Help

The species information function can be used to access species booklets which contain information about a species habitat, distribution, and life history, to search the Biota of Virginia (BOVA) database, create species lists and search the reference database. Please click on a link from the navigation menu on the left or on one of the links below.

1. *Species Booklet*: contains information about habitat, distribution, life history, taxonomic information and more for Virginia's wildlife species.

2. *Species List*: this function allows you to generate a list of species known or likely to occur within some administrative unit (Virginia County/City/USGS 7.5' Quadrangle/Hydrological Unit).

3. *References*: this function allows you to search through the database of references that were used in compiling the species information booklets.
