Lancashire Moth Group

This informal group of volunteer moth recorders was established in 1995 to promote the study, recording and conservation of Moths within Lancashire. A Newsletter is produced at least annually to keep those with an interest in moths updated on what is being seen and how Lancashire's moths are faring. In 2006 the *Lancashire Moths* website was established and is still running in 2021. As well as giving information about moths and moth recording in the county it also contains copies of all previous Newsletters.

The maps within this atlas have only been possible through the submission of moth records from several hundred moth recorders over many years. We are very keen to keep that long history of receiving and documenting records going and would warmly welcome records of any moth species from any parts of the old county of Lancashire from the River Mersey to just south of the River Kent near Arnside and from the west coast to well east of Manchester, Burnley and Hornby.

For more information about the Group, including how to submit moth records, do visit the *Lancashire Moths* website - www.lancshiremoths.co.uk/

The Tanyptera Project

A 7.5 year initiative (2017-2024) funded by the Tanyptera Trust to promote the study and conservation of insects and other invertebrates in the Lancashire and Cheshire region of NW England. The trust funds two full-time posts employed by National Museums Liverpool, supported with an annual budget to enable delivery of a variety of project activities, including offering to small grants to recorders, groups, and conservation organisations. The project aims to:

- Inform and inspire future entomology and wildlife conservation in the region
- Raise the profile of invertebrates with the wider public
- Improve understanding of the status and distribution of the region's rare and threatened invertebrate species and assemblages, and to inform conservation management for these
- Improve the quality of invertebrate recording and the skills of invertebrate recorders
- Improve access to data about invertebrates, their distribution, ecology and conservation
- Identify regionally important species and assemblages

For more information including how to get involved, please visit: www.northwestinvertebrates.org.uk

British Lepidoptera Collections at World Museum, Liverpool

British species are well represented with 97% species coverage. There are approximately 50,000 specimens of British micro-Lepidoptera, primarily F.N. Pierce and A.C. Vine material, the Pierce specimens complement genitalia slides housed at the Natural History Museum, London. Approximately 120,000 specimens of British macro-Lepidoptera, primarily from the collections of S.R. Fraser, J.S. Greenhill, A.H. Hamm, A. Robinson, I. Rutherford, H.B. Turner and H. Willoughby-Ellis. The museum also houses the Lepidoptera collection of the Lancashire & Cheshire Entomological Society which contains material from B.B. Snell amongst other collectors.

Collections available Monday – Friday by prior appointment: Tony.Hunter@liverpoolmuseums.org.uk

Lancashire Moth Atlas

Stephen Palmer, Richard Walker & Gary Hedges

Acknowledgements

The maps are a huge credit to the very many moth enthusiasts (see Appendix 1&2) who have contributed records or published information over nearly two centuries. Particular thanks go to:- Kevin McCabe and Justine Patton for their help with data management and map checks, respectively. Also, to all of the members of the Lancashire Moth Group for their invaluable recording contributions. Thank you to the Local Environmental Record Centres; Merseyside Biobank, Lancashire Environmental Records Network, and Greater Manchester Ecology Unit for various data exchanges. We are indebted to Dr Moustafa Eweda for his careful and thorough analysis of the data, which has greatly facilitated the verification process, and for all of his efforts and expertise in designing and producing the maps and compiling the atlas document. We are grateful to the photographers for offering use of their fantastic images on the cover and in the text below (images individually credited). Thanks also to Steve Judd for his thorough proofing of the text. Finally, we wish to acknowledge the funding and other support provided by the Tanyptera Trust (based at World Museum, National Museums Liverpool).

Introduction

We hope that this atlas will provide the opportunity for anyone with an interest in Lancashire's moths to view and download a detailed and accurate set of tetrad level distribution maps. This atlas covers all of the moth species recorded in this part of North West England and compliments similar projects in Cheshire and Cumbria.

Figure 1. Watsonian Vice Counties 59 & 60

All moth species with acceptable records recorded in the two Watsonian Vice Counties of VC59 (South Lancaster) and VC60 (West Lancaster) (Fig. 1) are depicted, wherever possible, at tetrad (2km square) level, or at 10km square level where more precise location data was unavailable.

The maps plot the distribution of 937 micro-moth and 586 macro-moth species (1,523 in total). They are based on over 1.5 million individual records, researched or submitted up to and including 31 December 2019. In addition, the verification process, for data submitted to the National Moth Recording Scheme project, was repeated in December 2020 to ensure that all of the supporting data is as accurate as possible. There are bound to be some errors so please let your Vice County Moth Recorder (VCMR) know of any that you find to allow us to continue to improve this resource. Details of the VCMRs can be found at www.lancashiremoths.co.uk/contacts

These maps can be used for many conservation related purposes and it is hoped that they will also stimulate further recording, especially in under-recorded areas. When submitting records, please refer to the Guidelines for Moth Recorders in Lancashire which can be located at www.lancashiremoths.co.uk/guidelines-for-recorders

Although these maps will quickly become out of date, they do provide a valuable snapshot in time of moth distribution within Lancashire. It is anticipated that data refreshes may be possible in the future. Even in such a well-recorded county as Lancashire the maps will, to some extent, indicate where recording activity has taken place rather than show true distributions. However, with many species they do provide a reasonably accurate indication of moth distribution, particularly where the larger moths and many leaf-mining micro-moths are concerned. The long-term value of the maps lies in demonstrating how under-recorded some species or areas are, and how some species might be declining, spreading or even have disappeared from the county altogether. They demonstrate how widely some migratory species disperse and how localised (and therefore vulnerable) some habitat specialists can be. Even more informative are the maps of newly arrived species. For example, *Acronicta aceris* (Sycamore) (Fig. 2) first recorded in Lancashire in 2017, having been flagged as one of the more likely species to cross the border with Cheshire for several years. Since then, it has been found in 11 tetrads in southern VC59 and continues to move northwards. It is also a good example of how differing recording techniques can be used when producing an atlas. This moth is readily attracted to light traps but equally has a conspicuous and easily identifiable larva.

Figure 2. *Acronicta aceris* (Sycamore) larva from Hightown in 2018

The use of different tetrad colours depicting two date bands (pre-2000 in blue-bordered squares and 2000 onwards in yellow filled squares) provides a basic indication of recent changes in distribution. A good example is 70.092 *Eulithis mellinata* (Spinach) (Fig. 3) which seems to show a very obvious and marked decline in recent records across the county. In this way, the maps will help direct further research. Maybe these maps will lead you to wonder about one of the moth species in your area and you might decide to look into this in more detail. If so, do please contact your VCMR for an up-to-date list of all records relating to the species of interest.

Figure 3. *Eulithis mellinata* (Spinach) from Chorlton in 2014

These are both worrying and exciting times for the conservation of moths in Britain. This regional atlas will support more informed judgements about how moths are responding to habitat and climate change and to other threats and also opportunities. As we see habitat swallowed up or destroyed under the inexorable pace of development, coastal habitats increasingly tucked behind giant concrete walls, species being found in ever smaller numbers at regularly recorded sites and some species simply disappearing, we can use this atlas to champion the conservation of moths. At the same time the delight of finding new species arriving, and then tracking their progress across the county provides some hope and no little enjoyment. These maps provide

the snapshot in time that is part of that story, of what has been and what is to come – both a dire warning and perhaps a glimmer of hope.

