## ENGLISH VERSIFICATION.1

in Mildin Paulika Balance of the contract of

in since includes on the out that or into a whole,

In dealing with English prosody, as in dealing with nearly everything else, the historical consideration of the matter is the first and almost the last thing of importance. Applying this, we find that when anything that can be called English poetry, as distinguished from Old English or Anglo-Saxon, appears—that is to say, at a floating period somewhere between 1100 and 1200—the material—the vocabulary—of the verse-writer exhibits a very small admixture of foreign matter. Exact calculations on such subjects are apt to be deceptive; but the best authorities agree in estimating by scores, rather than by hundreds, the number of words, not native or imported before the Conquest, in the very long Brut of Layamon, the first really considerable piece to be found

¹ There are few more controversial subjects than that of English Prosody: and a very large proportion of the statements now to be made are of a controversial character. In the space available, no support of arguments—hardly even any great number of provisos and qualifications—is possible. The writer hopes, therefore, that those who disagree will accept the preliminary assurance—first, that their opposition, though passed by in silence, is not in the least ignored or pooh-poohed; and secondly, that every statement here made is ready to be justified in the proper place—an elaborate History of English Prosody on which he has been long engaged.

in Middle English. In the versification, how-ever, as distinguished from the diction, things are decidedly different. The Anglo-Saxon poetry, which had begun to exhibit signs of decay before the Conquest, had been governed by a system of prosody quite well marked and sufficient after a fashion: but extremely different in rhythmical effect from any modern English poetry, and, from the point of view of that poetry, hardly exhibiting any metrical effect whatever. Long before the Conquest in one case, however, and for some time before it in the other, most educated Englishmen had been confronted with poetical exercises in two foreign languages—Latin and French: while influence may have been also exerted (though to an extent negligible for our present purpose) by other languages still. In both forms of Latin verse—the older quantitative and the younger accentual—and in French, the arrangement, not only rhythmical but metrical, of corresponding prosodic values in lines and sets of lines, was noticeable after a fashion similar in general, with whatever differences in particular, to that of modern English poetry.

The earlier history of English Versification is the history, not exactly of a struggle between

The earlier history of English Versification is the history, not exactly of a struggle between native and foreign rhythm, but of the native material of language adapting itself to the pressure of the foreign moulds, and modifying those moulds themselves by the spring and "thrust" of its natural qualities. We see the process going on in the very earliest and vaguest scraps of verse—the fragments of St. Godric and the like—which have come

down to us from the twelfth century; we see it in the great romance-chronicle just men-tioned at the meeting of the twelfth and thirteenth; and soon afterwards in perpetual progress. But this progress is complicated by the fact that the stuff of language itself also undergoes perpetual modification. In the purely English constituents inflections drop off, accent frequently changes, the morphology of the whole dictionary is profoundly modified; while, if not from the very first, from a tolerably early period, large drafts are being constantly accepted from French and Latin, and smaller ones from other languages. The shaping process is thus almost infinitely complicated: and it requires the most minute and patient investigation to be certain about its stages. Something of such investigation, however, has actually gone to the formulating of the following account. the property of continued at m

Of the three prosodies which have to be taken into consideration, Anglo-Saxon had been distinguished by an extremely elastic system of syllabic equivalence—groups of syllables arithmetically unequal being regarded as rhythmically equivalent, after a fashion the regularity or haphazardness of which does not matter to our present investigation. Classical Latin, following Greek, also observed this system of syllabic equivalence: but in a very different way, and under the control of a very severe and scientific arrangement of quantity. Low Latin verse, as a rule eschewing this system of equivalence, and substituting accent for quantity, had gone near to syllabic uniformity:

and this syllabic uniformity had been rigidly adopted by French. Further, rhyme, non-existent in Anglo-Saxon poetry proper, and, though existent, a mere accident in classical Latin verse, had become very prominent and almost universal in accentual Latin, quite universal—either in the form of assonance (vowelrhyme) or in the full form—in French. These were the alternatives, conditions, or whatever word may be preferred, which presented themselves to the Middle-English poet of the twelfth and thirteenth centuries.

From the very first the result worked itself out in an example of the correlation and composition of literary forces which is one of the most interesting things in literature. By looking both ways—from earliest to latest and from latest to earliest—we can distinguish a new form of verse, characteristically English in its blended originality, which takes the general rhythmical forms of Low Latin and French, but which adapts them to, or adapts to them, the primæval English tendency to syllabic equivalence. Sometimes, as in many examples from Godric onward, the poet seems, in a blind way, to be directly striking out and struggling towards such a model. Sometimes (here Layamon is the chief example in more than bulk) he seems to wish to produce something like the old Anglo-Saxon divided stave of a merely rhythmical character, and to be irresistibly lured into the new metrical couplets, with or without rhyme. The most prominent metrical form that at first emerges—that differently called the rhymed iambic dimeter,

the octo-syllabic couplet, and the four-accent distich—displays itself sometimes in a fair imitation of French rigidity, sometimes with a leaning towards English equivalence. This latter results in the anticipation of the famous Christabel metre by the unknown author of a version of Genesis and Exodus, and by others towards the middle of the thirteenth century. Practice increasing, both precision and variety increase with it. The great predominance of the short couplet in those French romances which, as the most interesting part of attainable literature, supply the original of so much of Middle English, makes this a kind of staple; but stanzas of a more elaborate kind are also borrowed from French and Provencal. Some years—even some decades—before Chaucer was born, we find English possessing a very large quantity of still extant verse, varying at first sight in metrical exterior to the highest degree; but (with the beginning of an exception to be noticed presently) quite uniform in general metrical principles. These principles are that the "lines," or most obvious metrical integers, possess a definite rhythm based on what is called double and triple time; that these integers are made up of corresponding or proportionate fractions to which it has been usual to give the name of "feet," though some object; that they are as a rule tipped with rhyme, whether in simple sequences of pairs or in more complicated sets called stanzas. It is upon the nature and constitution of these fractions that the hottest and most irreconcilable difference prevails among prosodists. Some prefer

to regard them merely from the point of view of the accented syllables which they contain, while others consider them as made up of "long" and "short" syllables precisely as classical feet are, though not combined on quite the same systems; and yet others hold different views. Neglecting these differences as far as possible, we may say that the most reasonable members of all parties would probably agree that the correspondence of the "lines," the composition of them by the fractions (waiving the principle of composition of these) and the position of rhyme as a timebeater, couplet-and-stanza-maker, and general accompanist to the piece, were all perfectly established and copiously exemplified by the close of the thirteenth century in England. One great and famous form (the "decasyllabic" "five foot," etc., couplet) had as yet made its appearance scarcely at all, and probably by accident only when it did appear: though the decasyllable itself was quite familiar for centuries past in French.

