Acknowledgements

Thanks to Jonathan Manton for sharing his well-informed 11 year old perspective with us, to Stu Moment for his help and encouragement throughout this project, to Andrew McKenzie for his help in developing **Whole Brain Spelling** classroom techniques, and to family and friends for their support and interest. Also, special thanks to Susan's mother, Elizabeth Dalesio, for the idea of the supplementary word list versions.

Loading the Program

Whole Brain Spelling comes in three versions:

-  Apple II computers (48K or more)
-  Commodore 64 and 128 computers
-  IBM PC and PC jr. computers

Color is essential to the design of **Whole Brain Spelling**. We suggest you use a color monitor to get the most out of this program.

In a few places in this manual, instructions differ for the different versions. Look for the symbol that goes with your computer.

To load **Whole Brain Spelling**:

- Insert the disk in your disk drive.
- Turn on your computer.

-  On Apple
-  or IBM computers,
 - The program will start automatically.

-  On Commodore computers,
 - (128 users - put your computer in 64 mode)
 - Type **LOAD "★",8** then press [return].
 - When the screen displays the READY prompt, type **RUN** and press [return].

You should have no problems booting your system and running the program with this disk. If you continue to receive an error message when attempting to run any portion of this program, please note both the message and where it occurs in the program when referring this problem back to us.

Warranty

SubLOGIC Corporation warrants all media for a period of 6 months from the date of purchase. In addition, SubLOGIC Corporation will replace any media that is out of warranty at a minimal charge.* SubLOGIC Corporation will extend this replacement service for a period not less than 10 years after purchase.

If you wish to return defective cassettes or disks, please return the MEDIA ONLY. We have established an efficient repair/replacement system which promises long run benefits to you. Returning the manuals will complicate the system and will raise shipping costs.

*Example; replacement charges October 1, 1985: \$5.00 for a disk.

Introduction

Pictured (l. to r.): Susan Campanini, David Manton, and Joe Weintraub.

Whole Brain Spelling came together through the combined talents of five people. David Manton and Susan Campanini are the principal authors of the program and creators of the Whole Brain Education approach to learning. The programming skills of Joe Weintraub were brought to bear during program development on the Apple, and the research assistance provided by Robert S. Hart proved invaluable throughout the project. Later, Jim Dobbs joined the team to work on conversions to other machines.

David Manton grew up in Burma and India, where he spent several years in the Peace Corps after getting a degree in Chemistry from Ohio Wesleyan University. He has had experience teaching and counseling people of all ages and backgrounds. David has done graduate work in Electrical Engineering, and has a Ph.D. in Educational Psychology from the University of Illinois. He presently holds

a teaching position at the University of Illinois in Computer Education.

Susan Campanini received her Ph.D. in French Language and Literature from the University of Illinois in 1975. She has had extensive experience with the PLATO educational system developed at the University, and has designed lessons and done research in many areas of Computer-Assisted Instruction.

Susan has been teaching since 1965, and is currently instructing students in Developmental English at Parkland College. She and David also conduct workshops in Whole Brain Education methods and do freelance work as Educational Consultants.

Joe Weintraub is a Certified Data Processor with ten years of programming experience. Joe has been a Senior Technical Analyst for GTE Data Services, and is currently working on an Electrical Engineering Ph.D. at the University of South Florida. Joe also informs us that he won 4th prize in the Florida West Coast Spelling Bee at age 13.

Jim Dobbs

Robert Hart

Robert Hart is Associate Director of the Language Learning Laboratory at the University of Illinois. He was appointed Director of the PLATO Humanities site in 1975, and is an Assistant Professor in the School of Humanities at the University. His current research interests include artificial intelligence and the development of computer-simulated models of human information processing.

Jim Dobbs is a musician whose interest in computers led him to write the Commodore version of **Whole Brain Spelling**. Jim and his wife Carol are currently operating a sound recording studio and pursuing an interest in computer-controlled music synthesis. Jim also teaches guitar and composes and performs music.