Recording effort distribution

There are several inherent biases of county moth records databases which affect the recorded distribution of each species. Areas which have received most attention over the years usually have the most species recorded. One example of a square which perhaps reflects the potential of many others is SJ79L (covering part of Flixton in VC59), where over 800 species have been recorded (Fig 4). The species list for SJ79L is based on over 100,000 records, the most for any 2km square in the region (Fig 5). SD47Y, which covers part of Gait barrows NNR and Yealand Allotments in VC60, is the only other 2km square with over 800 species recorded, but with less than 10 % of the records.

As well as highlighting the most recorded areas, the records density map (Fig. 4) may be used to target 2km squares which have received the least attention. There are many 2km squares, particularly in the North East of VC59, where there are still no moth records. However, care should be taken interpreting the recording effort of squares overlapping other vice counties as only VC69 & 60 data has been used.

Species found outside their main range

Some species have confirmed records from well outside of their known range and/or usual habitat. This might be due to a migration that is not normally associated with that species or it may represent the very early stage of a national expansion of range throughout Lancashire. However, neither of these possible explanations would seem to apply to the interesting species records below, which may be a response to:

- An unpredictable eruptive movement.
- Population levels becoming particularly high at a relatively nearby breeding site.
- Larval foodplants become scarce.
- Dispersal as a result of specific weather phenomena such as strong winds (often easterlies in the case of upland to lowland movements) or hot weather and associated thermal uplift.
- Captive breeding and release.
- Accidental releases from cars or moth traps where visits have recently been made out of the immediate area.
- Accidental introductions of a larva or an adult as a result of horticultural or other trade activities.

32.023 *Agonopterix rotundella* – (not mapped). The single moth is considered very likely to have been accidentally introduced following trapping activities outside of the county.

35.113 *Scrobipalpa salicorniae* – the single moth in East Lancashire, recorded well away from its saltmarsh habitat, is probably a result of a genuine eruptive occurrence or due to weather dispersal.

35.114 *Scrobipalpa instabilella* – a single record of a moth in north Preston, ca.10km from the nearest suitable habitat, is probably a consequence of a genuine eruptive and/or weather dispersal.

35.127 *Tuta absoluta* – picked up by DEFRA in Lancashire from imported food produce (assumed to be at Liverpool Docks). No specific details have been made available.

37.108 *Coleophora salicorniae* – found on two occasions about 10km inland from its saltmarsh habitat and considered to be a genuine eruptive and/or weather dispersal.

49.033 *Aphelia viburnana* – an unusual record of this bilberry feeding species on the coast at Bispham. The nearest suitable habitat with the foodplant is ca. 20km distant and this record is probably a result of a weather-related dispersal.

49.103 *Phalonidia affinitana* – a single inland record of this sea aster feeder in Billinge, ca. 20km distant from its usual habitat, is probably a weather-related dispersal.

