

THE AUSTRALIAN SPECIES OF
ROBERTSONIA (CRUSTACEA,
HARPACTICOIDA), WITH A REVISED
KEY TO THE GENUS

By R. HAMOND

Department of Zoology, Melbourne University, Victoria

Figures 1-41.

Manuscript received, 28th March, 1972.

SUMMARY

Two species of copepods of the genus *Robertsonia* are described and figured, *R. propinqua* (T. Scott) from saline lakes in south-east Australia and *R. barnesi* sp. nov. from the intertidal zone of north-eastern Queensland. A new key to all known species of the genus is provided.

Rec. Aust. Mus., **28**, page 421.
