**Appendix D30. Relationship of megabenthic invertebrate site clusters on the mainland shelf of southern California to depth and regional subpopulation categories, July-August 1994.** A = Near potentially anthropogenic inputs. Numbers next to boxes represent station numbers.

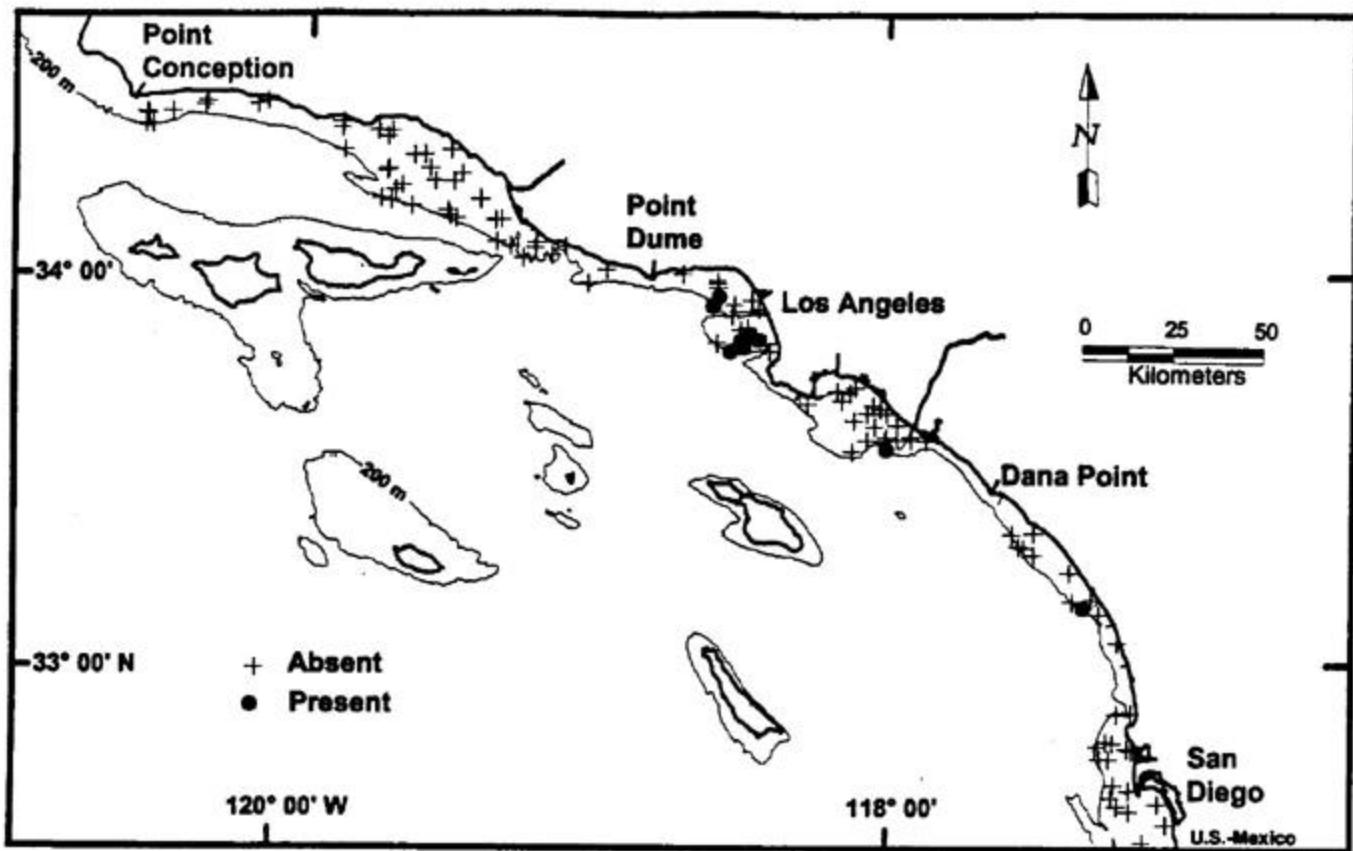

**Appendix D29. Distribution of the Upper Slope Recurrent Group (Group 7) of megabenthic invertebrates on the mainland shelf of southern California at depths of 10-200 m, July-August 1994.**

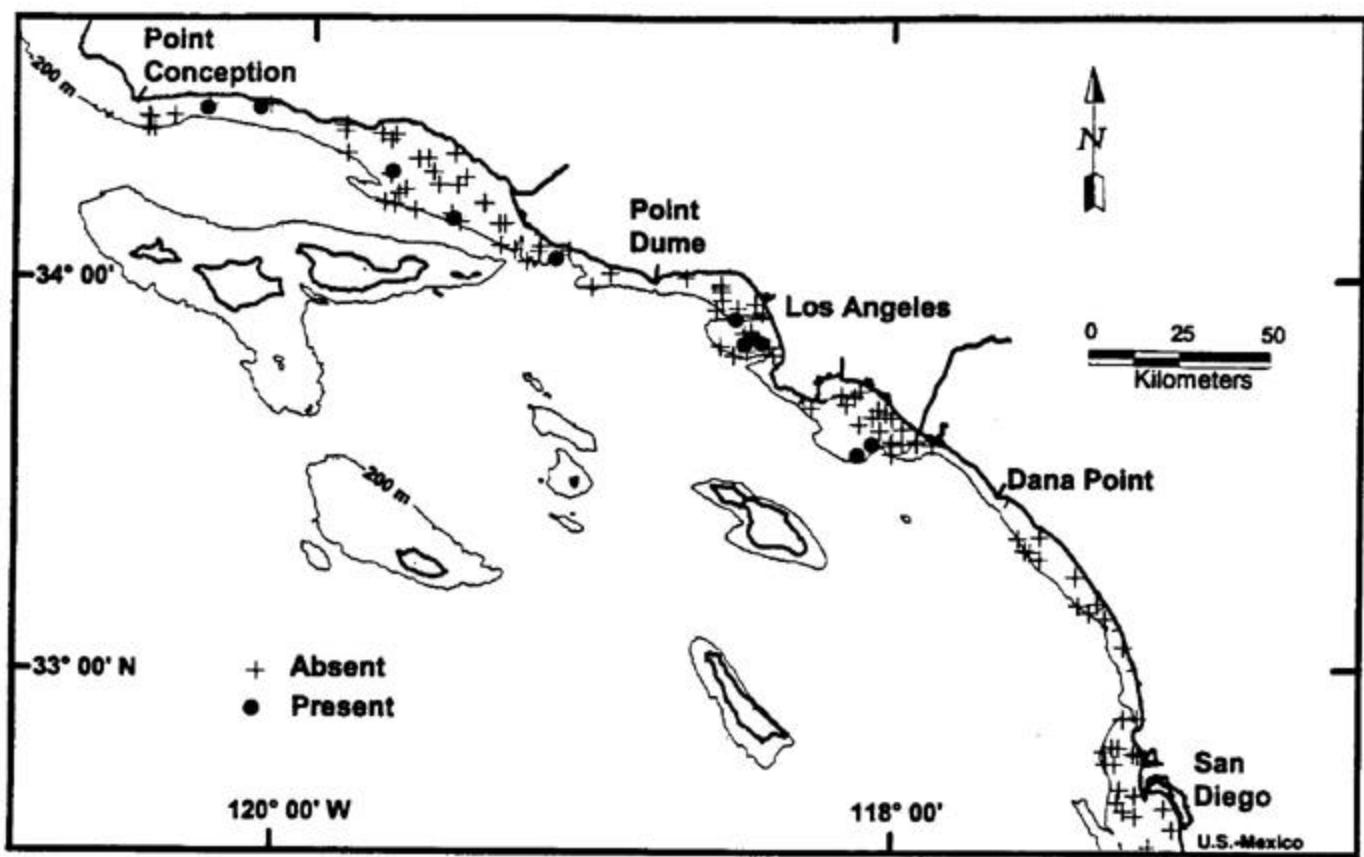

**Appendix D28. Distribution of the Outer Shelf Recurrent Group (Group 6) of megabenthic invertebrates on the mainland shelf of southern California at depths of 10-200 m, July-August 1994.**

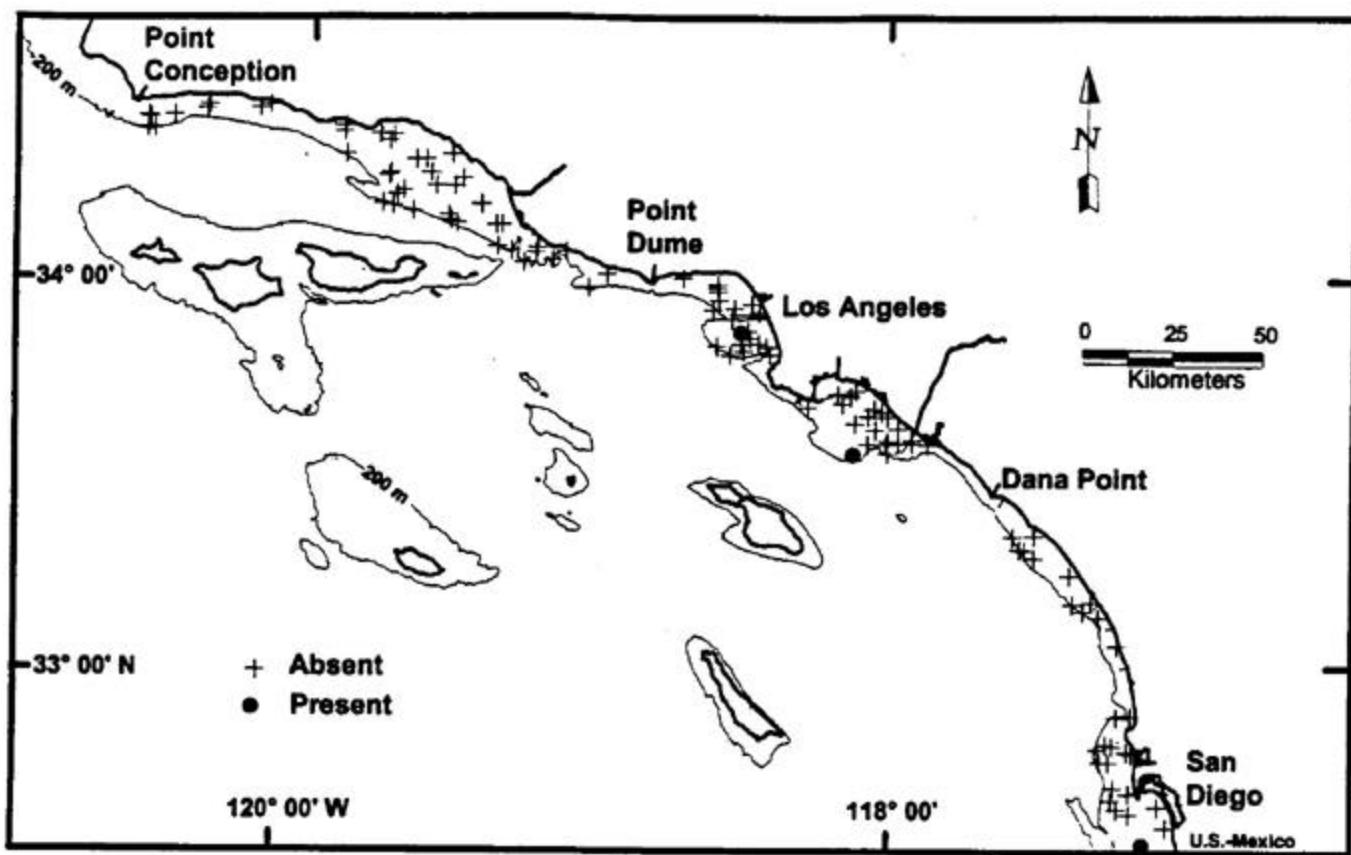

**Appendix D27. Distribution of the Shelf Break Recurrent Group (Group 5) of megabenthic invertebrates on the mainland shelf of southern California at depths of 10-200 m, July-August 1994.**

