SUMMARY

A biological survey of the major benthic habitats in the proposed Geographe Bay-Capes-Hardy Inlet marine conservation reserve was undertaken in early 1999 by the Department of Conservation and Land Management's Marine Conservation Branch in collaboration with the University of Western Australia.

Twenty subtidal and 26 intertidal sites were surveyed and comprehensive community data was collected. A total of 527 species of flora and fauna was collected during the subtidal survey. This total comprises of 150 algae, two seagrass, 110 sponge, 44 ascidian, eleven coral and 110 fish species. Eighty- one species of marine flora and fauna, comprising of 26 algae, one seagrass, two sponge, five anemone, one zooanthid, one coral, 34 molluscs, two polychaete worms, five crustaceans, one seastar, one brittlestar, one seurchin and one seacucumber species were collected during the intertidal survey.

These data will be important in the determination of the relative conservation values of the proposed Geographe Bay-Capes-Hardy Inlet marine conservation reserve. It will also contribute to the information base for the boundary and zoning planning process for the proposed reserve.

1. INTRODUCTION

This report presents the data collected during a biological survey of the Geographe Bay-Capes-Hardy Inlet region during the 28th January to 8th February 1999. The Marine Conservation Branch of the Department of Conservation and Land Management undertook this survey.

1.1. BACKGROUND

In recognition of the importance of conserving the State's marine biodiversity, the Minister for the Environment established the Marine Parks and Reserves Selection Working Group (MPRSWG) in 1986. The main aim of the MPRS WG was to identify representative and unique areas of Western Australia's marine waters for consideration as part of a statewide system of marine conservation reserves under the *Conservation and Land Management (CALM) Act* 1984. The MPRS WG's report was released in June 1994 and identified over seventy such candidate areas throughout the coastal waters of Western Australia (CALM, 1994).

The State's vesting body for marine conservation reserves is the Marine Parks and Reserves Authority (MPRA) which was established in 1997. The MPRA has prioritised the candidate areas for implementation as marine conservation reserves and the Geographe Bay-Capes-Hardy Inlet region was one of the MPRA's high priority candidate areas.

Under the State Government's marine and conservation strategy detailed in *New Horizons - The way ahead in marine conservation and management* released by the Western Australian Government in 1998 (WA Government, undated), there is a requirement for:

“Extensive assessment, community consultation and management planning before a new marine conservation reserve is established.”

An essential component of this is that:

“A comprehensive assessment of the area's biological and economic resources, and social values is carried out.”

In view of the high standing that the Geographe Bay-Capes-Hardy Inlet region has in the MPRA's priority list for new marine conservation reserves, CALM applied to Environment Australia for funding to perform a biological survey in the area. Partial funding of \$72,000 for the project has been obtained through Environment Australia's Natural Heritage Trust, via the Coast and Clean Seas Marine Protected Area Programme. CALM will contribute further resources to the project, valued at approximately \$97,000.

The data acquired during this project will be important in the determination of the relative conservation values of the respective major habitats of the proposed Geographe Bay-Capes-Hardy Inlet marine conservation reserve. It will also contribute to the information base required for the marine reserve planning process, during which marine reserve boundaries and zones for multiple-use will be considered for the area.

This project was collaboration between CALM's Marine Conservation Branch (MCB) and the Central Forest Region, South West Capes District Office, and the University of Western Australia.

1.2. OBJECTIVES

1.2.1. Primary Objectives

The primary objectives of the survey were:

- the quantitative description of marine biota at representative sites within the major benthic habitats;
- the quantitative analysis of species richness within the major benthic community types;
- the investigation of the influence of physical parameters, such as substrate type and wave exposure, on community diversity, and;
- the collection of fauna and flora density and biomass data as baseline information for long-term monitoring of communities before and after marine reserve implementation.

1.2.2. Secondary Objective

The secondary objective of the survey is the opportunistic collection of qualitative information on visually dominant marine fauna and flora.

2. METHODS

2.1. STUDY AREA

The study area is the proposed Geographe Bay-Capes-Hardy Inlet marine conservation reserve. This area encompasses the Leeuwin-Naturaliste and the Hardy Inlet which are two of the few areas of south west Western Australia recommended for marine reservation by the Marine Parks and Reserves Selection Working Group (CALM, 1994).

The study area extends from the Busselton Jetty in Geographe Bay to White Point in eastern Flinders Bay (Figure 1).

2.2. DESIGN

This biodiversity survey was designed to document how major geographical, geomorphological and oceanographic influences in the proposed Capes-Geographe Bay-Hardy Inlet marine conservation reserve affect the distribution of reef dwelling organisms (algae, sponges, ascidians, fish).

The survey was divided into two components:

Part A: Subtidal Habitats

Part B: Intertidal Habitats

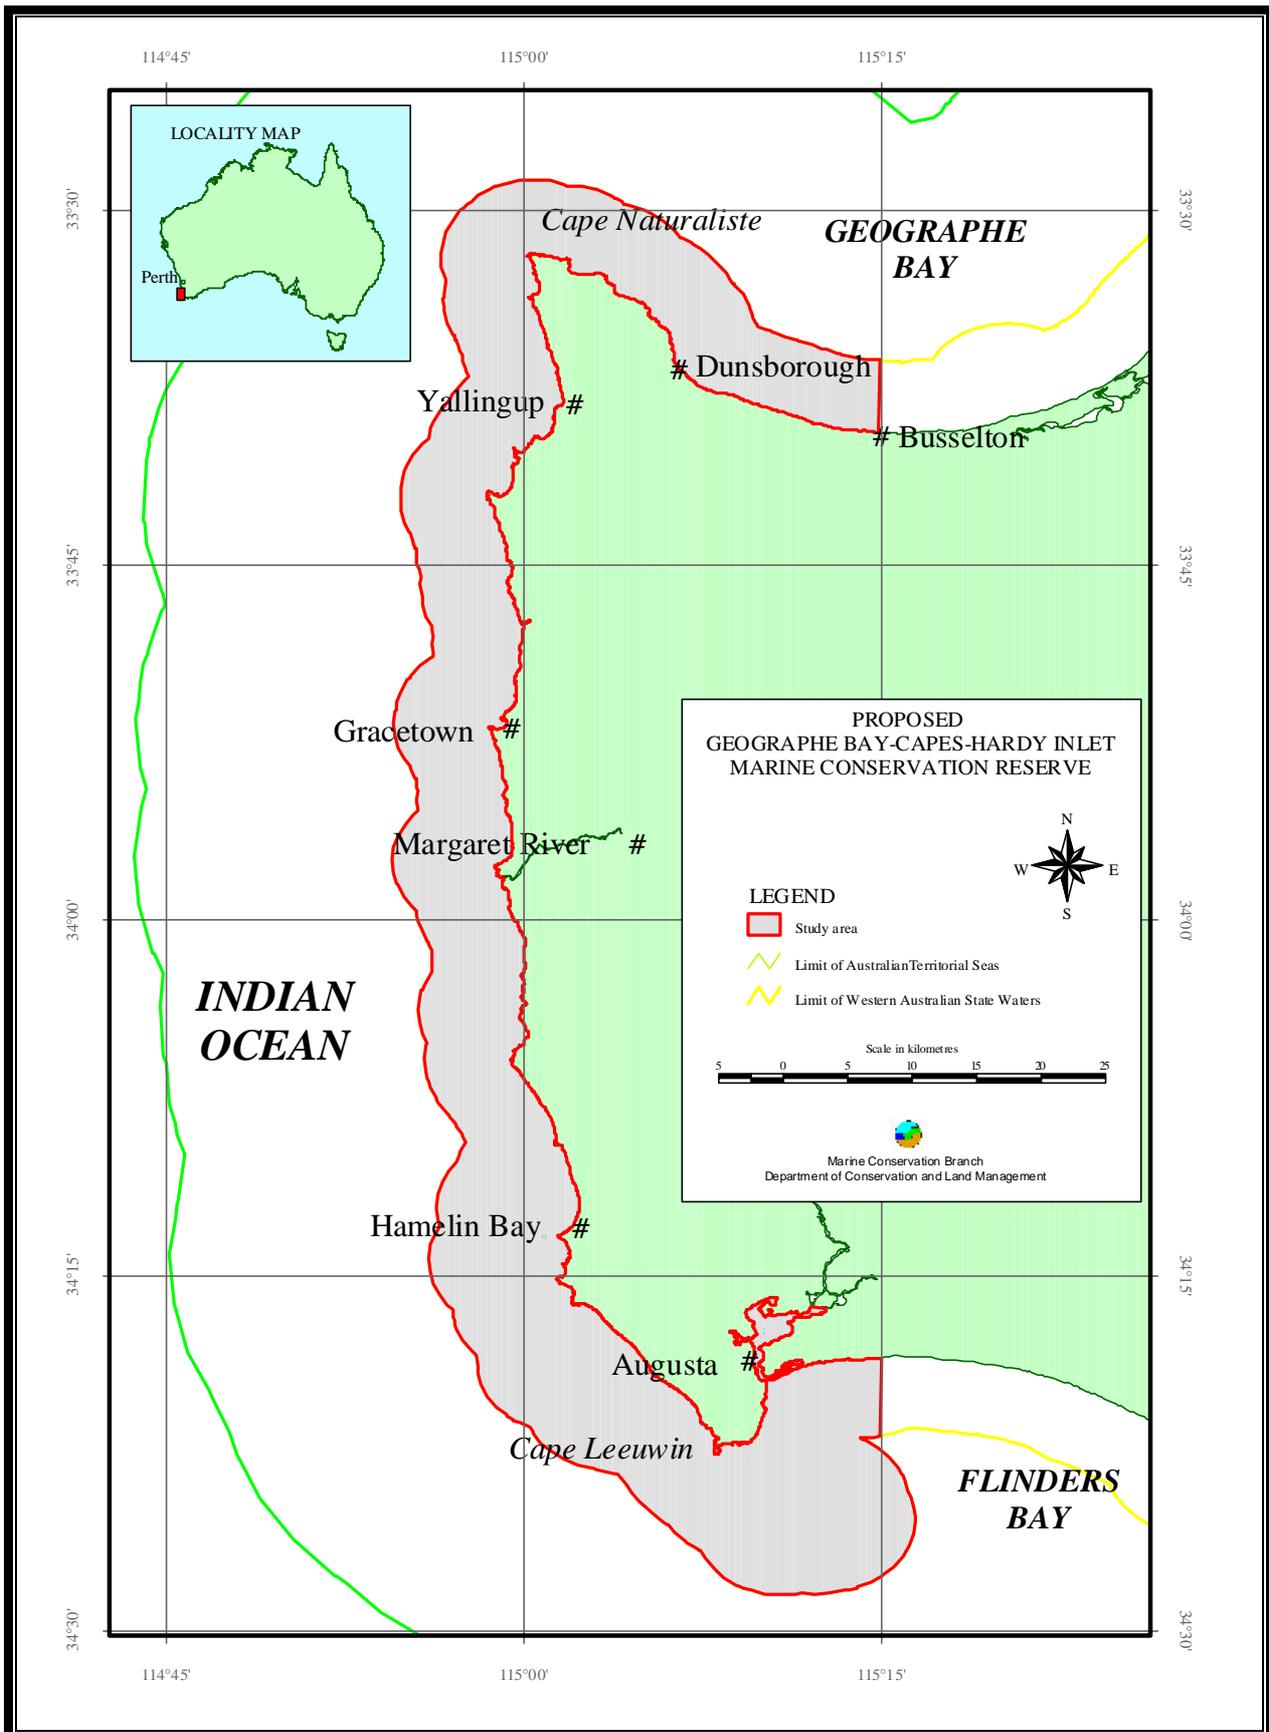

Figure 1: Survey location: Geographe Bay-Capes-Hardy Inlet region.

The survey was not designed to present an exhaustive list of all species and their distribution in the study area. Rather, it is designed to assess differences in species assemblages (species diversity, species abundance, species turnover) from a small intensive study of sites, habitats and depths that represent the range of reefs found within the Capes-Geographe-Hardy Inlet region.

It will form a biological basis for zoning and protected area designation within the proposed marine conservation reserve, as well as, a baseline for designing further surveys and monitoring programs. This analysis, along with the broad survey of benthic marine environments (Bancroft & Colman, 1998; Bancroft, 2000) will aid in assessing the representativeness and uniqueness components when zoning the proposed marine conservation reserve.

2.3. METHODS

2.3.1. Survey sites (subtidal)

Sites were located within three broadscale regions:

1. the northern region (north of Cape Naturaliste);
2. the western region (between Cape Naturaliste and Cape Leeuwin), and;
3. the southern region (south-east of Cape Leeuwin).

Reefs were sampled from 20 sites between Geographe Bay and Flinders Bay (Figure 2). Sites were chosen based on a pilot study, which surveyed benthic marine environments using remote video techniques (Bancroft & Colman, 1998; Bancroft, 1999; 2000). Sites visited during the present study encompassed a variety of habitat types (limestone and granite), reef morphology (high relief; >3 m relief and low relief; <3 m relief) and depths (deep; >10 m and shallow; <10 m) which are encountered within state waters in the area. Sites deeper than 20 m depth were not surveyed due to diving regulations. Site names, corresponding latitude and longitude, depths and environmental information are shown in Appendix I.

Fourteen granite reefs and six limestone reefs were surveyed. Five sites were surveyed in the northern region, twelve in the western region and three in the southern region. Of the granite reefs ten were low relief and four were high relief. Four limestone reefs were characterised by high relief morphology and two were low relief (Appendix I). Depths ranged between 4.5 m to 26 m.

2.3.2. Survey sites (intertidal)

Time constraints limited the survey to areas accessible by roads and tracks and excluded areas that could be accessed only by extensive walking forays along the coast. Onshore winds, rising swells overriding the predicted low tides limited sampling to the high intertidal on the exposed areas.

At each locality we made note of the major rock types, slope aspect, extent and exposure. A full description of all locations and habitat types is presented in Appendix II. Where and when conditions permitted access, the fauna in the high intertidal was sampled by recording the types and numbers of the conspicuous fauna. A total of 26 sites were sampled in this way (Appendix III; Figure 3). Two main habitat types were apparent: boulder fields (20 sites) and horizontal limestone platform (six sites).

2.3.3. Benthic Macroalgae

At each site, divers collected all macroalgae within randomly placed 0.25 m² quadrats. Six quadrats were sampled at each site with the exception of St. Alouarn Island and Sugarloaf where two and five quadrats were sampled, respectively. Sampling was stratified such that only quadrats, which fell on horizontal surfaces, were sampled. For encrusting algae only voucher specimens were collected because of difficulties removing the entire encrusting layer at some sites. Samples from each of the quadrats were placed in separate calico bags and brought to the surface.

Samples were sorted, and a species list compiled for each quadrat shortly after collection onboard *MV Voyager*. The density of canopy-forming species was determined (holdfasts 0.25 m⁻²) before thalli were dried and weighed. This was done for both adults and juveniles of canopy species. Canopy species were dried for at least 72 hours at 60°C at the Botany Department, University of Western Australia before being weighed to three decimal places.

Samples of understorey algae were sorted to species then fixed in 5% formalin in seawater onboard *MV Voyager*. Voucher specimens were prepared for each species and are presently being accessioned into the Herbarium at Botany (UWA).

2.3.4. Sponges and Ascidians

Sampling methods

At each survey site, six quadrats were recorded and sampled by the follow methods:

1. Before the dive at each sampling location, a video still of the clapperboard containing site information was taken.
2. Quadrat was placed *in situ* (depending on whether the sample location was high relief or low relief reef, the quadrats were placed vertically or horizontally, respectively).
3. A video record (approximately ten seconds) of the quadrat was made.
4. Close-ups of individual sessile invertebrates for identification purposes were recorded by digital video.
5. When video record was completed, voucher specimens were sampled and placed individually into a 250 ml specimen jar together with a label. The label would contain site and quadrat information.
6. After the dive, the water in the specimen jars was replaced with 100% ethanol for preservation.
7. An individual sample record sheet for each voucher was completed.