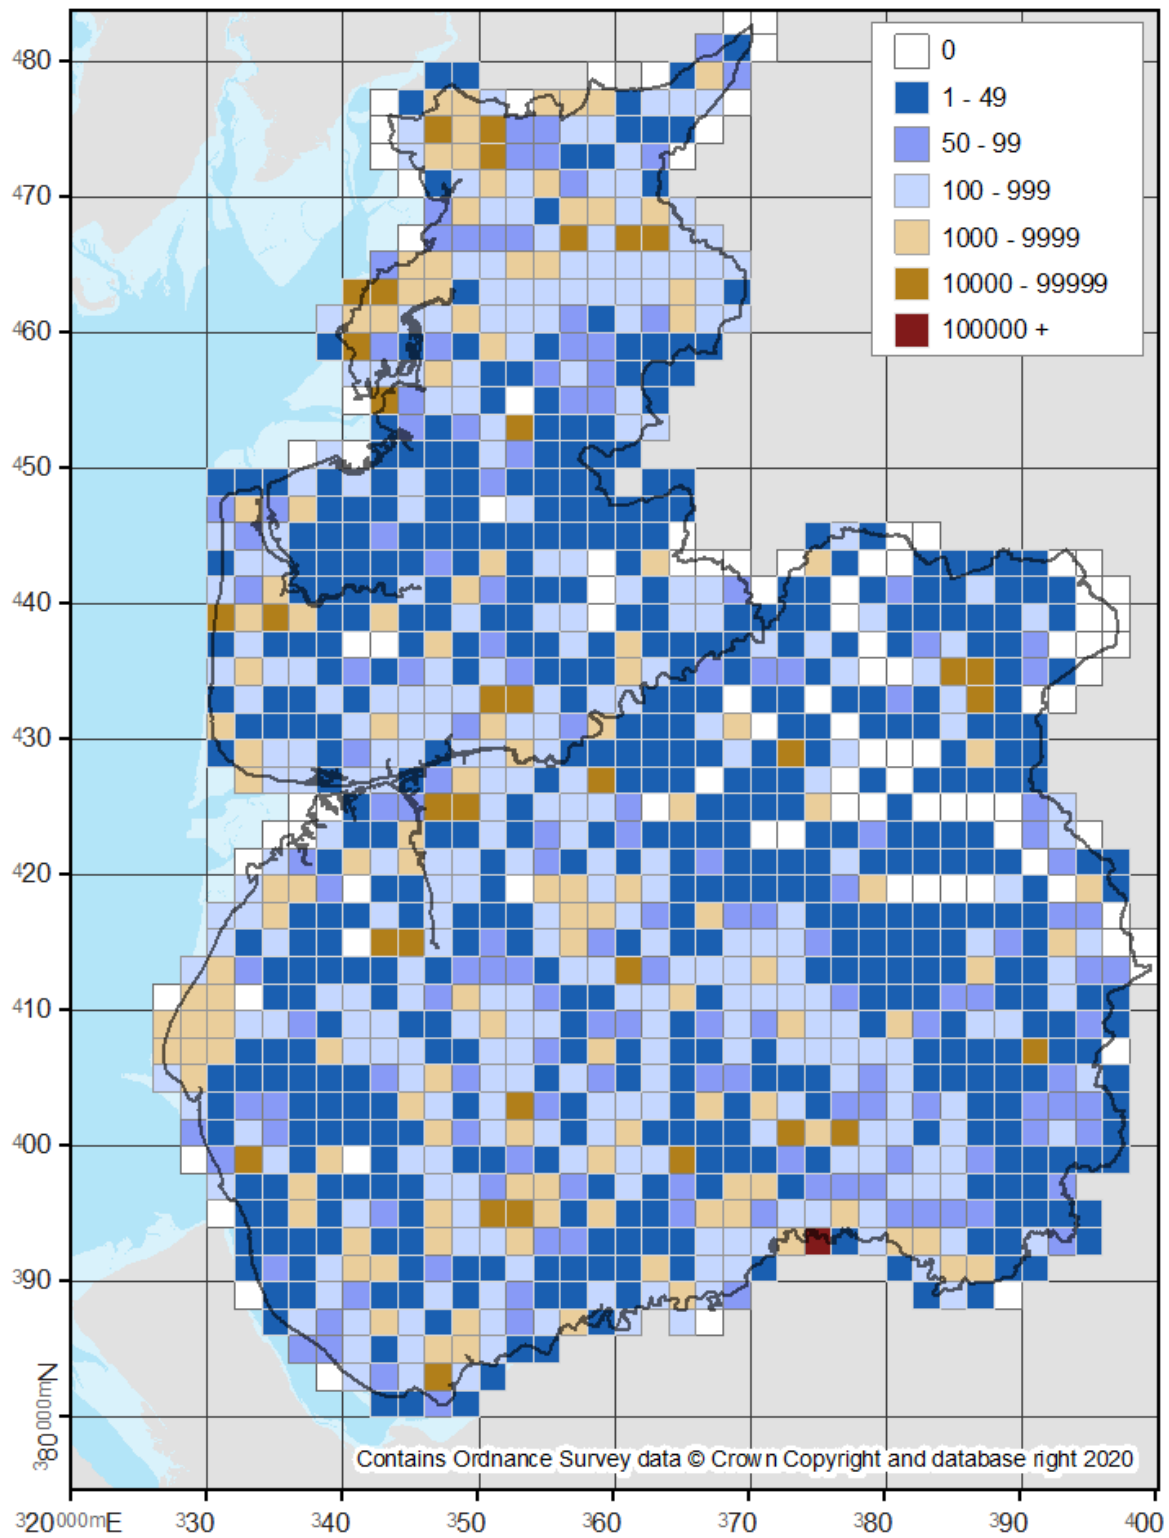

Figure 4. Records Density: the number of records per 2km square up to 2019

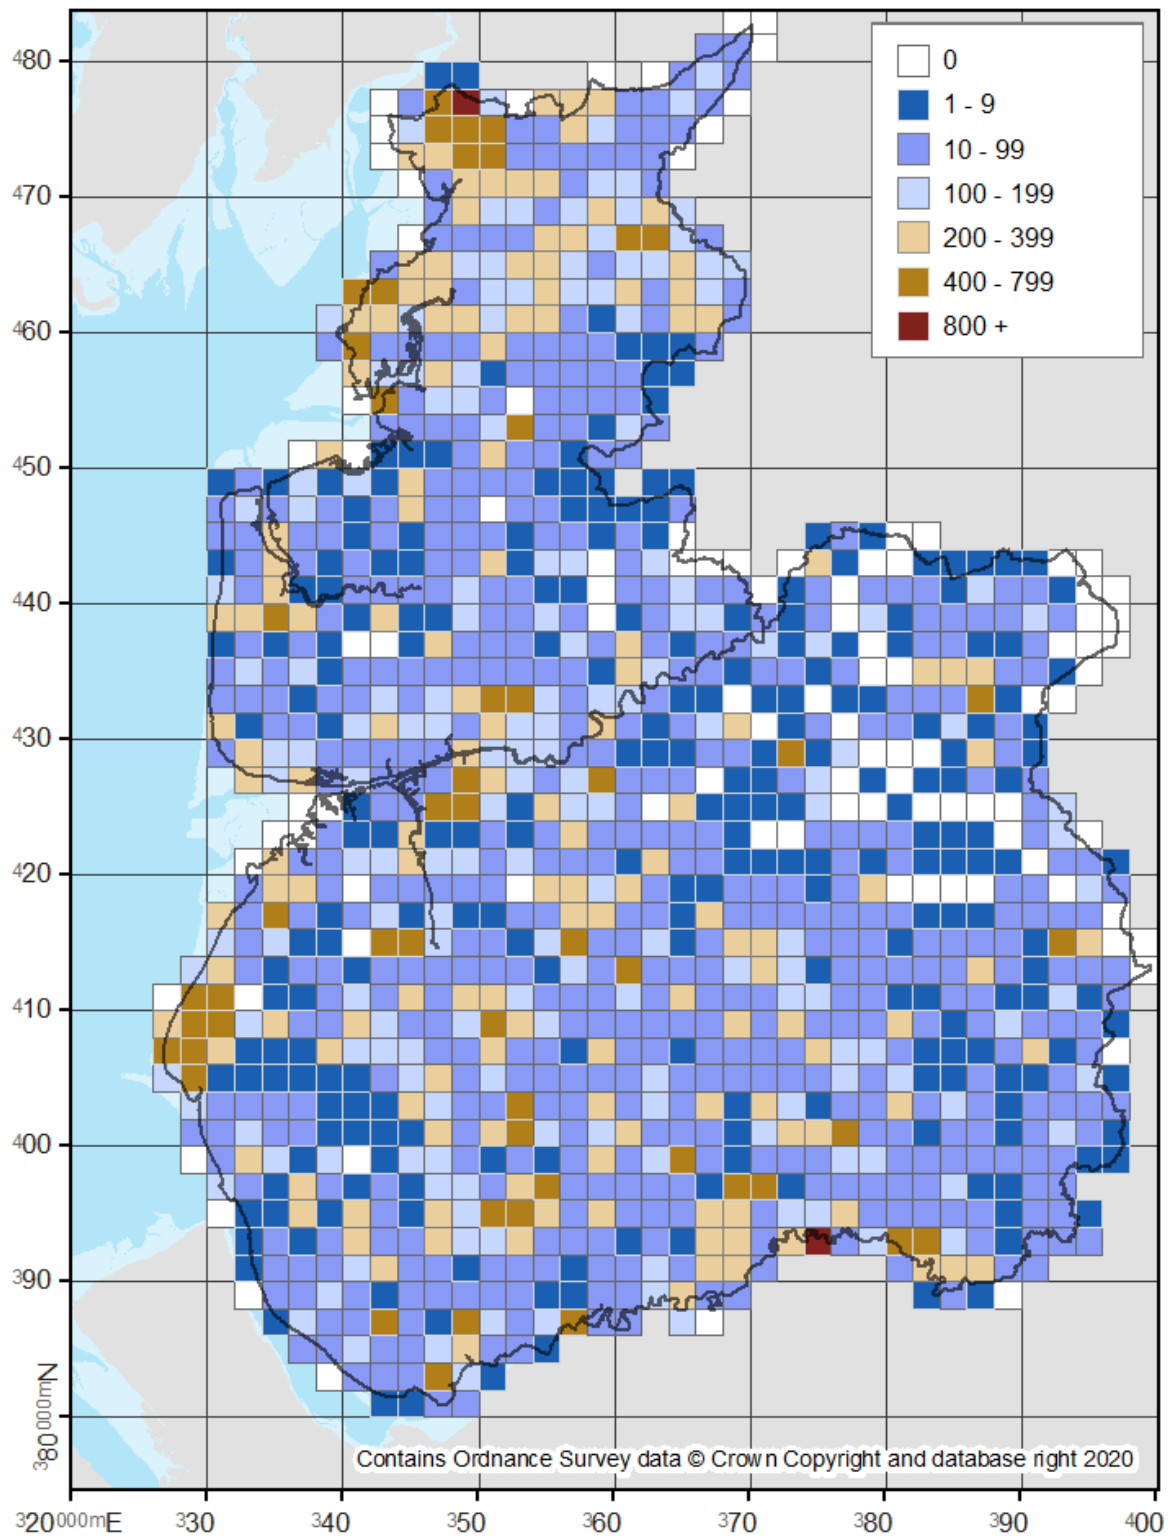

Figure 5. Species Richness: the number of species per 2km square up to 2019

49.174 *Phiaris palustrana* – an upland species in the county, the single record from near Cockerham in 2005 is considered a weather-related dispersal.

