# California Epicarideans

## Suborder Cymothoida

## Superfamily Bopyroidea

### Family Bopyridae \*

#### Subfamily Pseudioninae

*Aporobopyrus muguensis* Shiino, 1964

*Aporobopyrus oviformis* Shiino, 1934

*Asymmetrione ambodistorta* Markham, 1985

*Discomorphus magnifoliatus* Markham, 2008

*Goleathopseudione bilobatus* Román-Contreras, 2008

*Munidion pleuroncodis* Markham, 1975

*Orthione griffenis* Markham, 2004

*Pseudionae galacanthae* Hansen, 1897

*Pseudionae giardi* Calman, 1898

#### Subfamily Bopyrinae

*Bathygyge grandis* Hansen, 1897

*Bopyrella calmani* (Richardson, 1905)

*Probopyria* sp. A Stebbins, 2011

*Schizobopyrina striata* (Nierstrasz & Brender à Brandis, 1929)

#### Subfamily Argeiinae

*Argeia pugettensis* Dana, 1853

#### Subfamily Ioninae

*Ione cornuta* Bate, 1864

*Leidya infelix* Markham, 2002

#### Subfamily Phyllodurinae

*Phyllodurus abdominalis* Stimpson, 1857

#### Subfamily Athelginae

*Anathelges hyphalus* (Markham, 1974)

#### Subfamily Hemiarthrinae

*Hemiarthrus abdominalis* (Krøyer, 1840)

Unidentified species †

### Family Dajidae

*Holophryxus alaskensis* Richardson, 1905

### Family Entoniscidae

*Portunion conformis* Muscatine, 1956

## Superfamily Cryptoniscoidea

### Family Cabiropidae

*Cabirops montereyensis* Sassaman, 1985

### Family Cryptoniscidae

*Faba setosa* Nierstrasz & Brender à Brandis, 1930

### Family Hemioniscidae

*Hemioniscus balani* Buchholz, 1866

---

† Unidentified species of Hemiarthrinae infesting the shrimp *Betaeus longidactylus* off San Pedro, CA (J. Markham, pers. comm.)

\* Plus one possibly new (unexamined) species of bopyrid found infesting the hermit crab *Paguristes ulreyi* (= new bopyrid host record) off San Diego, CA (T. Stebbins, Nov. 2011)

# Family Bopyridae

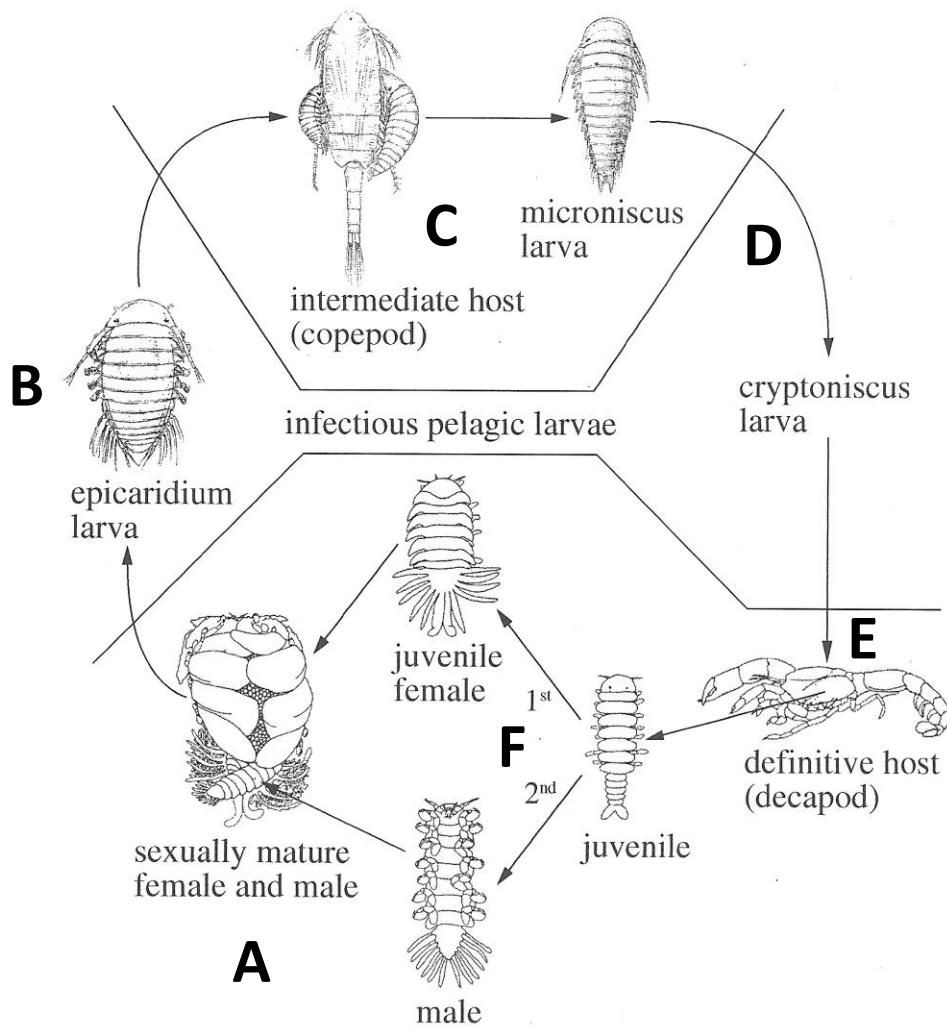

(Superfamily Bopyroidea)

*Bopyrids are parasites within the gill cavity or on/under the carapace of decapod hosts (e.g., crabs and shrimps). The parasites often distort the host carapace into a characteristic bulge, which has even been observed in fossil decapods.*

*California bopyrids: ~20 species (18 genera, 7 subfamilies)*

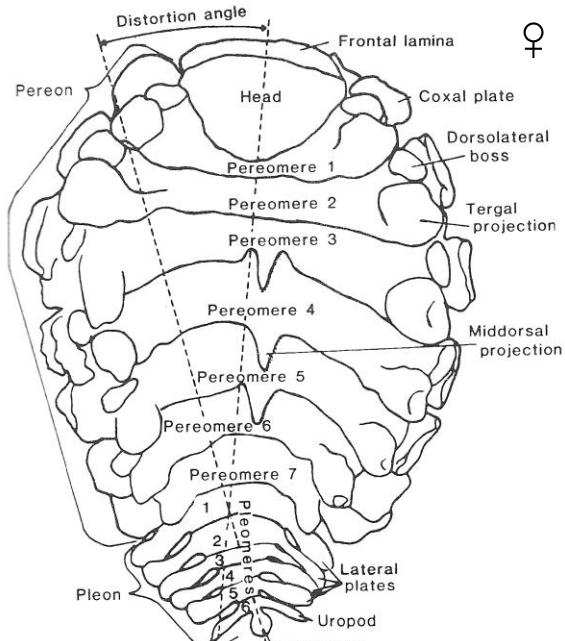

# Generalized Bopyrid Life Cycle \*

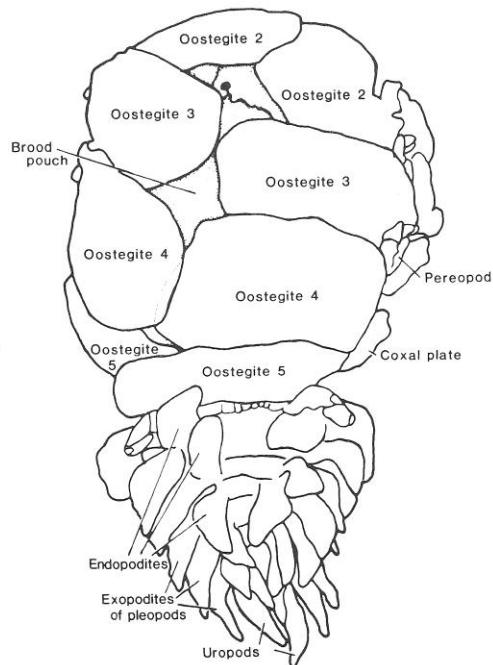

- A. Adult bopyrids typically found in gill chamber or on abdomen of decapod definitive host;
- B. Sexually mature release pelagic larvae (epicardium);
- C. Epicardium attaches to copepod intermediate host and metamorphoses into an ectoparasitic microniscus larva;
- D. Microniscus transforms into a cryptoniscus larva that detaches and is free-swimming;
- E. Cryptoniscus settles onto suitable definitive host (recently settled juveniles = bopyridia);
- F. First juvenile to settle becomes , while subsequent juveniles become dwarf that live on and fertilize eggs in marsupium.

