SELECTA ONE® HAS THE DIANTHUS SOLUTION FOR YOU!

Have you heard? Selecta One Dianthus cuttings are now available to you from offshore locations *and* with an expanded Root & Sell network. That's because Selecta One is the first breeding company certified by the U.S. Department of Agriculture's Animal and Plant Health Inspection Service (APHIS) as an approved offshore Dianthus production farm.

When you're shopping for Dianthus, purchase your unrooted cuttings, rooted liners and Callus+ cuttings from a licensed Selecta One Root & Sell Station. See page 21 for locations throughout North America.

Certified by

Dear Selecta One,

I used to deal with inconsistency in rooting with domestic Dianthus suppliers, but your 'Kenyan consistency' has given me a new confidence in Dianthus rooting.

Garett Vaisman
Grower at Lucas Greenhouses
Monroeville, New Jersey

Key

Ⓥ Vigor	⌚ Flowering Time	☀ Heat Tolerance

5 high		

FIRST CLASS AND ON TIME

- Satisfying **any quantity** you need, all in one shipment.
- Keeping your costs down and **profits up**.
- Providing you with **product variety** for every need.

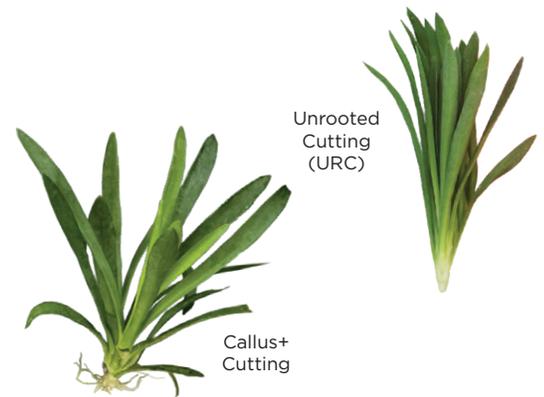

selecta ^{one}®

GROW YOUR Dianthus YOUR WAY

You already appreciate the dependability of Selecta One's proven supply chain. Now that we're flying dozens of varieties of Dianthus and pot carnations **as unrooted cuttings and Callus+ cuttings** directly into the U.S., take advantage of our expanded product range by broadening your Dianthus programs.

Dianthus Callus+ cuttings, NEW from Selecta One:

- Save money by eliminating IBA rooting hormone cost.
- Save propagation time by at least 2 weeks.
- Reduce waste by achieving 100% rooting success.
- Reduce risk with proven success from extensive trials across North America.

THERE'S A *Dianthus* FOR THAT!

Shop annuals, perennials, outdoor pots and indoor pots for gift-giving occasions, and in-ground varieties for cut flowers and landscapes.

Series	Potted Plant	Works in Landscape	Perennial	Annual	Flower Type	Size/Habit	Pot Sizes	Description
Capitán™		✓	7a	✓	Double	Upright	2.5 qt., (2.8 L) 8 to 14 in (20 to 35 cm) planters	<ul style="list-style-type: none"> • Large, vigorous plant. • Can be used as a cut flower. • Great in ground and in containers. • Long season flowering.
Carmen™		✓	5b	✓	Double	Medium Upright	1 to 2.5 qt. (1 to 2.8 L)	<ul style="list-style-type: none"> • True carnation. • Excellent uniformity. • Blooms continuously until frost. • Overwinters better than others.
DiaDeur™	✓		6a	✓	Double	Medium Upright	6 in. to 2.5 qt. (1 to 2.8 L)	<ul style="list-style-type: none"> • Fully double blooms. • Fragrant flowers. • Multicolored blooms. • Ideal for container and garden use.
Early Love®	✓		7a	✓	Double	Compact Upright	4 to 6 in. (10 to 15 cm)	<ul style="list-style-type: none"> • Excellent branching. • Early flowering. • Large, double bicolored blooms. • Ideal bouquets for Valentine's Day.

GROWING GUIDELINES

PROPAGATION

- Choose a well-drained medium with an EC of 0.75 to 0.80 mmhos and a pH of 5.5 to 5.8.
- Dianthus cuttings should be stuck on the day of arrival. Cuttings can be stored overnight at 39 to 45°F (4 to 7°C). Soaking the cuttings in water for 1-4 hours, cut end down, "asparagus style," can help prevent cuttings from drying out. Cuttings arrive bundled to make this easy.
- A rooting hormone is recommended to promote early, uniform rooting. IBA at 1,000 ppm dip is preferred.
- Soil temperature should be maintained at 68 to 72°F (20 to 22°C) until roots are visible.
- Mist heavily in the first few days to prevent desiccation. Reduce mist after 4-5 days to prevent excess water in the media. Too wet media will result in heavy callus and slow rooting.
- Begin fertilization when roots become visible with 75 to 100 ppm N. Increase to 150 to 200 ppm N as roots develop.
- Pinching is used to remove the first bloom, and to increase fill for larger containers. It is not needed with some varieties. Configure can be applied to enhance branching in no-pinch scenarios.
- Dianthus rooted cuttings should be ready for transplanting 28 to 33 days after sticking.

Easy, bundled cuttings

Configure

Pinching

3 Weeks After Stick

GROWING ON TO FINISH

- Use media with good aeration, drainage and water-holding capacity. Maintain pH 5.8-6.4.
- Dianthus should be grown cool or cold, depending on the type of production. See scheduling chart on page 19.
- For cold season production, grow in high light conditions.
- Feed regularly at 200-300 ppm N from a complete 17-5-17 cal-mag formula fertilizer.
- Avoid dramatic swings in media moisture to avoid root rot and other diseases.
- Watch for Alternaria leaf spot. This fungal pathogen is the most common disease.
- When grown cool, Dianthus will need little or no PGR. When needed from warm temperatures and/or vigorous varieties, PGR options include paclobutrazol sprays at 1-2 ppm, B-Nine at 2,500 ppm or Cycocel at 500-750 ppm.

ROOTED CUTTINGS
