A Comprehensive List of Known Deep-Sea Corals in Waters of the United States and its Island Territories (v. 2021)

Corals are a diverse and prominent component of the epibenthic fauna in deep waters of the United States and globally. Many species form three-dimensional biogenic habitats that support numerous other taxa, and their conservation has become a major driver of deep-sea protection efforts.

The following is a list of all deep-water coral species reported to occur within the territorial waters and exclusive economic zone (EEZ) of the United States and its insular territories as of 2021. This comprehensive list is updated from Cairns and Hourigan (2017) and includes species recognized through 2021. It incorporates updates to the seven peer-reviewed 2017 regional lists, as well as four new lists covering U.S. Island territories in the Pacific. The list is limited to species that do not depend upon symbiotic algae (*Symbiodinium* spp.) and light for their metabolic requirements (i.e., azooxanthellate or apozooxanthellate)¹, and that generally occur in water deeper than 50m. While 50m is shallower than most definitions of “deep-sea,” it was chosen practical management purposes by the National Oceanic and Atmospheric Administration (NOAA; Hourigan et al. 2017), and previously used in global estimates of deep-water corals (Cairns 2007).

Deep-water corals are arranged in the following taxonomic groupings: the anthozoan subclass Hexacorallia, including order Antipatharia, order Scleractinia, and two species in order Zoantharia; subclass Octocorallia, including order Alcyonacea, order Pennatulacea, and order Helioporacea; and the hydrozoan family Stylasteridae in order Anthoathecata. Only named species and subspecies are included in this list; we have excluded taxa identified only to genus, as cf., or as dubious species in the regional lists. Taxonomic names are generally those currently accepted in the World Register of Marine Species ([WoRMS](#)), and are arranged by order, and alphabetically within order by family, genus, and species. The family-level classification includes a major revision of the bamboo corals (Saucier et al. 2021). The list does not yet reflect the major systematic revision of the Octocorallia by McFadden et al. (2022), as these have not yet been incorporated in WoRMS..

Although the total number of species will vary over time due to taxonomic interpretation (synonyms), description of new taxa, and discovery of overlooked publications, currently 743 species are reported from the deep waters of the U.S. and its territories, an increase of 80 species since the 2017 list. This list includes 81 Antipatharia, 186 Scleractinia, two named Zoantharia, 357 Alcyonacea, 57 Pennatulacea, 1 Helioporacea, and 58 Stylasteridae. The current list includes 39 newly described species (highlighted in blue) added since the 2017 comprehensive list.

The list is divided into 11 U.S. geographic regions (Table 1): These regions primarily follow U.S. jurisdictional boundaries, and vary greatly in size, from small (U.S. Caribbean, ~220,000 km²) to very large (Alaska, ~3,700,000 km²; Hawaiian Archipelago and Johnston Atoll, ~2,900,000 km²). For the most part, however, they do reflect different proposed biogeographic regions fairly well. There is only limited overlap between species in the Atlantic and Pacific, with 21 species (e.g., *Desmophyllum dianthus*, *Lophelia pertusa* (= *Desmophyllum pertusum*), *Gersemia rubiformis*, and *Funiculina quadrangularis*) reported from both ocean basins. The Alaskan Arctic Ocean is the most depauperate, with only a few corals reported, and only one, *Gersemia rubiformis*, identified to species. Species determinations are almost all based on morphology, and new genetic techniques may better delineate species boundaries and reveal cryptic species.

In addition to biogeographic factors, the number of species reported from any region is highly dependent on the history and extent of sampling and study that conducted in that region (Cairns et al. 2017). The U.S. Gulf of

¹ In most cases, the lack of zooxanthellae has been inferred from the dark environments in which they occur, rather than empirically demonstrated. The 50m depth corresponds with the turnover of a number of octocoral species from zooxanthellate to azooxanthellate (e.g., Schubert et al. 2016, Sánchez et al. 2019).

Mexico has been the subject of both historical and recent sampling and taxonomic attention, which likely contributes to its having the highest total count of named deep-water coral species (238). In contrast, the deep-water corals of the U.S. Pacific Island territories outside Hawai‘i have been largely unstudied; we are not aware of any systematic studies aside from one checklist of scleractinian and stylasterid corals from the Mariana Archipelago by Randall (2003). The four new regional lists are largely based on video observations and identifications of corals conducted during the 2015-17 NOAA Campaign to Address Pacific monument Science, Technology, and Ocean NEeds (CAPSTONE; Kennedy et al. 2019). These are identified as “preliminary lists,” as very few specimens were collected and many coral taxa cannot be confidently identified from images alone. These observations are also primarily from deeper ROV and submersible expeditions, thereby missing the deep mesophotic depths from 50-200 m that often have rich azooxanthellate coral faunas. Therefore, we consider these taxon identifications to be provisional until more comprehensive taxonomic studies are undertaken.