\* Modified after Fig. 3 in Boyko & Williams (2009)

# Decapod Hosts of California Bopyrids

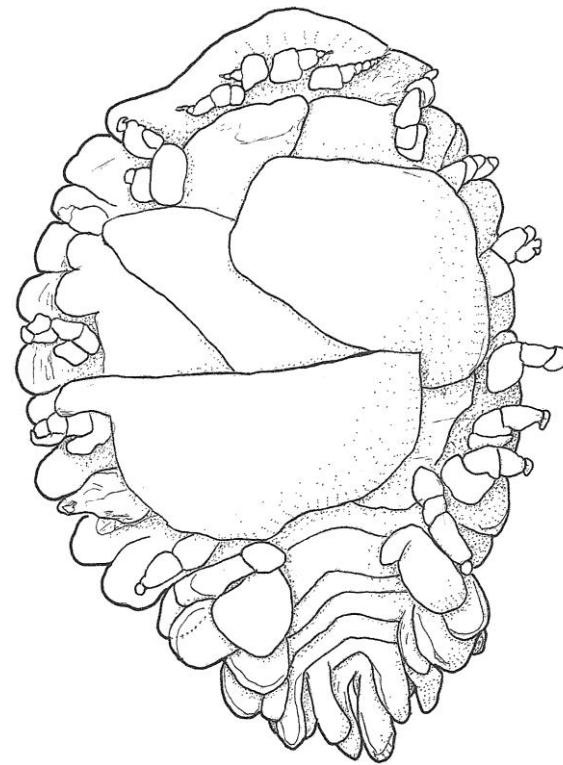

Host Families	Host Genera	Bopyrids
<b>Caridean Shrimp</b>		
Alpheidae [A] Hippolytidae [H] Crangonidae [C] Glyphocrangonidae [G]	[A] <i>Alpheopsis</i> , <i>Automate</i> , <i>Betaeus</i> , <i>Synalpheus</i> [H] <i>Eualus</i> , <i>Heptacarpus</i> , <i>Hippolyte</i> , <i>Lebbeus</i> , <i>Spirontocaris</i> , <i>Thor</i> [C] <i>Argis</i> , <i>Crangon</i> , <i>Lissocrangon</i> , <i>Mesocrangon</i> , <i>Metacrangon</i> , <i>Neocrangon</i> [G] <i>Glyphocrangon</i>	[A] <i>Bopyrella calmani</i> , <i>Probopyria</i> sp. A [H] <i>Argeia pugettensis</i> , <i>Hemiarthrus abdominalis</i> , <i>Schizobopyrina striata</i> [C] <i>Argeia pugettensis</i> [G] <i>Bathygyge grandis</i>
<b>Ghost Shrimp</b>		
Callianassidae	<i>Neotrypaea</i>	<i>Ione cornuta</i>
<b>Mud Shrimp</b>		
Upogebiidae	<i>Upogebia</i>	<i>Orthione griffenis</i> , <i>Phyllodurus abdominalis</i>
<b>Hermit Crabs</b>		
Diogenidae [D] Paguridae [P]	[D] <i>Isocheles</i> , <i>Paguristes</i> * [P] <i>Pagurus</i> , <i>Parapagurodes</i>	[D] <i>Asymmetrione ambodistorta</i> , *Unidentified sp. (new?) [P] <i>Anathelges hyphalus</i> , <i>Pseudione giardi</i>
<b>Squat Lobsters</b>		
Munididae [M1] Munidopsidae [M2]	[M1] <i>Munida</i> , <i>Pleuroncodes</i> [M2] <i>Galacantha</i> , <i>Munidopsis</i>	[M1] <i>Munidion pleuroncodis</i> , <i>Pseudione galacanthae</i> [M2] <i>Goleathopseudione bilobatus</i> , <i>Pseudione galacanthae</i>
<b>Porcelain Crabs</b>		
Porcellanidae	<i>Pachycheles</i> , <i>Petrolisthes</i>	<i>Aporobopyrus muguensis</i> , <i>Aporobopyrus oviformis</i> , <i>Discomorphus magnifoliatus</i>
<b>Brachyuran Crabs</b>		
Grapsidae	<i>Pachygrapsus</i>	<i>Leidya infelix</i>

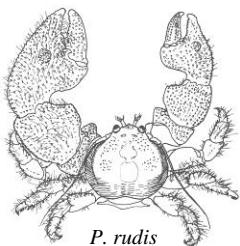

# *Aporobopyrus muguensis* (Shiino, 1964)

Dorsal view

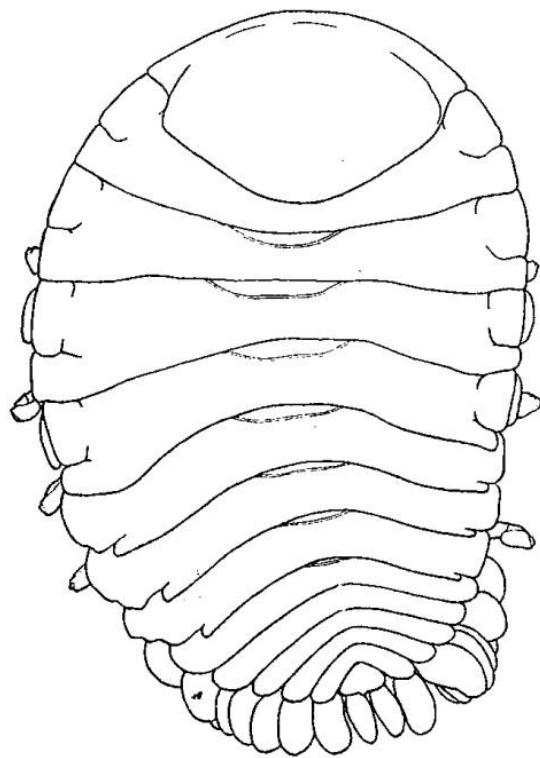

Ventral view

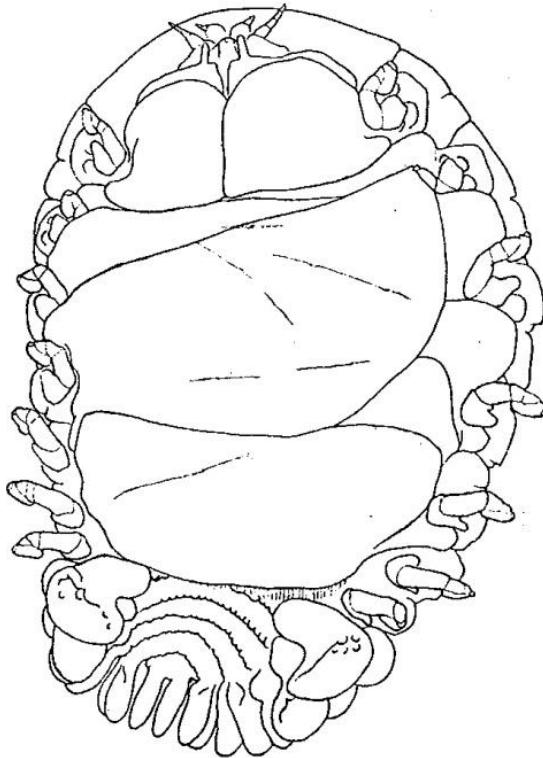

Host/Distribution: Infests the porcelain crabs *Pachycheles holosericus*, *P. pubescens*, and *P. rufus*; Bodega Bay, California to central west Baja California; 10-12 m.

# *Aporobopyrus oviformis* (Shiino, 1934)

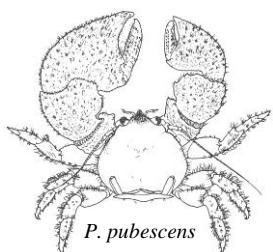

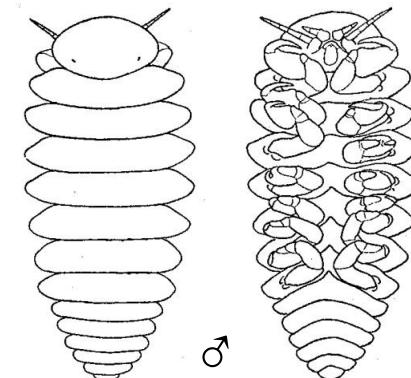

Dorsal view

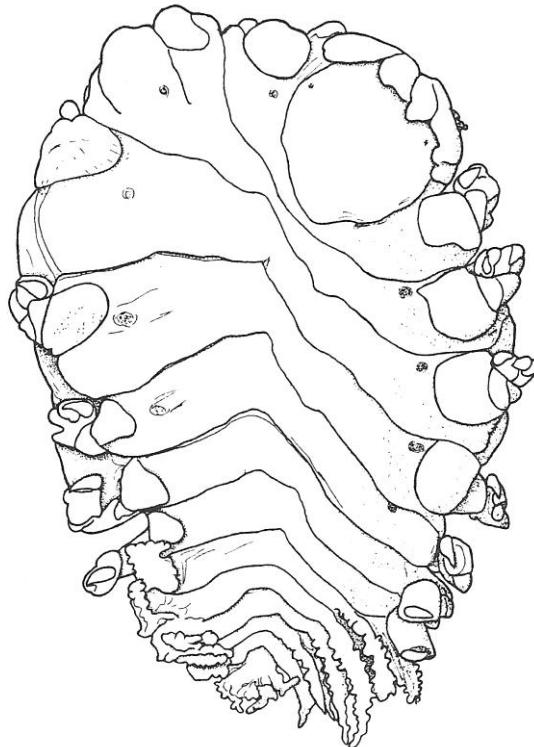

♀

Ventral view

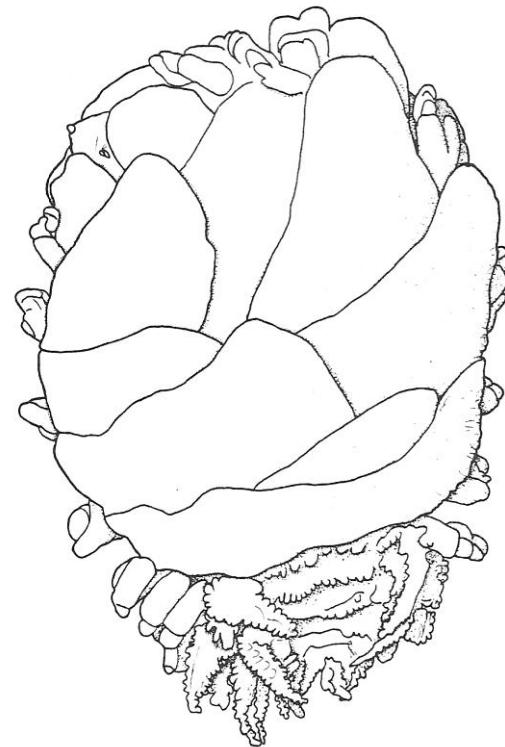

Host/Distribution: Infests the porcelain crab *Pachycheles pubescens* in California; Point Mugu, California, and Japan; 10-12 m.