Whole Brain Spelling was initially released in the fall of 1981 with one GENERAL spelling word list. User response to this program was so overwhelmingly positive, and the request for additional word lists so great, that we soon felt compelled to increase its effectiveness by making available a series of supplementary word list versions of the program in the following categories:

A CHILD'S GARDEN OF WORDS
FAIRY TALE
SCIENTIFIC
MEDICAL
BUSINESS

A CHILD'S GARDEN OF WORDS will give your preschool-through-3rd grader (ages 5-9) a head start in the development of word visualization skills. These are the words most often encountered in beginning reading lessons, and these word lists can be used as a primer to the GENERAL word list.

For anyone who is a child at heart our list of FAIRY TALE words should prove irresistible. Taken from Grimm's and other fantasy

tales, these words will pique your curiosity as well as enrich your spelling skills.

The SCIENTIFIC word lists are divided into the categories of general science, earth science, life science, and physical science. Each category is graded into 4 levels of difficulty.

The MEDICAL word lists are helpful to anyone involved in health sciences or the medical profession, and include categories in general medical terms, diagnosis, anatomy and drugs.

The BUSINESS word lists include commonly used real estate, insurance, legal, commercial, and accounting terms organized into 4 difficulty levels.

Whole Brain Spelling is the first set of Educational Software packages to be released by SubLOGIC Corporation. We believe that an educational program should be interesting as well as instructional. We would also contend that a program should take full advantage of the inherent capabilities of the system it was developed on.

These are the first educational programs we've reviewed that have been able to meet, and even surpass, these requirements. **Whole Brain Spelling**, based on a solid foundation of sound learning techniques, is also as entertaining as it is informative. The program makes effective use of the color graphic capabilities of the computer to enhance and emphasize visual aspects of the learning process. In short, **Whole Brain Spelling** makes learning fun.

We feel that each one of these programs can be a useful adjunct to the more traditional classroom methods being employed today. Users should find them to be useful (and enjoyable) tools for the development of improved spelling skills. After all, there is no law that says learning has to be dull!

Lesson Structure

The diagram below shows the parts of the lesson. The arrows indicate how you can move around in the lesson.

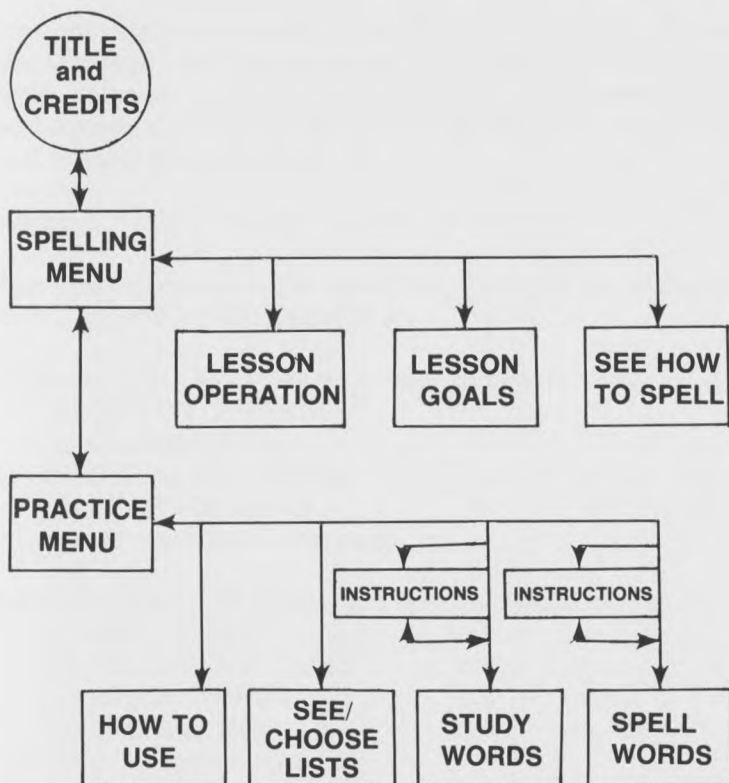

FIGURE 1

Lesson Operation

We have designed this lesson to be easy for you to use. LESSON OPERATION, (choice A on the SPELLING MENU), tells you how to use your computer to do this lesson.