This constant imitation, however, of French and of the Lower Latin carried with it not merely invaluable virtues, but considerable dangers. Both these prosodies, it has been said, tended to the adoption of a strict syllabic uniformity of line, a uniformity possessing its own attractions, but fatal to the variety and intimate-intricate appeal which are the great charms of matured English poetry. Absolute surrender to it had been staved off, partly by the inherent tendency towards equivalence which has been noticed, but still more by the

mere inexpertness of the artists, whose very blunders had a good effect. As, however, they grew more expert, there was a greater approximation to rigidity: and though in Chaucer equivalence is actually present, it is not present as often as it might be, and in octosyllables and stanza forms is generally absent. For-tunately a counter-tendency was aroused by a singular reaction 1 (the fact of which is undoubted, though the exact causes, dates, and so forth are very obscure) towards alliterative-accentual rhythm instead of metrical rhyme. The two currents, indeed, crossed and blended in numerous instances: but some very great work, such as the greatest of all the class, the Vision of Piers Plowman, and the brilliant Twa Maryit Wemen and the Wedo of Dunbar, have no rhyme, no regular stanza, and consist merely of long swinging lines, irregular in syllabic length, alliterated on three or more syllables, and shewing a general rhythmical uniformity and a pretty distinct middle pause, but not any metre in the strict sense. This tendency, as a separate and distinct one, exhausted itself about the end of the fifteenth century or quite early in the sixteenth. But in literature to no small extent, and in folksong and saw (especially in the Northern parts) to a still greater, it preserved the liberty, the variety, the restless throb and thrill of the English line.

<sup>&</sup>lt;sup>1</sup> Or, as some hold, a last stand of something continuously pre-existent. This is one of the points which must be waived, with others dependent on it, such as the amount of spontaneity in the later alliterated examples.

The remaining historical stages must be stated briefly lest we spend too much space over them; but they must be summarized.1 The process of blending or moulding which has been described, reached its first stage of perfection in Chaucer himself, whose work, for a century and a half, was actually and directly imitated. But meanwhile the language had grown much and altered still more: and the Chaucerian prosody required considerable modification. This was effected by the great Elizabethan school, Spenser making a fresh climacteric point in non-dramatic poetry, and the use of blank verse by the dramatists supplying an invaluable influence in lissoming, varying, and giving pulse to verse generally. In the weaker hands of the later playwrights these licences were pushed too far: and a little after the middle of the seventeenth century it became necessary for Milton in one way, and Dryden in another, to tighten up the springs again. But the result of this tightening was a recrudescence of the mistake about syllabic uniformity, which dominated the eighteenth century, and the correction of which was one of the greatest works of the early nineteenthcentury school of poets, especially Coleridge. For a hundred years, though theories of prosody have diverged almost as much as they have multiplied, there has seldom been any attempt in theory, and still seldom on the part of poets

<sup>&</sup>lt;sup>1</sup> Every sentence of this paragraph could be expanded into a chapter by giving chapter and verse for its contents.

of any great position in practice, to recur to the rigid numbering of verse by syllables.¹

But, though it is impossible to understand the actual system of English versification without understanding its history—though nearly all the mistakes and misconceptions on the subject have arisen from historical ignorance. ance—we are, in this brief space, bound to turn from the process of evolution to the product evolved. What is the system of English verse, as we find it actually or recently in Tennyson and Mr. Swinburne—as we have found it developing from the very first, and more or less developed for at least six hundred years? In the only scheme which seems to the present writer to adapt itself to the whole material and the whole conditions it is as follows:—

In the first place—the truism, though an insult to the reader, is a methodical necessity—verse, in general, is distinguished from prose by the fact that its divisions are not conditioned by sense, but by an arbitrary arrangement of words which has nothing necessarily, and in some of the very best poetry has little actually, to do with sense at all, and is entirely concerned with sound. Next, the conditions of this arrangement are two-fold. The first and most important concerns the aggregation of certain minor integers into a major which is called the "line" and (more equivocally) the "verse"; the second concerns what is also

<sup>&</sup>lt;sup>1</sup> Some interesting and not unimportant "sports" of the matter, such as the constantly renewed but always unsuccessful attempts at imitating classical *metres* (especially the dactylic hexameter) must remain unnoticed here.

sometimes called the "verse" in another sense, receiving also the titles of "stave," "stanza," "couplet," etc., etc. This latter may consist of simple pairs or larger blocks of more or less similar lines: or it may be built up of lines of various lengths and compositions in combinations sometimes pretty simple, sometimes extremely complex. One very powerful and important instrument in the construction of these combinations, from the couplet onwards, is in a sense external to the line, or at least superadded to it. And that is rhyme: or the selection, for the final syllable or syllables, of identical collocations of vowels and consonants. But the main tool or means of couplet-andstanza-building—a means which, though to its loss, can at a pinch and by a tour de force dispense with rhyme altogether—is the proportioning and correspondence of the internal constitution of the line itself. In other words, the same laws which govern the construction of the line govern, in a further adjustment and application of them, the construction of the stanza, from the ode-strophe of a score or more of lines, intricately harmonised, to the simple couplet. It is, therefore, on this construction of the line that everything depends: it is the Alpha and the Omega of the whole matter. To it we must devote most of our space, dealing more briefly with rhyme itself, and with the subject (in details vast and endlessly interesting, but in main principle pretty simple) of stanza-building.

