## Abstract

The ranges and abundances of species that depend on freshwater habitats are declining worldwide. Efforts to counteract those trends are often hampered by a lack of information about species distribution and conservation status and are often strongly biased toward a few well-studied groups. We identified the 3,906 vascular plants, macroinvertebrates, and vertebrates native to California, USA, that depend on fresh water for at least one stage of their life history. We evaluated the conservation status for these taxa using existing government and non-governmental organization assessments (e.g., endangered species act, NatureServe), created a spatial database of locality observations or distribution information from ~400 data sources, and mapped patterns of richness, endemism, and vulnerability. Although nearly half of all taxa with conservation status ( $n = 1,939$ ) are vulnerable to extinction, only 114 (6%) of those vulnerable taxa have a legal mandate for protection in the form of formal inclusion on a state or federal endangered species list. Endemic taxa are at greater risk than non-endemics, with 90% of the 927 endemic taxa vulnerable to extinction. Records with spatial data were available for a total of 2,276 species (61%). The patterns of species richness differ depending on the taxonomic group analyzed, but are similar across taxonomic level. No particular taxonomic group represents an umbrella for all species, but hotspots of high richness for listed species cover 40% of the hotspots for all other species and 58% of the hotspots for vulnerable freshwater species. By mapping freshwater species hotspots we show locations that represent the top priority for conservation action in the state. This study identifies opportunities to fill gaps in the evaluation of conservation status for freshwater taxa in California, to address the lack of occurrence information for nearly

data collection and analysis, decision to publish, or preparation of the manuscript.

**Competing Interests:** The authors have declared that no competing interests exist.

40% of freshwater taxa and nearly 40% of watersheds in the state, and to implement adequate protections for freshwater taxa where they are currently lacking.

## Introduction

Freshwater habitats cover less than 1% of the earth's surface (about the size of the European Union) but support roughly 125,000 described species, or 10% of the described species on the planet [1]. Species dependent on freshwater habitats are in decline globally [2, 3]; between 10,000 and 20,000 freshwater species are thought to be extinct or imperiled by human activities [1, 3], with freshwater species at higher risk of extinction than their terrestrial counterparts [4]. In North America, extinction rates for freshwater species are four to five times greater than those for terrestrial species [5–7], and increasing human population and climate change are predicted to exacerbate extinctions in the future [7–10]. Estimates of known extinctions however, are likely gross underestimates because most groups of freshwater organisms are understudied [11]. The insular and fragmented nature of freshwater habitats, which often results in high levels of endemism, makes freshwater populations highly vulnerable to extirpation [1].

Although great strides are being made in the methods to adapt conservation planning principals and conservation strategies to the particularities of freshwater systems [12–13], conservation action is hampered by a lack of basic information about the definition and location of these species. The first stage of systematic conservation planning is compiling information about the location of threatened and rare species in a region [14], but for freshwater species, this information tends to be lacking, dispersed, or focused on limited taxonomic groups even in data rich areas.

Because data is lacking, conservation groups often focus on focal species or taxonomic groups that have better distribution data. Recent studies have attempted to systematically address broad-scale patterns of freshwater species distribution, and spatial congruence among taxonomic groups [4, 15]. These studies show that congruence between taxonomic groups at global and continental scales are low, suggesting that focusing on a single species or taxonomic group may not benefit all freshwater species[4, 15].

California (USA) encompasses an exceptionally diverse array of freshwater ecosystem types, from rivers flowing through temperate rainforests to desert springs where ancient aquifers come to the surface [16]. In addition, demands on California's freshwater resources to meet human needs are intensifying as its population grows, and climate change further strains an already over-allocated water supply system [17–18]. Water allocations are currently five times the state's mean annual runoff and, in many of the state's major river basins, rights to divert water lay claim to up to 1,000% of natural surface water supplies [19].

Recent studies have highlighted dramatic declines of California native fishes with 80% either extinct or threatened with extinction within 100 years [10, 20]. Yet, the composition, distribution, and status of the broader suite of freshwater taxa in the state are not well understood. To address this need, we assembled the first comprehensive database of spatial observations for freshwater vascular plants, macroinvertebrates, and vertebrates in California. Here, we use this new and now publicly available database [21] to evaluate the patterns of freshwater species richness, endemism, and vulnerability, identify hotspots of freshwater richness, and to evaluate the spatial congruence of species richness across taxonomic groups.

## Materials and Methods

### Study Area

The spatial unit of analysis for this assessment was the smallest-size watershed (12-digit hydrologic unit code, or HUC12, watershed) available in the nested national dataset compiled by the US Department of Agriculture Natural Resource Conservation Service [22]. Our study area included those watersheds ( $n = 4,450$ ) within the administrative boundary of the state of California, totaling  $410,515 \text{ km}^2$  (Fig 1). For reporting results, we nested the HUC12 watersheds within 10 major hydrologic management regions defined by California’s Department of Water Resources corresponding to the state’s major drainage basins [23] (Fig 1)(S1 Table).

### Taxa List

The taxonomic units of analysis for this assessment were drawn from an initial list of species and sub-species known to utilize freshwater habitats within California from NatureServe (<http://natureserve.org>) ( $n = 1,903$ )[24]. Because NatureServe collects and manages information for only a subset of species throughout the U.S., Canada, Latin America, and the Caribbean we assessed regional and specific taxonomic reviews and checklists to identify missing taxa (S2 Table). For example, we relied on the PISCES for all fish data because the software and database is comprehensive and quality-controlled [25–26].

Comprehensive taxonomic reviews are not available in California for non-vascular plants, such as benthic algae and mosses, planktonic microcrustacea, segmented worms, and water

mites; consequently, these groups are excluded from our effort. The authors, selected for their taxonomic expertise in the state, compiled and reviewed lists of freshwater dependent species and subspecies that occur within California ([S1 Table](#)). The experts removed redundancies due to changes in taxonomy or nomenclature, and assembled a definitive list of freshwater taxa ([S3 Table](#)). Our final database augmented the freshwater taxa included in the NatureServe list by 105% (n = 2,003), for a total of 3,906 taxa ([S3 Table](#)). Species, subspecies, Evolutionary Significant Units, and Distinct Population Segments are hereafter referred to as “taxa” for convenience.

Criteria for categorizing taxa as “freshwater dependent” varied by taxonomic group ([S1 File](#)). For example, freshwater fishes were defined as those that spawn in freshwater habitats. Herpetofauna, were included if: 1) they rely on fresh water to complete one or more life stage (e.g., all anurans and many caudates); or, 2) forage within fresh water as obligates (e.g., western pond turtle, *Actinemys marmorata marmorata*) or non-obligates (e.g., western terrestrial garter snake, *Thamnophis elegans elegans*) at some stage of development; or, 3) they would not persist without freshwater microhabitats (e.g., Inyo mountain salamander, *Batrachoseps campi*); or, 4) they are found within splash zones of freshwater springs and creeks (e.g., Dunn’s salamander, *Plethodon dunni*). Plant species were included if: 1) they occur exclusively in fresh water and have special adaptations for living submerged in water, or at the water's surface; or, 2) occur primarily in freshwater wetland habitats but are not strictly aquatic; or, 3) require freshwater inundation to complete their life-cycle, such as plants occurring in long-inundated portions of vernal pools (e.g., *Orcuttia californica*); or, 4) were identified in the Jepson Manual of Vascular Plants of California [27] as associated with wetland habitats such as marshes, lakes, vernal pools, fens, springs, and bogs, and dependent on wetland habitat; or, 5) were included as wetland obligates or as facultative wetland plants in the U.S. Army Corps of Engineers list of wetland plant species [28]. See [S1 File](#) for criteria used for birds, mammals, vascular plants and invertebrates. We limited our list to taxa native to California.

Taxa were classified as endemic if they are known to be restricted to California based on available data sources ([S2 Table](#)).

## Conservation Status

We evaluated the conservation status for all taxa on our final list ([S3 Table](#)) by reviewing the scientific literature, NatureServe, state and federal Endangered Species Act lists, management agency designations, and taxonomic group reviews ([S1 Table](#)). We attempted to be as complete as possible, and use available conservation status sources for the taxonomic groups considered in this study. [Table 1](#) provides sources and criteria for classifying taxon as listed, vulnerable or apparently secure. Note that taxa were not classified as “apparently secure” if they fell under any criteria listed under “vulnerable” in [Table 1](#).

## Spatial Data and Summaries

We collected spatial data related to the occurrence or distribution of the freshwater taxa included on our final list ([S3 Table](#)), and assembled a geographic database using Esri ArcGIS version 10.1 software. Due to taxonomic changes and differences among data sources, we were not always able to attribute spatial records at the subspecies level. As a result, all spatial data summaries and analyses are conducted at the species level. Data were collected from a variety of sources ([S2 Table](#)). The subsequent database includes available spatial data for each taxon categorized by observation type ([Table 2](#)), data format (i.e. point, line, and polygon), origin (i.e. native range vs. translocation), conservation status, and habitat usage (e.g. seasonal or migratory use).