49.272 *Eucosma tripoliana* – perhaps one of the more regular ‘wanderers’ away from its coastal habitat. Has turned up in light traps in five locations at least 10km from the coast and is likely to be due to genuine eruptive dispersal and/or weather related.

63.003 *Pyrausta cingulata* – a single moth in South West Manchester in 2006 seems most likely to have been accidentally introduced.

63.100 *Catoptria margaritella* – this species is an infrequent wanderer away from its main moorland and lowland raised bog sites, but only in very small numbers.

63.112 *Platytes alpinella* – a single specimen recorded from Preston in 2012, a significant distance from the nearest known colony in East Yorkshire. This suggests possible wider immigration or an extreme wandering event.

69.006 *Sphinx ligustri* (Privet Hawk-moth) – the few county records may be the result of captive breeding and release, although vagrant activity cannot be completely ruled out.

69.007 *Sphinx pinastri* (Pine Hawk-moth) – possibly a similar situation to *S. ligustri* but only recorded on one occasion, in 1984. This species has expanded its range in England, and this may be part of an earlier range expansion.

70.091 *Eulithis populata* (Northern Spinach) – a regular but uncommon wanderer into lowland Lancashire from its mainly upland colonies; whether by design or as a result of weather is unknown.

70.098 *Dysstroma citrata* (Dark Marbled Carpet) – this species is rare away from its core upland areas but it has been known to wander westward on rare occasions. It has also been the subject of frequent misidentifications in lowland areas in the past.

70.104 *Lampropteryx otregiata* (Devon Carpet) – this moth spread into Lancashire in 2008 and has since become regular in North Lancashire. Unrepeated, extra-limital records in Formby and Manchester are now considered to be one-off results of the rapid range expansion.

70.128 *Melanthia procellata* (Pretty Chalk Carpet) – a single record from St Annes in 2013 is considered to be a wanderer from either North Lancashire or North Wales.

72.011 *Lymantria dispar* (Gypsy Moth) – a single larva, found inside B&Q in Blackpool in 2016 is an accidental importation amongst material stocked in the superstore.

72.0272 *Pyrrharctia isabella* (Isabelline Tiger) – larvae bred in several years up to 1906 in the Carnforth area (Moths and Butterflies of Great Britain and Ireland, Vol. 9). This was the result of imported oak.

72.029 *Callimorpha dominula* (Scarlet Tiger) – an introduced colony has been present on the Wirral since the 1960s and this species has also been rapidly expanding its range northwards in England and Wales in recent years. The records in VC59 during 2016 and 2017 (plus another, outside the current mapping period, in Preston in 2020) are probably part of the latter expansion in range, although captive breeding and release cannot be dismissed.

73.008 *Chrysodeixis chalcites* (Golden Twin-spot) – a single light trap record from Morecambe in 2003 of this occasional migrant species probably originated from an imported larva.

73.011 *Diachrysia chryson* (Scarce Burnished Brass) – see note below under ‘Historic Records’.

73.047 *Craniophora ligustri* (Coronet) – occasional records outside of its core northern Lancashire area seem likely to be the result of wandering individuals.

73.059 *Calophasia lunula* (Toadflax Brocade) – although a lot further north than other records in England, the singleton in 2018 at Great Sankey is believed to be due to the rapid expansion of range for this species nationally rather than an accidental introduction. The same applies to the two records of 73.085 *Nyctobrya muralis* (Marbled Green) in southwest VC59 in 2018 and 2019.

73.089 *Spodoptera littoralis* (Mediterranean Brocade) and 73.0892 *Spodoptera litura* (Asian Cotton Leafworm) – are both adventive species imported via the docks of Liverpool and Manchester.

73.106 *Trachea atriplicis* (Orache Moth) – it has not been possible to discover if the Liverpool record in 2009 relates to a genuine migrant or an accidental introduction into the British Isles.

73.146 *Photedes captiuncula* (Least Minor) – two records of this generally very sedentary species from outside of its core habitat of northern limestone suggest a rare case of dispersal or perhaps accidental introduction.

73.272 *Papestra biren* (Glaucous Shears) – this species, together with others such as 73.338 *Lycophotia porphyrea* (True Lover’s Knot), are regular wanderers from upland moorland habitat, most frequently occurring in VC60. This is sometimes, but not always, weather related.

73.324 *Agrotis trux* (Crescent Dart) – the origin of the single inland moth from Manchester in 2014 is unknown and probably originates from a wandering individual. This species is known to wander on rare occasions with several other locations in Britain having recent records well away from its rocky coastline habitat.

73.335 *Diarsia florida* (Fen Square-spot) – the status of this moth in Lancashire, as in Britain as a whole, as detailed in the Atlas of Britain and Ireland’s Larger Moths (2019), is “unclear due to taxonomic and identification difficulties”.

Extinctions

The last assessment of species extinctions in the county was made in 2002 (Palmer, S. M., *A Provisional checklist of the Lepidoptera of Lancashire*). Data in this atlas will provide additional insight into species decline and indicate where further research and more extensive surveys would be beneficial. For example, *Xylena exsoleta* (Sword-grass) has undergone a significant national decline which is reflected in its Lancashire distribution – the last record being from Leighton Moss in 1968. Also declining nationally but hopefully not following the same route as Sword-grass, is *Cucullia absinthii* (Wormwood) which has not been seen in the county since 1999. Although, this might be due to under-recording or the lack of targeted searching.

One considerable benefit of these maps is that it is now possible for any moth enthusiast to spot a potentially declining species in Lancashire and to investigate the underlying reasons for this further. This might involve finding out as much information as possible about the species in the county and relating this to wider information nationally. Citizen Science is a phrase often bandied-about but by making available distributional information, such as these maps, we can all get more closely involved in the study and conservation of species such as these.

Taxonomic name changes

During the production of these maps, several taxonomic changes were introduced affecting the scientific names in four families, covering four genera and ten species. These changes were published in the *Entomologist’s Record and Journal of Variation* **133**: 1-8 (Agassiz, Beavan and Heckford, 2021).

The use of the numbers listed in the Checklist of the Lepidoptera of the British Isles (Agassiz, Beavan and Heckford, 2013, as amended) will allow the generic changes on the maps to be linked to the former name via those numbers. However, for reference, the changes implemented are listed below.

Nepticulidae

4.074 *Ectoedemia sericopeza* = *Etainia sericopeza*

4.075 *Ectoedemia louisella* = *Etainia louisella*

- 4.076 *Ectoedemia decentella* = *Etainia decentella*
4.077 *Ectoedemia weaveri* = *Fomoria weaveri*
4.078 *Ectoedemia septembrella* = *Fomoria septembrella*

Gelechiidae

35.145 *Teleiodes sequax* = *Neotelphusa sequax*

Tortricidae

- 49.133 *Cochylis nana* = *Thyraylia nana*
49.137 *Cochylis dubitana* = *Neocochylis dubitana*
49.139 *Cochylis atricapitana* = *Cochylichroa atricapitana*

Noctuidae

73.085 *Nyctobrya muralis* (marbled green) = *Bryopsis muralis*

Verification and validation

Is your record missing?

