

MISSISSIPPI NATURAL HERITAGE PROGRAM

SPECIAL ANIMALS – TRACKING LIST

- 2016 -

Approximately 1500 species of animals, including all of the representatives of the groups gastropoda (snails); bivalvia (mussels); malacostraca (amphipods, crawfish, shrimp, isopods); arachnida (spiders, mites, ticks); insects; fish (including the cephalaspidomorphi (Jawless fish (lampreys)) and the osteichthyes (bony fish); amphibians (frogs and salamanders); reptiles (lizards, snakes, turtles, alligators); birds; and mammals; can be tracked by the Mississippi Natural Heritage Program. Tracking entails maintaining a database on occurrence localities, population status, and habitat conditions for tracked species. Many of the animals in the groups listed above are common, however, and are not tracked; tracking is focused upon species known or suspected to occur in low numbers. These are designated as species of special concern, and are listed on the following pages. There are 383 special concern animals, which include 8 gastropods, 50 bivalves, 37 crawfish and shrimp, 1 arachnid, 69 insects, 1 lamprey, 77 fish, 21 amphibians, 37 reptiles, 72 birds, and 17 mammals. Additional species are designated "watch" status (see "Special Animals – Watch List") with the potential of becoming species of special concern.

This list is designed for the primary purposes of: 1) in environmental assessments, "flagging" of sensitive species that may be negatively affected by proposed actions; 2) determination of protection priorities for natural areas that contain such species; and 3) determination of priorities of inventory and protection for these animals, including the proposed listing of species for state or federal protection.
