Abstract

As a result of studies on neotropical *Pteris* L., we report new records of *Pteris albertiae* and *P. longifolia* from Costa Rica; *P. longipetiolulata* from Costa Rica, Panama, Peru, Bolivia, and Venezuela; and *P. muricatopedata* from Mexico and Guatemala. The expanded distribution range and addition of species to biodiversity lists provide relevant information about the ecology and taxonomy of the species.

Keywords

Distribution, ferns, Mesoamérica, Mexico, South America.