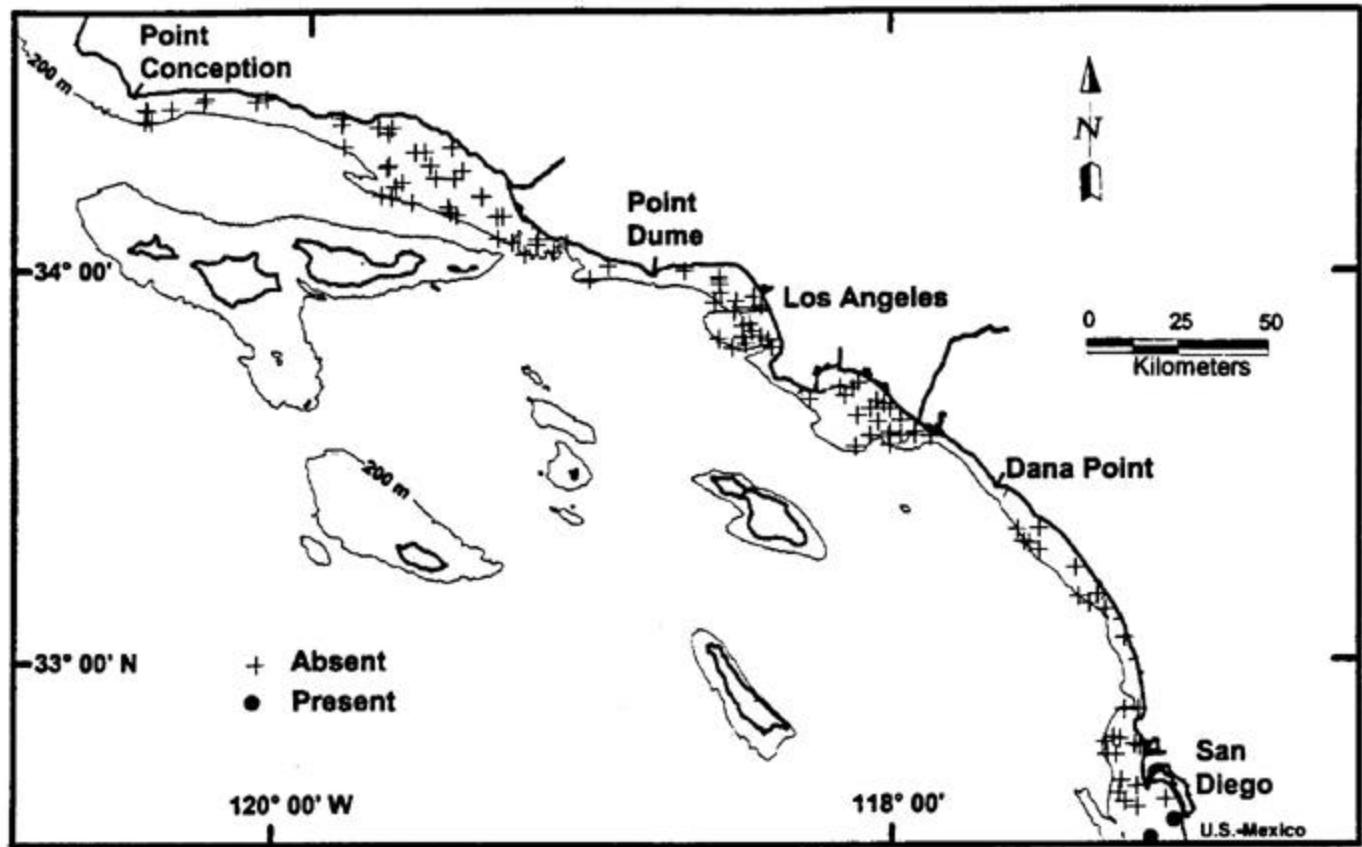

**Appendix D26. Distribution of the Submarine Canyon Recurrent Group (Group 4) of megabenthic invertebrates on the mainland shelf of southern California at depths of 10-200 m, July-August 1994.**

**Appendix D25. Distribution of the Middle/Outer Shelf Recurrent Group (Group 3) of megabenthic invertebrates on the mainland shelf of southern California at depths of 10-200 m, July-August 1994.**

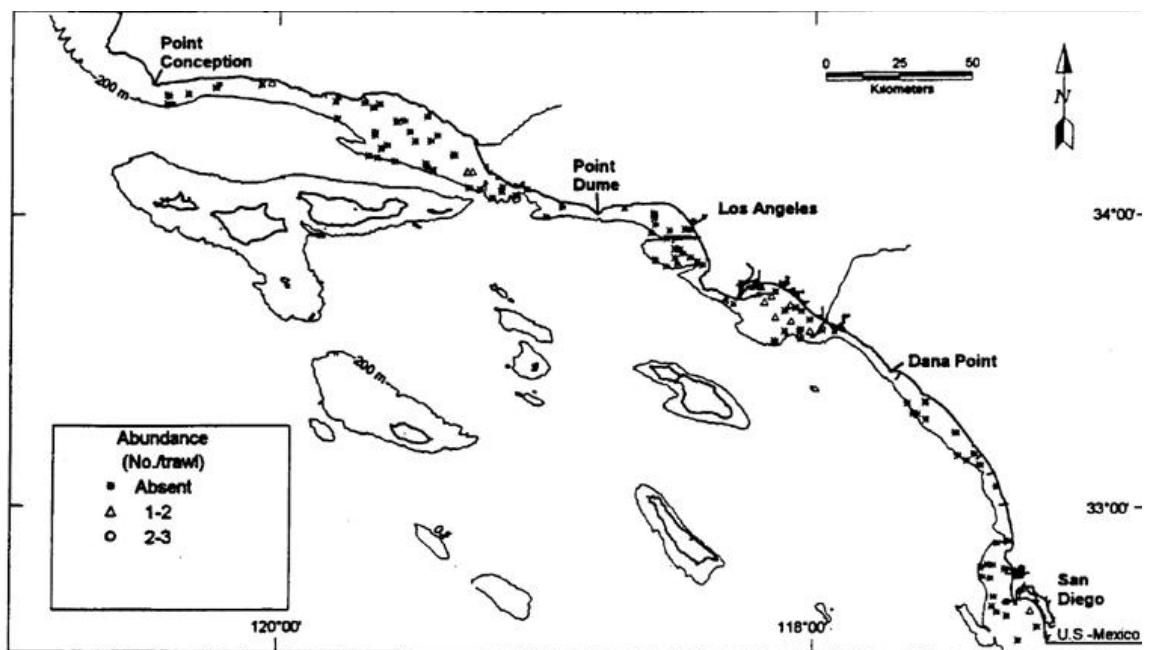

**Appendix D24. Distribution of the Middle Shelf Recurrent Group (Group 2) of megabenthic invertebrates on the mainland shelf of southern California at depths of 10-200 m, July-August 1994.**

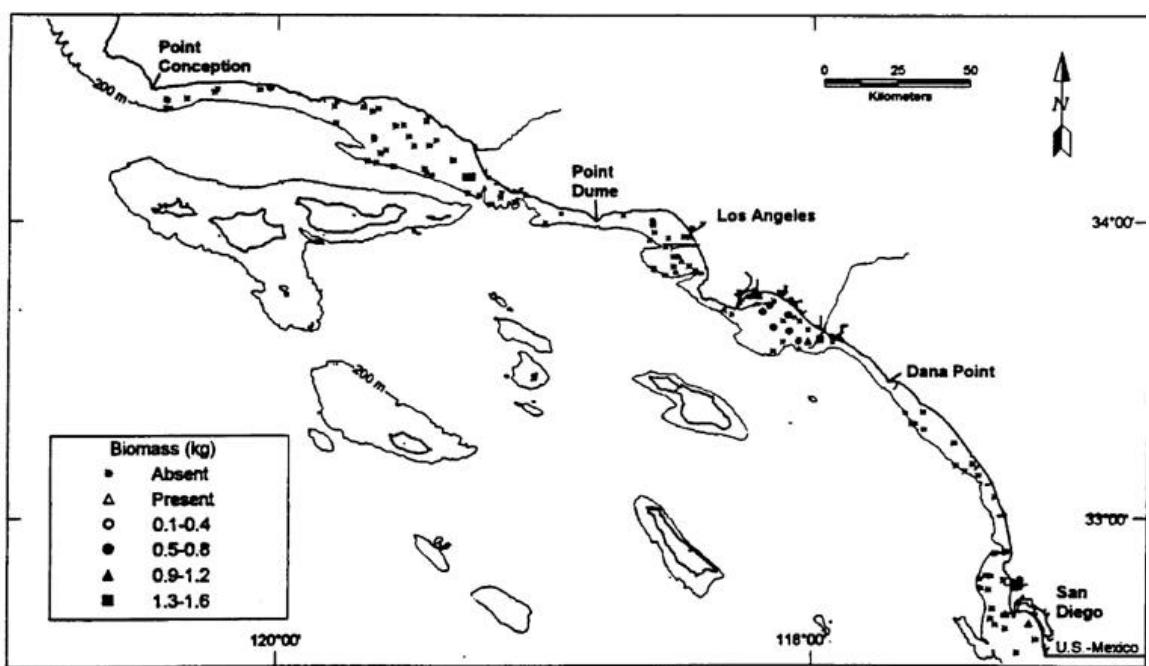

**Appendix D23. Distribution of the Inner/Middle Shelf Recurrent Group (Group 1) of megabenthic invertebrates on the mainland shelf of southern California at depths of 10-200 m, July-August 1994.**