A taxon was classified as listed, vulnerable or apparently secure if one of the criteria conditions were met. For example, if a taxon is classified as endangered on the federal ESA list, we designated the taxon as “listed” in our database. Alternatively, if a taxon was classified as EN (endangered) in Moyle et al. 2011, we classified the taxon as “vulnerable” in our database.

doi:10.1371/journal.pone.0130710.t001

While this effort represents the most comprehensive compilation of freshwater species occurrence in the state, we acknowledge that data quality may vary among sources. With the exception of PISCES, which has been expert reviewed for data quality, other data sources have

not undergone such review, and therefore may not accurately represent species ranges. For example, most invertebrate data come from bioassessment monitoring efforts which are known to under sample certain habitats such as non-perennial streams, large rivers, springs, high altitude streams, and wet meadows.

To examine and compare patterns of freshwater species richness, endemism, and vulnerability, we summed and mapped unique species by HUC12 watershed, and calculated the percentage of species that are endemic, vulnerable, and listed in each watershed. We also mapped richness by eight taxonomic groups (fish, herptofauna, mollusks, birds, crustaceans, plants, mammals, insects and other invertebrates) by summing the number of species in each taxonomic group within the HUC12s. We identified hotspots as the top 5% richest watersheds [39].

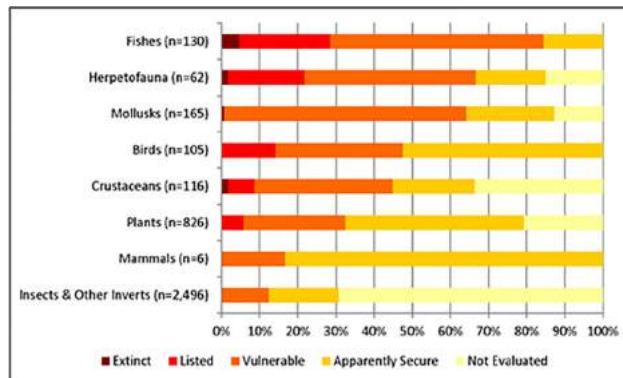

We recognize that spatial data for freshwater species is often lacking, so we tested how each taxonomic group serves as a proxy for the full suite of freshwater species. First we calculated the pairwise Pearson's correlation coefficient of species richness counts in HUC12 watersheds by taxonomic group to evaluate the relationship between taxonomic groups. Next, we calculated the Pearson's correlation coefficient for each taxonomic group compared to all other freshwater species not in that taxonomic group. For example, we calculated the correlation coefficient for fish richness compared to all other freshwater species (excluding fish) by HUC12 watershed. In addition, we calculated the correlation of all listed species in each HUC12 compared to all other non-listed species.

We also tested whether geographical patterns of richness in one group act as a surrogate for those in other groups by comparing the overlap of hotspots for one group with corresponding hotspots for other groups [39]. Finally, we compared the hotspots for each group with vulnerable freshwater species to test how well each group acts as a surrogate for vulnerable freshwater biodiversity in most need of conservation action.

## Results

### Richness, Endemism, and Vulnerability

We identified 3,906 freshwater taxa in California ([S3 Table](#)) which included 336 subspecies, evolutionary significant units, or distinct population segments. Insects, arachnids,

**Fig 2. Taxonomic grouping and conservation status of freshwater taxa native to California.**

Percentage of freshwater species by taxonomic groups that are considered vulnerable (at risk of extinction) in California watersheds, “Insects and other invertebrates” includes the classes Arachnida, Branchiopoda, Insecta and Polychaeta.

doi:10.1371/journal.pone.0130710.g002

branchiopods, and polychaetes (referred to henceforth as “insects and other invertebrates”) comprise over two-thirds (63%) of the freshwater taxa in the study, with 2,496 taxa (Fig 2). The next largest group is vascular plants (n = 826), followed by mollusks (n = 165), fish (n = 130), crustaceans (n = 116) birds (n = 105), herpetofauna (n = 62), and mammals (n = 6) (Table 3). Eleven freshwater taxa that were once found in the study area are now considered extinct, including one plant (*Potentilla multijuga*), two crustaceans (*Pacifastacus nigrescens* and *Synecetes pasadenae*), one mollusk (*Planorbella traski*), one frog (*Rana lithobates*) *yavapaiensis*), and six fishes (*Cyprinodon nevadensis calidae*, *Siphonodon bicolor* ssp. 11, *Gila crassicauda*, *Pogonichthys cinctoides*, *Ptychocheilus lucius*, and *Salvelinus confluentus*). An additional 14 species considered possibly extinct include eight insects (*Farula davisi*, *Hygrotus artus*, *Mesocapnia bakeri*, *Paraleptophlebia californica*, *Paraleptophlebia clara*, *Paraleptophlebia rufivenosa*, *Parapsyche extensa*, *Rhyacophila amabilis*), two amphibians (*Rana pretiosa*, and *Incilius alvarius*), one mollusk (*Valvata virens*), two plants (*Plagiobothrys glaber* and *Potentilla uliginosa*), and one turtle (*Kinosternon sonoriense*).

To date, conservation status has been assessed for only 50% (N = 1,939) of the state’s freshwater taxa (Table 3). Moreover, the conservation status of some taxonomic groups is

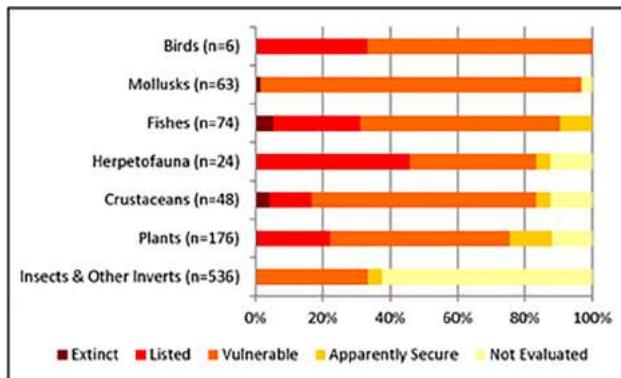

**Table 3. Number of taxa included in each taxonomic group along with the number and percentage of species by conservation status.**

Group	All	Extinct	Listed	Vulnerable (but not listed)	Apparently Secure	Not Evaluated
Insects and Other Inverts*	2,496	0	0	309 (12%)	460 (18%)	1,727 (70%)
Plants <sup>1</sup>	826	1 (0%)	47 (5%)	220 (27%)	387 (47%)	171 (21%)
Mollusks	165	1 (0.5%)	0	105 (63.5%)	38 (23%)	21 (13%)
Fishes	130	6 (5%)	31 (24%)	73 (56%)	20 (15%)	0
Crustaceans	116	2 (2%)	8 (7%)	42 (36%)	25 (21%)	39 (34%)
Birds	105	0	15 (14%)	35 (34%)	55 (52%)	0
Herpetofauna	62	1 (2%)	12 (19%)	29 (46%)	11 (18%)	9 (15%)
Mammals	6	0	0	1 (17%)	5 (83%)	0
Total	3,906	11 (0.3%)	113 (3%)	814 (21%)	1,001 (26%)	1,967 (50%)

\* Includes Arachnida, Branchiopoda, Insecta and Polychaeta.

<sup>1</sup>All California plants are evaluated for rarity. Due to the lack of a ‘secure’ category in the CNPS ranking system, common taxa may not appear to have been evaluated.

doi:10.1371/journal.pone.0130710.t003

**Fig 3. Taxonomic grouping and conservation rank of freshwater taxa endemic to study area.**

Percentage of freshwater endemic species by taxonomic groups that are considered vulnerable (at risk of extinction) in California watersheds. “Insects and other invertebrates” includes the classes Arachnida, Branchiopoda, Insecta and Polychaeta.

doi:10.1371/journal.pone.0130710.g003

disproportionally understudied. For example, the conservation status of all fish and bird taxa have been evaluated, but only 31% ( $n = 769$ ) of insects and other invertebrates (Table 3). Of the freshwater taxa evaluated, 51.5% are considered secure ( $n = 1,001$ ), 48% are ranked as vulnerable ( $n = 927$ ), and 0.5% ( $n = 11$ ) are now considered extinct. Although nearly half of the freshwater taxa were classified as vulnerable, only 113 (6%) are listed as endangered or threatened under the federal or state ESA.

Some taxonomic groups contain considerably more vulnerable taxa than others (Fig 2). For example, 104 of the 130 (80%) fishes, 66% of herpetofauna ( $n = 41$ ) and 64% ( $n = 105$ ) of mollusks are considered vulnerable. On the other hand, 83% of the mammals, 52% of the birds, and 47% of the plants are considered secure. However, as noted above, the comprehensiveness of data varies by taxonomic group such that the true level of imperilment could be much greater for taxonomic groups such as insects, other invertebrates and crustaceans where the majority of known taxa have not been evaluated for conservation state (Fig 2 and Table 3).

Nearly a quarter of the 3,906 native freshwater taxa found in California are endemic ( $n = 927$ ), including 536 insects and other non-molluscan invertebrates, 176 plants, 74 fishes, 63 mollusks, 48 crustaceans, 24 herpetofauna, and 6 birds (Fig 3). Of the 560 endemic taxa that were evaluated for conservation status, nearly 90% ( $n = 498$ ) are considered vulnerable (Fig 3). All 6 endemic birds are considered vulnerable, as are 98% of the endemic mollusk taxa. In addition, 85% of endemic fishes are considered vulnerable (Fig 3). Eight endemic taxa are considered extinct including four fishes (*Cyprinodon nevadensis calidae*, *Siphatales bicolor* ssp. 11, *Gila crassicauda*, and *Pogonichthys cinctoides*), two crustaceans (*Pacifastacus nigrescens* and *Synecetes pasadenae*), one plant (*Potentilla multijuga*) and one mollusk (*Planorbella traski*). Only 76 (14%) of vulnerable endemic taxa are formally listed on state or federal endangered species lists.