Moving Around in the Lesson

You choose where you want to go in the lesson and when. You are almost always free to leave any part of the lesson by returning to a menu. You can repeat any part of the lesson by choosing it again from a menu. Changes on the screen happen under your control. You move at your own pace.

Menus

There are two menus in this lesson (see Figure 1): the SPELLING MENU and the PRACTICE MENU.

From the SPELLING MENU, you may go directly to:

- (A) LESSON OPERATION
- (B) LESSON GOALS
- (C) SEE HOW TO SPELL
- (D) PRACTICE MENU

or you may return to the title page.

From the PRACTICE MENU, you may go directly to:

- (A) HOW TO USE
- (B) SEE/CHOOSE LISTS
- (C) STUDY WORDS
- (D) SPELL WORDS

or back to the main menu.

Keys to Press

At the bottom of each screen there are instructions about what keys you can press and what will happen when you press them. If a key is "advertised" as active, it will work. There are no "surprise" keys that do something strange when pressed accidentally. The name of the key is shown in brackets [], and what happens is described briefly next to the brackets. For example: [1] menu- means when you press the 1 key you will go back to the menu.

The keys you'll be using in this lesson include:

[1]
[2]
 [return]  [return] **IBM** [enter]
 [escape]  [f1] **IBM** [escape]
[space bar]
[a] through [d] for entering choices
the number keys for choosing lists
[a] through [z] for typing spelling words
[←] (the backspace key) for erasing

Instructions

The two spelling exercises, STUDY WORDS and SPELL WORDS, each have their own separate instructions. These instructions are available before and during the exercise. If you have already read them carefully and understand how to do the exercises, you can choose to skip the instructions and go directly to the exercises.

Convenience

The keys you'll use most in operating this lesson are keys which are easy to find and familiar.

Most screens have been labeled by title and page numbers. For example:

LESSON GOALS 1 of 5

Display formats, location of instructions on the screen, and key functions are consistent for ease of use.

A color-tuning guide has been provided, as the last screen of LESSON OPERATION, for adjusting your monitor.

Lesson Goals

LESSON GOALS, (choice B on the SPELLING MENU), tells you briefly what the purpose of this lesson is.

The goals of **Whole Brain Spelling** are:

- to develop visual imaging skills for spelling
- to offer 200 ten-word lists for spelling practice
- to diagnose and indicate areas for self-correction

Whole Brain Education is an approach to learning that combines “left brain” and “right brain” kinds of thinking. Along with your left brain abilities to reason, to apply rules, and to learn steps for doing tasks, you can also use your imagination, your right brain abilities to create and remember internal pictures, to trust your feelings and intuitions of knowledge.

Whole Brain Spelling is intended to help you develop and use your internal visualization skills for improving spelling. Many words in English are spelled very differently than they sound. For example, the **ough** in the word “thought” sounds just like the **aw** in the word “thaw”, but they look and are spelled very differently. Research (Simon, H. and Simon, D., 1973; Simon, D., 1975) has shown that good spellers use an internal image to see if a word they’ve spelled looks right. This visual information isn’t a replacement for knowing how the word sounds, what it means, or what general rules are useful for spelling English. The visual information makes the crucial difference, however, for correctly spelling words that are not phonetic (ie., in which spelling and sound differ).

Whole Brain Spelling is intended to teach you a method for learning HOW to spell. It is not primarily intended to teach you the 2,000 words in the lesson, or any other set of words. However, as you learn to focus your visual awareness, and practice using mental images to spell these 2,000 words, they will become more familiar and easier for you to spell correctly. You can use the method of making internal pictures of words in order to spell any words you see anywhere.