(a)

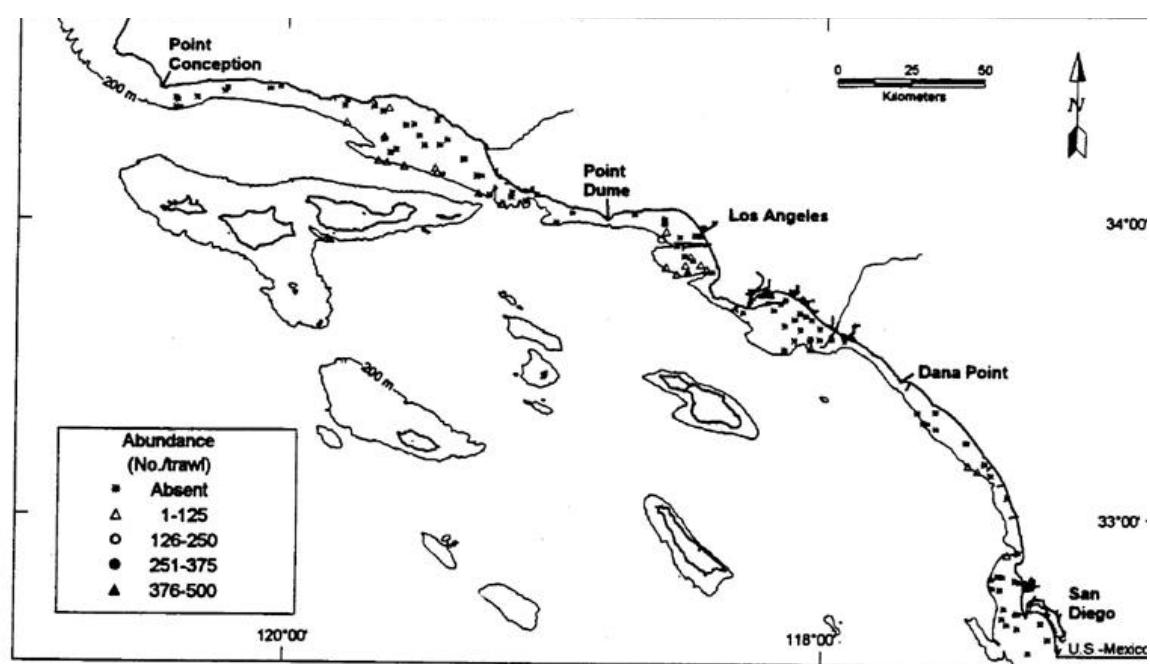

(b)

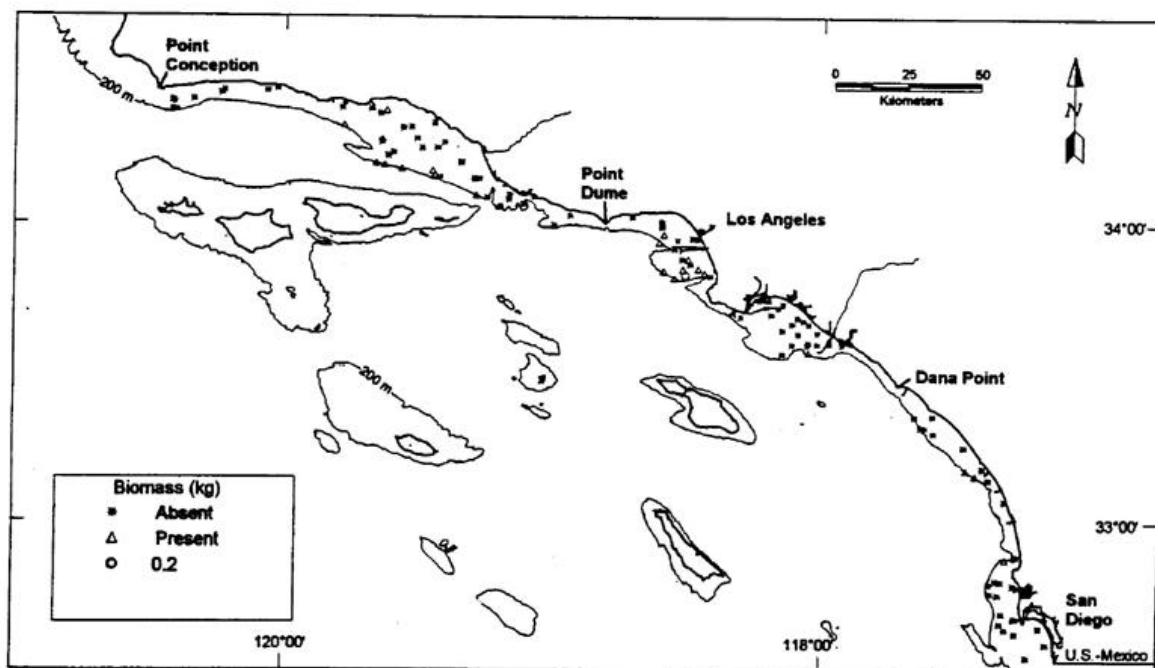

Appendix D22. Distribution of shortspined sea star (*Pisaster brevispinus*) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).

(a)

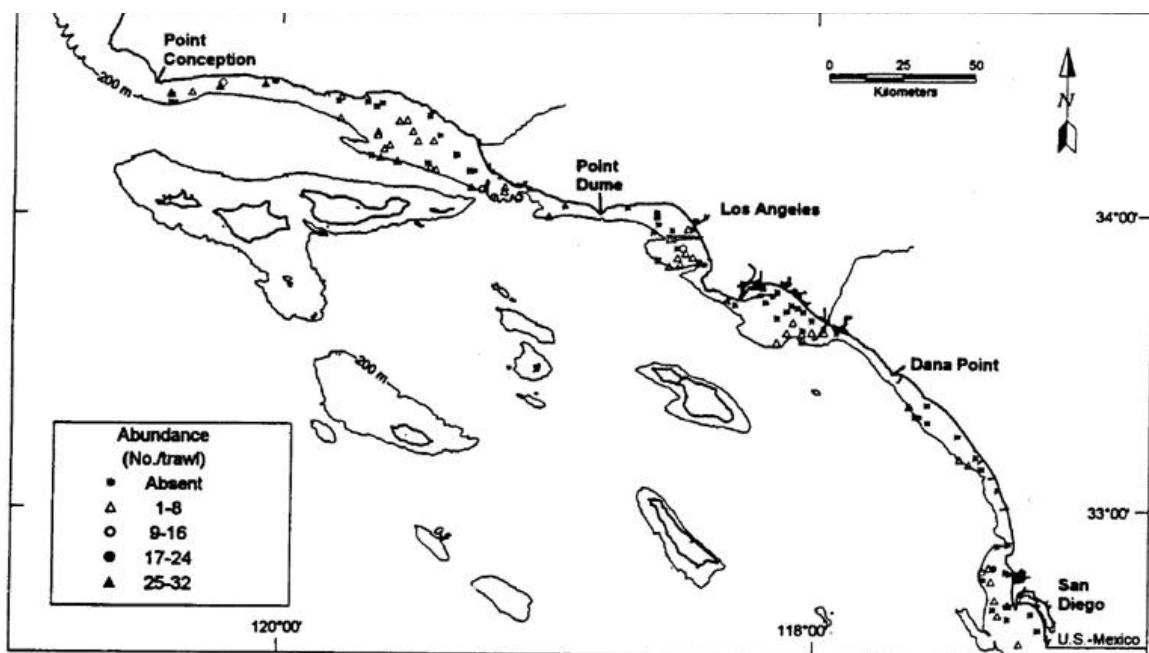

(b)

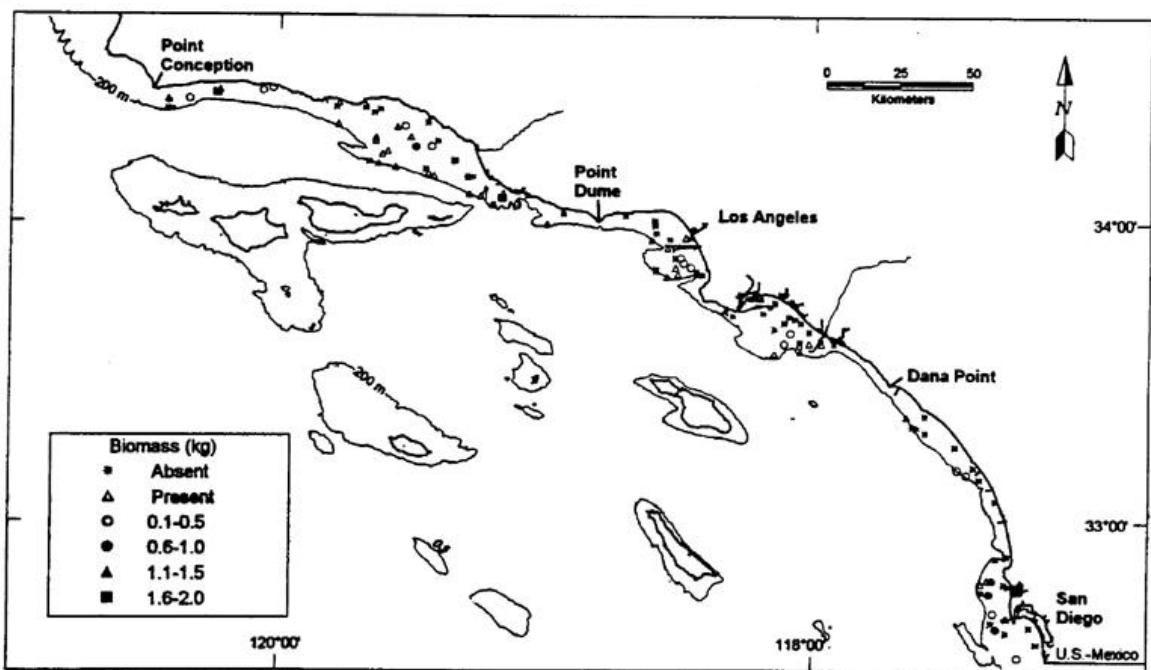

Appendix D21. Distribution of shortkeel bay shrimp (*Neocrangon zacae*) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).