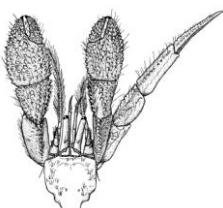

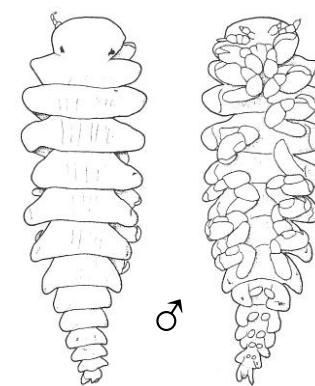

# *Asymmetrione ambodistorta* Markham, 1985

Dorsal view

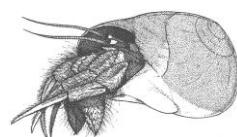

Ventral view

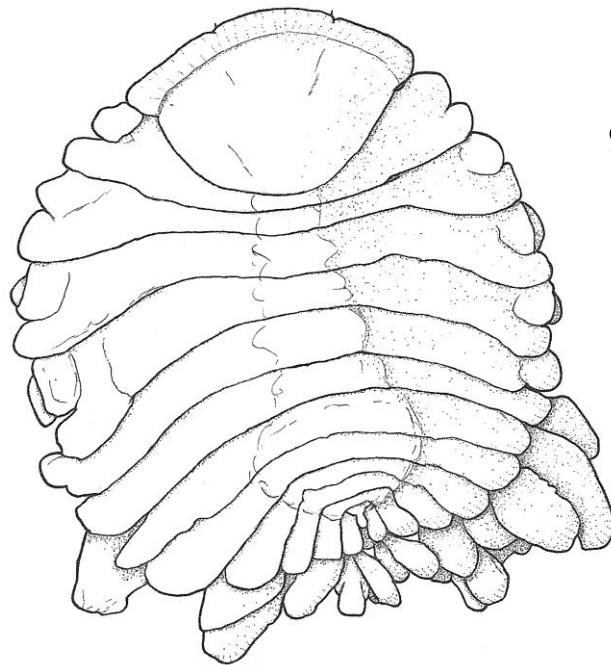

*I. pilosus*

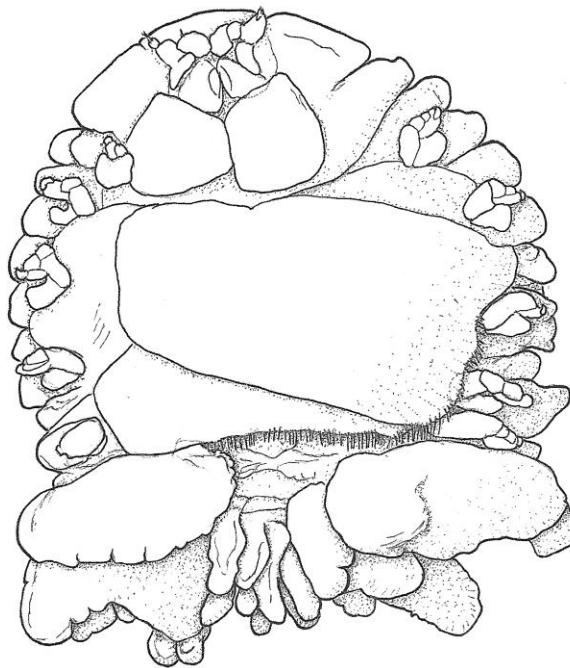

Host/Distribution: Infests the hermit crab *Isocheles pilosus*; Southern California; 3 m.

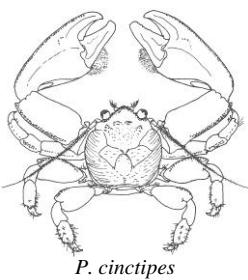

# *Discomorphus magnifoliatus* Markham, 2008

Dorsal view

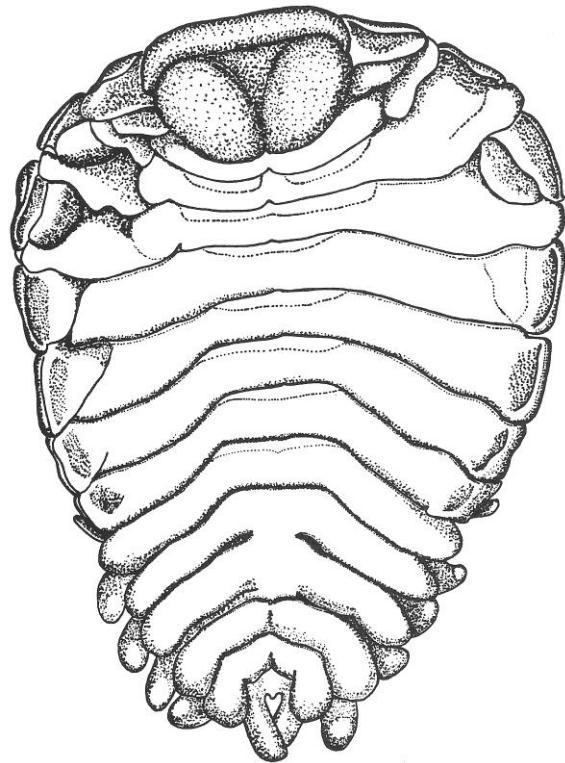

Ventral view

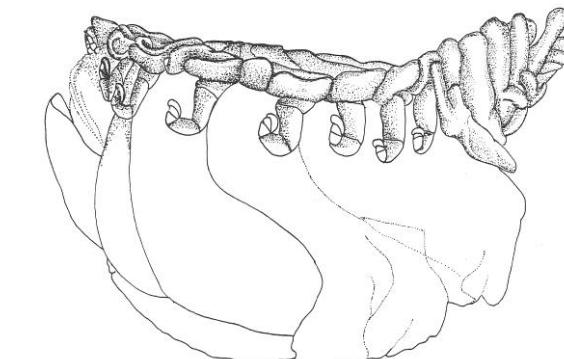

Host/Distribution: Infests the porcelain crab *Petrolisthes cinctipes*; Pacific Grove, Monterey County, California; intertidal.

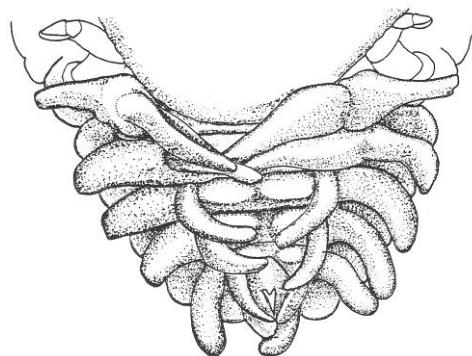

# *Goleathopseudione bilobatus* Román-Contreras, 2008

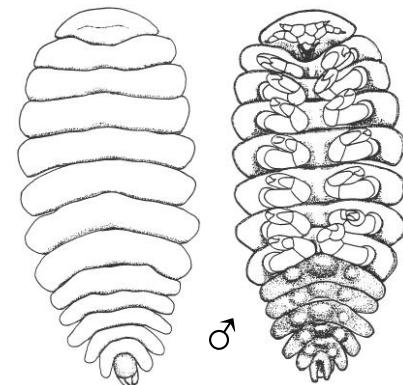

Dorsal view

♀  
Lateral view

Ventral view  
(pleon)

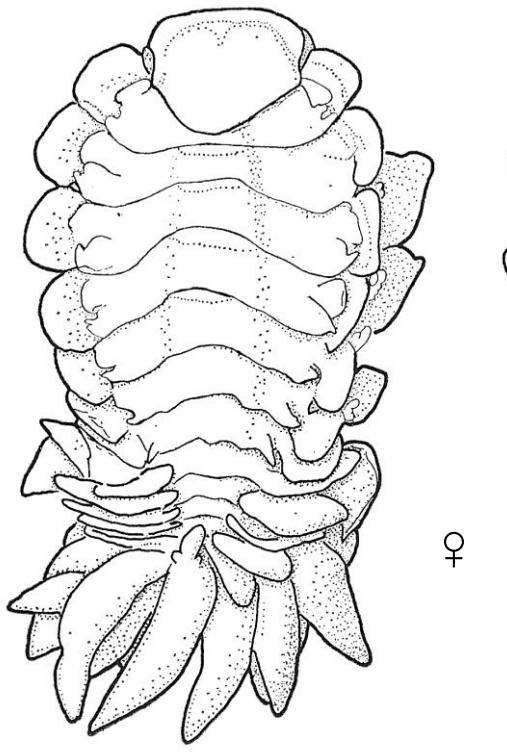

♂

*M. antonii*

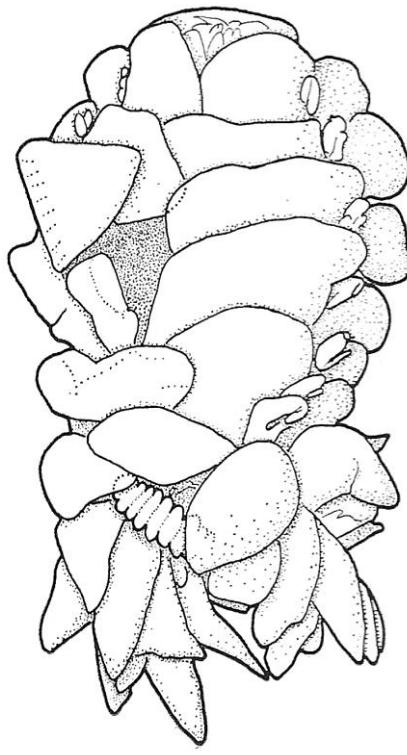

Host/Distribution: Infests the squat lobster *Munidopsis antonii*; Central California; 4100 m.

