FERNO Aquaboard Spinal System

Safely immobilise a casualty in the water, then support recovery at the poolside

Rescuing a casualty from a swimming pool carries its own distinct risks and challenges – especially when spinal injury is suspected. Rescue equipment needs to be light, buoyant and easily manoeuvrable – and it's vitally important to prevent slipping once the equipment is in place.

Aquaboard Spinal System is Ferno's uniquely innovative solution to these issues. Its special design features enable it to float up and under the casualty, so they're safely immobilised whilst still in the water, and supported once they're back on the poolside and in transit to hospital.

Developed in conjunction with the RLSS UK, Aquaboard forms a complete system in itself for swimming pool and leisure centre rescue. It's a simple, highly effective means to minimise the risk of further injury.

- **Easily positioned while in the pool** – smoothly glides in place beneath the casualty
- **Prevents slipping back into the water** – Neoprene Back Support holds the casualty firmly but gently in place
- **Simple to use** – convenient colour-coded adjustable strapping system and concave design to aid positioning
- **No need to reposition the patient after rescue** – they can remain secured on the Aquaboard on the way to hospital and during X-rays
- **Safe and comfortable** – Neoprene Back Support and lightweight adjustable head restraint
- **Easy user familiarisation** – supplied with instructional DVD and patient positioning instructions printed on the neoprene support
- Suitable to fit inside the Model 71, Gazelle, Titan, Titan Tapered and Titan 32 range of Basket stretchers

Part Nos:

010776501 Aquaboard Complete Spinal System
