Definitions (related but different)

SOCIAL ISOLATION (~25% ages 65+)

- Objective measure
 - Lack of social contacts
 - Limited interaction with others
- Associated with
 - Social network, family/household structure
 - Mobility, impairments, transportation, etc.

LONELINESS (~43% ages 65+)

- Subjective measure
 - Feeling isolated or alone
 - Lacking companionship
 - Feeling misunderstood or of limited value
- Associated with
 - Social network, family/household structure
 - Quality and meaningful interactions

SOCIAL CONNECTEDNESS

Interactions: inclusion, support, cohesion, integration

Risk Factors

- Social disconnectedness can impact all individuals
 - Ages, backgrounds, socioeconomic status levels, and geographic regions
- Known risk factors include:
 - Ages 18 to 50
 - Household size and structure
 - Employment status
 - Impairments (mobility, visual, hearing, cognitive)
 - Complex chronic disease profiles
 - Transportation
 - Technology access
 - Marginalized identity
 - Language and communication barriers
- Associated with
 - Premature mortality
 - Negative physical, mental, psychological effects
 - Health-related behaviors

COVID-19 Social Connectivity Paradox

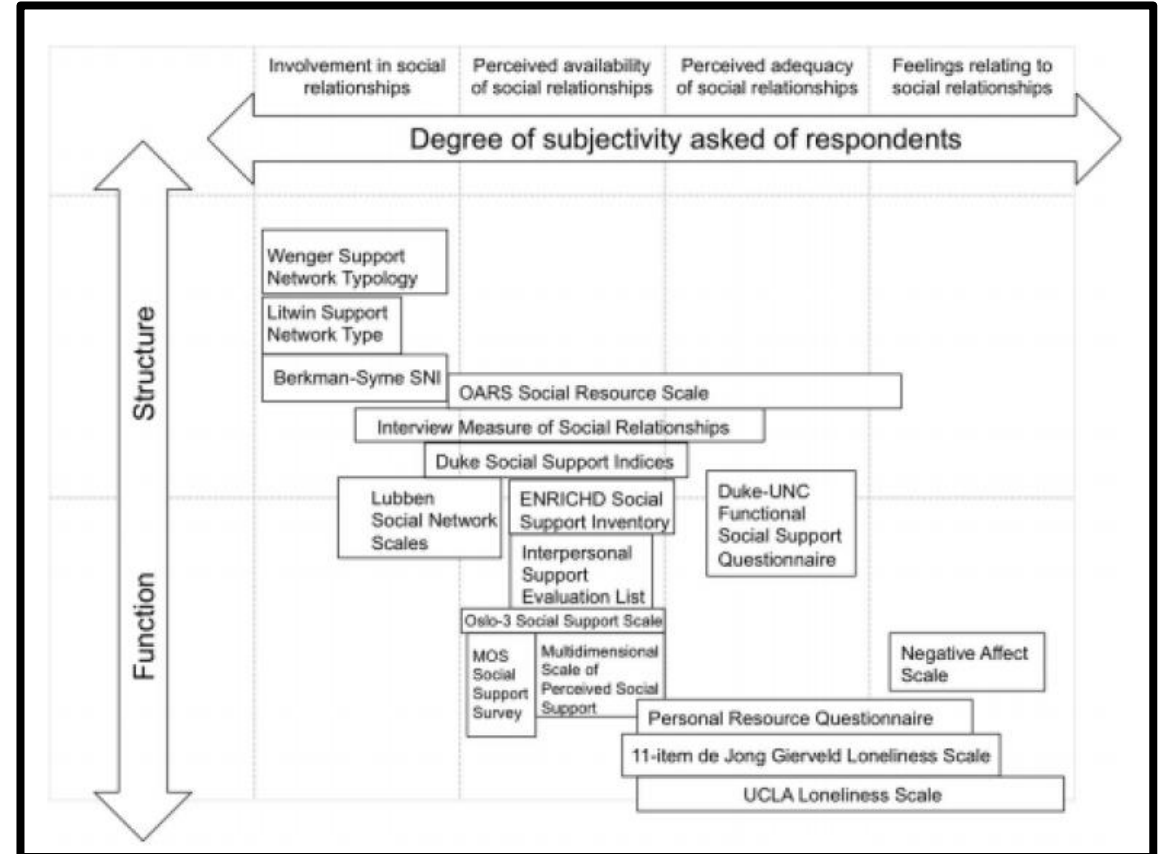

SOCIAL ISOLATION RISK
LONELINESS RISK
CONNECTIVITY RISK

COVID-19 INFECTION RISK