# *Munidion pleuroncodis* Markham, 1975

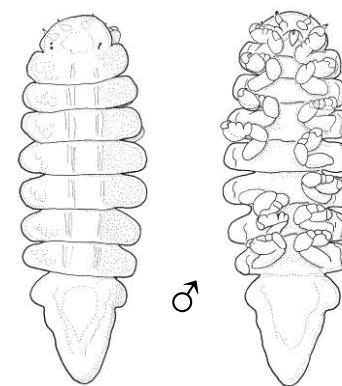

♀

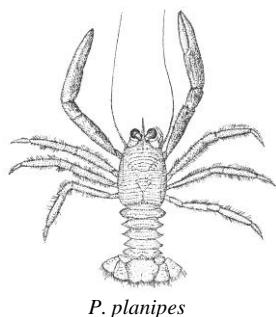

Dorsal view

Ventral view

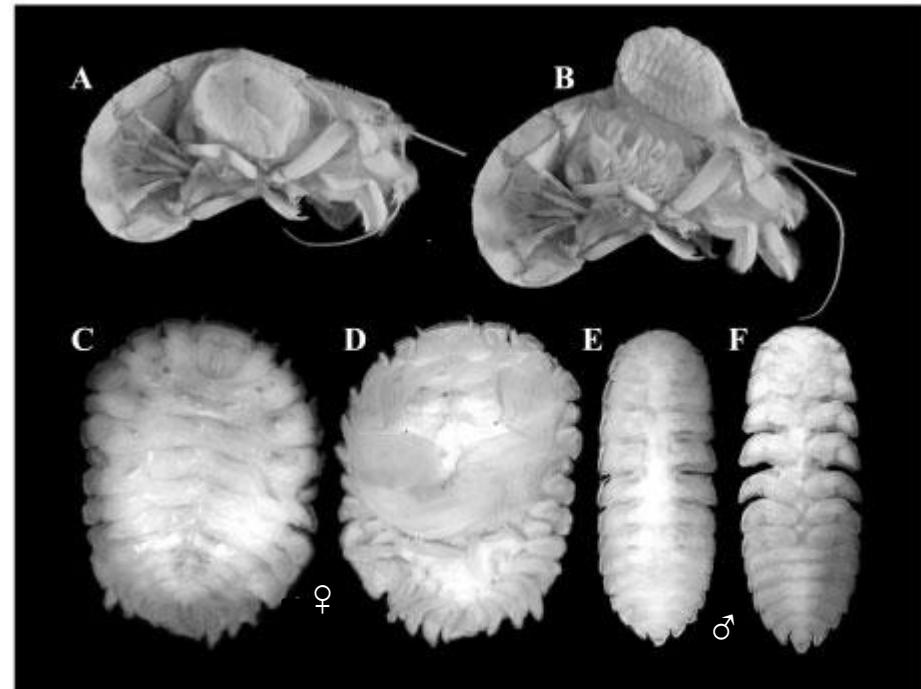

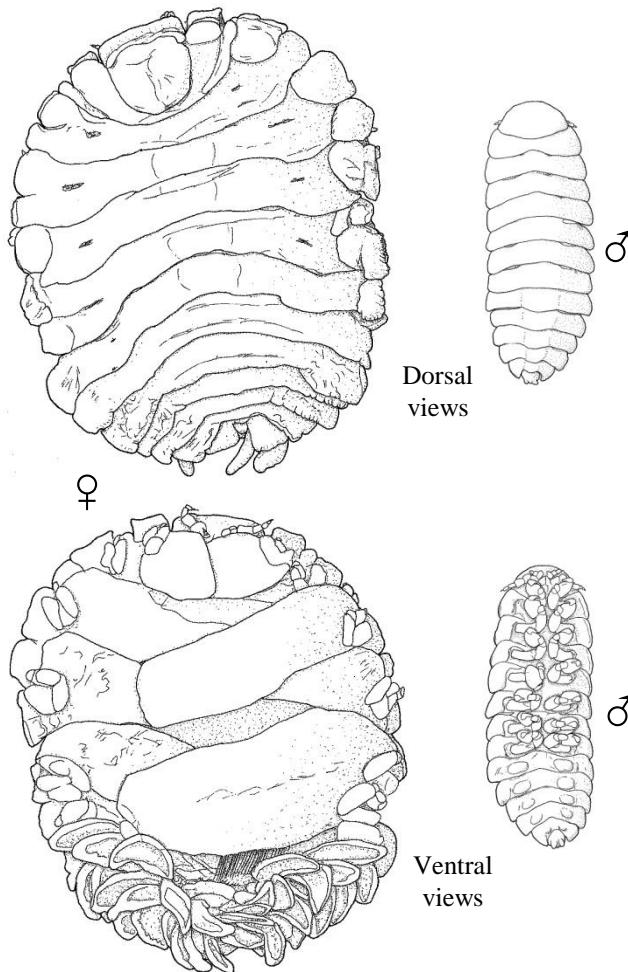

♂

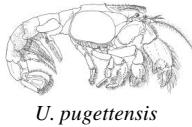

Host/Distribution: Infests the pelagic red crab (tuna crab) *Pleuroncodes planipes*; Central California to central Mexico; pelagic.

# *Orthione griffenis* Markham, 2004

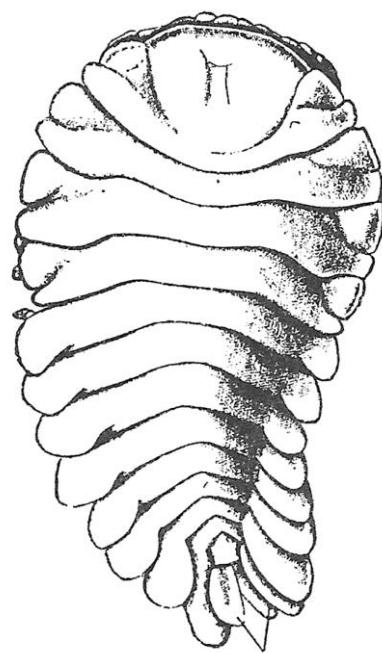

A, B = *Orthione griffenis* infesting *Upogebia pugettensis* from Oregon; C-D = dorsal and ventral views of female *O. griffenis*; E-F = dorsal and ventral views of male *O. griffenis*. [after Fig. 3 in Williams & An (2009)].

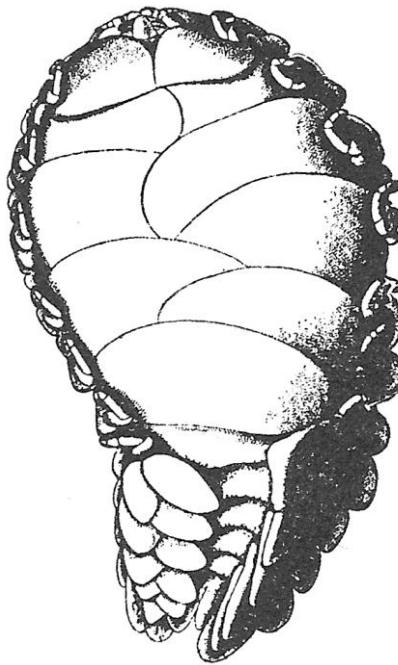

**Host/Distribution:** Infests the mud shrimp *Upogebia pugettensis* and *U. macginitieorum*; Introduced species from Asia (China, Japan) – British Columbia to southern California along western coast of North America.

# *Pseudione galacanthae* Hansen, 1897

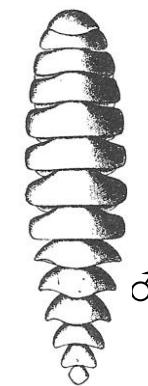

♀

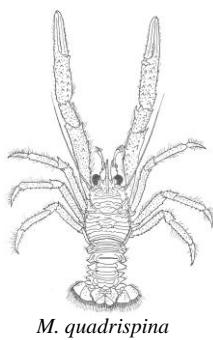

Dorsal view

Ventral view

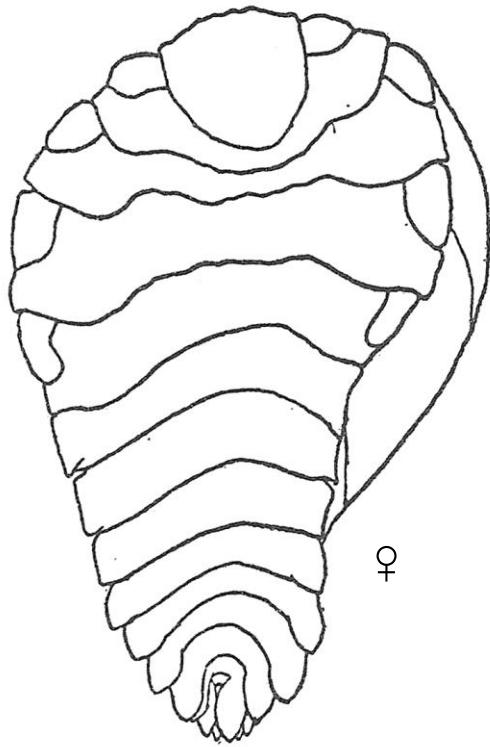

♂

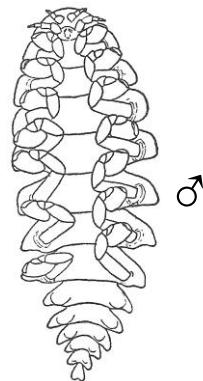

Host/Distribution: Infests the squat lobsters *Galacantha diomedaeae* and *Munida quadrispina*; British Columbia to Gulf of California. [questionable record in California, J. Markham, pers. comm.]

# *Pseudione giardi* Calman, 1898

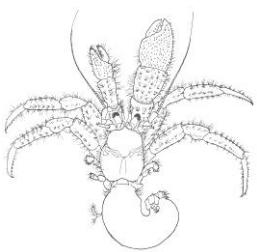

♀

Dorsal view

♂

Ventral view

*P. hirsutusculus*

**Host/Distribution:** Infests hermit crabs of the genus *Pagurus* (Paguridae); Bering Sea to San Juan Islands, Washington – possibly extended into California off Palos Verdes (see Note).

**Note:** Species added to SCAMIT Edition 6 list (SCAMIT 2011) based on trawl record off Palos Verdes (D. Cadien, pers. comm.). Record considered questionable according to J. Markham since *P. giardi* has not been previously known from California, although a report of a *Pseudione* sp. infesting *Pagurus hirsutusculus* in central California may refer to it (J. Markham, pers. comm.).