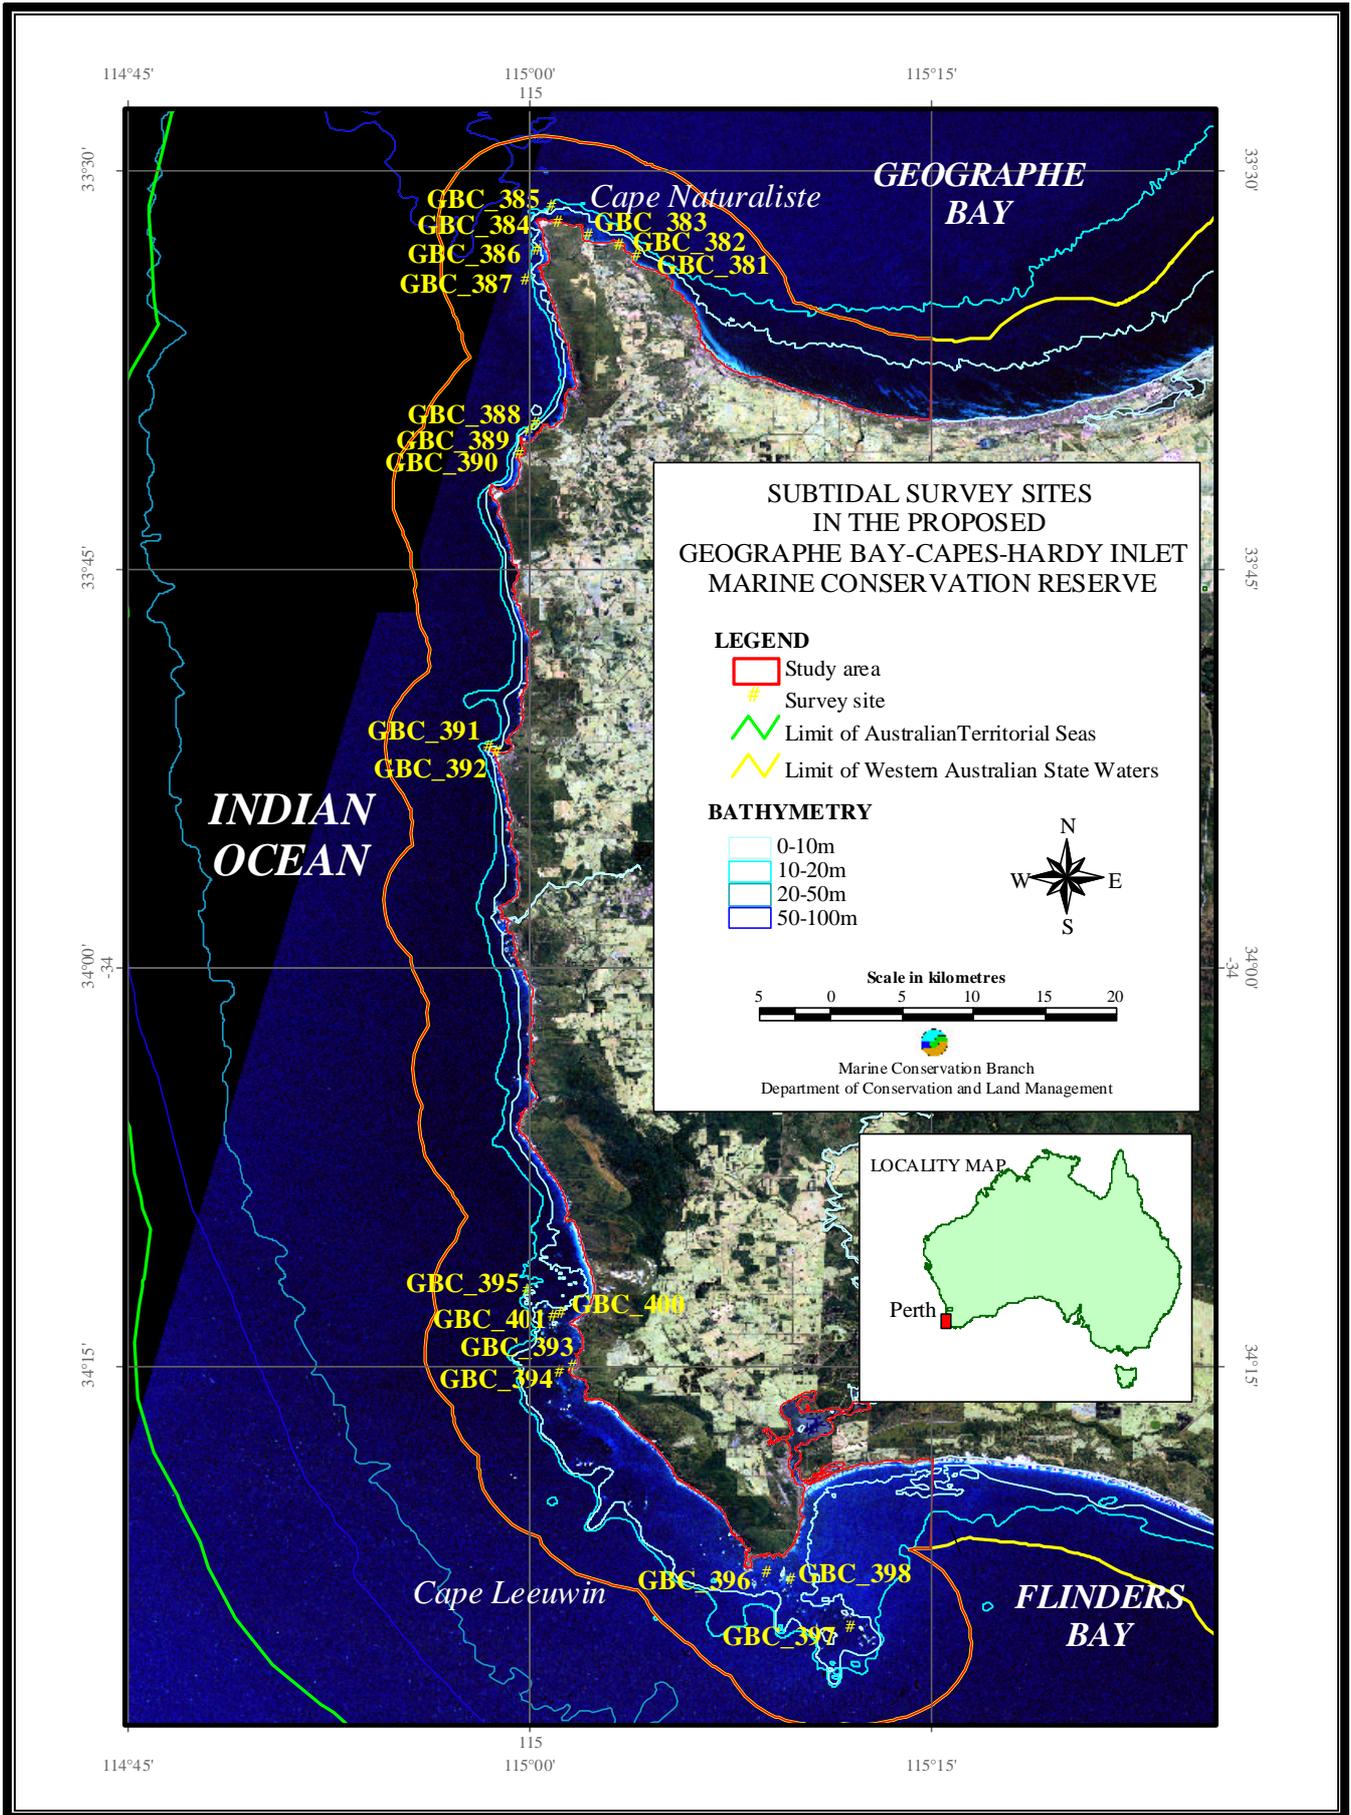

Figure 2. Subtidal survey sites in the Geographe Bay-Capes-Hardy Inlet region

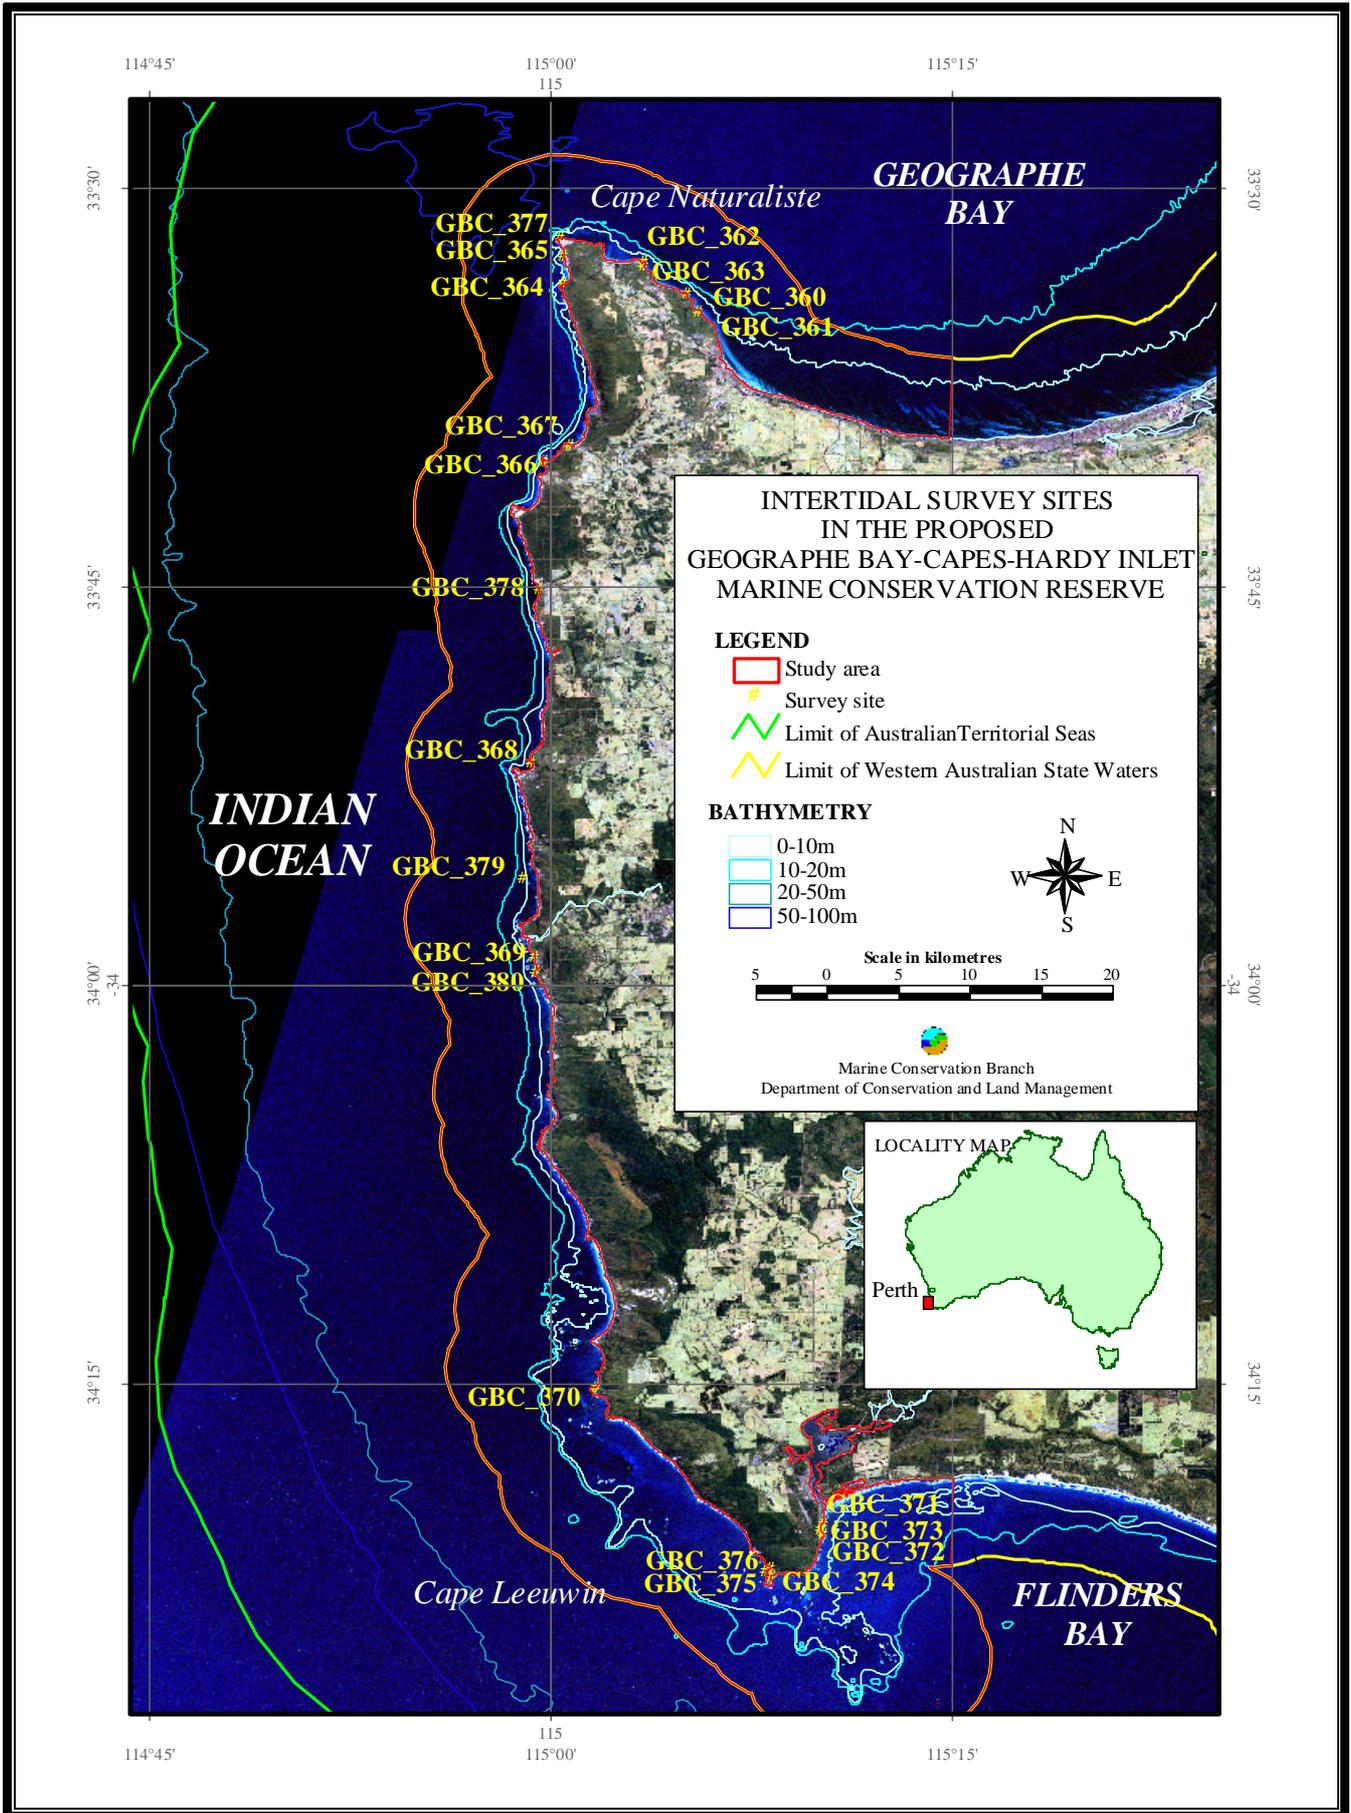

Figure 3. Intertidal survey sites in the Geographe Bay-Capes-Hardy Inlet region

Identification

Preliminary identifications of sponge voucher specimens were performed with Dr Jane Fromont, Curator of Aquatic Invertebrates, Western Australian Museum. In some cases, *in situ* photographs were used and spicule digests were performed when necessary. Specimens were tentatively identified to Family level.

Dr Laura Stocker (Murdoch University) identified the ascidians.

Measuring species abundance

Video frames of the quadrats and voucher specimens were captured off tape by the Iomega Buzz capture kit. These images were saved as Jpeg (*.jpg) files. EHP image analysis software was used to quantify the sponge community from the captured images. The software rectified the quadrat image and calculated area by tracing specimens. This data was then exported as an Excel spreadsheet for further analysis.

2.3.5. Hard corals

Hard corals were only sampled opportunistically. Pieces of coral were placed into 500 ml specimen jars and top up with bleach. All specimens were identified by the Western Australian Museum.

2.3.6. Reef fish

At each site, two teams of divers collected data on the abundance and lengths of all fish species present from a total of 24 transects. Two widths of transects were used to census the reef fish community at each site. At the start of the first transect, a weight attached to the end of a fibreglass tape was placed on the substrate with the dive buddy reeling out the tape behind the observer and indicating when the transect was completed.

On the first swim, the observer counted and estimated the lengths of all of the relatively large and more mobile reef fishes seen within a transect 25 m long by 5 m wide and 5 m high. Upon completion of the transect the observer would swim back along the transect investigating the crevices and overhangs within a 2 m wide strip searching for more cryptic species. No attempt was made to enumerate blennys or triplefin species. Once a large and small transect had been completed the buddy pair would move the tape measure at least 10 m away from the location of the weighted end of the transect and resume counting. In this manner, the transects formed the spokes of a wheel, never covering habitat already censused. Each buddy pair attempted to complete six replicate counts of both the large and the small transects to give a pooled level of replication of 12 transects per site.