If you consider a specific tetrad square is missing from the maps, please initially check below to discover the various possible reasons for this. If you are still unsure as to why it is missing, contact the appropriate VCMR and they will investigate the omission.

If a dot does not appear on the map when expected, this could be for various reasons:

- A record may have been removed due to the lack of essential supporting evidence.
- A record may have been considered a misidentification.
- A record date was well outside the expected flight period for a species and no accompanying evidence (such as a photo) was submitted with the record.
- An inadvertent submission of an incorrect grid reference. Most, but perhaps not all, have been identified and corrected.
- A MapMate generated error relating to ten-digit grid references. We ask that all recorders avoid using ten digits when submitting their data. Four (fieldwork) or six figure (Moth trap) references are ideal and the maximum accuracy should never exceed eight-digits – e. g. SD50785562.

If you have a pre-2020 record that would produce a new tetrad dot which has not been submitted to the relevant VCMR, then do please pass full details on as soon as possible for verification and inclusion in the county dataset. When doing so please do not use ten-digit grid references. Any additions will be picked up in a future revision of these maps.

Historic Records

We have not wanted to ignore some historic records from experienced and reliable recorders which cannot be fully validated. These are often difficult to place geographically due to imprecise or generalised use of site names and cannot be confirmed due to the lack of a voucher specimen. Instead, we have presumed them to be correct and included them in this atlas, even though they don't meet our current criteria for an acceptable record. Examples of such species are 15.045 *Phyllonorycter mespilella* and 73.011 *Diachrysia chryson* (Scarce Burnished Brass). The latter has a single record from the Preston area in 1866. It was not submitted to the NMRS for the National Macro-moth Atlas (2019) as it was well beyond the known range for the species. However, the moth is very distinctive, the correct habitat and foodplant are present in the area and the single record has been retained on these maps with slight reservations about its accuracy.

Taxonomic splits

Following taxonomic revision, some moths formerly considered to be a single species have subsequently been found to be made up of two or more separate species. Unless the specimen was retained, it will mean the original moth cannot be examined to ascertain which species it refers to. The sole record of *Elachista regificella* from Sales Wood near Prescott (VC59) in 1919 is a case in point; it is therefore not mapped pending the opportunity to examine a specimen.

Identification challenges

Leaf-mining species

Records for some leaf-mining species which were made over many years have been recently reassessed due to changing understanding of acceptable identification criteria. Examples of a few of these species are provided below in order to explain the apparent lack (or retention) of records on some distribution maps:

Parornix betulae / *P. loganella*

It is possible that birch feeding *P. loganella*, which only has one widely accepted historic record for Lancashire, may also be represented within the larval leaf-mine records of *Parornix betulae* (Fig. 6). The latter is a widely recorded and sometimes locally common species where naturally occurring birch is found. Careful examination of bred moths, or those found as adults, has failed to produce any more records of *P. loganella* and this species may no longer occur in the county. But, as the national range of this northern species does extend down into North Wales and Yorkshire, it would be a useful exercise to breed any larvae found in tenanted folds on birch to confirm the current status of both species.

Figure 6. *Parornix betulae*. Leaf-mine and fold on birch (*Betula Sp.*), Stalybridge 2018.

Leaf-mining larvae on oak and willow or sallow

Until the first few years of the 21st century it was widely accepted, based mainly on the Moths and Butterflies of Great Britain and Ireland Vol. 1 and Vol. 2, that many of the larvae of *Stigmella* and *Phyllonorycter* species associated with oak or willow could be reliably identified by their vacated larval feeding signs. More recently it has been found that this situation is a lot more complex than previously realised. It is now the case that most need to be bred through or at least, have a larva or pupa present that can be examined closely with a hand lens or sometimes under a microscope. This has meant that many previously 'acceptable' records have since been removed from the county dataset. Extreme examples of this are *Stigmella svenssoni* and *Phyllonorycter heegeriella* which now have no acceptable Lancashire records. It is perhaps significant that no adults of the latter moth (readily identifiable without dissection) have ever been reported in the county.

Trifurcula cryptella on *Lotus pedunculatus* (greater bird's-foot-trefoil) and *T. eurema* on *Lotus corniculatus* (common bird's-foot-trefoil)

The status of two leaf-mining species in Lancashire is currently uncertain until such time as the moths can be bred. Despite several attempts to do so in recent years, achieving this has proved elusive. The single foodplant association (as detailed above), currently accepted in the British Isles, is nowhere near as clear-cut in Europe. As a result, the maps for these two moths have been withheld pending more information and hopefully breeding or DNA barcode analysis.

In order to ensure the latest guidelines on identification criteria for all moth species are followed please refer to the annually updated County Guideline Grades available for examination on the Lancashire Moth Group website - www.lancashiremoths.co.uk/guidelines-for-recorders

Adult moths not separable externally

There are several macro-moths in the county that cannot reliably be separated by external characteristics of the adults alone. These include such well-known species as *Mesapamea* spp. (Common Rustic and Lesser Common Rustic), *Epirrita* spp. (the November Moth group), some of the *Oligia* spp. (Minors) and others. There are also many micro-moths which require microscopic examination to ensure accurate recording. As a result, the maps will not be complete for these species unless a specimen has been retained for microscopic examination.

At one extreme are some of the *Yponomeuta* spp. (Ermine Moths) where *Yponomeuta malinellus* and *Y. padella* are not separable in the adult stage (even by DNA or dissection). To further confuse matters, these two species also have forms which resemble *Y. cagnagella* and *Y. rorrella*. To ensure accuracy, the maps are currently based only on sites where larval webs have been reported or, in the case of *Y. rorrella*, a very fresh and typical specimen is photographed.

For other species, dissected adults will provide accurate identifications. Additionally, in the case of the externally identical *Acronicta psi* (Grey Dagger) and its much less common relative the *A. tridens* (Dark Dagger), the larvae are distinctively different and readily identified (Fig. 7 & 8).

Figure 7. *Acronicta tridens* (Dark Dagger)

Figure 8. *Acronicta psi* (Grey Dagger)

In order to increase our knowledge of such species do please check the guideline criteria www.lancashiremoths.co.uk/guidelines-for-recorders to find out which species require such proof of identity. If you decide to retain a single specimen for dissection (and we fully appreciate not all recorders wish to do this) then do contact your VCMR for more information.

Using the maps

- The following 1523 species distribution maps are ordered systematically according to "A checklist of the Lepidoptera of the British Isles" by Agassiz, D.J.L., Beavan, S.D. & Heckford R.J. (2013). Each species is given a number code known as the ABH number.
- Coastally, the watsonian vice county boundaries used here follow the mean high-water mark to reflect where the terrestrial and aquatic environments begin (where moth habitat may begin).