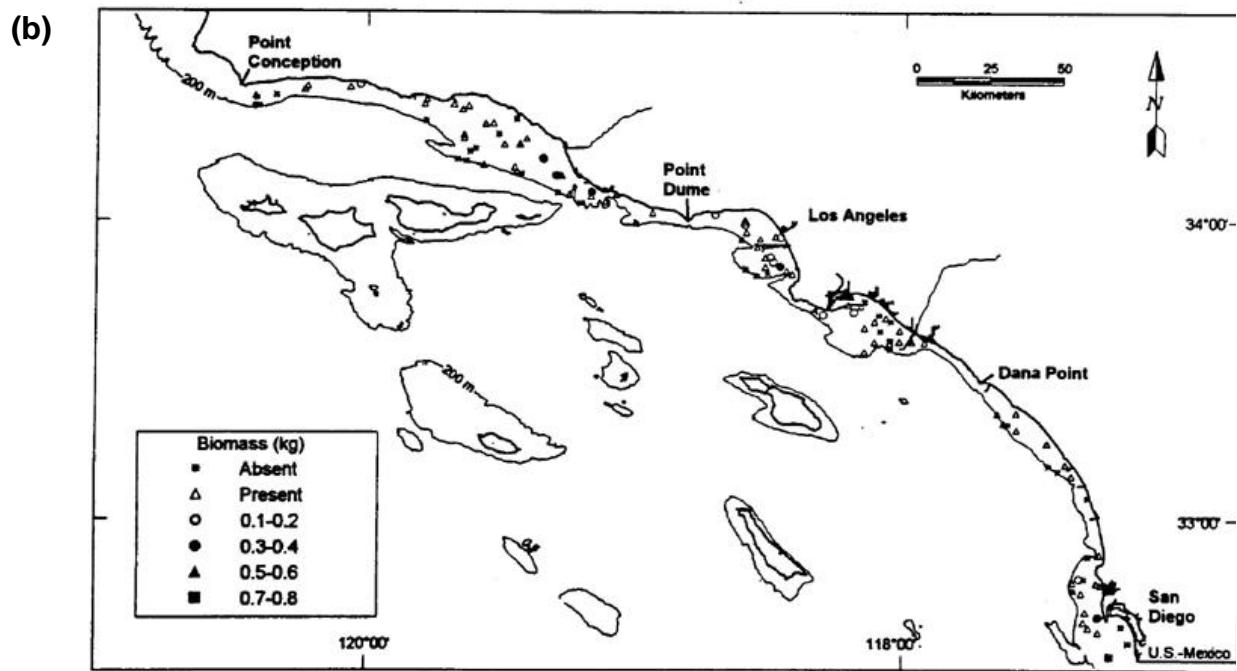

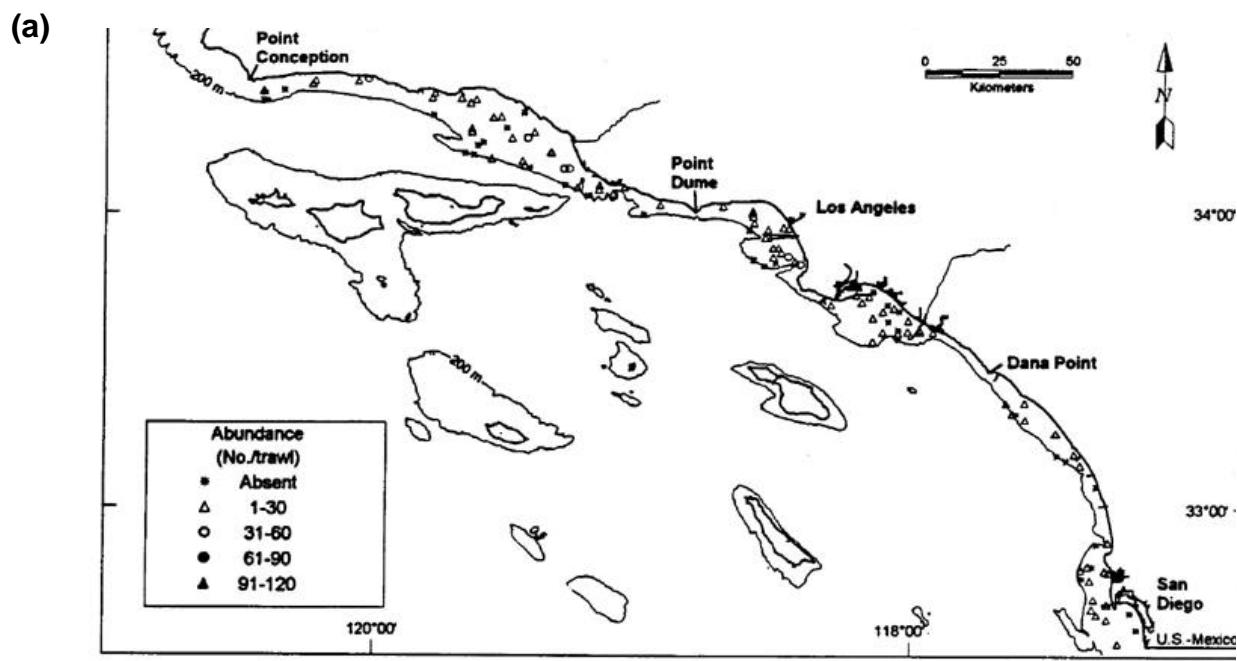

(a)

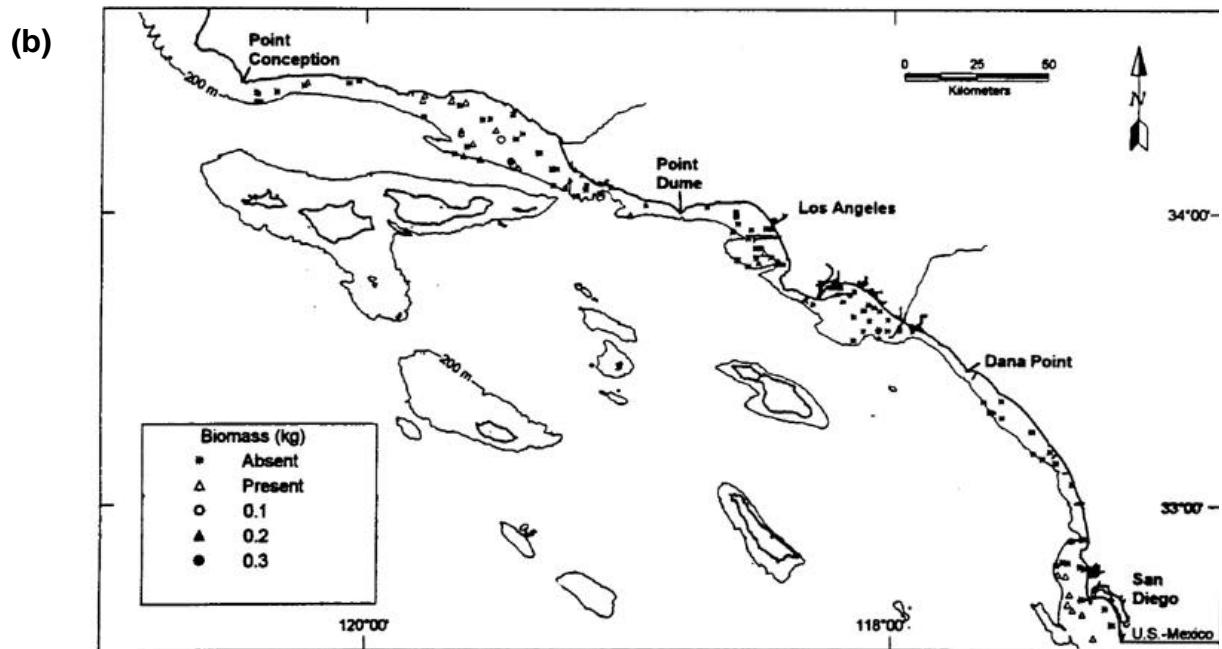

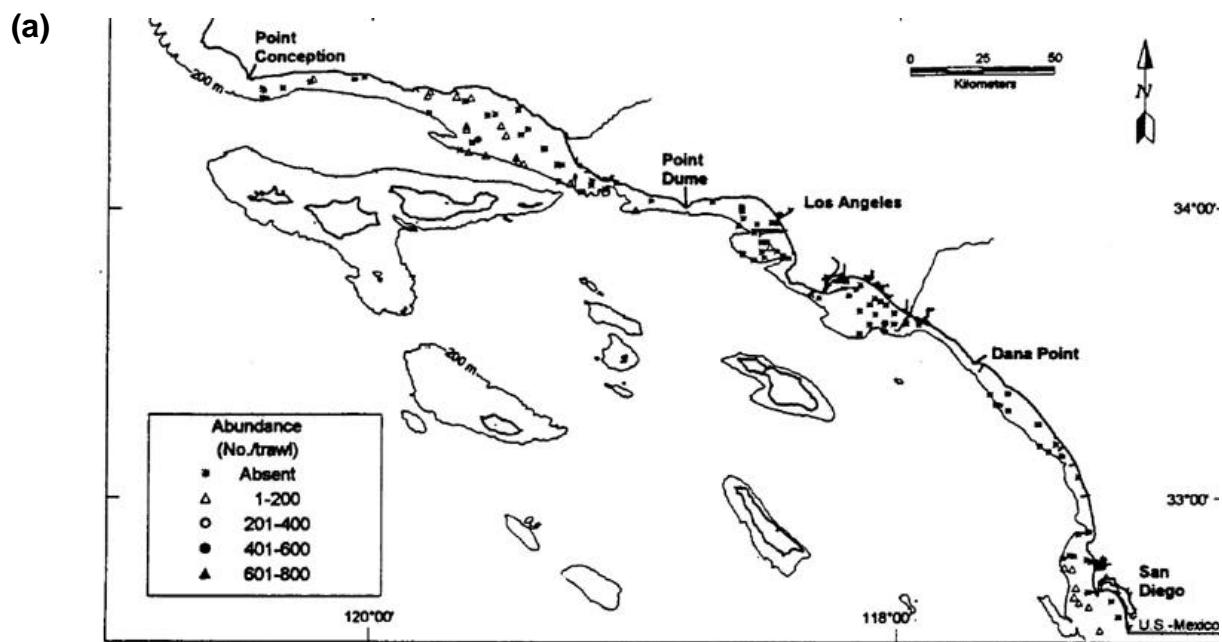

(b)

Appendix D20. Distribution of gray sand star (*Luidia foliolata*) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).