## Spatial Data and Summaries

To map spatial patterns of freshwater diversity in the state, we compiled spatial data from 408 different sources (S2 Table) and assembled a database with over 9,000 polygon, 23,000 line, and 3,484,000 point records. As noted in the above Methods, we compiled spatial data only at the species level. Therefore, although our final species list contains information on 3,906 taxa, we compiled spatial data for the 3,727 species in the database. It should be noted that although

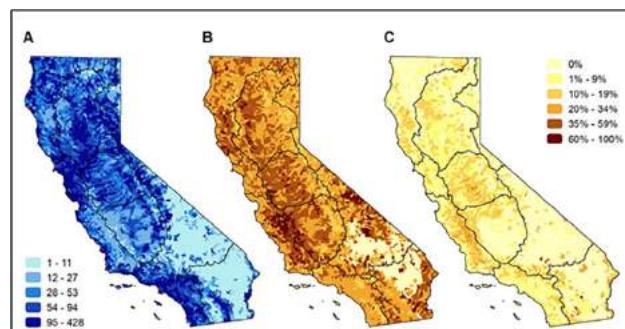

there are 336 subspecies, ESUs, or DPSs in the database, 179 species are comprised of at least two subspecies.

We obtained spatial data (see [Table 2](#) for data types) for 2,276 (61%) of the 3,727 total freshwater species, including 588 (68%) of the 862 endemic species, 752 (90%) of the 838 vulnerable species, and all 94 species listed under state or federal Endangered Species Acts [29–30]. We were unable to find any spatially explicit data for 1,451 (39%) of the species.

Hydrologic regions with the greatest species richness include portions of the San Francisco Bay (average species richness by HUC12 = 111 species), South Coast (average species richness by HUC12 = 91) and Sacramento River (average species richness by HUC12 = 74) ([Fig 4A](#)). The average richness of vulnerable taxa per HUC12 by hydrologic regions was greatest in the San Francisco Bay (n = 31), South Coast and San Joaquin (n = 22), Sacramento (n = 21), and North Coast (n = 19). However, the regions with the highest percentage of vulnerable species per HUC12 are the South Lahontan, Tulare Lake, South Coast, Colorado, and Central Coast regions ([Fig 4B](#)). Listed species are found across the study area with at least one being as either currently or historically found in watersheds that cover 76% of the state ([Fig 4C](#)). However, in contrast to vulnerable species ([Fig 4B](#)), the proportion of listed species per HUC12 watershed is relatively low ([Fig 4C](#)).

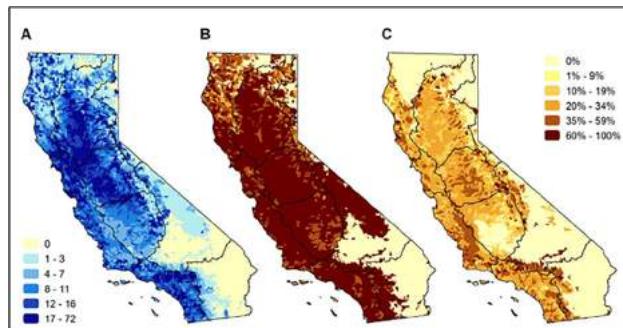

The average richness of endemic taxa per HUC12 by hydrologic regions was greatest in the San Francisco Bay (n = 19), San Joaquin (n = 15), South Coast (n = 14), Sacramento (n = 12), and the Central Coast (n = 11) ([Fig 5A](#)). Regions with hydrological connections outside of California—North Coast, North and South Lahontan, and Colorado River—have a lower percentage of California endemic species (n = 7, 5, 3, 4 on average, respectively). More than half of the study area (61%) is comprised of HUC12 watersheds in which over 60% of the endemic species found in those watersheds are considered vulnerable ([Fig 5B](#)). As with all native freshwater species, the proportion of endemic species that are listed under state or federal ESA lists is considerably less than the proportion of those considered vulnerable in most HUC12 watersheds ([Fig 5C](#)).

Spatial patterns of richness vary by taxonomic group and appear to correspond with distribution of freshwater habitat ([Fig 6](#)). For example, fish richness is highest in major rivers in the state including the Sacramento and Klamath river watersheds located in the Sacramento and North Coast hydrologic regions ([Fig 6A](#)) ([S1 Table](#)). Herpetofauna richness is highest in

**Fig 4. Patterns of richness and vulnerability of freshwater species native to California watersheds.** Maps of (A) the number of native freshwater species in each HUC12 watershed (includes current, historic, range and modeled data). The range of species richness is shown in quintiles, therefore the darkest blue is the top 20% of species richness, the lightest blue the lowest 20%; (B) percentage of species in each HUC12 watershed that are ranked as vulnerable; and (C) percentage of species in each HUC12 watershed that are listed as endangered or threatened under state or federal ESA lists. Maps in panels B and C share the legend on the right of the figure. The black lines on the maps represent the major hydrologic regions in the study area.

Maps in panels B and C share the legend on the right of the figure. The black lines on the maps represent the major hydrologic regions in the study area.

doi:10.1371/journal.pone.0130710.g005

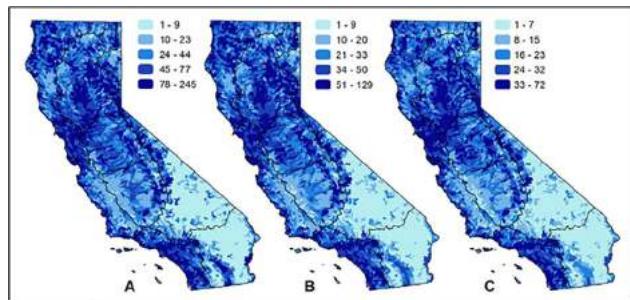

mountain foothill and coastal areas ([Fig 6B](#)), with bird richness being highest in wetland, coastal, and compatible agriculture (e.g., flooded rice) regions of the state ([Fig 6C](#)). Richness of mollusks/crustaceans, insects and other invertebrates is concentrated in headwater, spring systems and more isolated pockets of habitat ([Fig 6D and 6E](#)). Plant richness appears distributed throughout the state with pockets of high richness even in desert regions which are underrepresented by other taxonomic groups ([Fig 6F](#)).

Geographies noted for high species richness are consistent regardless of observation type ([Table 2](#)). The San Francisco Bay, Sacramento River, and portions of the South Coast hydrologic regions are consistently identified as biodiversity hotspots whether observational, range, or modeled data are considered ([Fig 7](#)). Patterns of diversity for historical observations and

Patterns of richness by data type of California freshwater species.** Maps show the number of native freshwater species when summarized by: (A) observational data recorded after 1980; (B) observational data recorded before 1980 or observations of extirpated populations; and (C) data that includes range maps, historical range maps, modeled habitat, professional judgment, critical habitat designations, and management area designations. Spatial data with an unknown observation date or unknown type are not included in any panel. The black lines on the maps represent the major hydrologic regions in the study area.

doi:10.1371/journal.pone.0130710.g007

extirpated populations appear similar to current observations ([Fig 7A and 7B](#)). Modeled and generalized data such as range maps completely cover the study area and provide perhaps the clearest pattern of diversity of freshwater taxa ([Fig 7C](#)); however, these patterns are only predictions of taxa presence. Nearly 40% of the study area does not contain a recent (post-1980) observation for any of the freshwater taxa considered in this study ([Fig 7A](#)).

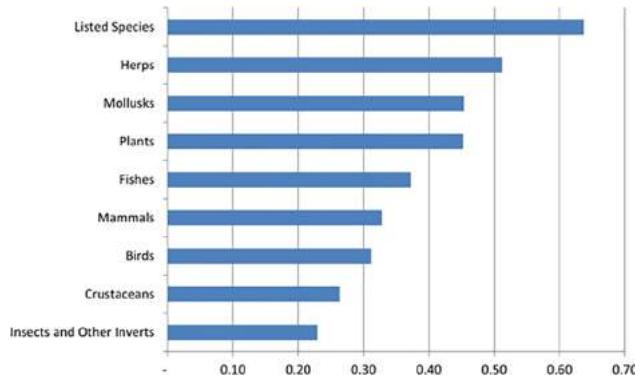

The correlation coefficients of species richness at the HUC12 watershed scale between the various taxonomic groups are relatively low ([Table 4](#)), with the highest being between mollusks and mammals (0.52); fishes and mammals (0.52); and fishes and herps (0.51). The lowest correlations coefficients are between insects and other inverts and birds (0.03); crustaceans (0.06) and fishes (0.07).