- Larger (10km) squares are used on the maps where there are no 2km square or better resolution records available. For example, if you see a large yellow square, it indicates there were no 2000-2019 records with a 2km or better location resolution for that area. Most of the larger squares are for the pre-2000 date band (blue-bordered squares), due to many historical records being based on imprecise location names.
- National status categories have been taken from the latest reviews but are only presented for species with a 'Nationally Scarce' or rarer category, and additionally for micro-moths classed as adventives. National status references:
Macro-moths: Fox, R., Parsons, M.S., & Harrower, C.A. (2019), '*A review of the status of macro-moth of Great Britain*'. Butterfly Conservation report to Natural England.
Micromoths: Davis, A.M. (2012), '*A Review of the Status of Microlepidoptera in Britain*'. Butterfly Conservation, Wareham. (Butterfly Conservation Report No. S12-02).
- Rather than scrolling through the document to find a particular species, it is almost always faster to use the search bar (Ctrl + F) to type in part of the ABH number, scientific name or vernacular name, and then press enter, or by clicking on a species name in the contents list.
- Extraction of individual maps used for any purpose that supports moth recording and conservation or helps to raise the profile of moths with the wider public is wholehearted encouraged. To copy an individual map on Adobe, click 'edit' > 'take a snapshot' and draw a box over the map. We would appreciate it if you do acknowledge this atlas, when doing this. The Tanyptera Project advocates openness of invertebrate information in its promotion of invertebrate recording and conservation in North West England, with the exception of very rare circumstances whereby a threatened species is likely to be negatively impacted.

Appendix 2

Local groups / societies contributing Lancashire (VC59 & VC60) moth records up to 2020

Chorley & District Natural History Society

Croxteth Country Park volunteers

Heysham Nature Reserve team

Leighton Moss RSPB volunteers

Merseyside Naturalist's Association

North Lancashire Wildlife Group

Rochdale Field Naturalists' Society

Rothamsted Insect Survey

RSPB Marshside

Woolston Eyes Conservation Group

Species Maps Index

abbreviana, Epinotia	49.234	Acronicta aceris	73.039	Agonopterix angelicella	32.032
abbreviata, Eupithecia	70.156	Acronicta alni	73.036	Agonopterix arenella	32.017
abietana, Acleris	49.067	Acronicta leporina	73.040	Agonopterix assimilella	32.024
abietaria, Eupithecia	70.149	Acronicta menyanthidis	73.042	Agonopterix atomella	32.012
abietella, Dioryctria	62.028	Acronicta psi	73.038	Agonopterix carduella	32.013
Abraxas grossulariata	70.205	Acronicta rumicis	73.045	Agonopterix ciliella	32.019
Abraxas sylvata	70.206	Acronicta tridens	73.037	Agonopterix cnicella	32.034
Abrostola tripartita	73.001	acroxantha, Tachystola	28.024	Agonopterix conterminella	32.010
Abrostola triplasia	73.002	Actebia praecox	73.308	Agonopterix heracliانا	32.018
abruptaria, Menophra	70.257	acuminatana, Dichrorampha	49.313	Agonopterix kaekeritziana	32.026
abscisana, Lobesia	49.183	acuminatella, Scrobipalpa	35.109	Agonopterix liturosa	32.008
absinthiata, Eupithecia	70.179	Adaina microdactyla	45.043	Agonopterix nanatella	32.025
absinthii, Cucullia	73.050	Adela croesella	7.008	Agonopterix nervosa	32.030
absoluta, Tuta	35.127	Adela cuprella	7.007	Agonopterix ocellana	32.007
acanthadactyla, Amblyptilia	45.010	Adela reaumurella	7.006	Agonopterix propinquella	32.016
Acasis viretata	70.200	ADELIDAE	7.000	Agonopterix purpurea	32.009
Acentria ephemerella	63.115	adjunctella, Coleophora	37.068	Agonopterix scopariella	32.011
aceriana, Gypsonoma	49.283	Adscita geryon	54.003	Agonopterix subpropinquella	32.015
acerifoliella, Phyllonorycter	15.084	Adscita statices	54.002	Agonopterix umbellana	32.029
aceris, Acronicta	73.039	adscitella, Elachista	38.017	Agonopterix yeatiana	32.035
achatana, Ancylys	49.215	adpersella, Coleophora	37.104	Agriopis aurantiaria	70.254
Acherontia atropos	69.005	adusta, Mniotype	73.238	Agriopis leucophaearia	70.253
Achlya flavicornis	65.016	adustata, Ligdia	70.208	Agriopis marginaria	70.255
Achroia grisella	62.005	adustella, Blastobasis	41.002	Agriphila geniculea	63.095
Acleris abietana	49.067	advenella, Acrobasis	62.035	Agriphila inquinatella	63.090
Acleris aspersana	49.078	aegrotalis, Patania	63.038	Agriphila latistria	63.091
Acleris bergmanniana	49.063	aeneofasciella, Stigmella	4.049	Agriphila selasella	63.092
Acleris caledoniana	49.064	aequidentellus, Epermenia	47.004	Agriphila straminella	63.093
Acleris comariana	49.065	aeratana, Dichrorampha	49.311	Agriphila tristella	63.089
Acleris effractana	49.072	aeriferana, Ptycholomoides	49.021	Agrius convolvuli	69.004
Acleris emargana	49.071	aescularia, Alsophila	70.245	Agrochola circellaris	73.192
Acleris ferrugana	49.083	aestivaria, Hemitea	70.305	Agrochola helvola	73.188
Acleris forsskaleana	49.062	Aethalura punctulata	70.274	Agrochola litura	73.187
Acleris hastiana	49.080	Aethes beatricella	49.123	Agrochola lota	73.189
Acleris holmiana	49.061	Aethes cnicana	49.127	Agrochola lychnidis	73.186
Acleris hyemana	49.082	Aethes dilucidana	49.122	Agrochola macilentana	73.190
Acleris laterana	49.066	Aethes francillana	49.124	Agrotis clavis	73.320
Acleris literana	49.087	Aethes hartmanniana	49.114	Agrotis exclamationis	73.317
Acleris logiana	49.086	Aethes rubigana	49.128	Agrotis ipsilon	73.327
Acleris notana	49.084	Aethes smeathmanniana	49.120	Agrotis puta	73.325
Acleris rhombana	49.070	Aethes tesseraana	49.121	Agrotis ripae	73.323
Acleris schalleriana	49.073	aethiops, Xenolechia	35.154	Agrotis segetum	73.319
Acleris sparsana	49.069	affinis, Bryotropha	35.047	Agrotis trux	73.324
Acleris umbrana	49.075	affinis, Cosmia	73.215	Agrotis vestigialis	73.322
Acleris variegana	49.077	affinitana, Phalonidia	49.103	ahenella, Hypochalchia	62.030
Acompsia cinerella	35.026	affinitata, Perizoma	70.132	Alabonia geoffrella	28.022
Acrobasis advenella	62.035	Agapeta hamana	49.109	albersana, Eucosmomorpha	49.199
Acrobasis consociella	62.038	Agapeta zoegana	49.110	albicapitella, Paraswammerdamia	16.019
Acrobasis marmorea	62.037	agathina, Xestia	73.356	albicillata, Mesoleuca	70.068
Acrobasis repandana	62.034	Aglossa caprealis	62.073	albicosta, Coleophora	37.063
Acrocercops brongniardella	15.019	Aglossa pinguinalis	62.074	albidella, Coleophora	37.050
Acrolepia autumnitella	19.014	Agnoea josephinae	30.003	albidella, Elachista	38.046
Acrolepiopsis assectella	19.011	Agonopterix alstromeriana	32.031	albifasciella, Ectoedemia	4.089