See How to Spell

SEE HOW TO SPELL, (choice C on the SPELLING MENU), explains the idea of internal visualization for spelling -- seeing words like pictures inside your head.

The text is presented in large colored letters so that it will be easy to read and understand. Color contrast within the sentences helps you to focus on the main ideas. The drawings illustrate how pictures -- and words as pictures -- can be imagined in your mind's eye.

The screen that has the word SUCCEED in a box allows you to play with the way a word looks. You can change the color and the case (capital or small letters), show double letters highlighted, or show the word one letter at a time. You can change the word as many times as you like by using keys [a] through [d].

This screen gives you an idea of how you can play with word pictures in your imagination.

It also shows some of the ways word pictures will look in the STUDY WORDS exercise later in the lesson.

Practice Menu

PRACTICE MENU, (choice D on the SPELLING MENU), takes you to the second menu in the lesson. From the PRACTICE MENU, you can find out HOW TO USE the exercises. You can go to SEE/CHOOSE LISTS to select a word list from any of the 200 ten-word lists. (See **Word Choice Criteria** in this manual to find out how the lists were compiled). Your current list number is shown at the bottom right of this menu. Each time you boot the disk, the current list number will be # 1 until you change it in SEE/CHOOSE LISTS. You can also reach STUDY WORDS and SPELL WORDS from this menu. These exercises allow you to study and spell each word on your current list.

All parts of the lesson which you reach from the PRACTICE MENU will return to this menu. You can always return to the main SPELLING MENU from the PRACTICE MENU.

How to Use

HOW TO USE, (choice A on the PRACTICE MENU), gives you an explanation of what the practice exercises are like and how you can use them to improve your spelling.

You can work with word lists three ways:

1. **SEE/CHOOSE LISTS** shows you a whole ten-word list at once and allows you to choose from 200 lists to study or spell.
2. **STUDY WORDS** allows you to study a list one word at a time, in large colored letters, by showing and erasing each word as you make a mental picture of it.
3. **SPELL WORDS** allows you to see and type each word on a list. If you make a spelling error, the program will show you which parts of the word you need to look at more carefully.

Although you can do the different parts of this lesson in any order you choose and skip easily from one part to another, here's our suggestion for a good way to get the most out of the spelling practice exercises:

1. **Go to SEE/CHOOSE LISTS**
Scan through lists until you find one you'd like to spell.
Return to the menu.
2. **Go to STUDY WORDS**
Show and erase each word enough times to get a clear

picture of the word in your mind's eye. Return to the menu.

3. Go to SPELL WORDS

Look carefully at each word, checking if your inner image of it is right. Type the word you saw. Study your answer to see if it looks right. Use the correction mark-up to see what letters are correct. Look at the highlighted letters the second time to strengthen your inner image of the whole word. Keep working until you've spelled the word completely correctly. Look at your correct word, and remember how it looks.

See/Choose Lists

SEE/CHOOSE LISTS, (choice B on the PRACTICE MENU), allows you to display an entire 10 word list on your screen at once.

You can flip back and forth through 200 lists to find one you'd like to study and spell.

On the Apple, use [escape] and [return].

On the Commodore, use [f1] and [return].

On the IBM, use [escape] and [enter].

The word lists are also included in this manual (**Word List Records**) for rapid scanning and keeping track of your progress.

Lower numbered lists are easier. Higher numbered lists are more challenging. You can also follow the screen instructions for entering a list number. The number you choose will be displayed directly, and then you can still flip back and forth some more or choose to enter another number.

When the list you want is on your screen, return to the menu to study or spell it. Your current list number will be saved. It is shown at the bottom right of the PRACTICE MENU screen.

Remember that whenever you re-boot the disk, the current list number starts back at # 1.