The level of replication and transect dimensions was determined by a pilot study which aimed to optimise the survey design (*see Kendrick et al., 1999*). The pilot study indicated that for the 10 most dominant species, a survey precision of between 10% and 25% could be obtained with twelve 25 x 5 x 5 m transects. The level of replication and transect size was also constrained by diver safety. The pilot study showed that buddy pairs could complete only six 25 x 5 x 5 m transects or three 50 x 5 x 5 m transects at deeper sites and stay within the no decompression limits. A transect width of 5 m was selected to account for variability in water clarity. This decision was justified with visibility falling to approximately 4 m at two sites. Furthermore, a calibration study showed that the observer's

measurement error for distance estimates increased beyond 5 m. Because measurement error could potentially affect the size of areas censused, it strengthened the case for the selection of a 5 m transect width. No reef fish were collected for voucher specimens.

2.3.7. Intertidal

In the boulder fields, between 14 and 30 quadrats (0.25 m²) were placed haphazardly, the number depending upon the extent of the site. On platforms, up to 20 quadrats were placed more or less systematically along up to four transects parallel to the shore. Each site was classified as either exposed or sheltered based on prevalent conditions.

In addition to the fauna, the dominant algal types and any seagrasses in the intertidal were noted and/or collected. Algae were more abundant in the subtidal areas. Algal species growing between 5 and 25 m depth were sampled in the complimentary and more comprehensive subtidal survey.

The fauna was differentiated in the field, with limited collections made for later identification using Shepherd and Thomas (1982), Wells and Bryce (1986), Wilson (1994), and Edgar (1997). Rather than produce a comprehensive species list, this study aimed to examine gross similarities between regions and sites within regions, with precise species identification possibly forming part of a later more extensive survey.

3. RESULTS

3.1. SUMMARY REPORT

A more comprehensive summary of the data presented in this report can be found in Kendrick *et al.* (1999). Kendrick *et al.* (1999) summarises the data, draws some conclusions and makes recommendations on survey techniques and future management zoning.

3.2. ALGAL ASSEMBLAGES

Community data for the algal assemblages was collected from all subtidal survey sites. This data is presented in Appendix IV. A total of 152 algae and two seagrass species were sampled (Appendix V).

3.3. SPONGE ASSEMBLAGES

A comprehensive sponge assemblage dataset was collected from 19 of the 20 subtidal survey sites (Appendix VI). During the subtidal survey, 139 voucher specimens were taken which represents a possible 110 different sponge species. A species list is presented in Appendix VII.

3.4. ASCIDIANS

The ascidian community was not quantified, however a total of 44 species of ascidians were identified from voucher specimens. A species list is presented in Appendix VIII.

3.5. HARD CORAL

A total of eleven hard coral samples were opportunistically collected and identified (Appendix IX). These samples comprised of seven different hard coral species. With the exception of the solitary polyp *Scolymia australis*, all of these hard coral species are considered to be of tropical distribution.

3.6. FISH CENSUS

Fish data was collected at all subtidal survey sites. Data was recorded for the wide transects and the narrow transects which is presented in Appendix X and Appendix XI, respectively.

A total of 110 fish species was encountered during all fish census transects. A species list is presented in Appendix XII.

3.7. INTERTIDAL COMMUNITIES

A total of 26 sites were sampled in the intertidal survey (Appendix III). A total of 54 species from six phyla of fauna were collected (Appendix XIII), which includes two sponges, five anemones, one zooanthid, one hard coral, 34 molluscs, two polychaete worms, five crustaceans, one seastar, one brittle star, one seurchin and one sea cucumber.

A collection of algae from the northern side of Cowaramup Bay, made adjacent to the boat ramp in the low intertidal, a zone exposed at extreme spring tides, resulted in 27 species (26 macroalgae and one seagrass) and serves as an indication of the high diversity of species in this area (Appendix XIV).

4. DATA MANAGEMENT

4.1. DATA REPORT

Hard copies of the Data Report will be held at three locations:

1. Marine Conservation Branch, Department of Conservation and Land Management, 47 Henry St., Fremantle Western Australia, 6160.
2. Woodvale Library, Science and Information Division, Ocean Reef Rd., Woodvale, Western Australia, 6026.
3. Archives, Woodvale Library, Science and Information Division, Ocean Reef Rd., Woodvale, Western Australia, 6026.

The Marine Conservation Branch will hold digital copies of the Data Report at three locations:

1. The Marine Conservation Branch Server:
mcb on StreetTalk\User Data\CALM.FREM\CALM [T:/Reports/MRI/MRI_3300]
2. MCB Server full backup DAT tape [T:/Reports/MRI/MRI_3300]
3. CD-ROM [MRI_3300]

4.2. GIS DATA

Spatial data in the form of GIS data layers will be stored digitally at three locations:

1. The Marine Conservation Branch Server:
GIS Data@FREM.SHARED\CALM on StreetTalk [L:/GIS/MCB/CFR/Capes/]
2. MCB Server full backup DAT tape [L:/GIS/MCB/CFR/Capes/]
3. On GIS Information Coordinator's Computer. [H:/MCB/CFR/Capes]

4.3. VIDEO RECORDS

Eight mini digital tapes were used to capture sampling quadrats, habitat data and opportunistic video footage. The tape numbers are:

1. MRI/CF/GBC/HH#1-02/1999
2. MRI/CF/GBC/HH#2-02/1999
3. MRI/CF/GBC/HH#3-02/1999
4. MRI/CF/GBC/HH#4-02/1999
5. MRI/CF/GBC/HH#5-02/1999
6. MRI/CF/GBC/HH#6-02/1999
7. MRI/CF/GBC/HH#7-02/1999
8. MRI/CF/GBC/HH#8-02/1999

Collected video footage will be held at two locations:

1. VHS masters to be archived at the CALM Information Management Branch, Como.
2. VHS copies to be stored at CALM Marine Conservation Branch, Fremantle.

GANNET ROCK		granite boulders		sheltered
BUNKERS BAY				
CAPE NATURALISTE	Granite headland, eroding dune behind	narrow limestone		exposed to west and north
SUGAR LOAF/ YALLINGUP	High consolidated dunes narrow limestone reefs at base; Sugarloaf large granitic dome forming small headland	narrow		exposed to west
YALLINGUP	small granite headland with limestone platform to north	relatively large, with pools	Fisheries Area	Protected exposed
SMITHS BEACH	Small granite headland to south, limestone headland to north	small limestone platform in of middle bay	Limestone with turf binding sand	north facing exposed, but with wide relatively sandy bay dissipating swell
CANAL ROCKS	Granite headland on west canal between north south trending rocks; landward consolidated dune, eroding cave face	narrow limestone with sand in middle of the bay		western side headland exposed; forming north opening bay relatively sheltered with <i>Posidonia</i> sp.
CAPE CLAIRULT/ INJIDUP	Granite headland?			exposed headland, protecting sandy bay with northerly aspect
MOSES ROCK	Steep limestone cliff area to south appears to be similar	granite boulders lying on a narrow limestone reef with central gutter parallel to beach	bare rock with coralline algae and small amount turf; <i>Galeolaria</i> at limestone granite boulders interface	exposed
COWARAMUP	High headlands North granite, South consolidated dune. interrupted, narrow limestone reef south to Ellensbrook	variable limestone platform, wider to south of point, depressions in platform with sand accumulations Rounded granites and angular metamorphic rocks embedded on limestone platform or forming shallow subtidal boulder field	algal turf binding sand and seagrass <i>H. tasmanica</i> in sand filled depressions	northerly aspect protected from westerly swells,