albifrontella, Elachista	38.030	Anania fuscalis	63.016	Apamea monoglypha	73.162
albimaculea, Denisia	28.005	Anania hortulata	63.025	Apamea oblonga	73.161
albipuncta, Mythimna	73.297	Anania perlucidalis	63.020	Apamea remissa	73.154
albipunctella, Depressaria	32.045	Anania terrealis	63.021	Apamea scolopacina	73.160
albistria, Argyresthia	20.023	Anaplectoides prasina	73.352	Apamea sordens	73.158
albulata, Asthena	70.111	Anarsia spartiella	35.020	Apamea sublustris	73.164
albulata, Perizoma	70.137	Anarta myrtilli	73.257	Apamea unanimitis	73.159
alburnella, Carpatolechia	35.149	Anarta trifolii	73.255	Apeira syringaria	70.231
alchemillata, Perizoma	70.133	anatipennella, Coleophora	37.049	Aphelia viburnana	49.033
alchimiella, Caloptilia	15.008	Anatrachyntis badia	34.0111	Aphomia sociella	62.001
Alcis repandata	70.265	anceps, Apamea	73.157	apicella, Ancylis	49.212
alcyonipennella, Coleophora	37.035	anceps, Peridea	71.016	apicina, Orodosma	72.002
Alder Kitten	71.006	ancipitella, Scoparia	63.065	apicipunctella, Elachista	38.032
Alder Moth	73.036	Ancylis achatana	49.215	apiformis, Sesia	52.002
Aleimma loefflingiana	49.060	Ancylis apicella	49.212	Aplocera plagiata	70.192
alimana, Gynnidomorpha	49.108	Ancylis badiana	49.214	Apocheima hispidaria	70.246
allisella, Exaeretia	32.006	Ancylis diminutana	49.209	Apodia bifractella	35.060
Allophyes oxyacanthae	73.068	Ancylis geminana	49.207	Apomyelois bistratella	62.039
alnetella, Stigmella	4.009	Ancylis mitterbacheriana	49.216	Apomyelois ceratoniae	62.040
alni, Acronicta	73.036	Ancylis myrtiliana	49.211	Aporophyla lueneburgensis	73.232
alniaria, Ennomos	70.234	Ancylis obtusana	49.204	Aporophyla lutulenta	73.231
alpella, Ypsolopha	17.008	Ancylis uncella	49.202	Aporophyla nigra	73.233
alpinana, Dichrorampha	49.320	Ancylis unguicella	49.201	Apotomis betuletana	49.150
alpinella, Elachista	38.028	anderidae, Phyllonorycter	15.069	Apotomis capreana	49.151
alpinella, Platytes	63.112	Anerastia lotella	62.069	Apotomis sauciana	49.153
alsinella, Caryocolum	35.128	angelicella, Agonopterix	32.032	Apotomis semifasciana	49.146
Alsophila aescularia	70.245	Angle Shades	73.113	Apotomis sororculana	49.152
alstromeriana, Agonopterix	32.031	Angle-barred Pug	70.169	Apotomis turbidana	49.149
alternata, Epirrhoe	70.061	anglicella, Parornix	15.028	Apple & Plum Case-bearer	37.016
alternata, Macaria	70.212	Angoumois Grain Moth	35.034	Apple Ermine	16.003
alternella, Tortricodes	49.044	angulifasciella, Ectoedemia	4.094	Apple Fruit Moth	20.019
alticolella, Coleophora	37.073	angustana, Eupoecilia	49.111	Apple Leaf Miner	21.001
Alucita hexadactyla	44.001	angustea, Eudonia	63.069	Apple Leaf Skeletonizer	48.007
ALUCITIDAE	44.000	angusticollella, Coptotriche	10.006	Apple Pith Moth	39.002
ambigua, Hoplodrina	73.099	angustiorana, Ditula	49.004	Apple Pygmy	4.013
ambigualis, Scoparia	63.064	annulatella, Rhigognostis	18.005	aprilina, Griposia	73.224
Amblyptilia acanthadactyla	45.010	Annulet	70.287	Aproaerema anthyllidella	35.010
Amblyptilia punctidactyla	45.011	anomala, Stilbia	73.061	Aproaerema cinctella	35.002
American Wainscot	73.296	anomalella, Stigmella	4.015	Aproaerema taeniolella	35.004
Amphipoea crinanensis	73.129	Anomalous	73.061	Apterogenum ypsilon	73.222
Amphipoea fucosa	73.126	Anorthoa munda	73.250	arceuthina, Argyresthia	20.004
Amphipoea lucens	73.127	Anthophila fabriciana	48.001	Archanara dissoluta	73.141
Amphipoea oculatea	73.128	anthyllidella, Aproaerema	35.010	Archer's Dart	73.322
Amphipyra berbera	73.063	Anticlea derivata	70.067	Archiearis parthenias	70.203
Amphipyra pyramidea	73.062	Antigastra catalaunalis	63.051	Archips podana	49.013
Amphipyra tragopoginis	73.064	antiqua, Orgyia	72.017	Archips rosana	49.016
Amphisbatis incongruella	30.004	Antitype chi	73.228	Archips xylosteanus	49.015
Anacamptis blattariella	35.012	Antler Moth	73.254	Arctia caja	72.026
Anacamptis populella	35.011	Apamea anceps	73.157	arcuatella, Ectoedemia	4.096
Anacamptis temerella	35.013	Apamea crenata	73.156	arcuella, Olethreutes	49.179
Anania coronata	63.018	Apamea epomidion	73.155	arenella, Agonopterix	32.017
Anania crocealis	63.022	Apamea furva	73.165	Arenostola phragmitidis	73.137
Anania funebris	63.024	Apamea lithoxylaea	73.163	areola, Xylocampa	73.069

