Central Ohio Urology Surgery Center

Robotic Adrenalectomy Procedures

Recent data shows that patients who have mildly elevated cortisol from adrenal adenomas have a 3-5x higher risk of heart disease. It is recommended now that these patients have adrenalectomies.

- We offer partial adrenalectomy for appropriate candidates to minimize the risk of adrenal insufficiency.
- Robotic adrenalectomy procedures are minimally invasive with low risk.
- Most robotic adrenalectomies can be performed in under an hour on an outpatient basis with no overnight stay.
- We are dedicated to offering patients robotic surgery in a safe and comfortable setting.

World-class surgeons and technology

Our expert robotic surgeons have performed more than 10,000 surgeries. The Robotic Surgery Institute at Central Ohio Urology Surgery Center offers the most advanced technology available today, Intuitive Surgical's da Vinci XI Robotic System.
