Flower Bulb Catalog

Ednie Flower Bulbs

Ednie Flower Bulbs

Lilies for Pot Plant Production

From the Ednie Team:

The catalog you just received is a compilation of current, carefully selected Pot Lily varieties.

Detailed descriptions and pertinent growing information is listed for each variety.

This catalog will be followed by a similar catalog for the Cut Flower Producer and a Specialty Lily Catalog.

For more information see page 19.

Happy Growing!!

Introduction

The Lilies listed in this Pot Catalog are produced and grown in The Netherlands or in California/Oregon (Easter Lily Land).

Prior to packing, all bulbs are washed, graded and packed in special peat to ensure proper pre-cooling for shorter or longer times.

All bulbs have had various temperature treatments to shorten the forcing period, except the C.T.F. Longiflorum which are shipped

"Direct from field" to the growers.

The various crops are lifted starting last week in September (US Longiflorum) until December (Dutch Lilies).

Alphabetical Index of all Lilies for Pot Production are listed on page 19.

Lilies are harvested once a year and can be shipped weekly (except Easter Lilies).

Alert: Most Lilies are shipped frozen except Easter Lilies...!!

Upon arrival of frozen bulbs, open the plastic bag in the crate immediately to make fresh air available to the lilies.

Some varieties are also available in bags of 25, see symbol

Hybrid Lilies Packed

Bulb Size	per Crate
10 - 12 cm.	500
12 - 14 cm.	400
14 - 16 cm.	300
16 - 18 cm.	200
18 - 20 cm.	150

For Easter Lily pack per crate, see page 11.

Asiatic Lilies

↑ For more detailed information see our Step-by-Step Growing Schedule

ASIATIC LILIES have bunch-type flowers which are sometimes spotted.

BRIGHT & CHARLOTTE's JOY

Asiatics are available in a wide variety of colors and have little or no fragrance. Some varieties are pollen-free, meaning they will not stain clothing and the flowers last longer. Some are doubles.

Because of its intensive hybridizing, many newer varieties are selected for Pot production, meaning shorter plants which can be grown without any PGR's.

Depending on the time of year and location, a PGR may still be advisable to keep the plants at the desired height.

All varieties listed in this section grow best in a cooler environment. The number of weeks is based on a forcing temperature of 55 - 65°F. (13 - 18°C.).

When grown during warmer temperatures, forcing time will be reduced by 2 weeks.

The JOY series does well in Combination Pots.

- for EASTER (or any time): BRIGHT & CHARLOTTE's Joy
- for MOTHER's Day (or any time): PERFECT & SPARKLING Joy
- for MEMORIAL Day (or any time): CLASSIC & PIPPA's Joy

L.A. Hybrid Lilies

for Pot Plant Production

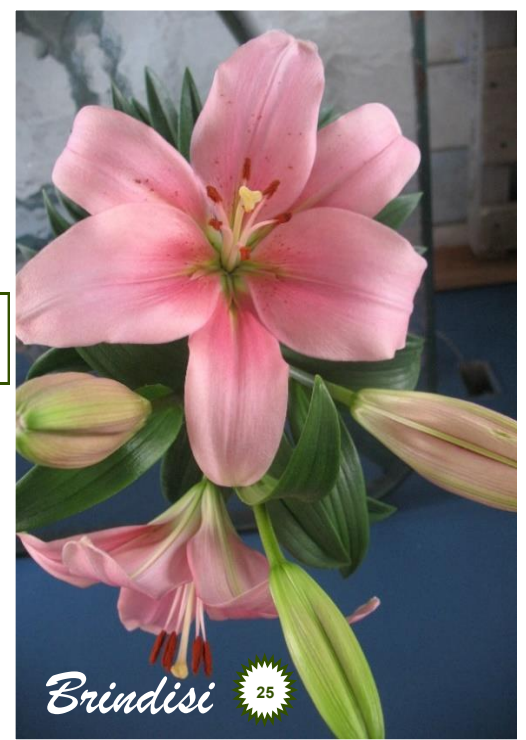

For more detailed information see our Step-by-Step Growing Schedule

These Hybrids are cross-bred from Longiflorum (L) and Asiatic (A) lilies. The larger trumpet-like flowers with the many colors of the Asiatic lily make an excellent addition to the Lily repertoire.

The varieties listed below and on the next page are selected to be used for Pot Production with the help of PGR's which must be applied to the bulb as a dip prior to planting. Additional drenching or spraying can be applied as needed.

They can be grown for all holidays or in between.