Study Words

STUDY WORDS, (choice C on the PRACTICE MENU), is an exercise for studying each word on your current list. This exercise will help you make pictures of the words in your mind's eye.

As you show and erase each word many times (by pressing the [space bar]), the "word picture" will change in ways that are interesting to see.

Words change color, cycle through colors, or "rainbow". Double letters are highlighted. The word may be written in capital or small letters. It may appear one letter at a time. It may flash on and off, or flash from one color to another.

The idea behind the changing display of each word is to focus visual awareness on the LOOK of the word and to make word study interesting and enjoyable.

Each time through a given list, the words will appear in a different order. The visual changes to the words are also randomly selected, for variety and interest. The timing of flashing displays has been carefully designed for comfortable pace and ease of study. You control the timing of showing and erasing each word, so that you can move at your own individual rate.

During the exercise, you can choose to see the full instructions again, and your place in the word list will be saved. If you return to the menu, your place will not be saved.

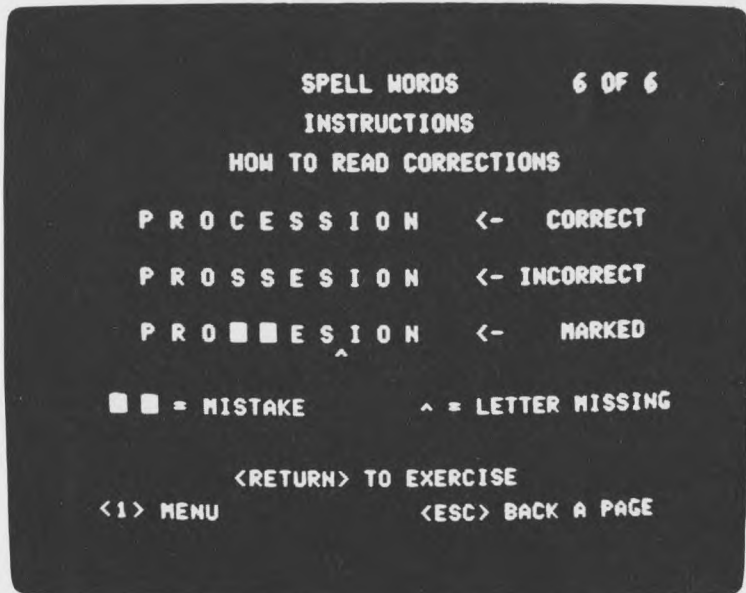

FIGURE 2: Instruction Screen, Apple Version

Spell Words

SPELL WORDS, (choice D on the PRACTICE MENU), is an exercise which allows you to show and type each word on your current list. You find out right away whether your spelling is correct. If not, you'll see what part of the word to focus on, and you can spell it again.

The spelling word is displayed in large letters in a box. You can look at the word for as long as you like. When the [return] or [enter] key is pressed, the word will erase and a prompt (>) below the box indicates where your typing will appear in large letters. The backspace key [←] is available for erasing typing errors. When [return] or [enter] key is pressed again, your answer is compared to the correct spelling of the word.

If you have spelled the word correctly, it will be moved into the box. Your correct word will be shown in a rainbow of colors. You can then choose to spell the word again or continue to the next word on the list.

If you have misspelled the word, colored boxes will overwrite areas of your answer that are not completely correct. A caret (^) indicates missing letters. (See Figure 2 for an illustration of the correction mark-up.) When the [return] or [enter] key is pressed again, the word is displayed once more in the box, and the parts of the word that you had trouble with are highlighted in orange. This highlighting is intended to help focus your attention: you correct yourself when you type the word again. You can make as many attempts as you like, or skip ahead to the next word at any time (except when the answer prompt is on the screen).

Each time through a given list, the words will appear in a different order. If you choose to read the full instructions during the exercise, your place in the word list is saved. If you return to the menu, your place is not saved.