We tested how the richness of various groups of species (taxonomic groups and listed species) serve as a proxy for the richness of all other freshwater species using correlation and hot-spot overlap analysis. Listed species were the most correlated at the HUC12 watershed scale with the richness of all other freshwater species (0.63), followed by herpetofauna (0.51) and mollusks and plants (0.45) ([Fig 8](#)). Insects and other invertebrates had the lowest correlation to all other species (0.23). With the hotspot overlap analysis, we found again that listed species serve as the best proxy for all other species, with a 40% overlap in hotspots, followed by plants (29%), mollusks (27%) and crustaceans (25%) ([Fig 9](#)). We also compared hotspots for each group with hotspots of vulnerable freshwater species, since these are in the highest need of conservation action. Hotspots for listed species overlapped with 58% of the hotspots for vulnerable

**Table 4. Correlation matrix of the richness within each HUC12 watershed summarized by taxonomic groups.**

	Fishes	Crustaceans	Herps	Insects & Other Inverts	Mollusks	Plants	Birds	Mammals
<b>Fishes</b>	1.00	0.33	0.51	0.07	0.35	0.22	0.42	0.52
<b>Crustaceans</b>		1.00	0.09	0.06	0.14	0.20	0.26	0.11
<b>Herps</b>			1.00	0.32	0.32	0.34	0.32	0.32
<b>Insects &amp; Other Inverts</b>				1.00	0.44	0.26	0.03	0.28
<b>Mollusks</b>					1.00	0.23	0.17	0.52

<b>Birds</b>							1.00	0.09
<b>Mammals</b>								1.00

doi:10.1371/journal.pone.0130710.t004

**Fig 8. Relationship among taxonomic groups.** Correlation of the richness within each HUC12 watershed for taxonomic groups of species when compared to all other freshwater species (excluding that group).

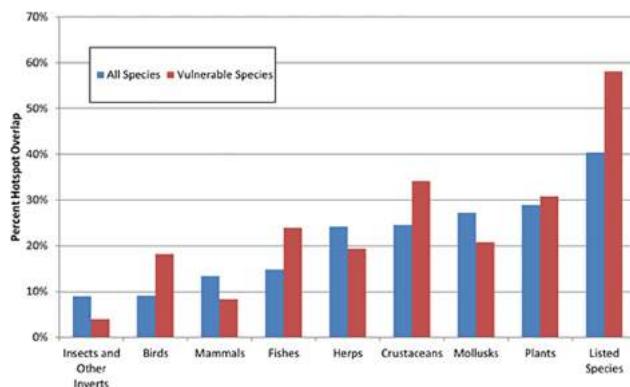

doi:10.1371/journal.pone.0130710.g008

freshwater species (excluding listed species). Mapping the hotspots shows that hotspots for listed species overlap with hotspots for all other species in the Sacramento River, San Francisco Bay, and South Coast hydrologic regions (Fig 10). However, hotspots congruence is lower in the North Coast and San Joaquin hydrologic regions.

## Discussion

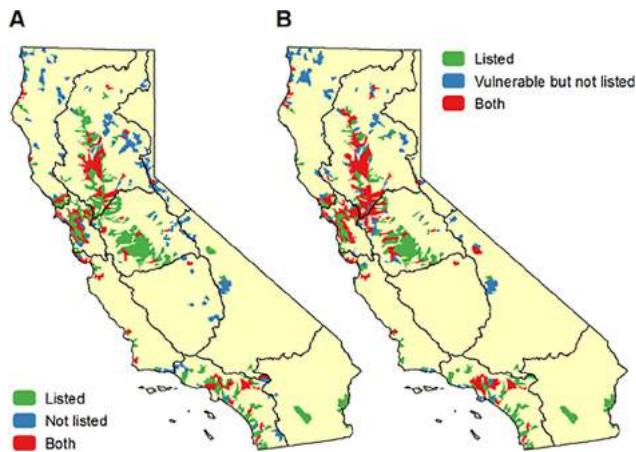

We compiled the most comprehensive database of freshwater species richness and distribution for the state of California to date. Using that database, we provide the first multi-taxa analysis of richness, endemism, and vulnerability for the majority of freshwater diversity in the state. Our study finds that the plight of freshwater species in California mirrors global trends [1–3]. We found that nearly half of freshwater taxa native to California are considered vulnerable to extinction, however only 6% of those taxa are currently listed under state or federal ESA. Even more disconcerting is that 90% of the freshwater taxa endemic to California—and so wholly reliant on conservation actions within the state—are vulnerable to extinction. However, only 14% of these endemic taxa are listed under state or federal ESAs (Fig 3). Therefore, legal listing does not appear to accurately reflect the state of vulnerability of freshwater taxa in the state.

We found that freshwater fishes, amphibians, reptiles, and mollusks are the most vulnerable taxonomic groups, a finding that is consistent with other studies [5, 10, 40–42]. However, this

**Fig 9. Overlap of hotspots.** The relative performance of hotspots (top 5% of watersheds by richness) for taxonomic groups of species in matching hotspots for all (blue bars) and vulnerable (red bars) freshwater species. To avoid double counting, hotspots for all and vulnerable species were identified excluding the species in each subgroup for each comparison.

doi:10.1371/journal.pone.0130710.g009

**Fig 10. Location of hotspots.** Comparison of the location of hotspot watersheds (top 5% by richness) for A) listed species with all non-listed species, and B) vulnerable but non-listed species.

doi:10.1371/journal.pone.0130710.g010

finding could be biased by the general lack of information about vulnerability of other taxonomic groups (Fig 3). These results provide evidence that some taxonomic groups are much better evaluated for conservation status than others (Table 3). For example, all fish and bird taxa have been evaluated as have most of the reptiles, amphibians, plants, and mollusks. In contrast, only 31% of the insects and other invertebrates have been evaluated for conservation status. Furthermore, we still lack spatially-explicit information for 1,448 freshwater species, including many known or suspected to be vulnerable to extinction. Evaluating the conservation status and locations of understudied freshwater species is priority for future research. Given that data acquisition is costly and time intensive, a recent study has shown that concentrating survey efforts on species with the highest uncertainty, such as rare species, provides an effective way to enhance the accuracy of conservation planning [43].

While there are some significant data gaps in our knowledge about the locations of many freshwater species, we were able to compile spatial data for 90% of the vulnerable species in the state, and all of the listed species. With this rich dataset, we were able to test how well a conservation focus on a particular subset of species would benefit other freshwater species. We found that a conservation focus on hotspots for a single taxonomic group such as fishes would provide poor overlap with hotspots for all other freshwater species. Our results are similar to a recent study on global patterns of freshwater species distribution [4]. Interestingly, we found that listed species do provide a reasonable proxy for other freshwater species, since hotspots for listed species cover 40% of the hotspots for non-listed species and 58% of the hotspots for non-listed vulnerable species (Figs 9 and 10). In our study area, focusing conservation action on the hotspots for listed species will likely benefit other freshwater species that need conservation action but have not yet been listed. If these patterns hold for other locations, this finding has implications for conservation strategies outside of our study area because there is generally more spatially explicit information about the distribution of listed species.

The publicly-available dataset [21] we have produced provides a means to place a wide range of freshwater management actions, including water rights administration and water use permitting within the larger context of freshwater-dependent species conservation. Furthermore, the dataset supports conservation planning initiatives by federal and state agencies and non-governmental organizations at the landscape scale, including efforts to delineate priority watershed networks which, if protected or restored, can most efficiently encompass freshwater biodiversity in the state for multiple species groups.

## Conclusions

Human population growth, increasing demands for freshwater resources, and climate change are projected to exacerbate strains on freshwater resources and lead to further imperilment and extinction of freshwater taxa [1, 8–10, 44–45]. Fundamental to addressing this conservation challenge is information to elucidate what taxa are at risk and where best to focus efforts to improve conservation of freshwater species diversity. This study provides a foundation for freshwater conservation planning in California and highlights key hotspots of freshwater species which serve as priorities for conservation action. Yet, major gaps remain in our understanding of freshwater species distribution and status, as well as in the conservation protections afforded that diversity. Filling these knowledge gaps—e.g., with targeted surveys for understudied taxa, especially the listed, vulnerable, and endemic forms—is essential to inform current and future water management decisions. Addressing the gaps and inadequacies in conservation protections will be critical if we are to reverse the alarming declines of freshwater diversity seen in California as around the world.

**S1 File.** Criteria used to define freshwater species

1. FISH

- Freshwater fishes are defined as those that spawn in freshwater. Catadromous species wouldn't qualify, however, we do not have any catadromous species in California. This also precludes several estuarine species commonly found in brackish water such as starry flounder, striped mullet and staghorn sculpin.

2. PLANTS

- Plant species that occur exclusively in freshwater and have special adaptations for living submerged in water, or at the water's surface. Includes free-floating aquatic plants and emergent wetland plants rooted beneath the water surface (e.g., *Nuphar polysepala*).
- Plant species that occur primarily in freshwater wetland habitats but are not strictly aquatic (e.g. *Typha angustifolia*).
- Plant species requiring freshwater inundation to complete their life-cycle, such as plants occurring in long-inundated portions of vernal pools (e.g., *Orcuttia californica*).
- Plant species associated with freshwater and aquatic habitats over much of their range or life-cycle as identified by expert botanists.
- Plant species identified in the Jepson Manual of Vascular Plants of California as associated with wetland habitats such as marshes, lakes, vernal pools, fens, springs, and bogs, and dependent on wetland habitat.
- Plant species identified as Wetland Obligates in the U.S. Army Corps of Engineers list of wetland plant species.
- Plant species identified as Facultative Wetland plants in the U.S. Army Corps of Engineers list of wetland plant species, and identified by expert botanists as dependent on freshwater wetland or aquatic habitats.