LOCATION	LANDWARD ASPECT	TYPE & EXTENT PLATFORM	NOTABLE BIOTA	EXPOSURE
ELLENSBROOK	Limestone reefs extensive to south	river water enters sea at granite boulder area with limestone platform		
CAPE MENDELLE/ KILCARNUP	Extensive limestone reef at point			north side point WNW facing , swells refracted around point
PREVELLY/ MARGARET RIVER	Limestone outcrops and islets at sealevel, Consolidated dune with limestone outcrops			exposed to westerly swells, dissipated in embayments by reefs and minor changes in aspect
GNARABUP POINT	Consolidated dune, eroded at sealevel forming wide reef	extensive limestone to south of Pt with classic notch and storm ramp, broken to north deep holes, gutters with high diversity algal sp, raised lip to seaward; subtidal reefs at entrance to bay	extent platform, variable topography giving a high diversity of microhabitats	exposed but variable degree of protection due to width platform
MARMADUKE POINT	unconsolidated dune moderate height, granite rocky point, limestone outcrop (3m)	small limestone platform at base of dune, large granite boulders to sea and on platform		exposed
REDGATE/ WRECK GEORGETTE	granite boulder outcrops along sandy beach line, unconsolidated dunes behind beach			exposed
THE FISHING PLACE	small bay surrounded by granite? headlands			
CAPE FREYCINET/ CONTOS SPRINGS	Cape, massive granite boulders to west; high consolidated dune above sandy beach			exposed
NORTH POINT/ BORANUP	Appear similar to Cosy Corner? granite headland			
HAMELIN BAY/ WHITE CLIFF POINT	headland high consolidate dune with exposed duricrust, long sweeping beach to north backed by extensive dunes some with blowouts	Hamelin Is. limestone with small platform and extensive limestone reefs; to seaward granite islands, extensive <i>P. angustifolia/sinuosa</i> meadows, flora in bay not investigated		
FOUL BAY	high consolidated dune exposed cave formation; granite headland to south, wide sandy beach between headlands	small platform with storm bench (10m) at base of dune, granites and metamorphic within limestone; accumulations of <i>Turbo intercostalis</i> , <i>Turbo torquatus</i> , <i>Thais orbita</i> , urchin <i>Phyllocanthus</i> spines in crevices; fossil corals at lower part of limestone outcrop	low turf on platform, narrow linear cracks, very regular surface	some protection from swells, very turbid waters, no large invertebrates due to regular topography; bird midden? with broken <i>Turbo</i> , <i>Lampus</i> , <i>Haliotis</i> , <i>Thais</i> , urchins, crabs, recent with gull droppings
COSY CORNER/ KNOBBY HEAD	consolidated dunes around high granite domes; offshore limestone islands and reef platforms	limestone reef to east, outcropping on beach and offshore	seagrass <i>A. antarctica</i> off sandy bay aerial photos indicate large sand sheets offshore	exposed to SW; some protection due to offshore islands and reefs
	granites trending SW			

LOCATION	LANDWARD ASPECT	TYPE & EXTENT PLATFORM	NOTABLE BIOTA	EXPOSURE
SKIPPY ROCK	off shore granite boulder protecting small beach, exposed limestone cliff			protected with accumulations of wrack
QUARRY BEACH	consolidated dune with exposed caves and seepage areas forming tufa over granite/gneiss			moderately exposed to west
WATERWHEEL	granite/gneiss boulders forming headlands with small coarse orange sandy beach between			exposed
RINGBOLT BAY	linear rocky boulder outcrops of granite, gneiss with quartzite intrusions to sea, gutters between outcrops			exposed, some islands and reefs off shore
DISABLED ACCESS/ POINT MATTHEW	sandy beach to east, granite and gneissic rocks to west		giant limpets at most exposed point	exposed
BARRACK POINT/ GRANNY'S POOL	High dunes over granite boulders		small beaches between rocky outcrops, accumulations of seagrass and <i>A. antarctica</i> stem balls. <i>P. coriacea</i> pericarps	exposed, boulders form protected pool
BARRACK POINT/ STORM BAY/FLINDERS BAY / AUGUSTA	rocky point, small sandy beach rocks 20m offshore with diverse algal assemblages and seagrass <i>A. antarctica</i>	granite, Gneiss and schist boulder field on narrow sand covered limestone platform, boulders seaward edge	algal turf and sand binding rocks to pavement <i>Serpularbis</i> on rocks	easterly aspect, moderately exposed to swells

APPENDIX III. INTERTIDAL SURVEY SAMPLING SITES INFORMATION

CALM No	Site	Code	Region	Quadrats	Latitude	Longitude	Description
<u>BOULDER FIELDS</u>							
GBC-360	Pt Picquet	PP	North	30	33°34'00"S	115°05'00"E	sheltered sites, facing NE into Geographe Bay, with a narrow intertidal area (2m wide) of small granite boulders on sand
GBC-361	Gannet Rock	GR	North	30	33°34'30"S	115°05'30"E	sheltered, facing E into Geographe Bay, intertidal 3-5m wide
GBC-362	Rocky Pt. East	RE	North	30	33°33'00"S	115°03'30"E	more exposed, facing NNE, with steep drop into sand
GBC-363	Rocky Pt. West	RW	North	30	33°33'00"S	115°03'15"E	exposed, facing N, large boulders, intertidal 10m wide
GBC-364a	Sugarloaf Rock 1	S1	North	30	33°33'30"S	115°00'10"E	sheltered behind Sugarloaf Rock, facing NW, intertidal narrower
GBC-364b	Sugarloaf Rock 2	S2	North	30	33°33'30"S	115°00'10"E	just east of Cape, relatively sheltered, facing N, 5m intertidal
GBC-365a	Cape Naturalist East	CE	North	30	33°32'00"S	115°00'30"E	high energy, facing W, boulder field separated from shore by sand
GBC-365b	Cape Naturalist South	CS	North	15	33°32'30"S	115°00'30"E	
GBC-366	Canal Rocks	CR	West	30	33°40'10"S	115°00'30"E	sheltered, facing W, in lee of Canal Rocks
GBC-367	Smith's Beach	SB	West	15	33°39'30"S	115°00'30"E	high energy, exposed, large sloping boulders dropping steeply
GBC-368a	Cowarumup (outer)	CO	West	30	33°51'40"S	114°59'10"E	exposed headland, east end of bay, facing NW, intertidal 5m wide
GBC-368b	Cowarumup (inner)	CI	West	30	33°51'40"S	114°59'10"E	sheltered, facing S into east end of bay, extensive intertidal
GBC-369	Prevelly boulders	PS	West	30	33°59'30"S	114°59'30"E	exposed headland, south of Gnarabup, facing SW
GBC-370	Foul Bay	FB	South	20	34°14'30"S	115°03'00"E	exposed headland in extensive bay, facing W, narrow steep shore
GBC-371	Flinders Bay	FL	South	20	34°20'30"S	115°10'30"E	sheltered, facing east within bay, wide intertidal (20m)
GBC-372	Granny's Pool	GB	South	20	34°20'40"S	115°10'30"E	sheltered, facing ESE, still within Flinders Bay
GBC-373	Fishing Ramp	FR	South	20	34°21'40"S	115°09'20"E	exposed, facing SE at entrance to Flinders Bay
GBC-374	Ringbolt Bay	RB	South	20	33°22'00"S	115°08'40"E	exposed, facing SW on headland
GBC-375	Waterwheel	WW	South	20	34°22'00"S	115°08'30"E	sheltered gutters
GBC-376	Quarry Bay	QB	South	20	34°21'40"S	115°08'30"E	sheltered, on south shore of W facing bay, facing N
<u>LIMESTONE PLATFORMS</u>							
GBC-377	Cape Naturaliste	CN	North	20	33°32'30"S	115°00'30"E	exposed, small, sand covered platform, some emergent boulders
GBC-378a	Moses Rock (platform)	MP	West	20	33°35'00"S	114°59'30"E	exposed, low platform behind fringing rocks
GBC-378b	Moses Rock (boulders)	MB	West	20	33°35'00"S	114°59'30"E	exposed boulders on inner platform
GBC-379a	Cowarumup (platform)	CP	West	45	33°51'55"S	114°59'00"E	sheltered platform facing N, 20m wide
GBC-379b	Cowarumup (boulders)	CB	West	15	33°51'55"S	114°59'00"E	sheltered boulders on inner platform
GBC-380	Prevelly limestone	PP	West	80	33°58'50"S	114°59'30"E	exposed platform, extensive, 50+m wide