Table 1. United States regions and the number of coral taxa identified to species. Provinces and ecoregions are those of the Marine Ecoregions of the World (Spaulding et al. 2007). Region abbreviations: Northeastern U.S. (NEUS); Southeastern U.S. (SEUS); U.S. Gulf of Mexico (GOM); U.S. Caribbean (including Puerto Rico, the U.S. Virgin Islands, and Navassa Island); U.S. West Coast (USWC); Hawaiian Archipelago and Johnston Atoll (Hawaii); Mariana Archipelago, including Guam and the Commonwealth of the Northern Mariana Islands (Marianas); U.S. Line & Phoenix Islands, including Palmyra, Kingman Reef, Jarvis Island and Howland and Baker Islands.

Region	Province and Ecoregions	Subclass Hexacorallia	Subclass Octocorallia	Subclass Hydroidolina	Total
NEUS	<i>Cold Temperate Northwest Atlantic Province</i> : Gulf of Maine/Bay of Fundy; Virginian	2 Antipatharia 18 Scleractinia	39 Alcyonacea 14 Pennatulacea		73
SEUS	<i>Warm Temperate Northwest Atlantic Province</i> : Carolinian <i>Tropical Northwestern Atlantic Province</i> : Floridian	17 Antipatharia 78 Scleractinia	95 Alcyonacea 14 Pennatulacea	15 Stylasteridae	219
GOM	<i>Warm Temperate Northwest Atlantic Province</i> : Northern Gulf of Mexico; <i>Tropical Northwestern Atlantic Province</i> : Floridian	31 Antipatharia 72 Scleractinia	112 Alcyonacea 1 Helioporacea 12 Pennatulacea	9 Stylasteridae	238
U.S. Caribbean	<i>Tropical Northwestern Atlantic Province</i> : Bahamian; Greater Antilles; Eastern Caribbean	16 Antipatharia 46 Scleractinia	46 Alcyonacea 7 Pennatulacea	16 Stylasteridae	132
Alaska	<i>Arctic Province</i> : Beaufort Sea (continental coast and shelf); Chukchi Sea; Eastern Bering; <i>Cold Temperate Northeast Pacific Province</i> : Aleutian Islands; Gulf of Alaska; North American Pacific Fjordland	13 Antipatharia 9 Scleractinia	55 Alcyonacea 11 Pennatulacea	23 Stylasteridae	112
USWC	<i>Cold Temperate Northeast Pacific Province</i> : Oregon, Washington, Vancouver; Northern California; Southern California Bight	11 Antipatharia 20 Scleractinia	58 Alcyonacea 28 Pennatulacea	6 Stylasteridae	124
Hawaii	<i>Hawaii Province</i> : Hawaii	24 Antipatharia 55 Scleractinia 2 Parazoanthidae	89 Alcyonacea 9 Pennatulacea	6 Stylasteridae	185
Wake	<i>Marshall, Gilbert and Ellis Islands Province</i> : Marshall Islands	2 Antipatharia 3 Scleractinia 1 Parazoanthidae	25 Alcyonacea 2 Pennatulacea		33
Marianas	<i>Tropical Northwestern Pacific Province</i> : Mariana Islands	9 Antipatharia 31 Scleractinia 1 Parazoanthidae	31 Alcyonacea	3 Stylasteridae	75
U.S. Line & Phoenix Islands	<i>Central Polynesian Province</i> : Line Islands; Phoenix/Tokelau/Northern Cook Islands	3 Antipatharia 6 Scleractinia 1 Parazoanthidae	42 Alcyonacea 2 Pennatulacea		54
American Samoa	<i>Central Polynesian Province</i> : Samoa Islands; Phoenix/Tokelau/Northern Cook Islands	3 Antipatharia 6 Scleractinia	19 Alcyonacea		28

Acknowledgements

We are greatly indebted to the authors of the regional species lists, which form the basis of this comprehensive list. We are also grateful to many taxonomists that have reviewed various parts of this list: Dennis Opresko and Daniel Wagner for Antipatharia; Marcelo Kitahara for Scleractinia; Les Watling, Gary Williams, Peter Etnoyer, Beth Horvath, Scott France, and Andrea Quattrini for Octocorallia; and Alberto Lindner for Stylasteridae. The addition of taxa from recent expeditions to U.S. Pacific Island territories would not have been possible without the exceptional work of the team at the University of Hawai‘i’s Deep-sea Animal Research Center (formerly Hawai‘i Undersea Research Laboratory), coordinating with numerous experts to identify taxa from underwater video. Heather Coleman assisted in editing the manuscript. This is a publication of NOAA’s Deep Sea Coral Research and Technology Program.

Table 2. List of known deep-sea coral species and their reported distributions across the regions of the United States. Blue shaded species names indicate newly described species since the first version of this list (Cairns & Hourigan 2017) through at least 2021. s = Species reported from the region, but all records are < 50m. NEUS (Northeastern U.S.); SEUS (Southeastern U.S.); GOM (U.S. Gulf of Mexico).

Notes

- a. Transfer of *Lophelia pertusa* to the genus *Desmophyllum* was proposed based on genetic similarity of mitochondrial genomes and microsatellites (Addamo et al. 2016), and this change has been accepted by WoRMS. However, because of the significant morphological difference between these two genera and a difference of opinion even among molecular scientists, we suggest delaying this transfer until additional molecular studies are done on more genes.
