

CONTENTS

CHAPTER I.

	PAGES
SEQUENCES AND LIMITS - - - - -	1-21
Convergence of Sequences. Notations for Limits. Monotonic Sequences. General Principle of Convergence. Solution of Numerical Equations by Means of Sequences. Upper and Lower Limits. Maximum and Minimum Limits. Sum of an Infinite Series.	
EXAMPLES - - - - -	21

CHAPTER II.

SERIES OF POSITIVE TERMS - - - - -	26-48
Cauchy's Condensation Test. Comparison Test. Integral Test. Logarithmic Scale. Ratio Tests. Ermakoff's Tests. Another Sequence of Tests. Notes on Tests of Convergence.	
EXAMPLES - - - - -	48

CHAPTER III.

SERIES IN GENERAL - - - - -	53-66
Absolute and Non-Absolute Convergence. Alternating Series; Ratio Test. Abel's Lemma. Tests of Abel and Dirichlet. Cesàro's Theorem on Non-Absolutely Convergent Series. Euler's Transformation.	
EXAMPLES - - - - -	66

CHAPTER IV.

ABSOLUTE CONVERGENCE - - - - -	69-76
Derangement. Applications; Multiplication of Absolutely Convergent Series. Riemann's and Pringsheim's Theorems.	
EXAMPLES - - - - -	76

CHAPTER V.

	PAGES
DOUBLE SERIES - - - - -	78-97
Sum of a Double Series. Repeated Summation. Series of Positive Terms. Tests for Convergence. Absolute Convergence. Multiplication of Series. Abel's, Mertens' and Pringsheim's Theorems. Substitution of a Power-Series in another Power-Series. Non-Absolute Convergence.	
EXAMPLES - - - - -	98
Theta-Series (17); other Elliptic Function-Series (22-27).	

CHAPTER VI.

INFINITE PRODUCTS - - - - -	104-114
Weierstrass's Inequalities. Positive Terms. Absolute Convergence. Terms of either Sign. Derangement. Gamma-Product.	
EXAMPLES - - - - -	114
Theta-Products (18-24).	

CHAPTER VII.

SERIES OF VARIABLE TERMS - - - - -	119-141
Uniform Convergence of Sequences. Uniform Convergence of Series. Weierstrass's, Abel's, and Dirichlet's Tests. Certain Trigonometrical Series. Continuity, Integration, and Differentiation of Series. Products. Tannery's Theorems. Historical Note. Quasi-Uniform Convergence.	
EXAMPLES - - - - -	141
Bendixson's Test of Uniform Convergence (20).	

CHAPTER VIII.

POWER SERIES - - - - -	145-170
Intervals of Convergence. Abel's Theorem. Comparison of Divergent Series. Continuity, Integration, Differentiation. Theorem of Identical Equality between two Power-Series. Multiplication and Division. Reversion of Series. Lagrange's Series. Linear Differential Equations of the Second Order. Solutions at a Singularity.	

	PAGES
SPECIAL POWER SERIES - - - - -	170-189
Exponential Series. Sine and Cosine Series. Binomial Series. Logarithmic Series. arc sin and arc tan Series.	
$\Sigma r^n \cos n\theta$, $\Sigma r^n \sin n\theta$, $\Sigma \frac{1}{n} r^n \cos n\theta$, $\Sigma \frac{1}{n} r^n \sin n\theta$.	
EXAMPLES - - - - -	189
Series for π (A. 42); Lagrange's Series (B. 23, 24); Abel's Theorem (B. 27-35).	

CHAPTER IX.

TRIGONOMETRICAL FORMULAE - - - - -	202-222
Sines and Cosines of Multiple Angles. The Sine and Cosine Products. Weierstrass's Formula for the Sine Product. The Cotangent Series.	
EXAMPLES - - - - -	223

CHAPTER X.

