The Herpetological Literature for Southwestern Asia 1758 to 2011 Supplement I

Alan E. Leviton and Steven C. Anderson

Preface to Supplement

This Supplement to *The Herpetological Literature for Southwestern Asia: An Indexed Bibliography*, which appeared on 29 January 2010, consists of updated records that were included in the original publication and more than 450 new references, some of which had been missed earlier, others published since January 2010. We have also reprinted in this Supplement, a copy of the Preface to the January 2010 edition inasmuch as most of its contents are germane to the Supplement as well.

The Supplement is arranged in the same format as the original publication: (1) Bibliography; (2) Keyword Index; and (3) Journals. However, we have now added (4) an index to all authors, both senior and their co-authors, where applicable, covering all references included in both the original publication and this supplement. Reference numbers below [9083] refer to references as they appeared in the January 2010 publication. References numbered [9083] and above are new references that did not appear in the original publication.

In addition to the author index, we have also added many new references to the geology of the Eastern Mediterranean and Southwest Asia, especially for the Neogene, Holocene, and most recent Anthropocene (latest Holocene, where there is evidence that the extent of human activities have had a significant global impact on the Earth's ecosystems (see P.J. Crutzen and E.F. Stoermer, 2000, IGBP [International Geosphere-Biosphere Programme] Newsletter 41)) inasmuch as we believe that it is incumbent for all of us to search for congruencies in biogeography between phylogeographic patterns and geologic history of the regions and, if not apparent, to offer thoughts on why the discrepancies exist.

And, once again, we call the attention of our colleagues to the matter of diacritical marks and accents usually associated with languages other than English and the variables that render standardization of spellings difficult, if not impossible, to insure. Indeed, we are reminded of the explanation offered in the Preface to the volume, *A Manual of the Geology of India* by Henry B. Medlicott and William T. Blanford, published in 1879. For those interested, we have provided below (see over, p. viii) a quote of the paragraph they wrote in explanation of the difficulties specifically in dealing with Oriental place names and their English transliterations, but this applies equally to transliterations among Russian, Turkish, Italian, Slavic, Czechoslovakian, and other languages.

Following publication of this Supplement, it is our intention to add new references to our bibliographic database and to make these available to colleagues on request. Times are changing, and with new computer and web technologies, nearly all of our colleagues are able to keep abreast of new developments almost as quickly as they occur.

Once again, we ask our colleagues to keep us informed of publications we have overlooked as well as new publications that relate to Southwest Asian herpetology. Also, we thank those who have kept us apprised of current contributions.

Lastly, we are indebted to our colleagues, notably Kraig Adler, Michele Aldrich, and George Zug, for tolerating us in our search for items and for taking time to review what we have done. Of course, we have no intention of evading ultimate responsibility for errors of omission or commission, of which we are confident there are many. So, to the users of this work, please do let us know where we have erred. We will make every effort to correct the errors as well as add missing items.

From the Preface to the first edition of *A Manual of the Geology of India . . .*, by H.B. Medlicott and W.T. Blanford (1879:vii)

The map (this in reference to the map included in the *Manual*), it is feared, will be found defective in several other respects . . . But the most serious drawback is in the names of places. Many towns of importance are omitted, owing to the small scale; and other names of interest, for purposes of geological description, such as those of fossil-localities, or of villages near important sections, are wanting. Nor is this all. The spelling of Oriental names is a well-known cause of perplexity; and the confusion has been increased by the unfortunate circumstance that, while one system has been adopted by the Great Trigonometrical Survey, and employed in all the maps, including those of the detailed Topographical Surveys, issued by the Department, and entirely distinct system (here one can substitute different editors of journals, AL/SA) has been employed by the Revenue Service, by whom the maps of all the best known parts of the country have been prepared. Under the first system, each letter in the Indian language is represented by a corresponding letter in the Roman alphabet; diacritical marks and accents being employed to distinguish such consonants or vowels in the latter as are required to represent two or more sounds, and the Italian or German sounds of the vowels being used, instead of the English. Under the second system, an attempt is made to represent the original sound by English spelling; double vowels being largely used, but no diacritical marks. The imperfection of the latter plan is manifest; because, in the first place, the sounds, of the vowels especially, in English, are variable, and incapable, in many cases, of representing those of Oriental languages; and, secondly, the representation of the true names by supposed equivalents is arbitrary, depending chiefly on the ear, often very imperfectly trained, of the transcriber . . .”