There is not, in English poetry, any hard and fast limitation of the length of the line; but

there are certain conditions which are practi-cally operative. There is no reason for excluding, as some have excluded, very shorteven monosyllabic—lines, which are some-times extremely effective; but their very effect depends on the comparative rarity of their, occurrence. There is more for regarding with scanty favour extremely long lines. They are not impossibilities or monstrosities. Some poets, especially Mr. Swinburne, have made verses of nearly a score or thereabouts of syllables possessing great beauty. But even these, and much more less successful specimens, suffer from the obvious drawback that they break themselves up into parts which are in fact wholes, and which comply much better with the demands of the voice, the ear, and even the eye. In particular, these long lines are constantly driven to invoke the powerful, but treacherous, aid of internal rhyme—which is a most disintegrating and revolutionary thing. The so-called "fourteener" which may with double rhyme be a fifteener, and which is one of the oldest metres in English, is about the longest really feasible: and even this, without very skilful handling, is apt to break up into an eight-and-six or eight-and-seven couplet.

But this is all comparatively plain sailing. The central knot, the crux, the battle-field, the bone of contention—a hundred other phrases may be applied to it—is the principle on which these aggregations of words or syllables are differentiated from prose—made to become "lines" in themselves, and to be fit material for the construction of couplets and

stanzas. Once more, it is equally impossible to enter into, and inconvenient to abstain from, an exposition of the controversies on the subject. To the present writer, the whole matter of English poetry, from the twelfth century to the twentieth, appears to be capable of exposition on the following principles.

In the first place, the ear recognizes for itself, or is made to recognize by the sleight-of-hand of the poet, one broad distinction of value between syllables—the distinction which is denoted, in classical prosody, by the terms "long" and "short." It does not, for the present purpose, matter in the very least what is the exact cause of this distinction, or the exact means by which it is produced. Those who say that the two classes of syllables take, as it may be, longer or shorter time in utterance; those who say that they are uttered with sharper or graver tone; those who assign to them lighter or heavier weight, louder or softer sound, thinner or denser substance—may be all right, or all wrong, or all partly wrong and partly right. But everybody (if he would only admit it) recognizes the fact of the broad difference. So also there may be infinite degrees of "length" and infinite degrees of "shortness," or few such degrees, or none at all: but this again leaves the main distinction untouched. And so, once more, there may be in different languages larger or smaller proportions of common syllables—that is to say, syllables which are capable of being treated as "long" or "short" in different situations and collocations. But this also is a previous, or a subsequent, question.

We are therefore left—if we choose not to follow vain imaginations and stick to our Corpus Poeticum itself—with the poet and his hoard of words—words consisting of syllables which differ from each other in this one great characteristic, and which accordingly provide him with the means of playing upon it to produce harmonies and symphonies of verbal sound. His having only two values in the wide sense (no doubt he is helped by the subdivisions above glanced at) may seem to a hasty judgment restrictive: and it would be so if very short lines were continuously used, this being, in fact, the main reason against them. But in a line of eight or ten syllables as norm, the possible permutations become very considerable, especially when assisted by that great and characteristic principle of English Poetry to which we have given the name of Equivalence. Here another place of danger is reached. There have been periods—long and important

Here another place of danger is reached. There have been periods—long and important ones—where this principle of equivalence (or the substitution of two short syllables for one long one 1) has been strenuously denied. Probably at all other periods—including the present not probably but certainly—there have been and are persons who have denied it. But they have never been able to support the denial except on the one hand by arbitrary exclusion or con-

xvii b

This principle is usually so stated: but, though approximately, it is only approximately true. Both in classical and English equivalence one long and two short are accepted as—one long and one short, and so on. In other words, the equivalence is elastic, not rigid—acoustic, not arithmetical.

demnation of some of the best things of the greatest English poets, and on the other by eccentric and unnatural devices of elision, extrametrical syllables, and the like. On the principle of Equivalence itself no exclusion is necessary on the one side, and no force or trick on the other.

We have, then, our poet with his stores of "long" and "short" syllables (ordinarily of course not separate, but, though mixed in the same word, separable for purposes of thought) and the principle of equivalence for means: with the composition of a line, presenting identical or varied but corresponding harmonies within itself and to other lines, for end. But he cannot strike his line off en bloc. As it is always reducible to two main groups of material (which, if anybody objects to "long" and "short," we are perfectly ready to call "black" and "white" or anything else), and as it has to correspond with other combinations of these groups, it will, except in miniature instances, subdivide itself into lesser sub-integers. To these sub-integers the old, and one would think very inoffensive, name of "feet" has generally been given, by an obvious and innocent metaphor—they being what the line (verse) runs upon. The word, however, has by partisans been thought to carry with it too much questionbegging adherence to certain theories, and others have been proposed. "Isochronous interval," the most recent, I think, of these, is not without merit, but is a little clumsy and open to some cavilling about "interval." "Space" by itself might do: but is really unnecessary. At

any rate, call them feet, spaces, isochronous intervals, or abracadabras, every English verse can be divided up (unless it is so short as only to admit one of them) into so many groups of "long" and "short" syllables which have metrical correspondence with each other in the line and in other lines. The number and nature of these groups is as controversial as most matters in the subject, but rather less acutely so; while the names for them become again a question of partisan battle to the death. As we have well-recognized and well-defined Greek names for every possible combination of the kind from two syllables up to five, it seems to some that there can be no possible harm in accepting them, without in the least binding the adopter to maintain that the English combinations correspond in all respects to the Greek and the Latin, and with a very express proviso that he does not admit all or many Greek and Latin arrangements of them in line. Others detest and execrate the very names. But once more, call the name iamb or abracadabra, trochee or tomfool, the thing is there from the Brut to the Barrack-Room Ballads.