# *Bathygyge grandis* Hansen, 1897

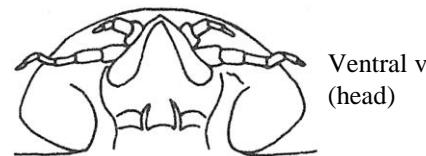

♀

[No female images exist]

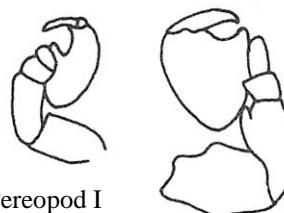

*G. viacaria*

Ventral view  
(head)

Dorsal view  
(whole body)

Pereopod I

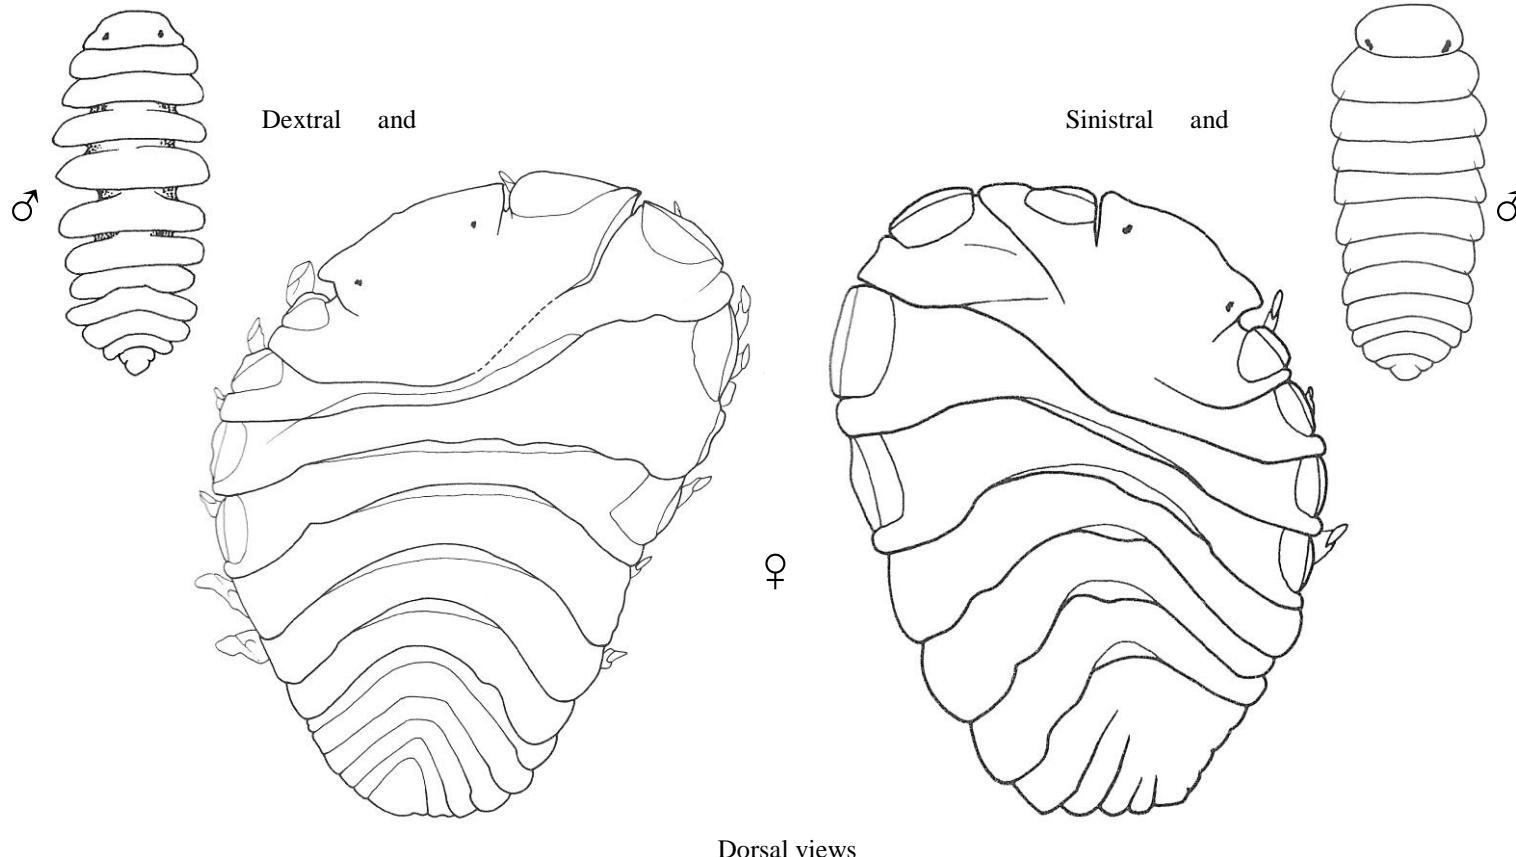

Pereopod V

♂

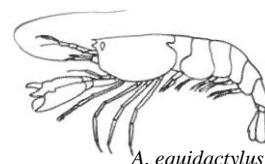

Host/Distribution: Infests the deepwater shrimp *Glyphocrangon vicaria*; San Clemente Basin, California; 1792-1866 m.

# *Bopyrella calmani* (Richardson, 1905) \*

\* Formerly = *Bopyriscus calmani*

Host/Distribution: Infests the alpheid snapping shrimp *Alpheopsis equidactylus* and *Synalpheus lockingtoni*; Central to southern California; intertidal to 9 m.

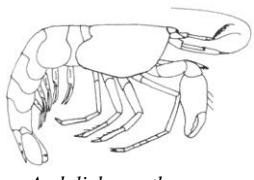

T. D. Stebbins, 2012

# *Probopyria* sp. A Stebbins, 2011

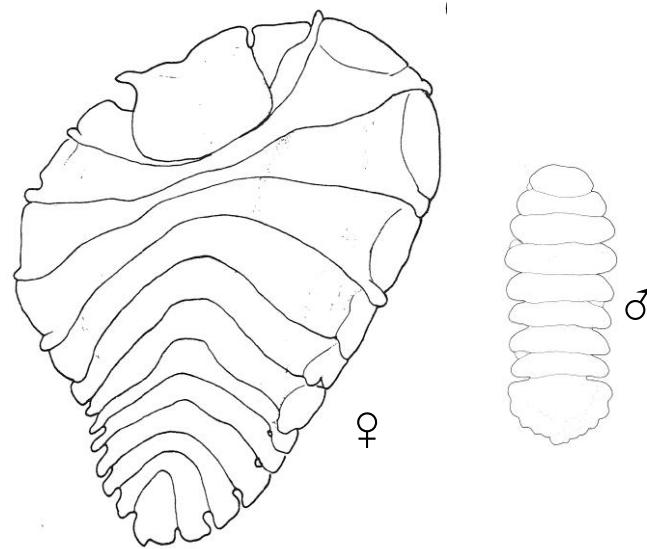

*Probopyria* sp. A

(Similar in general appearance to *P. alphei*)

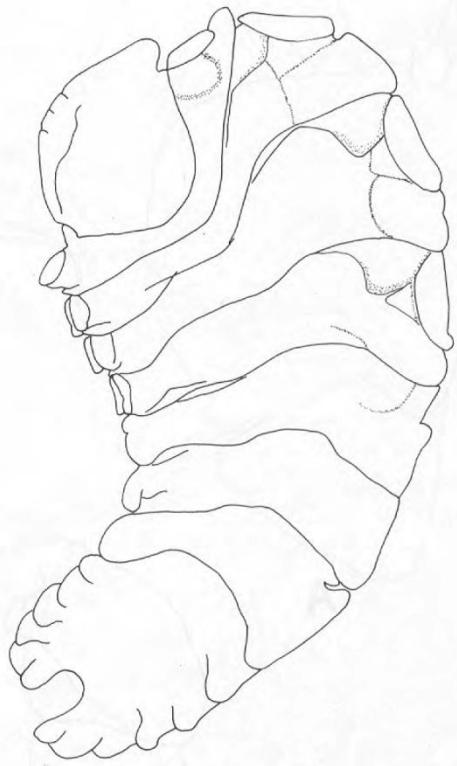

Host/Distribution: Infests the undescribed alpheid shrimp *Automate* sp. A (known from 1 record); Southern California. [genus ID provided by J. Markham, 8/1/08]

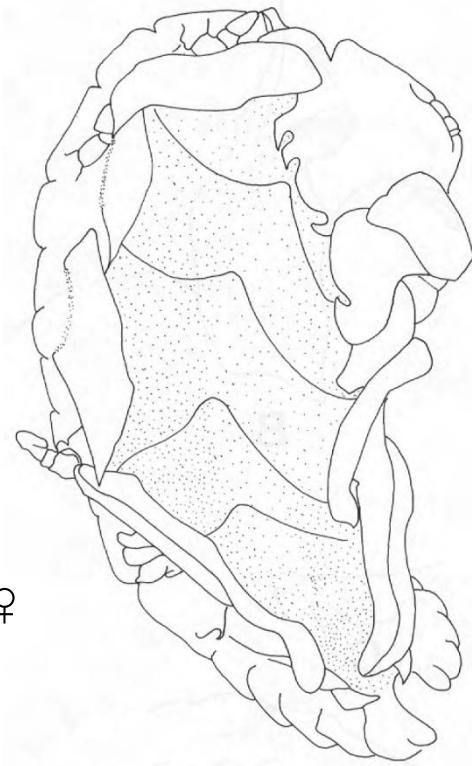

*Probopyria alphei*

(North Carolina – western Florida, Antigua, Brazil)

