AMPHIPOD NEWSLETTER 45

Dear Amphipodologists,

We hope this newsletter finds of you safe and healthy. 2021 has been another year of postponed meetings, electronic greetings and cancelled collection-expeditions. Many of us have spent the year in isolation and home-offices, and we miss our colleagues possibly even more than we did last year. Not least has this been a difficult time for our students who have been faced with less hands-on practical lab- and field-time, and with fewer job-opportunities when they finish.

We are therefore very happy to see that the facebook group is active, and it seems this has become a social place for the amphipodologists to meet. An impressive list of 377 publications (as of end of September) shows that we have not given up doing science despite the sad year.

Our beloved ICA is still in the planning, see more about that on page 56. Exciting news to all that there is in the planning also an amphipod- and bioinformatics workshop in connection to the International Crustacean Congress to be held in Wellington, New Zealand in May 2023. Block out the time in your calendars, friends! Make sure to check out the last page for "the old photo". We hope this will bring happy memories to some, and pleasure to all.

This November, Jim Lowry, fellow amphipodologist, mentor and friend passed. Alan Myers has written an In Memoriam for this newsletter, a longer and more comprehensive memoriam for Jim will be presented at a later stage. 2021 also took Ludmila Budnikova and Svetlana Kozlova from us. They will be greatly missed.

Lastly - both editors are thinking about how Amphipod Newsletter should develop. Wim writes about the bibliography on page 3, on page 56 we present a short questionnaire - and hope those interested in ANs continuation will take the time to answer.

*Statistics from
this Newsletter*

15 new genera

83 new species

2 new subspecies

Wim and Anne Helene

Jim Lowry In Memoriam

2 October 1942 – 4 November 2021

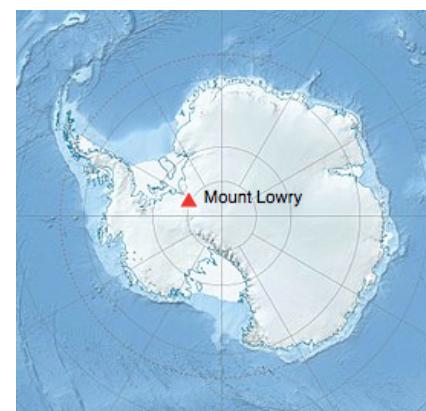

Our friend and colleague Jim Lowry passed away in Lecce, Italy on November 4th. He was born James Kenneth Lowry in Virginia, USA on October 2nd 1942. After qualifying at University in Virginia, he spent several years at Palmer Station in Antarctica. There, in addition to his biological studies, he had the distinction of having a mountain named after him – the 1,020 metres high Mt. Lowry in the Patuxent Range. He then worked for a while in New Zealand, before taking up his post at the Australian Museum in Sydney, where he was a senior research scientist for more than 40 years.

He spent almost all his working life on the study of amphipods, publishing his first paper (on *Microprotopus*) in 1970. His most recent contributions are currently in press and further papers are still to appear posthumously in the coming years.

This short memoriam is to inform all his colleagues, of which there are very many, of his passing, and a longer biography will be written at a later date that will do full justice to his long and distinguished career. Jim was always ready to help young amphipodologists and pass on his knowledge. At the Australian Museum, a series of young scientists were trained by him and have gone on to careers in carcinology in various parts of the world from England to New Zealand, as well of course as in Australia. He did more to describe the amphipod fauna of Australia than anyone had before him, especially on his beloved group the lysianassids, and more recently on the Talitroidea. He worked tirelessly to obtain funding for amphipod studies. In particular, he sourced resources to put together a team to study the amphipods of the Great Barrier Reef that resulted in a large monograph published in 2009.

He will be missed by his many colleagues, all of whom have benefitted from his advice and friendship, and by his loving wife Lucia and son Rafael.

Alan Myers, November 5, 2021

AN bibliography present and future scope of use

It is now more than 50 years since I took the initiative to start a newsletter for amphipod workers. Originally the newsletters were mimeographed and sent out in the mail, and I had an intricate system of regional collectors that assisted in getting in the money needed for the operation. Things became very much easier when AN could be produced on line and downloaded from the internet, and we even had some money left that we used on travel grants to amphipod conferences. I have now the invaluable help of coeditors, and my main contribution nowadays is to compile en annotate the bibliography. Few colleagues these days send pdf's of their papers to AN. I am very grateful to drs Ariyama, Labay, Mekhanikova, Morino, and Sidorov, who still do so.