3. HERPETOFAUNA

- Species that exclusively rely on freshwater or freshwater-dependent vegetation communities in California in order to complete one or more stages of a reproductive cycle.
- Species that forage within freshwater, either as obligates (e.g., *Actinemys marmorata* and *Thamnophis gigas*), non-obligates (e.g., *T. elegans* and *T. ordinoides*), or as obligates and non-obligates depending on point of ontogeny (i.e., larval and adult amphibian of a single species).
- Relict species occurring within mesic microhabitats within xeric landscapes that would not persist in such regions without freshwater springs, such as *Batrachoseps campi* (a plethodontid salamander that exhibits direct development and does not have a larval stage).
- Species that do not require freshwater for foraging or any part of their reproductive cycle, but are typically found in California occurring within the splash zone of freshwater springs and creeks, such as *Plethodon dunni* (a plethodontid salamander with direct development).

4. BIRDS

A) Criteria for Inclusion

- Species that exclusively rely on freshwater or freshwater-dependent vegetation communities in California, including taxa strongly associated with riparian vegetation.
- Species that breed widely across western North America in freshwater habitats and migrate to California where a substantial portion, but not all, of their wintering habitat consists of freshwater habitats
- Species that use coastal waters during winter and migration but rely completely on freshwater for breeding in California (e.g. Harlequin Duck, American White Pelican, Western Grebe)
- Species that require freshwater inputs into saline systems where reductions in freshwater inputs could result in complete habitat loss or substantial changes vegetation and habitat suitability (e.g., species that are only found at the Salton Sea , Saltmarsh Common Yellowthroat).
- Species that winter or breed in both freshwater and saline wetlands, but have large portions of their California population dependent on inland freshwater habitats, including flooded agriculture.

B) Criteria for Exclusion

- Species not dependent on the regular presence of freshwater or freshwater-dependent habitats.
- Species that no longer occur in or are not native to the region.
- Species were omitted if they are rare and do not contribute in a meaningful way to the avifauna of the region. – i.e., primarily lost “vagrants,” even if they occur every year (e.g., Swamp Sparrow, American Redstart).

5. INVERTEBRATES

- Benthic macroinvertebrates (BMIs) are those included on the Southwest Association of Freshwater Invertebrate Taxonomists (SAFIT) Standard Taxonomic Effort (STE) list collected as part of freshwater bioassessment in the southwestern United States. The list contains BMI species known to occur in streams, lakes, or wetlands, including vernal pools, but special emphasis was placed on stream taxa since freshwater bioassessment is most frequently conducted in that habitat type. The list was compiled from published literature sources and from records in the State Water Board’s bioassessment database, the latter being derived from surveys of thousands of stream sites throughout California.
- All species in the SAFIT list are benthic in one or more life stages and utilize freshwater habitats in one or more of the following critical life functions: feeding, mating, egg deposition/development, and larval development to maturity.
- The species list is more comprehensive for some taxonomic groups than others, reflecting the knowledge base and interests of the authors and other taxonomists at California’s Aquatic Bioassessment Lab, availability and regional synoptic coverage of primary taxonomic literature, and likelihood of obtaining properly preserved specimens in typical benthic samples. For example, the list is comprehensive for most aquatic insect groups such as mayflies, stoneflies, dragonflies, caddisflies, beetles, the dipteran suborder Nematocera, etc. The dipteran suborder Brachycera is a notable exception, with most taxa being listed at genus level. The species lists also include surface-dwelling groups like Gerridae (water striders, order Hemiptera) and Gyrinidae (whirligig beetles, order Coleoptera), but exclude taxa associated with riparian zones,

shore-dwelling species, and plant tissue inhabitants in taxonomic groups such as Collembola, Staphylinidae, Heteroceridae, Chrysomelidae, Curculionidae, Saldidae, Isopoda and Amphipoda.

- The list is comprehensive for benthic crustaceans except Ostracoda. The list does not include planktonic microcrustacea (Copepoda and Cladocera). No attempt has been made to provide comprehensive species lists for freshwater Annelida (segmented worms) as preservation is typically poor in benthic samples, but generic lists are provided for leeches and polychaetes. Similarly, generic listings are included for Acari (water mites). An extensive taxonomic literature is available for these groups and could support compilation of species lists by appropriate experts in future versions. The list also excludes freshwater parasites such as Branchiura and mermithid Nematoda, the Branchiobdella, which are commensals on crayfish, and the Nematomorpha which are parasitic on terrestrial insects but are found in freshwater for part of their life cycle.
- Phylum Mollusca is variably treated: species lists are generally comprehensive for taxa that occur in larger streams and rivers, despite improper preservation that prevents species-level identifications in typical benthic samples that are collected for bioassessment purposes. Pebblesnails (Families Hydrobiidae and Lithoglyphidae) are a diverse group in springs of the southwestern US, but a species list has not been included.

**S4 Table.** List of taxa included in the database.

Scientific Name	Common Name	Group
<i>Abedus breviceps</i>		Insects & other
<i>Abedus herberti</i>		Insects & other
<i>Abedus indentatus</i>		Insects & other
<i>Abedus ovatus</i>		Insects & other
<i>Abedus parkeri</i>		Insects & other
<i>Abedus vicinus</i>		Insects & other
<i>Ablabesmyia annulata</i>		Insects & other
<i>Ablabesmyia aspera</i>		Insects & other
<i>Ablabesmyia cinctipes</i>		Insects & other
<i>Ablabesmyia mallochi</i>		Insects & other
<i>Ablabesmyia monilis</i>		Insects & other
<i>Ablabesmyia peleensis</i>		Insects & other
<i>Acalyptonotus pacificus</i>		Insects & other
<i>Acanthomysis aspera</i>		Crustaceans
<i>Acanthomysis hwanhaiensis</i>		Crustaceans
<i>Acentrella insignifcans</i>	A Mayfly	Insects & other
<i>Acentrella turbida</i>	A Mayfly	Insects & other
<i>Acerpenna pygmaea</i>		Insects & other
<i>Acilius abbreviatus</i>		Insects & other
<i>Acipenser medirostris</i> ssp. 1	Southern green sturgeon	Fishes
<i>Acipenser medirostris</i> ssp. 2	Northern green sturgeon	Fishes
<i>Acipenser transmontanus</i>	White sturgeon	Fishes
<i>Acneus beeri</i>		Insects & other
<i>Acneus burnelli</i>		Insects & other
<i>Acneus oregonensis</i>		Insects & other
<i>Acneus quadrimaculatus</i>		Insects & other
<i>Actinemys marmorata</i> <i>marmorata</i>	Western Pond Turtle	Herps
<i>Actinemys marmorata</i> pallida	Southern Pacific Pond Turtle	Herps
<i>Actitis macularius</i>	Spotted Sandpiper	Birds
<i>Aechmophorus clarkii</i>	Clark's Grebe	Birds
<i>Aechmophorus occidentalis</i>	Western Grebe	Birds
<i>Aedes aegypti</i>		Insects & other
<i>Aedes cinereus</i>		Insects & other
<i>Aedes vexans</i>		Insects & other
<i>Aeshna canadensis</i>	Canada Darner	Insects & other
<i>Aeshna interrupta interna</i>		Insects & other
<i>Aeshna juncea</i>		Insects & other
<i>Aeshna palmata</i>	Paddle-tailed Darner	Insects & other

<i>Aeshna persephone</i>		Insects & other
<i>Aeshna subarctica</i>		Insects & other
<i>Aeshna umbrosa occidentalis</i>	Shadow Darner	Insects & other
<i>Aeshna walkeri</i>	Walker's Darner	Insects & other
<i>Agabus glabrellus</i>		Insects & other
<i>Agabus sculpturellus</i>		Insects & other
<i>Agabus ancillus</i>		Insects & other
<i>Agabus anthracinus</i>		Insects & other
<i>Agabus apache</i>		Insects & other
<i>Agabus approximatus</i>		Insects & other
<i>Agabus austini</i>		Insects & other
<i>Agabus austrodiscors</i>		Insects & other
<i>Agabus bjorkmanae</i>		Insects & other
<i>Agabus brevicollis</i>		Insects & other
<i>Agabus confertus</i>		Insects & other
<i>Agabus cordatus</i>		Insects & other
<i>Agabus discors</i>		Insects & other
<i>Agabus disintegratus</i>		Insects & other
<i>Agabus erichsoni</i>		Insects & other
<i>Agabus euryomus</i>		Insects & other
<i>Agabus griseipennis</i>		Insects & other
<i>Agabus hoppingi</i>		Insects & other
<i>Agabus hypomelas</i>		Insects & other
<i>Agabus illybiiformis</i>		Insects & other
<i>Agabus jimzim</i>		Insects & other
<i>Agabus klamathensis</i>		Insects & other
<i>Agabus kootenai</i>		Insects & other
<i>Agabus lineelus</i>		Insects & other
<i>Agabus lugens</i>		Insects & other
<i>Agabus lutosus</i>		Insects & other
<i>Agabus minnesotensis</i>		Insects & other
<i>Agabus morosus</i>		Insects & other
<i>Agabus oblitteratus nectris</i>		Insects & other
<i>Agabus oblitteratus oblitteratus</i>		Insects & other
<i>Agabus oblongulus</i>		Insects & other
<i>Agabus obsoletus</i>		Insects & other
<i>Agabus pandurus</i>		Insects & other
<i>Agabus perplexus</i>		Insects & other
<i>Agabus punctulatus</i>		Insects & other
<i>Agabus regularis</i>		Insects & other
<i>Agabus roguus</i>		Insects & other
<i>Agabus rumppi</i>	Death Valley Agabus Diving Beetle	Insects & other