**LEVEL OF SOCIAL
INTERACTION**

Measuring Risk

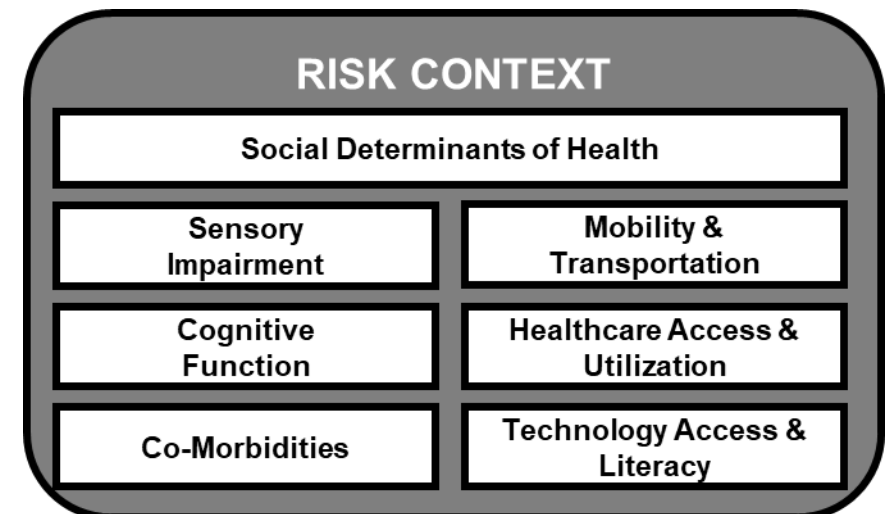

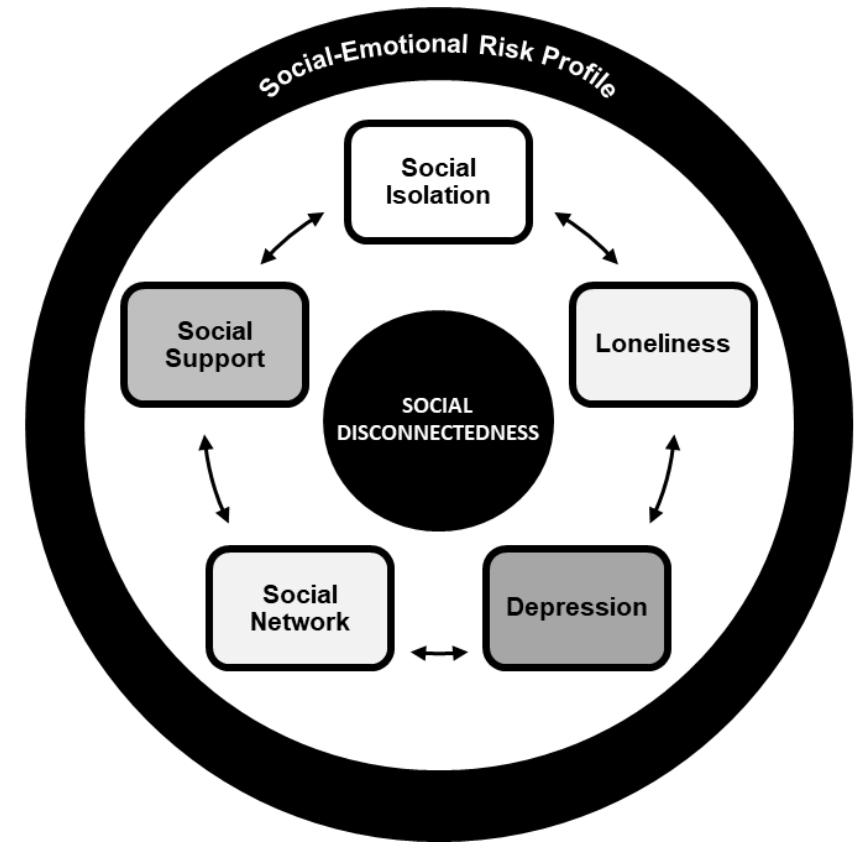

- Social connectedness is a complex issue with a multitude of contributing factors
 - Impact millions of adults
 - Often 'invisible' and unidentified
 - May present differently based on setting
- Social isolation, loneliness, disconnectedness, social network, social support, social resources...
 - Depression, anxiety, negative affect, optimism, resilience
- **Important to identify the goals and aims of an initiative, then match with the most appropriate measure(s) to accomplish objectives**

Source: 2020 National Academies of Sciences, Engineering, and Medicine (NASEM) report: "Social Isolation and Loneliness in Older Adults: Opportunities for the Health Care System." (originally from Valtorta et al., 2016)

Contextualizing Risk & Solutions

- Offering appropriate solutions requires an understanding of the issue(s)
- Prioritize what is important and who should be assessed
 - Varies by setting and client base
 - Varies by organization, staff, services provided
 - Varies by partners and referral sources
- “Love/Hate” relationship with data
 - Balance value/meaning with burdens
 - Leverage existing sources and partners
 - Data sharing and feedback

Coordinating Tailored Solutions