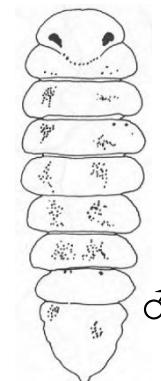

# *Schizobopyrina striata* (Nierstrasz & Brender à Brandis, 1929)

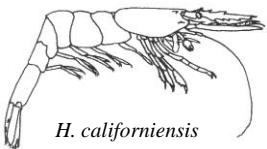

Dorsal view

Ventral view

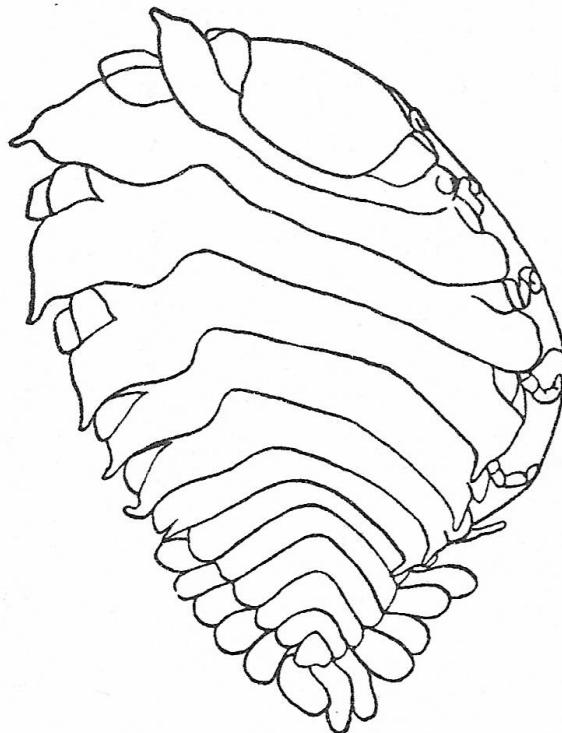

♂

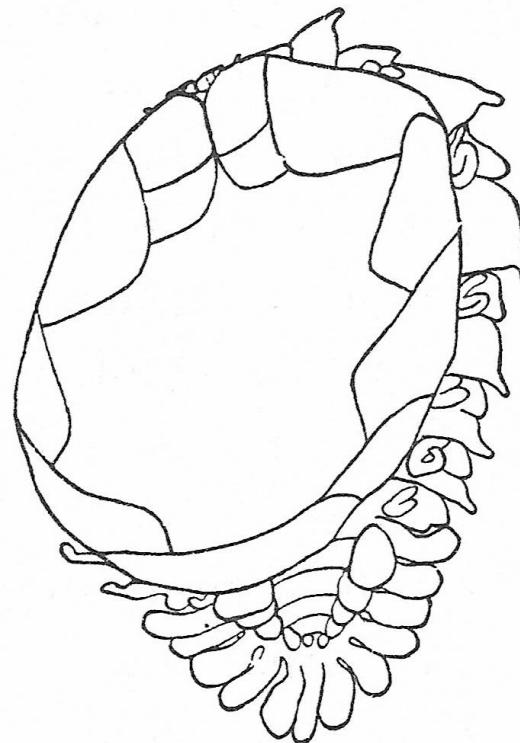

*H. californiensis*

Host/Distribution: Infests the hippolytid shrimps *Hippolyte californiensis* and *Thor algicola* (*T. algicola* may actually be *T. manningi*, J. Markham, pers. comm.); California to Baja California, and Gulf of California; shallow water.

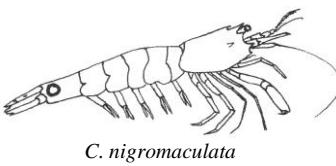

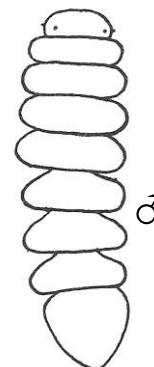

# *Argeia pugettensis* Dana, 1853

Dorsal view

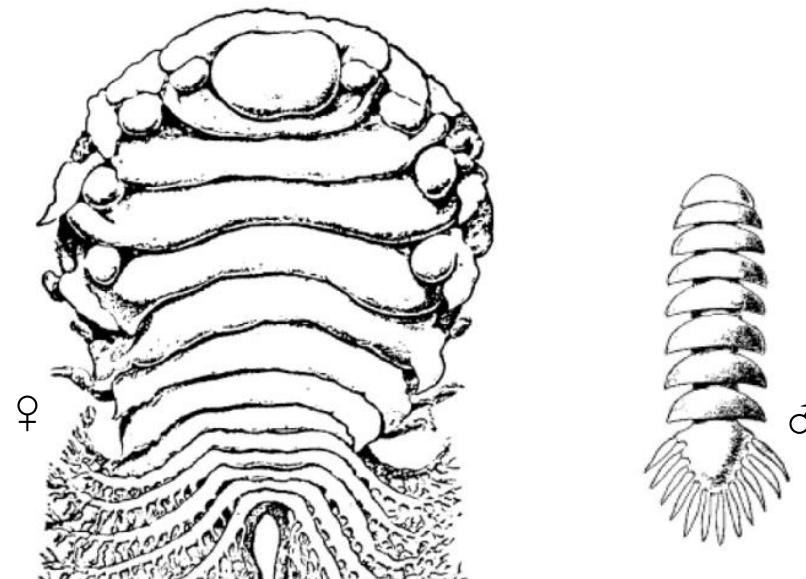

Ventral view

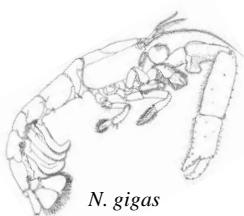

Host/Distribution: Infests multiple genera/species of shrimp in the families Crangonidae (e.g., *Argis*, *Crangon*, *Lissocrangon*, *Mesocrangon*, *Metacrangon*, *Neocrangon*) and Hippolytidae (e.g., *Eualus*); Bering Sea to southern California, Japan and Korea; intertidal to 188 m.

# *Ione cornuta* Bate, 1864

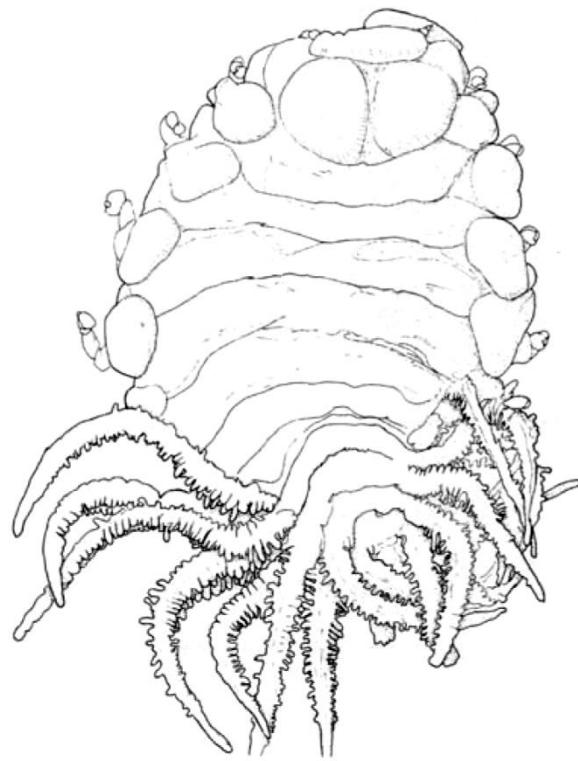

Dorsal views

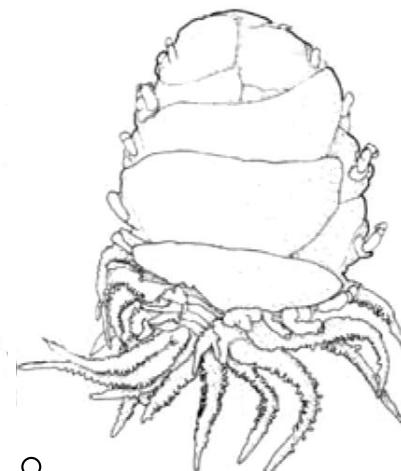

*N. gigas*

Host/Distribution: Infests ghost shrimps in the genera *Callianassa* and *Neotrypaea* (except no California hosts retained in *Callianassa*); British Columbia to San Francisco, California; intertidal to shallow water.

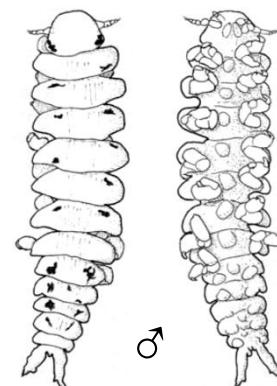

# *Leidya infelix* Markham, 2002

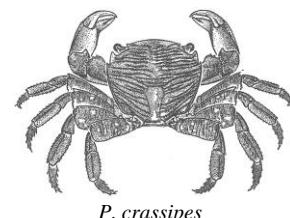

Dorsal view

Ventral view

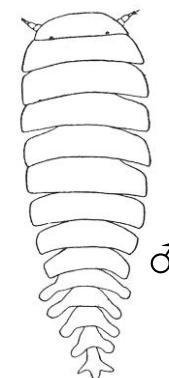

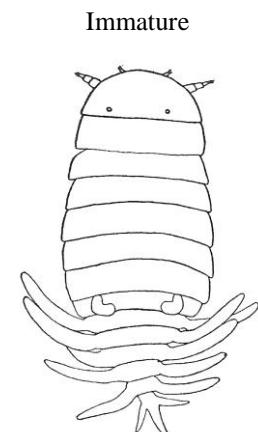

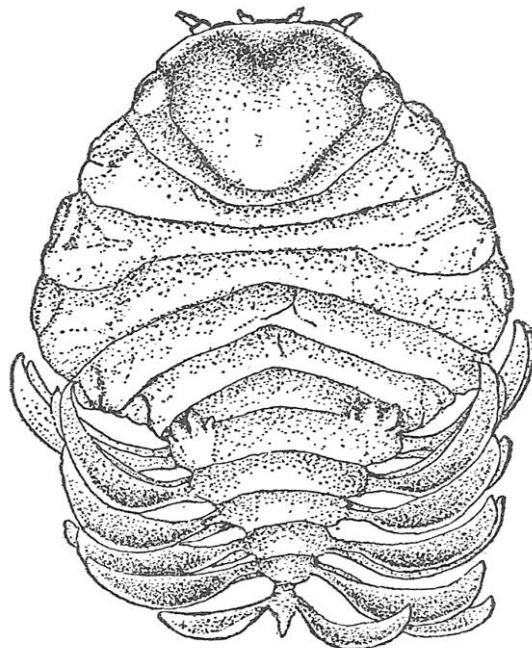

♂

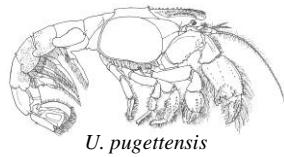

*P. crassipes*

Host/Distribution: Infests the lined shore crab *Pachygrapsus crassipes*; Southern California; intertidal.