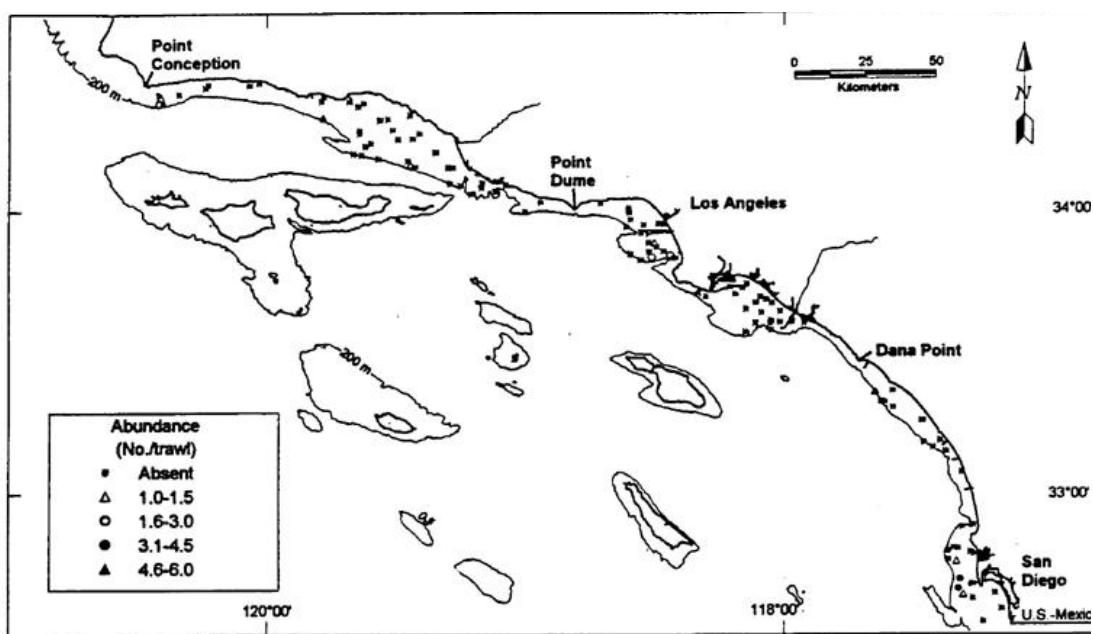

Appendix D19. Distribution of California san star (*Astropecten verrilli*) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).

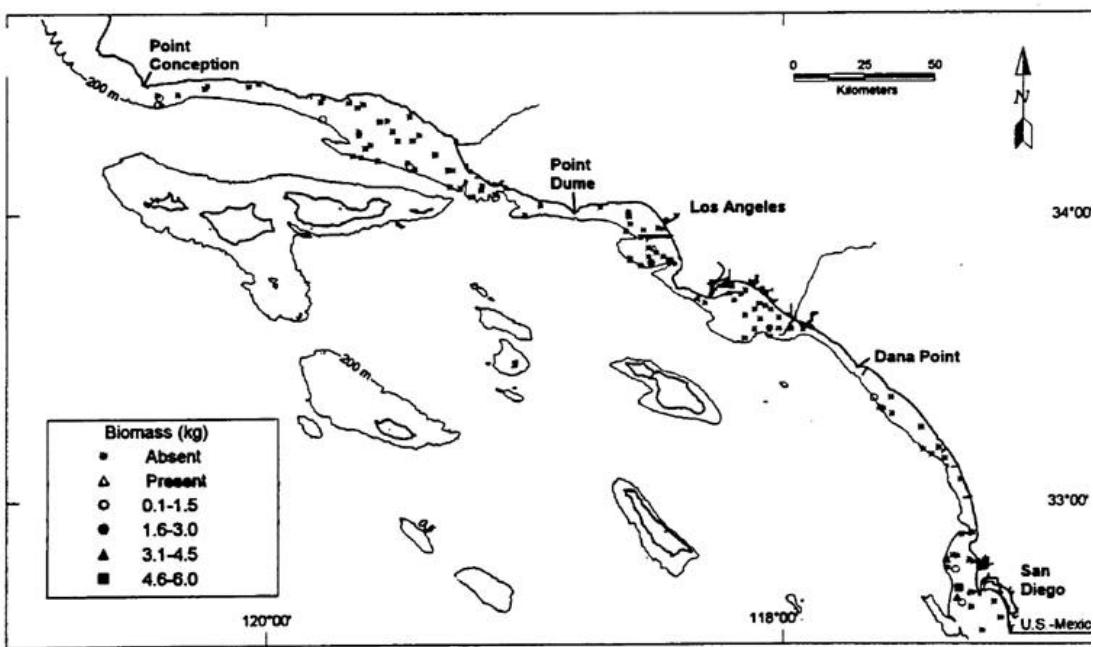

Appendix D18. Distribution of trailtip seapen (*Acanthoptilum* sp.) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).

(a)

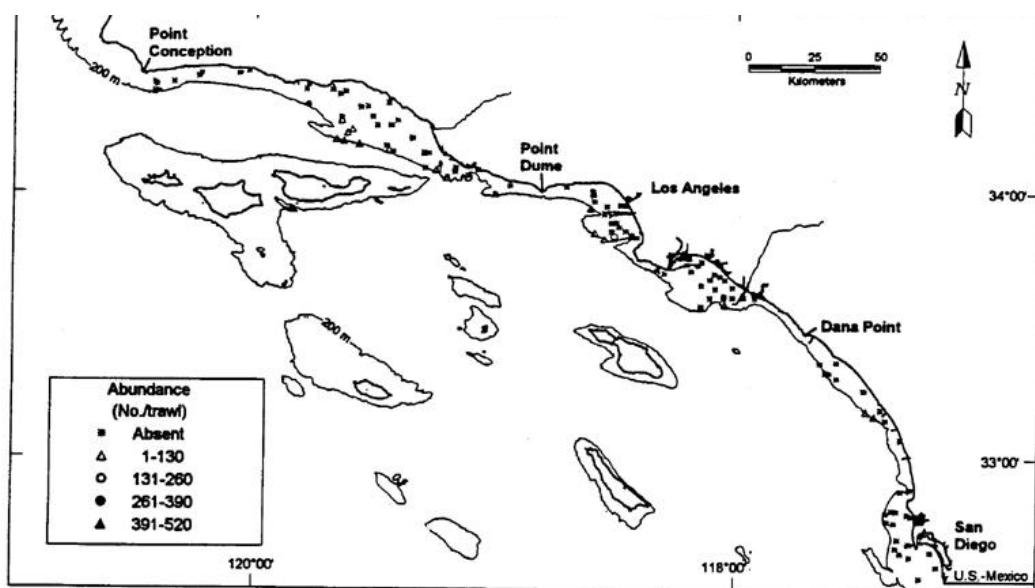

(b)

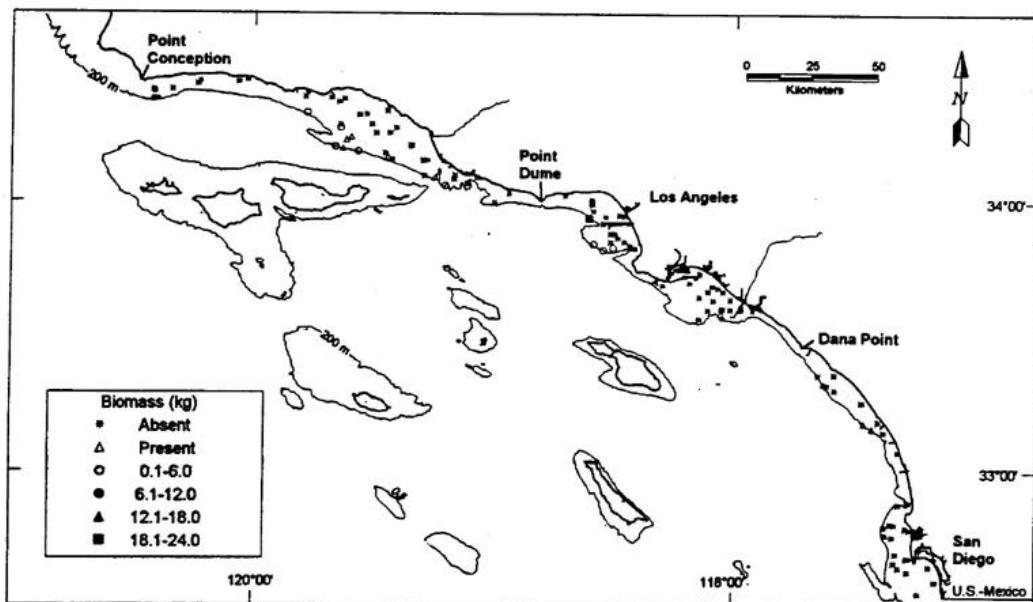

Appendix D17. Distribution of clonal plumose anemone (*Metridium "senile"*) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).