- Common issues across settings/organizations
 - Increased risk because of COVID-19
 - No 'one-size-fits-all' solution
 - Competing demands (organization and client)
 - Need to diversify offerings (bike, swim, jog)
- Above the surface
 - Lighter touch
 - Greater reach
 - First step (gateway)
- Below the surface
 - Heavier lift
 - Behind the scenes
 - More activation energy
- **Harmonized selection and implementation of complementary solutions (social care coordination)**

distanced connectivity **noun**

dis·tanced con·nec·tiv·i·ty | \ 'di-stən(t)st (,)kə-,nek-'ti-və-tē

- 1 a : Efforts to maintain and repair the fractured or diminished structural, functional, and quality aspects of ***physical*** social connectedness through the telephone, computer, or other smart devices.

- 1 b : Innovative and practical solutions to foster safe and meaningful interactions among older adults and others in their network(s).

Distanced Connectivity Examples

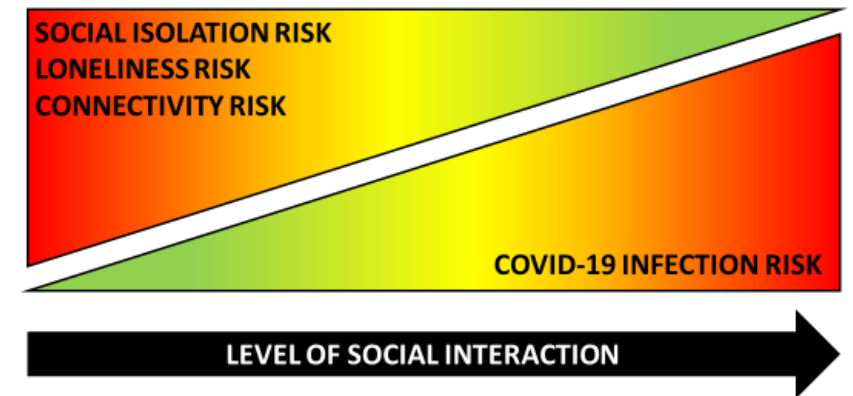

- Get friendly phone calls from a peer (wellness and reassurance)
- Attend virtual programs about health and wellness
- Join a support group
- Talk with a trained professional
- Attend social clubs and activities (also faith)
- Volunteer to help others
- Distribute pre-populated tablets with Wi-Fi