This lesson features a special answer checking technique. The program analyzes each individual spelling, so that the correction mark-up and the highlighted orange letters provide specific feedback and focus for self-correction. Feedback is given in visual form so that your attention to the task remains visual throughout.

This exercise is not a spelling test. It is for learning, practice, and enjoyment. No scores are kept. You can use the **Word List Records** in this manual to check off lists that you've learned to your own satisfaction.

Note to Educators

This **Whole Brain Spelling** lesson is specifically aimed at developing internal visualization skills for spelling. It is not intended as a comprehensive spelling curriculum. The visual approach is a supplement rather than a replacement for classroom activities that involve auditory skills, word meanings and sentence context, and performance evaluation.

Whole Brain Spelling: General Word List

Introduction

There are 2,000 spelling words in this lesson. They are organized into 200 ten-word lists graded for difficulty.

Rationale

Systematic research and sound personal judgment based on teaching experience were combined to select these spelling words.

Because the lesson teaches a visual technique, the vocabulary level of the words is not as important as the level of actual spelling difficulty. Of course, it is also helpful to know how a word sounds and what meaning (or meanings) it conveys. However, for the purpose of internal visualization, words were chosen that are the most commonly taught in grade school and high school spelling materials and whose level of spelling difficulty has been identified and measured systematically.

Word Choice Criteria

Most of the words in the lesson were selected from the New Iowa Spelling Scale (see **References**). The lists are arranged in order of increasing spelling difficulty.

- * The easier lists (1-72) include words spelled correctly by 30-60% of 5th graders in the Iowa nation-wide study.
- * The medium lists (73-121) include words spelled correctly by 50% or fewer of 7th graders.

The difficult lists (122-164) include words spelled correctly by 50% or fewer of 8th graders.

The “super challenge” lists (165-200) include words with very low accuracy percentages for 8th graders in the lowa study, words taken from adult spelling improvement texts, and interesting and difficult words we have used in our adult classroom teaching.

There are also a few “fun lists”, included within each difficulty category, that have a theme such as tree names, science terms and the like.

1	GEM AMONG BLUSH SOIL CONFUSE	ELSE INTEND FALSE INFANT ROUGH	2	HEAVY RESCUE NATURE ISLAND STRIKE	MAGIC LINK ARTIST EXTRA ALLEY

Whole Brain Spelling: A Child's Garden of Words

Introduction

Audience

The child's version of **Whole Brain Spelling** is intended for children who are building their first basic spelling vocabulary, ages 5 through 9, pre-school through third grade. It may also be used as a review for upper elementary school children. As a spelling primer, it may be helpful for adults learning English as a second language.

Note to Parents and Teachers

The lesson assumes that young children will have help from a parent or teacher in reading the instructions and learning how to operate the lesson. The lesson has been designed to be simple, consistent, and easy to use, so that even young children can continue on their own after initial guidance.

Rationale

By learning to use internal visualization for spelling early on, pre-school children can get a head start on the verbal skills they'll need to succeed in school.

If a child's early experiences with spelling are fun and rewarding, he or she is more likely to develop a positive attitude toward spelling performance and evaluation in school.

For children already in school, supplementary work, at home or in

classroom labs, provides practice and corrective feedback on an individual basis.

This primer was designed to precede the standard version of **Whole Brain Spelling**. The highest level of spelling difficulty in this lesson leads naturally to the easiest words in the standard version.

Children can form mental pictures of words as graphic images without knowing their meaning or pronunciation. They may, however, become curious to learn more about the words as they see and spell them.

Word Choice Criteria

There are 2,000 basic spelling words for children in this lesson. They are organized into 200 ten-word lists graded for difficulty.

The words were systematically selected from a nationwide study (Greene, Harry A. **The New Iowa Spelling Scale**) on elementary school spelling performance. The words tested in the study were those used most commonly and taught in schools.

The difficulty range begins with words like "dog" and "cat" and ends with words like "believe" and "captain."