APPENDIX IV. ALGAL ASSEMBLAGE DATA

APPENDIX V. ALGAE AND SEAGRASS SPECIES LIST
--

Species	Species
<i>Acanthophora dendroides</i>	<i>Acrocarpa robusta</i>
<i>Acrocarpa sp</i>	<i>Adelophyton sp</i>
<i>Amphibolis griffithii</i> *	<i>Amphiroa anceps</i>
<i>Amphiroa gracilis</i>	<i>Antithamnion hanowiooides</i>
<i>Apjohnia laetevirens</i>	<i>Areschougia sp</i>
<i>Aserococcus bullosus</i>	<i>Botryocladia sonderi</i>
<i>Callophycus harveyanus</i>	<i>Callophycus oppositifolius</i>
<i>Callophycus sp</i>	<i>Callophyllus sp</i>
<i>Carpopeltis elata</i>	<i>Carpopeltis sp</i>
<i>Carpopeltis spongeaplexus</i>	<i>Caulerpa brownii</i>
<i>Caulerpa flexilis</i>	<i>Caulerpa germinata</i>
<i>Caulerpa hedleyi</i>	<i>Caulerpa longifolia</i>
<i>Caulerpa obscura</i>	<i>Caulerpa simpliciuscula</i>
<i>Ceramium sp</i>	<i>Champia compressa</i>
<i>Champia sp</i>	<i>Cladisiphon sp</i>
<i>Clavicolonium ovatum</i>	<i>Caulocystis uvifera</i>
<i>Codium sp</i>	<i>Codium spongiosum</i>
<i>Ceoloclonium sp</i>	<i>Colpomenia sp</i>
<i>Craspedocarpus sp</i>	<i>Crustose corallines</i>
<i>Curdiea obesa</i>	<i>Cutleria multifida</i>
<i>Cutleria sp nov</i>	<i>Cystoseira trinodis</i>
<i>Cystoseira grevillei</i>	<i>Cystophora harveyi</i>
<i>Cystophora monilifera</i>	<i>Cystophora moniliformis</i>
<i>Cystophora pectinata</i>	<i>Cystophora racemosa</i>
<i>Cystophora retorta</i>	<i>Cystophora sp1</i>
<i>Cystophora sp2</i>	<i>Dasyclonium incisum</i>
<i>Dasyphylla priessi</i>	<i>Dasya sp</i>
<i>Dictyopteris australis</i>	<i>Dictyopteris muelleri</i>
<i>Dictyopteris plageogramma</i>	<i>Delisea pulchra</i>
<i>Dictyota naevosa</i>	<i>Dictyota sp</i>
<i>Dilophus fastigiatus</i>	<i>Dilophus sp</i>
<i>Dictyosphaeria sericea</i>	<i>Dictymenia sonderi</i>
<i>Dictymenia tridens</i>	<i>Echinothamnion hystrix</i>
<i>Echinothamnion mallardiae</i>	<i>Ecklonia radiata with multiple holdfasts</i>
<i>Ecklonia radiata</i>	<i>Epiphloea bullosa</i>
<i>Erythroclonium sonderi</i>	<i>Erythroclonium minuta</i>
<i>Euptilocladia spongeosa</i>	<i>Euptilocladia articulata</i>
<i>Galaxaura marginata</i>	<i>Gloiosaccion brownii</i>
<i>Glossophora nigricans</i>	<i>Gracilaria preissiana</i>
<i>Griffithsia sp</i>	<i>Griffithsia teges</i>
<i>Halimeda cuneata</i>	<i>Halopteris sp</i>
<i>Haloplegma preissii</i>	<i>Haloplegma sp2</i>
<i>Haraldiophyllum erosum</i>	<i>Hennedya crispa</i>
<i>Heterosiphonia crassipes</i>	<i>Heterosiphonia muelleri</i>
<i>Hemineura frondosa</i>	<i>Haliptilon roseum</i>
<i>Hydroclathrus clathratus</i>	<i>Hypoglossum sp</i>
<i>Hypnea ramentacea</i>	<i>Hypnea sp</i>
<i>Jania pulchella</i>	<i>Jania sp</i>
<i>Kuetzingia canaliculata</i>	<i>Laurencia brongniartii</i>
<i>Laurencia cruciata</i>	<i>Laurencia elata</i>
<i>Laurencia filiformis</i>	<i>Laurencia sp1</i>
<i>Laurencia sp2</i>	<i>Lobospira bicuspidata</i>
<i>Lobophora variegata</i>	<i>Melobesia sp</i>
<i>Metamastophora flabellata</i>	<i>Metagoniolithon radiatum</i>
<i>Metagoniolithon stelliferum</i>	<i>Myriodesma quercifolia</i>
<i>Myriodesma serelata</i>	<i>Myriodesma sp</i>
<i>Pachydictyon sp</i>	<i>Padina sp</i>

Species	Species
<i>Peyssonnelia novae-hollandiae</i>	<i>Peyssonnelia rubra</i>
<i>Peyssonnelia sp</i>	<i>Phaecelocarpus sp</i>
<i>Platyhalia angustifolia</i>	<i>Platyhalia quercifolia</i>
<i>Plocamium cartilagineum</i>	<i>Plocamium mertensii</i>
<i>Plocamium preissianum</i>	<i>Polysiphonia sp</i>
<i>Psilothalia sp</i>	<i>Pterocladia capillacea</i>
<i>Pterocladia lucida</i>	<i>Pterocladia rectangularis</i>
<i>Pterocladia sp</i>	<i>Rhipiliopsis robusta</i>
<i>Rhodymenia sonderi</i>	<i>Rhodopeltis australis</i>
<i>Sargassum sub-genus sargassum</i>	<i>Sarconema filiforme</i>
<i>Sargassum sub-genus arthrophyucus</i>	<i>Sargassum fallax</i>
<i>Sargassum linearifolium</i>	<i>Sargassum pinnate species</i>
<i>Sargassum podocanthum</i>	<i>Sargassum sp</i>
<i>Sargassum spinuligerum</i>	<i>Sargassum tristichum</i>
<i>Sargassum varians</i>	<i>Scaberia agardhii</i>
<i>Scinaia sp</i>	<i>Scytothalia dorycarpa</i>
<i>Sporochnus sp</i>	<i>Spyridia dasyoides</i>
<i>Thalassodendron pachyrhizum *</i>	<i>Thuretia quersifolia</i>
<i>Tylopus obtusatus</i>	<i>Vidalia spiralis</i>
<i>Zonaria sp</i>	<i>Zonaria turneriana</i>

* indicates a seagrass species

APPENDIX VIII. ASCIDIAN SPECIES LIST**FAMILY CLAVELINIDAE****Genus *Clavelina****Clavelina cylindrica**Clavelina moluccensis***Genus *Neptheis****Neptheis fascicularis***FAMILY PYCNOCLAVELLIDAE****Genus *Euclavella****Euclavella claviformis***FAMILY HOLOZOIDAE****Genus *Distaplia****Distaplia pallida***FAMILY POLYCITORIDAE****Genus *Eudistoma****Eudistoma maculosum***Genus *Polycitor****Polycitor nubilus***FAMILY RITTERELLIDAE****Genus *Ritterella****Ritterella sigillinoides***FAMILY PSEUDODISTOMIDAE****Genus *Pseudodistoma****Pseudodistoma australe**Pseudodistoma candens**Pseudodistoma sp. CC1***FAMILY POLYCLINIDAE****Genus *Aplidiopsis****Aplidiopsis mammillata***Genus *Sydneiodes****Sydneiodes tamaramae***Genus *Synoicum****Synoicum sacculum*

Genus Aplidium

Aplidium altarium
Aplidium benhami
Aplidium clivosum
Aplidium cratiferum
Aplidium filiforme
Aplidium petrosum
Aplidium rubricollum
Aplidium triggsense
Aplidium sp. CC1
Aplidium sp. CC2
Aplidium sp. CC3

Family Didemnidae**Genus Didemnum**

Didemnum albidum
Didemnum sp. CC1
Didemnum sp. CC2
Didemnum sp. CC3
Didemnum sp. CC4
Didemnum sp. CC5 (candidum?)
Didemnum sp. CC6 (augusti?)
Didemnum sp. CC7

Genus Leptoclinides

Leptoclinides sp. CC1
Leptoclinides sp. CC2
Leptoclinides sp. CC3
Leptoclinides sp. CC4 (c.f. Leptoclinides sp 4, P. Kott, 1997)

Genus Polysyncraton

Polysyncraton aspiculatum

FAMILY PEROPHORIDAE**Genus Perophora**

Perophora hutchisoni
Perophora multiclathrata

FAMILY STYELIDAE**Genus Cnemidocarpa**

Cnemidocarpa sp. CC1 (pedata?)

Genus Oculinaria

Oculinaria australia

Genus Botrylloides

Botrylloides leachi

FAMILY PYURIDAE**Genus Pyura**

Pyura gibbosa

APPENDIX IX. HARD CORAL DATA

Identification	Locality	Depth (m)	Collector	Date
<i>Coscinaraea marshae</i>	Canal Rocks	3.0	K.P. Bancroft, CALM	4/2/99
<i>Plesiastrea versipora</i>	Canal Rocks	3.0	K.P. Bancroft, CALM	4/2/99
<i>Turbinaria reniformis</i>	Canal Rocks	3.0	K.P. Bancroft, CALM	4/2/99
<i>Coscinaraea marshae</i>	Sugarloaf Rock GBC387	21.6	K.P. Bancroft, CALM	5/2/99
<i>Turbinaria reniformis</i>	Sugarloaf Rock GBC-387	21.6	K.P. Bancroft, CALM	5/2/99
<i>Turbinaria mesenterina</i>	Eagle Bay GBC-381	8.6	K.P. Bancroft, CALM	5/2/99
<i>Plesiastrea versipora</i>	Eagle Bay GBC-381	8.6	K.P. Bancroft, CALM	5/2/99
<i>Coscinaraea mcneilli</i>	Bunkers Bay GBC-383	8.6	K.P. Bancroft, CALM	5/2/99
<i>Turbinaria mesenterina</i>	Bunkers Bay GBC-383	8.6	K.P. Bancroft, CALM	5/2/99
<i>Scolymia australis</i>	Seal Island GBC-398	8.0	K.P. Bancroft, CALM	2/2/99
<i>Rhizotrochus tuberculatus</i>	South Point GBC-392	15.4	K.P. Bancroft, CALM	30/1/99