<i>Agabus sasquatch</i>		Insects & other
<i>Agabus semivittatus</i>		Insects & other
<i>Agabus seriatus</i>		Insects & other
<i>Agabus smithi</i>		Insects & other
<i>Agabus strigulosus</i>		Insects & other
<i>Agabus tristis</i>		Insects & other
<i>Agabus vandykei</i>		Insects & other
<i>Agabus versimilis</i>		Insects & other
<i>Agabus walsinghami</i>		Insects & other
<i>Agapetus arcita</i>	A Caddisfly	Insects & other
<i>Agapetus bifidus</i>		Insects & other
<i>Agapetus boulderensis</i>		Insects & other
<i>Agapetus celatus</i>	A Caddisfly	Insects & other
<i>Agapetus denningi</i>		Insects & other
<i>Agapetus joannia</i>	A Caddisfly	Insects & other
<i>Agapetus malleatus</i>	A Caddisfly	Insects & other
<i>Agapetus marlo</i>	A Caddisfly	Insects & other
<i>Agapetus occidentis</i>		Insects & other
<i>Agapetus orosus</i>	A Caddisfly	Insects & other
<i>Agapetus taho</i>	A Caddisfly	Insects & other
<i>Agathon arizonica</i>		Insects & other
<i>Agathon aylmeri</i>		Insects & other
<i>Agathon comstocki</i>		Insects & other
<i>Agathon dismalea</i>		Insects & other
<i>Agathon doanei</i>	A Net-winged Midge	Insects & other
<i>Agathon elegantulus</i>		Insects & other
<i>Agathon markii</i>		Insects & other
<i>Agathon sequoiarum</i>		Insects & other
<i>Agelaius phoeniceus aciculatus</i>	Kern Red-winged Blackbird	Birds
<i>Agelaius tricolor</i>	Tricolored Blackbird	Birds
<i>Agraylea multipunctata</i>		Insects & other
<i>Agraylea saltesea</i>	A Caddisfly	Insects & other
<i>Agrostis oregonensis</i>	Oregon Bentgrass	Plants
<i>Agrypnia dextra</i>		Insects & other
<i>Agrypnia glacialis</i>	A Caddisfly	Insects & other
<i>Agrypnia improba</i>		Insects & other
<i>Agrypnia vestita</i>		Insects & other
<i>Aix sponsa</i>	Wood Duck	Birds
<i>Alienacanthomysis macropsis</i>		Crustaceans
<i>Alisma gramineum</i>	Narrowleaf Water-plantain	Plants
<i>Alisma triviale</i>	Northern Water-plantain	Plants

<i>Alisotrichia arizonica</i>		Insects & other
<i>Allium validum</i>	Tall Swamp Onion	Plants
<i>Allocosmoecus partitus</i>	A Caddisfly	Insects & other
<i>Allomyia acanthis</i>		Insects & other
<i>Allomyia cascadis</i>		Insects & other
<i>Allomyia cidoipes</i>	A Caddisfly	Insects & other
<i>Allomyia renoa</i>		Insects & other
<i>Alloperla chandleri</i>	Mariposa Sallfly	Insects & other
<i>Alloperla delicata</i>	Delicate Sallfly	Insects & other
<i>Alloperla elevata</i>	A Stonefly	Insects & other
<i>Alloperla fraterna</i>	Cascades Sallfly	Insects & other
<i>Alloperla thalia</i>		Insects & other
<i>Alnus rhombifolia</i>	White Alder	Plants
<i>Alnus rubra</i>	Red Alder	Plants
<i>Alnus viridis fruticosa</i>	Siberian Alder	Plants
<i>Alnus viridis sinuata</i>	Sitka Alder	Plants
<i>Alnus viridis virdis</i>	Green Alder	Plants
<i>Alopecurus aequalis aequalis</i>	Short-awn Foxtail	Plants
<i>Alopecurus aequalis sonomensis</i>	Sonoma Shortawn Foxtail	Plants
<i>Alopecurus carolinianus</i>	Tufted Foxtail	Plants
<i>Alopecurus geniculatus geniculatus</i>	Meadow Foxtail	Plants
<i>Alopecurus myosuroides</i>	NA	Plants
<i>Alopecurus pratensis</i>	NA	Plants
<i>Alopecurus saccatus</i>	Pacific Foxtail	Plants
<i>Alotanypus venustus</i>		Insects & other
<i>Ambrysus amargosus</i>	Ash Meadows Naucorid	Insects & other
<i>Ambrysus arizonus</i>		Insects & other
<i>Ambrysus californicus</i>		Insects & other
<i>Ambrysus circumcinctus</i>		Insects & other
<i>Ambrysus funebris</i>	Nevares Spring Naucorid Bug	Insects & other
<i>Ambrysus melanopterus</i>		Insects & other
<i>Ambrysus mormon</i>		Insects & other
<i>Ambrysus occidentalis</i>		Insects & other
<i>Ambrysus pulchellus</i>		Insects & other
<i>Ambrysus puncticollis</i>		Insects & other
<i>Ambrysus relictus</i>		Insects & other
<i>Ambrysus thermarum</i>		Insects & other
<i>Ambrysus woodburyi</i>		Insects & other
<i>Ambystoma californiense "Santa Barbara"</i>	Santa Barbara Tiger Salamander	Herps
<i>Ambystoma californiense</i>	Sonoma Tiger Salamander	Herps

"Sonoma"		
<i>Ambystoma californiense californiense</i>	California Tiger Salamander	Herps
<i>Ambystoma gracile</i>	Northwestern Salamander	Herps
<i>Ambystoma macrodactylum</i>		Herps
<i>Ambystoma macrodactylum croceum</i>	Santa Cruz Long-toed Salamander	Herps
<i>Ambystoma macrodactylum signatum</i>	Southern Long-toed Salamander	Herps
<i>Ameletus amador</i>	A Mayfly	Insects & other
<i>Ameletus andersoni</i>	A Mayfly	Insects & other
<i>Ameletus bellulus</i>	A Mayfly	Insects & other
<i>Ameletus celer</i>	A Mayfly	Insects & other
<i>Ameletus cooki</i>	A Mayfly	Insects & other
<i>Ameletus dissitus</i>	A Mayfly	Insects & other
<i>Ameletus doddsianus</i>		Insects & other
<i>Ameletus edmundsi</i>	A Mayfly	Insects & other
<i>Ameletus exquisitus</i>		Insects & other
<i>Ameletus falsus</i>		Insects & other
<i>Ameletus imbellis</i>	A Mayfly	Insects & other
<i>Ameletus majusculus</i>	A Mayfly	Insects & other
<i>Ameletus minimus</i>	A Mayfly	Insects & other
<i>Ameletus oregonensis</i>		Insects & other
<i>Ameletus pritchardi</i>	A Mayfly	Insects & other
<i>Ameletus quadratus</i>		Insects & other
<i>Ameletus shepherdii</i>	A Mayfly	Insects & other
<i>Ameletus similior</i>	A Mayfly	Insects & other
<i>Ameletus sparsatus</i>	A Mayfly	Insects & other
<i>Ameletus subnotatus</i>	A Mayfly	Insects & other
<i>Ameletus suffusus</i>	A Mayfly	Insects & other
<i>Ameletus toliae</i>		Insects & other
<i>Ameletus validus</i>	A Mayfly	Insects & other
<i>Ameletus vancouverensis</i>	A Mayfly	Insects & other
<i>Ameletus velox</i>	A Mayfly	Insects & other
<i>Ameletus vernalis</i>	A Mayfly	Insects & other
<i>Americorophium salmonis</i>		Crustaceans
<i>Americorophium spinicorne</i>		Crustaceans
<i>Americorophium stimpsoni</i>		Crustaceans
<i>Ametor latus</i>		Insects & other
<i>Ametor scabrosus</i>		Insects & other
<i>Ametropus ammophilus</i>	A Mayfly	Insects & other
<i>Amiocentrus aspilus</i>	A Caddisfly	Insects & other