- * Beginner words (lists 1-12) were spelled correctly by 70-100% of third graders.
- * Easy words (lists 13-77) were spelled correctly by 30-69% of third graders.
- * Medium words (lists 78-115) were spelled correctly by 20-29% of third graders.

- * Difficult words (lists 116-178) were spelled correctly by 10-19% of third graders.
- * Challenging words (lists 179-200) were spelled correctly by 7-9% of third graders.

Whole Brain Spelling: Fairy Tale Words

Introduction

Audience

The fairy tale words version of **Whole Brain Spelling** is intended for kids from 8 to 80, for anyone who likes fairy tales and fantasy or is fascinated by old-fashioned language.

Rationale

Like the other versions of **Whole Brain Spelling**, the fairy tale lesson teaches you a method for spelling by imagining word pictures in your mind. The words used in this version trigger your imagination, calling up images of castles and princesses and dragons. When you're working with words from the world of fantasy, it's fun and easy to learn how to spell.

Although the lesson doesn't give the meanings of these words, you may find yourself intrigued about some of them and want to look them up. Words like "sorcery," "whithersoever," or "raiment" may never show up on a school spelling list.

Some of the words on this list are so old they are hardly used anymore: when was the last time you heard of someone being "cloven in twain"? There are words from earlier times like "waistcoat" and "curmudgeon" and from simpler times on the farm or in the wood like "gosling" and "gooseberries." You may even get interested in the history of words and how they change through the ages.

Word Choice Criteria

There are 2,000 words from fairy tales in this lesson, organized into 200 ten-word lists, and arranged in increasing spelling difficulty:

- * Easy 1-71
- * Medium 72-151
- * Challenge 152-193
- * Super Challenge 194-200

These words were selected from seven collections of best-loved fairy tales. The words are shown just as they came from the stories -- with “-ed’s” and “-ing’s” to liven things up.

1	WASPS SULFUR ROYAL PEEPED LOUSE	HARE FAIRY DEATHBED BREWED ABROAD	2	TRESSES SKULL PROW MOUTHFUL HUNTSMEN	GALE DOLT CHESTNUT BARD VILE

Whole Brain Spelling: Scientific Words

Introduction

Audience

The scientific words version of **Whole Brain Spelling** is intended for use by children in the upper elementary grades, junior high and high school students, and adults who encounter scientific language in school, home or work settings.

Rationale

This lesson, like other versions of **Whole Brain Spelling**, teaches you a visual technique for improving spelling skills. In this version, all of the 2,000 spelling words focus on science vocabulary. This lesson is not intended to teach you the meaning of the words or the scientific concepts they convey.

You may be interested in science and understand many of its concepts and yet experience difficulty spelling particular science words. Spelling difficulty may get in the way of communicating about science or writing reports in the laboratory or in the classroom.

Although you may be familiar with many of the 2,000 words in this lesson, you may find others, which you will learn to spell, whose meanings you will be curious to discover for yourself.

Children and adults alike who are motivated by an interest in science can use spelling practice with science words as a motivation for improving verbal skills in general.

You may also be interested in expanding your general spelling competence to various subject areas including science. Many of the science words you will learn to spell are also useful in contexts other than science.

Word Choice Criteria

There are 2,000 scientific words in this lesson, in 200 ten-word lists. They are divided into four science categories: general, earth, life, and physical. Within each science category, the lists are arranged according to increasing spelling difficulty.

- * General science (lists 1-51)
 - Easy 1-13
 - Medium 14-40
 - Difficult 41-51

- * Earth science (lists 52-87)
 - Easy 52-56
 - Medium 57-74
 - Difficult 75-84
 - Super Challenge 85-87

- * Life science (lists 88-144)
 - Easy 88-92
 - Medium 93-116
 - Difficult 117-140
 - Super Challenge 141-144

- * Physical science (lists 145-200)
 - Easy 145-151
 - Medium 152-180
 - Difficult 181-199
 - Super Challenge 200

The words were selected from representative junior and senior high school science textbooks. Words were chosen that were both useful and difficult to spell. In addition to technical terms, vocabulary for descriptive science writing has been included. Compound words and mathematical terms were also selected, but words usually written in abbreviated or notational form were omitted.