Argent & Sable	70.120	Atolmis rubricollis	72.042	Barred Chestnut	73.331
argentella, Elachista	38.004	atomaria, Ematurga	70.275	Barred Fruit-tree Tortrix	49.025
argentula, Coleophora	37.102	atomella, Agonopterix	32.012	Barred Hook-tip	65.003
argyran, Pammene	49.363	atra, Blastodacna	39.002	Barred Red	70.284
Argyresthia albistria	20.023	atrata, Odezia	70.130	Barred Rivulet	70.134
Argyresthia arceuthina	20.004	atrella, Oxypteryx	35.081	Barred Sallow	73.180
Argyresthia bonnetella	20.022	atricapitana, Cochylichroa	49.139	Barred Straw	70.093
Argyresthia brockeella	20.011	atricapitella, Stigmella	4.061	Barred Tooth-striped	70.201
Argyresthia conjugella	20.019	atricollis, Ectoedemia	4.095	Barred Umber	70.223
Argyresthia cupressella	20.007	atricomella, Elachista	38.025	Barred Yellow	70.085
Argyresthia curvella	20.015	atriplicella, Scrobipalpa	35.117	basaltinella, Bryotropha	35.045
Argyresthia dilectella	20.006	atriplicis, Coleophora	37.088	basistrigalis, Scoparia	63.063
Argyresthia glabratella	20.002	atriplicis, Trachea	73.106	Batia lunaris	28.015
Argyresthia glaucinella	20.017	atropos, Acherontia	69.005	batis, Thyatira	65.008
Argyresthia goedartella	20.012	atropunctana, Hedy	49.159	Batrachedra pinicolella	36.002
Argyresthia ivella	20.010	augur, Graphiphora	73.351	Batrachedra praeangusta	36.001
Argyresthia laevigatella	20.001	August Thorn	70.233	BATRACHEDRIDAE	36.000
Argyresthia pruniella	20.021	aurago, Tiliacea	73.180	Beaded Chestnut	73.186
Argyresthia pygmaeella	20.013	aurana, Pammene	49.379	beatricella, Aethes	49.123
Argyresthia retinella	20.016	aurantiaria, Agriopis	70.254	Beautiful Brocade	73.265
Argyresthia semifusca	20.020	aurata, Pyrausta	63.006	Beautiful Carpet	70.068
Argyresthia semitestacella	20.024	aureatella, Micropterix	1.003	Beautiful China-mark	63.118
Argyresthia sorbiella	20.014	aurella, Stigmella	4.045	Beautiful Golden Y	73.016
Argyresthia spinosella	20.018	aurita, Pammene	49.376	Beautiful Hook-tip	72.069
Argyresthia trifasciata	20.005	auroguttella, Euspilapteryx	15.016	Beautiful Plume	45.010
ARGYRESTHIIDAE	20.000	Autographa bractea	73.018	Beautiful Snout	72.007
argyropeza, Ectoedemia	4.085	Autographa gamma	73.015	Beautiful Yellow Underwing	73.257
Argyrotaenia ljugiana	49.020	Autographa jota	73.017	Bedellia somnulentella	24.001
aridella, Pediasia	63.110	Autographa pulchrina	73.016	BEDELLIIDAE	24.000
Aristotelia brizella	35.052	AUTOSTICHIDAE	27.000	Bedstraw Hawk-moth	69.014
Aristotelia ericinella	35.050	Autumn Green Carpet	70.096	Bee Moth	62.001
armigera, Helicoverpa	73.076	Autumnal Moth	70.109	Beech-green Carpet	70.099
Aroga velocella	35.094	Autumnal Rustic	73.365	Belted Beauty	70.250
artemisicolella, Coleophora	37.090	autumnata, Epirrita	70.109	Bembecia ichneumoniformis	52.014
artemisiella, Scrobipalpa	35.120	autumnitella, Acrolepia	19.014	bembeciformis, Sesia	52.003
aruncella, Micropterix	1.004	avellanella, Semioscopis	32.001	Bena bicolorana	74.007
Ash Bud Moth	22.002	aversata, Idaea	70.016	berbera, Amphipyra	73.063
Ash Pug	70.169	Axylia putris	73.328	bergmanniana, Acleris	49.063
Asian Cotton Leafworm	73.0892	Azalea Leaf Miner	15.007	betulae, Ortholepis	62.011
aspersana, Acleris	49.078	azaleella, Caloptilia	15.007	betulae, Parornix	15.025
aspidiscana, Eucosma	49.276	Bactra furfurana	49.195	betularia, Biston	70.252
Aspilapteryx tringipennella	15.015	Bactra lacteana	49.196	betulella, Coleophora	37.053
asseclana, Cnephasia	49.051	Bactra lancealana	49.194	betuletana, Apotomis	49.150
assectella, Acrolepiopsis	19.011	Bactra robustana	49.197	betulicola, Caloptilia	15.005
assimilata, Eupithecia	70.182	badia, Anatrachyntis	34.011	betulicola, Stigmella	4.005
assimilella, Agonopterix	32.024	badiana, Ancyliis	49.214	betulinella, Nemaxera	12.014
assimilella, Stigmella	4.040	badiata, Earophila	70.066	biatomella, Elachista	38.023
asteris, Coleophora	37.082	badiella, Depressaria	32.038	bicolorana, Bena	74.007
Asteroscopus sphinx	73.065	baja, Xestia	73.353	bicolorata, Hecatera	73.279
Asthena albulata	70.111	bajularia, Comibaena	70.300	bicostella, Pleurota	28.025
Atemelia torquatella	22.001	baliodactylus, Merrifieldia	45.034	bicurris, Hadena	73.281
Atethmia centrigo	73.219	Bankesia conspurcatella	11.007	bicuspis, Furcula	71.006
Athrips mouffetella	35.085	Barred Carpet	70.139	bidentata, Odontopera	70.240

bifasciata, Perizoma	70.134	Bordered Gothic	73.277	Bryotropha affinis	35.047
bifasciana, Piniphila	49.180	Bordered Grey	70.262	Bryotropha basaltinella	35.045
bifida, Furcula	71.007	Bordered Pearl	63.029	Bryotropha boreella	35.042
bifractella, Apodia	35.060	Bordered Pug	70.188	Bryotropha desertella	35.041
Bilberry Pug	70.145	Bordered Sallow	73.070	Bryotropha domestica	35.038
Bilberry Tortrix	49.033	Bordered Straw	73.074	Bryotropha politella	35.039
bilinealis, Parapoynx	63.118	Bordered White	70.276	Bryotropha senectella	35.046
bilineata, Campptogramma	70.059	boreella, Bryotropha	35.042	Bryotropha similis	35.049
bilunana, Epinotia	49.254	Borkhausenia fuscescens	28.012	Bryotropha terrella	35.040
bimaculata, Lomographa	70.279	Borkhausenia minutella	28.011	Bryotropha umbrosella	35.048
binaevella, Phycitodes	62.058	Box-tree Moth	63.054	BUCULATRICIDAE	14.000
binaria, Watsonalla	65.002	Brachmia blandella	35.028	Bucculatrix cidarella	14.008
binderella, Coleophora	37.030	Brachylochia viminalis	73.220	Bucculatrix cristatella	14.001
bipunctidactyla, Stenoptilia	45.013	bractea, Autographa	73.018	Bucculatrix demaryella	14.013
Birch Mocha	70.032	bradleyi, Mompha	40.007	Bucculatrix maritima	14.003
Bird-cherry Ermine	16.001	Bramble Shoot Moth	49.294	Bucculatrix nigricomella	14.002
Bird's Wing	73.105	brassicae, Mamestra	73.274	Bucculatrix thoracella	14.009
biren, Papestra	73.272	Brick	73.192	Bucculatrix ulmella	14.010
biselata, Idaea	70.013	Bright-line Brown-eye	73.267	bucephala, Phalera	71.025
bisselliella, Tineola	12.026	Brimstone Moth	70.226	Bud Moth	49.224
Biston betularia	70.252	Brindled Beauty	70.248	Buff Arches	65.009
Biston strataria	70.251	Brindled Green	73.225	Buff Ermine	72.019
bistriatella, Apomyelois	62.039	Brindled Ochre	73.234	Buff Footman	72.043
bistriga, Cryptoblabes	62.007	Brindled Plume	45.011	Buff-tip	71.025
bistrigella, Phylloporia	8.005	Brindled Pug	70.156	Bulrush Wainscot	73.136
bisulcella, Elachista	38.018	britannica, Thera	70.079	buoliana, Rhyacionia	49.305