COMPLEX SERIES AND PRODUCTS - - - - -	227-267
Complex Numbers. De Moivre's Theorem. Convergence of Complex Sequences. Absolute Convergence of Series and Products. Maclaurin's Integral Test. Ratio Tests for Absolute Convergence. Pringsheim's Tests. Ratio Tests for Non-Absolute Convergence. Weierstrass's Test. Abel's Lemma. Further Tests, Abel's, Dirichlet's. Double Series. Uniform Convergence; Weierstrass's, Abel's, and Dirichlet's Tests. Circle of Convergence. Cauchy's Inequalities. Abel's Theorem. Comparison of Divergent Series. Converse of Abel's Theorem. Poisson's Integral. Taylor's Theorem. Extensions of Cauchy's Inequalities. Lagrange's Series. Weierstrass's Double-Series Theorem.	
EXAMPLES - - - - -	267
Trisection of an Angle (9).	

CHAPTER XI.

SPECIAL COMPLEX SERIES AND FUNCTIONS - - - - -	278-310
Exponential Series. Sine and Cosine Series. Logarithmic Series; arc sin and arc tan Series. Binomial Series. Remainder in Binomial Series. Sine and Cosine Products. The Cotangent Series. Bernoulli's Numbers. Bernoullian	

	PAGES
Functions. Euler's Summation Formula. Elliptic Function Formulae.	
EXAMPLES - - - - -	310
CHAPTER XII.	
NON-CONVERGENT SERIES - - - - -	317-324
Historical Remarks. General Considerations.	
ASYMPTOTIC SERIES - - - - -	324-354
Euler's use of Asymptotic Series. Remainder in Euler's Formula. Application to Stirling's Series. Error-Function Integral. Logarithmic Integral. Fresnel's Integrals. Stirling's Series. Stokes's Asymptotic Formula. Poincaré's Theory of Asymptotic Series. Applications to Differential Equations. Bessel Functions.	
TRIGONOMETRICAL SERIES - - - - -	354-387
Series summed directly. Series summed by Integration. Recognition of Discontinuities in the Sum of a Trigonometrical Series. Differentiation. Dirichlet's Summation of Fourier's Series. Stokes's Transformation; Discontinuities in and Differentiation of a Fourier Series. Fejér's Theorem. Poisson's Integral. Gibbs's Phenomenon. Fejér's Lemma.	
EXAMPLES - - - - -	387
APPENDIX I.	
ARITHMETIC THEORY OF IRRATIONAL NUMBERS AND LIMITS	394-430
Infinite Decimals. Dedekind's Definition. Algebraic Operations with Irrational Numbers. Monotonic Sequences. Extreme Limits of a Sequence. General Principle of Convergence. Limits of Quotients. Extension of Abel's Lemma. Theorems on Limits.	
EXAMPLES - - - - -	430
Infinite Sets (14-16); Continuous Functions (17-19).	
APPENDIX II.	
DEFINITIONS OF THE LOGARITHMIC AND EXPONENTIAL FUNCTIONS - - - - -	436-457
Definition and Fundamental Properties of the Logarithm. Napier's Logarithms. Napier's Method of calculating	

CONTENTS

xv

	PAGES
Logarithms. Exponential Function. Logarithmic Scale of Infinity. Arithmetic Definition of an Integral (Single and Double).	
EXAMPLES - - - - -	457

APPENDIX III.

SOME THEOREMS ON INFINITE INTEGRALS AND GAMMA-FUNCTIONS - - - - -	461-513
Convergence, Divergence, and Oscillation. Definition as a Limit of a Sum. Tests of Convergence. Analogue of Abel's Lemma (or Second Theorem of the Mean). Absolute Convergence. Abel's and Dirichlet's Tests. Frullani's Integrals. Uniform Convergence. Weierstrass's, Abel's, and Dirichlet's Tests for Uniform Convergence. Continuity, Differentiation, and Integration. Special Integrals. Limiting Values of Integrals. Dirichlet's Integrals. Jordan's Integral. Integration of Series. Inversion of Repeated Integrals. The Gamma Integral. Stirling's Asymptotic Formula. Gamma-Function Formulae.	
EXAMPLES - - - - -	514
Gamma-Functions (35-47, 55-57).	

MISCELLANEOUS EXAMPLES.

EXAMPLES - - - - -	526-530
INDEX OF SPECIAL INTEGRALS, PRODUCTS, AND SERIES - - - - -	531-532
GENERAL INDEX - - - - -	533-535