Monosyllabic feet do exist in English<sup>1</sup>: but as a kind of metrical fiction—emphasis on the single syllable, or pause after or before it, making them colourably dissyllabic. On the other hand, it is very doubtful whether any feet of more than three syllables really exist in English at all;

<sup>&</sup>lt;sup>1</sup>It may even be said by a not too paradoxical hyperbole that feet of no syllables at all exist, in the shape of very long and emphatic pauses. But these are quite exceptional.

they are never needed in order to "scan" a single normal piece of English poetry. Further, it seems that those who deny the pyrrhic, or foot of two short syllables, to the English verse. or the English vocabulary, are right. It is yet further doubtful whether those who allow some of the classical tri-syllabic groups such as the cretic (long, short, long) and the amphibrach (short, long, short) are not unnecessarily liberal. English, I dare say, will not tolerate more than the equivalent of two long syllables in any foot; and the supposed amphibrachic metres can generally be scanned as anapaestic (short, short, long) in base. This last foot, with the iamb (short, long) and the trochee (long, short), are by far the most common; indeed, it is exceedingly rare that it is necessary to bring in any other except the tribrach (three shorts) which, despite frantic denials, has always been known, and for the last century has been very common. great constituents of the best known classical verse, the dactyl (long, short, short) and the spondee (two longs) are in a somewhat dubious position. The attempts that have been made to drag them into English in order to construct metres not naturally English at all, hardly But there certainly are spondees in the English vocabulary, and in English heroic and other verse; and the dactyl is not infrequent in separate words, though it has a constant tendency to tip itself up and disintegrate in combinations.

Besides the "feet" or "spaces," there is another thing which emerges very noticeably in English verse; and that is what is called the

"pause"—a tendency, that is to say, to make the close of a word coincide, not necessarily with a "stop" in the grammatical or logical sense, but with some important point in that sense, some minor grammatical division, or even some artificial break purely for the sake of the voice or the rhythm. Among the most prominent heresies about English prosody has been, at more than one time, the belief that this pause almost necessarily must be, and as far as possible should be, near the middle of the line. To this, which was a corrupt following of classical, and still more of French practice, the usage of many of our greatest poets, notably of Shakespeare and Milton, is directly opposed; and it is, in blank verse, almost fatal. Only by the widest possible liberty of pause, omitting it altogether where necessary, and putting it at any syllable from the first to the ninth (where it is used, say, in a decasyllabic line) can the astonishing variety and harmony of blank verse be achieved:1 while the omitting of it is equally at discretion, though not equally vital, in rhyme. This liberty of "pause" and that of "equivalence" constitute the real differentia of English poetry: for German, the nearest to it in this respect, is much less affluent, flexible, and various in regard to them.

Rhyme itself, however, performs very important functions in direct relation to verse. It is by no means a mere superadded ornament—it affects profoundly the structure and the

<sup>&</sup>lt;sup>1</sup> If the reader will turn to the opening speech of almost any play of Shakespeare and mark the variety of pause, he will not have much doubt about this matter.

character of the verse itself. In the first place, it is (as Mitford was the first to notice more than a hundred years ago) a very influential timebeater; it not merely marks the severance of the lines, but, by the anticipation of it, helps to mould and shape their form. Its regular alterations and interlacings are the main constituents of stanza-music; for, though unrhymed stanzas are possible, they disappoint the expectation of the hearer. Its irregular use, as shown in Lycidas, is capable of imparting a sort of Aeolian harmony which, once heard, is exquisitely delightful. In staccato rhymed and separated couplets it communicates a lively, if rather monotonous accompaniment: and to the "enjambed" or overlapped couplet one of subtler and more difficult but much more various attraction. Always it enables the verse to take hold of the attention with greater security; and sometimes, when used by a master, it heightens the poetic pleasure in a most extraordinary degree. Complaints have been made of the comparative paucity of rhymes in English, from the absence of inflections and of vowel endings; but few who know both English and (say) Italian poetry would be inclined to barter the accommodations of the former for those of the latter.

The staple lines in English poetry are, beyond comparison, the octosyllable or "four foot" line and the decasyllable or "five foot." By the extremest licence of trisyllabic substitution the former might be extended to twelve syllables and the latter to fifteen, not counting double or multiple endings. But practice soon teaches the poet that substitution on this scale changes

the ostensible base of the line too much.¹ The octosyllable, by the use of monosyllabic feet and of the devices called in classical prosody anacrusis (or starting with a single syllable) and catalexis (or cutting off one or more at the end) might contract itself to four and often does to seven or six. The decasyllable, though there are certainly nine-syllable-lines in Chaucer, is less patient of contraction.² All feet can be extended beyond their just limit by a double or multiple rhyme; and triple rhymes are possible, though very few poets have been able to save them from a touch of the burlesque. And the last foot of every line can be extended, one or even more syllables, by "weak ending."

So again the couplets of these two lines are the paramount forms of combination in English verse, and at one time threatened almost to monopolise attention. Quatrains have also been very prevalent, especially in lyric, the so-called "common measure" or "eights and sixes" being the most frequent of all. With regard to more elaborate stanzas, English possesses perhaps the most beautiful in the world—the Spenserian of nine lines—eight decasyllables and an Alexandrine with interlaced rhymes: and very intricate forms were common in Middle-English and have been practised with success by nineteenth century poets, especially Mr. Swinburne. Yet, on the whole, the genius of the language seems rather to tolerate and accept

<sup>&</sup>lt;sup>1</sup> Coleridge, as was natural in an experiment, has sometimes done this in *Christabel*.

<sup>&</sup>lt;sup>2</sup> Obviously because the octosyllable treads too closely on its heels.

them with delightful and consummate results

than to seek and prefer them of itself.

