

**STATE HIGHWAY  
TRAFFIC VOLUMES  
2001-2005**

# **State Highway Traffic Volumes 2001 to 2005**

**Prepared by  
Traffic Design Group Ltd.  
for Transit New Zealand**

## **Preface**

Traffic monitoring provides a fundamental tool for the management of the State Highway network. The measure of the traffic demand, imposed on the network, enables Transit New Zealand (Transit) to effectively and efficiently allocate resources.

The information contained in this publication is derived from Transit's traffic data collection system. This consists of a hierarchy of equipment that ranges from sophisticated weigh-in-motion and vehicle classification collection via telemetry to simple portable tube traffic counters.

The data collection, and processing, for the permanent weigh-in-motion and telemetry sites is managed by Transit's National Office in Wellington. The ATMS sites on the Auckland motorways are operated on behalf of Transit by an external contractor. The remaining sites, which represent the large majority of the sites throughout New Zealand, are not monitored continuously, and are counted several times a year as part of the Transit's regional traffic counting programmes managed by the Transit regional offices.

Transit welcomes any feedback on this publication. Note that this document is also available on the Transit website.

## **Disclaimer**

The traffic data contained in this document is intended to be used as an approximate indication of traffic flows on state highways throughout New Zealand. The traffic volumes are typically calculated from individual counts over one week intervals. Most sites are counted one, two or three times a year, with other sites counted on a continuous basis.

The limitations of the traffic counters and their installation, conversion of axle pairs to vehicle counts (in the case of tube counts), seasonal variations, congestion effects, and various analysis procedures contribute to a level of approximation in the data. These factors should be taken into account when using the AADT data.

For detailed design and project evaluation purposes, the actual traffic counts upon which this document is based can be obtained from the appropriate Transit Region office.

Transit and its employees or agents involved in preparation and publication of this document cannot accept liability for its contents or for any consequences arising from its use. People using the contents of this document should apply, and rely upon, their own skill and judgement. The contents should not be used in isolation from other sources of advice and information.

Chris Parkman  
Asset Information Manager  
Network Operations  
Transit New Zealand  
March 2006

## Notes

1. STATE HIGHWAY - State Highway 1 is suffixed N and S for the North and South Islands respectively.
2. DISTANCE - The approximate distance of the 'count site' in kilometres from the start of the highway.
3. LOCATION - The approximate descriptive location on the state highway. For more precise location details refer to the appropriate Transit region office.
4. AADT - Annual Average Daily Traffic volume, being an estimation of the daily traffic (two way total unless specified otherwise), averaged over the (calendar) year.
5. TYPE - The majority of the traffic counts provided in this publication have been undertaken at the particular count site over one or two typical weeks in the year and factored accordingly to provide a relatively robust estimate of the annual traffic volume at that location. There are other codes noted in the publication and these can be described as follows:

ATMS - Advanced Traffic Management System, monitored continuously  
TEL - Telemetry sites (usually dual loop), monitored continuously  
WIM - Weigh-in-motion sites, monitored continuously.  
CON - Regional control site, not monitored continuously throughout the year but more frequently than other non-continuous count sites  
Etd - Estimated count provided by Transit Regional TMS Administrator in the absence of detailed count data for a particular site

6. Most of the continuous sites are able to distinguish between short and long vehicles. Accordingly the percentage of Heavy Motor Vehicles (HMV), vehicles greater than 3.5 tonnes gross, can be estimated at these sites.

The continuous telemetry sites administered by Transit categorises vehicles into four standard vehicle length bins as follows:

<b>0.5 to 5.5m</b>	<b>5.5 to 11m</b>	<b>11 to 17m</b>	<b>17 to 35m</b>
--------------------	-------------------	------------------	------------------

For convenience, the number of heavy commercial vehicles is typically calculated from the length bin counts as the total of all vehicles exceeding 11m in length plus half of the vehicles in the 5.5 to 11m vehicle length bin.

The number in the % HMV column denotes the approximate percentage of Heavy Motor Vehicles measured at the particular count site

7. Where a State Highway spans more than one Transit region, the approximate location of the administrative boundary is shown.
8. Other traffic details such as the vehicle composition and the directional AADT are available for some sites from the Transit NZ regional offices.
9. The former SH 1F has now formed the first section of SH 1N. All reference stations on SH 1N have been adjusted accordingly.