# *Phyllodurus abdominalis* Stimpson, 1857

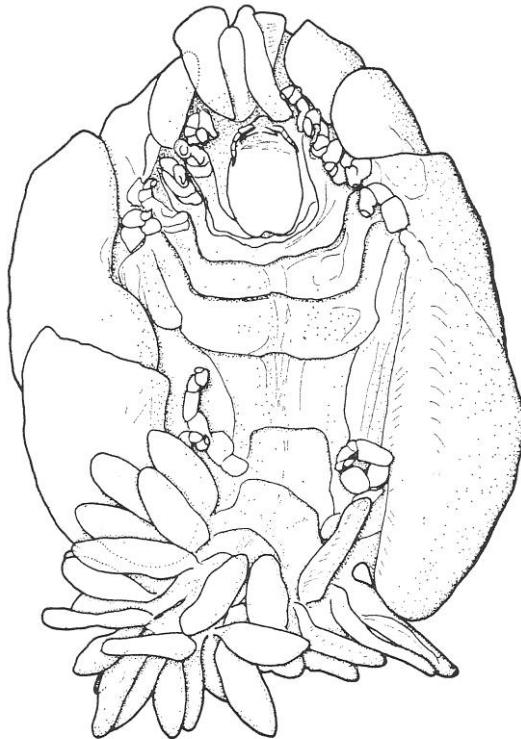

Dorsal views

Host/Distribution: Infests the mud shrimps *Upogebia lepta*, *U. macginitieorum*, and *U. pugettensis*; British Columbia to NW Baja California; intertidal.

# *Anathelges hyphalus* (Markham, 1974) \*

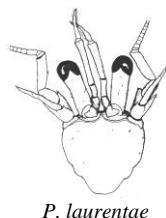

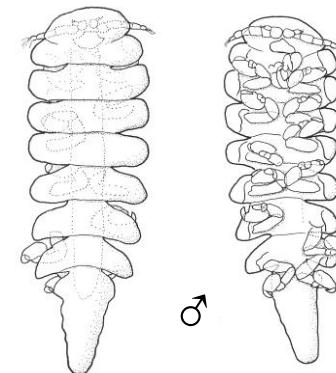

\* Formerly = *Stegophryxus hyphalus*

Dorsal view

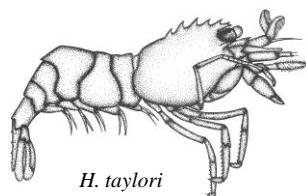

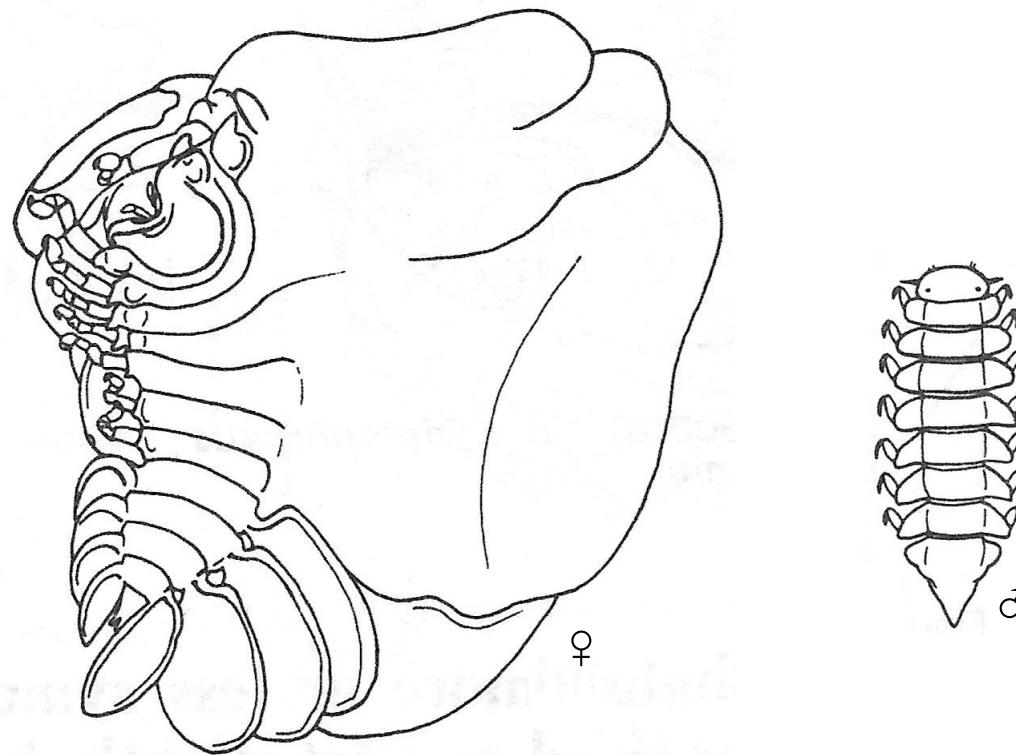

Ventral view

*P. laurentae*

Distribution/Hosts: Infests the hermit crabs *Parapagurodes laurentae* and *P. makarovi*; Carmel, California to Baja California; 69-319 m.

# *Hemiarthrus abdominalis* (Krøyer, 1840)

Host/Distribution: Infests multiple species of hippolytid shrimp in the genera *Eualus*, *Heptacarpus*, *Lebbeus*, and *Spirontocaris*; North Pole to Monterey, California (circumboreal).

# Family Dajidae

(Superfamily Bopyroidea)

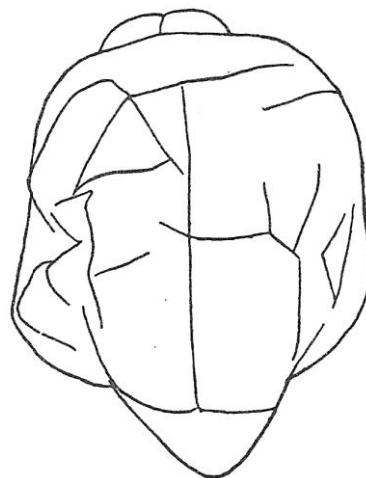

*Dajids are external parasites of euphausiids, mysids and midwater shrimp that live on the backs of their hosts appearing like hitchhikers. The parasites are often mistaken as fleshy growths.*

*California dajids: 1 described species*

\* *Image:* [www.pac.dfo-mpo.gc.ca/science/oceans/plankton-plancton/zooplankton-zooplancton/images/amphipoda/caridea/Pasiphaeadajidaeclose.jpg](http://www.pac.dfo-mpo.gc.ca/science/oceans/plankton-plancton/zooplankton-zooplancton/images/amphipoda/caridea/Pasiphaeadajidaeclose.jpg)

# *Holophryxus alaskensis* Richardson, 1905

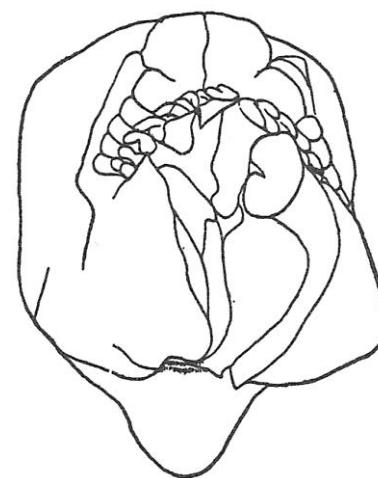

♀

Dorsal view

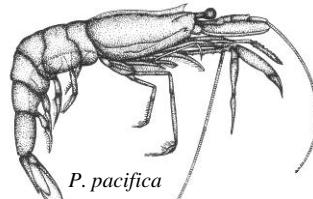

♀

Lateral view

Ventral view

Host/Distribution: Ectoparasite on the dorsal carapace of the Pacific glass shrimp *Pasiphaea pacifica*; Alaska to Santa Barbara Channel, California; 44-700 m.

# Family Entoniscidae

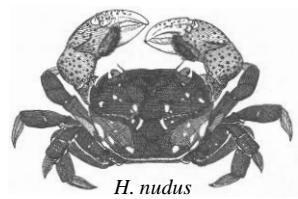

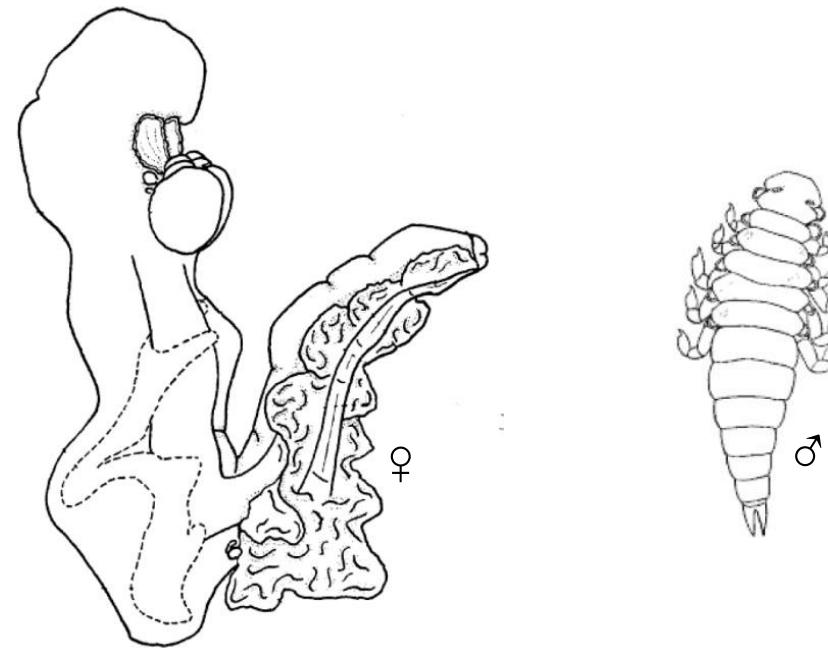

(Superfamily Bopyroidea)

*Entoniscids are highly modified internal parasites that live in the hemocoel of crab hosts, although one species has also been found in a snapping shrimp (*Synalpheus* sp). Adult females of these parasites bear little morphological resemblance to free-living isopods.*

*California entoniscids: 1 described species*

# *Portunion conformis* Muscatine, 1956

Host/Distribution: Parasite in visceral cavity of the shore crabs *Hemigrapsus oregonensis* and *H. nudus*; San Francisco to Marin County, California; intertidal.

