Take It Where You Need It

Two Great Flavors for Treating Low Blood Sugar!
Lemon and Grape Glucose 15™

Glucose 15™

Why Glucose15? All sugars are not created equal.
A simple monosaccharide sugar affects blood glucose rapidly.
glucose 15 delivers 15 grams of pure glucose (dextrose).

Glucose vs. Sucrose (table sugar)

Sucrose is 50% glucose and 50% fructose. Fructose has a lesser and slower affect on blood glucose. Thirty grams of sucrose would initially provide 15 grams of glucose.

Glucose vs. Orange Juice

While it may vary, 6 ounces of juice will deliver about 17 grams of sugars, which is good, but it's not glucose. **glucose 15** delivers 15 grams of glucose.

Candies and Milk

Candies and milk may contain various amounts of fat which slows digestion and thus slows the absorption of sugars.

No Chewing, Counting or Measuring

glucose 15 eliminates chewing, counting or measuring and delivers a consistent amount of glucose, 15 grams.

Glucose15 in pharmacies nationwide. Ask your pharmacist today!