(a)

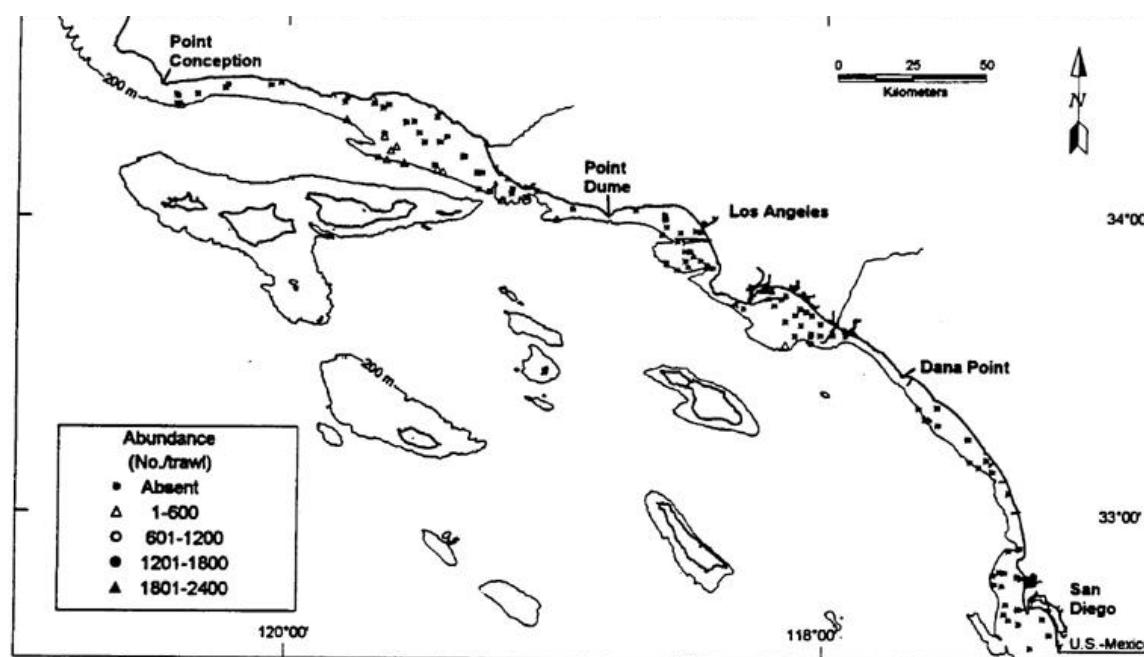

(b)

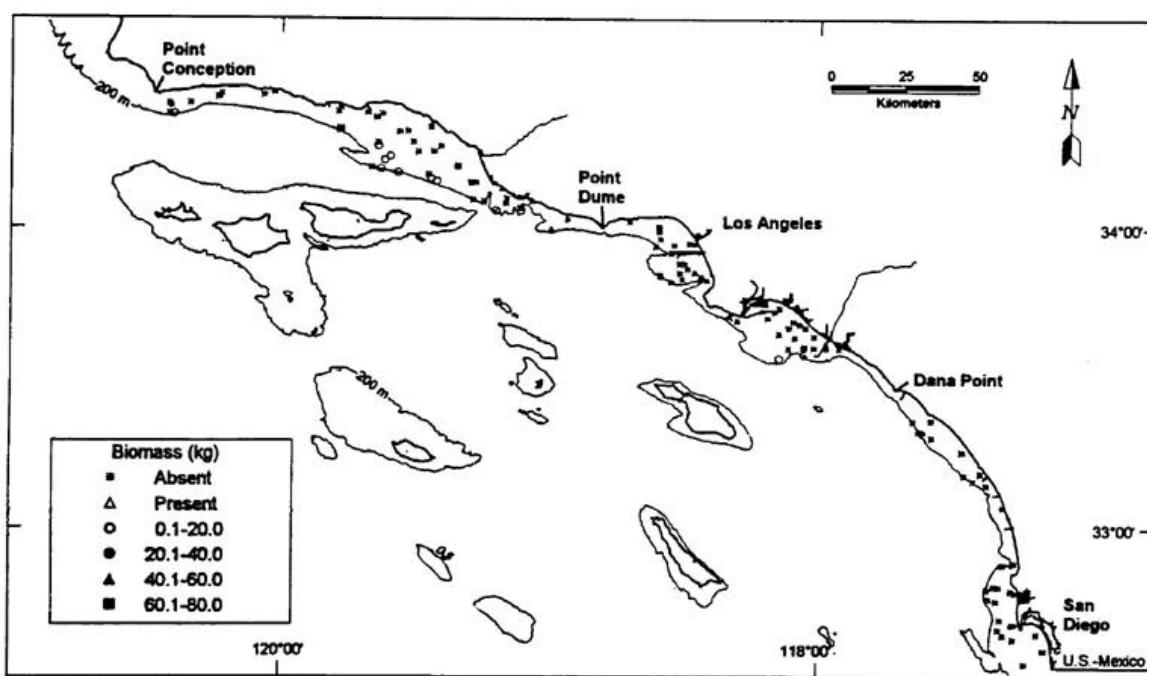

Appendix D16. Distribution of northern heart urchin (*Brisaster latifrons*) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).

(a)

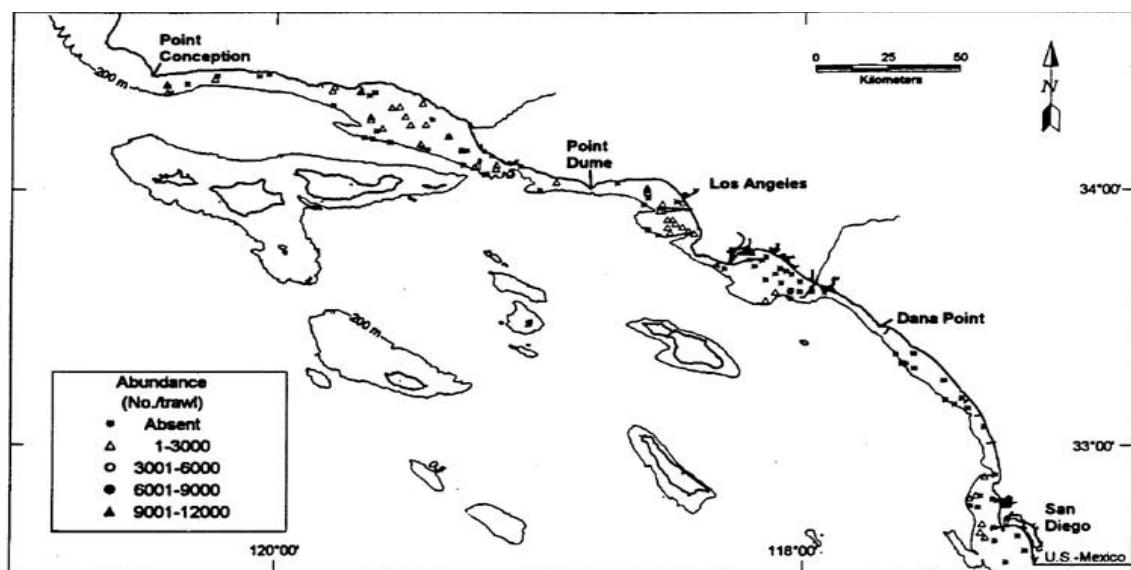

(b)

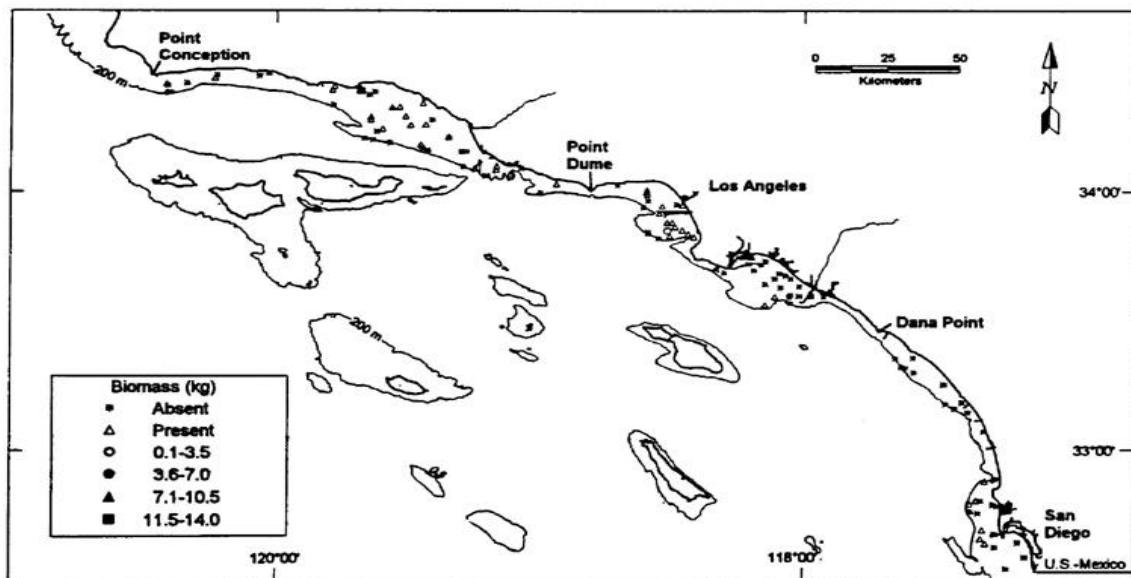

Appendix D15. Distribution of California sea urchin (*Spatangus californicus*) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).

(a)

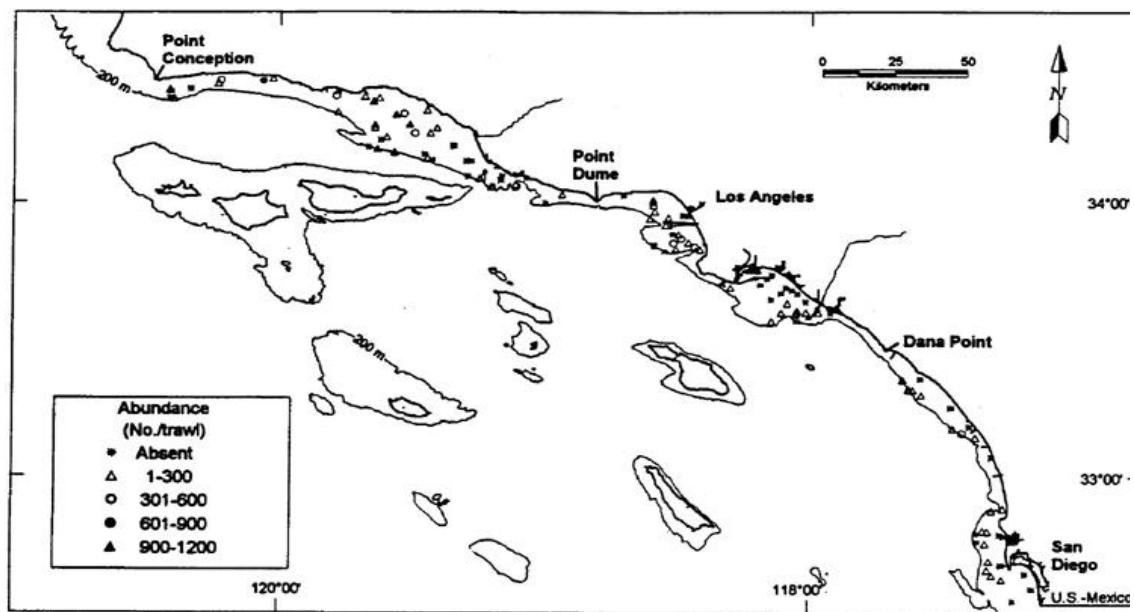

(b)

