

**77 Additional Marine Bivalve Species from Wakayama Prefecture  
— A Supplement to A CATALOGUE OF MOLLUSCS OF  
WAKAYAMA PREFECTURE,  
THE PROVINCE OF KII-I. by T. Habe**

AKIHIKO MATSUKUMA

Kyushu University Museum, 6-10-1, Hakozaki, Higashi-ku,  
Fukuoka, Japan 812-8581

In 1981, Tadashige Habe published a comprehensive catalogue of the bivalve mollusks of Wakayama Prefecture that has since become a fundamental source for the study of the subtropical and warm temperate bivalve fauna around Japan. Various investigators and shell collectors, including Takashi Okutani, Kin'ichi Sakurai, Eiji Tsuchida, Taiji Kurozumi, Shin'ichi Ikebe, and Yasuo Koyama, have since collected and reported a number of additional bivalves. In this paper the author records 77 marine bivalve species from Wakayama Prefecture collected mainly by Messrs. Tanaka, Nagai, Tsuchida, Ikebe and Koyama. This work is chiefly based on a manuscript and photographs prepared by Yasuo Koyama. The original citation, bibliography and some important synonyms are given for each species. Some are not illustrated, because no specimens were examined. Almost all the material studied is currently housed in the Wakayama Prefecture Museum in Kainan City. Bivalve specimens donated by Shin'ichi Ikebe to the Kyushu University Museum were also examined.

The author thanks Bernard Métivier, Paul Valentich Scott, and Paul Callomon for providing valuable support and advice.

**Class BIVALVIA Linnaeus, 1758** Nimaigai-ko