Such, as far as it is possible to set them forth in the space prescribed, are what seem to the writer to be the general facts and laws of English Versification. It is believed that no good English poetry will be found to be rebel to them; and that the breach or the neglect of them will almost invariably explain the badness of bad English poetry, as far as that badness depends upon metrical form. They are derived, not from any antecedent theory, but from a careful and constant reading of as far as may be the whole body of English Verse of all ages, since it really became English. They involve the minimum of exception, by-law, proviso, on the one hand, and of wire-drawing, special-pleading and driving-coaches-and-four-through-fact on the other. They require, of course, very large additions to cover detail, abundant instances for illustration, glosses perhaps and excursus for explanation here and there. But they appeal only, and only allow appeal, to the real Caesar of the subject—the Body of English Poetry; and to that Caesar they are at all times ready to go.

GEORGE SAINTSBURY.

#### PREFACE

RHYME concerns itself only with sound, but a RHYMERS' DICTIONARY may not entirely ignore spelling. A dozen volunteers, "of average intelligence and culture," tried to forget the arbitrary combinations of letters which unite to form English syllables, and made earnest attempts to turn to words spelled as they are pronounced. It was found that the eye has mastered the ear, that the printed word has dominated memory, that sound is second to sight. It was therefore concluded that a phonetic arrangement would confine the usefulness of the Lexicon to specialists and students —and there are admirable poets who are neither. The editor then devised a compromise between sound and spelling which proved, when tested, to be entirely successful. Strangers to his plan were able to seek out words as rapidly, and as certainly, as though they were consulting an ordinary dictionary.

The marshalling of rhymes into columns will save the poet and the builder of verses much turning of leaves, and much searching for the word. Relieved of a purely mechanical labour, they will be the more free to dwell on the poetic thought. The editor believes that he has thus rendered a genuine, if modest, aid to that art which appeals most strongly to him. Had he not so believed, he would not have

undertaken this considerable labour.

The Lexicon is divided into three parts.

The first comprises monosyllables, and words accented on the last syllable—hereinafter referred to as Finals.

The second consists of words accented on the

syllable before the last—Penults.

The third embraces words accented on the third syllable from the end—Antepenults.

### THE RULE OF ARRANGEMENT.

The words are grouped according to the accented vowel sound, and marshalled in columns, in the alphabetical sequence of the letters which follow this sound.

These letters are in darker type, and should be followed as in an ordinary dictionary, after the ear has directed the consulter to the vowel sound.

Each of the three parts of the Lexicon has fourteen vowel divisions, arbitrarily adopted for convenience of reference. Scientific precision in differentiating vowel sounds would defeat the first requirement of a reference

book—simplicity.

The Table of Contents enumerates these divisions, and includes key words illustrating the vowel sounds. In the first column of rhymes, on page I, for instance, will be found nine different ways of indicating the sound of long "a", as shown in these words: "day", "brae", "assegai", "habitué", "neigh", "obey", "qua", "soubriquet", "yea". Each of four rhyming words—"deafer", "feoffor", "heifer", "zephyr"—has its own way of indicating the sound of "e" as in "metal".

"Fraud", "broad", "awed", are independent of one another in their means of suggesting the sound of "a" as in "call"; while "been", "build", "sieve", "breeches", "women", "English", "pretty", "busy", are examples of some different ways of expressing in the written word the sound of "i" as in "pin". The table aims at showing by means of typical words, all the ways in which all the vowel sounds are indicated.

This Table of Contents will seldom be referred to by him who consults the lexicon, but it is introduced for the reason that it does for the vowels what the columns of rhymes do for the consonants. It completes the record of the vagaries of English spelling. The volume will perhaps thus have a use for others than poets. It is a hand-book, ready made, for the spelling reformer. It will supply him at a glance, with most of his illustrations, and provide him with

his arguments.

The closed and open sounds of the short "a" as in "cat" and "car", respectively, are in one division. They are so placed for these reasons—that poets rhyme them indifferently (as Shelley, to name one instance out of thousands, rhymes "läugh", and "cenotaph"); and that the pronunciation varies in different parts of the English speaking world. The words are not intermixed, but are placed in successive columns, the open "a" being crowned by two dots. "Draft" and "draught"—closed sound—on the one hand, for instance, and "läughed" and "quäffed"—open sound—on the other, are in successive columns. No poet would be criti-

cised for rhyming "draft" and wäft", and thus arranged, they fall together under his eye.

Under long "u", will be found those words which have the sound of "o" as in "move" and "groove", thus bringing together, though in separate successive columns, such words as "solitude" and "mood". These words are rhymed by Tennyson, and all poets pair the two sounds constantly. This division of columns brings many words which are spelled with "u" into the "o" column; as, for instance, "yule", which rhymes with "fool", and not with "mule"; "brute" and "fruit", which rhyme with "boot", and not with "cute"; and "grew" which rhymes with "ado", and not with "new" or "blue".

The few words which have the "u" sound as heard in "bull", "wool", "foot", "book", have also been placed in this subdivision. They have been so placed, not that such imperfect rhymes as "fool", and "wool"—which are sometimes seen—should fall under the eye in successive columns, but for the reason that they are so limited in number as to occupy but a few pages, and these might not be readily found in hastily turning the leaves of the volume.

The subdivision of "u" as in "burr" includes words, the sounds of which are indicated by five different vowels; viz: as in "err" and "her", "fir", "word", "cur", "myrrh". It was thought more convenient to place this division under "u" rather than "e". Orthöepists regard the vowel sounds as in "err", "her", and "fir", as differing; though "fir" is said to be pronounced in the South of England.

and in the United States as a perfect rhyme for "her". The sound of "u" as in "bury" is not as in "burry", nor as in "berry". It was found impossible, however, to indicate in these columns these slight shades of difference. Such an attempt would have resulted in endless cross references and much confusion. These words are intermingled as though of one sound, and their use must be left to the ear and the discretion of the poet; who indeed couples them without scruple. Perhaps, the widest divergence is found in such words as "cherish", -"nourish", "herring"-"stirring", and these are not so very far apart.

