filiformis</i> var. <i>occidentalis</i> .
Rosaceae	<i>Rosa nutkana</i> var. <i>hispida</i>						Report from ZION herbarium is based on a misidentified specimen of <i>R.</i> <i>woodsii</i> .
Rubiaceae	<i>Galium mexicanum</i> var. <i>asperulum</i>	<i>G. mexicanum</i> spp. <i>asperillum</i>	rough bedstraw	PerF	Periph	FalsRep	Report from ZION herbarium based on a misidentified specimen of <i>G.</i> <i>aparine</i> .
Rubiaceae	<i>Galium proliferum</i>		slender bedstraw	AnnF	Periph	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>G.</i> <i>wrightii</i> .
Rubiaceae	<i>Galium stellatum</i>	<i>G. stellatum</i> var. <i>eremicum</i>	stellate bedstraw	Shrub	Periph	Ques?	Report from Weight (1937) has not been confirmed and is out of species' known range.
Salicaceae	<i>Salix bebbiana</i>		Bebb's willow	Shrub	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>S.</i> <i>lastolepis</i> .

Appendix C. Rejected (falsely reported or questionable) taxa of Zion National Park, cont..

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Park status	Comments
Salicaceae	<i>Salix drummondiana</i>	Drummond's willow	Shrub	Wide	FalsRep	Report from ZION herbarium and Welsh (1995) is based on a misidentified specimen of <i>S. lasiolepis</i> .	
Saxifragaceae (Parnassiaceae)	<i>Parnassia parviflora</i>	marsh grass-of-Parnassus	PerF	Wide	FalsRep	Report from ZION herbarium based on a misidentified specimen of <i>P. palustris</i> var. <i>montanensis</i> . <i>P. parviflora</i> is not known from Utah.	
Saxifragaceae (Grossulariaceae)	<i>Ribes montigenum</i>	alpine prickly currant	Shrub	Wide	FalsRep	Report from ZION herbarium is based on a specimen collected from outside the park.	
Scrophulariaceae	<i>Castilleja flava</i>	<i>C. flava</i> var. <i>flava</i>	yellow paintbrush	PerF	Wide	Ques?	Report from Weight (1937) has not been confirmed and is well out of species' known range.
Scrophulariaceae	<i>Cordylanthus wrightii</i>	Wright's bird's-beak	AnnF	Wide	FalsRep	Report from ZION based on a misidentified specimen of <i>C. parviflorus</i> .	
Scrophulariaceae	<i>Penstemon caespitosus</i> <i>P. tusharensis</i> var. <i>suffruticosus</i>	Tushar penstemon	PerF	LocEn	FalsRep	Report from ZION herbarium and Welsh (1995) is based on a specimen collected outside the park. Type locality is near Beaver, Tushar Mountains, Beaver Co, UT (Palmer s.n. GH).	
Scrophulariaceae	<i>Penstemon latus</i>	Abajo penstemon	PerF	RegEn	Ques?	Reported by Cogan et al. (2004), but Zion NP is well outside the expected range of this species.	
Scrophulariaceae	<i>Penstemon leonardii</i>	Leonard's penstemon	PerF	RegEn	Ques?	Reported by Cogan et al. (2004), but Zion NP is well outside the expected range of this species. Report probably based on <i>P. higginsii</i> .	
Scrophulariaceae	<i>Penstemon platyphyllus</i>	broadleaf penstemon	PerF	LocEn	Ques?	Reported by Weight (1937), but without a voucher. Zion NP is well out of the species' known range. Type locality is Cottonwood Canyon, Salt Lake Co, UT (Watson 787 GH).	
Solanaceae	<i>Physalis heterophylla</i>	clammy ground-cherry	PerF	Intro	Ques?	Reported by Cogan et al. (2004), but Zion NP is well outside the expected range of this species. Native to E North America.	

Appendix C. Rejected (falsely reported or questionable) taxa of Zion National Park, cont..

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life form	Range	Park status	Comments
Typhaceae	<i>Typha angustifolia</i>		narrow-leaf cattail	PerG	Wide	FalsRep	Reports from ZION herbarium are based on a misidentified specimen of <i>T. domingensis</i> . <i>T. angustifolia</i> is not known from Utah. Also reported by Cogan et al. (2004).
Umbelliferae (Apiaceae)	<i>Cymopterus acaulis</i> var. <i>fendleri</i>	<i>C. fendleri</i> ; <i>C. glomeratus</i>	Fendler's cymopterus	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>C. newberryi</i> .
Umbelliferae (Apiaceae)	<i>Cymopterus bulbosus</i>		onion spring-parsley	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>C. purpureus</i> .
Umbelliferae (Apiaceae)	<i>Lomatium nuttallii</i>		Nuttall's desert- parsley	PerF	RegEn	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>L. graveolens</i> var. <i>clarkii</i> . <i>L. nuttallii</i> is not known from Utah.
Umbelliferae (Apiaceae)	<i>Lomatium orientale</i>		Oriental desert- parsley	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>Cymopterus purpureus</i> . <i>L. orientale</i> is not known from Utah.
Umbelliferae (Apiaceae)	<i>Lomatium triternatum</i>	<i>L. simplex</i> ssp. <i>platycarpum</i>	flat-seed lomatium	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>L. graveolens</i> var. <i>clarkii</i> .
Umbelliferae (Apiaceae)	<i>Yabea microcarpa</i>		California hedge- parsley	AnnF	Periph	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>Torilis arvensis</i> .
Valerianaceae	<i>Valeriana occidentalis</i>		western valerian	PerF	Wide	FalsRep	Report from ZION herbarium is based on a misidentified specimen of <i>V. arizonica</i> .

The vascular plant species listed in this table have been reported for Zion National Park from published and unpublished literature (Cogan et al. 2004, Fowler et al. 2007, Welsh 1995) or from herbarium specimens, but are now believed to be erroneous because of misidentifications (False reports or FalsRep) or because the park is well outside the known or expected range of the species (Questionable or Ques?).

Appendix D. Confirmed, historical, and reported taxa of Zion National Park, organized by life form with ecological notes.

Family	Species name	Common name	Nativity	Park status	Flower time	Warm Des	P/Oak/Sage	Mtn Conif	Wet	Comments
