

Vita Chip and EMF: Overview of empirical and anecdotal evidence

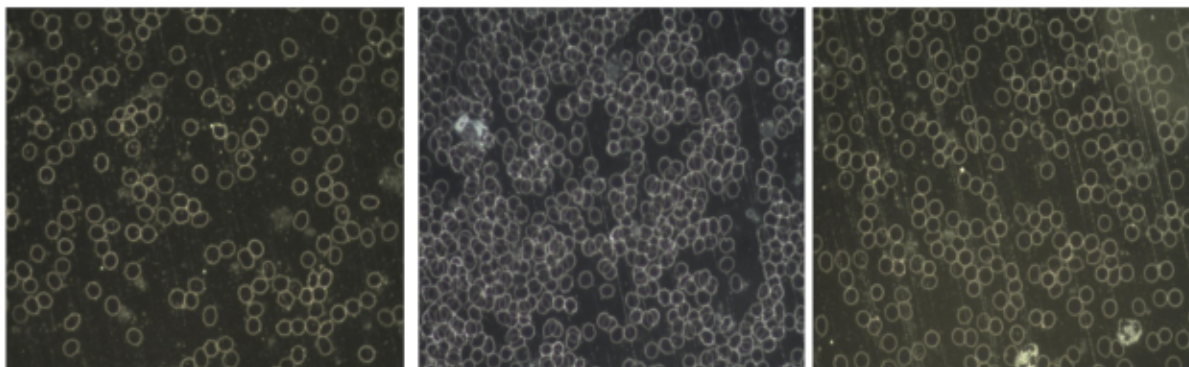

1. Clinical testing

Documentation study in an outpatient naturopathic practice involving 32 patients with various chronic diseases (e.g., sleep disorders, depression, infections, MS, Alzheimer's disease). Test method: Autonomous Response testing (ART) by Dr. Klinghardt. In all patients, EMF burden was a major cause of the acquired inability to self-regulate. Besides major improvements in all diagnostic areas, those were greatest in biophysical stress (EMF) and deficiency states. The statistical mean effect was very large ($d = 2.0$), scale: 1 = very low, 5 = very strong.

2. Laboratory testing

In a series of independent dark field microscopy screenings, the Vita Chip was able to reverse pseudo agglutination (Rouleaux formation) of red blood cells within a very short time.

Left: without cell phone; middle: after one minute of cell phone use (Rouleaux formation); right: after one minute of cell phone use with the Vita Chip

3. Field test

In a single case study involving two test conditions (before and after harmonizing of an outpatient practice with 10 Vita Chips), EMF burden was assessed using the BQAS (Bio-Quantum-Analysis-System). Results: EMF burden decreased by almost 90 percent within a matter of a few hours.

Parameter	Normal Range	Measurement (without VC)	Measurement (with VC)
EMF	0.046-0.167	.525	.056
Nicotine	0.124-0.453	.501	.35
Pesticides	0.013-0.313	.322	.091

4. Certification and licensing

The Vita Chip is certified by The International Society for Electromog Research (IGEF). IGEF has been working since 1990 to apply the ALARA principle to electrical and electronic equipment. ALARA is a proven principle of radiation protection and stands for "As Low As Reasonably Achievable". The aim of the IGEF is to:

- (1) help manufacturers of electrical equipment to reduce the electromagnetic emission of their products.
- (2) develop methods for testing and certifying low-radiation electrical appliances in independent laboratories.
- (3) develop the brand-protected IGEF seal of quality that honors certified products.
- (4) promote environmentally friendly and health-conscious life conditions.

5. Neurophysiological Assessment

We have only very recently started investigating changes caused by EMF on brain wave patterns. Preliminary findings indicate that the Vita Chip alters the EEG in terms of a pattern synchronization which may be interpreted as de-stressing of brain activity

6. Testimonies of unsolicited Vita Chip users

Since its introduction to the market in 2012, we have gathered dozens of reviews and testimonials by customers sensitive to EMF who applied the Vita Chip to their electronic devices (especially the cell phone). Most have experienced dramatic health changes within a very short time (sometimes within seconds). Symptoms affected are, e.g., dizziness, tiredness, sleep disorders, autoimmune diseases, allergies, and metabolic diseases.