<i>Ammannia coccinea</i>	Scarlet Ammannia	Plants
<i>Ammannia robusta</i>	Grand Redstem	Plants
<i>Amnicola limosa</i>		Mollusks
<i>Amphiagrion abbreviatum</i>	Western Red Damsel	Insects & other
<i>Amphicosmoecus canax</i>	A Caddisfly	Insects & other
<i>Amphinemura apache</i>		Insects & other
<i>Amphinemura mogollonica</i>		Insects & other
<i>Amphinemura venusta</i>		Insects & other
<i>Amphiscirpus nevadensis</i>		Plants
<i>Amphizoa insolens</i>		Insects & other
<i>Amphizoa lecontei</i>		Insects & other
<i>Amphizoa striata</i>		Insects & other
<i>Ampumixis dispar</i>		Insects & other
<i>Anabolia bimaculata</i>		Insects & other
<i>Anacaena limbata</i>		Insects & other
<i>Anacaena signaticollis</i>		Insects & other
<i>Anacroneuria wipukupa</i>		Insects & other
<i>Anagapetus aisha</i>	A Caddisfly	Insects & other
<i>Anagapetus bernea</i>	A Caddisfly	Insects & other
<i>Anagapetus chandleri</i>	A Caddisfly	Insects & other
<i>Anagapetus debilis</i>		Insects & other
<i>Anagapetus hoodi</i>		Insects & other
<i>Anas acuta</i>	Northern Pintail	Birds
<i>Anas americana</i>	American Wigeon	Birds
<i>Anas clypeata</i>	Northern Shoveler	Birds
<i>Anas crecca</i>	Green-winged Teal	Birds
<i>Anas cyanoptera</i>	Cinnamon Teal	Birds
<i>Anas discors</i>	Blue-winged Teal	Birds
<i>Anas platyrhynchos</i>	Mallard	Birds
<i>Anas strepera</i>	Gadwall	Birds
<i>Anax junius</i>	Common Green Darner	Insects & other
<i>Anax walsinghami</i>	Giant Green Darner	Insects & other
<i>Anaxyrus boreas boreas</i>	Boreal Toad	Herps
<i>Anaxyrus boreas halophilus</i>	California Toad	Herps
<i>Anaxyrus californicus</i>	Arroyo Toad	Herps
<i>Anaxyrus canorus</i>	Yosemite Toad	Herps
<i>Anaxyrus cognatus</i>	Great Plains Toad	Herps
<i>Anaxyrus exsul</i>	Black Toad	Herps
<i>Anaxyrus punctatus</i>	Red-spotted Toad	Herps
<i>Anaxyrus woodhousii</i> <i>woodhousii</i>	Rocky Mountain Toad	Herps

<i>Anchyceteis velutina</i>		Insects & other
<i>Anemopsis californica</i>	Yerba Mansa	Plants
<i>Anodonta californiensis</i>	California Floater	Mollusks
<i>Anodonta dejuncta</i>	Woebegone Floater	Mollusks
<i>Anodonta oregonensis</i>	Oregon Floater	Mollusks
<i>Anopheles franciscanus</i>		Insects & other
<i>Anopheles freeborni</i>		Insects & other
<i>Anopheles hermsi</i>		Insects & other
<i>Anopheles judithae</i>		Insects & other
<i>Anopheles occidentalis</i>		Insects & other
<i>Anopheles punctipennis</i>		Insects & other
<i>Anser albifrons</i>	Greater White-fronted Goose	Birds
<i>Anser albifrons elegans</i>	Tule White-fronted Goose	Birds
<i>Anthopotamus verticis</i>	Walker's Tusked Sprawler	Insects & other
<i>Antocha monticola</i>		Insects & other
<i>Apanisagrion lais</i>		Insects & other
<i>Apatania arizona</i>		Insects & other
<i>Apatania chasica</i>		Insects & other
<i>Apatania sorex</i>	A Caddisfly	Insects & other
<i>Apatania tavala</i>	Cascades Apatanian Caddisfly	Insects & other
<i>Apedilum elachistum</i>		Insects & other
<i>Apedilum subcinctum</i>		Insects & other
<i>Aphodius alternatus</i>		Insects & other
<i>Apobaetis etowah</i>	A Mayfly	Insects & other
<i>Aponogeton distachyos</i>	NA	Plants
<i>Apsectrotanypus florens</i>		Insects & other
<i>Apteraliplus parvulus</i>		Insects & other
<i>Aquarius amplus arizonensis</i>		Insects & other
<i>Aquarius remigis</i>		Insects & other
<i>Aquilegia eximia</i>	Van Houtte's Columbine	Plants
<i>Aquilegia shockleyi</i>	NA	Plants
<i>Araeopidius monochus</i>		Insects & other
<i>Archilestes californica</i>	California Spreadwing	Insects & other
<i>Archilestes grandis</i>	Great Spreadwing	Insects & other
<i>Archoplites interruptus</i>	Sacramento perch	Fishes
<i>Arctitalitus sylvaticus</i>		Crustaceans
<i>Arctocoris australis</i>		Insects & other
<i>Arctopsyche californica</i>	A Caddisfly	Insects & other
<i>Arctopsyche grandis</i>	A Caddisfly	Insects & other
<i>Ardea alba</i>	Great Egret	Birds
<i>Ardea herodias</i>	Great Blue Heron	Birds

<i>Arenaria paludicola</i>	Marsh Sandwort	Plants
<i>Argia agrioides</i>	California Dancer	Insects & other
<i>Argia alberta</i>	Paiute Dancer	Insects & other
<i>Argia emma</i>	Emma's Dancer	Insects & other
<i>Argia fumipennis</i>		Insects & other
<i>Argia hinei</i>	Lavender Dancer	Insects & other
<i>Argia immunda</i>	Kiowa Dancer	Insects & other
<i>Argia lacrimans</i>		Insects & other
<i>Argia lugens</i>	Sooty Dancer	Insects & other
<i>Argia moesta</i>	Powdered Dancer	Insects & other
<i>Argia munda</i>		Insects & other
<i>Argia nahuana</i>	Aztec Dancer	Insects & other
<i>Argia oenea</i>		Insects & other
<i>Argia pallens</i>		Insects & other
<i>Argia pima</i>		Insects & other
<i>Argia plana</i>		Insects & other
<i>Argia sabino</i>		Insects & other
<i>Argia sedula</i>	Blue-ringed Dancer	Insects & other
<i>Argia tarascana</i>		Insects & other
<i>Argia tezpi</i>		Insects & other
<i>Argia tonto</i>		Insects & other
<i>Argia translata</i>		Insects & other
<i>Argia vivida</i>	Vivid Dancer	Insects & other
<i>Artemia franciscana</i>	San Francisco Brine Shrimp	Crustaceans
<i>Artemia monica</i>	Mono Lake Brine Shrimp	Crustaceans
<i>Arundo donax</i>	NA	Plants
<i>Asarum lemmonii</i>	Lemmon's Wild Ginger	Plants
<i>Ascaphus truei</i>	Coastal Tailed Frog	Herps
<i>Asioplax edmundsi</i>	A Mayfly	Insects & other
<i>Assiminea californica</i>		Mollusks
<i>Assiminea infima</i>	Badwater Snail	Mollusks
<i>Asynarchus aldinus</i>		Insects & other
<i>Asynarchus cinnamoneus</i>		Insects & other
<i>Asynarchus montanus</i>		Insects & other
<i>Asynarchus pacificus</i>		Insects & other
<i>Atherix pachypus</i>		Insects & other
<i>Atopsyche sperryi</i>		Insects & other
<i>Atopsyche tripunctata</i>		Insects & other
<i>Atractelmis wawona</i>	Wawona Riffle Beetle	Insects & other
<i>Attenella attenuata</i>		Insects & other
<i>Attenella delantalala</i>	A Mayfly	Insects & other

<i>Attenella margarita</i>	A Mayfly	Insects & other
<i>Attenella soquele</i>	A Mayfly	Insects & other
<i>Augyles mundulus</i>		Insects & other
<i>Axonopsis californica</i>		Insects & other
<i>Aythya affinis</i>	Lesser Scaup	Birds
<i>Aythya americana</i>	Redhead	Birds
<i>Aythya collaris</i>	Ring-necked Duck	Birds
<i>Aythya marila</i>	Greater Scaup	Birds
<i>Aythya valisineria</i>	Canvasback	Birds
<i>Azolla filiculoides</i>	NA	Plants
<i>Azolla microphylla</i>	Mexican mosquito fern	Plants
<i>Baccharis glutinosa</i>	NA	Plants
<i>Baccharis salicina</i>		Plants
<i>Bacopa eisenii</i>	Gila River Water-hyssop	Plants
<i>Bacopa monnieri</i>	NA	Plants
<i>Bacopa rotundifolia</i>	NA	Plants
<i>Baetis adonis</i>	A Mayfly	Insects & other
<i>Baetis alias</i>	A Mayfly	Insects & other
<i>Baetis bicaudatus</i>	A Mayfly	Insects & other
<i>Baetis diablus</i>	A Mayfly	Insects & other
<i>Baetis flavistriga</i>	A Mayfly	Insects & other
<i>Baetis magnus</i>	A Mayfly	Insects & other
<i>Baetis notos</i>	A Mayfly	Insects & other
<i>Baetis palisadi</i>	A Mayfly	Insects & other
<i>Baetis piscatoris</i>	A Mayfly	Insects & other
<i>Baetis tricaudatus</i>	A Mayfly	Insects & other
<i>Baetisca lacustris</i>		Insects & other
<i>Baetodes allenii</i>		Insects & other
<i>Baetodes arizonensis</i>		Insects & other
<i>Baetodes bibbranchius</i>		Insects & other
<i>Baetodes edmundsi</i>		Insects & other
<i>Bandakia fragilis</i>		Insects & other
<i>Bandakia longipalpis</i>		Insects & other
<i>Bandakia oregonensis</i>		Insects & other
<i>Banksiola crotchi</i>	A Caddisfly	Insects & other
<i>Batis maritima</i>	Saltwort	Plants
<i>Batrachoseps campi</i>	Inyo Mountains Salamander	Herps
<i>Baumannella alameda</i>	Alameda Springfly	Insects & other
<i>Beckmannia syzigachne</i>	American Sloughgrass	Plants
<i>Belostoma bakeri</i>		Insects & other
<i>Belostoma confusum</i>		Insects & other