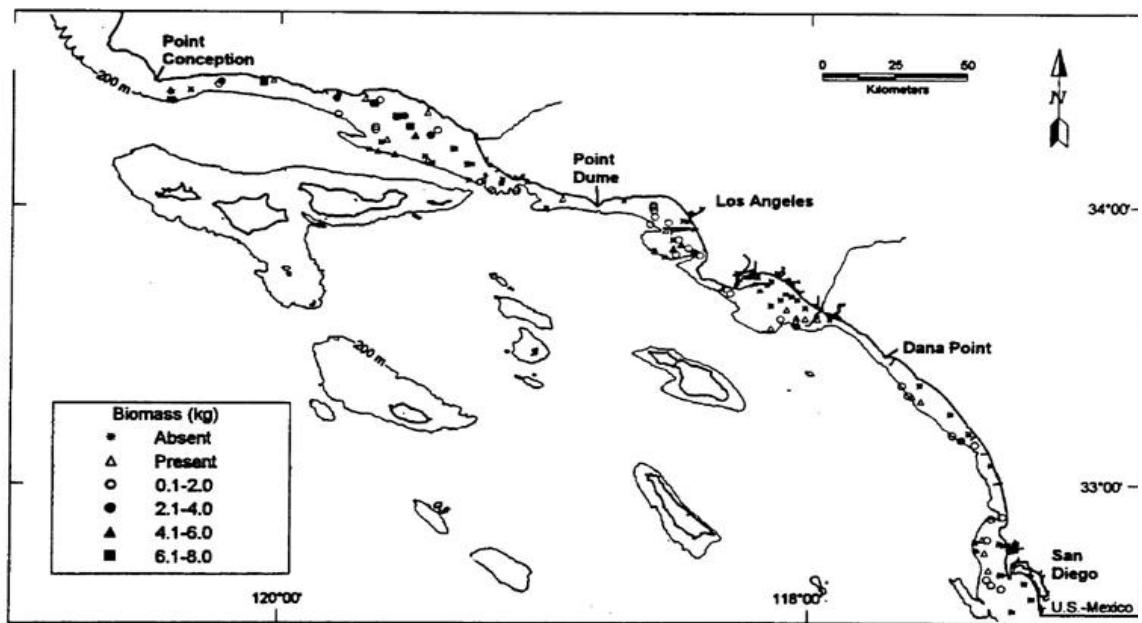

**Appendix D14. Distribution of brookenspine brittlestar (*Ophiura luetkeni*) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).**

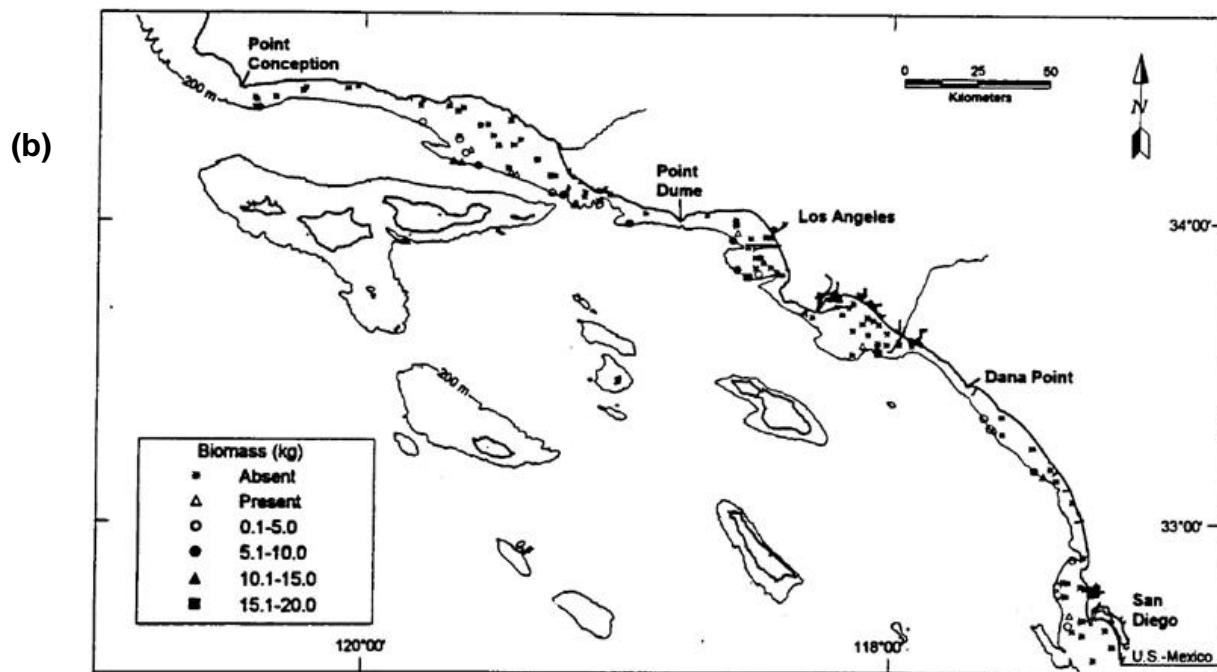

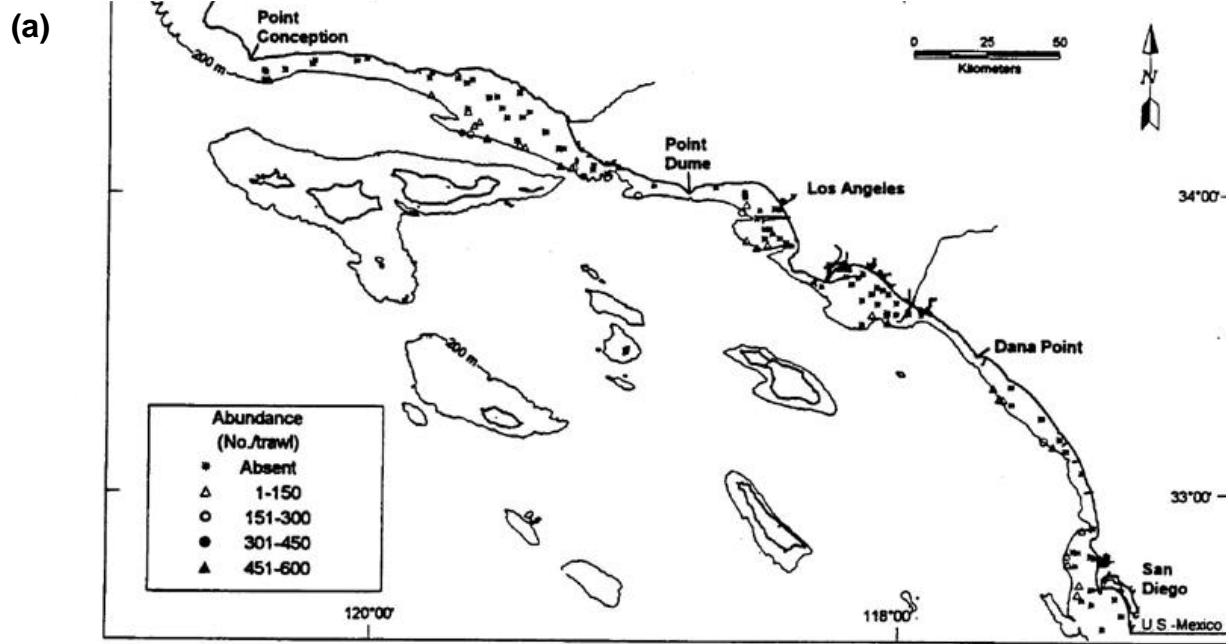

(a)