Much has been written about the pronunciation of the word "girl", and purists may object that it is included as a rhyme for "curl". Great poets have so rhymed this word, however, and millions have not been troubled at finding it so rhymed. As pronounced by those careful in vowel sounds, the word is unmated—and what would song-writers, nay, even poets do,

without a partner for "girl"?

Such words as "swan", "swamp", "yacht",
"wander", etc. (rhyming with "upon",
"romp", "not", "yonder", etc.), have the short "o" sound, and are therefore placed in that division. This arrangement, however, may not be clear to the casual consulter, unfamiliar with the volume, hence all "a" words with the short "o" sound, have been inserted under the "a" as in "fär", with a cross reference to the proper division.

The "a" as in "war" has the same sound as the "o" in "for", and the searcher would be at a loss to know to which division to turn. All such words—"ward", "warm", "warn", etc., rhyming with "accord", "form", "adorn", etc.—are so entered and cross-referred as to be found either under "a" as in "call", or "o" as in "not".

All vowel sounds other than those mentioned above, are so distinct from one another, that the ear will give unerring direction. No further reference to them, except such as is made in the table of contents, is thought to be necessary.

Rhymes are so limited in number in the English language that great licence is accorded to the poet. It has not, however, been regarded as properly within the scope of this Lexicon to introduce cross references coupling slightly different vowel sounds. For instance, the long and short "o" as in "force", and "horse"; the two "a" sounds, as in "guard", and "ward", "launch" and "paunch", "chant", and "daunt"; the "a" and "o" as in "daub" and "throb", "sauce" and cross"; the "a" and "o" as in "chant" and "font"; have no cross references. If the maker of verses cannot find expression for his thought in perfect rhyme, he can, of course, turn for himself to an approximate vowel sound. If the Lexicon attempted to do this for him, it would be difficult to know where to draw the line, and endless cross references would be required.

Thousands of words, such as "fire-clay", "noon-day", "holiday", etc., are included among the finals by shifting the primary accent to the last syllable. Poets are so constantly

transferring accents, that a crowd of words has necessarily been twice entered, once with the usual accent, the second time among the Finals. These permissible liberties are so much a matter of course that comment and example are almost superfluous. A few illustrations, casually culled,

are, however, inserted here.

Shakespeare has "sea-change"—"strange"; Keats, "tip-toe"—"blow", and "sea-flirt"—"hurt"; Rosetti, "thing"—"fiend's fairing"; Wordsworth, "sir"—"porringer"; and Dryden, "prognosticate"—"fate". Shelley's rhyming of "laugh" and "cenotaph", and Tennyson's coupling of "solitude" and "mood", have already been mentioned in another connexion. Such rhymes as "harbingers" and "stirs", "shed", and "unweari-ed", "garlanded" and "head", "unity" and "me", are innumerable.

This reference to forced accents has been made for the following reason. Unsupported by metre, standing in the isolation of a column, there is a hint of strangeness, a suggestion of licence, in these words with forced accents, especially among the dissyllables. The introduction of such words, however, as "moonlight" once among the penults, as a rhyme for "noon-light", and again among the finals as a rhyme for "bright", is imperatively demanded if the Lexicon is to be of practical use. The inclusion of antepenults among the finals is even more essential to the rhymer.

Six hundred antepenults, such as "abbreviate", have been placed among the finals to rhyme with "bait" and "fate"; four hundred,

such as "sceptical", in the column with "shall"; one hundred, such as "adamant", with "cant"; three hundred, in "ment"—" abandonment"—rhyme with "bent"; one thousand nouns ending in "y"—" fragility", etc.—have been included among the rhymes for "me", and in this column will also be found four hundred adverbs in "ly"—" daintily". Over a thousand words ending in "ness" and "less" -" fathomless", "expressiveness"—are in the column with "bless". Superlatives— "blithesomest"—and the poetic form of the second person singular—"rivallest"—have been inserted as rhymes for "blessed" and "zest", while poets' words, such as "slumbereth", are

among the rhymes for "breath".

Many past participles, such as "garlanded", are included under "head". Some three hundred "isms" and the same number of "ists" are inserted among the finals; four hundred such words as "tyrannous", as rhymes for "us"; three hundred words in "er"-"adventurer"—and over a hundred comparatives of adjectives—"lovelier"--as rhymes for "her"; and many present participles in "ing", such as "carrying", as rhymes for "bring". The extreme limit to which the editor has gone in this direction is indicated by his including a number of words such as "accessible", as rhymes for "full". In doing this, however, he has drawn the line well within the border, for Keats rhymed "innumerable" with "tell", and a great poet of our day has paired "untunable" with "hell". Where adjectives in "able" and "ible" have the accent on the fourth syllable

from the end, they have not been inserted at all. Poets have rhymed "fashionable" with "table", but an editor may not claim the licence which is readily accorded to genius.

With all these additions, it is an astonishing fact that there are not 20,000 monosyllabic

and final rhymes in the English language.

All the rhymeless monosyllables, and a great number of unrhymed penults will be found in lonely isolation in the pages of this volume. It will be convenient for the poet to see at a glance that a word is unpaired; and unrhymed penults may be useful in suggesting two word rhymes; as for instance, "verbatim"—"ratehim". Unrhymable antepenults have not been inserted. It is curious, that of nearly 20,000 antepenults which were extracted from dictionaries for introduction into this volume, 80 per cent. were found to have no rhyme.

There are about sixty monosyllables and words accented on the last syllable which appear

to be rhymeless. These are:

Aitch	Eighth	Ninth	Spoilt
Alb	Fifth	Oblige	Swoln
Amongst	Film	Of	Sylph
Avenge	Forge	Peart	Tenth
Bilge	Forth	Pint	Torsk
Bourn	Fourth	Porch	Twelfth
Breadth	Fugue .	Pork	Unplagued
Brusque	Gulf	Poulp	Volt
Bulb	Hemp	Prestige	Warmth
Coif	Lounge	Puss	Wasp
Conch	Mauve	Recumb	Wharves
Culm	Month	Sauce	Width
Cusp	Morgue	Scarce	With
Depth	Mourned	Scarf	Wolf
Doth	Mouth	Sixth	Wolves
2001	ana o ca cii	PATTE OFF	11 024 03

xxxiii

Trumping.