APPENDIX XII. FISH SPECIES LIST

Species	Common name
<i>Acanthaluteres spilomelanurus</i>	Bridled Leatherjacket
<i>Acanthistius pardalotus</i>	Western Leopard
<i>Achoerodus gouldii</i>	Western blue Groper
<i>Anoplocapros amygdaloides</i>	Western smooth Boxfish
<i>Anoplocapros lenticularis</i>	White barred Boxfish
<i>Aplodactylus westralis</i>	Western sea Carp
<i>Apogon ruepellii</i>	Gobbleguts
<i>Apogon victoriae</i>	Red striped Cardinal fish
<i>Aracana aurita</i>	Shaw's Cowfish
<i>Aracana ornata</i>	Ornate Cowfish
<i>Arothron hispidus</i>	Stars and stripes Toadfish
<i>Arripis georgianus</i>	Tommy ruff
<i>Aulopus purpurissatus</i>	Sargeant Baker
<i>Austrolabrus maculatus</i>	Black spotted Wrasse
<i>Bigener brownii</i>	Spiny Tailed Leatherjacket
<i>Bodianus frenchi</i>	Western Foxfish
<i>Brachaluteres jacksonia</i>	Pygmy Leatherjacket
<i>Centroberyx lineatus</i>	Swallowtail
<i>Cheilodactylus rubrolabiatus</i>	Red lipped Morwong
<i>Cheilodactylus gibbosus</i>	Western crested Morwong
<i>Cheilodactylus nigripes</i>	Magpie Perch
<i>Chelmonops curiosus</i>	Western Talma
<i>Chromis klunzingeri</i>	Black Headed Puller
<i>Chrysophrys auratus</i>	Snapper
<i>Contusus brevicaudus</i>	Prickly Toadfish
<i>Coris auricularis</i>	Western King Wrasse
<i>Dactylophora nigricans</i>	Dusky Morwong
<i>Dasyatis brevicaudata</i>	Smooth Stingray
<i>Dasyatis thetidis</i>	Black Stingray
<i>Dinolestes lewini</i>	Long finned pike
<i>Diodon nichthemerus</i>	Globe fish
<i>Dotalabrus alleni</i>	Little rainbow Wrasse
<i>Dotalabrus aurantiacus</i>	Pretty polly Wrasse
<i>Enoplosus armatus</i>	Old Wife
<i>Epenephelus rivulatus</i>	Chinaman cod
<i>Epinephelides armatus</i>	Breaksea cod
<i>Eubalichthys bucephalus</i>	Black Reef Leatherjacket
<i>Eubalichthys mosaicus</i>	Mosaic Leatherjacket
<i>Eupetrichthys angustipes</i>	Snakeskin Wrasse
<i>Gerres subfasciatus</i>	Roach
<i>Girella tephraeops</i>	Western rock Blackfish
<i>Girella zebra</i>	Zebra fish
<i>Glaucosoma hebracium</i>	Jewfish
<i>Halichoeres brownfieldi</i>	Brownfields Wrasse
<i>Heterodontus portusjackson</i>	Port Jackson shark
<i>Kyphosus cornelii</i>	Western Buffalo Bream
<i>Kyphosus sydneyanus</i>	Silver Drummer
<i>Lotella rhacinus</i>	Beardie
<i>Meuschenia flavolineata</i>	Yellow striped Leatherjacket
<i>Meuschenia freycineti</i>	Six spined Leatherjacket
<i>Meuschenia galii</i>	Blue lined Leatherjacket
<i>Meuschenia hippocrepis</i>	Horseshoe Leatherjacket
<i>Microcanthus strigatus</i>	Stripey
<i>Myliobatis australis</i>	Eagle ray
<i>Neatypus obliquus</i>	Footballer Sweep

Species	Common name
<i>Nelussetta ayraudi</i>	Chinaman Leatherjacket
<i>Nemadactylus valenciennes</i>	Queen Snapper
<i>Neodax balteatus</i>	Little weed Whiting
<i>Notalabrus parilus</i>	Brown spotted Wrasse
<i>Odax acroptilus</i>	Rainbow fish
<i>Odax cyanomelas</i>	Herring Cale
<i>Omegophora armilla</i>	Ringed Toadfish
<i>Omegophora cyanopunctata</i>	Blue spotted Toadfish
<i>Ophthalmolepis lineolata</i>	Maori Wrasse
<i>Orectolobus maculatus</i>	Spotted Wobbegong
<i>Orectolobus sp</i>	Western wobbegong
<i>Othos dentex</i>	Harlequin fish
<i>Paraplesiops meleagris</i>	Western Blue devil
<i>Parascyllium variolatum</i>	Varied Catshark
<i>Parequula melbournensis</i>	Silverbelly
<i>Parma mccullochi</i>	McCulloch's Scalyfin
<i>Parma occidentalis</i>	Western Scalyfin
<i>Parma victoriae</i>	Victorian Sclayfin
<i>Parupeneus signatus</i>	Black spotted Goatfish
<i>Pelates sexlineatus</i>	Striped Trumpeter
<i>Pelsartia humeralis</i>	Sea Trumpeter
<i>Pempheris klunzingeri</i>	Rough Bullseye
<i>Pempheris multiradiata</i>	Common Bullseye
<i>Penicipelta vittiger</i>	Toothbrush Leatherjacket
<i>Pictilabrus laticlavus</i>	Senator Wrasse
<i>Pictilabrus sp.</i>	False senator Wrasse
<i>Plectorinchus flavomaculatus</i>	Gold spotted sweetlips
<i>Pseudocaranx dentex</i>	Skipjack Trevally
<i>Pseudocaranx wrighti</i>	Sand Trevally
<i>Pseudolabrus biserialis</i>	Red banded Wrasse
<i>Pseudophycis barbata</i>	Bearded Cod
<i>Rhabdosargus sarba</i>	Tarwhine
<i>Sallaginoides punctata</i>	King George Whiting
<i>Schuettea woodwardi</i>	Woodwards Pomfret
<i>Scobinichthys granulatus</i>	Rough Leatherjacket
<i>Scorpius aequipinnis</i>	Sea Sweep
<i>Scorpius georgiana</i>	Banded Sweep
<i>Sillago maculata</i>	Trumpeter Whiting
<i>Siphonognathus beddomei</i>	Pencil Weed Whiting
<i>Siphonognathus caninus</i>	Sharp nosed Whiting
<i>Sphyræna obtusata</i>	Striped sea pike
<i>Tilodon sexfasciatum</i>	Moonlighter
<i>Torquener pleurogramma</i>	Banded Toadfish
<i>Trachichthys australis</i>	Roughy
<i>Trachinops brauni</i>	Blue lined Hulafish
<i>Trachinops noarlungae</i>	Noarlunga Hulafish
<i>Trachurus declivis</i>	Jack Mackerel
<i>Trachurus novaezelandiae</i>	Yellowtail Mackerel
<i>Trygonoptera mucosa</i>	Western Stingaree
<i>Trygonoptera ovalis</i>	Striped Stingaree
<i>Trygonoptera personata</i>	Masked Stingaree
<i>Upeneichthys lineatus</i>	Blue lined Goatfish
<i>Upeneichthys vlamingii</i>	Blue spotted Goatfish
<i>Urolophus circularis</i>	Circular Stingaree
<i>Urolophus paucimaculatus</i>	Sparsely spotted Stingaree

APPENDIX XIV. ALGAE AND SEAGRASSES COLLECTED IN THE LOW INTERTIDAL AT COWARAMUP BAY

Species

Acrocarpa robusta
Amphiroa anceps
Amphibolis antarctica *
Caulerpa brownii
Cladophora sp.
Codium spongiosum
Colpomenia sp
Crustose corallines
Cystophora harveyi
Dictyota sp.
Dictyosphaeria sericea
Ecklonia radiata adults
Halimeda cuneata
Haliptilon roseum
Hypnea sp
Jania sp
Laurencia cf majiculum
Lobophora variegata
Metagoniolithon radiatum
Metagoniolithon stelliferum
Neogoniolithon sp.
Pachydictyon sp
Sargassum arthrophyucus
Scaberia agardhii
Sphacelaria
Zonaria turneriana

* indicates a seagrass species