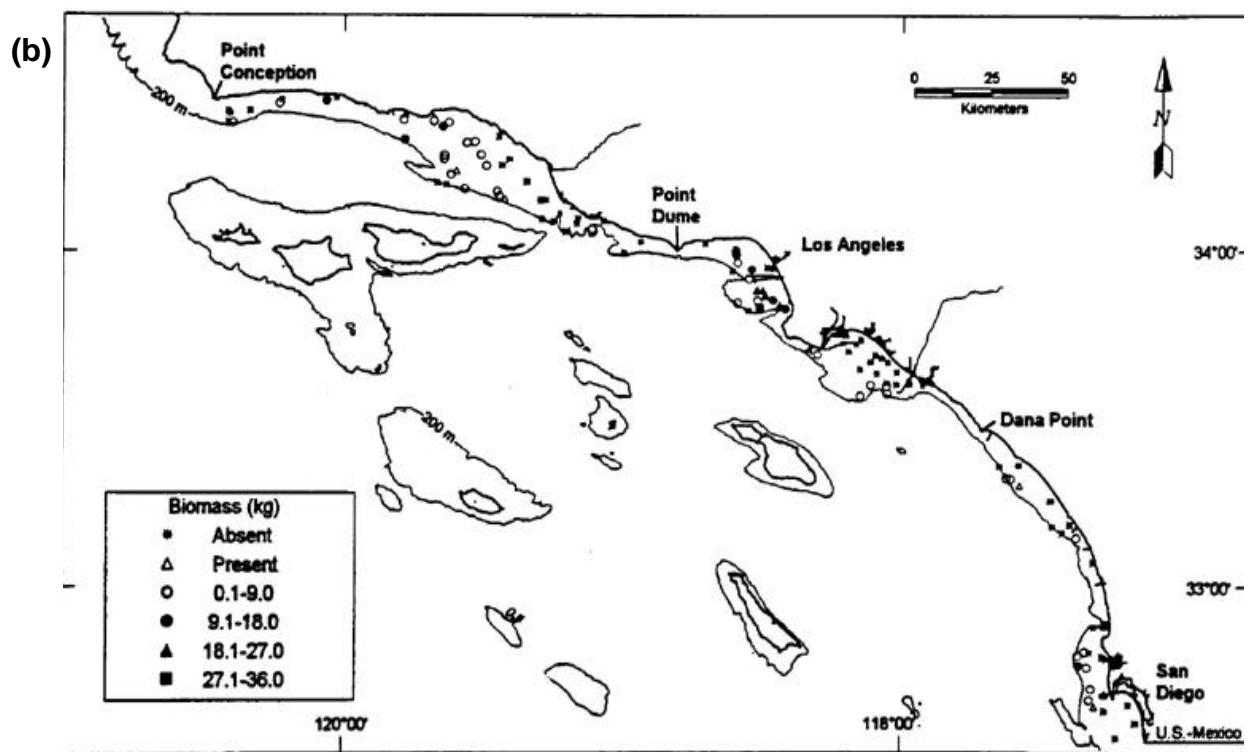

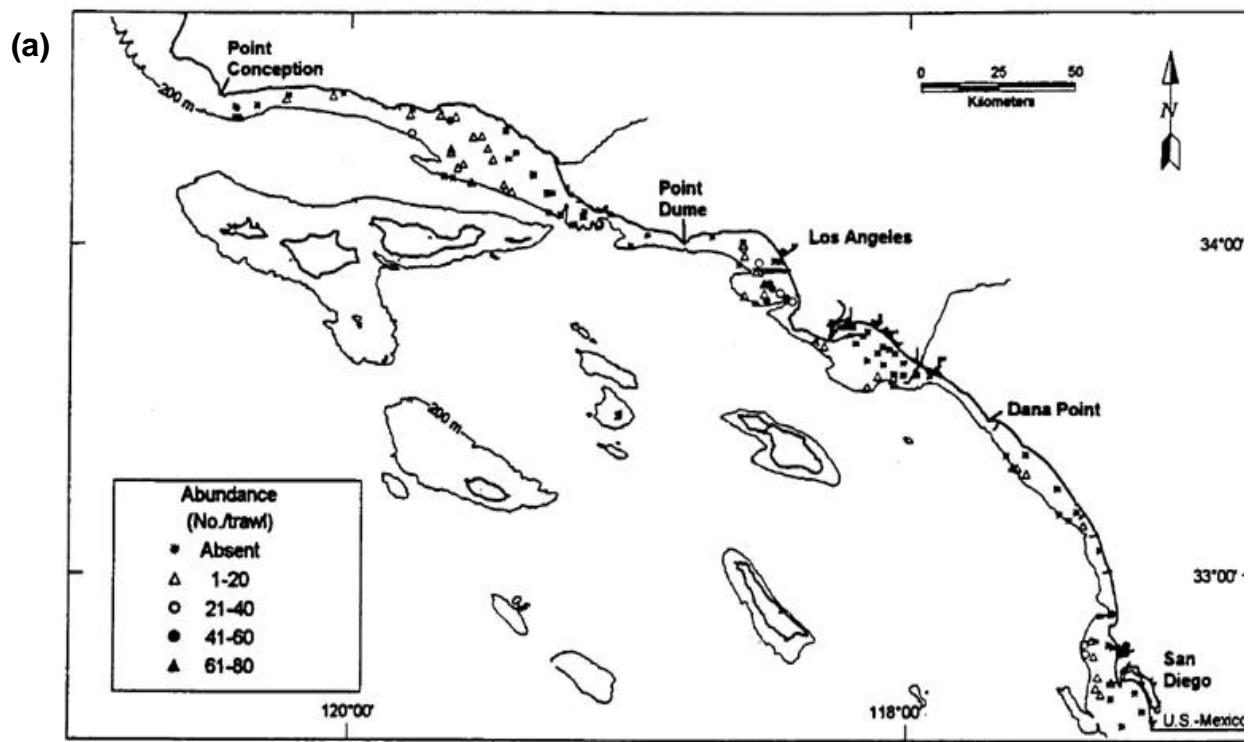

(b)

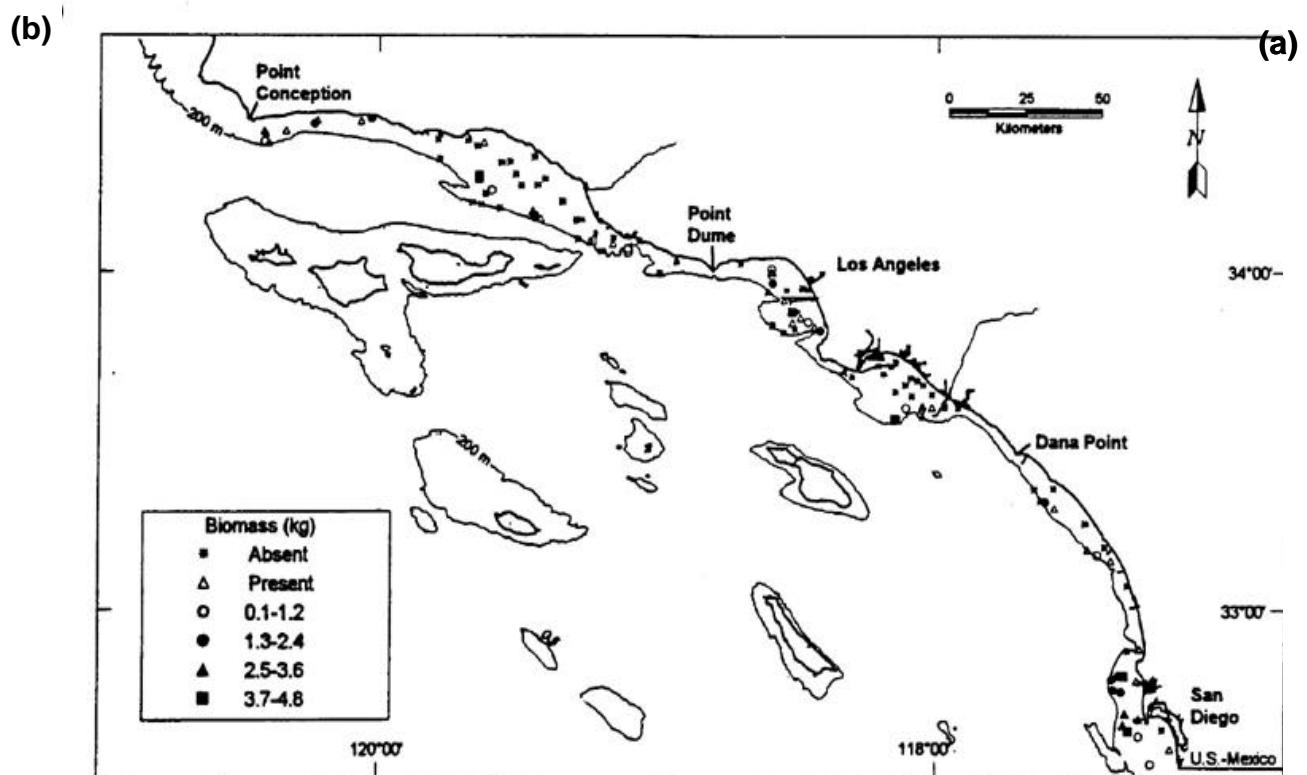

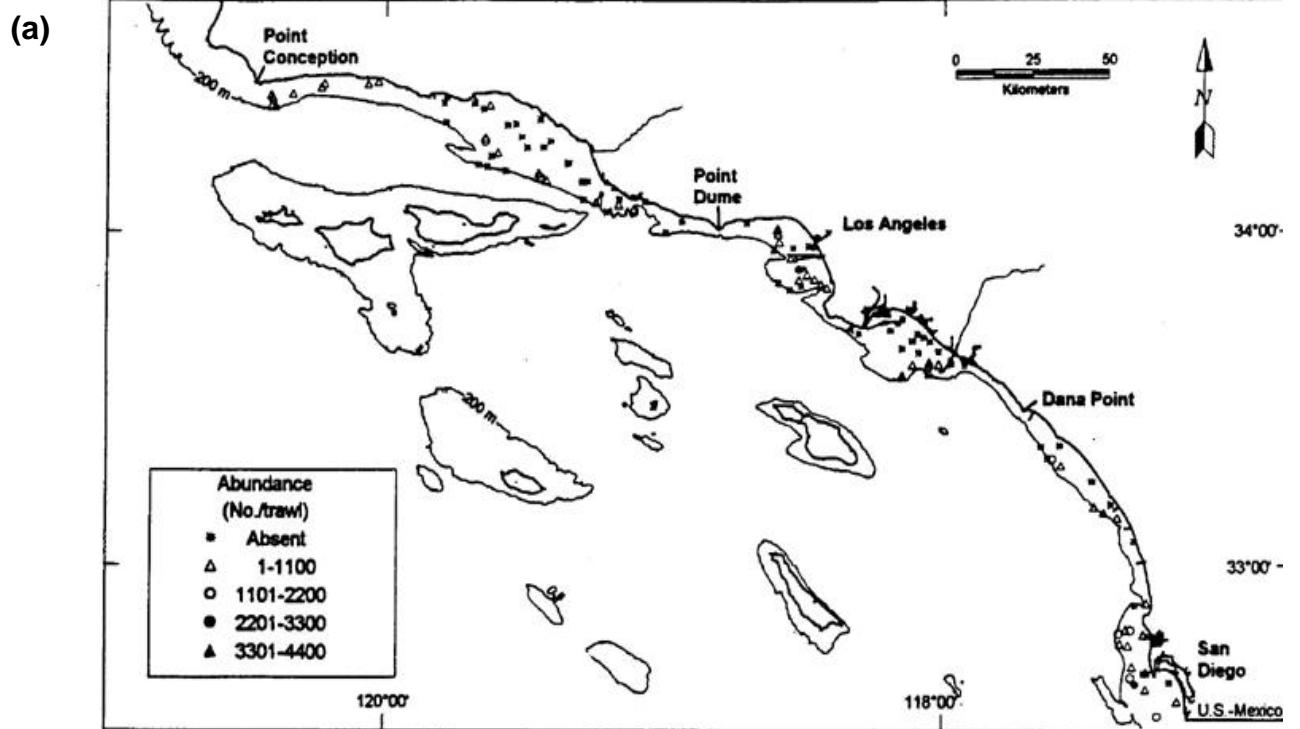

Appendix D13. Distribution of ridgeback rock shrimp (*Sicyonia ingentis*) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).

**Appendix D12.** Distribution of fragile sea urchin (*Allocentrotus fragilis*) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).

Appendix D11. Distribution of California sea cucumber (*Parastichopus californicus*) on the mainland shelf of southern California at depths of 10-200 m, July-August 1994: a) number of individuals per trawl and b) biomass per trawl (kg).

**Appendix D10.** Distribution of white sea urchin (*Lytechinus pictus*) on the mainland shelf of southern California at depths of 10-200 m, July August 1994:  
 a) number of individuals per trawl and b) biomass per trawl (kg).

**Appendix D9. Biomass (kg) by subpopulation for megabenthic invertebrate species collected in the regional survey of the mainland shelf of southern California, July-August 1994.**

POTW = Publicly owned treatment work monitoring areas.

N = Northern; C = Central; S = Southern; IS = Inner shelf; MS = Middle shelf; OS = Outer shelf;

P = POTW; NP = Non-POTW.

"0.0" indicates species that weight less than 0.1 kg combined.  
sp. = Species; unid. = Unidentified.