Whole Brain Spelling: Medical Words

Introduction

Audience

The medical version of **Whole Brain Spelling** is intended for students and professionals in health services: nurses, physicians, pharmacists, medical transcriptionists, and other hospital personnel.

Rationale

In the health services, the correct spelling of words in prescriptions and other medical records can literally be a matter of life or death.

Of course, medical terminology involves a massive data base, so acquiring a method for learning new words is as important as learning a particular set of terms. The internal visualization method taught in this lesson can serve as an aid to learning new words quickly and effectively.

A representative list of medical words includes words that contain frequently recurring segments (prefixes, suffixes, and roots) such as: "laryngo-", "-phobia", and "-cyst-". Familiarity with the spelling of words containing these types of segments can generalize to new vocabulary.

Medical words are particularly difficult to spell because they are often rather long and may contain unusual letter combinations such as "phth" and "rrh." Also, most people have very little exposure to these words outside of a medical context.

This lesson does not give the meaning of the terms, but seeing and spelling them may refresh the user's memory or spark an interest in vocabulary expansion.

Word Choice Criteria

There are 2,000 medical words in this lesson, organized into 200 ten-word lists. The lists have been grouped into four categories:

- * General 1-50
- * Diagnosis 51-100
- * Anatomy 101-150
- * Drugs 151-200

These words were selected from medical dictionaries, anatomy texts, pharmacological references, and nursing handbooks.

The designers of the lesson, David Manton and Susan Campanini, would like to thank Susan's mother, Elizabeth Dalesio, L.P.N. for her contribution of time and effort in compiling and proofreading the medical words and for originating the idea that this would be a valuable tool for students completing a nursing program.

Whole Brain Spelling: Business Words

Introduction

Audience

This version of **Whole Brain Spelling** is intended for secretaries and other office personnel who type or proofread reports and correspondence where spelling correctness is important. It will also be helpful to students preparing for jobs of this kind.

Rationale

Because correct spelling in a business letter or report can be crucial for understanding and important for a good impression on the reader, much clerical time is spent proofreading and verifying spelling. Secretaries need an efficient method for learning to recognize correct spelling. This lesson teaches basic internal visualization skills that aid this recognition process.

The need for spelling knowledge by a secretary who transcribes from tape is considerably increased. The more words s/he knows, the fewer s/he has to look up, thus saving time.

Since the words a secretary needs to be able to spell always appear in a sentence context, knowledge of inflected forms such as "preferred" and "preferable" is especially important.

Many words used in business writing have spellings which cannot be determined by sound alone, such as: collectible/ expendable, irrelevant/ inadvertent, mediator/ insurer.

Because **Whole Brain Spelling** teaches a strategy for spelling, the user can achieve two goals at once. While learning the 2,000 general business terms in the words lists, s/he can also acquire a method for learning how to spell other words specific to his/her office context.

Word Choice Criteria

There are 2,000 business words in this lesson. They are organized into 200 ten-word lists arranged according to increasing spelling difficulty.

- * Easy 1-63
- * Medium 64-137
- * Difficult 138-190
- * Very Difficult 191-200

The words were compiled from lists included in a variety of secretarial handbooks and business English textbooks. They cover areas of business terminology such as: banking, insurance, law, real estate, and commercial sales.

Both inflected and noninflected forms are included for commonly used and frequently misspelled words.

Pairs of easily confused words such as “stationery / stationary” were placed within the same word list. The lesson does not, however, indicate the different meanings of these words that sound alike.

Whenever two spellings are acceptable, the first spelling from Webster’s Third New International Dictionary (unabridged) has been used.