<i>Belostoma flumineum</i>		Insects & other
<i>Belostoma saratogae</i>	Saratoga Springs Belostoman Bug	Insects & other
<i>Belostoma subspinosum</i>		Insects & other
<i>Bergia texana</i>	Texas Bergia	Plants
<i>Berosus fraternus</i>		Insects & other
<i>Berosus hatchi</i>		Insects & other
<i>Berosus infuscatus</i>		Insects & other
<i>Berosus ingeminatus</i>		Insects & other
<i>Berosus maculosus</i>		Insects & other
<i>Berosus metalliceps</i>		Insects & other
<i>Berosus notapeltatus</i>		Insects & other
<i>Berosus oregonensis</i>		Insects & other
<i>Berosus punctatissimus</i>		Insects & other
<i>Berosus sayi</i>		Insects & other
<i>Berosus stylifera</i>		Insects & other
<i>Berula erecta</i>	Wild Parsnip	Plants
<i>Betula glandulosa</i>	Resin Birch	Plants
<i>Bibiocephala grandis</i>		Insects & other
<i>Bidens cernua</i>	Nodding Beggarticks	Plants
<i>Bidens laevis</i>	Smooth Bur-marigold	Plants
<i>Bidens tripartita</i>	NA	Plants
<i>Bidens vulgata</i>	NA	Plants
<i>Bilyjomyia algens</i>		Insects & other
<i>Biomphalaria havanensis</i>	Ghost Rams-horn	Mollusks
<i>Bisancora pastina</i>	Antelope Sallfly	Insects & other
<i>Bisancora rufiriformis</i>	Scooped Sallfly	Insects & other
<i>Bistorta bistortoides</i>		Plants
<i>Bittacomorpha clavipes</i>		Insects & other
<i>Bittacomorpha occidentalis</i>		Insects & other
<i>Bittacomorphella ostenii</i>		Insects & other
<i>Bittacomorphella pacifica</i>		Insects & other
<i>Blennosperma bakeri</i>	Baker's Blennosperma	Plants
<i>Blepharicera jordani</i>		Insects & other
<i>Blepharicera kalmiopsis</i>		Insects & other
<i>Blepharicera micheneri</i>	A Net-winged Midge	Insects & other
<i>Blepharicera ostensackeni</i>		Insects & other
<i>Blepharicera zionensis</i>		Insects & other
<i>Boehmeria cylindrica</i>	NA	Plants
<i>Bolboschoenus fluvialis</i>		Plants
<i>Bolboschoenus glaucus</i>	NA	Plants
<i>Bolboschoenus maritimus</i>	NA	Plants

paludosus		
Bolboschoenus robustus		Plants
Bolshecapnia maculata	Spotted Snowfly	Insects & other
Boreocclus persimilis		Insects & other
Boreocclus sinuaticornis		Insects & other
Boreoheptagyia lurida		Insects & other
Botaurus lentiginosus	American Bittern	Birds
Bowmanasellus sequoiae	Sequoia cave isopod	Crustaceans
Brachycentrus americanus	A Caddisfly	Insects & other
Brachycentrus echo	A Caddisfly	Insects & other
Brachycentrus occidentalis		Insects & other
Brachymesia furcata	Red-tailed Pennant	Insects & other
Brachymesia gravida		Insects & other
Branchinecta campestris	Pocket Pouch Fairy Shrimp	Crustaceans
Branchinecta coloradensis	Colorado Fairy Shrimp	Crustaceans
Branchinecta conservatio	Conservancy Fairy Shrimp	Crustaceans
Branchinecta cornigera		Crustaceans
Branchinecta dissimilis	Dissimilar Fairy Shrimp	Crustaceans
Branchinecta gigas	Giant Fairy Shrimp	Crustaceans
Branchinecta hiberna	Winter Fairy Shrimp	Crustaceans
Branchinecta kaibabensis		Crustaceans
Branchinecta lindahli	Versatile Fairy Shrimp	Crustaceans
Branchinecta longiantenna	Longhorn Fairy Shrimp	Crustaceans
Branchinecta lynchi	Vernal Pool Fairy Shrimp	Crustaceans
Branchinecta mackini	Alkali Fairy Shrimp	Crustaceans
Branchinecta mesovallensis	Midvalley Fairy Shrimp	Crustaceans
Branchinecta oriana	A Fairy Shrimp	Crustaceans
Branchinecta packardi		Crustaceans
Branchinecta sandiegonensis	San Diego Fairy Shrimp	Crustaceans
Brasenia schreberi	Watershield	Plants
Brechmorhoga mendax	Pale-faced Clubskimmer	Insects & other
Brechmorhoga pertinax		Insects & other
Brillia flavifrons		Insects & other
Brillia laculata		Insects & other
Brillia parva		Insects & other
Brillia retifinis		Insects & other
Brodiaea nana		Plants
Brodiaea orcuttii	Orcutt's Brodiaea	Plants
Brodiaea pallida	Chinese Camp Brodiaea	Plants
Brundiniella eumorpha		Insects & other
Brychius hornii		Insects & other

<i>Brychius pacificus</i>		Insects & other
<i>Bucephala albeola</i>	Bufflehead	Birds
<i>Bucephala clangula</i>	Common Goldeneye	Birds
<i>Buenoa arida</i>		Insects & other
<i>Buenoa arizonis</i>		Insects & other
<i>Buenoa hungerfordi</i>		Insects & other
<i>Buenoa margaritacea</i>		Insects & other
<i>Buenoa omani</i>		Insects & other
<i>Buenoa scimitra</i>		Insects & other
<i>Buenoa uhleri</i>		Insects & other
<i>Butorides virescens</i>	Green Heron	Birds
<i>Caecidotea sequoiae</i>	An Isopod	Crustaceans
<i>Caecidotea tomalensis</i>	Tomales Isopod	Crustaceans
<i>Caenis amica</i>	A Mayfly	Insects & other
<i>Caenis bajaensis</i>	A Mayfly	Insects & other
<i>Caenis latipennis</i>	A Mayfly	Insects & other
<i>Caenis punctata</i>	A Mayfly	Insects & other
<i>Caenis youngi</i>	A Mayfly	Insects & other
<i>Caladomyia pistra</i>		Insects & other
<i>Calamagrostis nutkaensis</i>	Pacific Small-reedgrass	Plants
<i>Calasellus californicus</i>	An Isopod	Crustaceans
<i>Calasellus longus</i>	An Isopod	Crustaceans
<i>Calidris alpina</i>	Dunlin	Birds
<i>Calidris mauri</i>	Western Sandpiper	Birds
<i>Calidris minutilla</i>	Least Sandpiper	Birds
<i>Calileuctra dobryi</i>	Elsmere Needlefly	Insects & other
<i>Calileuctra ephemera</i>	Napa Needlefly	Insects & other
<i>Calineuria californica</i>	Western Stone	Insects & other
<i>Callibaetis californicus</i>	A Mayfly	Insects & other
<i>Callibaetis ferrugineus</i>	A Mayfly	Insects & other
<i>Callibaetis fluctuans</i>	A Mayfly	Insects & other
<i>Callibaetis montanus</i>		Insects & other
<i>Callibaetis pallidus</i>	A Mayfly	Insects & other
<i>Callibaetis pictus</i>	A Mayfly	Insects & other
<i>Callicorixa audeni</i>		Insects & other
<i>Callicorixa scudderii</i>		Insects & other
<i>Callicorixa vulnerata</i>		Insects & other
<i>Calliperla luctuosa</i>	Coast Stripetail	Insects & other
<i>Callitricha fassettii</i>	NA	Plants
<i>Callitricha heterophylla bolanderi</i>	Large Water-starwort	Plants

<i>Callitriche heterophylla</i> <i>heterophylla</i>	Northern Water-starwort	Plants
<i>Callitriche longipedunculata</i>	Longstock Water-starwort	Plants
<i>Callitriche marginata</i>	Winged Water-starwort	Plants
<i>Callitriche palustris</i>	Vernal Water-starwort	Plants
<i>Callitriche trochlearis</i>	Waste-water Water-starwort	Plants
<i>Calochortus uniflorus</i>	Shortstem Mariposa Lily	Plants
<i>Calopteryx aequabilis</i>	River Jewelwing	Insects & other
<i>Caltha leptosepala</i>	Slender-sepal Marsh-marigold	Plants
<i>Caltha palustris</i>	NA	Plants
<i>Camelobaetidius kickapoo</i>		Insects & other
<i>Camelobaetidius maidu</i>	Maidu Mayfly	Insects & other
<i>Camelobaetidius mexicanus</i>		Insects & other
<i>Camelobaetidius musseri</i>		Insects & other
<i>Camelobaetidius warreni</i>	A Mayfly	Insects & other
<i>Campanula californica</i>	Swamp Harebell	Plants
<i>Capnia barberi</i>	Plumas Snowfly	Insects & other
<i>Capnia californica</i>	California Snowfly	Insects & other
<i>Capnia caryi</i>		Insects & other
<i>Capnia confusa</i>		Insects & other
<i>Capnia coyote</i>	Coyote Snowfly	Insects & other
<i>Capnia decepta</i>		Insects & other
<i>Capnia elongata</i>	Caascades Snowfly	Insects & other
<i>Capnia erecta</i>		Insects & other
<i>Capnia excavata</i>	Saddleback Snowfly	Insects & other
<i>Capnia fialai</i>	Humboldt Snowfly	Insects & other
<i>Capnia giulianii</i>	Whitney Snowfly	Insects & other
<i>Capnia glabra</i>	Smooth Snowfly	Insects & other
