

**Crystal Data:** Orthorhombic. *Point Group:*  $2/m2/m2/m$ . As minute tabular crystals.

**Physical Properties:** *Cleavage:* {100}, {010}, and {001}. Hardness =  $\sim 3$   
D(meas.) = 2.496 D(calc.) = 2.5075 (synthetic). Soluble in H<sub>2</sub>O, bitter and acid taste.

**Optical Properties:** Translucent. *Color:* Colorless to white; colorless in transmitted light.  
*Optical Class:* Biaxial (+) (synthetic). *Orientation:*  $X = c$ ;  $Y = b$ ;  $Z = a$ .  $\alpha = 1.301$   
 $\beta = [1.3012]$   $\gamma = 1.3068$   $2V(\text{meas.}) = 11^\circ 25'$

**Cell Data:** *Space Group:*  $Cmcm$  (synthetic).  $a = 6.8368(9)$   $b = 6.2619(7)$   $c = 6.7916(4)$   
 $Z = 4$

**X-ray Powder Pattern:** Synthetic. (ICDD 11-671).  
3.39 (100), 3.41 (85), 2.31 (40), 2.84 (25), 3.82 (20), 2.14 (20), 2.03 (20)

**Chemistry:** Analyses of relatively pure material are not available.

**Occurrence:** As a fumarolic sublimate.

**Association:** Sassolite, fluorborates, and fluorsilicates.

**Distribution:** From Vesuvius, Campania, and on Vucano, Aeolian Islands, Italy. At volcanoes on the Kamchatka Peninsula, Russia.

**Name:** Honors Professor Ferruccio Zambonini (1880–1932), Italian mineralogist, student of fumarolic minerals.

**Type Material:** University of Florence, Florence, Italy, 1974/1; National School of Mines, Paris, France; The Natural History Museum, London, England, 1933,419.