• Opportunities

- Safe
- Overcome geospatial barriers
- Convenience of participation and expertise
- Low cost (growing market)

• Challenges

- Digital divide
- Technological literacy
- Punctuated
- Unknown impact relative to face-to-face programs and services

Current Efforts & Models

- Emerging feasible and effective approaches (Williams et al., 2021)
 - Educational programs
 - Befriending interventions & social facilitation
 - Leisure/skill development
 - Animal interventions
 - Health and social care provision
 - Psychological therapy
- Array of measures, aims, and objectives
 - UCLA Loneliness Scale
 - De Jong Gierveld Loneliness Scale
 - Campaign to End Loneliness Measurement Tool
 - Upstream Social Interaction Risk Screener (U-SIRS)
 - Duke Social Support Index (DSSI)
 - Berkman-Syme Social Network Index
 - Patient Health Questionnaire (PHQ)

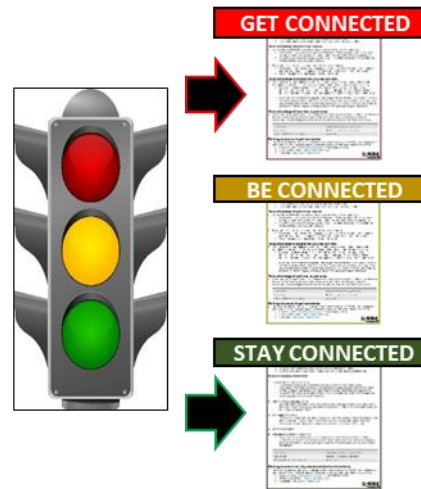

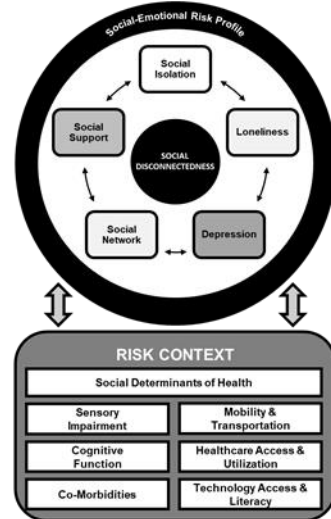

Setting	Personnel	Solution
Area Agency on Aging (AAA)	Staff/EBP Leaders	Wellness calls, virtual EBPs, tablets
Healthcare	CHW	Case management with community and faith partners
Community-based organizations (CBO)	Staff/Volunteers	Virtual programming/virtual congregate meals
University	Students	Friendly calls, screening, referrals
Assisted Living	Staff/Technicians	Friendly calls, virtual programming
Industry	Technology	Mass screening and care referrals/tablets

Making Tailored Connections

“NO WRONG DOOR”

ROBUST SCREENING

MAKING TAILORED CONNECTIONS

Services, Resources, & Programs (SRP)

- Utilize “no wrong door” system
- Conduct robust screening for social isolation risk
- Utilize community and faith services to make tailored connections

Distanced Connectivity Recommendations

- Maintaining client and staff safety is paramount
- Data are important to guide our efforts and document successes
- Identify ways to introduce meaningful interactions in different settings
 - Incorporate telephonic or internet-based services and programs
- No need to ‘recreate the wheel’
 - Assess effectiveness of existing interventions for ‘unintended benefits’
- Share successes and lessons learned

Resources for getting connected at safe distances during COVID-19

- Administration for Community Living: <https://acl.gov/COVID-19>