Certain of these words are unrhymed only in one of two correct pronunciations, as for instance, "bourn" (boorn), "mauve" (mawve) and "prestige" (prestezh); while "forge", "forth", "pork", which have the long "o", are habitually rhymed with "gorge", "north", and "fork", respectively. "Sauce"—"a" as in "fall"—is constantly coupled with "cross"; while "volt" (not the "volt" of electrometry, but a term in the ménage) is nearly rhymed by "salt," etc. Ten per cent. of the rhymeless monosyllables are supplied by ordinal numbers; and the percentage would be larger if "seventh" and "eleventh" were not mutually considerate. "Tenth" of course is mated by "nth," but the symbolism of algebra is far removed from that of poetry.

In Part II. inflected forms are set out at length. The plurals of such finals as form words of two syllables will be found, and the third person singular of the verb, as for instance, "races", "graces", "chases", etc. Present and past participles; comparative and superlative of adjectives; adverbs in "ly"; feminines in "ess"; adjectives in "ful", "less", "y", "ish", "able", "ible", etc. are all included, and so also, in many cases, are the second and third person singular in "est" and "eth."

It may be thought at first glance, that the insertion of these inflected forms is carried to excess, and that a cross reference to the words among the finals, plus the desired terminal, would be sufficient. It was found, however, that such cross references compelled much turning of pages, and were confusing. A great

many words, such as "earnest", for instance, have for rhymes only the superlative of adjectives, and the second person singular of verbs. It was thought well in such cases to set all the words out in full, e.g., "sternest", "burnest", "learnest", etc. "Smallest", "tallest", "humblest", are additional examples of much used words which have only second person singular rhymes. It seemed logical that if the second person were introduced the third should also be included. "Turpeth", for instance, has for rhymes only "chirpeth" and "usurpeth". In certain instances, some words have been omitted. To illustrate: the superlative "biggest" has for rhymes only the second person singular. One might conceivably say, "thou diggest", or "thou riggest"; but "thou twiggest", "priggest", or "wiggest" combine a solemn archaic form with slang, and the effect is ludicrous; hence these three words have not been included in the column.

Cross entries have been avoided wherever it has been found possible to do so. One has been made, for instance, in connection with the word "naked"—a cross entry to the "bake" column, plus "d". It seemed somewhat affected to insert a series of words such as "bak-éd". It has been left to the poet, who wishes to rhyme "naked," "rugged" and similar words, to construct his own dissyllables—but the materials are provided for him.

Words are inserted as often as there are ways of pronouncing them. Each pronunciation is a new word to the poet. There is authority, for instance, for four pronunciations of the word

"vase". It is therefore to be found as a rhyme for "ace", for "praise", for "Shiraz", and for "pause". Even then the editor has lagged behind the poet, for this protean monosyllable has been rhymed by the present Poet Laureate with "Mars".

These references to this word "vase" conveniently illustrate the principle that it is outside the province of a rhyming dictionary to attempt to be an authority upon the use of words, or to discriminate as to which is the better pronunciation. Its modest duty is to register what people say, in the manner in which dictionaries record that they say it. The dictionary assumes the right of judging between two pronunciations; the Rhymers' Lexicon inserts the two without comment.

The writer of light, or humorous verse, is justified in expecting to find the slang of the day; and a number of such words will be found in quotation marks. Those who search, as Rosetti searched, the old writers for apt words, have the right to expect to find the Chaucerean vocabulary in this Lexicon. The volume is unfortunately, however, arranged according to vowel sounds, and the editor naturally hesitates in assuming a responsibility which far greater men than he have declined. As he does not know how Chaucer pronounced his words, he has been compelled to omit them.

If the editor has recognized that a rhyming Lexicon must be catholic, and must refrain from attempts to discriminate between the better and the less accepted pronunciations, he has nevertheless taken no liberties with language. He has invented no pronunciations, has manufactured no word, has tortured none into an unauthorised sound, that he might provide a doubtful rhyme. "Tinglish", for instance, will be discovered as a rhyme for "English", but it would not have been entered had it not been found in the supplement of a standard dictionary.

The pronunciations are based usually upon Ogilvy's Imperial Dictionary. The latest edition of Webster, The Century and Murray's, as far as it has been completed, have also been consulted, as have Farmer's Dictionary of American-

isms, and the Dictionary of Slang.

In Part II. will be found many recurring instances of that indeterminate sound which may be indicated by almost any one of the vowels; and these have necessitated many cross references. "Bacon"—" taken"—" Jamaican", illustrate this indeterminate sound in the unaccented final syllable of words accented on the penult. "Tortured"—" orchard"; "tailor"—" whaler"; "cupboard"—" blubbered"; "choler"—" scholar"—" squalor"; "coloured"—" dullard"; are further instances. Though the "u" in "tortured" will in all probability be sounded when attention is especially drawn to the word, the usual pronunciation couples it with "orchard".

It will be noted that "Shiraz" is a rhyme given for "vase", ("papas", "mamas", "shahs" being also rhymes). It has been introduced, as have certain other words, not as a geographical term—in which sense it would be outside the limits of this Lexicon—

but as an adjectival expression, used generally in connection with the wine which Omar Khayam, and his devoted band of followers have

infused with a literary lusciousness.

Compound words are included only as found in standard dictionaries; "dead-man", "head-man", "red-man"; "eye-ball", "high-ball", "skyball"; and "fen-man", "penman", are examples of compounds thus inserted. The two rhymes for "eye-ball" are words in general use in the United States.

