I must admit, it is a labor of love. I enjoy looking in all the drawers, cabinets and display cases at every one of our beautiful fossils. We've added hundreds of new fossils this year and have reduced the price on some older ones.*

*It would be impossible for us to photograph everything. We are more than happy to send you a photo of anything you'd like to see.*

*Our friend, Leon Theisen is now conducting Trilobite hunts in his magnificent Devonian and Ordovician quarries. Plan on an all day adventure! You have my word, you will not be disappointed. Give me a call and I will put you in touch with him.*

*If you have any specific needs or want, and don't see them listed here, give us a call and we will do our best to find it for you. We look forward to hearing from you throughout the coming year.* Donna Russell

The following fossil insects are from Colombia, South America. Colombia produces the most fossiliferous amber in the world! Although, there is much debate about the age of this amber, we continue to believe it is Miocene in age. No one can date this fossil tree resin by any definitive tests. These tests are not available. There are people that will say the only true "amber" is from the Dominican Republic or from the Baltic Sea. Those people are usually financially invested. Geological Enterprises produces, markets and sells amber from all localities, including Dominican, Colombian, Baltic, Mexican and African. If we chose to call Colombian amber, copal, then we would call Dominican amber, copal as well.

The following fossils are from the Mt. Simon Formation of Wisconsin. They are thought to be Lower Upper Cambrian, 510 Million Years old. Fossils from this locality contain some of the best preserved jellyfish and trace fossils known on Earth. The Jellyfish are particularly outstanding as they are the largest jellyfish in the entire Fossil Record. One paper has been published on this incredible find. "STRANDED ON THE LATE CAMBRIAN SHORELINE: MEDUSA FROM CENTRAL WISCONSIN", G.S.A. February 2002.