Preface to Original Publication

For nearly five decades, we have been compiling a bibliography of the herpetology of Southwest Asia. For our purposes, this region encompasses the area between the Red Sea (including the Sinai Peninsula) and the Mediterranean Sea (including Cyprus) on the west and the Pakistan-Indian border region (including Jammu and Kashmir) on the east, and between the borders of the former Soviet Union on the north and the Gulf of Aden (including Socotra and Abd ‘al Kuri) on the south. Thus it includes Turkey, Iran, and Afghanistan as the northern tier (the Iranian Plateau), Pakistan in the east, the entire Arabian Peninsula in the south, the countries of Mesopotamia and the North Arabian Desert, Israel, and the Levant. We have attempted to be comprehensive in our coverage of publications within this region. We have also included a miscellany of publications for the herpetofaunas of adjacent countries insofar as they bear on taxa also represented within our region. For these areas, our coverage is far less complete.

Although we have tried to see as many of the listed publications as possible, there is still a large portion we have cited from sources that we have not verified. To facilitate location of references by interlibrary loan and via the Internet, we have given the full names of authors where these are known to us. We have also provided the full names of journals wherever possible, although there are still many that we have either not seen or have not been able to locate. In the last section, Journals as Cited in References, we provide a complete alphabetical list of all journals and the abbreviations we have chosen to use. The latter were chosen, perhaps somewhat arbitrarily, but as much as possible to avoid ambiguity (thus, for instance, we do not use J. for Journal but Jour., Jahrb. for Jahrbuch, Jahresh. for Jahresheft, and Zh. and Zhur. for the Russian Zhurnal, which some publications allow in the anglicized version as Journal and abbreviate ‘J.’). Furthermore, among the references, users will occasionally notice the presence of a series of ‘x’s, i.e., xxxxx, in place of expected bits of information such as pages, volume number, publisher, city where printed, etc. Clearly, at this time we were unable to provide the necessary specifics and the ‘x’s are meant to alert the user to unknowns in the citation.

We have collected references on all aspects of the biology of amphibians and reptiles and have tried to be complete, although systematics, distribution, and biogeography are our own particular interests. Owing to our areas of research, we have also included works on geology, paleontology, paleoclimatology, and geography that bear on biogeography of our region. We include some references on the biogeography of organisms other than amphibians and reptiles, as well as publications that refer to other aspects of ecology. Such references are far from exhaustive, however. We list a number of titles that deal with analyses of higher taxa that extend far beyond our geographic area as well as publications that describe techniques, particularly those useful in systematics or field herpetology. In short, we include works that have come to our attention that we believe would assist researchers conducting herpetological investigations in Southwest Asia. We have been less than diligent in keep-

ing up with the popular literature on herpetoculture, although we have included those that, serendipitously, came to our attention. In some cases, we have only the title, or the reference is in other ways incomplete. We have included such publications to call attention to them with the expectation that we, or others, will eventually complete the citation. A few websites are included, for the most part those maintained by academic institutions and museums. We have made no attempt to be comprehensive with regard to websites owing to impermanence.

We have made every effort to be consistent in our use of diacritical marks, but we know there are gaps. This is particularly true for the many references in Turkish and to some extent Eastern European languages such as Hungarian, Czech and Slovak. The bibliography was prepared using Papyrus©, which includes nearly all of the Western European glyphs, e.g., á ä ç é è ñ ö ü, but assuredly not diacritical marks for all languages. To the extent possible, we have gone back and entered such elements as ě Ě ğ ħ í ř Š Š š and others, but time constraints have made it impossible to recheck all foreign references when editing the final manuscript. We trust that our colleagues will forgive our shortcomings in this regard.

Keywords have been a particular concern. Without them, a bibliography of this size is of limited utility. First and foremost, we have tried to include keywords that indicate the countries and important geographic areas covered in each publication, and we have listed as keywords the taxa included in the work that occur in our area. In large, comprehensive works, e.g., Boulenger's catalogues, we have not recorded species that do not occur in Southwest Asia. We have tried to include keywords that describe the general subject matters of the reference. Obviously, we could only be inclusive for those works actually before us. Otherwise, we have had to list keywords based solely on the titles. The reader can look up keywords in the keyword index (pp. 429ff) and find the titles, listed by number, which include that keyword. Alternatively, users of the PDF version can utilize the search features of Adobe Acrobat© to search for works containing the keyword.

A cautionary note: Synonymies cannot be constructed through use of the keyword index and bibliography alone. We have not been able to include all of the permutations of Latin names used in the citations. The bibliography will lead the user to the necessary titles, but the references themselves must be checked for accurate orthography of the taxonomic names. For many taxa, we have included the current names in brackets [] in the keyword index in those instances where the keyword taxon name is no longer current. We realize that in many instances the taxonomy is unsettled, and it should not come as a surprise that some users will not agree with our judgments. We can only take refuge in noting that we have tried to use the most recent interpretations found in the literature, certainly for groups where we lack the most up-to-date expertise ourselves. Taxonomy is a "moving target!" and phylogenetic reshuffling and the reorganization of species groups and clades at all levels are taking place more rapidly than ever before. Most notable are the reorganization of groups such as the ranid frogs, some of which are now referred to other family groups, the colubrid snakes, especially the former nearly ubiquitous genera *Elaphe* and *Coluber*, and so forth.