Variety	Description & Plant Characteristics	Bulb Size in cm.	Blooms / Bulb	Natural Height	# Weeks to Force
BRINDISI	<i>Light pink flowers with medium pink blush towards center. No speckles.</i>	14 - 16	3 - 5	32 - 34 in.	13

Easter Lilies

LONGIFLORUM LILIES have trumpet-shaped flowers and are predominantly white with some exceptions. The Japanese species of the Longiflorums are the well-known Easter Lilies.

Easter Lilies are unique to the North American market. The rest of the world uses Longiflorums primarily as cut flowers, although in The Netherlands in the last 10 years some attempts have been made to produce lilies to compete with US growers.

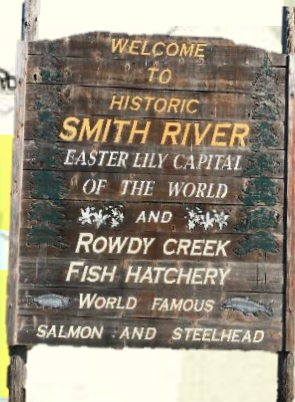

Easter Lilies are grown in the highlighted area shown on the map, from Brookings, Oregon to south of Smith River, California with Smith River being the capital of Easter Lily Land.

Crop rotation with beef and dairy cows helps to keep the fields healthy and fertilized. Ideally, a five-year rotation plan is needed.

The micro-climate of this particular area is very unique. With the Pacific Ocean on the west and the high mountain ranges on the east, this small stroke of land is sandwiched in between.

Temperatures rarely dip below 50°F. (10°C.) while at the same time it hardly ever goes above 70°F. (22°C.).

9 - 10 in.	100
10-11 in.	75

Easter Lilies

Programming Easter Lilies

"Programming" is shortening the time to flower which is called Vernalization.

Easter Lily bulbs need programming in order to bloom in time for Easter.

Although there are 4 different methods to reach the goal, 2 types are primarily used:

C(ontrolled) T(emperature) F(orc)ing Method (CTF).

Lilies are shipped in October (Direct From Field), immediately after harvest.

Upon arrival, bulbs are planted and stored at 63-65°F.

(17-18°C) for 1 to 3 weeks for optimum rooting.

Immediately after rooting, 1,000 hours of cooling is given.

(Cold storage is needed for this method).

CASE COOLED Method (Precooled or Programmed bulbs).

The cooling process of the bulbs start soon after harvest but not before the meristem is mature enough for the bulbs to assimilate the cooling.

The cooling temperature may vary, depending on the Easter date and maturity of the crop.

Moisture during this cooling method is critically important, hence the special, moist peatmoss used for packing.

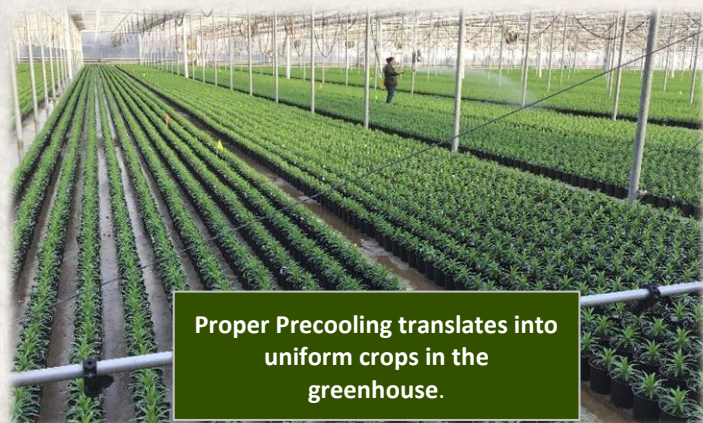

Once cooling is complete, the bulbs will be shipped to the greenhouses. This varies from late November to the middle of December depending on Easter date.

During cooling, the meristem development is closely monitored...

Ednie Flower Bulbs

Oriental Lilies

ORIENTAL LILIES produce larger open-faced flowers, often fragrant.

They are available in a small variety of colors: mostly reds, pinks, whites and combinations of these colors.

Oriental generally take longer to force than the Asiatics. However, new varieties have been bred which can be forced into bloom in as little as 10 weeks.

POLLEN-FREE means **STAIN-FREE**

Not only will these flowers no longer stain clothing, but the flowers themselves do not get smudge from the pollen. Additionally, the flowers last longer.

New(er) DEVELOPMENTS are:

Doubles
and
Pollen-Free
Oriental Lilies

For quite a few years the Lily industry has been trying to breed not only Double Oriental lilies but also POLLEN-FREE lilies.

Previously, they had been quite successful with Asiatics, but now also with Orientals.