Only such technical, scientific and botanical terms as might possibly be used have been introduced. A certain number of the familiar terms used in music have been entered; and part of the vocabulary of heraldry has been selected. This science will account for the presence of "bendways" as a rhyme for "endways", and of bendy" as a rhyme for "Effendi". The shortest common noun in the volume consists of two letters and two syllables. "Ai"—a kind of sloth—is very nearly, if not quite, a rhyme for "jawy". The most eccentric word, of course, comes from Swift; "Houyhnhmn" finds a nearly perfect rhyme in "minim". A dozen words such as "boudoir", "abbatoir", "noir", "escritoire", etc., have been deliberately omitted. The editor lacked courage to rhyme the first with "far" and the last with "war", as poets have done before now; nor did he think it worth while to establish two new vowel divisions for these aliens, naturalized though they be. This is the only case of deliberate omission. In Part III. the rhymes for "doxology" present incidentally a list of all the

"ologies"; and most of the "isms" will be found in Part I as rhymes for "prism".

The editor desires to express his appreciation

of the industry of his chief assistant, whose faithful work has much lightened his labour. He wishes also to acknowledge the patient courtesy of a well-known poet, who, in continually using the volume, has noted all omissions. Such practical correction, in conjunction with the editor's revision, ensures the accuracy and completeness of this second edition.

ANDREW LORING.

## THE PRINCIPLE OF ARRANGEMENT.

The Lexicon is divided into three parts.

- PART I Monosyllables, and Words accented on the last syllable.
- PART II Words accented on the syllable before the last —Penults.
- PART III Words accented on the third syllable from the end—Antepenults.

In each part the words are grouped according to the accented vowel sound, and marshalled in columns according to the alphabetical sequence of the letters which follow this vowel sound.

## ILLUSTRATIONS.

You seek the rhymes—

## for ACHE:

Monosyllable, therefore turn to Part 1. Vowel sound—"A" as in "Fate."

Under this heading follow alphabetical sequence of darker letters which come after the vowel. On p. 4 you find the word. You are referred to "—ke, p. 7"; where all the rhymes are in column.

## for GARAGE:

Accent on last syllable—Part I. Vowel sound—"A" as in "Car."

Following darker letters, you come to this word and its rhymes on p. 24.

#### for ICHTHYOSAUR:

Accent on last syllable—Part I. Vowel sound—" A" as in "Call."

Following darker letters to "r," you find this word p. 49, with cross-reference to "Abhor," p. 169, where all the rhymes are set out.

## for Broad:

Monosyllable—Part I.
Vowel sound, "A" as in "Call."

On p. 46 you find "applaud," "maraud" and all other rhymes.

#### for BREEZE:

Part I—" E " as in " Me "—p. 74.

The column of rhymes ends with "(see +s, p. 51)". On p. 51, you find all the rhymes for "bee," "agree," etc., and by adding "s" you get plurals and third person singular—"bees," "agrees," etc.

#### for WRECKS:

Part I.—" E" as in "Met"—p. 75.

You find "Becks, Bedecks," etc. The "etc." wherever found, means that close by, probably on the same page, will be entered the rhymes for the singular number, or the uninflected form. Accordingly, you find "wreck," "cheque," etc., in the column next preceding. Following. "Bedecks etc.," you will also find the entry "(see —x, p. 107)." On p. 107, "vex," annex," and all the "x" rhymes for "wrecks" will be discovered.

## for Yachting:

Penult—therefore Part II.

Vowel sound—"O" as in "Mottle."

On page 609, under "—chting" you find the word, and a reference to p. 641, where "allotting" and all other rhymes are in column. It may not have occurred to you that "a" in this word has the sound of short "O". Should you have looked first under "Carter"—the nearest "A" sound—you would have found on p. 298, a cross reference.

#### ILLUSTRATIONS

## for Mosquito:

Penult—Part II.

"E" as in "Metre," because "I" in "Mosquito" has this sound. You find the rhymes on p. 422.

#### for NITRIC:

Penult—Part II.—" I" as in "Mitre."

larger of the control of the control

You find the word standing alone on p. 513, and may therefore conclude it has no single word rhyme.

## 

Penult—Part II.—" I" as in "Mitten."

You find the word on p. 529, and underneath, "(cf. Bigot, p. 531)". This means that "Bigot" and its rhymes, p. 531, are nearly perfect rhymes for "frigate."

A STATE OF THE PARTY OF THE PAR

#### for OCTUPLE:

Penult—Part II.—"U" as in "Tuber."

You find the rhymes on p. 661, and beneath them you see "(cf. pupil)." This means that "pupil" is a nearly perfect rhyme; but that there are no more. Otherwise, a page number would have followed "pupil."

# for Coming:

Penult—Part II.—"U" as in "Rubber."

On p. 689, you find "Becoming" with a cross reference which leads you to "benumbing," "chumming," etc., on the next page.

to a shipping a late of the part of the late of the part of the pa

### for COLONEL:

Penult—Part II.—"E, I, O, U," as in "Berry," "Wording," etc.

You find this word in proper place on p. 706 with cross reference to "—rnal, p. 716," where you find "journal," "eternal," "nocturnal," etc., all grouped together.

#### ILLUSTRATIONS

#### for CHARITY:

Antepenult—Part III.—" A" as in "Chattering."

You find the word with its rhymes on p. 767, und underneath "(cf. p. 750)." On this page you find "rarity" and "debonairity," two permissible rhymes, though the vowel sound differs slightly.

#### for Anthropophaginian:

Antepenult—Part III.—" I" as in "Littleness.

You find the rhymes on p. 824 ending with "(cf. pinion, p. 545)" It would be permissible to elide the two syllables of this word and rhyme it with "Pinion," "Minion," etc.

## for Journalist:

Antepenult—Part III.—"E, I, O, U." as in "Currency," etc. p. 875.

## ABBREVIATIONS.

"Cf." indicates that the rhymes are nearly, but not quite, perfect.

"Etc.," indicates that close by, probably on the same page, will be found the singular number, or the uninflected form of the word.