We continue both to edit existing references and to add new ones to this bibliography. In the forthcoming updates, we plan to publish these additions and corrections as addenda to the existing list. Although we tried to be inclusive through the year 2000, we have added many titles through 2009. However, we still have many unincorporated articles sitting on our desks, and we realize that this will always be so. On the other hand, and in response to inquiries by our colleagues, we wish to make our efforts available without further delay. We would be most grateful to receive correspondence correcting our mistakes and omissions. Particularly helpful are actual copies of papers so that we can personally verify citations and list keywords.

We thank the many people who have sent us reprints and references over the past decades. We could not have assembled this bibliography without the help of librarians at our respective institutions. They have searched out many obscure and ancient publications in many languages and made them available to us. We are, furthermore, especially grateful to Dr. Kraig Adler, Cornell University, for his hospitality to Alan Leviton and for opening his large and important personal library for checking references. Leviton also made extensive use of the library of the Smithsonian Institution, and we thank Dr. George Zug, Division of Amphibians and Reptiles, Smithsonian Institution, for his facilitation, friendship, and encouragement. We also want to express our appreciation of the work done by Dr. Michele L. Aldrich, the most extraordinary proofreader we have ever known, who went far beyond the call to duty; she scanned the whole work and pointed out numerous inconsistencies, which we have tried to correct before going to press. And last, but not least, both Dr. Aaron Bauer, Villanova University, and Ms. Hallie Brignall, the latter the Academy's managing editor of Scientific Publications, perused segments of the work, the former providing missing data, the latter searching for errors and more inconsistencies. We are

grateful to all for their valiant attempts to keep us out of harm's way. Having said this, we also absolve all of our friends of any guilt for the errors we know persist in the work. They are our responsibility, and we alone bear the blame.

Finally, the authors of this bibliography are listed in the order determined by a "toss of a coin." Their contributions were equal though they placed emphasis on different areas. Initially, Leviton handled most of the publications for the 18th and 19th centuries and the geological literature whereas Anderson focused on the 20th century as well as regional geography, ecology and ancillary non-herpetological, neontological literature. Nonetheless, across the years there was considerable overlap in their activities as well as in the addition of materials for the first decade of the 21st century. Both recognize and accept equal responsibility for the strengths and weaknesses of this compilation. Furthermore, both are committed to an ongoing effort to upgrade the bibliography, to correct known and emergent errors, to expand it as new materials appear in press, and to respond positively to our colleagues who, we hope, will take time to bring to our attention errors of commission and/or omission. Updates, including both corrections and additions, will be issued on an irregular basis. Also, to facilitate the work of others, we ask our many friends and colleagues, if you find this work useful, to mention it in the acknowledgments and literature-cited sections to encourage wider distribution. And, to repeat what we said a moment ago, send us your comments, however complimentary or not, as well as corrections, updates, and additions, all of which we will both gratefully acknowledge and incorporate in our planned supplements. In addition to the printed version, this bibliography is available online at www.calacademy.org/research/scipubs as a downloadable PDF file.

In closing, we apologize in advance to our colleagues that, much to our regret, we are unable to respond to requests for copies of most of the papers in this bibliography inasmuch as few have been scanned and we lack the clerical assistance necessary to do more. Furthermore, copyright restrictions prohibit the wholesale copying of materials for secondary distribution, and we respect those restrictions.

The pages in the volume bear dual pagination numbers, e.g. "436 (186)," the first as it appears in the full volume, the second the already assigned pagination for the *Acta*. Thus, Wiegmann's Amphibian section is numbered 433-435 (actually these pages are unnumbered) followed by 436 (186)-522 (268). In a like manner the reptile and amphibian plates are dually numbered, LII (XIII)-LXI (XXII). No Southwest Asian records included)

AUTHOR INDEX

Index to all authors referenced in both the original publication (*CAS Occ. Pap.* 157; 29 Jan. 2010) and this Supplement. Author names suffer many unintentional abuses at the hands of editors and colleagues. We have usually accepted the spellings that appeared in the publication but we have also been guided by the author listings in Adler, Kraig, 1989, 2007, 2012, *Contributions to the History of Herpetology*, and Applegarth, J.S., 2012, *Index of authors in Taxonomic Herpetology*, pages 387–470 in Kraig Adler, *Contributions to the History of Herpetology*, vol. 3. Soc. Study Amphib. Rept., Ithaca, New York.