What function does this AN bibliography still fulfil? People, wherever they live in the world, nowadays have much better access to the literature. I would very much appreciate to hear from you how useful this bibliography still is for you, and whether its present scope is the right one. Is the list of new taxa still useful?

I presume that taxonomic, ecological, zoogeographical and parasitological still should be included, as well as ones on symbioses and fossil species. But what about the very many papers where amphipods, most often *Gammarus* or *Hyalella*, are used in all kinds of toxicological studies, often quite far removed from ecology, such as the toxicity of shampoos or rare metals? Or the papers that study the use of amphipods as fish food in aquaculture? Or proteomics? I have the impression that such papers are not of too much interest for most readers of AN, while the scientists for whom these papers ARE relevant, won't read AN. I have also the sneaking suspicion that I probably miss more papers in these categories than in those in my own main fields of taxonomy, symbioses or ecology.

Also, I am 84 now and the coming amphipod conference will have to discuss whether to continue AN, and if yes, who will take over when I will no longer be able to continue.

Please let me know your opinion on these matters (wjm.vader@gmail.com)

Updates on the 19th ICA

Following the meeting of the Tunisian organisation committee, the date of the next ICA will be in November 2022. It will held in Djerba Island and a web site of the colloquium is under construction.

All the best

Amphipod Newsletter - Quo Vadis?

The editors are thinking hard about how to develop Amphipod Newsletter. Several questions about the bibliography have been raised (see the discussion from Wim on page 3), especially “does anyone use the bibliography?” and “should we include non-taxonomic works in the bibliography?”. We would also be grateful for your insights into where we should develop the newsletter. Should we include more about people, collections, excursions - and in tat case - how will you help us get this knowledge so we can bring it on?

We need you - the readers - to help us forward. Please fill out our questionnaire - this should take less than 5 minutes of your time, and will help us a lot. The answers are anonymous, and we will not use this in any other way than to improve the newsletter. Our hope is that we can use the results of the questionnaire as a basis to discuss the development of the newsletter at the ICA 19.

Amphipod workshop in connection with ICC

Exciting things happening in the crustacean world in Wellington in 2023

The week-long ICC10 congress will be held 22-26th May, 2023 in Wellington, Aotearoa, NZ.

There is bonus added content for the amphipod and amphipod curious community.

Following the ICC10 there will be a 3-4 day amphipod and bioinformatics workshop (exact details will be announced later).

This workshop will be held in Wellington aimed at bringing together established researchers with those earlier in their career to pass on the secret ways of the amphipod and will include

- access to the amphipod collections from the NIWA Invertebrate and Te Papa collections (8000 registered samples (majority of which are not identified past family level), plus many unregistered lots. The majority of the samples are from the deep sea, but also range all the way to the freshwater.
- seminars on current amphipod biology and research, bioinformatics
- and maybe a small field trip or 2 (marine and freshwater)
- an amazing opportunity to sample amphipods, coffee, craft beer and wine, and the amazing Aotearoa environment

"Situated at the southern end of the North Island, Wellington, New Zealand, was recently named "the coolest little capital in the world" by Lonely Planet. Surrounded by nature and fuelled by creative energy, Wellington is a compact city with a powerful mix of culture, history, nature and cuisine. Fuel your visit with strong coffee and world-class craft beer – Wellingtonians are masters of casual dining, with plenty of great restaurants, night markets and food trucks."

Kia mauri tau, kia ngākau māhaki, kia ora

Be calm, be kind, be well

The banner features a collage of images: a close-up of colorful marine life, a red double-decker bus in a city, and a landscape view of Wellington. Text at the bottom includes "Register now at www.icc10.org", "Absolutely Positively Wellington WellingtonNZ.com", and "100% PURE NEW ZEALAND VisitWellington.com".

The Old Photo

During his presentation at the 18th ICA in Dijon August 2019, José Guerra-García showed several old photos from the early amphipod meetings. José has shared these photos with the AN, and we plan to share them here, to make sure everybody have the possibility to enjoy these photographic gems. Thank you to José for collecting these pictures, and for making them available to everybody.

We have tried to annotate the photos, but many names are missing or even uncertain. If anybody who are in the pictures (or who recognises people not named or wrongly named in the annotated photos) could help us with names of the participants, we will be very happy for the help. Please email the editors - we promise to share the updated annotations!

The original (without annotations)

How do you get in touch with the Amphipod Newsletter?