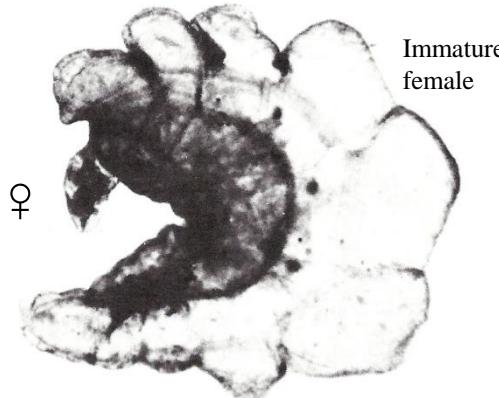

# Family Cabiropidae

(Superfamily Cryptoniscoidea)

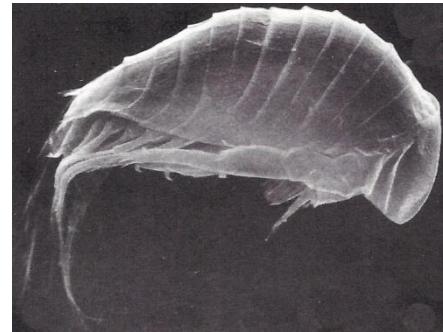

*Cabriopids are parasitic on free-living isopods and hyperparasitic on other epicaridean isopods. The family may also include a few parasites of cumaceans.*

*California cabriopids: 1 described species*

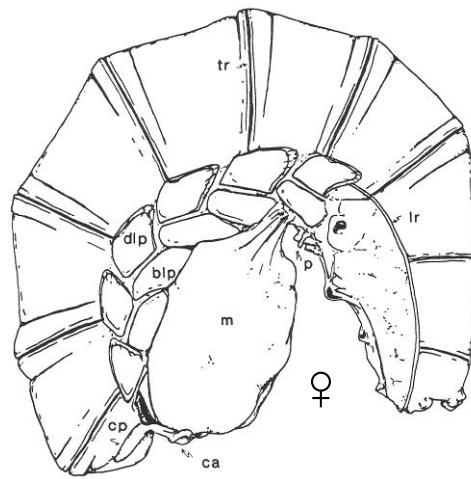

# *Cabirops montereyensis* Sassaman, 1985

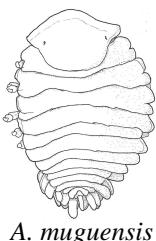

Immature female

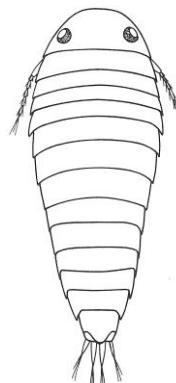

Epicaridium larva

Mature female

*A. muguensis*

Cryptoniscus stage larva

Host/Distribution: Parasite on the marsupium of the bopyrid isopod *Aporobopyrus muguensis*; Monterey Bay, California.

# Family Cryptoniscidae

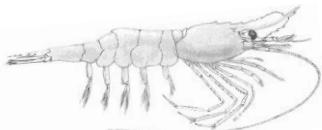

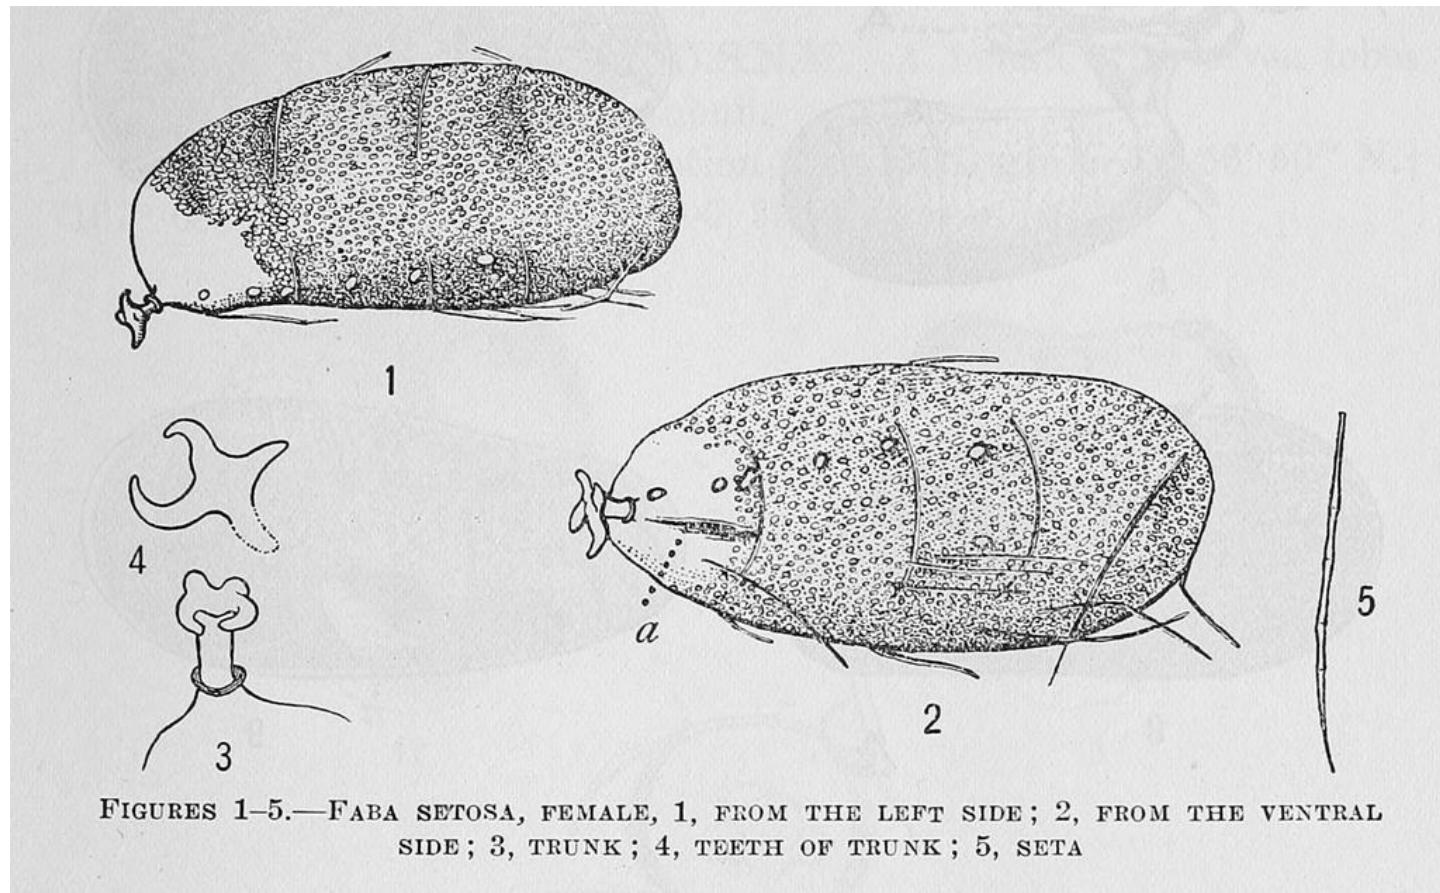

(Superfamily Cryptoniscoidea)

*Cryptoniscids are hyperparasites of rhizocephalin barnacles that parasitize decapod crustaceans or are directly attached to decapod hosts themselves.*

*California cryptoniscids: 1 described species*

# *Faba setosa* (Nierstrasz & Brender à Brandis, 1930)

Distribution/Host: Parasite of the hippolytid shrimp *Spirontocaris holmesi* (i.e., *S. bispinosa*); Central California; 300 m.

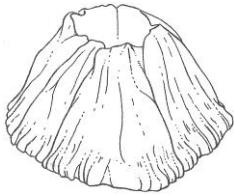

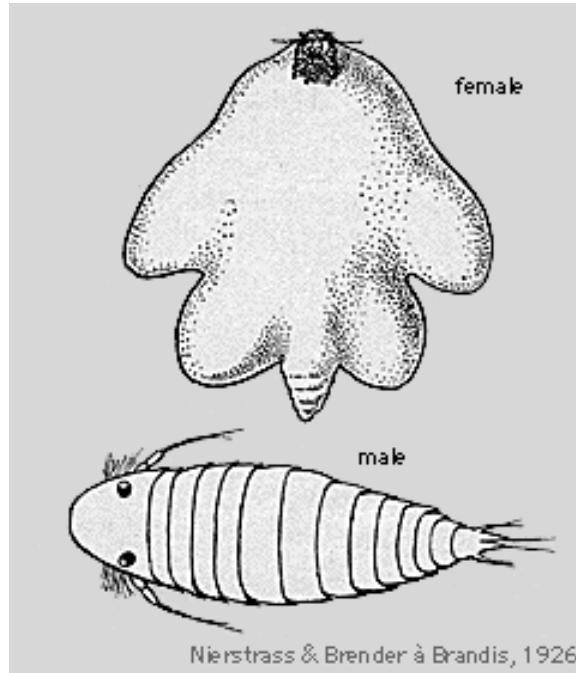

# Family Hemioniscidae

(Superfamily Cryptoniscoidea)

*Hemioniscids are parasites or hyperparasites of mostly thoracican and acrothoracican barnacles. Adult females are highly modified and bear little resemblance to free-living isopods .*

*California hemioniscids: 1 described species*

# *Hemioniscus balani* Buchholz, 1866

*B. glandula*

Host/Distribution: Parasite on barnacles of the genera *Balanus* and *Chthamalus*; Introduced species – British Columbia to Baja California in eastern Pacific; intertidal.
